1. NPS 2 (DN 50) and Smaller: ASME B1.20.1, with female thread.
2. NPS 2-1/2 (DN 65) and Larger: ASME B16.5, flanged.

H. Specialties and Accessories: Include tappings in tank and the following:

1. Pressure relief valve.
2. Pressure gage.
3. Thermometer.
4. Air-charging connection.
5. Gage glass, brass fittings, compression stops, and gage-glass guard.

I. Horizontal Tank Supports: Factory-fabricated steel saddles, welded to tank[**before testing and labeling**].

J. Vertical Tank Supports: Factory-fabricated steel legs or steel skirt, welded to tank[**before testing and labeling**].

K. Exterior Coating: [**Galvanized**][**Manufacturer's standard enamel paint**][**Primer paint**]<**Insert coating**>.

2.3 STEEL, NONPRESSURE, WATER STORAGE TANKS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Adamson Global Technology**]
2. [**Highland Tank & Manufacturing Company, Inc.**]
3. [**RECO USA**]
4. [**Steel Tank and Fabricating Corporation (STAFCO)**]
5. [**Wood, John Co**]

6. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Adamson Global Technology**]
2. [**Highland Tank & Manufacturing Company, Inc.**]
3. [**RECO USA**]
4. [**Steel Tank and Fabricating Corporation (STAFCO)**]
5. [**Wood, John Co**]
6. <**Insert manufacturer's name**>

C. Description: Steel, [**horizontal**][**vertical**], nonpressure-rated tank with cylindrical sidewalls.

D. Fabricate supports and attachments to tank with reinforcement strong enough to resist tank movement during seismic event when tank supports are anchored to building structure.

E. Construction: Steel, constructed with nontoxic welded joints.

F. Manhole: Watertight, for tank more than [**36 inches (915 mm)**]<**Insert dimension**> in diameter.

G. Cover for Open Tank: [**Plastic**][**Steel, with lining same as or similar to tank lining and**] with shape that encloses top of tank.

H. Tappings: Factory-fabricated[**stainless**] steel, welded to tank.

1. NPS 2 (DN 50) and Smaller: ASME B1.20.1, with female thread.
2. NPS 2-1/2 (DN 65) and Larger: ASME B16.5, flanged.

I. Specialties and Accessories: Include tappings in tank and the following:

1. Vacuum relief valve.
2. Free air vent with insect screen.
3. Thermometer.
4. Gage glass, brass fittings, compression stops, and gage-glass guard.

J. Horizontal Tank Supports: Factory-fabricated steel saddles, welded to tank[**before testing and labeling**].

K. Vertical Tank Supports: Factory-fabricated steel legs or steel skirt, welded to tank[**before testing and labeling**].

L. Exterior Coating: [**Galvanized**][**Manufacturer's standard enamel paint**][**Primer paint**]<**Insert coating**>.

2.4 INSULATED, STEEL, WATER STORAGE TANKS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**A. O. Smith Corporation**]
2. [**GSW Water Heating**]
3. [**HESCO Bastion Ltd.**]

4. [**Laars Heating Systems Company; a subsidiary of Bradford White Corporation**]
5. [**Lochinvar, LLC**]
6. [**Precision Boilers**]
7. [**PVI; A WATTS Brand**]
8. [**RBI**]
9. [**State Industries**]
10. [**Vaughn Thermal Corporation**]
11. [**Wessels Company**]
12. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**A. O. Smith Corporation**]
2. [**GSW Water Heating**]
3. [**HESCO Bastion Ltd.**]
4. [**Laars Heating Systems Company; a subsidiary of Bradford White Corporation**]
5. [**Lochinvar, LLC**]
6. [**Precision Boilers**]
7. [**PVI; A WATTS Brand**]
8. [**RBI**]
9. [**State Industries**]
10. [**Vaughn Thermal Corporation**]
11. [**Wessels Company**]
12. <**Insert manufacturer's name**>

C. Description: Steel, vertical, pressure-rated tank with cylindrical sidewalls.

D. Fabricate supports and attachments to tank with reinforcement strong enough to resist tank movement during seismic event when tank supports are anchored to building structure.

E. Construction: [**ASME code, steel**][**Steel**], constructed with nontoxic welded joints, for [**125-psig (860-kPa)**][**150-psig (1035-kPa)**]<**Insert value**> working pressure.

F. Manhole: Watertight, for tank more than [**36 inches (915 mm)**]<**Insert dimension**> in diameter; same pressure rating as tank.

G. Tappings: Factory-fabricated[**stainless**] steel, welded to tank[**before testing and labeling**].

1. NPS 2 (DN 50) and Smaller: ASME B1.20.1, with female thread.
2. NPS 2-1/2 (DN 65) and Larger: ASME B16.5, flanged.

H. Specialties and Accessories: Include tappings in tank and the following:

1. Pressure relief valve.
2. Pressure gage.
3. Thermometer.
4. Air-charging connection.
5. Gage glass, brass fittings, compression stops, and gage-glass guard.

I. Vertical Tank Supports: Factory-fabricated steel legs or steel skirt, welded to tank[**before testing and labeling**].

J. Insulation: Factory-installed fiberglass or polyurethane foam; surrounding entire tank except connections and other openings; suitable for tank operating temperature; and complying with

ASHRAE/IES 90.1.

K. Jacket: Steel, with manufacturer's standard finish unless otherwise indicated.

2.5 PLASTIC, PRESSURE, WATER STORAGE TANKS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Pentair, Inc.**]
2. [**Tankinetics, Inc**]
3. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Pentair, Inc.**]
2. [**Tankinetics, Inc**]
3. <**Insert manufacturer's name**>

C. Description: FRP, vertical, pressure-rated tank with cylindrical sidewalls.

D. Construction: [**ASME code, composite FRP**][**Composite FRP**], [**contact-molded**][**or**][**filament-wound**], thermosetting-resin tank for [**100-psig (690-kPa)**][**125-psig (860-kPa)**][**150-psig (1035-kPa)**]<**Insert value**> working pressure.

E. Manhole: Watertight, for tank more than [**36 inches (915 mm)**]<**Insert dimension**> in diameter; same pressure rating as tank.

F. Tappings: Factory-fabricated, FRP flanged-end nozzle.

1. NPS 2 (DN 50) and Smaller: Include plastic-to-steel transition fitting from tank nozzle flange to ASME B1.20.1, female thread.
2. NPS 2-1/2 (DN 65) and Larger: ASME B16.5, flanged.

G. Specialties and Accessories: Include tappings in tank and the following:

1. Pressure relief valve.
2. Pressure gage.
3. Thermometer.

H. Vertical Tank Supports: Factory-fabricated steel legs or FRP skirt attached by FRP brackets to tank sidewall.

2.6 PLASTIC, NONPRESSURE, WATER STORAGE TANKS

A. FRP Water Storage Tanks:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Amprotec, Inc.**]
b. [**Belding Tank Technologies, Inc**]
c. [**L. F. Manufacturing, Inc**]
d. [**Palmer Manufacturing and Tank Company**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Amprotec, Inc.**]
b. [**Belding Tank Technologies, Inc**]
c. [**L. F. Manufacturing, Inc**]
d. [**Palmer Manufacturing and Tank Company**]
e. <**Insert manufacturer's name**>

3. Description: FRP, vertical, nonpressure-rated water tank.
4. Construction: [**ASTM D3299, filament-wound**][**or**][**ASTM D4097, contact-molded**] FRP.
5. Tappings: Factory-fabricated, FRP flanged-end nozzle.

a. NPS 2 (DN 50) and Smaller: Include plastic-to-steel transition fitting from tank nozzle flange to ASME B1.20.1, female thread.

1) [**Exception: Tappings may be threaded FRP coupling integral with nozzle for connections for plastic piping.**]

b. NPS 2-1/2 (DN 65) and Larger: Flanged.

6. Vertical Tank Support: Separate factory-fabricated steel stand capable of supporting tank.

B. PE Water Storage Tanks:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Amprotec, Inc.**]
b. [**Assmann Corporation of America**]
c. [**Chem-Tainer Industries**]
d. [**Poly Processing Company**]
e. [**Premier Plastics Inc.**]
f. [**Snyder Industries, Inc.**]
g. [**Steel Tank and Fabricating Corporation (STAFCO)**]
h. [**TolPlast Company, Inc.**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Amprotec, Inc.**]
b. [**Assmann Corporation of America**]
c. [**Chem-Tainer Industries**]
d. [**Poly Processing Company**]

e. [**Premier Plastics Inc.**]
f. [**Snyder Industries, Inc.**]
g. [**Steel Tank and Fabricating Corporation (STAFCO)**]
h. [**TolPlast Company, Inc.**]
i. <**Insert manufacturer's name**>

3. Description: PE, vertical, flat-bottom, nonpressure-rated water tank.
4. Construction: ASTM D1998, molded PE.
5. Tappings: Factory-fabricated bulkhead fittings attached to tank.

a. NPS 2 (DN 50) and Smaller: With female thread.
b. NPS 2-1/2 (DN 65) and Larger: Flanged.

6. Vertical Tank Support: Separate factory-fabricated steel stand capable of supporting entire bottom of tank.

C. Manhole: Watertight, for tank more than [**36 inches (915 mm)**]<**Insert dimension**> in diameter.

D. Cover for Open Tank: Plastic, same as or similar to tank material and with shape that encloses top of tank.

E. Specialties and Accessories: Include tappings in tank and the following:

1. Vacuum relief valve.
2. Free air vent with insect screen.
3. Thermometer.
4. Gage glass, brass fittings, compression stops, and gage-glass guard.

2.7 PAINT MATERIALS

A. Paint: Comply with AWWA D102.

B. Primer: Tank fabricator's standard epoxy-polyamide paint.

C. Tank Shell Exterior Intermediate Paint: Tank fabricator's standard, two-component epoxy paint compatible with prime and finish paint. Intermediate coat shall have a slight color contrast with finish coat.

D. Tank Shell Exterior Finish Paint: Tank fabricator's standard urethane paint.

1. Color: [**As selected by Owner from tank manufacturer's paint chart**]<**Insert color**>.

2.8 SHOP PAINTING

A. Tank Shell Exterior Finish Coat: Factory coating according to AWWA D103.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install water storage tanks on concrete bases, level and plumb, firmly anchored. Arrange so devices

needing servicing are accessible.

1. Install horizontal tanks on [**concrete piers and factory-fabricated**][**fabricated steel supports and**] saddles.

B. Vertical Water Storage Tanks:

1. Install on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."

C. Anchor tank supports and tanks to substrate.

1. Use steel or FRP straps over or around plastic tanks.

D. Install tank seismic restraints.

E. Install thermometers and pressure gages on water storage tanks and piping if indicated. Thermometers and pressure gages are specified in Section 220500 "Common Work Results for Plumbing."

F. Install the following devices on tanks:

1. Pressure relief valves.
2. Temperature and pressure relief valves.
3. Vacuum relief valves.
4. Tank vents on nonpressure tanks.
5. Connections to accessories.

G. After installing tanks with factory finish, inspect finishes and repair damages to finishes.

3.2 FIELD QUALITY CONTROL

A. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:

1. Tank Weld Test: Use radiographic method according to AWWA D100. Repair failures and retest.
2. Leak Test, AWWA D100: Comply with AWWA D100[**and NFPA 22**]. Fill tanks with water and test for leaks after installation. Repair leaks and retest until no leaks exist.

    a. Water will be furnished by Owner.

3. Leak Test: Comply with [**AWWA D110**][**AWWA D115**][**and NFPA 22**]. Fill tanks with water and test for leaks after installation. Repair leaks and retest until no leaks exist.

    a. Water will be furnished by Owner.

4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Water storage tanks will be considered defective if they do not pass test and inspections.

C. Prepare test and inspection reports.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 13 16 00 - SANITARY WASTE AND VENT PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Hub-and-spigot, cast-iron soil pipe and fittings.
2. Hubless, cast-iron soil pipe and fittings.
3. Galvanized-steel pipe and fittings.
4. Stainless steel drainage pipe and fittings.
5. Ductile-iron pipe and fittings.
6. Copper tube and fittings.
7. ABS pipe and fittings.
8. PVC pipe and fittings.
9. Specialty pipe fittings.
10. Encasement for underground metal piping.

B. Related Requirements:

1. Section 221329 "Sanitary Sewerage Pumps" for effluent and sewage pumps.
2. Section 226600 "Chemical-Waste Systems for Laboratory and Healthcare Facilities" for chemical-waste and vent piping systems.
3. Section 333115 "Site Sanitary Sewerage Piping" for sanitary sewerage piping and structures outside the building.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For adhesives, indicating VOC content.

C. Shop Drawings: For hubless, single-stack drainage system. Include plans, elevations, sections, and details.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans and elevations, or Building Information Model (BIM) drawn to scale, showing items described in this Section and coordinated with all building trades.

B. Seismic Qualification Certificates: For waste and vent piping, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Detailed description of piping anchorage devices on which the certification is based and their installation requirements.

C. Field quality-control reports.

1.4 FIELD CONDITIONS

A. Interruption of Existing Sanitary Waste Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service in accordance with requirements indicated:

1. Notify [**Architect**][**Construction Manager**][**Owner**] no fewer than [**two**]<**Insert number**> days in advance of proposed interruption of sanitary waste service.
2. Do not proceed with interruption of sanitary waste service without [**Architect's**][**Construction Manager's**][**Owner's**] written permission.

1.5 WARRANTY

A. Listed manufacturers to provide labeling and warranty of their respective products.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Components and installation are capable of withstanding the following minimum working pressure unless otherwise indicated:

1. Soil, Waste, and Vent Piping: [**10 ft. head of water (30 kPa head of water)**]<**Insert pressure**>.
2. Waste, Force-Main Piping: [**50 psig (345 kPa)**][**100 psig (690 kPa)**][**150 psig (1035 kPa)**]<**Insert pressure**>.

B. Seismic Performance: Soil, waste, and vent piping and support and installation to withstand the effects of earthquake motions determined in accordance with [**ASCE/SEI 7**]<**Insert requirement**>. See Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment":

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
2. Component Importance Factor: [**1.5**][**1.0**].

C. <**Insert requirements for Component Amplification Factor and Component Response Modification Factor**>.

2.2 PIPING MATERIALS

A. Piping materials to bear label, stamp, or other markings of specified testing agency.

B. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.3 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AB & I Foundry; a part of the McWane family of companies**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AB & I Foundry; a part of the McWane family of companies**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]
4. <**Insert manufacturer's name**>

C. Pipe and Fittings:

1. Marked with CISPI collective trademark.
2. ASTM A74, [**service**][**and**][**extra-heavy**] cast iron.

D. Gaskets: ASTM C564, rubber.

E. Caulking Materials: ASTM B29, pure lead and oakum or hemp fiber.

2.4 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AB & I Foundry; a part of the McWane family of companies**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AB & I Foundry; a part of the McWane family of companies**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]
4. <**Insert manufacturer's name**>

C. Pipe and Fittings:

1. Marked with CISPI collective trademark.
2. ASTM A888 or CISPI 301.

D. Single-Stack Aerator Fittings: ASME B16.45, hubless, cast-iron aerator and deaerator drainage fittings.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Conine Manufacturing Co., Inc**]
    b. [**SE Sovent**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Conine Manufacturing Co., Inc**]
    b. [**SE Sovent**]
    c. <**Insert manufacturer's name**>

E. CISPI, Hubless-Piping Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ANACO-Husky; a part of the McWane family of companies**]
    b. [**Charlotte Pipe and Foundry Company**]
    c. [**Dallas Specialty & Mfg. Co.**]
    d. [**Fernco Inc**]
    e. [**Ideal Tridon Group**]
    f. [**Matco-Norca**]
    g. [**MIFAB, Inc**]
    h. [**Mission Rubber Company, LLC**]
    i. [**Tyler Pipe; a subsidiary of McWane Inc.**]
    j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ANACO-Husky; a part of the McWane family of companies**]
    b. [**Charlotte Pipe and Foundry Company**]
    c. [**Dallas Specialty & Mfg. Co.**]
    d. [**Fernco Inc**]
    e. [**Ideal Tridon Group**]
    f. [**Matco-Norca**]
    g. [**MIFAB, Inc**]
    h. [**Mission Rubber Company, LLC**]
    i. [**Tyler Pipe; a subsidiary of McWane Inc.**]
    j. <**Insert manufacturer's name**>

3. Standards: ASTM C1277 and CISPI 310.
4. Description: Stainless steel corrugated shield with stainless steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.

F. Heavy-Duty, Hubless-Piping Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**AB & I Foundry; a part of the McWane family of companies**]
    b. [**ANACO-Husky; a part of the McWane family of companies**]
    c. [**Charlotte Pipe and Foundry Company**]
    d. [**Clamp-All Corp**]
    e. [**Dallas Specialty & Mfg. Co.**]
    f. [**Ideal Tridon Group**]
    g. [**MIFAB, Inc**]
    h. [**Mission Rubber Company, LLC**]
    i. [**Tyler Pipe; a subsidiary of McWane Inc.**]
    j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**AB & I Foundry; a part of the McWane family of companies**]
    b. [**ANACO-Husky; a part of the McWane family of companies**]
    c. [**Charlotte Pipe and Foundry Company**]
    d. [**Clamp-All Corp**]
    e. [**Dallas Specialty & Mfg. Co.**]
    f. [**Ideal Tridon Group**]
    g. [**MIFAB, Inc**]
    h. [**Mission Rubber Company, LLC**]
    i. [**Tyler Pipe; a subsidiary of McWane Inc.**]
    j. <**Insert manufacturer's name**>

3. Standards: ASTM C1277 and ASTM C1540. <**Insert standard**>.
4. Description: Stainless steel shield with stainless steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.

2.5 GALVANIZED-STEEL PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    1. [**U.S. Steel**]
    2. [**Wheatland Tube; Zekelman Industries**]
    3. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    1. [**U.S. Steel**]
    2. [**Wheatland Tube; Zekelman Industries**]
    3. <**Insert manufacturer's name**>

C. Galvanized-Steel Pipe: ASTM A53/A53M, Type E, standard-weight cast iron. Include square-cut-grooved or threaded ends matching joining method.

D. Cast-Iron Drainage Fittings: [**Galvanized;**]ASME B16.12, threaded.

E. Steel Pipe Pressure Fittings:

1. Steel Pipe Nipples: [**Galvanized;**]ASTM A733, made of ASTM A53/A53M or ASTM A106/A106M, Schedule 40, seamless steel pipe. Include ends matching joining method.
2. Malleable-Iron Unions: ASME B16.39, Class 150, hexagonal-stock body with ball-and-socket, metal-to-metal, bronze seating surface; and female threaded ends.
3. Gray-Iron, Threaded Fittings: [**Galvanized;**]ASME B16.4, Class 125, standard pattern.

F. Cast-Iron Flanges: ASME B16.1, Class 125.

1. Flange Gasket Materials: ASME B16.21, full-face, flat, nonmetallic, asbestos-free, **1/8-inch (3.2-mm)** maximum thickness unless thickness or specific material is indicated.
2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

G. Grooved-Joint, Galvanized-Steel-Pipe Appurtenances:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Anvil; an ASC Engineered Solution**]
   b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
   c. [**Shurjoint; a part of Aalberts Integrated Piping Systems**]
   d. [**Smith-Cooper International**]
   e. [**Star Pipe Products**]
   f. [**Victaulic Company**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Anvil; an ASC Engineered Solution**]
   b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
   c. [**Shurjoint; a part of Aalberts Integrated Piping Systems**]
   d. [**Smith-Cooper International**]
   e. [**Star Pipe Products**]
   f. [**Victaulic Company**]
   g. <**Insert manufacturer's name**>

3. Galvanized, Grooved-End Fittings for Galvanized-Steel Piping: ASTM A536, ductile-iron castings; ASTM A47/A47M, malleable-iron castings; ASTM A234/A234M, forged steel fittings; or ASTM A106/A106M, steel pipes with dimensions matching ASTM A53/A53M, steel pipe, and complying with AWWA C606 for grooved ends.
4. Grooved Mechanical Couplings for Galvanized-Steel Piping: ASTM F1476, Type I. Include ferrous housing sections with continuous curved keys, EPDM-rubber gasket suitable for hot and cold water, and bolts and nuts.

2.6 STAINLESS STEEL DRAINAGE PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide**

products by one of the following][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Anvil; an ASC Engineered Solution**]
2. [**BLÜCHER; A Watts Water Technologies Company**]
3. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Anvil; an ASC Engineered Solution**]
2. [**BLÜCHER; A Watts Water Technologies Company**]
3. <**Insert manufacturer's name**>

C. Description: Comply with requirements of ASME A112.3.1 drainage pattern.

D. Material: [**Type 304 stainless steel**][**Type 316L stainless steel**][**Type 304 or 316L stainless steel**].

E. Pipe Construction: Seamless.

F. Internal Sealing Rings: [**EPDM**][**NBR**]<**Insert material**>[**, marked or color-coded for the application**].

G. Joints: Single or double, socket and spigot ends.

2.7 DUCTILE-IRON PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**American Cast Iron Pipe Company**]
2. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
3. [**McWane Ductile; a part of the McWane family of companies**]
4. [**U.S. Pipe**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**American Cast Iron Pipe Company**]
2. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
3. [**McWane Ductile; a part of the McWane family of companies**]
4. [**U.S. Pipe**]
5. <**Insert manufacturer's name**>

C. Ductile-Iron, Mechanical-Joint Piping:

1. Ductile-Iron Pipe: AWWA C151/A21.51, with mechanical-joint bell and plain spigot ends unless grooved or flanged ends are indicated.
2. Ductile-Iron Fittings: AWWA C110/A21.10, mechanical-joint, ductile- or gray-iron standard pattern or AWWA C153/A21.53, ductile-iron compact pattern.
3. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

D. Ductile-Iron, Push-on-Joint Piping:

1. Ductile-Iron Pipe: AWWA C151/A21.51, with push-on-joint bell and plain spigot ends unless grooved or flanged ends are indicated.
2. Ductile-Iron Fittings: AWWA C110/A21.10, push-on-joint, ductile- or gray-iron standard pattern or AWWA C153/A21.53, ductile-iron compact pattern.
3. Gaskets: AWWA C111/A21.11, rubber.

E. Ductile-Iron, Grooved-Joint Piping: AWWA C151/A21.51, with round-cut-grooved ends in accordance with AWWA C606.

F. Ductile-Iron, Grooved-End Pipe Appurtenances:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Anvil; an ASC Engineered Solution**]
   b. [**Shurjoint; a part of Aalberts Integrated Piping Systems**]
   c. [**Smith-Cooper International**]
   d. [**Star Pipe Products**]
   e. [**Victaulic Company**]
   f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Anvil; an ASC Engineered Solution**]
   b. [**Shurjoint; a part of Aalberts Integrated Piping Systems**]
   c. [**Smith-Cooper International**]
   d. [**Star Pipe Products**]
   e. [**Victaulic Company**]
   f. <**Insert manufacturer's name**>

3. Grooved-End, Ductile-Iron Fittings: ASTM A536, ductile-iron castings, with dimensions matching AWWA C110/A 21.10, ductile-iron pipe or AWWA C153/A 21.53, ductile-iron fittings, and complying with AWWA C606 for grooved ends.
4. Grooved Mechanical Couplings for Ductile-Iron Pipe: ASTM F1476, Type I. Include ferrous housing sections with continuous curved keys, EPDM-rubber center-leg gasket suitable for hot and cold water, and bolts and nuts.

2.8 COPPER TUBE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
2. [**Cambridge-Lee Industries, LLC**]
3. [**Cerro Flow Products, LLC**]
4. [**Wieland Copper Products, LLC**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
2. [**Cambridge-Lee Industries, LLC**]
3. [**Cerro Flow Products, LLC**]
4. [**Wieland Copper Products, LLC**]
5. <**Insert manufacturer's name**>

C. Copper Type DWV Tube: ASTM B306, drainage tube, drawn temper.

D. Copper Drainage Fittings: ASME B16.23, cast copper or ASME B16.29, wrought copper, solder-joint fittings.

E. Hard Copper Tube: **ASTM B88, Type L and Type M (ASTM B88M, Type B and Type C)**, water tube, drawn temper.

F. Soft Copper Tube: **ASTM B88, Type L (ASTM B88M, Type B)**, water tube, annealed temper.

G. Copper Pressure Fittings:

1. Copper Fittings: ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint fittings. Furnish wrought-copper fittings if indicated.
2. Copper Unions: MSS SP-123, copper-alloy, hexagonal-stock body with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.

H. Copper Flanges: ASME B16.24, Class 150, cast copper with solder-joint end.

1. Flange Gasket Materials: ASME B16.21, full-face, flat, nonmetallic, asbestos-free, **1/8-inch (3.2-mm)** maximum thickness unless thickness or specific material is indicated.
2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

I. Solder: ASTM B32, lead free with ASTM B813, water-flushable flux.

2.9 ABS PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Charlotte Pipe and Foundry Company**]
2. [**JM Eagle**]
3. [**Royal Building Products, a Westlake Company**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. [**Charlotte Pipe and Foundry Company**]
2. [**JM Eagle**]
3. [**Royal Building Products, a Westlake Company**]
4. <**Insert manufacturer's name**>

C. NSF Marking: Comply with NSF 14 for plastic piping components. Include "NSF-dwv" marking for plastic

drain, waste, and vent piping and "NSF-sewer" for plastic sewer piping.

D. Solid-Wall ABS Pipe: ASTM D2661, Schedule 40.

E. Cellular-Core ABS Pipe: ASTM F628, Schedule 40.

F. ABS Socket Fittings: ASTM D2661, made in accordance with ASTM D3311, drain, waste, and vent patterns.

G. Solvent Cement: ASTM D2235.

1. Product Data: Verify ABS solvent cement has a VOC content of 325 g/L or less.
2. Verify solvent cement complies with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
3. Verify solvent cement complies with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Verify formaldehyde emissions do not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
4. Verify solvent cement complies with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Verify building concentration of formaldehyde does not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde does not exceed 9 mcg/cu. m.

2.10 PVC PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**GF Piping Systems**]
4. [**JM Eagle**]
5. [**National Pipe and Plastic, Inc. (Oldcastle)**]
6. [**North America Pipe Corporation**]
7. [**Rocky Mountain Colby Pipe Company**]
8. [**Silver-line Plastics**]
9. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**GF Piping Systems**]
4. [**JM Eagle**]
5. [**National Pipe and Plastic, Inc. (Oldcastle)**]
6. [**North America Pipe Corporation**]
7. [**Rocky Mountain Colby Pipe Company**]
8. [**Silver-line Plastics**]
9. <**Insert manufacturer's name**>

C. Comply with NSF 14 for plastic piping components. Include "NSF-dwv" marking for plastic drain, waste, and vent piping and "NSF-sewer" marking for plastic sewer piping.

D. Solid-Wall PVC Pipe: ASTM D2665 drain, waste, and vent.

E. Cellular-Core PVC Pipe: ASTM F891, Schedule 40.

F. PVC Socket Fittings: ASTM D2665, made in accordance with ASTM D3311, drain, waste, and vent patterns and to fit Schedule 40 pipe.

G. Adhesive Primer: ASTM F656.

1. Product Data: Verify adhesive primer has a VOC content of 550 g/L or less.
2. Product Data: Verify adhesive primer complies with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
3. Product Data: Verify adhesive primer complies with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Verify formaldehyde emissions do not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
4. Product Data: Verify adhesive primer complies with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Verify building concentration of formaldehyde does not exceed half of the indoor recommended exposure limit, or 33 mcg/cu. m, and that of acetaldehyde does not exceed 9 mcg/cu. m.

H. Solvent Cement: ASTM D2564.

1. Product Data: Verify PVC welding solvent cement has a VOC content of 510 g/L or less.

2.11 SPECIALTY PIPE FITTINGS

A. Transition Couplings:

1. General Requirements: Fitting or device for joining piping with small differences in ODs or of different materials. Include end connections of same size as and compatible with pipes to be joined.
2. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
3. Unshielded, Nonpressure Transition Couplings:

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1) [**Dallas Specialty & Mfg. Co.**]
2) [**Fernco Inc**]
3) [**Mission Rubber Company, LLC**]
4) [**Plastic Oddities**]
5) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**Dallas Specialty & Mfg. Co.**]
2) [**Fernco Inc**]
3) [**Mission Rubber Company, LLC**]
4) [**Plastic Oddities**]
5) <**Insert manufacturer's name**>

c. Standard: ASTM C1173.
d. Description: Elastomeric, sleeve-type, reducing or transition pattern. Include shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.
e. End Connections: Same size as and compatible with pipes to be joined.
f. Sleeve Materials:

1) For Cast-Iron Soil Pipes: ASTM C564, rubber.
2) For Plastic Pipes: ASTM F477, elastomeric seal or ASTM D5926 PVC.
3) For Dissimilar Pipes: ASTM D5926 PVC or other material compatible with pipe materials being joined.

4. Shielded, Nonpressure Transition Couplings:

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1) [**Cascade Waterworks Mfg. Co.**]
2) [**Mission Rubber Company, LLC**]
3) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**Cascade Waterworks Mfg. Co.**]
2) [**Mission Rubber Company, LLC**]
3) <**Insert manufacturer's name**>

c. Standard: ASTM C1460.
d. Description: Elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.
e. End Connections: Same size as and compatible with pipes to be joined.

5. Pressure Transition Couplings:

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1) [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
2) [**Cascade Waterworks Mfg. Co.**]
3) [**EBAA Iron Sales, Inc.**]
4) [**Ford Meter Box Company, Inc. (The)**]
5) [**JCM Industries, Inc**]
6) [**Romac Industries, Inc.**]
7) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
2) [**Cascade Waterworks Mfg. Co.**]
3) [**EBAA Iron Sales, Inc.**]
4) [**Ford Meter Box Company, Inc. (The)**]
5) [**JCM Industries, Inc**]
6) [**Romac Industries, Inc.**]
7) <**Insert manufacturer's name**>

c. Standard: AWWA C219.
d. Description: Metal sleeve-type same size as, with pressure rating at least equal to, and ends compatible with, pipes to be joined.
e. Center-Sleeve Material: [**Manufacturer's standard**][**Carbon steel**][**Stainless steel**][**Ductile iron**][**Malleable iron**].
f. Gasket Material: Natural or synthetic rubber.
g. Metal Component Finish: Corrosion-resistant coating or material.

B. Dielectric Fittings:

1. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
2. Dielectric Unions:

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1) [**A.Y. McDonald Mfg. Co.**]
2) [**Capitol Manufacturing Company**]
3) [**GF Piping Systems: Georg Fischer LLC**]
4) [**HART Industrial Unions, LLC**]
5) [**Jomar Valve**]
6) [**Matco-Norca**]
7) [**WATTS; A Watts Water Technologies Company**]
8) [**Wilkins**]
9) [**Zurn Industries, LLC**]
10) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**A.Y. McDonald Mfg. Co.**]
2) [**Capitol Manufacturing Company**]
3) [**GF Piping Systems: Georg Fischer LLC**]
4) [**HART Industrial Unions, LLC**]
5) [**Jomar Valve**]
6) [**Matco-Norca**]
7) [**WATTS; A Watts Water Technologies Company**]
8) [**Wilkins**]
9) [**Zurn Industries, LLC**]
10) <**Insert manufacturer's name**>

c. Description:

1) Standard: ASSE 1079.
2) Pressure Rating: [125 psig (860 kPa) **minimum at** 180 deg F (82 deg C)][150 psig (1035 kPa)][250 psig (1725 kPa)]<**Insert pressure**>.
3) End Connections: Solder-joint copper alloy and threaded ferrous.

3. Dielectric Flanges:

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1) [**Capitol Manufacturing Company**]
2) [**GF Piping Systems: Georg Fischer LLC**]
3) [**Matco-Norca**]
4) [**WATTS; A Watts Water Technologies Company**]
5) [**Zurn Industries, LLC**]
6) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**Capitol Manufacturing Company**]
2) [**GF Piping Systems: Georg Fischer LLC**]
3) [**Matco-Norca**]
4) [**WATTS; A Watts Water Technologies Company**]
5) [**Zurn Industries, LLC**]
6) <**Insert manufacturer's name**>

c. Description:

1) Standard: ASSE 1079.
2) Factory-fabricated, bolted, companion-flange assembly.
3) Pressure Rating: [125 psig (860 kPa) **minimum at** 180 deg F (82 deg C)][150 psig (1035 kPa)][175 psig (1200 kPa)][300 psig (2070 kPa)]<**Insert pressure**>.
4) End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

4. Dielectric-Flange Insulating Kits:

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1) [**Advance Products & Systems, LLC**]
2) [**CALPICO, Inc.**]
3) [**GF Piping Systems: Georg Fischer LLC**]
4) [**GPT; a division of EnPRO Industries**]
5) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

1) [**Advance Products & Systems, LLC**]
2) [**CALPICO, Inc.**]
3) [**GF Piping Systems: Georg Fischer LLC**]
4) [**GPT; a division of EnPRO Industries**]
5) <**Insert manufacturer's name**>

c. Description:

1) Nonconducting materials for field assembly of companion flanges.
2) Pressure Rating: [**150 psig (1035 kPa)**]<**Insert pressure**>.
3) Gasket: Neoprene or phenolic.
4) Bolt Sleeves: Phenolic or polyethylene.
5) Washers: Phenolic with steel backing washers.

5. Dielectric Nipples:

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1) [**Anvil; an ASC Engineered Solution**]
2) [**Elster Perfection; Honeywell**]
3) [**Matco-Norca**]
4) [**Precision Plumbing Products**]
5) [**Victaulic Company**]
6) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**Anvil; an ASC Engineered Solution**]
2) [**Elster Perfection; Honeywell**]
3) [**Matco-Norca**]
4) [**Precision Plumbing Products**]
5) [**Victaulic Company**]
6) <**Insert manufacturer's name**>

c. Description:

1) Standard: IAPMO PS 66.
2) Electroplated steel nipple.
3) Pressure Rating: [**300 psig (2070 kPa) at 225 deg F (107 deg C)**]<**Insert pressure and temperature**>.
4) End Connections: Male threaded or grooved.
5) Lining: Inert and noncorrosive, propylene.

2.12 ENCASEMENT FOR UNDERGROUND METAL PIPING

A. Standard: ASTM A674 or AWWA C105/A 21.5.

B. Material: [**Linear low-density polyethylene film of 0.008-inch (0.20-mm)**][**or**][**high-density, cross-laminated polyethylene film of 0.004-inch (0.10-mm)**] minimum thickness.

C. Form: [**Sheet**][**or**][**tube**].

D. Color: [**Black**][**or**][**natural**]<**Insert color**>.

PART 3 - EXECUTION

3.1 EARTH MOVING

A. Comply with requirements for excavating, trenching, and backfilling specified in Section 312000 "Earth Moving."

3.2 INSTALLATION OF PIPING

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems.

1. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations.
2. Install piping as indicated unless deviations to layout are approved on coordination drawings.

B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

E. Install piping to permit valve servicing.

F. Install piping at indicated slopes.

G. Install piping free of sags and bends.

H. Install fittings for changes in direction and branch connections.

I. Install piping to allow application of insulation.

J. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in [**Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment"**][**Section 220548.13 "Vibration Controls for Plumbing Piping and Equipment"**].

K. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends.

1. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical.
2. Use long-turn, double Y-branch, and 1/8-bend fittings if two fixtures are installed back to back or side by side with common drain pipe.

a. Straight tees, elbows, and crosses may be used on vent lines.

3. Do not change direction of flow more than 90 degrees.
4. Use proper size of standard increasers and reducers if pipes of different sizes are connected.

a. Reducing size of waste piping in direction of flow is prohibited.

L. Lay buried building waste piping beginning at low point of each system.

1. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream.
2. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements.
3. Maintain swab in piping and pull past each joint as completed.

M. Install soil and waste and vent piping at the following minimum slopes unless otherwise indicated:

1. Building Sanitary Waste: Two percent downward in direction of flow for piping **NPS 3 (DN 80)** and smaller; [**1**][**2**]<**Insert number**> percent downward in direction of flow for piping **NPS 4 (DN 100)** and larger.
2. Horizontal Sanitary Waste Piping: [**Two**]<**Insert number**> percent downward in direction of flow.
3. Vent Piping: [**One**]<**Insert number**> percent down toward vertical fixture vent or toward vent stack.

N. Install cast-iron soil piping in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."

1. Install encasement on underground piping in accordance with ASTM A674 or AWWA C105/A 21.5.

O. Install steel piping in accordance with applicable plumbing code.

P. Install stainless steel piping in accordance with ASME A112.3.1 and applicable plumbing code.

Q. Install aboveground copper tubing in accordance with CDA's "Copper Tube Handbook."

R. Install aboveground ABS piping in accordance with ASTM D2661.

S. Install aboveground PVC piping in accordance with ASTM D2665.

T. Install underground [**ABS**][**and**][**PVC**] piping in accordance with ASTM D2321.

U. Install engineered soil and waste and vent piping systems as follows:

1. Combination Waste and Vent: Comply with standards of authorities having jurisdiction.
2. Hubless, Single-Stack Drainage System: Comply with ASME B16.45 and hubless, single-stack aerator fitting manufacturer's written installation instructions.
3. Reduced-Size Venting: Comply with standards of authorities having jurisdiction.

V. Install underground, ductile-iron, force-main piping according to AWWA C600.

1. Install buried piping inside building between wall and floor penetrations and connection to sanitary sewer piping outside building with restrained joints.
2. Anchor pipe to wall or floor. Install thrust-block supports at vertical and horizontal offsets.
3. Install encasement on piping in accordance with ASTM A674 or AWWA C105/A 21.5.

W. Install underground, copper, force-main tubing in accordance with CDA's "Copper Tube Handbook."

1. Install encasement on piping in accordance with ASTM A674 or AWWA C105/A 21.5.

X. Install force mains at elevations indicated.

Y. Plumbing Specialties:

1. Install backwater valves in sanitary waster gravity-flow piping.

a. Comply with requirements for backwater valves specified in Section 221319 "Sanitary Waste Piping Specialties."

2. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers in sanitary waste gravity-flow piping.

a. Install cleanout fitting with closure plug inside the building in sanitary drainage force-main piping.
b. Comply with requirements for cleanouts specified in Section 221319 "Sanitary Waste Piping Specialties."

3. Install drains in sanitary waste gravity-flow piping.

a. Comply with requirements for drains specified in Section 221319 "Sanitary Waste Piping Specialties."

Z. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

AA. Install sleeves for piping penetrations of walls, ceilings, and floors.

1. Comply with requirements for sleeves specified in Section 220500 "Common Work Results for Plumbing."

BB. Install sleeve seals for piping penetrations of concrete walls and slabs.

1. Comply with requirements for sleeve seals specified in Section 220500 "Common Work Results for Plumbing."

CC. Install escutcheons for piping penetrations of walls, ceilings, and floors.

1. Comply with requirements for escutcheons specified in Section 220500 "Common Work Results for Plumbing."

3.3 JOINT CONSTRUCTION

A. Hub-and-Spigot, Cast-Iron Soil Piping Gasketed Joints: Join in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.

B. Hub-and-Spigot, Cast-Iron Soil Piping Caulked Joints: Join in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for lead-and-oakum caulked joints.

C. Hubless, Cast-Iron Soil Piping Coupled Joints:

1. Join hubless, cast-iron soil piping in accordance with CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.

D. Threaded Joints: Thread pipe with tapered pipe threads in accordance with ASME B1.20.1.

1. Cut threads full and clean using sharp dies.
2. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

    a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
    b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
    c. Do not use pipe sections that have cracked or open welds.

E. Join stainless steel pipe and fittings with gaskets in accordance with ASME A112.3.1.

F. Join copper tube and fittings with soldered joints in accordance with ASTM B828. Use ASTM B813, water-flushable, lead-free flux and ASTM B32, lead-free-alloy solder.

G. Grooved Joints: Cut groove ends of pipe in accordance with AWWA C606. Lubricate and install gasket over ends of pipes or pipe and fitting. Install coupling housing sections over gasket, with keys seated in piping grooves. Install and tighten housing bolts.

H. Flanged Joints: Align bolt holes. Select appropriate gasket material, size, type, and thickness. Install gasket concentrically positioned. Use suitable lubricants on bolt threads. Torque bolts in cross pattern.

I. Plastic, Nonpressure-Piping, Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings in accordance with the following:

1. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements.
2. ABS Piping: Join in accordance with ASTM D2235 and ASTM D2661 appendixes.
3. PVC Piping: Join in accordance with ASTM D2855 and ASTM D2665 appendixes.

J. Joint Restraints and Sway Bracing:

1. Provide joint restraints and sway bracing for storm drainage piping joints to comply with the following conditions:

    a. Provide axial restraint for pipe and fittings [**5 inches (125 mm)**]<**Insert dimensions**> and larger, upstream and downstream of all changes in direction, branches, and changes in diameter greater than two pipe sizes.
    b. Provide rigid sway bracing for pipe and fittings [**4 inches (100 mm)**]<**Insert dimensions**> and larger, upstream and downstream of all changes in direction 45 degrees and greater.
    c. Provide rigid sway bracing for pipe and fittings [**5 inches (125 mm)**]<**Insert dimensions**> and larger, upstream and downstream of all changes in direction and branch openings.

3.4 INSTALLATION OF SPECIALTY PIPE FITTINGS

A. Transition Couplings:

1. Install transition couplings at joints of piping with small differences in ODs.
2. In Waste Drainage Piping: [**Unshielded**][**Shielded**], nonpressure transition couplings.
3. In Aboveground Force Main Piping: Fitting-type transition couplings.
4. In Underground Force Main Piping:

a. NPS 1-1/2 (DN 40) and Smaller: Fitting-type transition couplings.
b. NPS 2 (DN 50) and Larger: Pressure transition couplings.

B. Dielectric Fittings:

1. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
2. Dielectric Fittings for NPS 2 (DN 50) and Smaller: Use dielectric [**nipples**][**unions**].
3. Dielectric Fittings for NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Use dielectric [**flanges**][**flange kits**][**nipples**].
4. Dielectric Fittings for NPS 5 (DN 125) and Larger: Use dielectric flange kits.

