

**Port of Stockton**  
CALIFORNIA

# THE PORT'S ENVIRONMENTAL COMMITMENT RUNS DEEP!

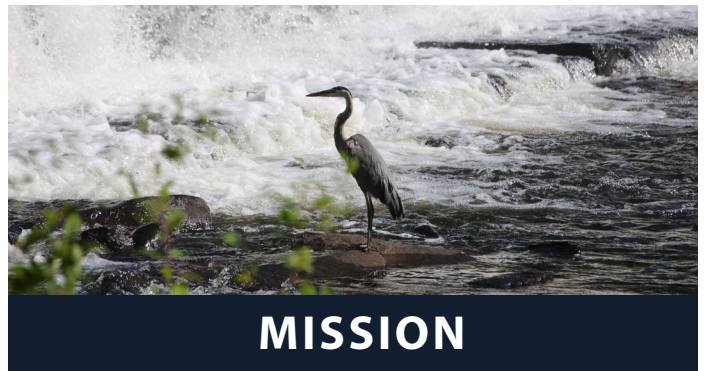

## WHAT IS D.E.E.P.?

The Delta Environmental Enhancement Program (DEEP) is an action oriented program that focuses on implementing environmental initiatives and projects that measure and improve the Port's direct impact on the environment.

## VISION

Develop and implement initiatives to advance the Port of Stockton's environmental commitment to the natural environment, the community, and goal to become a carbon-neutral Port.

## MISSION

The DEEP program aims to create measurable and influential initiatives that have noticeable positive change on the Port's surrounding environment.

## D.E.E.P FRAMEWORK

The DEEP framework is in line with the Green Marine certification program and both meets and goes beyond select requirements for the North American marine industry standards. The DEEP framework includes projects and initiatives that focus on the following categories:

**AIR QUALITY & GHG EMISSIONS • ENERGY & TRANSPORTATION  
DUNE RESTORATION • WILDLIFE & HABITAT • WASTE & WATER**

As participant in the Green Marine program, the Port of Stockton will continue to lead as an environmentally conscientious and forward-thinking port in the maritime industry.
