Appendix B: Table of Standard Fixture Wattages

The *2011 Table of Standard Fixture Wattages* was generated under the following guidelines:

1. All fixtures must comply with Title 10 of the Code of Federal Regulations (same as CWT) as well as California's Title 24 Regulations; and
2. All fixtures using 4-foot or U-tube "standard" 40 W fluorescent lamps (F40T12 or FU40T12) are excluded, with the exception of equivalent "standard" high-output and instant-start fixtures. All fixtures with 8-foot "standard" 75 W lamps (F96T12) are excluded *as well as* all fixtures with 8-foot "high output" 110 W lamps (F96T12HO).

The motivation for the exclusion of these "standard" lamp fixtures is that most "cool-white" and "warm-white" general purpose lamps of the above types do not meet federal code (Title 10).

New codes that do not conform to these guidelines will not be added to the 2011 table. Lighting fixtures are uniquely identified based on the first five columns of the table (Fixture Code, Lamp Code, Ballast Type, Nominal Watts/Lamp, and Lamps/Fixture).

Screw-in lamps CFLs are not eligible for offering incentives.

Ballast Type

for fluorescent fixtures

- **L** electronic
- **S** Standard magnetic
- **E** Energy efficient magnetic

Configuration [letter]

- **T** Tandem wired fixture
- **D** Delamped fixture, i.e. some lamps Permanently removed but ballasts remain

Configuration [number]

for de-lamped fixtures

Number signifies the total number of ballasts in the fixture: e.g. An "F42EE/D2" is an "F44EE" with two lamps removed so that there is one extraneous ballast.

for tandem wired ballasts

Number signifies the total number of lamps being run by the ballast: e.g. An "F42LL/T4" would indicate that a four-lamp ballast is wired to run two two-lamp fixtures.

with no preceding letter

Number indicates the number of ballasts in an ambiguous multiple ballast fixture: e.g. An "F43ILL/2" indicates a three-lamp fixture with two ballasts (as is often the case if there is A/B switching).

Ballast Light Output

- **R** Reduced light output
- **H** High light output
- **V** Very high light output

Other Abbreviations

BF = Ballast Factor
RLO = Reduced Light Output Ballast (<.85 Ballast Factor)