3.5 INSTALLATION OF VALVES

A. General valve installation requirements for general-duty valve installation are specified in Section 220523 "General-Duty Valves for Plumbing Piping."

B. Shutoff Valves:

1. Install shutoff valve on each sewage pump discharge.
2. Install [**gate**][**full-port ball**] valve for piping **NPS 2 (DN 50)** and smaller.
3. Install [**gate**]<**Insert type**> valve for piping **NPS 2-1/2 (DN 65)** and larger.

C. Check Valves: Install swing check valve, between pump and shutoff valve, on each sewage pump discharge.

D. Backwater Valves: Install backwater valves in piping subject to backflow.

1. Horizontal Piping: Horizontal backwater valves.[**Use normally closed type unless otherwise indicated.**]
2. Floor Drains: Drain outlet backwater valves unless drain has integral backwater valve.
3. Install backwater valves in accessible locations.
4. Comply with requirements for backwater valve specified in Section 221319 "Sanitary Waste Piping Specialties."

3.6 INSTALLATION OF HANGERS AND SUPPORTS

A. Comply with requirements for seismic-restraint devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."

B. Comply with requirements for pipe hanger and support devices and installation specified in [**Section 220529 "Hangers and Supports for Plumbing Piping and Equipment"**][**Section 220548.13 "Vibration Controls for Plumbing Piping and Equipment"**].

1. Install [**carbon-steel**]<**Insert material**> pipe hangers for horizontal piping in noncorrosive environments.
2. Install [**stainless steel**][**fiberglass**] pipe hangers for horizontal piping in corrosive environments.
3. Install [**carbon-steel**]<**Insert material**> pipe support clamps for vertical piping in noncorrosive environments.
4. Install stainless steel pipe support clamps for vertical piping in corrosive environments.
5. Vertical Piping: MSS Type 8 or Type 42 clamps.
6. Install individual, straight, horizontal piping runs:

a. 100 Ft. (30 m) and Less: MSS Type 1, adjustable, steel clevis hangers.
b. Longer Than 100 Ft. (30 m): MSS Type 43, adjustable roller hangers.
c. Longer Than 100 Ft. (30 m) if Indicated: MSS Type 49, spring cushion rolls.

7. Multiple, Straight, Horizontal Piping Runs 100 Ft. (30 m) or Longer: MSS Type 44 pipe rolls. Support pipe rolls on trapeze.
8. Base of Vertical Piping: MSS Type 52 spring hangers.

C. Install hangers for [**cast-iron**][**steel**][**stainless steel**][**and**][**copper**] soil piping, with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

D. Install hangers for [**ABS**][**and**][**PVC**] piping, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

E. Support horizontal piping and tubing within **12 inches (300 mm)** of each fitting[**, valve,**] and coupling.

F. Support vertical runs of [**cast-iron**][**steel**][**stainless steel**][**and**][**copper**] soil piping to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

G. Support vertical runs of [**ABS**][**and**][**PVC**] piping to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

3.7 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.

C. Connect waste and vent piping to the following:

1. Plumbing Fixtures: Connect waste piping in sizes indicated, but not smaller than required by plumbing code.
2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by authorities having jurisdiction.
3. Plumbing Specialties: Connect waste and vent piping in sizes indicated, but not smaller than required by plumbing code.
4. Install test tees (wall cleanouts) in conductors near floor and floor cleanouts with cover flush with floor.
5. Install horizontal backwater valves [**with cleanout cover flush with floor**][**in pit with pit cover flush with floor**]<**Insert description**>.
6. Comply with requirements for [**backwater valves**][**cleanouts**][**and**][**drains**] specified in Section 221319 "Sanitary Waste Piping Specialties."
7. Equipment: Connect waste piping as indicated.

a. Provide shutoff valve if indicated and union for each connection.
b. Use flanges instead of unions for connections **NPS 2-1/2 (DN 65)** and larger.

D. Connect force-main piping to the following:

1. Sanitary Sewer: To exterior force main.
2. Sewage Pump: To sewage pump discharge.

E. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.

F. Make connections in accordance with the following unless otherwise indicated:

1. Install unions, in piping **NPS 2 (DN 50)** and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping **NPS 2-1/2 (DN 65)** and larger, adjacent to flanged valves and at final connection to each piece of equipment.

3.8 IDENTIFICATION

A. Identify exposed sanitary waste and vent piping.

B. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.9 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.

1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

D. Test sanitary waste and vent piping in accordance with procedures of authorities having jurisdiction or, in absence of published procedures, as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired.

    a. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.

2. Leave uncovered and unconcealed new, altered, extended, or replaced waste and vent piping until it has been tested and approved.

    a. Expose work that was covered or concealed before it was tested.

3. Roughing-in Plumbing Test Procedure: Test waste and vent piping except outside leaders on completion of roughing-in.

    a. Close openings in piping system and fill with water to point of overflow, but not less than **10 ft. head of water (30 kPa head of water)**.
    b. From 15 minutes before inspection starts to completion of inspection, water level must not drop.

c. Inspect joints for leaks.

4. Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight.

   a. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into piping system equal to pressure of **1 inch wg (250 Pa)**.
   b. Use U-tube or manometer inserted in trap of water closet to measure this pressure.
   c. Air pressure must remain constant without introducing additional air throughout period of inspection.
   d. Inspect plumbing fixture connections for gas and water leaks.

5. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
6. Prepare reports for tests and required corrective action.

E. Test force-main piping in accordance with procedures of authorities having jurisdiction or, in absence of published procedures, as follows:

1. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved.

   a. Expose work that was covered or concealed before it was tested.

2. Cap and subject piping to static-water pressure of **50 psig (345 kPa)** above operating pressure, without exceeding pressure rating of piping system materials.

   a. Isolate test source and allow to stand for four hours.
   b. Leaks and loss in test pressure constitute defects that must be repaired.

3. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
4. Prepare reports for tests and required corrective action.

3.10 CLEANING AND PROTECTION

A. Clean interior of piping. Remove dirt and debris as work progresses.

B. Protect sanitary waste and vent piping during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

C. Place plugs in ends of uncompleted piping at end of day and when work stops.

D. Exposed Plastic Piping: Protect [**ABS**][**PVC**] plumbing vents exposed to sunlight with two coats of water-based latex paint.

E. Repair damage to adjacent materials caused by waste and vent piping installation.

3.11 PIPING SCHEDULE

A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.

B. Aboveground, soil and waste piping NPS 4 (DN 100) and smaller are to be the following:

1. Service cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless, cast-iron soil pipe and fittings[**and hubless, single-stack aerator fittings**]; [**CISPI**][**heavy-duty**] hubless-piping couplings; and coupled joints.
3. Galvanized-steel pipe, drainage fittings, and threaded joints.
4. Stainless steel pipe and fittings, sealing rings, and gasketed joints.
5. Copper Type DWV tube, copper drainage fittings, and soldered joints.
6. [**Solid-wall**][**Cellular-core**] ABS pipe, ABS socket fittings, and solvent-cemented joints.
7. [**Solid-wall**][**Cellular-core**] PVC pipe, PVC socket fittings, and solvent-cemented joints.
8. Dissimilar Pipe-Material Couplings: [**Unshielded**][**Shielded**], nonpressure transition couplings.

C. Aboveground, soil and waste piping NPS 5 (DN 125) and larger are to be the following:

1. Service cast iron, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless, cast-iron soil pipe and fittings [**and hubless, single-stack aerator fittings**]; [**CISPI**][**heavy-duty**] hubless-piping couplings; and coupled joints.
3. Galvanized-steel pipe, drainage fittings, and threaded joints.
4. Stainless steel pipe and fittings, sealing rings, and gasketed joints.
5. [**Solid-wall**][**Cellular-core**] PVC pipe, PVC socket fittings, and solvent-cemented joints.
6. Dissimilar Pipe-Material Couplings: [**Unshielded**][**Shielded**], nonpressure transition couplings.

D. Aboveground, vent piping NPS 4 (DN 100) is to be the following:

1. Service cast iron, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless, cast-iron soil pipe and fittings; [**CISPI**][**heavy-duty**] hubless-piping couplings; and coupled joints.
3. Galvanized-steel pipe, drainage fittings, and threaded joints.
4. Stainless steel pipe and fittings gaskets, and gasketed joints.
5. Copper Type DWV tube, copper drainage fittings, and soldered joints.

    a. Option for Vent Piping, NPS 2-1/2 and NPS 3-1/2 (DN 65 and DN 90): Hard copper tube, **Type M (Type C)**; copper pressure fittings; and soldered joints.

6. [**Solid-wall**][**Cellular-core**] ABS pipe, ABS socket fittings, and solvent-cemented joints.
7. [**Solid-wall**][**Cellular-core**] PVC pipe, PVC socket fittings, and solvent-cemented joints.
8. Dissimilar Pipe-Material Couplings: [**Unshielded**][**Shielded**], nonpressure transition couplings.

E. Aboveground, vent piping NPS 5 (DN 125) and larger is to be the following:

1. Service cast iron, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless, cast-iron soil pipe and fittings; [**CISPI**][**heavy-duty**] hubless-piping couplings; and coupled joints.
3. Galvanized-steel pipe, drainage fittings, and threaded joints.
4. [**Solid-wall**][**Cellular-core**] PVC pipe, PVC socket fittings, and solvent-cemented joints.
5. Dissimilar Pipe-Material Couplings: [**Unshielded**][**Shielded**], nonpressure transition couplings.

F. Underground, soil, waste, and vent piping NPS 4 (DN 100) and smaller are to be the following:

1. [**Extra-heavy**][**Service**] cast-iron soil piping; [**gaskets; and gasketed**][**caulking materials; and caulked**] joints.
2. Hubless, cast-iron soil pipe and fittings; [**CISPI**][**heavy-duty**][**cast-iron**] hubless-piping couplings; and coupled joints.
3. Stainless steel pipe and fittings, gaskets, and gasketed joints.
4. [**Solid-wall**][**Cellular-core**] ABS pipe, ABS socket fittings, and solvent-cemented joints.
5. [**Solid-wall**][**Cellular-core**] PVC pipe, PVC socket fittings, and solvent-cemented joints.
6. Dissimilar Pipe-Material Couplings: [**Unshielded**][**Shielded**], nonpressure transition couplings.

G. Underground, soil and waste piping NPS 5 (DN 125) and larger are to be the following:

1. [**Extra-heavy**][**Service**], cast-iron soil piping; [**gaskets; and gasketed**][**caulking materials; and caulked**] joints.
2. Hubless, cast-iron soil pipe and fittings; [**CISPI**][**heavy-duty**][**cast-iron**] hubless-piping couplings; coupled joints.
3. [**Solid-wall**][**Cellular-core**] PVC pipe, PVC socket fittings, and solvent-cemented joints.
4. Dissimilar Pipe-Material Couplings: [**Unshielded**][**Shielded**], nonpressure transition couplings.

H. Aboveground sanitary-sewage force mains NPS 1-1/2 and NPS 2 (DN 40 and DN 50) are to be the following:

1. Hard copper tube, **Type L (Type B)**; copper pressure fittings; and soldered joints.
2. Galvanized-steel pipe, pressure fittings, and threaded joints.

I. Aboveground sanitary-sewage force mains NPS 2-1/2 to NPS 6 (DN 65 to DN 150) are to be the following:

1. Hard copper tube, **Type L (Type B)**; copper pressure fittings; and soldered joints.
2. Galvanized-steel pipe, pressure fittings, and threaded joints.
3. Grooved-end, galvanized-steel pipe; grooved-joint, galvanized-steel-pipe appurtenances; and grooved joints.

J. Underground sanitary-sewage force mains NPS 4 (DN 100) and smaller are to be the following:

1. [**Hard**][**Soft**] copper tube, **Type L (Type B)**; [**wrought-**]copper pressure fittings; and soldered joints.
2. Ductile-iron, mechanical-joint piping and mechanical joints.
3. Ductile-iron, push-on-joint piping and push-on joints.
4. Ductile-iron, grooved-joint piping and grooved joints.
5. Fitting-type transition coupling for piping smaller than **NPS 1-1/2 (DN 40)** and pressure transition coupling for **NPS 1-1/2 (DN 40)** and larger if dissimilar pipe materials.

K. Underground sanitary-sewage force mains NPS 5 (DN 125) and larger are to be the following:

1. Hard copper tube, **Type L (Type B)**; [**wrought-**]copper pressure fittings; and soldered joints.
2. Ductile-iron, mechanical-joint piping and mechanical joints.
3. Ductile-iron, push-on-joint piping and push-on joints.
4. Ductile-iron, grooved-joint piping and grooved joints.
5. Pressure transition couplings if dissimilar pipe materials.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 13 19 00 - SANITARY WASTE PIPING SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Backwater valves, horizontal, cast iron.
2. Backwater valves, drain-outlet type.
3. Backwater valves, horizontal, plastic.
4. Cleanouts, cast iron, exposed.
5. Cleanouts, stainless steel, exposed.
6. Cleanouts, cast iron, exposed, floor mounted.
7. Cleanouts, stainless steel, exposed, floor mounted.
8. Cleanouts, cast iron, wall mounted.
9. Cleanouts, plastic, floor mounted.
10. Air-admittance valves, at fixture.
11. Air-admittance valves, stack mounted.
12. Air-admittance valves, wall box.
13. Miscellaneous sanitary drainage piping specialties.

B. Related Requirements:

1. Section 076200 "Sheet Metal Flashing and Trim" for metal roof flashing assemblies.
2. Section 077200 "Roof Accessories" for preformed flashings.
3. Section 078413 "Penetration Firestopping" for through-penetration firestop assemblies.
4. Section 221323 "Sanitary Waste Interceptors" for metal and concrete interceptors outside the building, grease interceptors, grease-removal devices, oil interceptors, and solids interceptors.
5. Section 221423 "Storm Drainage Piping Specialties" for trench drains for storm water, channel drainage systems for storm water, roof drains, and catch basins.
6. Section 224300 "Healthcare Plumbing Fixtures" for plaster sink interceptors.
7. Section 334200 "Stormwater Conveyance" for storm drainage piping and piping specialties outside the building.

1.2 DEFINITIONS

A. ABS: Acrylonitrile butadiene styrene.

B. EPDM: Ethylene propylene diene monomer.

C. PVC: Polyvinyl chloride.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of specified product.

B. Shop Drawings:

1. Frost-Resistant Vent Terminals: Show fabrication and installation details.

1.4 INFORMATIONAL SUBMITTALS

A. Field Quality Control Reports: For specified tests and inspections.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For sanitary waste piping specialties.

PART 2 - PRODUCTS

2.1 ASSEMBLY REQUIREMENTS

A. Provide sanitary waste piping specialties bearing label, stamp, or other markings of specified testing agency.

B. Comply with NSF/ANSI 14 for plastic sanitary waste piping specialty components.

2.2 BACKWATER VALVES

A. Backwater Valves, Horizontal, Cast Iron :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    b. [**Josam Company**]
    c. [**MIFAB, Inc**]
    d. [**WATTS; A Watts Water Technologies Company**]
    e. [**Zurn; Zurn Elkay**]

2. Standard: ASME A112.14.1.
3. Size: Same as connected piping.
4. Body: Cast iron.
5. Cover: Cast iron with [**bolted**][**threaded**] access check valve.
6. End Connections: [**Hub and spigot**][**hubless**] .
7. Check Valve: Removable bronze swing check, factory assembled or field modified to hang [**closed**][**open for airflow unless subject to backflow condition**] .
8. Extension: ASTM A74, Service Class; full-size, cast-iron, soil-pipe extension to field-installed cleanout at floor; in place of backwater valve cover.

B. Backwater Valves, Drain-Outlet Type :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]

b. [**Josam Company**]
c. [**WATTS; A Watts Water Technologies Company**]
d. [**Zurn; Zurn Elkay**]

2. Size: Same as floor drain outlet.
3. Body: Cast iron or bronze; made for vertical installation in bottom outlet of floor drain.
4. Check Valve: Removable ball float.
5. Inlet: Threaded.
6. Outlet: Threaded or spigot.

C. Backwater Valves, Horizontal, Plastic :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Endura; a Canplas Industries Company**]
b. [**IPS Corporation**]
c. [**NDS Inc**]
d. [**Oatey Co.**]
e. [**Plastic Oddities**]
f. [**Sioux Chief Manufacturing Company, Inc.**]
g. [**Zurn; Zurn Elkay**]

2. Size: Same as connected piping.
3. Body: [**ABS**][**PVC**] .
4. Cover: Same material as body with threaded access to check valve.
5. Check Valve: Removable swing check.
6. End Connections: Socket type.

2.3 CLEANOUTS

A. Cleanouts, Cast Iron, Exposed :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
b. [**Josam Company**]
c. [**MIFAB, Inc**]
d. [**Tyler Pipe; a part of the McWane family of companies**]
e. [**WATTS; A Watts Water Technologies Company**]
f. [**Zurn; Zurn Elkay**]

2. Standard: ASME A112.36.2.
3. Size: Same as connected drainage piping.
4. Body Material: [**Hub-and-spigot, cast-iron soil pipe T-branch**][**Hubless, cast-iron soil pipe test tee**] as required to match connected piping.
5. Closure: [**Countersunk**][**raised-head**] , [**brass**][**cast-iron**][**plastic**] plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

B. Cleanouts, Stainless Steel, Exposed :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**BLÜCHER; A Watts Water Technologies Company**]
   b. [**Josam Company**]
   c. [**Kusel Equipment Co**]
   d. [**Zurn Elkay Water Solutions**]

2. Standard: ASME A112.3.1.
3. Size: Same as connected drainage piping.
4. Body Material: Stainless steel tee with side cleanout as required to match connected piping.
5. Closure: Stainless steel plug with seal.

C. Cleanouts, Cast Iron, Exposed, Floor Mounted :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
   b. [**Josam Company**]
   c. [**MIFAB, Inc**]
   d. [**Sioux Chief Manufacturing Company, Inc.**]
   e. [**WATTS; A Watts Water Technologies Company**]
   f. [**Zurn; Zurn Elkay**]

2. Standard: ASME A112.36.2 for [**adjustable housing**][**cast-iron soil pipe with cast-iron ferrule**][**heavy-duty, adjustable housing**][**threaded, adjustable housing**] cleanout.
3. Size: Same as connected branch.
4. Body or Ferrule: Cast iron.
5. Clamping Device: [**Not required**][**Required**] .
6. Outlet Connection: [**Inside caulk**][**Spigot**][**Threaded**] .
7. Closure: [**Brass plug with straight threads and gasket**][**Brass plug with tapered threads**][**Cast-iron plug**][**Plastic plug**] .
8. Adjustable Housing Material: [**Cast iron**][**Plastic**] with [**threads**][**setscrews or other device**] .
9. Frame and Cover Material and Finish: [**Nickel-bronze, copper alloy**][**Painted cast iron**][**Polished bronze**][**Rough bronze**][**Stainless steel**].
10. Frame and Cover Shape: [**Round**][**Square**].
11. Top-Loading Classification: [**Extra-Heavy**][**Heavy**][**Light**][**Medium**] Duty.
12. Riser: ASTM A74, [**Extra-Heavy**][**Service**] Class, cast-iron drainage pipe fitting and riser to cleanout.

D. Cleanouts, Stainless Steel, Exposed, Floor Mounted :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**BLÜCHER; A Watts Water Technologies Company**]
b. [**Josam Company**]
c. [**Kusel Equipment Co**]
d. [**Zurn; Zurn Elkay**]

2. Standards: ASME A112.3.1 [**; NSF listed**] .
3. Size: Same as connected branch.

4. Housing: [**Type 304**][**Type 316**] stainless steel.
5. Closure: [**Stainless steel with seal**][**Plastic plug**] .
6. Riser: ASTM A74, [**Extra-Heavy**][**Service**] Class, [**stainless steel**][**cast-iron**] drainage pipe fitting and riser to cleanout.
7. Body or Ferrule: Stainless steel.
8. Clamping Device: [**Not required**][**Required**] .
9. Outlet Connection: [**Inside caulk**][**Spigot**][**Threaded**][**Butt-weld**] .
10. Adjustable Housing Material: [**Cast iron**][**Plastic**] with [**threads**][**setscrews or other device**] .
11. Frame and Cover Material and Finish: Stainless steel.
12. Frame and Cover Shape: [**Round**][**Square**] .
13. Top-Loading Classification: [**Extra Heavy**][**Heavy**][**Light**][**Medium**] Duty.

E. Cleanouts, Cast Iron, Wall Mounted :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
b. [**Josam Company**]
c. [**MIFAB, Inc**]
d. [**WATTS; A Watts Water Technologies Company**]
e. [**Zurn; Zurn Elkay**]

2. Standard: ASME A112.36.2. Include wall access.
3. Size: Same as connected drainage piping.
4. Body: [**Hub-and-spigot, cast-iron soil pipe T-branch**][**Hubless, cast-iron soil pipe test tee**] as required to match connected piping.
5. Closure Plug:

a. Material: [**Brass**][**Cast iron**] .
b. Closure Type: [**Countersunk**][**raised**] head.
c. Drilled and threaded for cover attachment screw.
d. Size: Same as or not more than one size smaller than cleanout size.

6. Wall Access, Cover Plate: Round, [**deep, chrome-plated bronze**][**flat, chrome-plated brass or stainless steel**] cover plate with screw.
7. Wall Access, Frame and Cover: [**Round**][**Square**] , [**nickel-bronze, copper-alloy, or stainless steel**] wall-installation frame and cover.

F. Cleanouts, Plastic, Floor Mounted :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Endura; a Canplas Industries Company**]
b. [**IPS Corporation**]
c. [**NDS Inc**]
d. [**Plastic Oddities**]
e. [**Sioux Chief Manufacturing Company, Inc.**]
f. [**Zurn; Zurn Elkay**]

2. Size: Same as connected branch.
3. Body: [**ABS**][**PVC**] .
4. Closure Plug: [**ABS**][**PVC**] .
5. Riser: Drainage pipe fitting and riser to cleanout of same material as drainage piping.

2.4 AIR-ADMITTANCE VALVES

A. Air-Admittance Valves, at Fixture :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Oatey Co.**]
b. [**ProVent Systems**]
c. [**Studor, Inc.; a brand of IPS Corporation**]

2. Standard: ASSE 1051, Type A for single fixture or Type B for branch piping.
3. Housing: [**ABS**][**PVC**] .
4. Operation: Mechanical sealing diaphragm.
5. Size: Same as connected fixture or branch vent piping.

B. Air-Admittance Valves, Stack Mounted :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Oatey Co.**]
b. [**Sioux Chief Manufacturing Company, Inc.**]
c. [**Studor, Inc.; a brand of IPS Corporation**]

2. Standard: ASSE 1050 for vent stacks.
3. Housing: [**ABS**][**PVC**] .
4. Operation: Mechanical sealing diaphragm.
5. Size: Same as connected stack vent or vent stack.

C. Air-Admittance Valves, Wall Box :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Oatey Co.**]
b. [**Sioux Chief Manufacturing Company, Inc.**]
c. [**Studor, Inc.; a brand of IPS Corporation**]

2. Description: White plastic housing with white plastic grille, made for recessed installation. Include bottom pipe connection and space to contain one air-admittance valve.
3. Size: Approximately **6 inches wide by 6 inches high by 4 inches deep (150 mm wide by 150 mm high by 100 mm deep)**.

2.5 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES

A. Open Drains :

1. Description: Shop or field fabricate from ASTM A74, Service Class, hub-and-spigot, cast-iron soil-pipe fittings. Include P-trap, hub-and-spigot riser section; and where required, increaser fitting joined with ASTM C564 rubber gaskets.
2. Size: Same as connected waste piping [**with increaser fitting of size indicated**] .

B. Deep-Seal Traps :

1. Description: Cast-iron or bronze casting, with inlet and outlet matching connected piping and cleanout trap-seal primer valve connection.
2. Size: Same as connected waste piping.

a. NPS 2 (DN 50): **4-inch- (100-mm-)** minimum water seal.
b. NPS 2-1/2 (DN 65) and Larger: **5-inch- (125-mm-)** minimum water seal.

C. Floor Drain, Trap-Seal Primer Fittings :

1. Description: Cast iron, with threaded inlet and threaded or spigot outlet, and trap-seal primer valve connection.
2. Size: Same as floor drain outlet with **NPS 1/2 (DN 15)** side inlet.

D. Floor Drain, Inline Trap Seal :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Green Drain, Inc.**]
b. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
c. [**Josam Company**]
d. [**MIFAB, Inc**]
e. [**RectorSeal Plumbing; A CSW Industrials Company**]
f. [**Sure Seal; a RectorSeal brand**]
g. [**Zurn; Zurn Elkay**]

2. Description: Inline floor drain trap seal, forming a physical barrier to slow trap evaporation while not impeding flow from drain.
3. Material: [**Polypropylene**][**ABS**][**EPDM**][**Silicone rubber**] .
4. Standard: Tested and certified in accordance with ASSE 1072.
5. Listing: [**ICC-ES**][**IAPMO**] listed.
6. Size: Same as floor drain outlet or strainer throat.

E. Air-Gap Fittings :

1. Standard: ASME A112.1.2, for fitting designed to ensure fixed, positive air gap between installed inlet and outlet piping.
2. Body: Bronze or cast iron.
3. Inlet: Opening in top of body.
4. Outlet: Larger than inlet.
5. Size: Same as connected waste piping and with inlet large enough for associated indirect waste piping.

F. Sleeve Flashing Device :

1. Description: Manufactured, cast-iron fitting, with clamping device that forms sleeve for pipe floor penetrations of floor membrane. Include galvanized-steel pipe extension in top of fitting that will extend [**1 inch (25 mm)**][**2 inches (51 mm)**] above finished floor and galvanized-steel pipe extension in bottom of fitting that will extend through floor slab.
2. Size: As required for close fit to riser or stack piping.

G. Stack Flashing Fittings :

1. Description: Counterflashing-type, cast-iron fitting, with bottom recess for terminating roof membrane, and with threaded or hub top for extending vent pipe.
2. Size: Same as connected stack vent or vent stack.

H. Vent Caps :

1. Description: Cast-iron body with threaded or hub inlet and vandal-proof design. Include vented hood and setscrews to secure to vent pipe.
2. Size: Same as connected stack vent or vent stack.

I. Frost-Resistant Vent Terminals :

1. Description: Manufactured or shop-fabricated assembly constructed of copper, lead-coated copper, or galvanized steel.
2. Design: To provide **1-inch (25-mm)** enclosed air space between outside of pipe and inside of flashing collar extension, with counterflashing.

J. Expansion Joints :

1. Standard: ASME A112.6.4.
2. Body: Cast iron with bronze sleeve, packing, and gland.
3. End Connections: Matching connected piping.
4. Size: Same as connected soil, waste, or vent piping.

PART 3 - EXECUTION

3.1 INSTALLATION OF BACKWATER VALVES

A. Install backwater valves in building drain piping.

1. For interior installation, provide cleanout deck plate flush with floor and centered over backwater valve cover, and of adequate size to remove valve cover for servicing.

3.2 INSTALLATION OF CLEANOUTS

A. Install cleanouts in aboveground piping and building drain piping in accordance with the following, unless otherwise indicated:

1. Size same as drainage piping up to **NPS 4 (DN 100)**. Use **NPS 4 (DN 100)** for larger drainage piping unless larger cleanout is indicated.
2. Locate at each change in direction of piping greater than 45 degrees.
3. Locate at minimum intervals of **50 ft. (15 m)** for piping **NPS 4 (DN 100)** and smaller and **100 ft. (30 m)** for larger piping.
4. Locate at base of each vertical soil and waste stack.

B. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.

C. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.

3.3 INSTALLATION OF AIR-ADMITTANCE VALVES

A. Install fixture air-admittance valves on fixture drain piping.

B. Install stack air-admittance valves at top of stack vent and vent stack piping.

C. Install air-admittance-valve wall boxes recessed in wall.

3.4 INSTALLATION OF MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES

A. Open Drains: Assemble open drain fittings and install with top of hub [**1 inch (25 mm)**][**2 inches (51 mm)**] above floor.

B. Deep-Seal Traps: Install deep-seal traps on floor drains and other waste outlets, as indicated [**in the floor drain schedule**][**on Drawings**] .

C. Floor Drain, Trap-Seal Primer Fittings: Install floor drain, trap-seal primer fittings on inlet to floor drains that require trap-seal primer connection.

1. Exception: Fitting may be omitted if trap has trap-seal primer connection.
2. Size: Same as floor drain inlet.

D. Floor Drain, Inline Trap Seal: Install inline trap seal device in the outlet of the floor drain in accordance with manufacturer's written instructions.

1. Verify that the floor drain is clean and free of debris.
2. Insert the trap seal into the drain outlet so that it seats fully and forms a secure, watertight fit without distortion.
3. Ensure the device is oriented correctly to maintain proper one-way flow and prevent sewer gas backflow.
4. After installation, pour water through the drain to confirm unrestricted flow and proper operation of the trap seal.
5. Protect inline trap seals from construction debris and damage until Project completion.

E. Air-Gap Fittings: Install air-gap fittings on draining-type backflow preventers and on indirect-waste piping discharge into sanitary drainage system.

F. Sleeve Flashing Device: Install sleeve and sleeve seals with each riser passing through floors with waterproof membrane.

1. Ensure the pipe is clean and free of debris.

G. Stack Flashing Fittings: Install stack flashing fittings and seals with each stack passing through floors with waterproof membrane.

1. Ensure the pipe is clean and free of debris.

H. Vent Caps: Install vent caps on each vent pipe passing through roof.

1. Ensure the pipe is clean and free of debris.
2. Use setscrews to fasten the cap to the pipe, making sure it is tight and vandal-proof.
3. Confirm that there is at least a **1-inch (25-mm)** gap between the pipe and the roof substrate.

I. Frost-Resistant Vent Terminals: Install frost-resistant vent terminals on each vent pipe passing through roof. Maintain **1-inch (25-mm)** clearance between vent pipe and roof substrate.

1. Ensure the pipe is clean and free of debris.

J. Expansion Joints: Install expansion joints on vertical stacks and conductors. Position expansion joints for easy access and maintenance.

K. Blocking: Install blocking reinforcement for wall-mounting-type specialties.

L. Traps, General: Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.

3.5 PIPING CONNECTIONS

A. Comply with requirements in Section 221316 "Sanitary Waste and Vent Piping" for piping installation requirements. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment, to allow service and maintenance.

3.6 LABELING AND IDENTIFYING

A. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit.

1. Nameplates and signs are specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.7 PROTECTION

A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.

B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 22 13 19 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 13 19 00A - HIGH-EFFICIENCY PARTICULATE AIR FILTRATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. HEPA rigid-cell box filters.
2. HEPA V-bank cell filters.
3. HEPA filter diffusers.
4. HEPA filter fan modules.
5. ULPA filters.
6. 95 percent DOP filters.
7. HEPA/ULPA filter holding frames.
8. Side-access HEPA/ULPA filter housings.
9. Side-access HEPA/ULPA filter containment housings.
10. HEPA, ULPA, and 95 percent DOP filter gauges.

B. Related Requirements:

1. Section 233119 "HVAC Casings" for customized housings used for HEPA filters.
2. Section 234100 "Particulate Air Filtration" for particulate-air filters used in combination with HEPA filters.

1.2 DEFINITIONS

A. DOP: Dioctyl phthalate.

B. HEPA: High-efficiency particulate air.

C. PAO: Poly-alpha-olefin.

D. PSL: Polystyrene latex.

E. ULPA: Ultralow penetration air.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product. Include dimensions; operating characteristics; required clearances and access; rated flow capacity, including initial and final pressure drop at rated airflow; efficiency and test method; fire classification; furnished specialties; and accessories for each model indicated.

B. Sustainable Design Submittals:

1. Product data showing compliance with ASHRAE 62.1.

C. Shop Drawings: For air filters.

1. Include plans, elevations, sections, details, and attachments to other work.
2. Show filter rack assembly, dimensions, materials, and methods of assembly of components.
3. Include setting drawings, templates, and requirements for installing anchor bolts and anchorages.

1.4 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Data: Certificates, for filters, accessories, and components from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Product Test Reports: For each filter, for tests performed by [**manufacturer and witnessed by a qualified testing agency**][**a qualified testing agency**].

C. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each type of filter and rack to include in emergency, operation, and maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Provide [**one**]<**Insert number**> complete set(s) of filters for each filter bank. If system includes prefilters, provide only prefilters.

1.7 QUALITY ASSURANCE

A. Testing Agency Qualifications: An NRTL.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store products in a clean, dry place.

B. Comply with manufacturer's written rigging and installation instructions for unloading and moving to final installed location.

C. Handle products carefully to prevent damage, breaking, denting, and scoring. Do not install damaged products.

D. Protect products from weather, dirt, dust, water, construction debris, and physical damage.

1. Retain factory-applied coverings on equipment to protect finishes during construction and remove just prior to operating unit.
2. Cover unit openings before installation to prevent dirt and dust from entering inside of units. If required to remover coverings during unit installation, reapply coverings over openings after unit installation and remove just prior to operating unit.
3. Replace installed products damaged during construction.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Filters shall withstand the effects of earthquake motions determined according to [**ASCE/SEI 7**]<**Insert requirement**>.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
2. Component Importance Factor: [**1.5**][**1.0**].
3. <**Insert requirements for Component Amplification Factor and Component Response Modification Factor**>.

B. ASHRAE 62.1 Compliance:

1. Comply with applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality"; Section 5 - "Systems and Equipment"; and Section 7 - "Construction and Startup."

C. Comply with NFPA 90A and NFPA 90B.

D. Comply with UL 900.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended use.

F. Capacities and Characteristics:

1. Drawing Tag No.: <**Insert designation**>.
2. Face Size: [**24 by 24 inches (600 by 600 mm)**][**24 by 12 inches (600 by 300 mm)**][**12 by 24 inches (300 by 600 mm)**]<**Insert dimensions**>.
3. Depth: <**Insert number**> **inches (mm)** nominal.
4. Surface Area: <**Insert number**> **sq. ft. (sq. m)**.
5. Number of Filters, Wide by High: <**Insert number wide by number high**>.
6. System Airflow: <**Insert number**> **cfm (L/s)**.
7. Maximum or Rated Face Velocity: <**Insert number**> **fpm (m/s)**.
8. Initial Resistance: <**Insert number**> **inches wg (Pa)**.
9. Recommended Final Resistance: <**Insert number**> **inches wg (Pa)**.
10. Access: [**Front**][**Back**][**Side**].
11. Performance Level: [**99.97 percent HEPA**][**99.9997 percent ULPA**][**95 percent DOP**]<**Insert requirement**>.

2.2 HEPA RIGID-CELL BOX FILTERS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be**

incorporated into the Work include, but are not limited to, the following]:

1. [**AAF International**]
2. [**Air-Nu**]
3. [**Camfil Farr Inc.**]
4. [**Flanders Corporation**]
5. [**Glasfloss Industries**]
6. [**Parker Hannifin Corporation; HVAC Filtration Division**]
7. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AAF International**]
2. [**Air-Nu**]
3. [**Camfil Farr Inc.**]
4. [**Flanders Corporation**]
5. [**Glasfloss Industries**]
6. [**Parker Hannifin Corporation; HVAC Filtration Division**]
7. <**Insert manufacturer's name**>

C. Source Limitations: Obtain from single source from single manufacturer.

D. Description: Factory-fabricated, disposable, packaged air filters with media perpendicular to airflow and with holding frames.

E. Standards:

1. Comply with IEST-RP-CC001.6.
2. Comply with UL 586.
3. Comply with IEST-RP-CC034.4.

F. Media: Fibrous material, constructed so individual pleats are maintained under rated-airflow conditions.

1. Internal Separators: [**None**][**Corrugated aluminum**]<**Insert type**>.
2. Media to Filter Frame Seal Material: [**Polyurethane**]<**Insert material**>.
3. Faceguard Material: [**Aluminum**][**Stainless steel**]<**Insert material**>.
4. Faceguard Location: [**None**][**Upstream**][**and**][**downstream**].

G. Filter-Media Frames:

1. Material: [**Fire-retardant plywood**][**Aluminum**][**Fire-retardant particleboard**][**Galvanized steel**][**Non-fire-retardant particleboard**]<**Insert material**>.
2. Filter Frame to Mounting Frame Seal Material: [**Neoprene**][**Knife edge in silicone gel-filled channel**][**Knife edge in urethane gel-filled channel**]<**Insert material**>.
3. Filter Frame to Mounting Frame Seal Location: [**Upstream**][**Downstream**].
4. Style: [**Box**][**Gel track**]<**Insert style**>.

2.3 HEPA V-BANK CELL FILTERS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Flanders Corporation**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Flanders Corporation**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain from single source from single manufacturer.

D. Description: Factory-fabricated, disposable, packaged air filters with media at an angle to airflow and with holding frames.

E. Standards:

1. Comply with IEST-RP-CC001.6.
2. Comply with UL 586.
3. Comply with IEST-RP-CC034.4.

F. Media: Fibrous material, constructed so individual pleats are maintained under rated-airflow conditions.

1. Internal Separators: [**None**][**Corrugated aluminum**]<**Insert type**>.
2. Media to Filter Frame Seal Material: [**Polyurethane**]<**Insert sealant**>.

G. Filter-Media Frames:

1. Material: [**Fire-retardant plywood**][**Aluminum**][**Fire-retardant particleboard**][**Galvanized steel**][**Non-fire-retardant particleboard**]<**Insert material**>.
2. Filter Frame to Mounting Frame Seal Material: [**Neoprene**][**Knife edge in silicone gel-filled channel**][**Knife edge in urethane gel-filled channel**]<**Insert material**>.
3. Filter Frame to Mounting Frame Seal Location: [**Upstream**][**Downstream**].
4. Style: [**Box**][**Gel track**]<**Insert style**>.

2.4 HEPA FILTER DIFFUSERS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Envirco**]
4. [**Flanders Corporation**]
5. [**Microzone Corporation**]
6. [**Parker Hannifin Corporation; HVAC Filtration Division**]
7. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Envirco**]
4. [**Flanders Corporation**]
5. [**Microzone Corporation**]
6. [**Parker Hannifin Corporation; HVAC Filtration Division**]
7. <**Insert manufacturer's name**>

C. Source Limitations: Obtain from single source from single manufacturer.

D. Description: Factory-fabricated, individually ducted, HEPA filter-holding ceiling modules.

E. Standards:

1. Comply with IEST-RP-CC001.6.
2. Comply with UL 586.
3. Comply with IEST-RP-CC034.4.

F. Media: Fibrous glass, constructed of continuous sheets with closely spaced pleats with separators.

1. Media to Frame Side Bond: Urethane or polyurethane sealant.
2. Frame to Grid Bond: <**Insert type of gasket**>[**gasket**][**Knife edge for gel-filled channel**].
3. Application: [**Class 100,000 (ISO 8)**][**Class 10,000 (ISO 7)**][**Class 1,000 (ISO 6)**][**Class 100 (ISO 5)**][**Class 10 (ISO 4)**]<**Insert class**> clean room.

G. Casing:

1. Configuration: [**Ducted**][**Plenum**] inlet.
2. Module Material: [**Minimum 16-gauge (0.508-mm) extruded aluminum**]<**Insert gauge and material**> with [**mill**]<**Insert type**> finish.
3. Suspension: [**Ceiling grid**][**Independent**].

H. Accessories:

1. [**Fixed**][**Adjustable**] diffusion damper.
2. Diffusion-damper adjustment port.
3. Filter test port.

2.5 HEPA FILTER FAN MODULES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Envirco**]
4. [**Microzone Corporation**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Envirco**]
4. [**Microzone Corporation**]
5. <**Insert manufacturer's name**>

C. Source Limitations: Obtain from single source from single manufacturer.

D. Description: Factory-fabricated, HEPA filter ceiling module with fan.

E. Standards:

1. Comply with IEST-RP-CC001.6.
2. Comply with UL 586.
3. Comply with IEST-RP-CC034.4.

F. Media: Fibrous glass, constructed of continuous sheets with closely spaced pleats with separators.

1. Frame Material: [**Aluminum**]<**Insert material**>.
2. Media to Frame Side Bond: Urethane or polyurethane sealant.
3. Frame to Grid Bond: <**Insert type of gasket**>[**gasket**][**Knife edge for gel-filled channel**].
4. Application: [**Class 100,000 (ISO 8)**][**Class 10,000 (ISO 7)**][**Class 1,000 (ISO 6)**][**Class 100 (ISO 5)**][**Class 10 (ISO 4)**]<**Insert class**> clean room.
5. Faceguard: [**Stainless steel**]<**Insert material**>.

G. Casing:

1. Configuration: [**Ducted inlet**][**Plenum inlet**][**Plenum inlet with MERV 8 prefilter**].
2. Module Material: [**Minimum 16-gauge (0.508-mm) extruded aluminum**]<**Insert gauge and material**> with [**mill**]<**Insert type**> finish.
3. Suspension: [**Ceiling grid**][**Independent**].

H. Accessories: Filter test port.

I. Motor:

1. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230500 "Common Work Results for HVAC."
2. Type: [**Permanent-split capacitor with SCR for speed adjustment**][**Electronically commutated motor**].
3. Fan-Motor Assembly Isolation: Rubber isolators.
4. Enclosure: <**Insert type**>.
5. Enclosure Materials: <**Insert type**>.
6. Motor Bearings: <**Insert special requirements**>.
7. Unusual Service Conditions:

    a. Ambient Temperature: <**Insert number**>**deg F (deg C)**.
    b. Altitude: <**Insert number**> **feet (m)** above sea level.
    c. High humidity.
    d. <**Insert conditions**>.

8. Efficiency: Premium efficient.
9. NEMA Design: <**Insert designation**>.
10. Service Factor: <**Insert value**>.
11. Motor Speed: [**Single speed**][**Multispeed**][**with variable-speed control**].
12. Electrical Characteristics:

a. Horsepower: <**Insert number**> hp.
b. Volts: [**120**][**208**][**230**][**460**]<**Insert number**> V.
c. Phase: [**Single**][**Three**].
d. Hertz: 60 Hz.
e. Full-Load Amperes: <**Insert number**> A.
f. Minimum Circuit Ampacity: <**Insert number**> A.
g. Maximum Overcurrent Protection: <**Insert number**> A.

2.6 ULPA FILTERS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Flanders Corporation**]
4. [**Parker Hannifin Corporation; HVAC Filtration Division**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Flanders Corporation**]
4. [**Parker Hannifin Corporation; HVAC Filtration Division**]
5. <**Insert manufacturer's name**>

C. Source Limitations: Obtain from single source from single manufacturer.

D. Description: Factory-fabricated ULPA filters with holding casing.

E. Standards:

1. Comply with IEST-RP-CC001.6.
2. Comply with UL 586.
3. Comply with IEST-RP-CC007.3.
4. Comply with IEST-RP-CC034.4.

F. Media: Fibrous material, constructed of continuous sheets with closely spaced pleats that are maintained under rated-airflow conditions.

1. Internal Separators: [**None**][**Corrugated aluminum**]<**Insert type**>.
2. Media to Filter Frame Seal Material: [**Polyurethane**]<**Insert material**>.
3. Faceguard Material: [**Aluminum**][**Stainless steel**]<**Insert material**>.
4. Faceguard Location: [**None**][**upstream**][**and**][**downstream**].

G. Filter-Media Frames:

1. Material: [**Fire-retardant plywood**][**Aluminum**][**Fire-retardant particleboard**][**Galvanized steel**][**Non-fire-retardant particleboard**]<**Insert material**>.
2. Filter Frame to Mounting Frame Seal Material: [**Neoprene**][**Silicone Gel**][**Urethane Gel**]<**Insert material**>.

3. Filter Frame to Mounting Frame Seal Location: [**Upstream**][**Downstream**].
4. Style: [**Box**][**Gel track**]<**Insert style**>.

2.7 95 PERCENT DOP FILTERS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Flanders Corporation**]
4. [**Parker Hannifin Corporation; HVAC Filtration Division**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Flanders Corporation**]
4. [**Parker Hannifin Corporation; HVAC Filtration Division**]
5. <**Insert manufacturer's name**>

C. Source Limitations: Obtain filters from single source from single manufacturer.

D. Description: Factory-fabricated, 95 percent DOP filters with holding casing.

E. Media: Fibrous material, constructed of continuous sheets with closely spaced pleats that are maintained under rated-airflow conditions.

1. Internal Separators: [**None**][**Corrugated aluminum**]<**Insert type**>.
2. Media to Filter Frame Seal Material: [**Polyurethane**]<**Insert material**>.
3. Faceguard Material: [**Aluminum**][**Stainless steel**]<**Insert material**>.
4. Faceguard Location: [**None**][**Upstream**][**Downstream**].

F. Filter-Media Frames:

1. Material: [**Fire-retardant plywood**][**Aluminum**][**Fire-retardant particleboard**][**Galvanized steel**][**Non-fire-retardant particleboard**]<**Insert material**>.
2. Filter Frame to Mounting Frame Seal Material: [**Neoprene**][**Knife edge in silicone gel-filled channel**][**Knife edge in urethane gel-filled channel**].
3. Filter Frame to Mounting Frame Seal Location: [**Upstream**][**Downstream**].
4. Style: [**Box**][**Gel track**]<**Insert style**>.

2.8 HEPA/ULPA FILTER HOLDING FRAMES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Flanders Corporation**]

4. [**Parker Hannifin Corporation; HVAC Filtration Division**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Flanders Corporation**]
4. [**Parker Hannifin Corporation; HVAC Filtration Division**]
5. <**Insert manufacturer's name**>

C. Source Limitations: Obtain from single source from single manufacturer.

D. Description: Framing members with access for upstream (front) or downstream (back) filter servicing, cut to size and prepunched for assembly into modules, specifically designed for HEPA/ULPA/95 percent DOP filter banks.

E. Material: Minimum **14-gauge (1.9-mm)** [**stainless-**][**or**][**galvanized-**]steel framing members. Factory-prepunched holes and dimples for ease of filter alignment and assembly.

F. Prefilters: Incorporate a separate holding frame for prefilter, removable from front or back.

G. Gasketed Sealing: Factory-installed, positive-sealing device for each filter to ensure seal between gasketed filter elements to prevent bypass of unfiltered air. Filter latching mechanism to seat each filter firmly against holding frame surface.

H. Knife-Edge Sealing: Knife-edge to mate with [**HEPA**][**and**][**ULPA**] filter elements to prevent bypass of unfiltered air. Factory-installed, positive-locking mechanism for each filter to seat the knife edge into the gel during installation and to remove the filter from the knife edge during filter replacement.

2.9 SIDE-ACCESS HEPA/ULPA FILTER HOUSINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Flanders Corporation**]
4. [**Parker Hannifin Corporation; HVAC Filtration Division**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Flanders Corporation**]
4. [**Parker Hannifin Corporation; HVAC Filtration Division**]
5. <**Insert manufacturer's name**>

C. Source Limitations: Obtain from single source from single manufacturer.

D. Description: Factory-assembled, side-access filter housings, specifically designed for HEPA/ULPA/95 percent DOP filter banks, with flanges to connect to duct or casing system.

E. Factory Testing: Factory pressure test housing and sealed joints at [**6.0-inch wg (1500 Pa)**]<**Insert value**>. Document and submit to confirm maximum <**Insert percentage**> leakage.

F. Materials: [**Galvanized steel**]<**Insert material**>[**double-wall casing with 1-inch (25-mm) insulation**][**double-wall casing with 2-inch (50-mm) insulation**].

1. Pressure taps and fittings.
2. DOP test ports.
3. Mounted magnehelic gauges.

G. Prefilters: Integral tracks to accommodate [**2-inch- (50-mm-)**][**4-inch- (100-mm-)**]<**Insert dimension**> thick, disposable [**or washable**]filters.

H. Access Doors: [**Hinged, with continuous**][**Continuous**] gaskets on perimeter and positive-locking devices. Arranged for filter access from [**one-side**][**both-sides**] access door.

I. Gasketed Sealing: Factory-installed, positive-sealing device for each filter to ensure seal between gasketed filter elements to prevent bypass of unfiltered air. Filter latching mechanism to seat each filter firmly against side-access housing channel surface.

J. Knife-Edge Sealing: Knife-edge to mate with [**HEPA**][**and**][**ULPA**] filter elements to prevent bypass of unfiltered air. Factory-installed, positive-locking mechanism for each filter to seat the knife edge into the gel during installation and to remove the filter from the knife edge during filter replacement.

2.10 SIDE-ACCESS HEPA/ULPA FILTER CONTAINMENT HOUSINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Flanders Corporation**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AAF International**]
2. [**Camfil Farr Inc.**]
3. [**Flanders Corporation**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain from single source from single manufacturer.

D. Description: Factory-assembled, side-access housings, with bag in/bag out feature to protect maintenance personnel from coming into direct contact with the interior of the housing and the contaminated filter media during required filter change out, with flanges to connect to duct or casing system.

E. Standards: Test according to ASME AG-1.

F. Casing:

1. Material: Constructed of minimum 16-gauge- (1.5-mm-) thick, [**galvanized steel**][**stainless steel**][**, double-wall casing with 2-inch (50-mm) fiberglass insulation,**] to hold filters. Side servicing through gasketed access doors on one side. Equip housings to be capable of connection to other housings. Equip housings with metal slide channel tracks and locking mechanisms to hold filters, and the following:

   a. Pressure gauge tap and fitting.
   b. DOP test ports.
   c. Lifting lugs.

2. Casing Pressure: Casing constructed for up to [**positive/negative 6.0-inch wg (1500 Pa)**][**positive/negative 10-inch wg (2500 Pa)**]<**Insert casing pressure requirement**>.

G. Isolation Dampers:

1. Material: Stainless-steel body, blade, and flanges.
2. Round Damper Blade: <**Insert diameter**> damper, replaceable, solid silicone gasket sandwiched between stainless-steel plates, providing silicone gasket blade to knife edge seal.

   a. Bubble-tight seal at minimum 10-inch wg (2490-Pa) differential pressure to comply with ASME N509.

H. Prefilters: Integral tracks to accommodate [2-inch- (50-mm-)][4-inch- (100-mm-)] thick, disposable filters.

I. Access Doors: Continuous gaskets on perimeter and positive-locking devices. Provide ribbed bagging rim behind access door and PVC bags for bag-in, bag-out arrangement. Arrange so filter cartridges can be loaded from an access door for each tier and section of the following:

1. Combination prefilter and HEPA filter.
2. HEPA filter.
3. Upstream and downstream test section.

J. Gasketed Sealing: Factory-installed, positive-sealing device for each filter to ensure seal between gasketed filter elements to prevent bypass of unfiltered air. Filter locking mechanism to seat each filter firmly against side-access housing channel surface.

K. Knife-Edge Sealing: Knife-edge to mate with [**HEPA**][**and**][**ULPA**] filter elements to prevent bypass of unfiltered air. Factory-installed, positive-locking mechanism for each filter to seat the knife edge into the gel during installation and to remove the filter from the knife edge during filter replacement.

L. Accessories:

1. Filter change-out trays.
2. Document-storage pocket.
3. Filter removal rod.

2.11 HEPA, ULPA, AND 95 PERCENT DOP FILTER GAUGES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be**

incorporated into the Work include, but are not limited to, the following]:

1. [**Ashcroft Inc**]
2. [**Dwyer Instruments, Inc**]
3. [**Orange Research**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Ashcroft Inc**]
2. [**Dwyer Instruments, Inc**]
3. [**Orange Research**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain from single source from single manufacturer.

D. Description: Diaphragm type with dial and pointer in metal case, vent valves, black figures on white background, and front recalibration adjustment.

1. Diameter: [**4-1/2 inches (115 mm)**][**2-1/2 inches (75 mm)**]<**Insert dimension**>.
2. Material: [**Stainless-steel**]<**Insert material**> case and [**die-cast aluminum**][**stainless-steel**]<**Insert material**> body with [**wetted material matching body material**]<**Insert wetted material**>.
3. Accuracy: [**Plus/minus 2 percent of full scale**]<**Insert accuracy**>.
4. Scale Range for Filter Media Having a Recommended Final Resistance of 2.0- to 3.0-Inch wg (500 to 750 Pa) or Less: **0- to 3.0-inch wg (0 to 750 Pa)**.
5. Scale Range for Filter Media Having a Recommended Final Resistance of 3.0- to 4.0-Inch wg (750 to 1000 Pa) or Less: **0- to 4.0-inch wg (0 to 1000 Pa)**.

E. Accessories: Static-pressure tips, tubing, gauge connections, and mounting bracket.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine ducts, air-handling units, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF FILTERS

A. Position each filter unit with clearance for normal service and maintenance. Anchor filter holding frames to substrate.

B. Install filters in position to prevent passage of unfiltered air.

C. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters that were used during construction and testing with new, clean filters.

D. Coordinate filter installations with duct and air-handling unit installations.

3.3 INSTALLATION OF HEPA, ULPA, AND 95 PERCENT DOP FILTER GAUGES

A. Install filter gauge for each filter bank.

B. Install filter-gauge, static-pressure tips upstream and downstream from filters. Install filter gauges on filter banks with separate static-pressure taps upstream and downstream from filters. Mount filter gauges on outside of filter housing or filter plenum in an accessible position. Adjust and level inclined gauges.

3.4 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between pressure sensors and [**DDC system**]<**Insert system description**>.

C. Connect control wiring between controlled devices.

D. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.5 FIELD QUALITY CONTROL

A. Testing Agency:

1. Owner will engage a qualified testing agency to perform tests and inspections.
2. Engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections[**with the assistance of a factory-authorized service representative**].

D. Tests and Inspections:

1. HEPA and ULPA Filters: Pressurize housing to a minimum of [**6.0-inch wg (1500 Pa)**]<**Insert value**>, and test housing joints, door seals, and sealing edges of filter for air leaks according to pressure-decay method in ASME AG-1.

E. Air filter will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

3.6 CLEANING

A. After completing system installation and testing, adjusting, and balancing air-handling and air-distribution systems, clean filter housings and install new filter media.

3.7 PROTECTION

A. Protect installed products and accessories from damage during construction.

END OF SECTION 22 13 19 00A

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
22 13 19 00	22 13 00 00	Facility Gray-Water Storage Tanks

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 13 19 13 - SANITARY DRAINS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Floor drains.
2. Floor sinks.
3. Trench drains.
4. Concrete trench drain-forming system.

1.2 DEFINITIONS

A. ABS: Acrylonitrile-butadiene styrene.

B. FRP: Fiberglass-reinforced plastic.

C. HDPE: High-density polyethylene.

D. PE: Polyethylene.

E. PP: Polypropylene.

F. PVC: Polyvinyl chloride.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Sanitary drains are to bear label, stamp, or other markings of specified testing agency.

B. Comply with NSF 14 for plastic sanitary piping specialty components.

2.2 FLOOR DRAINS

A. Floor Drain - Cast Iron :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Commercial Enameling Company**]
b. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
c. [**Josam Company**]
d. [**MIFAB, Inc**]
e. [**Prier Products, Inc.**]
f. [**Sioux Chief Manufacturing Company, Inc.**]
g. [**Wade; a subsidiary of McWane Inc.**]
h. [**WATTS; A Watts Water Technologies Company**]
i. [**Whitehall Manufacturing; a division of Morris Group International**]
j. [**Zurn Industries, LLC**]
k. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Commercial Enameling Company**]
b. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
c. [**Josam Company**]
d. [**MIFAB, Inc**]
e. [**Prier Products, Inc.**]
f. [**Sioux Chief Manufacturing Company, Inc.**]
g. [**Wade; a subsidiary of McWane Inc.**]
h. [**WATTS; A Watts Water Technologies Company**]
i. [**Whitehall Manufacturing; a division of Morris Group International**]
j. [**Zurn Industries, LLC**]
k. <**Insert manufacturer's name**>

3. Source Limitations: Obtain cast-iron floor drains from single manufacturer.
4. Standard: ASME A112.6.3[**with backwater valve**].
5. Pattern: [**Area**][**Floor**][**Funnel floor**][**Sanitary**]<**Insert pattern**> drain.
6. Body Material: [**Gray iron**]<**Insert material**>.
7. Seepage Flange: [**Not required**][**Required**].
8. Anchor Flange: [**Not required**][**Required**].
9. Clamping Device: [**Not required**][**Required**].
10. Outlet: [**Bottom**][**Side**]<**Insert type**>.
11. Backwater Valve: [**Drain-outlet type**][**Integral, ASME A112.14.1, swing-check type**][**Not required**].
12. Coating on Interior and Exposed Exterior Surfaces: [**Acid-resistant enamel**][**Not required**]<**Insert material**>.
13. Sediment Bucket: [**Not required**]<**Insert description**>.
14. Top or Strainer Material: [**Bronze**][**Gray iron**][**Nickel bronze**][**Stainless steel**]<**Insert material**>.
15. Top of Body and Strainer Finish: [**Nickel bronze**][**Polished bronze**][**Rough bronze**][**Stainless steel**]<**Insert finish**>.
16. Top Shape: [**Round**][**Square**]<**Insert shape**>.
17. Dimensions of Top or Strainer: <**Insert dimensions and describe body, sump, and grate**>.
18. Top Loading Classification: [**Extra Heavy Duty**][**Heavy Duty**][**Light Duty**][**Medium Duty**].
19. Funnel: [**Not required**][**Required**]<**Insert description and dimensions**>.
20. Inlet Fitting: [**Not required**][**Gray iron, with threaded inlet and threaded or spigot outlet, and trap-seal primer valve connection**].
21. Trap Material: [**Bronze**][**Cast iron**][**Copper**][**Not required**]<**Insert material**>.
22. Trap Pattern: [**Deep-seal P-trap**][**Standard P-trap**][**Not required**]<**Insert pattern**>.
23. Trap Features: [**Cleanout**][**Trap-seal primer valve drain connection**][**Cleanout and trap-seal primer valve drain connection**][**Not required**]<**Insert type**>.

B. Floor Drain - Stainless Steel, ASME A112.3.1 :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Zurn Industries, LLC**]
    b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Zurn Industries, LLC**]
    b. <**Insert manufacturer's name**>

3. Source Limitations: Obtain stainless steel floor drains, ASME A112.3.1, from single manufacturer.
4. Standard: ASME A112.3.1.
5. Outlet: [**Bottom**][**Side**]<**Insert type**>.
6. Top or Strainer Material: [**Stainless steel**]<**Insert material**>.
7. Top Shape: [**Round**][**Square**]<**Insert shape**>.
8. Dimensions of Top or Strainer: <**Insert dimensions and describe body, sump, and grate**>.
9. Seepage Flange: [**Not required**][**Required**].
10. Anchor Flange: [**Not required**][**Required**].
11. Clamping Device: [**Not required**][**Required**].
12. Trap-Primer Connection: [**Not required**][**Required**].
13. Trap Material: [**Cast iron**][**Stainless steel**][**Not required**]<**Insert material**>.
14. Trap Pattern: [**Deep-seal P-trap**][**Standard P-trap**][**Not required**]<**Insert pattern**>.

C. Floor Drain - Stainless Steel, ASME A112.6.3 :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ACO, Inc.**]
    b. [**BLÜCHER; A Watts Water Technologies Company**]
    c. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    d. [**Josam Company**]
    e. [**Kusel Equipment Co**]
    f. [**Scherping Systems, Inc.**]
    g. [**Sioux Chief Manufacturing Company, Inc.**]
    h. [**Wade; a subsidiary of McWane Inc.**]
    i. [**WATTS; A Watts Water Technologies Company**]
    j. [**Zurn Industries, LLC**]
    k. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ACO, Inc.**]
    b. [**BLÜCHER; A Watts Water Technologies Company**]
    c. [**Jay R. Smith Mfg Co; a division of Morris Group International**]

d. [**Josam Company**]
e. [**Kusel Equipment Co**]
f. [**Scherping Systems, Inc.**]
g. [**Sioux Chief Manufacturing Company, Inc.**]
h. [**Wade; a subsidiary of McWane Inc.**]
i. [**WATTS; A Watts Water Technologies Company**]
j. [**Zurn Industries, LLC**]
k. <**Insert manufacturer's name**>

3. Source Limitations: Obtain stainless steel floor drains, ASME A112.6.3, from single manufacturer.
4. Standard: ASTM A112.6.3.
5. Outlet: [**Bottom**][**Side**]<**Insert type**>.
6. Top or Strainer Material: [**Stainless steel**]<**Insert material**>.
7. Top Shape: [**Round**][**Square**]<**Insert shape**>.
8. Dimensions of Top or Strainer: <**Insert dimensions and describe body, sump, and grate**>.
9. Seepage Flange: [**Not required**][**Required**].
10. Anchor Flange: [**Not required**][**Required**].
11. Clamping Device: [**Not required**][**Required**].
12. Trap-Primer Connection: [**Not required**][**Required**].
13. Trap Material: [**Cast iron**][**Stainless steel**][**Not required**]<**Insert material**>.
14. Trap Pattern: [**Deep-seal P-trap**][**Standard P-trap**][**Not required**]<**Insert pattern**>.

D. Floor Drain - Plastic :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Endura; a brand of IPEX**]
   b. [**IPS Corporation**]
   c. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
   d. [**Josam Company**]
   e. [**Oatey Co.**]
   f. [**Plastic Oddities**]
   g. [**Schluter Systems L.P.**]
   h. [**Sioux Chief Manufacturing Company, Inc.**]
   i. [**Zurn Industries, LLC**]
   j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Endura; a brand of IPEX**]
   b. [**IPS Corporation**]
   c. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
   d. [**Josam Company**]
   e. [**Oatey Co.**]
   f. [**Plastic Oddities**]
   g. [**Schluter Systems L.P.**]
   h. [**Sioux Chief Manufacturing Company, Inc.**]
   i. [**Zurn Industries, LLC**]
   j. <**Insert manufacturer's name**>

3. Source Limitations: Obtain plastic floor drains from single manufacturer.
4. Standard: ASME A112.6.3.
5. Material: [**ABS**][**or**][**PVC**]<**Insert material**>.
6. Seepage Flange: [**Not required**][**Required**].
7. Clamping Device: [**Not required**][**Required**].
8. Outlet: [**Bottom**][**Side**]<**Insert type**>.
9. Sediment Bucket: [**Not required**]<**Insert description**>.
10. Top or Strainer Material: [**Bronze**][**Plastic**][**Stainless steel**]<**Insert other**>.
11. Top of Body and Strainer Finish: [**Nickel bronze**][**Polished bronze**][**Rough bronze**][**Stainless steel**]<**Insert other**>.
12. Top Shape: [**Round**][**Square**]<**Insert shape**>.
13. Dimensions of Top or Strainer: <**Insert dimensions and describe body, sump, and grate if required**>.
14. Trap Material: [**Cast iron**][**Plastic drainage piping**][**Not required**]<**Insert material**>.
15. Trap Pattern: [**Standard P-trap**][**Not required**]<**Insert pattern**>.

2.3 FLOOR SINKS

A. Floor Sink - Cast Iron :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Commercial Enameling Company**]
    b. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    c. [**Wade; a subsidiary of McWane Inc.**]
    d. [**WATTS; A Watts Water Technologies Company**]
    e. [**Zurn Industries, LLC**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Commercial Enameling Company**]
    b. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    c. [**Wade; a subsidiary of McWane Inc.**]
    d. [**WATTS; A Watts Water Technologies Company**]
    e. [**Zurn Industries, LLC**]
    f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain cast-iron floor sinks from single manufacturer.
4. Standard: ASME A112.6.7.
5. Pattern: [**Floor**][**Funnel floor**]<**Insert pattern**> drain.
6. Body Material: Cast iron.
7. Anchor Flange: [**Not required**][**Required**][**, with seepage holes**].
8. Clamping Device: [**Not required**][**Required**].
9. Outlet: Bottom, [**no-hub**]<**Insert type**> connection.
10. Coating on Interior Surfaces: [**Not required**][**Acid-resistant enamel**]<**Insert coating**>.
11. Sediment Bucket: [**Not required**]<**Insert description**>.
12. Internal Strainer: [**Not required**][**Dome**][**Flat**].
13. Internal Strainer Material: [**Aluminum**]<**Insert material**>.
14. Top Grate Material: [**Cast iron**]<**Insert material**>[**, loose**][**, hinged**].

15. Top of Body and Grate Finish: [**Nickel bronze**][**Acid-resistant enamel**]<**Insert finish**>.
16. Top Shape: [**Round**][**Square**]<**Insert shape**>.
17. Dimensions of Top Grate: <**Insert dimensions and describe grate pattern**>.
18. Top Loading Classification: [**No traffic**]<**Insert traffic loading**>.
19. Funnel: [**Not required**][**Required**]. <**Insert material, shape and dimensions**>.
20. <**Insert additional options here**>.

B. Floor Sink - Stainless Steel :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    b. [**Wade; a subsidiary of McWane Inc.**]
    c. [**WATTS; A Watts Water Technologies Company**]
    d. [**Zurn Industries, LLC**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    b. [**Wade; a subsidiary of McWane Inc.**]
    c. [**WATTS; A Watts Water Technologies Company**]
    d. [**Zurn Industries, LLC**]
    e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain stainless steel floor sinks from single manufacturer.
4. Standard: ASME A112.6.7.
5. Pattern: [**Floor**][**Funnel floor**]<**Insert pattern**> drain.
6. Body Material: Stainless steel.
7. Anchor Flange: [**Not required**][**Required**][**, with seepage holes**].
8. Clamping Device: [**Not required**][**Required**].
9. Outlet: Bottom, [**no-hub**]<**Insert type**> connection.
10. Sediment Bucket: [**Not required**]<**Insert description**>.
11. Internal Strainer: [**Not required**][**Dome**][**Flat**].
12. Internal Strainer Material: [**Stainless steel**]<**Insert material**>.
13. Top Grate Material: [**Stainless steel**]<**Insert material**>[**, loose**][**, hinged**].
14. Top of Body and Grate Finish: [**Satin nickel**][**Stainless steel**]<**Insert finish**>.
15. Top Shape: [**Round**][**Square**]<**Insert shape**>.
16. Dimensions of Top Grate: <**Insert dimensions and describe grate pattern**>.
17. Top Loading Classification: [**No traffic**]<**Insert traffic loading**>.
18. Funnel: [**Not required**][**Required**]. <**Insert material, shape and dimensions**>.
19. <**Insert additional options here**>.

C. Floor Sink - Plastic :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Endura; a brand of IPEX**]
b. [**IPS Corporation**]
c. [**Oatey Co.**]
d. [**Plastic Oddities**]
e. [**Sioux Chief Manufacturing Company, Inc.**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Endura; a brand of IPEX**]
b. [**IPS Corporation**]
c. [**Oatey Co.**]
d. [**Plastic Oddities**]
e. [**Sioux Chief Manufacturing Company, Inc.**]
f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain plastic floor sinks from single manufacturer.
4. Standard: ASME A112.6.7.
5. Pattern: [**Floor**][**Funnel floor**]<**Insert pattern**> drain.
6. Body Material: PVC.
7. Outlet: Bottom, PVC primer and solvent cement connection.
8. Sediment Bucket: [**Not required**]<**Insert description**>.
9. Internal Strainer: [**Not required**][**Dome**][**Flat**].
10. Internal Strainer Material: [**PVC**]<**Insert material**>.
11. Top Grate Material: [**PVC**]<**Insert material**>.
12. Top Shape: [**Round**][**Square**]<**Insert shape**>.
13. Dimensions of Top Grate: <**Insert dimensions and describe grate pattern**>.
14. Top Loading Classification: [**No traffic**]<**Insert traffic loading**>.
15. Funnel: [**Not required**][**Required**]. <**Insert material, shape and dimensions**>.
16. <**Insert additional options here**>.

2.4 TRENCH DRAINS

A. Trench Drain, Individual - Cast Iron or Ductile Iron :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
b. [**Josam Company**]
c. [**MIFAB, Inc**]
d. [**Sioux Chief Manufacturing Company, Inc.**]
e. [**Wade; a subsidiary of McWane Inc.**]
f. [**Zurn Industries, LLC**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]

b. [**Josam Company**]
c. [**MIFAB, Inc**]
d. [**Sioux Chief Manufacturing Company, Inc.**]
e. [**Wade; a subsidiary of McWane Inc.**]
f. [**Zurn Industries, LLC**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain trench drains from single manufacturer.
4. Standard: ASME A112.6.3 for trench drains.
5. Material: Cast iron or ductile iron body.
6. Flange: [**Anchor**][**Seepage**][**Not required**].
7. Clamping Device: [**Not required**][**Required**].
8. Outlet: [**Bottom**][**End**][**Side**]<**Insert location**>.
9. Grate Material: [**Ductile iron**][**Ductile iron or gray iron**][**Gray iron**][**Stainless steel**]<**Insert material**>.
10. Grate Finish: [**Painted**][**Not required**]<**Insert finish**>.
11. Dimensions of Frame and Grate: <**Insert dimensions and describe body, sump, and grate if required**>.
12. Top Loading Classification: [**Extra Heavy Duty**][**Heavy Duty**][**Light Duty**][**Medium Duty**].
13. Trap Material: [**Cast iron**][**Stainless steel**][**Not required**]<**Insert material**>.
14. Trap Pattern: [**Standard P-trap**][**Not required**]<**Insert pattern**>.

B. Trench Drain, Individual - Stainless Steel :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**WATTS; A Watts Water Technologies Company**]
   b. [**Whitehall Manufacturing; a division of Morris Group International**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**WATTS; A Watts Water Technologies Company**]
   b. [**Whitehall Manufacturing; a division of Morris Group International**]
   c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain stainless steel trench drain from single manufacturer.
4. Description: Stainless steel trench consisting of sloped trench body, grates, and appurtenances; designed so grates fit into trench body recesses without rocking or rattling.
5. Standard: ASME A112.6.3.
6. Dimensions: <**Insert dimensions**> wide by <**Insert dimensions long**>.
7. Grates: Manufacturer's designation "[**Heavy**][**Medium**] Duty," with slots or perforations, and of width and thickness that fit recesses in channels.

   a. Material: Stainless steel.
   b. Locking Mechanism: [**Manufacturer's standard device for securing grates to body channel**][**Not required**].

8. Covers: Solid stainless steel of width and thickness that fit recesses in channel, and of length indicated.

9. Supports, Anchors, and Setting Devices: Manufacturer's standard, unless otherwise indicated.

C. Trench Drain, Modular Channel System - Stainless Steel :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ACO, Inc.**]
   b. [**BLÜCHER; A Watts Water Technologies Company**]
   c. [**Eric'sons**]
   d. [**MultiDrain Systems, Inc.**]
   e. [**Vodaland**]
   f. [**Whitehall Manufacturing; a division of Morris Group International**]
   g. [**Zurn Industries, LLC**]
   h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ACO, Inc.**]
   b. [**BLÜCHER; A Watts Water Technologies Company**]
   c. [**Eric'sons**]
   d. [**MultiDrain Systems, Inc.**]
   e. [**Vodaland**]
   f. [**Whitehall Manufacturing; a division of Morris Group International**]
   g. [**Zurn Industries, LLC**]
   h. <**Insert manufacturer's name**>

3. Source Limitations: Obtain modular stainless steel channel systems, from single manufacturer.
4. Standard: ASME A112.6.8.
5. Description: Modular system of stainless steel channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
6. Channel Sections: Interlocking joint, stainless steel with level invert.

   a. Dimensions: [**6 inches (152 mm)**][**12 inches (305 mm)**] wide. Include number of units required to form total lengths indicated.

7. Grates: Manufacturer's designation "[**Heavy**][**Medium**] Duty," with slots or perforations, and of width and thickness that fit recesses in channels.

   a. Material: [**Ductile iron**][**Fiberglass**][**Galvanized steel**][**Gray iron**][**Stainless steel**]<**Insert material**>.
   b. Locking Mechanism: [**Manufacturer's standard device for securing grates to channel sections**][**Not required**].

8. Covers: Solid [**ductile or gray iron**][**stainless steel**]<**Insert material**>, of width and thickness that fit recesses in channels, and of lengths indicated.
9. Supports, Anchors, and Setting Devices: Manufacturer's standard, unless otherwise indicated.
10. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

D. Trench Drain, Modular Channel System - Polymer Concrete, Narrow, Sloped Invert :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the**

following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

a. [**ABT, Inc.**]
b. [**ACO, Inc.**]
c. [**Eric'sons**]
d. [**Hubbell Utility Solutions; Hubbell Incorporated**]
e. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
f. [**MultiDrain Systems, Inc.**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABT, Inc.**]
b. [**ACO, Inc.**]
c. [**Eric'sons**]
d. [**Hubbell Utility Solutions; Hubbell Incorporated**]
e. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
f. [**MultiDrain Systems, Inc.**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain narrow, sloped-invert, polymer-concrete channel drainage systems from single manufacturer.
4. Standard: ASME A112.6.8.
5. Description: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
6. Channel Sections: Narrow, interlocking-joint, sloped-invert, polymer-concrete modular units with end caps.

a. Include rounded bottom, with built-in invert slope of 0.6 percent and with outlets in number, sizes, and locations indicated.
b. Include extension sections necessary for required depth.
c. Dimensions: [**4-inch (102-mm)**]<**Insert dimension**> inside width. Include number of units required to form total lengths indicated.
d. Frame: [**Gray-iron, cast iron, or galvanized steel for grates**][**Not required**]<**Insert material**>.

7. Grates: Manufacturer's designation "[**Heavy**][**Medium**] Duty," with slots or perforations, and of width and thickness that fit recesses in channel sections.

a. Material: [**Ductile iron**][**Fiberglass**][**Galvanized steel**][**Gray iron**][**Stainless steel**]<**Insert material**>.
b. Locking Mechanism: [**Manufacturer's standard device for securing grates to channel sections**][**Not required**].

8. Covers: Solid [**ductile or gray iron**]<**Insert material**>, of width and thickness that fit recesses in channel sections, and of lengths indicated.
9. Supports, Anchors, and Setting Devices: Manufacturer's standard, unless otherwise indicated.
10. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

E. Trench Drain, Modular Channel System - Polymer Concrete, Narrow, Level Invert :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABT, Inc.**]
    b. [**ACO, Inc.**]
    c. [**Hubbell Utility Solutions; Hubbell Incorporated**]
    d. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    e. [**Josam Company**]
    f. [**MultiDrain Systems, Inc.**]
    g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABT, Inc.**]
    b. [**ACO, Inc.**]
    c. [**Hubbell Utility Solutions; Hubbell Incorporated**]
    d. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    e. [**Josam Company**]
    f. [**MultiDrain Systems, Inc.**]
    g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain narrow, level-insert, polymer-concrete channel drainage systems from single manufacturer.
4. Standard: ASME A112.6.8.
5. Description: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
6. Channel Sections: Narrow, interlocking-joint, precast, polymer-concrete modular units with end caps.

    a. Include rounded bottom, with level invert and with **NPS 4 (DN 100)** outlets in number and locations indicated.
    b. Dimensions: [**5-inch (127-mm)**]<**Insert dimension**> inside width and [**9-3/4 inches (248 mm)**]<**Insert dimension**> inside depth. Include number of units required to form total lengths indicated.
    c. Frame: [**Gray-iron or galvanized steel for grates**][**Not required**]<**Insert material**>.

7. Grates: Manufacturer's designation "[**Heavy**][**Medium**] Duty," with slots or perforations, and of width and thickness that fit recesses in channel sections.

    a. Material: [**Ductile iron**][**Fiberglass**][**Galvanized steel**][**Cast iron or gray iron**][**Stainless steel**]<**Insert material**>.
    b. Locking Mechanism: [**Manufacturer's standard device for securing grates to channel sections**][**Not required**].

8. Covers: Solid [**ductile, cast, or gray iron**]<**Insert material**>, of width and thickness that fit recesses in channel sections, and of lengths indicated.
9. Supports, Anchors, and Setting Devices: Manufacturer's standard, unless otherwise indicated.
10. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

F. Trench Drain, Modular Channel System - Polymer Concrete, Wide, Level Invert :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the**

following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

a. [**ABT, Inc.**]
b. [**ACO, Inc.**]
c. [**Eric'sons**]
d. [**Hubbell Utility Solutions; Hubbell Incorporated**]
e. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
f. [**Josam Company**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABT, Inc.**]
b. [**ACO, Inc.**]
c. [**Eric'sons**]
d. [**Hubbell Utility Solutions; Hubbell Incorporated**]
e. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
f. [**Josam Company**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain wide, level-insert, polymer-concrete channel drainage systems from single manufacturer.
4. Standard: ASME A112.6.8.
5. Description: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
6. Channel Sections: Wide, interlocking-joint, precast, polymer-concrete modular units with end caps.

a. Include flat or rounded bottom, with level invert and with outlets in number, sizes, and locations indicated.
b. Dimensions: [**8-inch (203-mm)**]<**Insert dimension**> inside width and [**13-3/4 inches (350 mm)**]<**Insert dimension**> inside depth. Include number of units required to form total lengths indicated.
c. Frame: [**Galvanized steel, gray iron, or cast iron for grates**][**Not required**]<**Insert material**>.

7. Grates: Manufacturer's designation "[**Heavy**][**Medium**] Duty," with slots or perforations, and of width and thickness that fit recesses in channel sections.

a. Material: [**Ductile iron**][**Fiberglass**][**Galvanized steel**][**Gray iron**][**Stainless steel**]<**Insert material**>.
b. Locking Mechanism: [**Manufacturer's standard device for securing grates to channel sections**][**Not required**].

8. Covers: Solid [**ductile or gray iron**]<**Insert material**>, of width and thickness that fit recesses in channel sections, and of lengths indicated.
9. Supports, Anchors, and Setting Devices: Manufacturer's standard, unless otherwise indicated.
10. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

G. Trench Drain, Modular Channel System - FRP :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ACO, Inc.**]
    b. [**Aquaduct, Inc.**]
    c. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    d. [**Zurn Industries, LLC**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ACO, Inc.**]
    b. [**Aquaduct, Inc.**]
    c. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    d. [**Zurn Industries, LLC**]
    e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain FRP channel drainage systems from single manufacturer.
4. Standard: ASME A112.6.8.
5. Description: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
6. Channel Sections: Interlocking-joint, sloped-invert, FRP modular units, with end caps. Include flat, rounded, or inclined inside bottom, with outlets in number, sizes, and locations indicated.

    a. Dimensions: [**4 inches (102 mm)**][**4 or 6 inches (102 or 152 mm)**][**6 inches (152 mm)**][**6 or 8 inches (152 or 203 mm)**][**8 inches (203 mm)**] wide. Include number of units required to form total lengths indicated.
    b. Frame: [**Galvanized steel**][**Stainless steel**][**Manufacturer's standard metal**]<**Insert material**> for grates.

7. Grates: With slots or perforations and widths and thickness that fit recesses in channel sections.

    a. Material: [**Fiberglass**][**Galvanized steel**][**Gray iron**][**Stainless steel**]<**Insert material**>.
    b. Locking Mechanism: [**Manufacturer's standard device for securing grates to channel sections**][**Not required**].

8. Covers: Solid [**ductile or gray iron**]<**Insert material**>, of width and thickness that fit recesses in channel sections, and of lengths indicated.
9. Supports, Anchors, and Setting Devices: Manufacturer's standard, unless otherwise indicated.
10. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

H. Trench Drain, Modular Channel System - HDPE or PE :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    b. [**Sioux Chief Manufacturing Company, Inc.**]
    c. [**Tuf-Tite Corporation**]
    d. [**Zurn Industries, LLC**]

e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
   b. [**Sioux Chief Manufacturing Company, Inc.**]
   c. [**Tuf-Tite Corporation**]
   d. [**Zurn Industries, LLC**]
   e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain HDPE or PE channel drainage systems from single manufacturer.
4. Standard: ASME A112.6.8.
5. Description: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
6. Channel Sections: Interlocking-joint, HDPE or PE modular units, with end caps. Include flat, rounded, or inclined bottom, with level invert and with outlets in number, sizes, and locations indicated.

   a. Dimensions: **4 inches (102 mm)** wide. Include number of units required to form total lengths indicated.

7. Grates: With slots or perforations and widths and thickness that fit recesses in channel sections.

   a. Material: [**Fiberglass**][**Galvanized steel**][**Gray iron**][**Stainless steel**]<**Insert material**>.
   b. Color: <**Insert color or delete subparagraph**>.

8. Supports, Anchors, and Setting Devices: Manufacturer's standard, unless otherwise indicated.
9. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

I. Trench Drain, Modular Channel System - PP :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Infinity Plastics, Inc.**]
   b. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Infinity Plastics, Inc.**]
   b. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
   c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain PP channel drainage systems from single manufacturer.
4. Standard: ASME A112.6.8.
5. Description: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
6. Channel Sections: Interlocking-joint, PP modular units, with end caps. Include flat, rounded, or

inclined bottom, with level invert and with outlets in number, sizes, and locations indicated.

a. Dimensions: **4 inches (102 mm)** wide. Include number of units required to form total lengths indicated.

7. Grates: With slots or perforations and widths and thickness that fit recesses in channel sections.

a. Material: [**Fiberglass**][**Galvanized steel**][**Gray iron**][**Stainless steel**]<**Insert material**>.
b. Color: <**Insert color or delete subparagraph**>.

8. Supports, Anchors, and Setting Devices: Manufacturer's standard, unless otherwise indicated.
9. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

J. Trench Drain, Modular Channel System - PVC :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**MultiDrain Systems, Inc.**]
b. [**NDS Inc**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**MultiDrain Systems, Inc.**]
b. [**NDS Inc**]
c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain PVC channel drainage systems from single manufacturer.
4. Standard: ASME A112.6.8.
5. Description: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
6. Channel Sections: Interlocking-joint, PVC modular units, with end caps. Include flat, rounded, or inclined bottom, with level invert and with outlets in number, sizes, and locations indicated.

a. Dimensions: **4 inches (102 mm)** wide. Include number of units required to form total lengths indicated.

7. Grates: With slots or perforations and widths and thickness that fit recesses in channel sections.

a. Material: [**Fiberglass**][**Galvanized steel**][**Gray iron**][**Stainless steel**]<**Insert material**>.
b. Color: <**Insert color or delete subparagraph**>.

8. Supports, Anchors, and Setting Devices: Manufacturer's standard, unless otherwise indicated.
9. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

2.5 CONCRETE TRENCH DRAIN-FORMING SYSTEM

A. Concrete Trench Drain-Forming System: .

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABT, Inc.**]
    b. [**ACO, Inc.**]
    c. [**Eric'sons**]
    d. [**MultiDrain Systems, Inc.**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABT, Inc.**]
    b. [**ACO, Inc.**]
    c. [**Eric'sons**]
    d. [**MultiDrain Systems, Inc.**]
    e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain concrete trench drain-forming system from single manufacturer.
4. Description: Radius trench-drain-forming system, including a removable form that is customizable for width, depth, length, shape, slope, frame material, and grate material.
5. Form Bottom: [**Smooth radius**][**Vee**][**Flat**]<**Insert option**>.
6. Form Use: [**Single use**][**or**][**reusable**].
7. Form Covers: Plywood or metal to keep concrete out of trench form during installation.
8. Width: [**8-inch (203-mm)**][**10-inch (254-mm)**][**12-inch (305-mm)**][**18-inch (457-mm)**][**24-inch (610-mm)**]<**Insert width**> inside dimension.
9. Depth: [**See Drawings**]<**Insert dimension**>.
10. Length: [**See Drawings**]<**Insert dimension**>.
11. Bottom Shape: [**Smooth radius**][**Vee**]<**Insert shape**>.
12. Slope: [**Level - no slope**][**0.5 percent**][**0.6 percent**][**1.0 percent**]<**Insert slope**>.
13. Frame/Grate Seat:

    a. Load Bearing, <**Insert loading requirement**>.
    b. Material: [**Powder-coated steel**][**Galvanized steel**][**Iron**][**Aluminum**][**Plastic**][**FRP**][**Stainless steel**]<**Insert material**>.

14. Concrete Anchors: [**18 inches (457 mm) o.c.**]<**Insert spacing**>.
15. Grate:

    a. Manufacturer's Load Bearing Designation: "[**Heavy**][**Medium**] Duty".
    b. Material: [**Ductile iron**][**FRP**][**Galvanized steel**][**Cast iron**][**Stainless steel**]<**Insert material**>.
    c. Grate Type: [**ADA**][**Heel-proof**][**slotted**][**perforated**][**bar**]<**Insert grate type**>.

PART 3 - EXECUTION

3.1 INSTALLATION OF SANITARY DRAINS

A. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.

1. Position floor drains for easy access and maintenance.
2. Set floor drains below elevation of surrounding finished floor to allow floor drainage.
3. Set with grates depressed according to the following drainage area radii:

    a. Radius, 30 Inches (750 mm) or Less: Equivalent to 1 percent slope, but not less than **1/4-inch (6.35-mm)** total depression.
    b. Radius, 30 to 60 Inches (750 to 1500 mm): Equivalent to 1 percent slope.
    c. Radius, 60 Inches (1500 mm) or Larger: Equivalent to 1 percent slope, but not greater than **1-inch (25-mm)** total depression.

4. Install floor-drain flashing collar or flange, so no leakage occurs between drain and adjoining flooring.

    a. Maintain integrity of waterproof membranes where penetrated.

5. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.

B. Install trench drains at low points of surface areas to be drained.

1. Set grates of drains flush with finished surface, unless otherwise indicated.

C. Comply with ASME A112.3.1 for installation of stainless steel channel drainage systems.

1. Install on support devices, so that top will be flush with adjacent surface.

D. Install FRP channel drainage system components on support devices, so that top will be flush with adjacent surface.

E. Install plastic channel drainage system components on support devices, so that top will be flush with adjacent surface.

F. Install open drain fittings with top of hub [**1 inch (25 mm)**][**2 inches (51 mm)**]<**Insert dimension**> above floor.

3.2 PIPING CONNECTIONS

A. Comply with requirements in Section 221316 "Sanitary Waste and Vent Piping" for piping installation requirements. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Comply with requirements in Section 221319 "Sanitary Waste Piping Specialties" for backwater valves, air admittance devices and miscellaneous sanitary drainage piping specialties.

C. Comply with requirements in Section 221323 "Sanitary Waste Interceptors" for grease interceptors, grease-removal devices, oil interceptors, sand interceptors, and solid interceptors.

D. Install piping adjacent to equipment to allow service and maintenance.

3.3 ELECTRICAL CONNECTIONS

A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 LABELING AND IDENTIFYING

A. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.5 PROTECTION

A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.

B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 22 13 19 13

Task	Specification	Specification Description
22 13 19 13	22 13 19 00	Sanitary Waste Piping Specialties
22 13 19 13	22 13 00 00	Facility Gray-Water Storage Tanks
22 13 19 13	22 13 19 00a	High-Efficiency Particulate Air Filtration

SECTION 22 13 23 00 - SANITARY WASTE INTERCEPTORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Interceptors, grease.
2. Grease-removal devices.
3. Interceptors, oil.
4. Interceptors, sand.
5. Interceptors, sand and oil.
6. Interceptors, solids.
7. Precast-concrete manhole risers.
8. Manhole risers, frames, and covers.
9. Sampling ports.

1.2 DEFINITIONS

A. FOGs: Fats, oils, greases.

B. FRP: Fiberglass-reinforced plastic.

C. PP: Polypropylene.

1.3 ACTION SUBMITTALS

A. Product Data: For each type and size of sanitary waste interceptor.

1. Include materials of fabrication, dimensions, rated capacities, retention capacities, operating characteristics, size and location of each pipe connection, furnished specialties, and accessories.
2. Include diagrams of power wiring.

B. Shop Drawings: For each type and size of precast-concrete sanitary waste interceptor.

1. Include materials of construction, dimensions, rated capacities, retention capacities, location and size of each pipe connection, furnished specialties, and accessories.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Interceptors, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Piping connections. Include size, location, and elevation of each.
2. Interface with underground structures and utility services.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For sanitary waste interceptors to include in emergency, operation, and maintenance manuals.

1.6 FIELD CONDITIONS

A. Interruption of Existing Sewer Services: Do not interrupt services to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary sewer services in accordance with requirements indicated:

1. Notify [**Architect**][**Construction Manager**][**Owner**] no fewer than [**seven**]<**Insert number**> days in advance of proposed interruption of service.
2. Do not proceed with interruption of sewer services without [**Architect's**][**Construction Manager's**][**Owner's**] written permission.

PART 2 - PRODUCTS

2.1 INTERCEPTORS, GREASE

A. Interceptors, Grease - Precast Concrete :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Advance Concrete Products Co.**]
    b. [**Copeland Precast, Inc.**]
    c. [**Oldcastle Infrastructure Inc.; CRH Americas**]
    d. [**Wieser Concrete**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Advance Concrete Products Co.**]
    b. [**Copeland Precast, Inc.**]
    c. [**Oldcastle Infrastructure Inc.; CRH Americas**]
    d. [**Wieser Concrete**]
    e. <**Insert manufacturer's name**>

3. Standard:

    a. ASTM C913.
    b. [**Specific requirements of the Authority Having Jurisdiction**].

4. Description: Factory-fabricated grease interceptor for intercepting and retaining FOG from food[**-preparation**][**or**][**-processing**] wastewater.
5. Include rubber-gasketed joints, vent connections, manholes, compartments or baffles, and piping

or openings to retain grease and to permit wastewater flow.

6. Inlet, Outlet, and Vent Piping Connections: Hub, or no-hub (hubless) unless otherwise indicated.
7. Structural Design Loads:

    a. Light-Traffic Load: Comply with ASTM C890, A-8.
    b. Medium-Traffic Load: Comply with ASTM C890, A-12.
    c. Heavy-Traffic Load: Comply with ASTM C890, A-16.
    d. Walkway Load: Comply with ASTM C890, A-03.

8. Resilient Pipe Connectors: **ASTM C923 (ASTM C923M)**, cast or fitted into interceptor walls, for each pipe connection.
9. Steps: [**Individual FRP steps or FRP ladder**][**Individual FRP steps, FRP ladder, or ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**][**ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**]<**Insert material**>, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at **12- to 16-inch (300- to 400-mm)** intervals. Omit steps if total depth from floor of interceptor to finished grade is less than [**60 inches (1500 mm)**]<**Insert dimension**>.
10. Grade Rings: Reinforced-concrete rings, **6- to 9-inch (150- to 225-mm)** total thickness, to match diameter of manhole frame and cover.
11. Manhole Frames and Covers: Ferrous; **24-inch (610-mm)** ID by **7- to 9-inch (175- to 225-mm)** riser with **4-inch- (100-mm-)** minimum-width flange and **26-inch- (660-mm-)** diameter cover.

    a. Ductile Iron: ASTM A536, Grade 60-40-18, unless otherwise indicated.
    b. Gray Iron: ASTM A48/A48M, Class 35, unless otherwise indicated.
    c. Include indented top design with lettering cast into cover, using wording equivalent to "[**INTERCEPTOR**][**GREASE INTERCEPTOR**][**SANITARY SEWER**]" <**Insert lettering**>.

12. Capacities and Characteristics:

    a. Length by Width by Depth: <**Insert inches (mm)**>.
    b. Number of Compartments: [**One**][**Two**]<**Insert number**>.
    c. Flow Rate: <**Insert gpm (L/s)**>.
    d. Retention Capacity: <**Insert lb (kg)**>.
    e. Inlet and Outlet Pipe Size: <**Insert NPS (DN)**>.

        1) Centerline of Inlet to Floor: <**Insert inches (mm)**>.
        2) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

    f. Trapped Outlet: Integral.
    g. Cleanout: Integral[**or field installed on outlet**].
    h. Vent Pipe Size: <**Insert NPS (DN)**>.
    i. Mounting: [**Above floor**][**Recessed in acid-resistant, coated steel frame and cradle**][**Recessed, flush with floor**]<**Insert mounting**>.
    j. Flow-Control Fitting: Required.
    k. Operation: [**Manual cleaning**][**Semiautomatic, manual drawoff**]<**Insert operation**>.

B. Interceptors, Grease - Steel :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    b. [**Josam Company**]

c. [**MIFAB, Inc**]
d. [**ParkUSA; a Northwest Pipe Company**]
e. [**Rockford Separators**]
f. [**Wade; a subsidiary of McWane Inc.**]
g. [**WATTS; A Watts Water Technologies Company**]
h. [**Zurn Industries, LLC**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
b. [**Josam Company**]
c. [**MIFAB, Inc**]
d. [**ParkUSA; a Northwest Pipe Company**]
e. [**Rockford Separators**]
f. [**Wade; a subsidiary of McWane Inc.**]
g. [**WATTS; A Watts Water Technologies Company**]
h. [**Zurn Industries, LLC**]
i. <**Insert manufacturer's name**>

3. Standard:

a. PDI G101.
b. [**ASME A112.14.3**].

4. PDI Seal: Required.
5. Description: Factory-fabricated grease interceptor for intercepting and retaining FOG from food[**-preparation**][**or**][**-processing**] wastewater.
6. Body Material: Steel.
7. Interior Lining: Factory-applied epoxy, polyurethane, or manufacturer's acid-resistant coating.
8. Exterior Coating: Factory-applied epoxy, polyurethane, or manufacturer's acid-resistant coating.
9. Inlet, Outlet, and Vent Piping Connections: Hub, or no-hub (hubless) unless otherwise indicated.
10. Body Extension: <**Insert inches (mm)**> height.
11. Capacities and Characteristics:

a. Length by Width by Depth: <**Insert inches (mm)**>.
b. Number of Compartments: [**One**][**Two**]<**Insert number**>.
c. Flow Rate: <**Insert gpm (L/s)**>.
d. Retention Capacity: <**Insert lb (kg)**>.
e. Inlet and Outlet Pipe Size: <**Insert NPS (DN)**>.

1) Centerline of Inlet to Floor: <**Insert inches (mm)**>.
2) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

f. Trapped Outlet: Integral.
g. Cleanout: Integral[**or field installed on outlet**].
h. Vent Pipe Size: <**Insert NPS (DN)**>.
i. Mounting: [**Above floor**][**Recessed in acid-resistant, coated steel frame and cradle**][**Recessed, flush with floor**]<**Insert mounting**>.
j. Flow-Control Fitting: Required.
k. Operation: [**Manual cleaning**][**Semiautomatic, manual drawoff**]<**Insert operation**>.

C. Interceptors, Grease - Plastic :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Ashland PolyTrap**]
    b. [**Bio-Microbics, Inc.**]
    c. [**Canplas Industries Ltd.**]
    d. [**MIFAB, Inc**]
    e. [**Rockford Separators**]
    f. [**Schier Products Company**]
    g. [**Town & Country Plastics, Inc**]
    h. [**Zurn Industries, LLC**]
    i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Ashland PolyTrap**]
    b. [**Bio-Microbics, Inc.**]
    c. [**Canplas Industries Ltd.**]
    d. [**MIFAB, Inc**]
    e. [**Rockford Separators**]
    f. [**Schier Products Company**]
    g. [**Town & Country Plastics, Inc**]
    h. [**Zurn Industries, LLC**]
    i. <**Insert manufacturer's name**>

3. Standard:

    a. PDI G101.
    b. [**ASME A112.14.3**].

4. PDI Seal: Required.
5. Description: Factory-fabricated grease interceptor for intercepting and retaining FOG from food[**-preparation**][**or**][**-processing**] wastewater.
6. Body Material: Plastic.
7. Inlet, Outlet, and Vent Piping Connections: Hub, or no-hub (hubless) unless otherwise indicated.
8. Body Extension: <**Insert inches (mm)**> height.
9. Capacities and Characteristics:

    a. Length by Width by Depth: <**Insert inches (mm)**>.
    b. Number of Compartments: [**One**][**Two**]<**Insert number**>.
    c. Flow Rate: <**Insert gpm (L/s)**>.
    d. Retention Capacity: <**Insert lb (kg)**>.
    e. Inlet and Outlet Pipe Size: <**Insert NPS (DN)**>.

        1) Centerline of Inlet to Floor: <**Insert inches (mm)**>.
        2) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

    f. Trapped Outlet: Integral.
    g. Cleanout: Integral[**or field installed on outlet**].
    h. Vent Pipe Size: <**Insert NPS (DN)**>.
    i. Mounting: [**Above floor**][**Recessed in acid-resistant, coated steel frame and cradle**][**Recessed, flush with floor**]<**Insert mounting**>.

j. Flow-Control Fitting: Required.
k. Operation: [**Manual cleaning**][**Semiautomatic, manual drawoff**]<**Insert operation**>.

2.2 GREASE-REMOVAL DEVICES

A. Grease-Removal Devices :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**G K & L, Inc**]
   b. [**Grease Guardian**]
   c. [**Highland Tank & Manufacturing Company, Inc.**]
   d. [**International Grease Recovery Device**]
   e. [**Josam Company**]
   f. [**MIFAB, Inc**]
   g. [**Thermaco, Inc**]
   h. [**Wade; a subsidiary of McWane Inc.**]
   i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**G K & L, Inc**]
   b. [**Grease Guardian**]
   c. [**Highland Tank & Manufacturing Company, Inc.**]
   d. [**International Grease Recovery Device**]
   e. [**Josam Company**]
   f. [**MIFAB, Inc**]
   g. [**Thermaco, Inc**]
   h. [**Wade; a subsidiary of McWane Inc.**]
   i. <**Insert manufacturer's name**>

3. Standard:

   a. PDI G101.
   b. [**ASME A112.14.3**].
   c. [**ASME A112.14.4**].

4. PDI Seal: Required.
5. Description: Factory-fabricated grease-removal device for automatic intercepting and removal of FOG from food[**-preparation**][**or**][**-processing**]<**Insert application**> wastewater.
6. Body Material: [**Stainless steel**][**Steel**]<**Insert material**>.
7. Interior Lining: Factory-applied epoxy, polyurethane, or manufacturer's acid-resistant coating.
8. Exterior Coating: Factory-applied epoxy, polyurethane, or manufacture's acid-resistant coating.
9. Interior Separation Device: [**Baffles**][**Screens**]<**Insert device**>.
10. Inlet, Outlet, and Vent Piping Connections: Hub, or no-hub (hubless) unless otherwise indicated.
11. Capacities and Characteristics:

    a. Heater: Required.
    b. Length by Width by Depth: <**Insert inches (mm)**>.

c. Flow Rate: <**Insert gpm (L/s)**>.
d. Basket Material: [**Stainless steel**]<**Insert material**>.
e. Inlet and Outlet Size: <**Insert NPS (DN)**>.

1) Centerline of Inlet to Floor: <**Insert inches (mm)**>.
2) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

f. Cleanout: Integral[**or field installed on outlet**].
g. Vent Pipe Size: <**Insert NPS (DN)**>.
h. Mounting: [**Above floor**]<**Insert mounting**>.
i. Flow-Control Fitting: Required.
j. Operation: [**Automatic recovery**]<**Insert operation**>.
k. Electrical Characteristics:

1) Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2) Power Requirement: [**120 V ac**]<**Insert power**>.
3) Full-Load Amperes: <**Insert number**> A.
4) Minimum Circuit Ampacity: <**Insert number**> A.
5) Maximum Overcurrent Protection: <**Insert number**> A.

l. Waste Grease Receptacle: [**Furnished by Owner**]<**Insert description**>.

2.3 INTERCEPTORS, OIL

A. Interceptors, Oil - Precast Concrete :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Advance Concrete Products Co.**]
b. [**Copeland Precast, Inc.**]
c. [**Oldcastle Infrastructure Inc.; CRH Americas**]
d. [**Wieser Concrete**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Advance Concrete Products Co.**]
b. [**Copeland Precast, Inc.**]
c. [**Oldcastle Infrastructure Inc.; CRH Americas**]
d. [**Wieser Concrete**]
e. <**Insert manufacturer's name**>

3. Standard:

a. ASTM C913.
b. [**Specific requirements of the Authority Having Jurisdiction**].

4. Description: Factory-fabricated oil interceptor with removable sediment bucket or strainer, baffles,

vents, and flow-control fitting on inlet.

5. Include rubber-gasketed joints, vent connections, manholes, compartments or baffles, and piping or openings to retain oil and to permit wastewater flow.
6. Inlet, Outlet, and Vent Piping Connections: Hub, or no-hub (hubless) unless otherwise indicated.
7. Structural Design Loads:

    a. Light-Traffic Load: Comply with ASTM C890, A-8.
    b. Medium-Traffic Load: Comply with ASTM C890, A-12.
    c. Heavy-Traffic Load: Comply with ASTM C890, A-16.
    d. Walkway Load: Comply with ASTM C890, A-03.

8. Resilient Pipe Connectors: **ASTM C923 (ASTM C923M)**, cast or fitted into interceptor walls, for each pipe connection.
9. Steps: [**Individual FRP steps or FRP ladder**][**Individual FRP steps, FRP ladder, or ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**][**ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**]<**Insert material**>, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at **12- to 16-inch (300- to 400-mm)** intervals. Omit steps if total depth from floor of interceptor to finished grade is less than [**60 inches (1500 mm)**]<**Insert dimension**>.
10. Grade Rings: Reinforced-concrete rings, **6- to 9-inch (150- to 225-mm)** total thickness, to match diameter of manhole frame and cover.
11. Manhole Frames and Covers: Ferrous; **24-inch (610-mm)** ID by **7- to 9-inch (175- to 225-mm)** riser, with **4-inch- (100-mm-)** minimum-width flange and **26-inch- (660-mm-)** diameter cover.

    a. Ductile Iron: ASTM A536, Grade 60-40-18, unless otherwise indicated.
    b. Gray Iron: ASTM A48/A48M, Class 35, unless otherwise indicated.
    c. Include indented top design with lettering cast into cover, using wording equivalent to "[**INTERCEPTOR**][**OIL INTERCEPTOR**][**SANITARY SEWER**]" <**Insert lettering**>.

12. Separated liquids and oils are to be collected in a receptacle approved by the Authority Having Jurisdiction.
13. Capacities and Characteristics:

    a. Length by Width by Depth: <**Insert inches (mm)**>.
    b. Flow Rate: <**Insert gpm (L/s)**>.
    c. Capacity: <**Insert gal. (L)**>.
    d. Inlet and Outlet Pipe Size: <**Insert NPS (DN)**>.

        1) Centerline of Inlet to Floor: <**Insert inches (mm)**>.
        2) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

    e. Waste-Oil-Outlet Pipe Size: <**Insert NPS (DN)**>.

        1) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

    f. Trapped Outlet: Integral.
    g. Cleanout: Integral[**or field installed on outlet**].
    h. Vent Pipe Size: <**Insert NPS (DN)**>.
    i. Mounting: [**Above floor**][**Recessed in acid-resistant, coated steel frame and cradle**][**Recessed, flush with floor**]<**Insert mounting**>.
    j. Flow-Control Fitting: Required.

B. Interceptors, Oil - Steel :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    b. [**Josam Company**]
    c. [**MIFAB, Inc**]
    d. [**ParkUSA; a Northwest Pipe Company**]
    e. [**Rockford Separators**]
    f. [**Wade; a subsidiary of McWane Inc.**]
    g. [**WATTS; A Watts Water Technologies Company**]
    h. [**Zurn Industries, LLC**]
    i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    b. [**Josam Company**]
    c. [**MIFAB, Inc**]
    d. [**ParkUSA; a Northwest Pipe Company**]
    e. [**Rockford Separators**]
    f. [**Wade; a subsidiary of McWane Inc.**]
    g. [**WATTS; A Watts Water Technologies Company**]
    h. [**Zurn Industries, LLC**]
    i. <**Insert manufacturer's name**>

3. Description: Factory-fabricated oil interceptor with removable sediment bucket or strainer, baffles, vents, and flow-control fitting on inlet.
4. Body Material: Steel.
5. Interior Lining: Factory-applied epoxy, polyurethane, or manufacturer's acid-resistant coating.
6. Exterior Coating: Factory-applied epoxy, polyurethane, or manufacturer's acid-resistant coating.
7. Inlet, Outlet, and Vent Piping Connections: Hub, or no-hub (hubless) unless otherwise indicated.
8. Extension: Cast-iron or steel shroud, full size of interceptor, extending from top of interceptor to grade.
9. Cover: Cast iron or steel, with steel reinforcement to provide ASTM C890 [**A-03, walkway**]<**Insert loading type**> load.
10. Separated liquids and oils are to be collected in a receptacle approved by the Authority Having Jurisdiction.
11. Capacities and Characteristics:

    a. Length by Width by Depth: <**Insert inches (mm)**>.
    b. Flow Rate: <**Insert gpm (L/s)**>.
    c. Capacity: <**Insert gal. (L)**>.
    d. Inlet and Outlet Pipe Size: <**Insert NPS (DN)**>.

        1) Centerline of Inlet to Floor: <**Insert inches (mm)**>.
        2) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

    e. Waste-Oil-Outlet Pipe Size: <**Insert NPS (DN)**>.

        1) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

    f. Trapped Outlet Required: Integral.

g. Cleanout: Integral[**or field installed on outlet**].
h. Vent Pipe Size: <**Insert NPS (DN)**>.
i. Mounting: [**Above floor**][**Recessed in acid-resistant, coated steel frame and cradle**][**Recessed, flush with floor**]<**Insert mounting**>.
j. Flow-Control Fitting: Required.

C. Interceptors, Oil - Plastic :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**MIFAB, Inc**]
   b. [**Striem**]
   c. [**Town & Country Plastics, Inc**]
   d. [**Xerxes by Shawcor Ltd.**]
   e. [**Zurn Industries, LLC**]
   f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**MIFAB, Inc**]
   b. [**Striem**]
   c. [**Town & Country Plastics, Inc**]
   d. [**Xerxes by Shawcor Ltd.**]
   e. [**Zurn Industries, LLC**]
   f. <**Insert manufacturer's name**>

3. Description: Factory-fabricated oil interceptor with removable sediment bucket or strainer, baffles, vents, and flow-control fitting on inlet.
4. Body Material: Plastic.
5. Inlet, Outlet, and Vent Piping Connections: Hub, or no-hub (hubless) unless otherwise indicated.
6. Extension: Plastic shroud, full size of interceptor, extending from top of interceptor to grade.
7. Cover: Plastic[**with steel reinforcement to provide ASTM C890**][**A-03, walkway**]<**Insert loading type**> load.
8. Separated liquids and oils are to be collected in a receptacle approved by the Authority Having Jurisdiction.
9. Capacities and Characteristics:

   a. Length by Width by Depth: <**Insert inches (mm)**>.
   b. Flow Rate: <**Insert gpm (L/s)**>.
   c. Capacity: <**Insert gal. (L)**>.
   d. Inlet and Outlet Pipe Size: <**Insert NPS (DN)**>.

      1) Centerline of Inlet to Floor: <**Insert inches (mm)**>.
      2) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

   e. Waste-Oil-Outlet Pipe Size: <**Insert NPS (DN)**>.

      1) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

   f. Trapped Outlet: Integral.

g. Cleanout: Integral[**or field installed on outlet**].
h. Vent Pipe Size: <**Insert NPS (DN)**>.
i. Mounting: [**Above floor**][**Recessed in acid-resistant, coated steel frame and cradle**][**Recessed, flush with floor**]<**Insert mounting**>.
j. Flow-Control Fitting: Required.

2.4 INTERCEPTORS, SAND

A. Interceptors, Sand - Precast Concrete :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Advance Concrete Products Co.**]
   b. [**Copeland Precast, Inc.**]
   c. [**Oldcastle Infrastructure Inc.; CRH Americas**]
   d. [**Wieser Concrete**]
   e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Advance Concrete Products Co.**]
   b. [**Copeland Precast, Inc.**]
   c. [**Oldcastle Infrastructure Inc.; CRH Americas**]
   d. [**Wieser Concrete**]
   e. <**Insert manufacturer's name**>

3. Standard:

   a. ASTM C913.
   b. [**Specific requirements of the Authority Having Jurisdiction**].

4. Description: Factory-fabricated sand interceptor with removable sediment bucket or strainer, baffles, vents, and flow-control fitting on inlet.
5. Include rubber-gasketed joints, vent connections, manholes, compartments or baffles, and piping or openings to retain sand and to permit wastewater flow.
6. Inlet, Outlet, and Vent Piping Connections: Hub, or no-hub (hubless) unless otherwise indicated.
7. Structural Design Loads:

   a. Light-Traffic Load: Comply with ASTM C890, A-8.
   b. Medium-Traffic Load: Comply with ASTM C890, A-12.
   c. Heavy-Traffic Load: Comply with ASTM C890, A-16.
   d. Walkway Load: Comply with ASTM C890, A-03.

8. Resilient Pipe Connectors: **ASTM C923 (ASTM C923M)**, cast or fitted into interceptor walls, for each pipe connection.
9. Steps: [**Individual FRP steps or FRP ladder**][**Individual FRP steps, FRP ladder, or ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**][**ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**]<**Insert material**>, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at **12- to 16-**

inch (300- to 400-mm) intervals. Omit steps if total depth from floor of interceptor to finished grade is less than [60 inches (1500 mm)]<**Insert dimension**>.

10. Grade Rings: Reinforced-concrete rings, 6- to 9-inch (150- to 225-mm) total thickness, to match diameter of manhole frame and cover.
11. Manhole Frames and Covers: Ferrous; 24-inch (610-mm) ID by 7- to 9-inch (175- to 225-mm) riser with 4-inch- (100-mm-) minimum-width flange and 26-inch- (660-mm-) diameter cover.

    a. Ductile Iron: ASTM A536, Grade 60-40-18, unless otherwise indicated.
    b. Gray Iron: ASTM A48/A48M, Class 35, unless otherwise indicated.
    c. Include indented top design with lettering cast into cover, using wording equivalent to "[**INTERCEPTOR**][**SAND INTERCEPTOR**][**SANITARY SEWER**]" <**Insert lettering**>.

12. Capacities and Characteristics:

    a. Length by Width by Depth: <**Insert inches (mm)**>.
    b. Flow Rate: <**Insert gpm (L/s)**>.
    c. Capacity: <**Insert gal. (L)**>.
    d. Inlet and Outlet Pipe Size: <**Insert NPS (DN)**>.

        1) Centerline of Inlet to Floor: <**Insert inches (mm)**>.
        2) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

    e. Trapped Outlet: Integral.
    f. Cleanout: Integral[**or field installed on outlet**].
    g. Vent Pipe Size: <**Insert NPS (DN)**>.
    h. Mounting: [**Above floor**][**Recessed in acid-resistant, coated steel frame and cradle**][**Recessed, flush with floor**]<**Insert mounting**>.
    i. Flow-Control Fitting: Required.

B. Interceptors, Sand - Steel :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    b. [**Josam Company**]
    c. [**MIFAB, Inc**]
    d. [**ParkUSA; a Northwest Pipe Company**]
    e. [**Rockford Separators**]
    f. [**Wade; a subsidiary of McWane Inc.**]
    g. [**WATTS; A Watts Water Technologies Company**]
    h. [**Zurn Industries, LLC**]
    i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    b. [**Josam Company**]
    c. [**MIFAB, Inc**]
    d. [**ParkUSA; a Northwest Pipe Company**]
    e. [**Rockford Separators**]

f. [**Wade; a subsidiary of McWane Inc.**]
g. [**WATTS; A Watts Water Technologies Company**]
h. [**Zurn Industries, LLC**]
i. <**Insert manufacturer's name**>

3. Description: Factory-fabricated sand interceptor, steel body and inlet grate; with settlement chamber and removable basket or strainer made for removing and retaining sand from wastewater.
4. Body Material: Steel.
5. Interior Lining: Factory-applied epoxy, polyurethane, or manufacturer's acid-resisting coating.
6. Exterior Coating: Factory-applied epoxy, polyurethane, or manufacturer's acid-resisting coating.
7. Inlet, Outlet, and Vent Piping Connections: Hub, or no-hub (hubless) unless otherwise indicated.
8. Grate: Cast iron or steel with reinforcement to provide ASTM C890 [**A-03, walkway**]<**Insert loading type**> load.
9. Capacities and Characteristics:

a. Length by Width by Depth: <**Insert inches (mm)**>.
b. Flow Rate: <**Insert gpm (L/s)**>.
c. Capacity: <**Insert gal. (L)**>.
d. Inlet and Outlet Pipe Size: <**Insert NPS (DN)**>.

1) Centerline of Inlet to Floor: <**Insert inches (mm)**>.
2) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

e. Trapped Outlet: Integral.
f. Cleanout: Integral[**or field installed on outlet**].
g. Vent Pipe Size: <**Insert NPS (DN)**>.
h. Installation Position: [**Top flush with grade**]<**Insert position**>.

C. Interceptors, Sand - Plastic :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**MIFAB, Inc**]
b. [**Striem**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**MIFAB, Inc**]
b. [**Striem**]
c. <**Insert manufacturer's name**>

3. Description: Factory-fabricated sand interceptor with removable sediment bucket or strainer, baffles, vents, and flow-control fitting on inlet.
4. Body Material: Plastic.
5. Inlet, Outlet, and Vent Piping Connections: Hub, or no-hub (hubless) unless otherwise indicated.
6. Extension: Plastic shroud, full size of interceptor, extending from top of interceptor to grade.
7. Cover: Plastic[**with steel reinforcement to provide ASTM C890**][**A-03, walkway**]<**Insert loading type**> load.
8. Capacities and Characteristics:

a. Length by Width by Depth: <**Insert inches (mm)**>.
b. Flow Rate: <**Insert gpm (L/s)**>.
c. Capacity: <**Insert gal. (L)**>.
d. Inlet and Outlet Pipe Size: <**Insert NPS (DN)**>.

1) Centerline of Inlet to Floor: <**Insert inches (mm)**>.
2) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

e. Waste-Oil-Outlet Pipe Size: <**Insert NPS (DN)**>.

1) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

f. Trapped Outlet: Integral.
g. Cleanout: Integral[**or field installed on outlet**].
h. Vent Pipe Size: <**Insert NPS (DN)**>.
i. Mounting: [**Above floor**][**Recessed in acid-resistant, coated steel frame and cradle**][**Recessed, flush with floor**]<**Insert mounting**>.
j. Flow-Control Fitting: Required.

2.5 INTERCEPTORS, SAND AND OIL

A. Interceptors, Sand and Oil - Precast Concrete :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Copeland Precast, Inc.**]
b. [**Oldcastle Infrastructure Inc.; CRH Americas**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Copeland Precast, Inc.**]
b. [**Oldcastle Infrastructure Inc.; CRH Americas**]
c. <**Insert manufacturer's name**>

3. Standard:

a. ASTM C913.
b. [**Specific requirements of the Authority Having Jurisdiction**].

4. Description: Factory-fabricated sand and oil interceptor with removable sediment bucket or strainer, baffles, vents, and flow-control fitting on inlet.
5. Include rubber-gasketed joints, vent connections, manholes, compartments or baffles, and piping or openings to retain sand and to permit wastewater flow.
6. Inlet, Outlet, and Vent Piping Connections: Hub, or no-hub (hubless) unless otherwise indicated.
7. Structural Design Loads:

a. Light-Traffic Load: Comply with ASTM C890, A-8.
b. Medium-Traffic Load: Comply with ASTM C890, A-12.

c. Heavy-Traffic Load: Comply with ASTM C890, A-16.
d. Walkway Load: Comply with ASTM C890, A-03.

8. Resilient Pipe Connectors: **ASTM C923 (ASTM C923M)**, cast or fitted into interceptor walls, for each pipe connection.
9. Steps: [**Individual FRP steps or FRP ladder**][**Individual FRP steps, FRP ladder, or ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**][**ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**]<**Insert material**>, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at **12- to 16-inch (300- to 400-mm)** intervals. Omit steps if total depth from floor of interceptor to finished grade is less than [**60 inches (1500 mm)**]<**Insert dimension**>.
10. Grade Rings: Reinforced-concrete rings, **6- to 9-inch (150- to 225-mm)** total thickness, to match diameter of manhole frame and cover.
11. Manhole Frames and Covers: Ferrous; **24-inch (610-mm)** ID by **7- to 9-inch (175- to 225-mm)** riser with **4-inch- (100-mm-)** minimum-width flange and **26-inch- (660-mm-)** diameter cover.

    a. Ductile Iron: ASTM A536, Grade 60-40-18, unless otherwise indicated.
    b. Gray Iron: ASTM A48/A48M, Class 35, unless otherwise indicated.
    c. Include indented top design with lettering cast into cover, using wording equivalent to "[**INTERCEPTOR**][**SAND & OIL INTERCEPTOR**][**SANITARY SEWER**]" <**Insert lettering**>.

12. Separated liquids and oils are to be collected in a receptacle approved by the Authority Having Jurisdiction.
13. Capacities and Characteristics:

    a. Length by Width by Depth: <**Insert inches (mm)**>.
    b. Flow Rate: <**Insert gpm (L/s)**>.
    c. Capacity: <**Insert gal. (L)**>.
    d. Inlet and Outlet Pipe Size: <**Insert NPS (DN)**>.

        1) Centerline of Inlet to Floor: <**Insert inches (mm)**>.
        2) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

    e. Trapped Outlet: Integral.
    f. Cleanout: Integral[**or field installed on outlet**].
    g. Vent Pipe Size: <**Insert NPS (DN)**>.
    h. Mounting: [**Above floor**][**Recessed in acid-resistant, coated steel frame and cradle**][**Recessed, flush with floor**]<**Insert mounting**>.
    i. Flow-Control Fitting: Required.

B. Interceptors, Sand and Oil - Steel :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    b. [**Josam Company**]
    c. [**MIFAB, Inc**]
    d. [**ParkUSA; a Northwest Pipe Company**]
    e. [**Rockford Separators**]
    f. [**Wade; a subsidiary of McWane Inc.**]
    g. [**WATTS; A Watts Water Technologies Company**]

h. [**Zurn Industries, LLC**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
b. [**Josam Company**]
c. [**MIFAB, Inc**]
d. [**ParkUSA; a Northwest Pipe Company**]
e. [**Rockford Separators**]
f. [**Wade; a subsidiary of McWane Inc.**]
g. [**WATTS; A Watts Water Technologies Company**]
h. [**Zurn Industries, LLC**]
i. <**Insert manufacturer's name**>

3. Description: Factory-fabricated sand and oil interceptor with removable basket or strainer, baffles, vents, and flow-control fitting on inlet.
4. Body Material: Steel.
5. Interior Lining: Factory-applied epoxy, polyurethane, or manufacturer's acid-resistant coating.
6. Exterior Coating: Factory-applied epoxy, polyurethane, or manufacturer's acid-resistant coating.
7. Inlet, Outlet, and Vent Piping Connections: Hub, or no-hub (hubless) unless otherwise indicated.
8. Extension: Cast-iron or steel shroud, full size of interceptor, extending from top of interceptor to grade.
9. Cover: Cast iron or steel, with steel reinforcement to provide ASTM C890 [**A-03, walkway**]<**Insert loading type**> load.
10. Separated liquids and oils are to be collected in a receptacle approved by the Authority Having Jurisdiction.
11. Capacities and Characteristics:

a. Length by Width by Depth: <**Insert inches (mm)**>.
b. Flow Rate: <**Insert gpm (L/s)**>.
c. Capacity: <**Insert gal. (L)**>.
d. Inlet and Outlet Pipe Size: <**Insert NPS (DN)**>.

1) Centerline of Inlet to Floor: <**Insert inches (mm)**>.
2) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

e. Waste-Oil-Outlet Pipe Size: <**Insert NPS (DN)**>.

1) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

f. Trapped Outlet: Integral.
g. Cleanout: Integral[**or field installed on outlet**].
h. Vent Pipe Size: <**Insert NPS (DN)**>.
i. Mounting: [**Above floor**][**Recessed in acid-resistant, coated steel frame and cradle**][**Recessed, flush with floor**]<**Insert mounting**>.
j. Flow-Control Fitting: Required.

C. Interceptors, Sand and Oil - Plastic :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

a. [**MIFAB, Inc**]
b. [**Striem**]
c. [**Town & Country Plastics, Inc**]
d. [**Zurn Industries, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**MIFAB, Inc**]
b. [**Striem**]
c. [**Town & Country Plastics, Inc**]
d. [**Zurn Industries, LLC**]
e. <**Insert manufacturer's name**>

3. Description: Factory-fabricated sand and oil interceptor with removable sediment bucket or strainer, baffles, vents, and flow-control fitting on inlet.
4. Body Material: Plastic.
5. Inlet, Outlet, and Vent Piping Connections: Hub, or no-hub (hubless) unless otherwise indicated.
6. Extension: Plastic shroud, full size of interceptor, extending from top of interceptor to grade.
7. Cover: Plastic[**with steel reinforcement to provide ASTM C890**][**A-03, walkway**]<**Insert loading type**> load.
8. Separated liquids and oils are to be collected in a receptacle approved by the Authority Having Jurisdiction.
9. Capacities and Characteristics:

a. Length by Width by Depth: <**Insert inches (mm)**>.
b. Flow Rate: <**Insert gpm (L/s)**>.
c. Capacity: <**Insert gal. (L)**>.
d. Inlet and Outlet Pipe Size: <**Insert NPS (DN)**>.

1) Centerline of Inlet to Floor: <**Insert inches (mm)**>.
2) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

e. Waste-Oil-Outlet Pipe Size: <**Insert NPS (DN)**>.

1) Centerline of Outlet to Floor: <**Insert inches (mm)**>.

f. Trapped Outlet: Integral.
g. Cleanout: Integral[**or field installed on outlet**].
h. Vent Pipe Size: <**Insert NPS (DN)**>.
i. Mounting: [**Above floor**][**Recessed in acid-resistant, coated steel frame and cradle**][**Recessed, flush with floor**]<**Insert mounting**>.
j. Flow-Control Fitting: Required.

2.6 INTERCEPTORS, SOLIDS

A. Interceptors, Solids - Cast Iron, Cast Aluminum, or Steel :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
b. [**Josam Company**]
c. [**MIFAB, Inc**]
d. [**Rockford Separators**]
e. [**Wade; a subsidiary of McWane Inc.**]
f. [**WATTS; A Watts Water Technologies Company**]
g. [**Zurn Industries, LLC**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
b. [**Josam Company**]
c. [**MIFAB, Inc**]
d. [**Rockford Separators**]
e. [**Wade; a subsidiary of McWane Inc.**]
f. [**WATTS; A Watts Water Technologies Company**]
g. [**Zurn Industries, LLC**]
h. <**Insert manufacturer's name**>

3. Description: Factory-fabricated solids interceptor made for removing and retaining [**lint**][**sediment**]<**Insert solid**> from wastewater.
4. Body Material: Cast iron, cast aluminum or steel.
5. Interior Separation Device: [**Baffles**][**Screens**]<**Insert device**>.
6. Interior Lining: Factory-applied epoxy, polyurethane, or manufacturer's acid-resistant coating.
7. Exterior Coating: Factory-applied epoxy, polyurethane, or manufacturer's acid-resistant coating.
8. Inlet, and Outlet Piping Connections: Threaded unless otherwise indicated.
9. Body Dimensions: <**Insert dimensions**>.
10. Flow Rate: <**Insert gpm (L/s)**>.
11. Inlet and Outlet Pipe Size: <**Insert NPS (DN)**>.
12. Mounting: [**Above floor**][**Inline**]<**Insert mounting**>.

B. Interceptors, Solids - Plastic :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Ashland PolyTrap**]
b. [**MIFAB, Inc**]
c. [**Striem**]
d. [**Town & Country Plastics, Inc**]
e. [**Zurn Industries, LLC**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Ashland PolyTrap**]

b. [**MIFAB, Inc**]
c. [**Striem**]
d. [**Town & Country Plastics, Inc**]
e. [**Zurn Industries, LLC**]
f. <**Insert manufacturer's name**>

3. Description: Factory-fabricated interceptor made for removing and retaining [**lint**][**sediment**]<**Insert solid**> from wastewater.
4. Body Material: Plastic.
5. Interior Separation Device: [**Baffles**][**Screens**]<**Insert device**>.
6. Inlet, and Outlet Piping Connections: Threaded unless otherwise indicated.
7. Body Dimensions: <**Insert dimensions**>.
8. Flow Rate: <**Insert gpm (L/s)**>.
9. Inlet and Outlet Pipe Size: <**Insert NPS (DN)**>.
10. Mounting: [**Above floor**][**Inline**]<**Insert mounting**>.

2.7 MANHOLE RISERS, FRAMES, AND COVERS

A. Precast-Concrete Manhole Risers: [**ASTM C478 (ASTM C478M)**][**ASTM C913**], with rubber-gasket joints.

1. Structural Design Loads:

a. Light-Traffic Load: Comply with ASTM C890, A-8.
b. Medium-Traffic Load: Comply with ASTM C890, A-12.
c. Heavy-Traffic Load: Comply with ASTM C890, A-16.
d. Walkway Load: Comply with ASTM C890, A-03.

2. Length: From top of underground concrete structure to grade.
3. Riser Sections: **3-inch (75-mm)** minimum thickness and [**36-inch (915-mm)**]<**Insert dimension**> diameter.
4. Top Section: Eccentric cone unless otherwise indicated. Include top of cone to match grade ring size.
5. Gaskets: **ASTM C443 (ASTM C443M)**, rubber.
6. Steps: [**Individual FRP steps or FRP ladder**][**Individual FRP steps, FRP ladder, or ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**][**ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**]<**Insert material**>, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at **12- to 16-inch (300- to 400-mm)** intervals.

B. Grade Rings: Reinforced-concrete rings, **6- to 9-inch (150- to 225-mm)** total thickness, diameter matching manhole frame and cover, and height as required to adjust the manhole frame and cover to indicated elevation and slope.

C. Manhole Frames and Covers: Ferrous; **24-inch (610-mm)** ID by **7- to 9-inch (175- to 225-mm)** riser with **4-inch- (100-mm-)** minimum-width flange and **26-inch- (660-mm-)** diameter cover.

1. Ductile Iron: ASTM A536, Grade 60-40-18, unless otherwise indicated.
2. Gray Iron: ASTM A48/A48M, Class 35, unless otherwise indicated.
3. Include indented top design with lettering cast into cover, using wording equivalent to the following:

a. Grease Interceptors in Sanitary Sewerage System: "[**INTERCEPTOR**][**GREASE INTERCEPTOR**][**SANITARY SEWER**]" <**Insert lettering**>.

b. Oil Interceptors in Sanitary Sewerage System: "[**INTERCEPTOR**][**OIL INTERCEPTOR**][**SANITARY SEWER**]" <**Insert lettering**>.
c. Sand Interceptors in Sanitary Sewerage System: "[**INTERCEPTOR**][**SAND INTERCEPTOR**][**SANITARY SEWER**]" <**Insert lettering**>.
d. Sand and Oil Interceptors in Sanitary Sewerage System: "[**INTERCEPTOR**][**SAND & OIL INTERCEPTOR**][**SANITARY SEWER**]" <**Insert lettering**>.

2.8 SAMPLING PORTS

A. Sampling Ports - Precast Concrete :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ParkUSA; a Northwest Pipe Company**]
   b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ParkUSA; a Northwest Pipe Company**]
   b. <**Insert manufacturer's name**>

3. Description: Factory-fabricated sampling port.
4. Body Material: Precast concrete or Class I/II concrete with design strength of **4500 psi (31,026 kPa)** at 28 days.
5. Location: Below grade.
6. Body Interior Diameter: [**15-inch (381-mm)**][**18-inch (458-mm)**][**24-inch (610-mm)**]<**Insert dimension**> diameter.
7. Structural Design Loads:

   a. Light-Traffic Load: Comply with ASTM C890, A-8.
   b. Medium-Traffic Load: Comply with ASTM C890, A-12.
   c. Heavy-Traffic Load: Comply with ASTM C890, A-16.
   d. Walkway Load: Comply with ASTM C890, A-03.

8. Resilient Pipe Connectors: **ASTM C923 (ASTM C923M)**, cast or fitted into walls, for each pipe connection.
9. Grade Rings: Reinforced-concrete rings, **6- to 9-inch (150- to 225-mm)** total thickness, to match diameter of manhole frame and cover.
10. Manhole Frames and Covers:

    a. Ductile Iron: ASTM A536, Grade 60-40-18, unless otherwise indicated.
    b. Gray Iron: ASTM A48/A48M, Class 35, unless otherwise indicated.
    c. Include indented top design with lettering cast into cover, using wording equivalent to "[**SAMPLING WELL/PORT**]" <**Insert lettering**>.

B. Sampling Ports - Metal :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following]:

a. [**ParkUSA; a Northwest Pipe Company**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ParkUSA; a Northwest Pipe Company**]
b. <**Insert manufacturer's name**>

3. Description: Factory-fabricated sampling port.
4. Body Material: Type 304 stainless steel conforming with ASTM A480/A480M.
5. Body Diameter: [**15-inch (381-mm)**][**24-inch (610-mm)**]<**Insert dimension**> diameter.
6. Location: [**Above grade**][**In accessible pit**].
7. Cover: Removable lid with securing bolts and gasket.

a. Include indented top design with lettering cast into cover, using wording equivalent to "[**SAMPLING WELL/PORT**]" <**Insert lettering**>.

C. Sampling Ports - Plastic :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**MIFAB, Inc**]
b. [**Schier Products Company**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**MIFAB, Inc**]
b. [**Schier Products Company**]
c. <**Insert manufacturer's name**>

3. Description: Factory-fabricated sampling port.
4. Body Material: Seamless rotationally molded polyethylene or molded HDPE.
5. Body Diameter: [**15-inch (381-mm)**][**18-inch (458-mm)**][**24-inch (610-mm)**]<**Insert dimension**> diameter.
6. Location: [**Above grade**][**In accessible pit**][**Below grade**].
7. Cover: Water and gas-tight seal.

a. Include indented top design with lettering cast into cover, using wording equivalent to "[**SAMPLING WELL/PORT**]" <**Insert lettering**>.

8. Body Extension: <**Insert inches (mm)**> height.
9. Structural Design Loads:

a. Light-Traffic Load: Comply with ASTM C890, A-8.
b. Medium-Traffic Load: Comply with ASTM C890, A-12.

c. Heavy-Traffic Load: Comply with ASTM C890, A-16.
d. Walkway Load: Comply with ASTM C890, A-03.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Excavating, trenching, and backfilling are specified in Section 312000 "Earth Moving."

3.2 INSTALLATION OF SANITARY WASTE INTERCEPTORS

A. Equipment Mounting:

1. Install [**grease interceptors**][**grease-removal devices**][**and**][**solids interceptors**] on cast-in-place concrete equipment base(s).
2. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."

B. Install precast-concrete interceptors in accordance with ASTM C891.

C. Set interceptors level and plumb.

D. Install manhole risers from top of underground concrete interceptors to manholes and gratings at finished grade.

E. Set tops of manhole frames and covers flush with finished surface in pavements.

1. Set tops [**3 inches (75 mm)**]<**Insert dimension**> above finish surface elsewhere unless otherwise indicated.

F. Set tops of grating frames and grates flush with finished surface.

G. Set [**metal**][**and**][**plastic**] interceptors level and plumb.

H. Set tops of metal interceptor covers flush with finished surface in pavements.

1. Set tops [**3 inches (75 mm)**]<**Insert dimension**> above finish surface elsewhere unless otherwise indicated.

I. Install captured waste oil piping and waste oil storage tanks in accordance with the requirements of the Authority Having Jurisdiction.

J. Install grease interceptors, including trapping, venting, and flow-control fitting, in accordance with authorities having jurisdiction and with clear space for servicing.

1. Above-Floor Installation: Set unit with bottom resting on floor unless otherwise indicated.
2. Flush with Floor Installation: Set unit and extension, if required, with cover flush with finished floor.
3. Recessed Floor Installation: Set unit in receiver housing having bottom or cradle supports, with receiver housing cover flush with finished floor.
4. Install cleanout immediately downstream from interceptors not having integral cleanout on outlet.

K. Install grease-removal devices on floor. Install trap, vent, and flow-control fitting in accordance with authorities having jurisdiction.

1. Install control panel adjacent to unit unless otherwise indicated.

L. Install oil and sand & oil interceptors, including trapping, venting, and flow-control fitting, in accordance with authorities having jurisdiction and with clear space for servicing.

1. Coordinate captured waste oil storage tank and/or gravity drain with the Authority Having Jurisdiction.

M. Install solids interceptors with cleanout immediately downstream from interceptors that do not have integral cleanout on outlet.

1. Install trap on interceptors that do not have integral trap and are connected to sanitary drainage and vent systems.

3.3 PIPING CONNECTIONS

A. Piping installation requirements are specified in Section 221316 "Sanitary Waste and Vent Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Make piping connections between interceptors and piping systems.

3.4 ELECTRICAL CONNECTIONS

A. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplates to be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplates to be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least **1/2 inches (13 mm)** high.

3.5 IDENTIFICATION

A. Identification materials and installation are specified in Section 312000 "Earth Moving."

1. Arrange for installation of green warning tapes directly over piping and at outside edges of underground interceptors.
2. Use warning tapes or detectable warning tape over ferrous piping.
3. Use detectable warning tape over nonferrous piping and over edges of underground structures.

B. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or

near each of the following:

1. Grease interceptors.
2. Grease-removal devices.
3. Oil and sand, and oil interceptors.
4. Solids interceptors.
5. Sampling ports.

3.6 PROTECTION

A. Protect sanitary waste interceptors from damage during construction period.

B. Repair damage to adjacent materials caused by sanitary waste interceptor installation.

END OF SECTION 22 13 23 00

Task	Specification	Specification Description
22 13 23 00	22 13 19 00	Sanitary Waste Piping Specialties
22 13 23 00	22 13 00 00	Facility Gray-Water Storage Tanks

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 13 29 00 - SANITARY SEWERAGE PUMPS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Submersible effluent pumps.
2. Submersible sewage pumps.
3. Wet-pit-volute sewage pumps.
4. Sewage-pump, reverse-flow assemblies.
5. Sewage-pump basins and basin covers.
6. Progressing-cavity sewage pumps.
7. Packaged, submersible sewage-pump units.
8. Packaged wastewater-pump units.

B. Related Requirements:

1. Section 221429 "Sump Pumps" for applications in storm-drainage systems.
2. Section 333200 "Site Packaged Sewage Pumping Stations" for applications in site-construction sewage pumping.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. [**Include construction details, material descriptions, dimensions of individual components and profiles.**][**Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.**]

B. Shop Drawings:

1. Include plans, elevations, sections, and [**mounting**][**attachment**] details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
4. Include diagrams for power, signal, and control wiring.

1.3 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For pumps and controls, to include in operation and maintenance manuals.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Retain shipping flange protective covers and protective coatings during storage.

B. Protect bearings and couplings against damage.

C. Comply with manufacturer's written instructions for handling.

1.5 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. UL Compliance: Comply with UL 778 for motor-operated water pumps.

2.2 SUBMERSIBLE EFFLUENT PUMPS

A. Submersible, Fixed-Position, Single-Seal Effluent Pumps :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**A.Y. McDonald Mfg. Co.**]
    b. [**Barnes; a Crane Pumps & Systems brand**]
    c. [**Bell & Gossett; a Xylem brand**]
    d. [**Flo Fab Inc**]
    e. [**Goulds Water Technology; a Xylem brand**]
    f. [**GRUNDFOS CBS Inc.**]
    g. [**Liberty Pumps**]
    h. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
    i. [**Pentair Aurora; Pentair Pump Group**]
    j. [**ProFlo; a Ferguson Enterprises, Inc. brand**]
    k. [**Sta-Rite Industries, Inc.; Pentair Ltd.**]
    l. [**Stancor, Inc**]
    m. [**WILO-EMU USA LLC**]
    n. [**Zoeller Company**]
    o. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**A.Y. McDonald Mfg. Co.**]
    b. [**Barnes; a Crane Pumps & Systems brand**]
    c. [**Bell & Gossett; a Xylem brand**]
    d. [**Flo Fab Inc**]

e. [**Goulds Water Technology; a Xylem brand**]
f. [**GRUNDFOS CBS Inc.**]
g. [**Liberty Pumps**]
h. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
i. [**Pentair Aurora; Pentair Pump Group**]
j. [**ProFlo; a Ferguson Enterprises, Inc. brand**]
k. [**Sta-Rite Industries, Inc.; Pentair Ltd.**]
l. [**Stancor, Inc**]
m. [**WILO-EMU USA LLC**]
n. [**Zoeller Company**]
o. <**Insert manufacturer's name**>

3. Description: Factory-assembled and -tested effluent-pump unit.
4. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal effluent pump as defined in HI 1.1-1.2 and HI 1.3.
5. Pump Casing: Cast iron, with open inlet, legs that elevate pump to permit flow into impeller, and vertical discharge for piping connection.
6. Impeller: Statically and dynamically balanced, [**ASTM A48/A48M, Class No. 25 A cast iron**][**ASTM A532/A532M, abrasion-resistant cast iron**][**ASTM B584, cast bronze**][**and**][**stainless steel**], closed or semiopen design for clear wastewater, and keyed and secured to shaft.
7. Pump and Motor Shaft: Stainless steel[**or steel**], with factory-sealed, grease-lubricated ball bearings.
8. Seal: Mechanical.
9. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.

    a. Motor Housing Fluid: [**Air**][**Oil**].

10. Controls, Rod-and-Float Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>.
    b. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
    d. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater than **60 inches (1500 mm)**.
    e. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

11. Controls, Float- and Pressure-Switch Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>; [**pedestal**][**wall**] mounted.
    b. Switch Type: [**Mechanical-float**][**Mercury-float**][**Pressure**]<**Insert type**> type, in NEMA 250, Type 6 enclosures with mounting rod and electric cables.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
    d. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with [**mechanical-float, mercury-float, or pressure**]<**Insert type**> switch matching control and electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

12. Control-Interface Features:

    a. Remote Alarm Contacts: For remote alarm interface.
    b. Building Automation System Interface: Auxiliary contacts in pump controls for interface to

building automation system and capable of providing the following:

1) On-off status of pump.
2) Alarm status.

B. Submersible, Fixed-Position, Double-Seal Effluent Pumps :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABS; Cardo Flow Solutions**]
   b. [**BJM Pumps, LLC**]
   c. [**Federal Pump Corp**]
   d. [**HOMA Pump Technology Inc.**]
   e. [**KSB Inc.**]
   f. [**Liberty Pumps**]
   g. [**Pentair Aurora; Pentair Pump Group**]
   h. [**PX Pumps USA**]
   i. [**Stancor, Inc**]
   j. [**Tsurumi America, Inc.**]
   k. [**WILO-EMU USA LLC**]
   l. [**Zoeller Company**]
   m. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABS; Cardo Flow Solutions**]
   b. [**BJM Pumps, LLC**]
   c. [**Federal Pump Corp**]
   d. [**HOMA Pump Technology Inc.**]
   e. [**KSB Inc.**]
   f. [**Liberty Pumps**]
   g. [**Pentair Aurora; Pentair Pump Group**]
   h. [**PX Pumps USA**]
   i. [**Stancor, Inc**]
   j. [**Tsurumi America, Inc.**]
   k. [**WILO-EMU USA LLC**]
   l. [**Zoeller Company**]
   m. <**Insert manufacturer's name**>

3. Description: Factory-assembled and -tested effluent-pump unit.
4. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal effluent pump as defined in HI 1.1-1.2 and HI 1.3.
5. Pump Casing: Cast iron, with open inlet, legs that elevate pump to permit flow into impeller, and vertical discharge for piping connection.
6. Impeller: Statically and dynamically balanced, [**ASTM A48/A48M, Class No. 25 A cast iron**][**ASTM A532/A532M, abrasion-resistant cast iron**][**ASTM B584, cast bronze**][**and**][**stainless steel**], closed or semiopen design for clear wastewater, and keyed and secured to shaft.
7. Pump and Motor Shaft: Stainless steel[**or steel**], with factory-sealed, grease-lubricated ball bearings.

8. Seals: Mechanical.
9. Moisture-Sensing Probe: Internal moisture sensor and moisture alarm.
10. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.

    a. Motor Housing Fluid: [**Air**][**Oil**].

11. Controls, Rod-and-Float Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>.
    b. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
    d. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater than **60 inches (1500 mm)**.
    e. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

12. Controls, Float- and Pressure-Switch Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>; [**pedestal**][**wall**] mounted.
    b. Switch Type: [**Mechanical-float**][**Mercury-float**][**Pressure**]<**Insert type**> type, in NEMA 250, Type 6 enclosures with mounting rod and electric cables.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
    d. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with [**mechanical-float, mercury-float, or pressure**]<**Insert type**> switch matching control and electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

13. Control-Interface Features:

    a. Remote Alarm Contacts: For remote alarm interface.
    b. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:

        1) On-off status of pump.
        2) Alarm status.

C. Submersible, Quick-Disconnect, Single-Seal Effluent Pumps :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Liberty Pumps**]
    b. [**Pentair Aurora; Pentair Pump Group**]
    c. [**Stancor, Inc**]
    d. [**WILO-EMU USA LLC**]
    e. [**Zoeller Company**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Liberty Pumps**]
b. [**Pentair Aurora; Pentair Pump Group**]
c. [**Stancor, Inc**]
d. [**WILO-EMU USA LLC**]
e. [**Zoeller Company**]
f. <**Insert manufacturer's name**>

3. Description: Factory-assembled and -tested effluent-pump unit with guide-rail supports.
4. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal effluent pump as defined in HI 1.1-1.2 and HI 1.3.
5. Pump Casing: Cast iron, with open inlet, and discharge fittings for connection to guide-rail support.
6. Impeller: Statically and dynamically balanced, [**ASTM A48/A48M, Class No. 25 A cast iron**][**ASTM A532/A532M, abrasion-resistant cast iron**][**ASTM B584, cast bronze**][**and**][**stainless steel**], closed or semiopen design for clear wastewater, and keyed and secured to shaft.
7. Pump and Motor Shaft: Stainless steel[**or steel**], with factory-sealed, grease-lubricated ball bearings.
8. Seal: Mechanical.
9. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.

    a. Motor Housing Fluid: [**Air**][**Oil**].

10. Controls, Rod-and-Float Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>.
    b. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
    d. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater than **60 inches (1500 mm)**.
    e. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

11. Controls, Float- and Pressure-Switch Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>; [**pedestal**][**wall**] mounted.
    b. Switch Type: [**Mechanical-float**][**Mercury-float**][**Pressure**]<**Insert type**> type, in NEMA 250, Type 6 enclosures with mounting rod and electric cables.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
    d. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with [**mechanical-float, mercury-float, or pressure**]<**Insert type**> switch matching control and electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

12. Control-Interface Features:

    a. Remote Alarm Contacts: For remote alarm interface.
    b. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:

        1) On-off status of pump.
        2) Alarm status.

13. Guide-Rail Supports:

    a. Standard: SWPA's "Submersible Sewage Pumping Systems (SWPA) Handbook."
    b. Guide Rails: Vertical pipes or structural members, made of galvanized steel or other corrosion-resistant metal, attached to baseplate and basin sidewall or cover.
    c. Baseplate: Corrosion-resistant metal plate, attached to basin floor, supporting guide rails and stationary elbow.
    d. Pump Yoke: Motor- or casing-mounted yokes or other attachments for aligning pump during connection of flanges.
    e. Movable Elbow: Pump discharge-elbow fitting with flange, seal, and positioning device.
    f. Stationary Elbow: Fixed discharge-elbow fitting with flange that mates to movable-elbow flange and support attached to baseplate.
    g. Lifting Cable: Stainless steel; attached to pump and cover at manhole.

D. Submersible, Quick-Disconnect, Double-Seal Effluent Pumps :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABS; Cardo Flow Solutions**]
    b. [**Chicago Pump Company; Grundfos Pumps Corporation**]
    c. [**Federal Pump Corp**]
    d. [**Flygt; a brand of Xylem Inc.**]
    e. [**HOMA Pump Technology Inc.**]
    f. [**Liberty Pumps**]
    g. [**Pentair Aurora; Pentair Pump Group**]
    h. [**PX Pumps USA**]
    i. [**Stancor, Inc**]
    j. [**Tsurumi America, Inc.**]
    k. [**WILO-EMU USA LLC**]
    l. [**Zoeller Company**]
    m. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABS; Cardo Flow Solutions**]
    b. [**Chicago Pump Company; Grundfos Pumps Corporation**]
    c. [**Federal Pump Corp**]
    d. [**Flygt; a brand of Xylem Inc.**]
    e. [**HOMA Pump Technology Inc.**]
    f. [**Liberty Pumps**]
    g. [**Pentair Aurora; Pentair Pump Group**]
    h. [**PX Pumps USA**]
    i. [**Stancor, Inc**]
    j. [**Tsurumi America, Inc.**]
    k. [**WILO-EMU USA LLC**]
    l. [**Zoeller Company**]
    m. <**Insert manufacturer's name**>

3. Description: Factory-assembled and -tested effluent-pump unit with guide-rail supports.
4. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal effluent pump as defined in HI 1.1-1.2 and HI 1.3.

5. Pump Casing: Cast iron, with open inlet, and discharge fittings for connection to guide-rail support.
6. Impeller: Statically and dynamically balanced, [**ASTM A48/A48M, Class No. 25 A cast iron**][**ASTM A532/A532M, abrasion-resistant cast iron**][**ASTM B584, cast bronze**][**and**][**stainless steel**], closed or semiopen design for clear wastewater, and keyed and secured to shaft.
7. Pump and Motor Shaft: Stainless steel[**or steel**], with factory-sealed, grease-lubricated ball bearings.
8. Seals: Mechanical.
9. Moisture-Sensing Probe: Internal moisture sensor and moisture alarm.
10. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.

    a. Motor Housing Fluid: [**Air**][**Oil**].

11. Controls, Rod-and-Float Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>.
    b. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
    d. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater than **60 inches (1500 mm)**.
    e. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

12. Controls, Float- and Pressure-Switch Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>; [**pedestal**][**wall**] mounted.
    b. Switch Type: [**Mechanical-float**][**Mercury-float**][**Pressure**]<**Insert type**> type, in NEMA 250, Type 6 enclosures with mounting rod and electric cables.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
    d. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with [**mechanical-float, mercury-float, or pressure**]<**Insert type**> switch matching control and electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

13. Control-Interface Features:

    a. Remote Alarm Contacts: For remote alarm interface.
    b. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:

        1) On-off status of pump.
        2) Alarm status.

14. Guide-Rail Supports:

    a. Standard: SWPA's "Submersible Sewage Pumping Systems (SWPA) Handbook."
    b. Guide Rails: Vertical pipes or structural members, made of galvanized steel or other corrosion-resistant metal, attached to baseplate and basin sidewall or cover.
    c. Baseplate: Corrosion-resistant metal plate, attached to basin floor, supporting guide rails and stationary elbow.
    d. Pump Yoke: Motor- or casing-mounted yokes or other attachments for aligning pump

during connection of flanges.

e. Movable Elbow: Pump discharge-elbow fitting with flange, seal, and positioning device.
f. Stationary Elbow: Fixed discharge-elbow fitting with flange that mates to movable-elbow flange and support attached to baseplate.
g. Lifting Cable: Stainless steel; attached to pump and cover at manhole.

E. Capacities and Characteristics:

1. Unit Capacity: <**Insert value**> **gpm (L/min.)**.
2. Number of Pumps: [**One**][**Two**]<**Insert value**>.
3. Each Pump:

a. Capacity: <**Insert value**> **gpm (L/min.)**.
b. Solids Handling Capability: [**Not applicable**][**2 inches (50 mm) minimum**][**2-1/2 inches (65 mm) minimum**][**3 inches (75 mm) minimum**]<**Insert inches (mm) minimum**>.
c. Total Dynamic Head: <**Insert value**>**feet (kPa)**.
d. Speed: <**Insert rpm**>.
e. Discharge Pipe Size: <**Insert value**> **NPS (DN)**.
f. Motor Horsepower: <**Insert value**> hp.
g. Electrical Characteristics:

1) Volts: [**120**][**240**][**277**][**480**]<**Insert value**> V ac.
2) Phases: [**Single**][**Three**].
3) Hertz: 60.

4. Unit Electrical Characteristics:

a. Full-Load Amperes: <**Insert value**> A.
b. Minimum Circuit Ampacity: <**Insert value**> A.
c. Maximum Overcurrent Protection: <**Insert value**> A.

2.3 SUBMERSIBLE SEWAGE PUMPS

A. Submersible, Fixed-Position, Single-Seal Sewage Pumps :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**A.Y. McDonald Mfg. Co.**]
b. [**Bell & Gossett; a Xylem brand**]
c. [**EBARA Pumps Americas Corp.**]
d. [**Flo Fab Inc**]
e. [**Flygt; a brand of Xylem Inc.**]
f. [**Goulds Water Technology; a Xylem brand**]
g. [**GRUNDFOS CBS Inc.**]
h. [**Liberty Pumps**]
i. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
j. [**PACO Pumps; Grundfos Pumps Corporation, USA**]
k. [**Peerless Pump Company**]
l. [**Pentair Aurora; Pentair Pump Group**]
m. [**ProFlo; a Ferguson Enterprises, Inc. brand**]
n. [**Swaby Manufacturing Company**]
o. [**Weil Pump; a Wilo Company**]

p. [**Weinman; a Crane Pumps & Systems brand**]
q. [**WILO-EMU USA LLC**]
r. [**Zoeller Company**]
s. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**A.Y. McDonald Mfg. Co.**]
b. [**Bell & Gossett; a Xylem brand**]
c. [**EBARA Pumps Americas Corp.**]
d. [**Flo Fab Inc**]
e. [**Flygt; a brand of Xylem Inc.**]
f. [**Goulds Water Technology; a Xylem brand**]
g. [**GRUNDFOS CBS Inc.**]
h. [**Liberty Pumps**]
i. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
j. [**PACO Pumps; Grundfos Pumps Corporation, USA**]
k. [**Peerless Pump Company**]
l. [**Pentair Aurora; Pentair Pump Group**]
m. [**ProFlo; a Ferguson Enterprises, Inc. brand**]
n. [**Swaby Manufacturing Company**]
o. [**Weil Pump; a Wilo Company**]
p. [**Weinman; a Crane Pumps & Systems brand**]
q. [**WILO-EMU USA LLC**]
r. [**Zoeller Company**]
s. <**Insert manufacturer's name**>

3. Description: Factory-assembled and -tested sewage-pump unit.
4. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal sewage pump as defined in HI 1.1-1.2 and HI 1.3.
5. Pump Casing: Cast iron, with open inlet, legs that elevate pump to permit flow into impeller, and vertical discharge for piping connection.
6. Impeller: Statically and dynamically balanced, [**ASTM A48/A48M, Class No. 25 A cast iron**][**ASTM A532/A532M, abrasion-resistant cast iron**][**ASTM B584, cast bronze**][**and**][**stainless steel**], nonclog, open, or semiopen design for solids handling, and keyed and secured to shaft.
7. Pump and Motor Shaft: Stainless steel[**or steel**], with factory-sealed, grease-lubricated ball bearings.
8. Seal: Mechanical.
9. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.

a. Motor Housing Fluid: [**Air**][**Oil**].

10. Controls, Rod-and-Float Type:

a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>.
b. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
d. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater than **60 inches (1500 mm)**.

e. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

11. Controls, Float- and Pressure-Switch Type:

a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>; [**pedestal**][**wall**] mounted.
b. Switch Type: [**Mechanical-float**][**Mercury-float**][**Pressure**]<**Insert type**> type, in NEMA 250, Type 6 enclosures with mounting rod and electric cables.
c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
d. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with [**mechanical-float, mercury-float, or pressure**]<**Insert type**> switch matching control and electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

12. Control-Interface Features:

a. Remote Alarm Contacts: For remote alarm interface.
b. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:

1) On-off status of pump.
2) Alarm status.

B. Submersible, Fixed-Position, Double-Seal Sewage Pumps :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABS; Cardo Flow Solutions**]
b. [**Barnes; a Crane Pumps & Systems brand**]
c. [**Bell & Gossett; a Xylem brand**]
d. [**BJM Pumps, LLC**]
e. [**Chicago Pump Company; Grundfos Pumps Corporation**]
f. [**E.I.M. Electric Co., Ltd.**]
g. [**EBARA Pumps Americas Corp.**]
h. [**Federal Pump Corp**]
i. [**Flygt; a brand of Xylem Inc.**]
j. [**Goulds Water Technology; a Xylem brand**]
k. [**HOMA Pump Technology Inc.**]
l. [**KSB Inc.**]
m. [**Liberty Pumps**]
n. [**PACO Pumps; Grundfos Pumps Corporation, USA**]
o. [**Pentair Aurora; Pentair Pump Group**]
p. [**PX Pumps USA**]
q. [**Sta-Rite Industries, Inc.; Pentair Ltd.**]
r. [**Stancor, Inc**]
s. [**Swaby Manufacturing Company**]
t. [**Weil Pump; a Wilo Company**]
u. [**Weinman; a Crane Pumps & Systems brand**]
v. [**WILO-EMU USA LLC**]
w. [**Zoeller Company**]
x. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

a. [**ABS; Cardo Flow Solutions**]
b. [**Barnes; a Crane Pumps & Systems brand**]
c. [**Bell & Gossett; a Xylem brand**]
d. [**BJM Pumps, LLC**]
e. [**Chicago Pump Company; Grundfos Pumps Corporation**]
f. [**E.I.M. Electric Co., Ltd.**]
g. [**EBARA Pumps Americas Corp.**]
h. [**Federal Pump Corp**]
i. [**Flygt; a brand of Xylem Inc.**]
j. [**Goulds Water Technology; a Xylem brand**]
k. [**HOMA Pump Technology Inc.**]
l. [**KSB Inc.**]
m. [**Liberty Pumps**]
n. [**PACO Pumps; Grundfos Pumps Corporation, USA**]
o. [**Pentair Aurora; Pentair Pump Group**]
p. [**PX Pumps USA**]
q. [**Sta-Rite Industries, Inc.; Pentair Ltd.**]
r. [**Stancor, Inc**]
s. [**Swaby Manufacturing Company**]
t. [**Weil Pump; a Wilo Company**]
u. [**Weinman; a Crane Pumps & Systems brand**]
v. [**WILO-EMU USA LLC**]
w. [**Zoeller Company**]
x. <**Insert manufacturer's name**>

3. Description: Factory-assembled and -tested sewage-pump unit.
4. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal sewage pump as defined in HI 1.1-1.2 and HI 1.3.
5. Pump Casing: Cast iron, with open inlet, legs that elevate pump to permit flow into impeller, and vertical discharge for piping connection.
6. Impeller: Statically and dynamically balanced, [**ASTM A48/A48M, Class No. 25 A cast iron**][**ASTM A532/A532M, abrasion-resistant cast iron**][**ASTM B584, cast bronze**][**and**][**stainless steel**], nonclog, open, or semiopen design for solids handling, and keyed and secured to shaft.
7. Pump and Motor Shaft: Stainless steel[**or steel**], with factory-sealed, grease-lubricated ball bearings.
8. Seals: Mechanical.
9. Moisture-Sensing Probe: Internal moisture sensor and moisture alarm.
10. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.

    a. Motor Housing Fluid: [**Air**][**Oil**].

11. Controls, Rod-and-Float Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>.
    b. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
    d. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater than **60 inches (1500 mm)**.

e. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

12. Controls, Float- and Pressure-Switch Type:

a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>; [**pedestal**][**wall**] mounted.
b. Switch Type: [**Mechanical-float**][**Mercury-float**][**Pressure**]<**Insert type**> type, in NEMA 250, Type 6 enclosures with mounting rod and electric cables.
c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
d. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with [**mechanical-float, mercury-float, or pressure**]<**Insert type**> switch matching control and electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

13. Control-Interface Features:

a. Remote Alarm Contacts: For remote alarm interface.
b. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:

1) On-off status of pump.
2) Alarm status.

C. Submersible, Quick-Disconnect, Single-Seal Sewage Pumps :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**EBARA Pumps Americas Corp.**]
b. [**Flygt; a brand of Xylem Inc.**]
c. [**Gorman-Rupp Company (The)**]
d. [**Goulds Water Technology; a Xylem brand**]
e. [**Liberty Pumps**]
f. [**PACO Pumps; Grundfos Pumps Corporation, USA**]
g. [**Pentair Aurora; Pentair Pump Group**]

j. [**WILO-EMU USA LLC**]
k. [**Zoeller Company**]
l. <**Insert manufacturer's name**>

3. Description: Factory-assembled and -tested sewage-pump unit with guide-rail supports.
4. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal sewage pump as defined in HI 1.1-1.2 and HI 1.3.
5. Pump Casing: Cast iron, with open inlet, and discharge fittings for connection to guide-rail support.
6. Impeller: Statically and dynamically balanced, [**ASTM A48/A48M, Class No. 25 A cast iron**][**ASTM A532/A532M, abrasion-resistant cast iron**][**ASTM B584, cast bronze**][**and**][**stainless steel**], nonclog, open, or semiopen design for solids handling, and keyed and secured to shaft.
7. Pump and Motor Shaft: Stainless steel[**or steel**], with factory-sealed, grease-lubricated ball bearings.
8. Seal: Mechanical.
9. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.

    a. Motor Housing Fluid: [**Air**][**Oil**].

10. Controls, Rod-and-Float Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>.
    b. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
    d. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater than **60 inches (1500 mm)**.
    e. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

11. Controls, Float- and Pressure-Switch Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>; [**pedestal**][**wall**] mounted.
    b. Switch Type: [**Mechanical-float**][**Mercury-float**][**Pressure**]<**Insert type**> type, in NEMA 250, Type 6 enclosures with mounting rod and electric cables.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
    d. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with [**mechanical-float, mercury-float, or pressure**]<**Insert type**> switch matching control and electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

12. Control-Interface Features:

    a. Remote Alarm Contacts: For remote alarm interface.
    b. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:

        1) On-off status of pump.
        2) Alarm status.

13. Guide-Rail Supports:

a. Standard: SWPA's "Submersible Sewage Pumping Systems (SWPA) Handbook."
b. Guide Rails: Vertical pipes or structural members, made of galvanized steel or other corrosion-resistant metal, attached to baseplate and basin sidewall or cover.
c. Baseplate: Corrosion-resistant metal plate, attached to basin floor, supporting guide rails and stationary elbow.
d. Pump Yoke: Motor- or casing-mounted yokes or other attachments for aligning pump during connection of flanges.
e. Movable Elbow: Pump discharge-elbow fitting with flange, seal, and positioning device.
f. Stationary Elbow: Fixed discharge-elbow fitting with flange that mates to movable-elbow flange and support attached to baseplate.
g. Lifting Cable: Stainless steel; attached to pump and cover at manhole.

D. Submersible, Quick-Disconnect, Double-Seal Sewage Pumps :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABS; Cardo Flow Solutions**]

3. Description: Factory-assembled and -tested sewage-pump unit with guide-rail supports.
4. Pump type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal sewage pump as defined in HI 1.1-1.2 and HI 1.3.
5. Pump Casing: Cast iron, with open inlet, and discharge fittings for connection to guide-rail support.
6. Impeller: Statically and dynamically balanced, [**ASTM A48/A48M, Class No. 25 A cast iron**][**ASTM A532/A532M, abrasion-resistant cast iron**][**ASTM B584, cast bronze**][**and**][**stainless steel**], nonclog, open, or semiopen design for solids handling, and keyed and secured to shaft.
7. Pump and Motor Shaft: Stainless steel[**or steel**], with factory-sealed, grease-lubricated ball bearings.
8. Seals: Mechanical.
9. Moisture-Sensing Probe: Internal moisture sensor and moisture alarm.
10. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.

    a. Motor Housing Fluid: [**Air**][**Oil**].

11. Controls, Rod-and-Float Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>.
    b. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
    d. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater than **60 inches (1500 mm)**.
    e. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

12. Controls, Float- and Pressure-Switch Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>; [**pedestal**][**wall**] mounted.
    b. Switch Type: [**Mechanical-float**][**Mercury-float**][**Pressure**]<**Insert type**> type, in NEMA

250, Type 6 enclosures with mounting rod and electric cables.
c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
d. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with [**mechanical-float, mercury-float, or pressure**]<**Insert type**> switch matching control and electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

13. Control-Interface Features:

a. Remote Alarm Contacts: For remote alarm interface.
b. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:

1) On-off status of pump.
2) Alarm status.

14. Guide-Rail Supports:

a. Standard: SWPA's "Submersible Sewage Pumping Systems (SWPA) Handbook."
b. Guide Rails: Vertical pipes or structural members, made of galvanized steel or other corrosion-resistant metal, attached to baseplate and basin sidewall or cover.
c. Baseplate: Corrosion-resistant metal plate, attached to basin floor, supporting guide rails and stationary elbow.
d. Pump Yoke: Motor- or casing-mounted yokes or other attachments for aligning pump during connection of flanges.
e. Movable Elbow: Pump discharge-elbow fitting with flange, seal, and positioning device.
f. Stationary Elbow: Fixed discharge-elbow fitting with flange that mates to movable-elbow flange and support attached to baseplate.
g. Lifting Cable: Stainless steel; attached to pump and cover at manhole.

E. Submersible, Quick-Disconnect, Grinder Sewage Pumps :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABS; Cardo Flow Solutions**]
b. [**Alyan Pump Company**]
c. [**Barnes; a Crane Pumps & Systems brand**]
d. [**BJM Pumps, LLC**]
e. [**EBARA Pumps Americas Corp.**]
f. [**HOMA Pump Technology Inc.**]
g. [**Liberty Pumps**]
h. [**Pentair Aurora; Pentair Pump Group**]
i. [**Stancor, Inc**]
j. [**Tsurumi America, Inc.**]
k. [**Vaughan Co., Inc.**]
l. [**Weil Pump; a Wilo Company**]
m. [**WILO-EMU USA LLC**]
n. [**Zoeller Company**]
o. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABS; Cardo Flow Solutions**]
b. [**Alyan Pump Company**]
c. [**Barnes; a Crane Pumps & Systems brand**]
d. [**BJM Pumps, LLC**]
e. [**EBARA Pumps Americas Corp.**]
f. [**HOMA Pump Technology Inc.**]
g. [**Liberty Pumps**]
h. [**Pentair Aurora; Pentair Pump Group**]
i. [**Stancor, Inc**]
j. [**Tsurumi America, Inc.**]
k. [**Vaughan Co., Inc.**]
l. [**Weil Pump; a Wilo Company**]
m. [**WILO-EMU USA LLC**]
n. [**Zoeller Company**]
o. <**Insert manufacturer's name**>

3. Description: Factory-assembled and -tested, grinder sewage-pump unit with guide-rail supports.
4. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal sewage pump as defined in HI 1.1-1.2 and HI 1.3.
5. Pump Casing: Cast iron, with open inlet, and discharge fittings for connection to guide-rail supports.
6. Impeller: Bronze or stainless steel; statically and dynamically balanced, with stainless-steel cutter, grinder, or slicer assembly; capable of handling solids; and keyed and secured to shaft.
7. Pump and Motor Shaft: Stainless steel[**or steel**], with factory-sealed, grease-lubricated ball bearings.
8. Seal: Mechanical.
9. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.

    a. Motor Housing Fluid: [**Air**][**Oil**].

10. Controls, Rod-and-Float Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>.
    b. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
    d. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater than **60 inches (1500 mm)**.
    e. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

11. Controls, Float- and Pressure-Switch Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>; [**pedestal**][**wall**] mounted.
    b. Switch Type: [**Mechanical-float**][**Mercury-float**][**Pressure**]<**Insert type**> type, in NEMA 250, Type 6 enclosures with mounting rod and electric cables.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
    d. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with [**mechanical-float, mercury-float, or pressure**]<**Insert type**> switch matching control and electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

12. Control-Interface Features:

a. Remote Alarm Contacts: For remote alarm interface.
b. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:

1) On-off status of pump.
2) Alarm status.

13. Guide-Rail Supports:

a. Standard: SWPA's "Submersible Sewage Pumping Systems (SWPA) Handbook."
b. Guide Rails: Vertical pipes or structural members, made of galvanized steel or other corrosion-resistant metal, attached to baseplate and basin sidewall or cover.
c. Baseplate: Corrosion-resistant metal plate, attached to basin floor, supporting guide rails and stationary elbow.
d. Pump Yoke: Motor- or casing-mounted yokes or other attachments for aligning pump during connection of flanges.
e. Movable Elbow: Pump discharge-elbow fitting with flange, seal, and positioning device.
f. Stationary Elbow: Fixed discharge-elbow fitting with flange that mates to movable-elbow flange and support attached to baseplate.
g. Lifting Cable: Stainless steel; attached to pump and cover at manhole.

F. Submersible, Quick-Disconnect, Progressing-Cavity, Grinder Sewage Pumps :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Barnes; a Crane Pumps & Systems brand**]
b. [**Environment One Corporation**]
c. [**Pentair Aurora; Pentair Pump Group**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Barnes; a Crane Pumps & Systems brand**]
b. [**Environment One Corporation**]
c. [**Pentair Aurora; Pentair Pump Group**]
d. <**Insert manufacturer's name**>

3. Description: Factory-assembled and -tested, progressing-cavity, grinder sewage-pump unit with guide-rail supports.
4. Pump Type: Submersible, progressing-cavity, single-screw rotary, grinder sewage pump as defined in HI 3.1-3.5.
5. Pump Body: [**Cast iron**]<**Insert material**>.
6. Pump Bearings: Radial and thrust types.
7. Pump Shaft: Steel.
8. Rotor: Stainless steel.
9. Stator: [**Buna-N**][**or**][**natural rubber**]<**Insert material**>.
10. Seal: Packing gland and mechanical types.
11. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.
12. Controls, Rod-and-Float Type:

a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>.
b. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
d. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater than **60 inches (1500 mm)**.
e. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

13. Controls, Float- and Pressure-Switch Type:

a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>; [**pedestal**][**wall**] mounted.
b. Switch Type: [**Mechanical-float**][**Mercury-float**][**Pressure**]<**Insert type**> type, in NEMA 250, Type 6 enclosures with mounting rod and electric cables.
c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
d. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with [**mechanical-float, mercury-float, or pressure**]<**Insert type**> switch matching control and electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

14. Control-Interface Features:

a. Remote Alarm Contacts: For remote alarm interface.
b. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:

1) On-off status of pump.
2) Alarm status.

15. Guide-Rail Supports:

a. Standard: SWPA's "Submersible Sewage Pumping Systems (SWPA) Handbook."
b. Guide Rails: Vertical pipes or structural members, made of galvanized steel or other corrosion-resistant metal, attached to baseplate and basin sidewall or cover.
c. Baseplate: Corrosion-resistant metal plate, attached to basin floor, supporting guide rails and stationary elbow.
d. Pump Yoke: Motor- or casing-mounted yokes or other attachments for aligning pump during connection of flanges.
e. Movable Elbow: Pump discharge-elbow fitting with flange, seal, and positioning device.
f. Stationary Elbow: Fixed discharge-elbow fitting with flange that mates to movable-elbow flange and support attached to baseplate.
g. Lifting Cable: Stainless steel; attached to pump and cover at manhole.

G. Capacities and Characteristics:

1. Unit Capacity: <**Insert value**> **gpm (L/min.)**.
2. Number of Pumps: [**One**][**Two**]<**Insert value**>.
3. Each Pump:

a. Capacity: <**Insert value**> **gpm (L/min.)**.
b. Solids Handling Capability: [**Not applicable**][**2 inches (50 mm) minimum**][**2-1/2 inches (65 mm) minimum**][**3 inches (75 mm) minimum**]<**Insert inches (mm) minimum**>.
c. Total Dynamic Head: <**Insert value**> **feet (kPa)**.
d. Speed: <**Insert rpm**>.
e. Discharge Pipe Size: <**Insert value**> **NPS (DN)**.

f. Motor Horsepower: <**Insert value**> hp.
g. Electrical Characteristics:

1) Volts: [**120**][**240**][**277**][**480**]<**Insert value**> V ac.
2) Phases: [**Single**][**Three**].
3) Hertz: 60.

4. Unit Electrical Characteristics:

a. Full-Load Amperes: <**Insert value**> A.
b. Minimum Circuit Ampacity: <**Insert value**> A.
c. Maximum Overcurrent Protection: <**Insert value**> A.

2.4 WET-PIT-VOLUTE SEWAGE PUMPS

A. Description: Factory-assembled and -tested sewage-pump unit.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Alyan Pump Company**]
2. [**Armstrong Fluid Technology**]
3. [**Chicago Pump Company; Grundfos Pumps Corporation**]
4. [**Federal Pump Corp**]
5. [**Flo Fab Inc**]
6. [**PACO Pumps; Grundfos Pumps Corporation, USA**]
7. [**Peerless Pump Company**]
8. [**Pentair Aurora; Pentair Pump Group**]
9. [**Swaby Manufacturing Company**]
10. [**Tramco Pump Company**]
11. [**Vertiflo Pump Company**]
12. [**Weil Pump; a Wilo Company**]
13. [**Weinman; a Crane Pumps & Systems brand**]
14. [**Yeomans Chicago Corporation**]
15. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Alyan Pump Company**]
2. [**Armstrong Fluid Technology**]
3. [**Chicago Pump Company; Grundfos Pumps Corporation**]
4. [**Federal Pump Corp**]
5. [**Flo Fab Inc**]
6. [**PACO Pumps; Grundfos Pumps Corporation, USA**]
7. [**Peerless Pump Company**]
8. [**Pentair Aurora; Pentair Pump Group**]
9. [**Swaby Manufacturing Company**]
10. [**Tramco Pump Company**]
11. [**Vertiflo Pump Company**]
12. [**Weil Pump; a Wilo Company**]
13. [**Weinman; a Crane Pumps & Systems brand**]
14. [**Yeomans Chicago Corporation**]
15. <**Insert manufacturer's name**>

D. Pump Type: Wet-pit-volute, single-stage, separately coupled, overhung-impeller, centrifugal sewage pump as defined in HI 1.1-1.2 and HI 1.3.

E. Pump Casing: Cast iron, with open inlet and threaded or flanged connection for discharge piping.

F. Pump Shaft: [**Stainless steel**][**and**][**steel**].

G. Impeller: Statically and dynamically balanced, [**ASTM A48/A48M, Class No. 25 A cast iron**][**ASTM A532/A532M, abrasion-resistant cast iron**][**and**][**ASTM B584, cast bronze**], nonclog, open, or semiopen design for solids handling, and keyed and secured to shaft.

H. Sleeve Bearings: Bronze. Include oil-lubricated, intermediate sleeve bearings at **48-inch- (1200-mm-)** maximum intervals if basin depth is more than **48 inches (1200 mm)**, and grease-lubricated, ball-type thrust bearings.

I. Pump and Motor Shaft Coupling: Flexible, capable of absorbing torsional vibration and shaft misalignment.

J. Pump Discharge Piping: Factory or field fabricated, [**galvanized, ASTM A53/A53M, Schedule 40, steel pipe with ASME B16.1, Class 125, cast-iron flanges and flanged fittings or ASME B16.4, Class 125, gray-iron threaded fittings**]<**Insert pipe material**>.

1. Revise piping configuration to accommodate reverse-flow assembly.

K. Support Plate: Cast iron or coated steel; strong enough to support pumps, motors, and controls. See "Sewage-Pump Basins and Basin Covers" Article for requirements.

L. Shaft Seal: Stuffing box, with graphite-impregnated braided-yarn rings and bronze packing gland.

M. Motor: Single speed; grease-lubricated ball bearings and mounted on vertical, cast-iron pedestal.

N. Controls, Rod-and-Float Type:

1. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>.
2. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
3. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
4. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater than **60 inches (1500 mm)**.
5. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

O. Controls, Float- and Pressure-Switch Type:

1. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>; [**pedestal**][**wall**] mounted.
2. Switch Type: [**Mechanical-float**][**Mercury-float**][**Pressure**]<**Insert type**> type, in NEMA 250, Type 6 enclosures with mounting rod and electric cables.
3. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
4. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with [**mechanical-float, mercury-float, or pressure**]<**Insert type**> switch matching control and electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

P. Control-Interface Features:

1. Remote Alarm Contacts: For remote alarm interface.
2. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:

    a. On-off status of pump.
    b. Alarm status.

Q. Capacities and Characteristics:

1. Unit Capacity: <**Insert value**> **gpm (L/min.)**.
2. Number of Pumps: [**One**][**Two**]<**Insert value**>.
3. Each Pump:

    a. Capacity: <**Insert value**> **gpm (L/min.)**.
    b. Solids Handling Capability: [**2 inches (50 mm)**][**2-1/2 inches (65 mm)**][**3 inches (75 mm)**]<**Insert inches (mm)**> minimum.
    c. Total Dynamic Head: <**Insert value**> **feet (kPa)**.
    d. Speed: <**Insert rpm**>.
    e. Discharge Pipe Size: <**Insert value**> **NPS (DN)**.
    f. Motor Horsepower: <**Insert value**> hp.
    g. Electrical Characteristics:

        1) Volts: [**120**][**240**][**277**][**480**]<**Insert value**> V ac.
        2) Phases: [**Single**][**Three**].
        3) Hertz: 60.

4. Unit Electrical Characteristics:

    a. Full-Load Amperes: <**Insert value**> A.
    b. Minimum Circuit Ampacity: <**Insert value**> A.
    c. Maximum Overcurrent Protection: <**Insert value**> A.

2.5 SEWAGE-PUMP, REVERSE-FLOW ASSEMBLIES

A. Description: Factory-fabricated, sewage pump reverse-flow assembly for factory or field assembly and installation in sewage pump basin.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Chicago Pump Company; Grundfos Pumps Corporation**]
2. [**Federal Pump Corp**]
3. [**PACO Pumps; Grundfos Pumps Corporation, USA**]
4. [**Peerless Pump Company**]
5. [**Weil Pump; a Wilo Company**]
6. [**Yeomans Chicago Corporation**]
7. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Chicago Pump Company; Grundfos Pumps Corporation**]
2. [**Federal Pump Corp**]
3. [**PACO Pumps; Grundfos Pumps Corporation, USA**]

4. [**Peerless Pump Company**]
5. [**Weil Pump; a Wilo Company**]
6. [**Yeomans Chicago Corporation**]
7. <**Insert manufacturer's name**>

D. Components: Include the following corrosion-resistant-metal components:

1. Inlet Fitting: One combination inlet-overflow strainer fitting.
2. Valves: Two shutoff valves and two check valves.
3. Strainers: Two strainer housings with reverse-flow, self-flushing strainers.
4. Pipe and Fittings: Size and configuration required to connect to sewage pumps and piping.

2.6 SEWAGE-PUMP BASINS AND BASIN COVERS

A. Basins: Factory-fabricated, watertight, cylindrical, basin sump with top flange and sidewall openings for pipe connections.

1. Material: [**Cast iron**][**Fiberglass**][**Polyethylene**]<**Insert material**>.
2. Reinforcement: Mounting plates for pumps, fittings[**, guide-rail supports if used,**] and accessories.
3. Anchor Flange: Same material as or compatible with basin sump, cast in or attached to sump, in location and of size required to anchor basin in concrete slab.

B. Basin Covers: Fabricate metal cover with openings having gaskets, seals, and bushings; for access to pumps, pump shafts, control rods, discharge piping, vent connections, and power cables.

1. Reinforcement: Steel or cast iron, capable of supporting foot traffic for basins installed in foot-traffic areas.

C. Capacities and Characteristics:

1. Capacity: <**Insert value**> **gal. (L)**.
2. Diameter: <**Insert value**> **inches (mm)**.
3. Depth: <**Insert value**> **inches (mm)**.
4. Inlet No. 1:

    a. Drainage Pipe Size: <**Insert value**> **NPS (DN)**.
    b. Bottom of Sump to Centerline: <**Insert value**> **inches (mm)**.
    c. Type: [**Flanged**][**Hubbed**][**Threaded**] outside.

5. Inlet No. 2:

    a. Drainage Pipe Size: <**Insert value**> **NPS (DN)**.
    b. Bottom of Sump to Centerline: <**Insert value**> **inches (mm)**.
    c. Type: [**Flanged**][**Hubbed**][**Threaded**] outside.

6. Inlet No. 3:

    a. Drainage Pipe Size: <**Insert value**> **NPS (DN)**.
    b. Bottom of Sump to Centerline: <**Insert value**> **inches (mm)**.
    c. Type: [**Flanged**][**Hubbed**][**Threaded**] outside.

7. Sidewall Outlet:

a. Discharge Pipe Size: <**Insert value**> **NPS (DN)**.
b. Bottom of Sump to Centerline: <**Insert value**> **inches (mm)**.
c. Type: [**Hubbed inside**][**Hubbed outside**]<**Insert type**>.

8. Cover Material: [**Cast iron**][**Steel with bituminous coating**][**Cast iron or steel with bituminous coating**]<**Insert material**>.
9. Cover Diameter: <**Insert value**> **inches (mm)**, but not less than outside diameter of basin top flange.
10. Manhole Required in Cover: [**Yes**][**No**].
11. Vent Size: <**Insert value**> **NPS (DN)**.

2.7 PROGRESSING-CAVITY SEWAGE PUMPS

A. Description: Factory-assembled and -tested, progressing-cavity, single-screw rotary pump as defined in HI 3.1-3.5.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Continental Pump Co.**]
2. [**Moyno, Inc.**]
3. [**Roper Pump Co.**]
4. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Continental Pump Co.**]
2. [**Moyno, Inc.**]
3. [**Roper Pump Co.**]
4. <**Insert manufacturer's name**>

D. Pump Body: [**Cast iron**]<**Insert material**> with feet for base or floor installation.

E. Pump Bearings: Radial and thrust types.

F. Pump Shaft: Steel.

G. Rotor: [**Chrome-plated steel**]<**Insert material**>.

H. Stator: [**Buna-N**][**or**][**natural rubber**]<**Insert material**>.

I. Seals: Packing gland and mechanical types.

J. Coupling: Flexible.

K. Motor: Single speed; grease-lubricated ball bearings.

L. Capacities and Characteristics:

1. Capacity: <**Insert value**>**gal. (L/min.)**.
2. Solids Handling Capability: [**Not applicable**][**2 inches (50 mm) minimum**][**2-1/2 inches (65 mm) minimum**][**3 inches (75 mm) minimum**]<**Insert inches (mm) minimum**>.

3. Total Dynamic Head: <**Insert value**> **feet (kPa)**.
4. Speed: <**Insert rpm**>.
5. Discharge Pipe Size: <**Insert value**> **NPS (DN)**.
6. Motor Horsepower: <**Insert value**> hp.
7. Electrical Characteristics:

    a. Volts: [**120**][**240**][**277**][**480**]<**Insert value**> V ac.
    b. Phases: [**Single**][**Three**].
    c. Hertz: 60.

8. Unit Electrical Characteristics:

    a. Full-Load Amperes: <**Insert value**> A.
    b. Minimum Circuit Ampacity: <**Insert value**> A.
    c. Maximum Overcurrent Protection: <**Insert value**> A.

2.8 PACKAGED, SUBMERSIBLE SEWAGE-PUMP UNITS

A. Packaged, Submersible, Grinder, Sewage-Pump Units:

1. Description: Factory-assembled and -tested, automatic-operation, basin-mounted, grinder sewage-pump unit.
2. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**A.Y. McDonald Mfg. Co.**]
    b. [**Barnes; a Crane Pumps & Systems brand**]
    c. [**Environment One Corporation**]
    d. [**Goulds Water Technology; a Xylem brand**]
    e. [**Liberty Pumps**]
    f. [**Pentair Aurora; Pentair Pump Group**]
    g. [**SFA Saniflo USA**]
    h. [**Zoeller Company**]
    i. <**Insert manufacturer's name**>

3. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**A.Y. McDonald Mfg. Co.**]
    b. [**Barnes; a Crane Pumps & Systems brand**]
    c. [**Environment One Corporation**]
    d. [**Goulds Water Technology; a Xylem brand**]
    e. [**Liberty Pumps**]
    f. [**Pentair Aurora; Pentair Pump Group**]
    g. [**SFA Saniflo USA**]
    h. [**Zoeller Company**]
    i. <**Insert manufacturer's name**>

4. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller centrifugal pump as defined in HI 1.1-1.2 and HI 1.3.
5. Pump Casing: Cast iron.

6. Impeller: Stainless-steel grinder[**, cutter, or slicer**] type with shredding ring.
7. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.
8. Controls for Simplex Pump: Manufacturer's standard panel for one pump.
9. Controls for Duplex Pump: Automatic, with mechanical- or mercury-float switches and alternator.
10. Pump Discharge Piping: Factory or field fabricated, [**galvanized, ASTM A53/A53M, Schedule 40, steel pipe with ASME B16.4, Class 125, gray-iron threaded fittings**]<**Insert pipe material**>.
11. Basin: Watertight[**plastic**] and of size required for pumps, with inlet pipe connection and gastight cover with pump discharge and vent connections.

B. Packaged, Submersible, Nonclog, Sewage-Pump Units :

1. Description: Factory-assembled and -tested, automatic-operation, basin-mounted, sewage-pump unit.
2. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**A.Y. McDonald Mfg. Co.**]
    b. [**Barnes; a Crane Pumps & Systems brand**]
    c. [**Bell & Gossett; a Xylem brand**]
    d. [**Glentronics, Inc.**]
    e. [**Goulds Water Technology; a Xylem brand**]
    f. [**GRUNDFOS CBS Inc.**]
    g. [**Liberty Pumps**]
    h. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
    i. [**PACO Pumps; Grundfos Pumps Corporation, USA**]
    j. [**Pentair Aurora; Pentair Pump Group**]
    k. [**Sta-Rite Industries, Inc.; Pentair Ltd.**]
    l. [**Zoeller Company**]
    m. <**Insert manufacturer's name**>

3. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**A.Y. McDonald Mfg. Co.**]
    b. [**Barnes; a Crane Pumps & Systems brand**]
    c. [**Bell & Gossett; a Xylem brand**]
    d. [**Glentronics, Inc.**]
    e. [**Goulds Water Technology; a Xylem brand**]
    f. [**GRUNDFOS CBS Inc.**]
    g. [**Liberty Pumps**]
    h. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
    i. [**PACO Pumps; Grundfos Pumps Corporation, USA**]
    j. [**Pentair Aurora; Pentair Pump Group**]
    k. [**Sta-Rite Industries, Inc.; Pentair Ltd.**]
    l. [**Zoeller Company**]
    m. <**Insert manufacturer's name**>

4. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller centrifugal pump as defined in HI 1.1-1.2 and HI 1.3.
5. Pump Casing: Cast iron.

6. Impeller: Brass or cast iron; statically and dynamically balanced, non-clog design, and capable of handling **2-inch- (50-mm-)** diameter solids.
7. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.
8. Controls for Simplex Pump: Manufacturer's standard panel for one pump.
9. Controls for Duplex Pump: Automatic, with mechanical- or mercury-float switches and alternator.
10. Pump Discharge Piping: Factory or field fabricated, [**galvanized, ASTM A53/A53M, Schedule 40, steel pipe with ASME B16.4, Class 125, gray-iron threaded fittings**]<**Insert pipe material**>.
11. Basin: Watertight[**plastic**] and of size required for pumps, with inlet pipe connection and gastight cover with pump discharge and vent connections.

C. Capacities and Characteristics:

1. System Capacity: <**Insert value**>**gal. (L/min.)**.
2. Number of Pumps: [**One**][**Two**].
3. Each Pump:

    a. Capacity: <**Insert value**>**gal. (L/min.)**.
    b. Total Dynamic Head: <**Insert value**> **feet (kPa)**.
    c. Speed: <**Insert rpm**>.
    d. Discharge Pipe Size: <**Insert value**> **NPS (DN)**.
    e. Motor Horsepower: <**Insert value**> hp.
    f. Electrical Characteristics:

        1) Volts: [**120**][**240**][**277**][**480**]<**Insert value**> V ac.
        2) Phases: [**Single**][**Three**].
        3) Hertz: 60.

4. Unit Electrical Characteristics:

    a. Full-Load Amperes: <**Insert value**> A.
    b. Minimum Circuit Ampacity: <**Insert value**> A.
    c. Maximum Overcurrent Protection: <**Insert value**> A.

5. Alternator Control Required: [**Yes**][**No**].
6. Basin:

    a. Dimensions: <**Insert values**>.
    b. Inlet Size: <**Insert value**> **NPS (DN)**.
    c. Bottom to Inlet Centerline: <**Insert value**> **inches (mm)**.
    d. Vent Size: <**Insert value**> **NPS (DN)**.

2.9 PACKAGED WASTEWATER-PUMP UNITS

A. Packaged, Wet-Pit-Volute, Wastewater-Pump Units:

1. Description: Factory-assembled and -tested, automatic-operation, basin-mounted, effluent-pump unit.
2. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Alyan Pump Company**]
b. [**Federal Pump Corp**]
c. [**Hartell Pumps; Milton Roy**]
d. <**Insert manufacturer's name**>

3. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Alyan Pump Company**]
b. [**Federal Pump Corp**]
c. [**Hartell Pumps; Milton Roy**]
d. <**Insert manufacturer's name**>

4. Pump Type: Wet-pit-volute, single-stage, separately coupled, overhung-impeller centrifugal pump as defined in HI 1.1-1.2 and HI 1.3.
5. Pump Body and Impeller: Corrosion-resistant materials.
6. Motor: With built-in overload protection and mounted vertically on basin cover.
7. Power Cord: Three-conductor, waterproof cable of length required, but not less than **72 inches (1830 mm)** and with grounding plug and cable-sealing assembly for connection at pump.
8. Control: Float switch.
9. Pump Discharge Piping: Factory or field fabricated, [**galvanized, ASTM A53/A53M, Schedule 40, steel pipe with ASME B16.4, Class 125, gray-iron threaded fittings**]<**Insert pipe material**>.
10. Basin: Watertight, aluminum, plastic, or coated steel with inlet pipe connection and gastight cover with vent and pump discharge connections.

B. Packaged, Submersible Wastewater-Pump Units:

1. Description: Factory-assembled and -tested, automatic-operation, effluent-pump unit with basin.
2. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**A.Y. McDonald Mfg. Co.**]
b. [**ABS; Cardo Flow Solutions**]
c. [**Bell & Gossett; a Xylem brand**]
d. [**Goulds Water Technology; a Xylem brand**]
e. [**GRUNDFOS CBS Inc.**]
f. [**Liberty Pumps**]
g. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
h. [**Pentair Aurora; Pentair Pump Group**]
i. [**ProFlo; a Ferguson Enterprises, Inc. brand**]
j. [**SFA Saniflo USA**]
k. [**Sta-Rite Industries, Inc.; Pentair Ltd.**]
l. [**Zoeller Company**]
m. <**Insert manufacturer's name**>

3. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**A.Y. McDonald Mfg. Co.**]
b. [**ABS; Cardo Flow Solutions**]
c. [**Bell & Gossett; a Xylem brand**]

d. [**Goulds Water Technology; a Xylem brand**]
e. [**GRUNDFOS CBS Inc.**]
f. [**Liberty Pumps**]
g. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
h. [**Pentair Aurora; Pentair Pump Group**]
i. [**ProFlo; a Ferguson Enterprises, Inc. brand**]
j. [**SFA Saniflo USA**]
k. [**Sta-Rite Industries, Inc.; Pentair Ltd.**]
l. [**Zoeller Company**]
m. <**Insert manufacturer's name**>

4. Pump Type: Submersible, end-suction, single-stage, overhung-impeller, centrifugal pump as defined in HI 1.1-1.2 and HI 1.3.
5. Pump Body and Impeller: Corrosion-resistant materials.
6. Pump Seals: Mechanical.
7. Motor: Hermetically sealed, capacitor-start type, with built-in overload protection.
8. Power Cord: Three-conductor, waterproof cable of length required, but not less than **72 inches (1830 mm)** and with grounding plug and cable-sealing assembly for connection at pump.
9. Control: Float switch.
10. Pump Discharge Piping: Factory or field fabricated, [**galvanized, ASTM A53/A53M, Schedule 40, steel pipe with ASME B16.4, Class 125, gray-iron threaded fittings**]<**Insert pipe material**>.
11. Basin: Watertight plastic with inlet pipe connection and gastight cover with vent and pump discharge connections.

C. Capacities and Characteristics:

1. Pump Capacity: <**Insert value**> **gpm (L/min.)**.
2. Total Dynamic Head: <**Insert value**> **feet (kPa)**.
3. Speed: <**Insert rpm**>.
4. Discharge Pipe Size: <**Insert value**> **NPS (DN)**.
5. Motor Horsepower: <**Insert value**> hp.
6. Electrical Characteristics:

a. Volts: [**120**][**240**]<**Insert value**> V ac.
b. Phases: [**Single**][**Three**].
c. Hertz: 60.

7. Unit Electrical Characteristics:

a. Full-Load Amperes: <**Insert value**> A.
b. Minimum Circuit Ampacity: <**Insert value**> A.
c. Maximum Overcurrent Protection: <**Insert value**> A.

8. Basin:

a. Capacity: [**2 gal. (7.6 L)**][**4 gal. (15.1 L)**]<**Insert value**> minimum.
b. Inlet Connection: [**NPS 1-1/2 (DN 40)**]<**Insert pipe size**> minimum.
c. Vent Connection: [**NPS 1-1/2 (DN 40)**]<**Insert pipe size**> minimum.

2.10 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 220500 "Common Work Results for Plumbing."

1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

B. Motors for submersible pumps shall be hermetically sealed.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Excavation and filling are specified in Section 312000 "Earth Moving."

3.2 EXAMINATION

A. Examine roughing-in for plumbing piping to verify actual locations of sanitary drainage and vent piping connections before sewage pump installation.

3.3 INSTALLATION

A. Pump Installation Standards:

1. Comply with HI 1.4 for installation of centrifugal pumps.
2. Comply with HI 3.1-3.5 for installation of progressing-cavity sewage pumps.

B. Equipment Mounting:

1. Install progressing-cavity sewage pumps on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
3. Comply with requirements for vibration isolation devices specified in Section 220548.13 "Vibration Controls for Plumbing Piping and Equipment."

C. Wiring Method: Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

D. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

3.4 CONNECTIONS

A. Comply with requirements for piping specified in Section 221316 "Sanitary Waste and Vent Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to equipment, allow space for service and maintenance.

3.5 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test, inspect, and adjust components, assemblies, and equipment installations, including connections.

B. Perform the following tests and inspections:

1. Perform each visual and mechanical inspection.
2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Pumps and controls will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.6 STARTUP SERVICE

A. [**Engage a factory-authorized service representative to perform**][**Perform**] startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. <**Insert startup steps**>.

3.7 ADJUSTING

A. Adjust pumps to function smoothly, and lubricate as recommended by manufacturer.

B. Adjust control set points.

3.8 DEMONSTRATION

A. [**Engage a factory-authorized service representative to train**][**Train**] Owner's maintenance personnel to adjust, operate, and maintain[**controls and**] pumps.

END OF SECTION 22 13 29 00

Task	Specification	Specification Description
22 13 29 00	22 13 00 00	Facility Gray-Water Storage Tanks
22 13 29 13	22 13 29 00	Sanitary Sewerage Pumps

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 14 00 00 - FACILITY STORM-WATER RETENTION TANKS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Steel, pressure, storm-water retention tanks.
2. Steel, nonpressure, storm-water retention tanks.
3. Insulated, steel, storm-water retention tanks.
4. Plastic, pressure, storm-water retention tanks.
5. Plastic, nonpressure, storm-water retention tanks.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for storm-water retention tanks.

B. Shop Drawings:

1. Include plans, elevations, sections, and [**mounting**][**attachment**] details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Detail fabrication and assembly of storm-water retention tanks.
4. <**Insert list of products**>.

C. Delegated-Design Submittal: For storm-water retention tanks.

1.3 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For facility storm-water retention tanks, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Welding certificates.

1.4 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
3. AWS D1.4/D1.4M, "Structural Welding Code - Reinforcing Steel."

B. Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design facility storm-water retention tanks.

B. Structural Performance: Facility storm-water retention tank, including structural reinforcement and foundation, shall be capable of withstanding the effects of dead and live gravity loads and winds of [**100 mph (161 km/h)**]<**Insert value**>.

C. Seismic Performance: Facility storm-water retention tank, including structural reinforcement and foundation, shall withstand the effects of earthquake motions determined according to [**ASCE/SEI 7**]<**Insert requirement**>.

1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified[**and the system will be fully operational after the seismic event**]."

D. Thermal Movements: Storm-water retention tank, including structural reinforcement and foundation, shall allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects. Base engineering calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change: [**120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces**]<**Insert temperature change**>.

2.2 STEEL, PRESSURE, STORM-WATER RETENTION TANKS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**A. O. Smith Corporation**]
2. [**Adamson Global Technology**]
3. [**Aldrich Company, Inc. (The)**]
4. [**Bradford White Corporation**]
5. [**Cemline Corporation**]
6. [**Flo Fab Inc**]
7. [**Green Boiler Technologies**]
8. [**GSW Water Heating**]
9. [**HESCO Bastion Ltd.**]
10. [**Lochinvar, LLC**]
11. [**Precision Boilers**]

12. [**PVI; A WATTS Brand**]
13. [**RBI**]
14. [**RECO USA**]
15. [**State Industries**]
16. [**Weben-Jarco, Inc**]
17. [**Wendland Manufacturing Corp.**]
18. [**Wessels Company**]
19. [**Wood, John Co**]
20. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**A. O. Smith Corporation**]
2. [**Adamson Global Technology**]
3. [**Aldrich Company, Inc. (The)**]
4. [**Bradford White Corporation**]
5. [**Cemline Corporation**]
6. [**Flo Fab Inc**]
7. [**Green Boiler Technologies**]
8. [**GSW Water Heating**]
9. [**HESCO Bastion Ltd.**]
10. [**Lochinvar, LLC**]
11. [**Precision Boilers**]
12. [**PVI; A WATTS Brand**]
13. [**RBI**]
14. [**RECO USA**]
15. [**State Industries**]
16. [**Weben-Jarco, Inc**]
17. [**Wendland Manufacturing Corp.**]
18. [**Wessels Company**]
19. [**Wood, John Co**]
20. <**Insert manufacturer's name**>

C. Description: Steel, [**horizontal**][**vertical**], pressure-rated tank with cylindrical sidewalls.

D. Fabricate supports and attachments to tank with reinforcement strong enough to resist tank movement during seismic event when tank supports are anchored to building structure.

E. Construction: [**ASME code, steel**][**Steel**], constructed with welded joints, for [**125-psig (860-kPa)**][**150-psig (1035-kPa)**]<**Insert value**> working pressure.

1. Comply with AWWA D100, "Welded Steel Tanks for Water Storage," and with AWWA M42, "Steel Water-Storage Tanks," for welded-steel, surface-water retention tanks.

F. Manhole: Watertight, for tank more than [**36 inches (900 mm)**]<**Insert dimension**> in diameter; same pressure rating as tank.

G. Tappings: Factory-fabricated[**stainless**] steel, welded to tank[**before testing and labeling**].

1. NPS 2 (DN 50) and Smaller: ASME B1.20.1, with female thread.
2. NPS 2-1/2 (DN 65) and Larger: ASME B16.5, flanged.

H. Specialties and Accessories: Include tappings in tank and the following:

1. Pressure relief valve.

2. Pressure gage.
3. Thermometer.
4. Air-charging connection.
5. Gage glass, brass fittings, compression stops, and gage-glass guard.

I. Horizontal Tank Supports: Factory-fabricated steel saddles, welded to tank[**before testing and labeling**].

J. Vertical Tank Supports: Factory-fabricated steel legs or steel skirt, welded to tank[**before testing and labeling**].

1. Lining Material: [**Cement**][**Copper**]<**Insert material**>.
2. Coating: [**Epoxy resin**][**Galvanized**][**Glass**][**Nickel**]<**Insert coating**>.

K. Exterior Coating: [**Galvanized**][**Manufacturer's standard enamel paint**][**Primer paint**]<**Insert coating**>.

2.3 STEEL, NONPRESSURE, STORM-WATER RETENTION TANKS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Adamson Global Technology**]
2. [**Highland Tank & Manufacturing Company, Inc.**]
3. [**RECO USA**]
4. [**Steel Tank and Fabricating Corporation (STAFCO)**]
5. [**Wood, John Co**]
6. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Adamson Global Technology**]
2. [**Highland Tank & Manufacturing Company, Inc.**]
3. [**RECO USA**]
4. [**Steel Tank and Fabricating Corporation (STAFCO)**]
5. [**Wood, John Co**]
6. <**Insert manufacturer's name**>

C. Description: Steel, [**horizontal**][**vertical**], nonpressure-rated tank with cylindrical sidewalls.

D. Fabricate supports and attachments to tank with reinforcement strong enough to resist tank movement during seismic event when tank supports are anchored to building structure.

E. Construction: Steel, constructed with welded joints.

1. Comply with AWWA D100, "Welded Steel Tanks for Water Storage," and with AWWA M42, "Steel Water-Storage Tanks," for welded-steel, surface-water retention tanks.

F. Manhole: Watertight, for tank more than [**36 inches (900 mm)**]<**Insert dimension**> in diameter.

G. Cover for Open Tank: [**Plastic**][**Steel, with lining same as or similar to tank lining and**] with shape

that encloses top of tank.

H. Tappings: Factory-fabricated[**stainless**] steel, welded to tank.

1. NPS 2 (DN 50) and Smaller: ASME B1.20.1, with female thread.
2. NPS 2-1/2 (DN 65) and Larger: ASME B16.5, flanged.

I. Specialties and Accessories: Include tappings in tank and the following:

1. Vacuum relief valve.
2. Free air vent with insect screen.
3. Thermometer.
4. Gage glass, brass fittings, compression stops, and gage-glass guard.

J. Horizontal Tank Supports: Factory-fabricated steel saddles, welded to tank[**before testing and labeling**].

K. Vertical Tank Supports: Factory-fabricated steel legs or steel skirt, welded to tank[**before testing and labeling**].

1. Lining Material: [**Cement**][**Copper**]<**Insert material**>.
2. Coating: [**Epoxy resin**][**Galvanized**][**Glass**][**Nickel**]<**Insert coating**>.

L. Exterior Coating: [**Galvanized**][**Manufacturer's standard enamel paint**][**Primer paint**]<**Insert coating**>.

2.4 INSULATED, STEEL, STORM-WATER RETENTION TANKS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**A. O. Smith Corporation**]
2. [**GSW Water Heating**]
3. [**HESCO Bastion Ltd.**]
4. [**Laars Heating Systems Company; a subsidiary of Bradford White Corporation**]
5. [**Lochinvar, LLC**]
6. [**Precision Boilers**]
7. [**PVI; A WATTS Brand**]
8. [**RBI**]
9. [**State Industries**]
10. [**Vaughn Thermal Corporation**]
11. [**Wessels Company**]
12. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**A. O. Smith Corporation**]
2. [**GSW Water Heating**]
3. [**HESCO Bastion Ltd.**]
4. [**Laars Heating Systems Company; a subsidiary of Bradford White Corporation**]
5. [**Lochinvar, LLC**]
6. [**Precision Boilers**]
7. [**PVI; A WATTS Brand**]

8. [**RBI**]
9. [**State Industries**]
10. [**Vaughn Thermal Corporation**]
11. [**Wessels Company**]
12. <**Insert manufacturer's name**>

C. Description: Steel, vertical, pressure-rated tank with cylindrical sidewalls.

D. Fabricate supports and attachments to tank with reinforcement strong enough to resist tank movement during seismic event when tank supports are anchored to building structure.

E. Construction: [**ASME code, steel**][**Steel**], constructed with welded joints, for [**125-psig (860-kPa)**][**150-psig (1035-kPa)**]<**Insert value**> working pressure.

1. Comply with AWWA D100, "Welded Steel Tanks for Water Storage," and with AWWA M42, "Steel Water-Storage Tanks," for welded-steel, surface-water retention tanks.

F. Manhole: Watertight, for tank more than [**36 inches (900 mm)**]<**Insert dimension**> in diameter; same pressure rating as tank.

G. Tappings: Factory-fabricated[**stainless**] steel, welded to tank[**before testing and labeling**].

1. NPS 2 (DN 50) and Smaller: ASME B1.20.1, with female thread.
2. NPS 2-1/2 (DN 65) and Larger: ASME B16.5, flanged.

H. Specialties and Accessories: Include tappings in tank and the following:

1. Pressure relief valve.
2. Pressure gage.
3. Thermometer.
4. Air-charging connection.
5. Gage glass, brass fittings, compression stops, and gage-glass guard.

I. Vertical Tank Supports: Factory-fabricated steel legs or steel skirt, welded to tank[**before testing and labeling**].

1. Lining Material: [**Cement**][**Copper**]<**Insert material**>.
2. Coating: [**Epoxy resin**][**Galvanized**][**Glass**][**Nickel**]<**Insert coating**>.

J. Insulation: Factory-installed fiberglass or polyurethane foam; surrounding entire tank except connections and other openings; suitable for tank operating temperature; and complying with ASHRAE/IES 90.1.

K. Jacket: Steel, with manufacturer's standard finish unless otherwise indicated.

2.5 PLASTIC, PRESSURE, STORM-WATER RETENTION TANKS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Pentair, Inc.**]
2. [**Tankinetics, Inc**]

3. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Pentair, Inc.**]
2. [**Tankinetics, Inc**]
3. <**Insert manufacturer's name**>

C. Description: Fiberglass-reinforced plastic (FRP), vertical, pressure-rated tank with cylindrical sidewalls.

D. Construction: [**ASME code, composite FRP**][**Composite FRP**], [**contact-molded**][**or**][**filament-wound**], thermosetting-resin tank for [**100-psig (690-kPa)**][**125-psig (860-kPa)**][**150-psig (1035-kPa)**]<**Insert value**> working pressure.

1. Comply with AWWA D120.

E. Manhole: Watertight, for tank more than [**36 inches (900 mm)**]<**Insert dimension**> in diameter; same pressure rating as tank.

F. Tappings: Factory-fabricated, FRP flanged-end nozzle.

1. NPS 2 (DN 50) and Smaller: Include plastic-to-steel transition fitting from tank nozzle flange to ASME B1.20.1, female thread.
2. NPS 2-1/2 (DN 65) and Larger: ASME B16.5, flanged.

G. Specialties and Accessories: Include tappings in tank and the following:

1. Pressure relief valve.
2. Pressure gage.
3. Thermometer.

H. Vertical Tank Supports: Factory-fabricated steel legs or FRP skirt attached by FRP brackets to tank sidewall.

2.6 PLASTIC, NONPRESSURE, STORM-WATER RETENTION TANKS

A. FRP Water Retention Tanks:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Amprotec, Inc.**]
b. [**Belding Tank Technologies, Inc**]
c. [**L. F. Manufacturing, Inc**]
d. [**Palmer Manufacturing and Tank Company**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Amprotec, Inc.**]
b. [**Belding Tank Technologies, Inc**]
c. [**L. F. Manufacturing, Inc**]
d. [**Palmer Manufacturing and Tank Company**]
e. <**Insert manufacturer's name**>

3. Description: FRP, vertical, nonpressure-rated water tank.
4. Construction: [**ASTM D3299, filament-wound**][**or**][**ASTM D4097, contact-molded**] FRP.
5. Tappings: Factory-fabricated, FRP flanged-end nozzle.

a. NPS 2 (DN 50) and Smaller: Include plastic-to-steel transition fitting from tank nozzle flange to ASME B1.20.1, female thread.

1) Exception: Tappings may be threaded FRP coupling integral with nozzle for connections for plastic piping.

b. NPS 2-1/2 (DN 65) and Larger: Flanged.

6. Vertical Tank Support: Separate factory-fabricated steel stand capable of supporting tank.
7. Manhole: Watertight, for tank more than [**36 inches (915 mm)**]<**Insert dimension**> in diameter.
8. Cover for Open Tank: Plastic, same as or similar to tank material and with shape that encloses top of tank.
9. Specialties and Accessories: Include tappings in tank and the following:

a. Vacuum relief valve.
b. Free air vent with insect screen.
c. Thermometer.
d. Gage glass, brass fittings, compression stops, and gage-glass guard.

B. PE Water Retention Tanks:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Amprotec, Inc.**]
b. [**Assmann Corporation of America**]
c. [**Chem-Tainer Industries**]
d. [**Poly Processing Company**]
e. [**Premier Plastics Inc.**]
f. [**Snyder Industries, Inc.**]
g. [**Steel Tank and Fabricating Corporation (STAFCO)**]
h. [**TolPlast Company, Inc.**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Amprotec, Inc.**]
b. [**Assmann Corporation of America**]
c. [**Chem-Tainer Industries**]
d. [**Poly Processing Company**]
e. [**Premier Plastics Inc.**]

f. [**Snyder Industries, Inc.**]
g. [**Steel Tank and Fabricating Corporation (STAFCO)**]
h. [**TolPlast Company, Inc.**]
i. <**Insert manufacturer's name**>

3. Description: PE, vertical, flat-bottom, nonpressure-rated water tank.
4. Construction: ASTM D1998, molded PE.
5. Tappings: Factory-fabricated bulkhead fittings attached to tank.

   a. NPS 2 (DN 50) and Smaller: With female thread.
   b. NPS 2-1/2 (DN 65) and Larger: Flanged.

6. Vertical Tank Support: Separate factory-fabricated steel stand capable of supporting entire bottom of tank.
7. Manhole: Watertight, for tank more than [**36 inches (915 mm)**]<**Insert dimension**> in diameter.
8. Cover for Open Tank: Plastic, same as or similar to tank material and with shape that encloses top of tank.
9. Specialties and Accessories: Include tappings in tank and the following:

   a. Vacuum relief valve.
   b. Free air vent with insect screen.
   c. Thermometer.
   d. Gage glass, brass fittings, compression stops, and gage-glass guard.

2.7 PAINT MATERIALS

A. Paint: Comply with AWWA D102.

B. Primer: Tank fabricator's standard epoxy-polyamide paint.

C. Tank Shell Exterior Intermediate Paint: Tank fabricator's standard, two-component epoxy paint compatible with prime and finish paint. Intermediate coat shall have a slight color contrast with finish coat.

D. Tank Shell Exterior Finish Paint: Tank fabricator's standard urethane paint.

1. Color: [**As selected by Owner from tank manufacturer's paint chart**]<**Insert color**>.

2.8 SHOP PAINTING

A. Tank Shell Exterior Finish Coat: Factory coating according to AWWA D103.

PART 3 - EXECUTION

3.1 INSTALLATION OF STORM-WATER RETENTION TANKS

A. Install storm-water retention tanks on concrete bases, level and plumb, firmly anchored. Arrange so devices needing servicing are accessible.

1. Install horizontal tanks on [**concrete piers and factory-fabricated**][**fabricated steel supports and**] saddles.

B. Anchor tank supports and tanks to substrate.

1. Use steel or FRP straps over or around plastic tanks.

C. Install thermometers and pressure gages on water retention tanks and piping if indicated. Thermometers and pressure gages are specified in Section 220500 "Common Work Results for Plumbing."

D. Install the following devices on tanks where indicated:

1. Pressure relief valves.
2. Temperature and pressure relief valves.
3. Vacuum relief valves.
4. Tank vents on nonpressure tanks.
5. Connections to accessories.

E. After installing tanks with factory finish, inspect finishes and repair damages to finishes.

3.2 CONNECTIONS

A. Where installing piping adjacent to storm-water retention tanks, allow space for service and maintenance.

B. Connect water piping to water retention tanks with unions or flanges and with shutoff valves. Connect tank drains with shutoff valves and discharge over closest floor drains.

1. Valves NPS 2 (DN 50) and Smaller: Gate valves or ball valves complying with requirements in Section 220523 "General-Duty Valves for Plumbing Piping."
2. Valves NPS 2-1/2 (DN 65) and Larger: Gate valves or butterfly valves complying with requirements in Section 220523 "General-Duty Valves for Plumbing Piping."
3. Drain Valves: **NPS 3/4 (DN 20)** gate valves or ball valves complying with requirements in Section 220523 "General-Duty Valves for Plumbing Piping." Include outlet with, or nipple in outlet with, ASME B1.20.7, 3/4-11.5NH thread for garden-hose service, threaded cap, and chain.
4. Water Piping Connections: Make connections to dissimilar metals with dielectric fittings. Dielectric fittings are specified in Section 221116 "Domestic Water Piping."

3.3 IDENTIFICATION

A. Identify system components. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

END OF SECTION 22 14 00 00

SECTION 22 14 13 00 - STORM DRAINAGE PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Hub-and-spigot, cast-iron soil pipe and fittings.
2. Hubless, cast-iron soil pipe and fittings.
3. Galvanized-steel pipe and fittings.
4. Copper tube and fittings.
5. ABS pipe and fittings.
6. PVC pipe and fittings.
7. Specialty pipe fittings.
8. Encasement for underground metal piping.

B. Related Requirements:

1. Section 221429 "Sump Pumps" for storm drainage pumps.
2. Section 334200 "Stormwater Conveyance" for storm drainage piping outside the building.

1.2 ACTION SUBMITTALS

A. Product Data:

1. Hub-and-spigot, cast-iron soil pipe and fittings.
2. Hubless, cast-iron soil pipe and fittings.
3. Galvanized-steel pipe and fittings.
4. Copper tube and fittings.
5. ABS pipe and fittings.
6. PVC pipe and fittings.
7. Specialty pipe fittings.

B. Sustainable Design Submittals:

1. Product Data: For adhesives, indicating VOC content.
2. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: For controlled-flow roof drainage system. Include calculations, plans, sections, elevations, and details.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans and elevations, or Building Information Model (BIM) drawn to scale, showing items described in this Section and coordinated with all building trades.

B. Seismic Qualification Certificates: For storm drainage piping, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Detailed description of piping anchorage devices on which the certificate is based and their installation requirements.

C. Field Quality-Control Reports: Inspection reports signed by authorities having jurisdiction.

1.4 QUALITY ASSURANCE

A. Provide materials bearing label, stamp, or other markings of specified testing agency.

1.5 FIELD CONDITIONS

A. Interruption of Existing Storm Drainage Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:

1. Notify [**Architect**][**Construction Manager**][**Owner**] no fewer than [**two**]<**Insert number**> days in advance of proposed interruption of storm drainage service.
2. Do not proceed with interruption of storm drainage service without [**Architect's**][**Construction Manager's**][**Owner's**] written permission.

1.6 WARRANTY

A. Listed manufacturers to provide labeling and warranty of their respective products

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Components and installation are to be capable of withstanding the following minimum working pressure unless otherwise indicated:

1. Storm Drainage Piping: [**10-foot head of water (30 kPa)**]<**Insert pressure**>.
2. Storm Drainage, Force-Main Piping: [**50 psig (345 kPa)**][**100 psig (690 kPa)**][**150 psig (1035 kPa)**]<**Insert pressure**>.

B. Seismic Performance: Storm drainage piping and support and installation to withstand the effects of earthquake motions determined in accordance with [**ASCE/SEI 7**]<**Insert requirement**>. See Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully functional after the seismic event**]."
2. Component Importance Factor: [**1.5**][**1.0**].
3. <**Insert requirements for Component Amplification Factor and Component Response Modification Factor**>

2.2 PIPING MATERIALS

A. Piping materials to bear label, stamp, or other markings of specified testing agency.

B. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.3 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AB & I Foundry; a part of the McWane family of companies**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AB & I Foundry; a part of the McWane family of companies**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]
4. <**Insert manufacturer's name**>

C. Pipe and Fittings:

1. Marked with CISPI collective trademark and NSF certification mark.
2. Standard: ASTM A74.
3. Class: [**Service weight**][**and**][**Extra heavy**] cast iron.

D. Gaskets: ASTM C564, rubber.

E. Caulking Materials: ASTM B29, pure lead and oakum or hemp fiber.

2.4 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AB & I Foundry; a part of the McWane family of companies**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AB & I Foundry; a part of the McWane family of companies**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]

4. <**Insert manufacturer's name**>

C. Pipe and Fittings:

1. Marked with CISPI collective trademark and NSF certification mark.
2. Standards: ASTM A888 and CISPI 301.

D. Standard, Hubless-Piping Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ANACO-Husky; a part of the McWane family of companies**]
    b. [**Charlotte Pipe and Foundry Company**]
    c. [**Dallas Specialty & Mfg. Co.**]
    d. [**Fernco Inc**]
    e. [**Ideal Tridon Group**]
    f. [**Matco-Norca**]
    g. [**MIFAB, Inc**]
    h. [**Mission Rubber Company, LLC**]
    i. [**Tyler Pipe; a subsidiary of McWane Inc.**]
    j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ANACO-Husky; a part of the McWane family of companies**]
    b. [**Charlotte Pipe and Foundry Company**]
    c. [**Dallas Specialty & Mfg. Co.**]
    d. [**Fernco Inc**]
    e. [**Ideal Tridon Group**]
    f. [**Matco-Norca**]
    g. [**MIFAB, Inc**]
    h. [**Mission Rubber Company, LLC**]
    i. [**Tyler Pipe; a subsidiary of McWane Inc.**]
    j. <**Insert manufacturer's name**>

3. Marked with CISPI collective trademark [**and NSF certification mark**].
4. Standards: ASTM C1277 and CISPI 310.
5. Description: Stainless steel corrugated shield with stainless steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.

E. Heavy-Duty, Hubless-Piping Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ANACO-Husky; a part of the McWane family of companies**]
    b. [**Charlotte Pipe and Foundry Company**]
    c. [**Dallas Specialty & Mfg. Co.**]

d. [**Fernco Inc**]
e. [**Ideal Tridon Group**]
f. [**Matco-Norca**]
g. [**MIFAB, Inc**]
h. [**Mission Rubber Company, LLC**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ANACO-Husky; a part of the McWane family of companies**]
b. [**Charlotte Pipe and Foundry Company**]
c. [**Dallas Specialty & Mfg. Co.**]
d. [**Fernco Inc**]
e. [**Ideal Tridon Group**]
f. [**Matco-Norca**]
g. [**MIFAB, Inc**]
h. [**Mission Rubber Company, LLC**]
i. <**Insert manufacturer's name**>

3. Standard: ASTM C1277 or ASTM C1540.
4. Description: Stainless steel shield with stainless steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.

F. Cast-Iron, Hubless-Piping Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**MG Coupling**]
b. [**MIFAB, Inc**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**MG Coupling**]
b. [**MIFAB, Inc**]
c. <**Insert manufacturer's name**>

3. Standard: ASTM A1056.
4. Description: Two-piece ASTM A48/A48M, cast-iron housing; stainless steel bolts and nuts; and ASTM C564, rubber sleeve with integral, center pipe stop.

2.5 GALVANIZED-STEEL PIPE AND FITTINGS

A. Galvanized-Steel Pipe: ASTM A53/A53M, Type E, standard-weight class. Include ends matching joining method.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following]:

a. [**U.S. Steel**]
b. [**Wheatland Tube; Zekelman Industries**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**U.S. Steel**]
b. [**Wheatland Tube; Zekelman Industries**]
c. <**Insert manufacturer's name**>

B. Cast-Iron Drainage Fittings: [**Galvanized,**]ASME B16.12, threaded.

C. Steel-Pipe Pressure Fittings:

1. Steel Pipe Nipples: [**Galvanized,**]ASTM A733, made of ASTM A53/A53M or ASTM A106/A106M, Schedule 40, seamless steel pipe. Include ends matching joining method.
2. Malleable-Iron Unions: ASME B16.39; Class 150; hexagonal-stock body with ball-and-socket, metal-to-metal, bronze seating surface; and female threaded ends.
3. Gray-Iron, Threaded Fittings: [**Galvanized,**]ASME B16.4, Class 125, standard pattern.

D. Cast-Iron Flanges: ASME B16.1, Class 125.

1. Flange Gasket Materials: ASME B16.21, full-face, flat, nonmetallic, asbestos-free, **1/8-inch (3.2-mm)** maximum thickness unless thickness or specific material is indicated.
2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

E. Grooved-Joint, Galvanized-Steel-Pipe Appurtenances:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Anvil; an ASC Engineered Solution**]
b. [**Shurjoint; a part of Aalberts Integrated Piping Systems**]
c. [**Smith-Cooper International**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Anvil; an ASC Engineered Solution**]
b. [**Shurjoint; a part of Aalberts Integrated Piping Systems**]
c. [**Smith-Cooper International**]
d. <**Insert manufacturer's name**>

3. Galvanized, Grooved-End Fittings for Galvanized-Steel Piping:

a. ASTM A536 ductile-iron castings.

b. ASTM A234/A234M forged-steel fittings.

2.6 COPPER TUBE AND FITTINGS

A. Copper Tube:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Cambridge-Lee Industries, LLC**]
   b. [**Cerro Flow Products, LLC**]
   c. [**Wieland Copper Products, LLC**]
   d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Cambridge-Lee Industries, LLC**]
   b. [**Cerro Flow Products, LLC**]
   c. [**Wieland Copper Products, LLC**]
   d. <**Insert manufacturer's name**>

3. Copper Type DWV Tube: ASTM B306, drainage tube, drawn temper.
4. Copper Tube, Drawn Temper: **ASTM B88, Type L and Type M (ASTM B88M, Type B and Type C)**.
5. Copper Tube, Annealed Temper: **ASTM B88, Type L (ASTM B88M, Type B)**.

B. Copper Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**NIBCO INC.**]
   b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**NIBCO INC.**]
   b. <**Insert manufacturer's name**>

3. Copper Drainage Fittings: ASME B16.23, cast copper or ASME B16.29, wrought copper, solder-joint fittings.
4. Copper Pressure Fittings: ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint fittings. Furnish wrought-copper fittings if indicated.
5. Copper Unions: MSS SP-123, copper-alloy, hexagonal-stock body with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.
6. Copper Flanges: ASME B16.24, Class 150, cast copper with solder-joint end.

a. Flange Gasket Materials: ASME B16.21, full-face, flat, nonmetallic, asbestos-free, **1/8-inch (3.2-mm)** maximum thickness unless thickness or specific material is indicated.
b. Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

C. Solder: ASTM B32, lead free with ASTM B813, water-flushable flux.

2.7 ABS PIPE AND FITTINGS

A. ABS Pipe:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
b. [**Charlotte Pipe and Foundry Company**]
c. [**JM Eagle**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
b. [**Charlotte Pipe and Foundry Company**]
c. [**JM Eagle**]
d. <**Insert manufacturer's name**>

3. NSF Marking: Comply with NSF 14 for plastic piping components. Include "NSF-dwv" marking for plastic storm drain and "NSF-sewer" for plastic storm sewer piping.
4. Solid-Wall ABS Pipe: ASTM D2661, Schedule 40.
5. Cellular-Core ABS Pipe: ASTM F1488, Schedule 40.

B. ABS Socket Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Charlotte Pipe and Foundry Company**]
b. [**NIBCO INC.**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Charlotte Pipe and Foundry Company**]
b. [**NIBCO INC.**]
c. <**Insert manufacturer's name**>

3. Standard: ASTM D2661, made in accordance with ASTM D3311, drain, waste, and vent patterns.

4. NSF Marking: Comply with NSF 14 for plastic piping components. Include "NSF-dwv" marking for plastic storm drain and "NSF-sewer" for plastic storm sewer piping.

C. Solvent Cement: ASTM D2235.

1. Solvent cement shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
2. Solvent cement shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
3. Solvent cement shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit or 33 mcg/cu. m and that of acetaldehyde shall not exceed 9 mcg/cu. m.

2.8 PVC PIPE AND FITTINGS

A. PVC Pipe:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Charlotte Pipe and Foundry Company**]
   b. [**JM Eagle**]
   c. [**National Pipe and Plastic, Inc. (Oldcastle)**]
   d. [**North America Pipe Corporation**]
   e. [**Silver-line Plastics**]
   f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Charlotte Pipe and Foundry Company**]
   b. [**JM Eagle**]
   c. [**National Pipe and Plastic, Inc. (Oldcastle)**]
   d. [**North America Pipe Corporation**]
   e. [**Silver-line Plastics**]
   f. <**Insert manufacturer's name**>

3. NSF Marking: Comply with NSF 14 for plastic piping components. Include marking with "NSF-dwv" for plastic storm drain and "NSF-sewer" for plastic storm sewer piping.
4. Solid-Wall PVC Pipe: ASTM D2665 drain, waste, and vent.
5. Cellular-Core PVC Pipe: ASTM F891, Schedule 40.

B. PVC Socket Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

a. [**Charlotte Pipe and Foundry Company**]
b. [**NIBCO INC.**]
c. [**North America Pipe Corporation**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Charlotte Pipe and Foundry Company**]
b. [**NIBCO INC.**]
c. [**North America Pipe Corporation**]
d. <**Insert manufacturer's name**>

3. Standard: ASTM D2665, made in accordance with ASTM D3311, drain, waste, and vent patterns and to fit Schedule 40 pipe.
4. NSF Marking: Comply with NSF 14 for plastic piping components. Include marking with "NSF-dwv" for plastic storm drain and "NSF-sewer" for plastic storm sewer piping.

C. Adhesive Primer: ASTM F656.

1. Adhesive primer shall have a VOC content of 550 g/L or less.
2. Adhesive primer shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
3. Adhesive primer shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
4. Adhesive primer shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit or 33 mcg/cu. m and that of acetaldehyde shall not exceed 9 mcg/cu. m.

D. Solvent Cement: ASTM D2564.

1. Solvent cement shall have a VOC content of 510 g/L or less.

2.9 SPECIALTY PIPE FITTINGS

A. Transition Couplings:

1. General Requirements: Fitting or device for joining piping with small differences in ODs or of different materials. Include end connections of same size as and compatible with pipes to be joined.
2. Fitting-Type Transition Couplings: Manufactured piping coupling or specified-piping-system fitting.
3. Unshielded, Nonpressure Transition Couplings:

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

1) [**Dallas Specialty & Mfg. Co.**]
2) [**Fernco Inc**]
3) [**Mission Rubber Company, LLC**]
4) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**Dallas Specialty & Mfg. Co.**]
2) [**Fernco Inc**]
3) [**Mission Rubber Company, LLC**]
4) <**Insert manufacturer's name**>

c. Standard: ASTM C1173.
d. Description: Elastomeric sleeve, reducing or transition pattern. Include shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.
e. Sleeve Materials:

1) For Cast-Iron Soil Pipes: ASTM C564 rubber.
2) For Plastic Pipes: ASTM F477, elastomeric seal or ASTM D5926 PVC.
3) For Dissimilar Pipes: ASTM D5926 PVC or other material compatible with pipe materials being joined.

4. Shielded, Nonpressure Transition Couplings:

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1) [**Dallas Specialty & Mfg. Co.**]
2) [**Fernco Inc**]
3) [**Mission Rubber Company, LLC**]
4) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**Dallas Specialty & Mfg. Co.**]
2) [**Fernco Inc**]
3) [**Mission Rubber Company, LLC**]
4) <**Insert manufacturer's name**>

c. Standard: ASTM C1460.
d. Description: Elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.
e. End Connections: Same size as and compatible with pipes to be joined.

5. Pressure Transition Couplings:

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following]:

1) [**Cascade Waterworks Mfg. Co.**]
2) [**EBAA Iron Sales, Inc.**]
3) [**Ford Meter Box Company, Inc. (The)**]
4) [**JCM Industries, Inc**]
5) [**Romac Industries, Inc.**]
6) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**Cascade Waterworks Mfg. Co.**]
2) [**EBAA Iron Sales, Inc.**]
3) [**Ford Meter Box Company, Inc. (The)**]
4) [**JCM Industries, Inc**]
5) [**Romac Industries, Inc.**]
6) <**Insert manufacturer's name**>

c. Standard: AWWA C219.
d. Description: Metal, sleeve-type couplings same size as pipes to be joined, and with pressure rating at least equal to and ends compatible with pipes to be joined.
e. Center-Sleeve Material: [**Manufacturer's standard**][**Carbon steel**][**Stainless steel**][**Ductile iron**][**Malleable iron**].
f. Gasket Material: Natural or synthetic rubber.
g. Metal Component Finish: Corrosion-resistant coating or material.

B. Dielectric Fittings:

1. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
2. Dielectric Unions:

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1) [**A.Y. McDonald Mfg. Co.**]
2) [**HART Industrial Unions, LLC**]
3) [**Jomar Valve**]
4) [**Matco-Norca**]
5) [**WATTS; A Watts Water Technologies Company**]
6) [**Zurn Industries, LLC**]
7) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**A.Y. McDonald Mfg. Co.**]
2) [**HART Industrial Unions, LLC**]
3) [**Jomar Valve**]

4) [**Matco-Norca**]
5) [**WATTS; A Watts Water Technologies Company**]
6) [**Zurn Industries, LLC**]
7) <**Insert manufacturer's name**>

c. Description:

1) Standard: ASSE 1079.
2) Pressure Rating: [**150 psig (1035 kPa) minimum at 180 deg F (82 deg C)**][**150 psig (1035 kPa)**][**250 psig (1725 kPa)**]<**Insert pressure**>.
3) End Connections: Solder-joint copper alloy and threaded ferrous.

3. Dielectric Flanges:

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1) [**WATTS; A Watts Water Technologies Company**]
2) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**WATTS; A Watts Water Technologies Company**]
2) <**Insert manufacturer's name**>

c. Description:

1) Standard: ASSE 1079.
2) Factory-fabricated, bolted, companion-flange assembly.
3) Pressure Rating: [**150 psig (1035 kPa) minimum at 180 deg F (82 deg C)**][**175 psig (1200 kPa)**][**300 psig (2070 kPa)**]<**Insert pressure and temperature**>.
4) End Connections: Solder-joint copper alloy and threaded ferrous.

4. Dielectric-Flange Insulating Kits:

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1) [**Advance Products & Systems, LLC**]
2) [**GPT; a division of EnPRO Industries**]
3) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**Advance Products & Systems, LLC**]
2) [**GPT; a division of EnPRO Industries**]
3) <**Insert manufacturer's name**>

c. Description:

1) Nonconducting materials for field assembly of companion flanges.
2) Pressure Rating: [**150 psig (1035 kPa)**]<**Insert pressure**>.
3) Gasket: Neoprene or phenolic.
4) Bolt Sleeves: Phenolic or polyethylene.
5) Washers: Phenolic with steel-backing washers.

5. Dielectric Nipples:

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1) [**Anvil; an ASC Engineered Solution**]
2) [**Matco-Norca**]
3) [**Precision Plumbing Products**]
4) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**Anvil; an ASC Engineered Solution**]
2) [**Matco-Norca**]
3) [**Precision Plumbing Products**]
4) <**Insert manufacturer's name**>

c. Description: Electroplated steel nipple.
d. Standards: ASTM F492, ASME B1.20.1.
e. Pressure Rating: [**300 psig (2070 kPa) at 225 deg F (107 deg C)**]<**Insert pressure and temperature**>.
f. End Connections: Male threaded or grooved.
g. Lining: Inert and noncorrosive, propylene.

2.10 ENCASEMENT FOR UNDERGROUND METAL PIPING

A. Standard: ASTM A674 or AWWA C105/A 21.5.

B. Material: [**High-density, crosslaminated polyethylene film of 0.004-inch (0.10-mm)**][**or**][**linear low-density polyethylene film of 0.008-inch (0.20-mm)**] minimum thickness.

C. Form: [**Sheet**][**or**][**tube**].

D. Color: [**Black**][**or**][**natural**]<**Insert color**>.

PART 3 - EXECUTION

3.1 EARTH MOVING

A. Comply with requirements for excavating, trenching, and backfilling specified in Section 312000 "Earth Moving."

3.2 INSTALLATION OF PIPING

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems.

B. Install piping as indicated unless deviations from layout are approved on coordination drawings.

C. Install piping in concealed locations.

1. Piping installed in equipment rooms, service areas, and where indicated may be exposed.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping to permit valve servicing.

G. Install piping at indicated slopes.

H. Install piping free of sags and bends.

I. Install fittings for changes in direction and branch connections.

J. Install piping to allow application of insulation.

K. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."

L. Make changes in direction for piping using appropriate branches, bends, and long-sweep bends.

1. Do not change direction of flow more than 90 degrees.
2. Use proper size of standard increasers and reducers if pipes of different sizes are connected.

a. Reducing size of drainage piping in direction of flow is prohibited.

M. Lay buried building piping beginning at low point of each system.

1. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream.
2. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements.
3. Maintain swab in piping and pull past each joint as completed.

N. Install piping at the following minimum slopes unless otherwise indicated.

1. Building Storm Drain: [**1/4 inch per foot (2 percent)**]<**Insert number**> downward in direction of

flow for piping NPS 3 (DN 80) and smaller; [1/8 inch per foot (2 percent)][1/4 inch per foot (2 percent)]<**Insert number**> downward in direction of flow for piping NPS 4 (DN 100) and larger.

2. Horizontal Storm Drainage Piping: [1/4 inch per foot (2 percent)]<**Insert number**> downward in direction of flow.

O. Install cast-iron soil piping in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Ch IV, "Installation of Cast Iron Soil Pipe and Fittings."

1. Install encasement on underground piping in accordance with ASTM A674 or AWWA C105/A 21.5.

P. Install steel piping in accordance with applicable plumbing code.

Q. Install aboveground copper tubing in accordance with CDA's "Copper Tube Handbook."

R. Install aboveground ABS piping in accordance with ASTM D2661.

S. Install aboveground PVC piping in accordance with ASTM D2665.

T. Install underground [**ABS**][**and**][**PVC**] piping in accordance with ASTM D2321.

U. Install engineered controlled-flow drain specialties and storm drainage piping in locations indicated.

1. Install encasement on piping in accordance with ASTM A674 or AWWA C105/A 21.5.

V. Install force mains at elevations indicated.

W. Plumbing Specialties:

1. Install backwater valves in storm drainage gravity-flow piping.

a. Comply with requirements for backwater valves specified in Section 221423 "Storm Drainage Piping Specialties."

2. Install cleanouts in storm drainage gravity-flow piping in accessible locations.

a. Install cleanout fitting with closure plug inside the building in storm drainage force-main piping.
b. Comply with requirements for cleanouts specified in Section 221423 "Storm Drainage Piping Specialties."

3. Install drains in storm drainage gravity-flow piping.

a. Comply with requirements for drains specified in Section 221423 "Storm Drainage Piping Specialties."

X. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

Y. Install sleeves for piping penetrations of walls, ceilings, and floors.

1. Comply with requirements for sleeves specified in Section 220500 "Common Work Results for Plumbing."

Z. Install sleeve seals for piping penetrations of concrete walls and slabs.

1. Comply with requirements for sleeve seals specified in Section 220500 "Common Work Results for Plumbing."

AA. Install escutcheons for piping penetrations of walls, ceilings, and floors.

1. Comply with requirements for escutcheons specified in Section 220500 "Common Work Results for Plumbing."

3.3 JOINT CONSTRUCTION

A. Hub-and-Spigot, Cast-Iron Soil Piping Gasketed Joints: Join in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.

B. Hub-and-Spigot, Cast-Iron Soil Piping Caulked Joints: Join in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for lead-and-oakum caulked joints.

C. Hubless, Cast-Iron Soil Piping Coupled Joints: Join in accordance with CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.

D. Threaded Joints: Thread pipe with tapered pipe threads in accordance with ASME B1.20.1.

1. Cut threads full and clean using sharp dies.
2. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

a. Apply appropriate tape or thread compound to external pipe threads unless dry-seal threading is specified.
b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
c. Do not use pipe sections that have cracked or open welds.

E. Join copper tube and fittings with soldered joints in accordance with ASTM B828. Use ASTM B813, water-flushable, lead-free flux and ASTM B32, lead-free-alloy solder.

F. Grooved Joints: Cut groove ends of pipe in accordance with AWWA C606. Lubricate and install gasket over ends of pipes or pipe and fittings. Install coupling housing sections, over gasket, with keys seated in piping grooves. Install and tighten housing bolts.

G. Flanged Joints: Align bolt holes. Select appropriate gasket material, size, type, and thickness. Install gasket concentrically positioned. Use suitable lubricants on bolt threads. Torque bolts in cross pattern.

H. Plastic, Nonpressure-Piping, Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings in accordance with the following:

1. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements.
2. ABS Piping: Join in accordance with ASTM D2235 and ASTM D2661 appendices.
3. PVC Piping: Join in accordance with ASTM D2855 and ASTM D2665 appendices.

I. Joint Restraints and Sway Bracing:

1. Provide joint restraints and sway bracing for storm drainage piping joints to comply with the following conditions:

a. Provide axial restraint for pipe and fittings [5 inches (125 mm)]<**Insert dimensions**> and larger, upstream and downstream of all changes in direction, branches, and changes in diameter greater than two pipe sizes.
b. Provide rigid sway bracing for pipe and fittings [4 inches (100 mm)]<**Insert dimensions**> and larger, upstream and downstream of all changes in direction 45 degrees and greater.
c. Provide rigid sway bracing for pipe and fittings [5 inches (125 mm)]<**Insert dimensions**> and larger, upstream and downstream of all changes in direction and branch openings.

3.4 INSTALLATION OF SPECIALTY PIPE FITTINGS

A. Transition Couplings:

1. Install transition couplings at joints of piping with small differences in ODs.
2. In Drainage Piping: [**Unshielded**][**Shielded**], nonpressure transition couplings.
3. In Aboveground Force-Main Piping: Fitting-type transition couplings.

B. Dielectric Fittings:

1. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
2. Dielectric Fittings for NPS 2 (DN 50) and Smaller: Use dielectric [**nipples**][**unions**].
3. Dielectric Fittings for NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Use dielectric [**flanges**][**flange kits**][**nipples**].
4. Dielectric Fittings for NPS 5 (DN 125) and Larger: Use dielectric flange kits.

3.5 INSTALLATION OF VALVES

A. General valve installation requirements for general-duty valve installations are specified in Section 220523 "General-Duty Valves for Plumbing Piping."

B. Shutoff Valves:

1. Install shutoff valve on each sump pump discharge.
2. Install [**gate**][**full port ball valve**] for piping NS 2 (DN 50) and smaller.
3. Install [**gate**][**butterfly**]<**Insert type**> valve for piping NPS 2-1/2 (DN 65) and larger.

C. Check Valves: Install swing-check valve, between pump and shutoff valve, on each sump pump discharge.

D. Backwater Valves: Install backwater valves in piping subject to backflow.

1. Horizontal Piping: Horizontal backwater valves.[**Use normally closed type unless otherwise indicated.**]
2. Install backwater valves in accessible locations.
3. Comply with requirements for backwater valves specified in Section 221423 "Storm Drainage Piping Specialties."

3.6 INSTALLATION OF HANGERS AND SUPPORTS

A. Comply with requirements for seismic-restraint devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."

B. Comply with requirements for hangers, supports, and anchor devices specified in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."

1. Install [**carbon-steel**]<**Insert material**> pipe hangers for horizontal piping in noncorrosive environments.
2. Install [**stainless steel**][**fiberglass**] pipe hangers for horizontal piping in corrosive environments.
3. Install [**carbon-steel**]<**Insert material**> pipe support clamps for vertical piping in noncorrosive environments.
4. Install stainless steel pipe support clamps for vertical piping in corrosive environments.
5. Vertical Piping: MSS Type 8 or Type 42, clamps.
6. Install individual, straight, horizontal piping runs:

    a. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel clevis hangers.
    b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
    c. Longer Than 100 Feet (30 m) if Indicated: MSS Type 49, spring cushion rolls.

7. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
8. Base of Vertical Piping: MSS Type 52, spring hangers.

C. Install hangers for [**cast-iron**][**galvanized-steel**][**and**][**copper**] soil [**tubing**][**and**][**piping**], with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

D. Install hangers for [**ABS**][**and**][**PVC**] piping, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

E. Support horizontal piping and tubing within **12 inches (300 mm)** of each fitting[**, valve,**] and coupling.

F. Support vertical [**cast-iron**][**galvanized steel**][**and**][**copper**][**tubing**][**and**][**piping**] to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent, but as a minimum at base and at each floor.

G. Support vertical [**ABS**][**and**][**PVC**] piping with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

3.7 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect interior storm drainage piping to exterior storm drainage piping. Use transition fitting to join dissimilar piping materials.

C. Connect storm drainage piping to roof drains and storm drainage specialties.

1. Install test tees (wall cleanouts) in conductors near floor and floor cleanouts with cover flush with floor.
2. Install horizontal backwater valves [**with cleanout cover flush with floor**][**in pit with pit cover flush with floor**]<**Insert description**>.
3. Comply with requirements for [**backwater valves**][**cleanouts**][**and**][**drains**] specified in Section 221423 "Storm Drainage Piping Specialties."

D. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.

E. Make connections in accordance with the following unless otherwise indicated:

1. Install unions, in piping **NPS 2 (DN 50)** and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping **NPS 2-1/2 (DN 65)** and larger, adjacent to flanged valves and at final connection to each piece of equipment.

3.8 IDENTIFICATION

A. Identify exposed storm drainage piping.

B. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.9 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.

1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

D. Test storm drainage piping in accordance with procedures of authorities having jurisdiction or, in absence of published procedures, as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired.

    a. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.

2. Leave uncovered and unconcealed new, altered, extended, or replaced storm drainage piping until it has been tested and approved.

    a. Expose work that was covered or concealed before it was tested.

3. Test Procedure:

    a. Test storm drainage piping[**, except outside leaders,**] on completion of roughing-in.
    b. Close openings in piping system and fill with water to point of overflow, but not less than **10-foot head of water (30 kPa)**.
    c. From 15 minutes before inspection starts until completion of inspection, water level must not drop.
    d. Inspect joints for leaks.

4. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
5. Prepare reports for tests and required corrective action.

E. Test force-main piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:

1. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved.

    a. Expose work that was covered or concealed before it was tested.

2. Cap and subject piping to static-water pressure of **50 psig (345 kPa)** above operating pressure, without exceeding pressure rating of piping system materials.

    a. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.

3. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
4. Prepare reports for tests and required corrective action.

3.10 CLEANING

A. Clean interior of piping. Remove dirt and debris as work progresses.

3.11 PROTECTION

A. Protect piping and drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

B. Place plugs in ends of uncompleted piping at end of day and when work stops.

C. Repair damage to adjacent materials caused by storm drainage piping installation.

3.12 PIPING SCHEDULE

A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.

B. Aboveground storm drainage piping [**NPS 6 (DN 150) and smaller**]<**Insert pipe size range**> is to be[**any of**] the following:

1. Service weight, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless, cast-iron soil pipe and fittings; [**CISPI,**][**heavy-duty,**] hubless-piping couplings; and coupled joints.
3. Galvanized-steel pipe, drainage fittings, and threaded joints.
4. Copper Type DWV tube, copper drainage fittings, and soldered joints.
5. [**Solid-wall**][**Cellular-core**] ABS pipe, ABS socket fittings, and solvent-cemented joints.
6. [**Solid-wall**][**Cellular-core**] PVC pipe, PVC socket fittings, and solvent-cemented joints.
7. Dissimilar Pipe-Material Couplings: [**Unshielded**][**Shielded**], nonpressure transition couplings.

C. Aboveground, storm drainage piping [**NPS 8 (DN 200) and larger**]<**Insert pipe size range**> is to be[

any of] the following:

1. Service weight, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless, cast-iron soil pipe and fittings; [**CISPI,**][**heavy-duty,**] hubless-piping couplings; and coupled joints.
3. Galvanized-steel pipe, drainage fittings, and threaded joints.
4. Copper Type DWV tube, copper drainage fittings, and soldered joints.
5. [**Solid-wall**][**Cellular-core**] PVC pipe, PVC socket fittings, and solvent-cemented joints.
6. Dissimilar Pipe-Material Couplings: [**Unshielded**][**Shielded**], nonpressure transition couplings.

D. Underground storm drainage piping [**NPS 6 (DN 150) and smaller**]<**Insert pipe size range**> shall be[**any of**] the following:

1. [**Extra heavy**][**Service weight**], cast-iron soil pipe and fittings; [**gaskets; and gasketed**][**caulking materials; and caulked**] joints.
2. Hubless, cast-iron soil pipe and fittings; [**CISPI,**][**heavy-duty,**][**cast-iron,**] hubless-piping couplings; and coupled joints.
3. [**Solid-wall**][**Cellular-core**] ABS pipe, ABS socket fittings, and solvent-cemented joints.
4. [**Solid-wall**][**Cellular-core**] PVC pipe, PVC socket fittings, and solvent-cemented joints.
5. Dissimilar Pipe-Material Couplings: [**Unshielded**][**Shielded**], nonpressure transition couplings.

E. Underground, storm drainage piping [**NPS 8 (DN 200) and larger**]<**Insert pipe size range**> is to be[**any of**] the following:

1. [**Extra heavy**][**Service weight**], cast-iron soil pipe and fittings; [**gaskets; and gasketed**][**caulking materials; and caulked**] joints.
2. Hubless, cast-iron soil pipe and fittings; [**CISPI,**][**heavy-duty,**][**cast-iron,**] hubless-piping couplings; and coupled joints.
3. [**Solid-wall**][**Cellular-core**] PVC pipe, PVC socket fittings, and solvent-cemented joints.
4. Cellular-core, sewer and drain series, PVC pipe; PVC socket fittings; and solvent-cemented joints.
5. Dissimilar Pipe-Material Couplings: [**Unshielded**][**Shielded**], nonpressure transition couplings.

F. Aboveground storm drainage force mains [**NPS 1-1/2 and NPS 2 (DN 40 and DN 50)**]<**Insert pipe size range**> is to be[**any of**] the following:

1. Hard copper tube, **Type L (Type B)** copper pressure fittings, and soldered joints.
2. Galvanized-steel pipe, pressure fittings, and threaded joints.

G. Aboveground storm drainage force mains [**NPS 2-1/2 to NPS 6 (DN 65 to DN 150)**]<**Insert pipe size range**> is to be[**any of**] the following:

1. Hard copper tube, **Type L (Type B)** copper pressure fittings, and soldered joints.
2. Galvanized-steel pipe, pressure fittings, and threaded joints.
3. Grooved-end, galvanized-steel pipe; grooved-joint, galvanized-steel-pipe appurtenances; and grooved joints.
4. Fitting-type transition couplings if dissimilar pipe materials.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 14 29 00 - SUMP PUMPS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Sump pumps - submersible.
2. Sump pumps - wet-pit volute.
3. Oil-sensing sump pumps and controllers.
4. Sump pumps - pedestal.
5. Sump-pump basins and basin covers.
6. Packaged drainage-pump units - submersible.

B. Related Requirements:

1. Section 221329 "Sanitary Sewerage Pumps" for effluent and sewage pumps.

1.2 ACTION SUBMITTALS

A. Product Data:

1. Sump pumps - submersible.
2. Sump pumps - wet-pit volute.
3. Oil-sensing sump pumps and controllers.
4. Sump pumps - pedestal.
5. Sump-pump basins and basin covers.
6. Packaged drainage-pump units - submersible.

B. Product Data Submittals: For each product.

1. Construction details, material descriptions, dimensions of individual components and profiles.
2. Rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

C. Shop Drawings:

1. Include plans, elevations, sections, and [**mounting**][**attachment**] details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

1.3 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For pumps and controls.

1. Indicate actual installed items by marking submittals with an arrow or box.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Retain shipping flange protective covers and protective coatings during storage.

B. Protect bearings and couplings against damage.

C. Comply with manufacturer's written instructions for handling.

1.5 WARRANTY

A. Manufacturer Warranty: [**Manufacturer agrees**][**Installer agrees**][**Manufacturer and Installer agree**] to repair or replace sump pumps that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Faulty operation of <**Insert components**>.
b. Deterioration of metals, metal finishes, and other materials beyond normal [**weathering**][**use**].
c. <**Insert conditions relating to specified products**>.
d. <**Insert failure modes**>.

2. Warranty Period: [**1**]<**Insert number**> year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

A. Obtain each type of sump pump from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and use.

B. UL Compliance: Comply with UL 778 for motor-operated water pumps.

2.3 SUMP PUMPS - SUBMERSIBLE

A. Sump Pumps - Submersible, Fixed Position, Single Seal: .

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**A.Y. McDonald Mfg. Co.**]
b. [**Crane Pumps & Systems**]
c. [**Glentronics, Inc.**]
d. [**GRUNDFOS CBS Inc.**]

e. [**Industrial Flow Solutions**]
f. [**Liberty Pumps**]
g. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
h. [**Pentair Aurora; Pentair Pump Group**]
i. [**ProFlo; a Ferguson Enterprises, Inc. brand**]
j. [**Weil Pump; a Wilo Company**]
k. [**Xylem**]
l. [**Zoeller Company**]
m. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**A.Y. McDonald Mfg. Co.**]
b. [**Crane Pumps & Systems**]
c. [**Glentronics, Inc.**]
d. [**GRUNDFOS CBS Inc.**]
e. [**Industrial Flow Solutions**]
f. [**Liberty Pumps**]
g. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
h. [**Pentair Aurora; Pentair Pump Group**]
i. [**ProFlo; a Ferguson Enterprises, Inc. brand**]
j. [**Weil Pump; a Wilo Company**]
k. [**Xylem**]
l. [**Zoeller Company**]
m. <**Insert manufacturer's name**>

3. Description: Factory-assembled and -tested sump-pump unit.
4. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal sump pump as defined in HI 14.1-14.2 and HI 14.3.
5. Pump Casing: Cast iron, with strainer inlet; legs that elevate pump to permit flow into impeller; and vertical discharge for piping connection.
6. Impeller: Statically and dynamically balanced, [**manufacturer's standard**]<**Insert material**> designed for clear wastewater handling, and keyed and secured to shaft.
7. Pump and Motor Shaft: Stainless steel[**or steel**], with factory-sealed, grease-lubricated ball bearings.
8. Seal: Mechanical.
9. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.

a. Motor Housing Fluid: [**Air**][**Oil**].

10. Capacities and Characteristics:

a. Unit Capacity: <**Insert gpm (L/min.)**>.
b. Number of Pumps: [**One**][**Two**]<**Insert number**>.
c. Each Pump:

1) Capacity: <**Insert gpm (L/min.)**>.
2) Total Dynamic Head: <**Insert feet (kPa)**>.
3) Speed: <**Insert rpm**>.
4) Discharge Size: <**Insert NPS (DN)**>.
5) Electrical Characteristics:

a) Motor Horsepower: <**Insert value**> hp.
b) Volts: [**115**][**230**][**460**]<**Insert value**> V ac.
c) Phases: [**Single**][**Three**].
d) Hertz: 60.

d. Unit Electrical Characteristics:

1) Full-Load Amperes: <**Insert value**> A.
2) Minimum Circuit Ampacity: <**Insert value**> A.
3) Maximum Overcurrent Protection: <**Insert value**> A.

11. Controls, Rod-and-Float Type:

a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>.
b. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
d. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater than **60 inches (1500 mm)**.
e. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

12. Controls, Float- and Pressure-Switch Type:

a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>; [**pedestal**][**wall**] mounted.
b. Switch Type: [**Mechanical-float**][**Mercury-float**][**Pressure**]<**Insert type**> type, in NEMA 250, Type 6 enclosures with mounting rod and electric cables.
c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
d. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with [**mechanical-float, mercury-float, or pressure**]<**Insert type**> switch matching control and electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

13. Control-Interface Features:

a. Remote Alarm Contacts: For remote alarm interface.
b. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:

1) On-off status of pump.
2) Alarm status.

B. Sump Pumps - Submersible, Fixed Position, Double Seal: .

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**EBARA Pumps Americas Corp.**]
b. [**GRUNDFOS CBS Inc.**]
c. [**Industrial Flow Solutions**]
d. [**Xylem**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**EBARA Pumps Americas Corp.**]
    b. [**GRUNDFOS CBS Inc.**]
    c. [**Industrial Flow Solutions**]
    d. [**Xylem**]
    e. <**Insert manufacturer's name**>

3. Description: Factory-assembled and -tested sump-pump unit.
4. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal sump pump as defined in HI 14.1-14.2 and HI 14.3.
5. Pump Casing: Cast iron, with strainer inlet; legs that elevate pump to permit flow into impeller; and vertical discharge for piping connection.
6. Impeller: Statically and dynamically balanced, [**manufacturer's standard**]<**Insert material**> designed for clear wastewater handling, and keyed and secured to shaft.
7. Pump and Motor Shaft: Stainless steel[**or steel**], with factory-sealed, grease-lubricated ball bearings.
8. Seals: Mechanical.
9. Moisture-Sensing Probe: Internal moisture sensor and moisture alarm.
10. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.

    a. Motor Housing Fluid: [**Air**][**Oil**].

11. Capacities and Characteristics:

    a. Unit Capacity: <**Insert gpm (L/min.)**>.
    b. Number of Pumps: [**One**][**Two**]<**Insert number**>.
    c. Each Pump:

        1) Capacity: <**Insert gpm (L/min.)**>.
        2) Total Dynamic Head: <**Insert feet (kPa)**>.
        3) Speed: <**Insert rpm**>.
        4) Discharge Size: <**Insert NPS (DN)**>.
        5) Electrical Characteristics:

            a) Motor Horsepower: <**Insert value**> hp.
            b) Volts: [**115**][**230**][**460**]<**Insert value**> V ac.
            c) Phases: [**Single**][**Three**].
            d) Hertz: 60.

    d. Unit Electrical Characteristics:

        1) Full-Load Amperes: <**Insert value**> A.
        2) Minimum Circuit Ampacity: <**Insert value**> A.
        3) Maximum Overcurrent Protection: <**Insert value**> A.

12. Controls, Rod-and-Float Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>.
    b. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.

d. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater than **60 inches (1500 mm)**.
e. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

13. Controls, Float- and Pressure-Switch Type:

a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>; [**pedestal**][**wall**] mounted.
b. Switch Type: [**Mechanical-float**][**Mercury-float**][**Pressure**]<**Insert type**> type, in NEMA 250, Type 6 enclosures with mounting rod and electric cables.
c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
d. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with [**mechanical-float, mercury-float, or pressure**]<**Insert type**> switch matching control and electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

14. Control-Interface Features:

a. Remote Alarm Contacts: For remote alarm interface.
b. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:

1) On-off status of pump.
2) Alarm status.

2.4 SUMP PUMPS - WET-PIT VOLUTE

A. Sump Pumps - Wet-Pit Volute: .

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Crane Pumps & Systems**]
b. [**Federal Pump Corp**]
c. [**Peerless Pump Company**]
d. [**Swaby Manufacturing Company**]
e. [**Tramco Pump Company**]
f. [**Vertiflo Pump Company**]
g. [**Weil Pump; a Wilo Company**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Crane Pumps & Systems**]
b. [**Federal Pump Corp**]
c. [**Peerless Pump Company**]
d. [**Swaby Manufacturing Company**]
e. [**Tramco Pump Company**]
f. [**Vertiflo Pump Company**]
g. [**Weil Pump; a Wilo Company**]

h. <**Insert manufacturer's name**>

3. Description: Factory-assembled and -tested sump-pump unit.
4. Pump Type: Wet-pit-volute, single-stage, separately coupled, overhung-impeller, centrifugal sump pump as defined in HI 14.1-14.2 and HI 14.3.
5. Pump Casing: Cast iron, with strainer inlet and threaded connection for **NPS 2 (DN 50)** and smaller and flanged connection for **NPS 2-1/2 (DN 65)** and larger discharge piping.
6. Impeller: Statically and dynamically balanced, [**manufacturer's standard**]<**Insert material**> designed for clear wastewater handling, and keyed and secured to shaft.
7. Sleeve Bearings: Bronze. Include oil-lubricated, intermediate sleeve bearings at **48-inch- (1200-mm-)** maximum intervals if basin depth is more than **48 inches (1200 mm)**, and grease-lubricated, ball-type thrust bearings.
8. Pump and Motor Shaft Coupling: Flexible, capable of absorbing torsional vibration and shaft misalignment.
9. Pump Discharge Piping: Factory- or field-fabricated, [**galvanized, ASTM A53/A53M, Schedule 40, steel pipe with ASME B16.1, Class 125, cast-iron flanges and flanged fittings or ASME B16.4, Class 125, gray-iron threaded fittings**]<**Insert pipe material**>.
10. Support Plate: Cast iron or coated steel; strong enough to support pumps, motors, and controls. See "Sump-Pump Basins and Basin Covers" Article for requirements.
11. Shaft Seal: Stuffing box, with graphite-impregnated braided-yarn rings and bronze packing gland.
12. Motor: Single speed; grease-lubricated ball bearings and mounting on vertical, cast-iron pedestal.
13. Capacities and Characteristics:

    a. Unit Capacity: <**Insert gpm (L/min.)**>.
    b. Number of Pumps: [**One**][**Two**]<**Insert number**>.
    c. Each Pump:

        1) Capacity: <**Insert gpm (L/min.)**>.
        2) Total Dynamic Head: <**Insert feet (kPa)**>.
        3) Speed: <**Insert rpm**>.
        4) Discharge Size: <**Insert NPS (DN)**>.
        5) Electrical Characteristics:

            a) Motor Horsepower: <**Insert value**> hp.
            b) Volts: [**115**][**230**][**460**]<**Insert value**> V ac.
            c) Phases: [**Single**][**Three**].
            d) Hertz: 60.

    d. Unit Electrical Characteristics:

        1) Full-Load Amperes: <**Insert value**> A.
        2) Minimum Circuit Ampacity: <**Insert value**> A.
        3) Maximum Overcurrent Protection: <**Insert value**> A.

14. Controls, Rod-and-Float Type:

    a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>.
    b. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
    c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
    d. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater than **60 inches (1500 mm)**.
    e. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

15. Controls, Float- and Pressure-Switch Type:

a. Enclosure: NEMA 250, [**Type 1**][**Type 4X**]<**Insert type**>; [**pedestal**][**wall**] mounted.
b. Switch Type: [**Mechanical-float**][**Mercury-float**][**Pressure**]<**Insert type**> type, in NEMA 250, Type 6 enclosures with mounting rod and electric cables.
c. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
d. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with [**mechanical-float, mercury-float, or pressure**]<**Insert type**> switch matching control and electric bell; 120 V ac, with transformer and contacts for remote alarm bell.

16. Control-Interface Features:

a. Remote Alarm Contacts: For remote alarm interface.
b. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:

1) On-off status of pump.
2) Alarm status.

2.5 OIL-SENSING SUMP PUMPS AND CONTROLLERS

A. Oil-Sensing Sump Pumps and Controllers: .

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Flo Fab Inc**]
b. [**Industrial Flow Solutions**]
c. [**Liberty Pumps**]
d. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
e. [**Weil Pump; a Wilo Company**]
f. [**Xylem**]
g. [**Zoeller Company**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Flo Fab Inc**]
b. [**Industrial Flow Solutions**]
c. [**Liberty Pumps**]
d. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
e. [**Weil Pump; a Wilo Company**]
f. [**Xylem**]
g. [**Zoeller Company**]
h. <**Insert manufacturer's name**>

3. Description: Factory-assembled and -tested sump-pump unit. ASME A17.1 compliant.
4. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal sump pump as defined in HI 14.1-14.2 and HI 14.3.
5. Pump Casing: Cast iron, with strainer inlet; legs that elevate pump to permit flow into impeller; and vertical discharge for piping connection.

6. Capacities and Characteristic:

    a. Unit Capacity: <**Insert gpm (L/min.)**>.
    b. Number of Pumps: [**One**][**Two**]<**Insert number**>.
    c. Each Pump:

        1) Capacity: <**Insert gpm (L/min.)**>.
        2) Total Dynamic Head: <**Insert feet (kPa)**>.
        3) Speed: <**Insert rpm**>.
        4) Discharge Size: <**Insert NPS (DN)**>.
        5) Electrical Characteristics:

            a) Motor Horsepower: <**Insert value**> hp.
            b) Volts: [**115**][**230**][**460**]<**Insert value**> V ac.
            c) Phases: [**Single**][**Three**].
            d) Hertz: 60.

    d. Unit Electrical Characteristics:

        1) Full-Load Amperes: <**Insert value**> A.
        2) Minimum Circuit Ampacity: <**Insert value**> A.
        3) Maximum Overcurrent Protection: <**Insert value**> A.

7. Controls:

    a. Industrial-grade switch(es) with internal [**20**]<**Insert number**> A relay and Type 304 stainless steel sensor probes.
    b. Liquid/oil sensor that differentiates and indicates the presence of oil and/or water under high-water conditions.
    c. Alarm Panel:

        1) High-oil-level alarm.
        2) High-water-level alarm.
        3) Audible and visual alarms for each alarm condition.
        4) Dry contacts for remote monitoring of oil, water, and high liquid conditions.

    d. Control Panel:

        1) [**Simplex**][**Duplex**].
        2) Enclosure: NEMA 250, Type 4X.
        3) HOA switch(es).
        4) Green pump run light; power on light.
        5) Pump circuit breaker(s).

2.6 SUMP PUMPS - PEDESTAL

A. Sump Pumps - Pedestal: .

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**A.Y. McDonald Mfg. Co.**]
    b. [**AMT; a Gorman-Rupp company**]

c. [**Federal Pump Corp**]
d. [**Goulds Water Technology; a Xylem brand**]
e. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
f. [**Pentair Aurora; Pentair Pump Group**]
g. [**Tramco Pump Company**]
h. [**Zoeller Company**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**A.Y. McDonald Mfg. Co.**]
b. [**AMT; a Gorman-Rupp company**]
c. [**Federal Pump Corp**]
d. [**Goulds Water Technology; a Xylem brand**]
e. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
f. [**Pentair Aurora; Pentair Pump Group**]
g. [**Tramco Pump Company**]
h. [**Zoeller Company**]
i. <**Insert manufacturer's name**>

3. Description: Factory-assembled and -tested, automatic-operation, freestanding, sump-pump unit.
4. Pump Type: Wet-pit-volute, single-stage, separately coupled, overhung-impeller centrifugal sump pump, configured as a pedestal pump. Sump pump to be as defined in HI 14.1-14.2 and HI 14.3.
5. Pump Casing: Corrosion-resistant material, with strainer inlet; design that permits flow into impeller; and vertical discharge for piping connection.
6. Impeller: Aluminum, brass, or plastic.
7. Motor: With built-in overload protection and mounted vertically on sump-pump column.
8. Power Cord: Three-conductor waterproof cable of length required, but not less than **72 inches (1830 mm)**, with grounding plug and cable-sealing assembly for connection at pump.
9. Capacities and Characteristics:

a. Capacity: <**Insert gpm (L/min.)**>.
b. Total Dynamic Head: <**Insert feet (kPa)**>.
c. Speed: <**Insert rpm**>.
d. Discharge Size: <**Insert NPS (DN)**>.
e. Electrical Characteristics:

1) Motor Horsepower: <**Insert value**> hp.
2) Volts: [**115**][**230**][**460**]<**Insert value**> V ac.
3) Phases: [**Single**][**Three**].
4) Hertz: 60.

10. Control: Float switch.

2.7 SUMP-PUMP BASINS AND BASIN COVERS

A. Basins : Factory-fabricated, watertight, cylindrical, basin sump with top flange and sidewall openings for pipe connections.

1. Material: [**Cast iron**][**Fiberglass**][**Polyethylene**]<**Insert material**>.
2. Reinforcement: Mounting plates for pumps, fittings, and accessories.
3. Anchor Flange: Same material as or compatible with basin sump, cast in or attached to sump,

and in location and of size required to anchor basin in concrete slab.

B. Basin Covers: Fabricate metal cover with openings having gaskets, seals, and bushings; for access to pumps, pump shafts, control rods, discharge piping, vent connections, and power cables.

1. Reinforcement: Steel or cast iron, capable of supporting foot traffic for basins installed in foot-traffic areas.

C. Capacities and Characteristics:

1. Capacity: <**Insert gal. (L)**>.
2. Diameter: <**Insert inches (mm)**>.
3. Depth: <**Insert inches (mm)**>.
4. Inlet No. 1:

    a. Drainage Pipe Size: <**Insert NPS (DN)**>.
    b. Bottom of Sump to Centerline: <**Insert inches (mm)**>.
    c. Type: [**Flanged**][**Hubbed**][**Threaded**] outside.

5. Inlet No. 2:

    a. Drainage Pipe Size: <**Insert NPS (DN)**>.
    b. Bottom of Sump to Centerline: <**Insert inches (mm)**>.
    c. Type: [**Flanged**][**Hubbed**][**Threaded**] outside.

6. Inlet No. 3:

    a. Drainage Pipe Size: <**Insert NPS (DN)**>.
    b. Bottom of Sump to Centerline: <**Insert inches (mm)**>.
    c. Type: [**Flanged**][**Hubbed**][**Threaded**] outside.

7. Sidewall Outlet:

    a. Discharge Pipe Size: <**Insert NPS (DN)**>.
    b. Bottom of Sump to Centerline: <**Insert inches (mm)**>.
    c. Type: [**Hubbed inside**][**Hubbed outside**]<**Insert type**>.

8. Cover Material: [**Cast iron**][**Steel with bituminous coating**][**Cast iron or steel with bituminous coating**]<**Insert material**>.
9. Cover Diameter: <**Insert inches (mm)**>, but not less than OD of basin top flange.
10. Manhole Required in Cover: [**Yes**][**No**].
11. Vent Size: <**Insert NPS (DN)**>.

2.8 PACKAGED DRAINAGE-PUMP UNITS - SUBMERSIBLE

A. Packaged Drainage-Pump Units - Submersible: .

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**A.Y. McDonald Mfg. Co.**]
    b. [**Liberty Pumps**]

c. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
d. [**Pentair Aurora; Pentair Pump Group**]
e. [**Zoeller Company**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**A.Y. McDonald Mfg. Co.**]
b. [**Liberty Pumps**]
c. [**Little Giant; a brand of Franklin Electric Co., Inc.**]
d. [**Pentair Aurora; Pentair Pump Group**]
e. [**Zoeller Company**]
f. <**Insert manufacturer's name**>

3. Description: Factory-assembled and -tested, automatic-operation, basin-mounted, sump-pump unit.
4. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller centrifugal pump as defined in HI 14.1-14.2 and HI 14.3.
5. Casing: [**Metal**]<**Insert material**>.
6. Impeller: [**Brass**]<**Insert material**>.
7. Pump Seal: Mechanical.
8. Motor: Hermetically sealed, capacitor-start type, with built-in overload protection.
9. Power Cord: Three-conductor waterproof cable of length required, but not less than **72 inches (1830 mm)**, with grounding plug and cable-sealing assembly for connection at pump.
10. Pump Discharge Piping: Factory- or field-fabricated, [**galvanized, ASTM A53/A53M, Schedule 40, steel pipe with ASME B16.4, Class 125, gray-iron threaded fittings**]<**Insert pipe material**>.
11. Control: Motor-mounted float switch.
12. Basin: Plastic.
13. Capacities and Characteristics:

a. Capacity: <**Insert gpm (L/min.)**>.
b. Total Dynamic Head: <**Insert feet (kPa)**>.
c. Speed: <**Insert rpm**>.
d. Discharge Pipe Size: <**Insert NPS (DN)**>.
e. Electrical Characteristics:

1) Motor Horsepower: <**Insert value**> hp.
2) Volts: [**115**][**230**][**460**]<**Insert value**> V.
3) Phases: [**Single**][**Three**].
4) Hertz: 60.
5) Full-Load Amperes: <**Insert value**> A.
6) Minimum Circuit Ampacity: <**Insert value**> A.
7) Maximum Overcurrent Protection: <**Insert value**> A.

f. Basin:

1) Capacity: [**2 gal. (7.6 L)**][**5 gal. (18.9 L)**]<**Insert value**> minimum.
2) Inlet Connection: [**NPS 1-1/2 (DN 40)**]<**Insert pipe size**> minimum.

2.9 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 220500 "Common Work Results for Plumbing."

1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

B. Motors for submersible pumps are to be hermetically sealed.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Excavation and filling are specified in Section 312000 "Earth Moving."

3.2 EXAMINATION

A. Examine roughing-in for plumbing piping to verify actual locations of storm drainage piping connections before sump-pump installation.

3.3 INSTALLATION

A. Pump Installation Standards: Comply with HI 14.4 for installation of sump pumps.

B. Equipment Mounting:

1. Comply with requirements for vibration isolation and seismic control devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
2. Comply with requirements for vibration isolation devices specified in Section 220548.13 "Vibration Controls for Plumbing Piping and Equipment."

C. Wiring Method: Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

D. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

3.4 PIPING CONNECTIONS

A. Comply with requirements for piping specified in Section 221414 "Storm Drainage Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to equipment, allow space for service and maintenance.

3.5 STARTUP SERVICE

A. [**Engage a factory-authorized service representative to perform**][**Perform**] startup service.

1. Complete installation and startup checks in accordance with manufacturer's written instructions.
2. <**Insert startup steps if any**>.

3.6 ADJUSTING

A. Adjust pumps to function smoothly, and lubricate as recommended by manufacturer.

B. Adjust control set points.

3.7 FIELD QUALITY CONTROL

A. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test, inspect, and adjust components, assemblies, and equipment installations, including connections.

C. Tests and inspections:

1. Perform each visual and mechanical inspection.
2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
5. Pumps and controls will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.8 DEMONSTRATION

A. [**Engage a factory-authorized service representative to train**][**Train**] Owner's maintenance personnel to adjust, operate, and maintain[**controls and**] pumps.

END OF SECTION 22 14 29 00

Task	Specification	Specification Description
22 14 29 00	22 14 00 00	Facility Storm-Water Retention Tanks
22 14 29 13	22 14 29 00	Sump Pumps
22 14 29 13	22 14 00 00	Facility Storm-Water Retention Tanks
22 14 29 16	22 13 29 00	Sanitary Sewerage Pumps
22 14 29 16	22 14 29 00	Sump Pumps
22 14 29 16	22 14 00 00	Facility Storm-Water Retention Tanks
22 14 29 19	22 14 29 00	Sump Pumps
22 14 29 19	22 14 00 00	Facility Storm-Water Retention Tanks

SECTION 26 01 00 00 - SUPPLEMENTAL REQUIREMENTS FOR ELECTRICAL

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes requirements generally applicable to all electrical Work on the Project, including but not limited to Work specified in Divisions 26, 27, and 28.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. [**Section 013100 "Project Management and Coordination"**]<**Insert Section number and title**> specifies preinstallation conference procedures.

1.2 REFERENCES

A. Abbreviations and Acronyms for Electrical Terms and Units of Measure:

1. 8P8C: An 8-position 8-contact modular jack.
2. A: Ampere, unit of electrical current.
3. AC or ac: Alternating current.
4. AFCI: Arc-fault circuit interrupter.
5. AGC: Automatic gain control.
6. AIC: Ampere interrupting capacity.
7. AL, Al, or ALUM: Aluminum.
8. ASD: Adjustable-speed drive.
9. ATP: Acceptance test procedure.
10. ATS: Automatic transfer switch.
11. A/V: Audio/visual.
12. AWG: American wire gauge; see ASTM B258.
13. BAS: Building automation system.
14. BDA: Bi-directional amplifier.
15. BIL: Basic impulse insulation level.
16. BIM: Building information modeling.
17. BMS: Building management system.
18. BNC: Bayonet Neill-Concelman - type of connector.
19. B/W: Black and white.
20. CAD: Computer-aided design or drafting.
21. CATV: Community antenna television.
22. CB: Circuit breaker.
23. CCD: Charge-coupled device.
24. CCTV: Closed-circuit television.
25. cd: Candela, the SI fundamental unit of luminous intensity.
26. CO/ALR: Copper-aluminum, revised.
27. COPS: Critical operations power system.
28. CU or Cu: Copper.
29. CU-AL or AL-CU: Copper-aluminum.

30. DACR: Digital alarm communicator receiver.
31. DACT: Digital alarm communicator transmitter.
32. DAS: Distributed antenna system.
33. dB: Decibel, a unitless logarithmic ratio of two electrical, acoustical, or optical power values.
34. dB(A-weighted) or dB(A): Decibel acoustical sound pressure level with A-weighting applied in accordance with IEC 61672-1.
35. dB(adjusted) or dBa: Decibel weighted absolute noise power with respect to 3.16 pW (minus 85 dBm).
36. dBm: Decibel absolute power with respect to 1 mW.
37. dBmV: Decibel absolute voltage with respect to 1 mV across identical impedance.
38. DC or dc: Direct current.
39. DCOA: Designated critical operations area.
40. DDC: Direct digital control (HVAC).
41. DGP: Data gathering panel.
42. DHCP: Dynamic host configuration protocol.
43. EGC: Equipment grounding conductor.
44. ELV: Extra-low voltage.
45. EMF: Electromotive force.
46. EMI: Electromagnetic interference.
47. EMP: Electrical maintenance program (operation and maintenance); electromagnetic pulse (transient analysis).
48. EPS: Emergency power supply.
49. EPSS: Emergency power supply system.
50. ERCES: Emergency responder communications enhancement system.
51. ESS: Energy storage system.
52. EV: Electric vehicle.
53. EVPE: Electric vehicle power export equipment.
54. EVSE: Electric vehicle supply equipment.
55. FACU: Fire-alarm control unit.
56. FAS: Fire-alarm system.
57. fc: Footcandle, an internationally recognized unit of illuminance equal to one lumen per square foot or 10.76 lx. The simplified conversion 1 fc = 10 lx in the Specifications is common practice and considered adequate precision for building construction activities. When there are conflicts, lux is the primary unit; footcandle is specified for convenience.
58. FCC: Federal Communications Commission; fire command center.
59. FLC: Full-load current.
60. ft: Foot.
61. ft-cd: Foot-candle, the antiquated U.S. standard unit of illuminance, equal to one international candle measured at a distance of one foot, that was superseded in 1948 by the unit "footcandle" when the SI unit candela (cd) replaced the international candle; see "fc."
62. FTP: File transfer protocol.
63. FXO: Foreign exchange office.
64. GEC: Grounding electrode conductor.
65. GFCI: Ground-fault circuit interrupter.
66. GFPE: Ground-fault protection of equipment.
67. GND: Ground.
68. GROL: General Radiotelephone Operator License (FCC).
69. H.323: Audio and video protocol.
70. HACR: Heating, air conditioning, and refrigeration.
71. HDPE: High-density polyethylene.
72. HID: High-intensity discharge.
73. HP or hp: Horsepower.
74. HVAC: Heating, ventilating, and air conditioning.
75. Hz: Hertz.
76. I&TFAS: Inspection and testing of fire-alarm system.

77. IB-PSC: In-building public safety communications.
78. IBT: Intersystem bonding termination.
79. ICT: Information and communications technology.
80. IDC: Initiating device circuit.
81. inch: Inch. To avoid confusion, the abbreviation "in." is not used.
82. I/O: Input/output.
83. IP: Ingress protection rating (enclosures); Internet protocol (communications).
84. IR: Infrared.
85. IS: Intrinsically safe.
86. IT&R: Inspecting, testing, and repair.
87. ITE: Information technology equipment.
88. kAIC: Kiloampere interrupting capacity.
89. kcmil or MCM: One thousand circular mils.
90. kV: Kilovolt.
91. kVA: Kilovolt-ampere.
92. kvar: Kilovolt-ampere reactive.
93. kW: Kilowatt.
94. kWh: Kilowatt-hour.
95. LAN: Local area network.
96. lb: Pound (weight).
97. lbf: Pound (force).
98. LCD: Liquid-crystal display.
99. LCDI: Leakage-current detector-interrupter.
100. LED: Light-emitting diode.
101. Li-ion: Lithium-ion.
102. lm: Lumen, the SI-derived unit of luminous flux.
103. LNG: Liquefied natural gas.
104. LP-Gas: Liquefied petroleum gas.
105. LRC: Locked-rotor current.
106. LTE: Long-term evolution (mobile device technology standard).
107. LV: Low voltage.
108. lx: Lux, the SI-derived unit of illuminance equal to one lumen per square meter.
109. m: Meter.
110. MATV: Master antenna television.
111. MCC: Motor-control center.
112. MDC: Modular data center.
113. MG set: Motor-generator set.
114. MIDI: Musical instrument digital interface.
115. MLO: Main lugs only.
116. MPEG: Moving Picture Experts Group.
117. MPEG-2: Abbreviation for the ISO/IEC Moving Picture Experts Group's standard for generic coding of moving pictures and associated audio information (ISO/IEC 13818) released in 1995 and used for most over-the-air and satellite broadcast digital television.
118. MPEG-4: Abbreviation for the ISO/IEC Moving Picture Experts Group's standard framework for coding of audio-visual objects (ISO/IEC 14496) released in 1999, with digital rights management and more advanced compression algorithms than MPEG-2.
119. MOV: Metal-oxide varistor.
120. MV: Medium voltage.
121. MVA: Megavolt-ampere.
122. mW: Milliwatt.
123. MW: Megawatt.
124. MWh: Megawatt-hour.
125. NAC: Notification appliance circuit.
126. N.C.: Normally closed.
127. NFC: Near field communications.
128. Ni-Cd: Nickel-cadmium.

129. NICET: National Institute for Certification in Engineering Technologies, a division of the National Society of Professional Engineers.
130. Ni-MH: Nickel-metal hydride.
131. NIU: Network interface unit.
132. N.O.: Normally open.
133. NPT: National (American) standard pipe taper.
134. NTSC: National Television System Committee.
135. OCPD: Overcurrent protective device.
136. ONT: Optical network terminal.
137. PC: Personal computer.
138. PCS: Power conversion system.
139. PCU: Power-conditioning unit.
140. Percent obs/ft (percent obs/m): Percent obscuration per unit distance; unit of measure for sensitivity of smoke detectors.
141. PF or pf: Power factor.
142. PHEV: Plug-in hybrid electric vehicle.
143. PIR: Passive infrared.
144. PLC: Programmable logic controller.
145. PLFA: Power-limited fire alarm.
146. PoE: Power over Ethernet.
147. POTS: Plain old telephone service. See "public switched telephone network" definition.
148. PSTN: Public switched telephone network.
149. PTZ: Pan-tilt-zoom.
150. PV: Photovoltaic.
151. PVC: Polyvinyl chloride.
152. pW: Picowatt.
153. RAID: Redundant array of inexpensive disks; redundant array of independent disks.
154. RAM: Random-access memory.
155. RAT: Radio alarm transmitter.
156. REX: Request-to-exit.
157. RF: Radio frequency.
158. RFI: (electrical) Radio-frequency interference; (contract) Request for interpretation.
159. RMS or rms: Root-mean-square.
160. RPM or rpm: Revolutions per minute.
161. SCADA: Supervisory control and data acquisition.
162. SCCR: Short-circuit current rating.
163. SCR: Silicon-controlled rectifier.
164. SIP: Session initiation protocol.
165. SLC: Signaling-line circuit.
166. SPD: Surge protective device.
167. SPDT: Single pole, double throw.
168. sq.: Square.
169. SWD: Switching duty.
170. TCP/IP: Transmission Control Protocol/Internet Protocol.
171. TEFC: Totally enclosed fan-cooled.
172. TR: Tamper resistant.
173. TVSS: Transient voltage surge suppressor.
174. UHF: Ultra-high frequency.
175. UL: (standards) UL Standards & Engagement Inc.; (product categories) UL, LLC.
176. UL CCN: UL Category Control Number.
177. UPS: Uninterruptible power supply.
178. USB: Universal serial bus.
179. UTC: Coordinated universal time.
180. UV: Ultraviolet.
181. V: Volt, unit of electromotive force.

182. V(ac): Volt, alternating current.
183. V(dc): Volt, direct current.
184. VA: Volt-ampere, unit of complex electrical power.
185. VAR: Volt-ampere reactive, unit of reactive electrical power.
186. VFC: Variable-frequency controller.
187. VOM: Volt-ohm-multimeter.
188. VoIP: Voice over Internet Protocol.
189. VPN: Virtual private network.
190. VRLA: Valve regulated lead acid; also called "sealed lead acid (SLA)" or "valve regulated sealed lead acid."
191. VU: Volume unit.
192. W: Watt, unit of real electrical power.
193. WAN: Wide area network.
194. Wh: Watt-hour, unit of electrical energy usage.
195. WPT: Wireless power transfer.
196. WPTE: Wireless power transfer equipment.
197. WR: Weather resistant.

B. Abbreviations and Acronyms for Electrical Raceway Types:

1. EMT: Electrical metallic tubing.
2. EMT-A: Aluminum electrical metallic tubing.
3. EMT-S: Steel electrical metallic tubing.
4. EMT-SS: Stainless steel electrical metallic tubing.
5. ENT: Electrical nonmetallic tubing.
6. EPEC: Electrical HDPE underground conduit (thin wall).
7. EPEC-A: Type A electrical HDPE underground conduit.
8. EPEC-B: Type B electrical HDPE underground conduit.
9. ERMC: Electrical rigid metal conduit.
10. ERMC-A: Aluminum electrical rigid metal conduit.
11. ERMC-S: Steel electrical rigid metal conduit.
12. ERMC-S-G: Galvanized-steel electrical rigid metal conduit.
13. ERMC-S-PVC: PVC-coated-steel electrical rigid metal conduit.
14. ERMC-SS: Stainless steel electrical rigid metal conduit.
15. FMC: Flexible metal conduit.
16. FMC-A: Aluminum flexible metal conduit.
17. FMC-S: Steel flexible metal conduit.
18. FMT: Steel flexible metallic tubing.
19. FNMC: Flexible nonmetallic conduit. See "LFNC."
20. HDPE: HDPE underground conduit (thick wall).
21. HDPE-40: Schedule 40 HDPE underground conduit.
22. HDPE-80: Schedule 80 HDPE underground conduit.
23. IMC: Steel electrical intermediate metal conduit.
24. LFMC: Liquidtight flexible metal conduit.
25. LFMC-A: Aluminum liquidtight flexible metal conduit.
26. LFMC-S: Steel liquidtight flexible metal conduit.
27. LFMC-SS: Stainless steel liquidtight flexible metal conduit.
28. LFNC: Liquidtight flexible nonmetallic conduit.
29. LFNC-A: Layered (Type A) liquidtight flexible nonmetallic conduit.
30. LFNC-B: Integral (Type B) liquidtight flexible nonmetallic conduit.
31. LFNC-C: Corrugated (Type C) liquidtight flexible nonmetallic conduit.
32. PVC: Rigid PVC conduit.
33. PVC-40: Schedule 40 rigid PVC conduit.
34. PVC-80: Schedule 80 rigid PVC Conduit.
35. PVC-A: Type A rigid PVC concrete-encased conduit.
36. PVC-EB: Type EB rigid PVC concrete-encased underground conduit.

37. RGS: See ERMC-S-G.
38. RMC: See ERMC.
39. RTRC: Reinforced thermosetting resin conduit.
40. RTRC-AG: Low-halogen, aboveground reinforced thermosetting resin conduit.
41. RTRC-AG-HW: Heavy wall, low-halogen, aboveground reinforced thermosetting resin conduit.
42. RTRC-AG-SW: Standard wall, low-halogen, aboveground reinforced thermosetting resin conduit.
43. RTRC-AG-XW: Extra heavy wall, low-halogen, aboveground reinforced thermosetting resin conduit.
44. RTRC-BG: Low-halogen, belowground reinforced thermosetting resin conduit.

C. Abbreviations and Acronyms for Electrical Single-Conductor and Multiple-Conductor Cable Types:

1. AC: Armored cable.
2. CATV: Coaxial general-purpose cable.
3. CATVP: Coaxial plenum cable.
4. CATVR: Coaxial riser cable.
5. CI: Circuit integrity cable.
6. CL2: Class 2 cable.
7. CL2P: Class 2 plenum cable.
8. CL2R: Class 2 riser cable.
9. CL2X: Class 2 cable, limited use.
10. CL3: Class 3 cable.
11. CL3P: Class 3 plenum cable.
12. CL3R: Class 3 riser cable.
13. CL3X: Class 3 cable, limited use.
14. CM: Communications general-purpose cable.
15. CMG: Communications general-purpose cable.
16. CMP: Communications plenum cable.
17. CMR: Communications riser cable.
18. CMUC: Under-carpet communications wire and cable.
19. CMX: Communications cable, limited use.
20. DG: Distributed generation cable.
21. FC: Flat cable.
22. FCC: Flat conductor cable.
23. FPL: Power-limited fire-alarm cable.
24. FPLP: Power-limited fire-alarm plenum cable.
25. FPLR: Power-limited fire-alarm riser cable.
26. IGS: Integrated gas spacer cable.
27. ITC: Instrumentation tray cable.
28. ITC-ER: Instrumentation tray cable, exposed run.
29. MC: Metal-clad cable.
30. MC-FPL/FPLR/FPLP: Metal-clad cable containing FPL, FPLR, or FPLP.
31. MC-HL: Metal-clad cable, hazardous location.
32. MI: Mineral-insulated, metal-sheathed cable.
33. MTW: (machine tool wiring) Moisture-, heat-, and oil-resistant thermoplastic cable.
34. MV: Medium-voltage cable.
35. NM: Nonmetallic sheathed cable.
36. NMC: Nonmetallic sheathed cable with corrosion-resistant nonmetallic jacket.
37. NMS: Nonmetallic sheathed cable with signaling, data, and communications conductors, plus power or control conductors.
38. NPLF: Non-power-limited fire-alarm circuit cable.
39. NPLFP: Non-power-limited fire-alarm circuit cable for environmental air spaces.
40. NPLFR: Non-power-limited fire-alarm circuit riser cable.
41. NUCC: Nonmetallic underground HDPE conduit with conductors.
42. OFC: Conductive optical fiber general-purpose cable.

43. OFCG: Conductive optical fiber general-purpose cable.
44. OFCP: Conductive optical fiber plenum cable.
45. OFCR: Conductive optical fiber riser cable.
46. OFN: Nonconductive optical fiber general-purpose cable.
47. OFNG: Nonconductive optical fiber general-purpose cable.
48. OFNP: Nonconductive optical fiber plenum cable.
49. OFNR: Nonconductive optical fiber riser cable.
50. P: Marine shipboard cable.
51. PLTC: Power-limited tray cable.
52. PLTC-ER: Power-limited tray cable, exposed run.
53. PV: Photovoltaic cable.
54. RHH: (high heat) Thermoset rubber, heat-resistant cable.
55. RHW: Thermoset rubber, moisture-resistant cable.
56. SA: Silicone rubber cable.
57. SE: Service-entrance cable.
58. SER: Service-entrance cable, round.
59. SEU: Service-entrance cable, flat.
60. SIS: Thermoset cable for switchboard and switchgear wiring.
61. TBS: Thermoplastic cable with outer braid.
62. TC: Tray cable.
63. TC-ER: Tray cable, exposed run.
64. TC-ER-HL: Tray cable, exposed run, hazardous location.
65. THW: Thermoplastic, heat- and moisture-resistant cable.
66. THHN: Thermoplastic, heat-resistant cable with nylon jacket outer sheath.
67. THHW: Thermoplastic, heat- and moisture-resistant cable.
68. THWN: Thermoplastic, moisture- and heat-resistant cable with nylon jacket outer sheath.
69. TW: Thermoplastic, moisture-resistant cable.
70. UF: Underground feeder and branch-circuit cable.
71. USE: Underground service-entrance cable.
72. XHH: Cross-linked polyethylene, heat-resistant cable.
73. XHHW: Cross-linked polyethylene, heat- and moisture-resistant cable.

D. Abbreviations and Acronyms for Electrical Flexible Cord Types:

1. SEO: 600 V extra-hard-usage, hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp locations.
2. SEOW: 600 V extra-hard-usage, hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp or wet locations.
3. SEOO: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp locations.
4. SEOOW: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp or wet locations.
5. SJEO: 300 V hard-usage, junior hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp locations.
6. SJEOW: 300 V hard-usage, junior hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp or wet locations.
7. SJEOO: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp locations.
8. SJEOOW: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp or wet locations.
9. SJO: 300 V hard-usage, junior hard-service cord with thermoset insulation and oil-resistant thermoset outer cover for damp locations.
10. SJOW: 300 V hard-usage, junior hard-service cord with thermoset insulation and oil-resistant thermoset outer cover for damp or wet locations.
11. SJOO: 300 V hard-usage, junior hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer cover for damp locations.

12. SJOOW: 300 V hard-usage, junior hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer cover for damp or wet locations.
13. SJTO: 300 V hard-usage, junior hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer cover for damp locations.
14. SJTOW: 300 V hard-usage, junior hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer cover for damp or wet locations.
15. SJTOO: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer cover for damp locations.
16. SJTOOW: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer cover for damp or wet locations.
17. SO: 600 V extra-hard-usage, hard-service cord with thermoset insulation and oil-resistant thermoset outer covering for damp locations.
18. SOW: 600 V extra-hard-usage, hard-service cord with thermoset insulation and oil-resistant thermoset outer covering for damp or wet locations.
19. SOO: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer covering for damp locations.
20. SOOW: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer covering for damp or wet locations.
21. STO: 600 V extra-hard-usage, hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer covering for damp locations.
22. STOW: 600 V extra-hard-usage, hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer covering for damp or wet locations.
23. STOO: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer covering for damp locations.
24. STOOW: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer covering for damp or wet locations.

E. Abbreviations for Communications Spaces:

1. EF: Entrance facility; generally serves campus or building. EF may include an ER.
2. ER: Equipment room; generally serves campus or building.
3. TE: Telecommunications enclosure; generally serves a single tenant or floor.
4. TR: Telecommunications room; generally serves a single tenant or floor.

F. Abbreviations for Communications Facilities:

1. HC: Horizontal cross-connect; also called "floor distributor" (FD).
2. IC: Intermediate cross-connect; also called "building distributor" (BD).
3. MC: Main cross-connect; also called "campus distributor" (CD).

G. Abbreviations for Grounding and Bonding:

1. BBC: Backbone bonding conductor, for connecting multiple TBBs serving the same floor.
2. PBB: Primary bonding busbar; located in main distribution frame room, ideally near electrical service entrance.
3. RBB: Rack bonding busbar; located in equipment cabinets and racks.
4. SBB: Secondary bonding busbar; located in intermediate distribution frame rooms.
5. TBB: Telecommunications bonding backbone, for connecting SBBs to PBB.
6. TBC: Telecommunications bonding conductor, for connecting PBB to intersystem bonding termination device or busbar at electrical service entrance.
7. TEBC: Telecommunications equipment bonding conductor, for connecting RBBs to SBBs or PBB.
8. UBC: Unit bonding conductor, for connecting individual communications equipment to RBBs or SBBs.

H. Definitions:

1. 8-Position 8-Contact (8P8C) Modular Jack: An unkeyed jack with up to eight contacts commonly used to terminate twisted pair and multiconductor Ethernet cable. Also called a "TIA-1096 miniature 8-position series jack" (8PSJ), or an "IEC 8877 8-pole jack."

    a. Be careful when suppliers use "RJ45" generically. Obsolete RJ45 jacks used for analog telephone cables have rejection keys. 8P8C jacks used for digital telephone cables and Ethernet cables do not have rejection keys.

2. Agile Receiver: A broadband receiver that can be tuned to any desired channel.
3. Backbone: Primary segment of ERCES between donor antenna and distribution cabling.
4. Basic Impulse Insulation Level (BIL): Reference insulation level expressed in impulse crest voltage with a standard wave not longer than 1.5 times 50 microseconds and 1.5 times 40 microseconds.
5. Broadband: For the purposes of this Section, wide bandwidth equipment or systems that can carry signals occupying in the frequency range of 54 to 1002 MHz. A broadband communication system can simultaneously accommodate television, voice, data, and many other services.
6. Broadcast Media: Loudspeakers, radios, cellular phones, and other media that will carry the selected message to the selected audience.
7. Cable: In accordance with NIST NBS Circular 37 and IEEE standards, in the United States for the purpose of interstate commerce, the definition of "cable" is (1) a conductor with insulation, or a stranded conductor with or without insulation (single-conductor cable); or (2) a combination of conductors insulated from one another (multiple-conductor cable).
8. Carrier: A pure-frequency signal that is modulated to carry information. In the process of modulation, the signal is spread out over a wider band. The carrier frequency is the center frequency on any television channel.
9. Channels: Separate parallel signal paths, from sources to loudspeakers or loudspeaker zones, with separate amplification and switching that permit selection between paths for speaker alternative program signals.
10. Communications Jack: A fixed connecting device designed for insertion of a communications cable plug.
11. Communications Outlet: One or more communications jacks, or cables and plugs, mounted in a box or ring, with a suitable protective cover.
12. Conductive Cable: Cable containing non-current-carrying electrically conductive members such as metallic strength members and metallic vapor barriers.
13. Conductor: In accordance with NIST NBS Circular 37 and IEEE standards, in the United States for the purpose of interstate commerce, the definition of "conductor" is (1) a wire or combination of wires not insulated from one another, suitable for carrying an electric current; (2) (National Electrical Safety Code) a material, usually in the form of wire, cable, or bar, suitable for carrying an electric current; or (3) (general) a substance or body that allows a current of electricity to pass continuously along it.
14. Conduit: A structure containing one or more duct raceways.
15. Control Unit: A system component that monitors inputs and controls outputs through various types of circuits.

    a. Autonomous Control Unit (ACU): The primary control unit for an in-building mass notification system (MNS).
    b. Emergency Communications Control Unit (ECCU): A system capable of sending mass notification messages to individual buildings, zones of buildings, individual outdoor loudspeaker arrays, or zones of outdoor loudspeaker arrays; or a building, multiple buildings, outside areas, or a combination of these.
    c. Fire-alarm control unit (FACU).
    d. Wireless Control Unit: A component that transmits/receives and processes wireless signals.

16. Designated Seismic System: An architectural, electrical, or mechanical system and its components for which the component importance factor is greater than 1.0 when determined in

accordance with Section 018123 "Facility Seismic and Wind Criteria."

17. Direct Buried: Installed underground without encasement in concrete or other protective material.
18. Downlink: The signal from a base station to portable radios.
19. Duct Bank: An arrangement of conduit providing one or more continuous duct raceways between two points.
20. Duct Raceway: A single enclosed raceway for conductors or cable.
21. Electrical Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.
22. Emergency Communications System (ECS): A system for the protection of life by indicating the existence of an emergency situation and communicating information necessary to facilitate an appropriate response and action.

    a. Distributed Recipient Mass Notification System (DRMNS): A system meant to communicate directly to targeted individuals and groups that might not be in a contiguous area.
    b. Emergency Voice/Alarm Communications System (EVACS): Dedicated manual or automatic facilities for originating and distributing voice instructions, as well as evacuation signals pertaining to an emergency, to the occupants of a building.
    c. Mass Notification System (MNS): A system used to provide information and instructions to people in buildings or other spaces using intelligible voice communications and including visual signals, text, graphics, tactile, or other communication methods (in-building MNS); and could have the capability to provide real-time information to outdoor areas and to communicate with other notification systems provided for a campus, region, or global geographic setting (wide-area MNS).

23. Emergency Systems: Those systems legally required and classed as emergency by municipal, state, federal, or other codes, or by any governmental agency having jurisdiction that is designed to ensure continuity of lighting, electrical power, or both, to designated areas and equipment in the event of failure of the normal supply for safety of human life.
24. Enclosure: The case or housing of an apparatus, or the fence or wall(s) surrounding an installation, to prevent personnel from accidentally contacting energized parts or to protect the equipment from physical damage. Types of enclosures and enclosure covers include the following:

    a. Cabinet: An enclosure that is designed for either surface mounting or flush mounting and is provided with a frame, mat, or trim in which a swinging door or doors are or can be hung.
    b. Concrete Box: A box intended for use in poured concrete.
    c. Conduit Body: A means for providing access to the interior of a conduit or tubing system through one or more removable covers at a junction or terminal point. In the United States, conduit bodies are listed in accordance with outlet box requirements.
    d. Conduit Box: A box having threaded openings or knockouts for conduit, EMT, or fittings.
    e. Cover Plate: A cover designed for protecting wiring devices installed in flush-mounted device boxes while permitting their safe operation; also called a faceplate or wallplate.
    f. Cutout Box: An enclosure designed for surface mounting that has swinging doors or covers secured directly to and telescoping with the walls of the enclosure.
    g. Device Box: A box with provisions for mounting a wiring device directly to the box.
    h. Extension Ring: A ring intended to extend the sides of an outlet box or device box to increase the box depth, volume, or both.
    i. Floor Box: A box mounted in the floor intended for use with a floor box cover and other components to complete the floor box enclosure.
    j. Floor-Mounted Enclosure: A floor box and floor box cover assembly with means to mount in the floor that is sealed against the entrance of scrub water at the floor level.
    k. Floor Nozzle: An enclosure used on a wiring system, intended primarily as a housing for a receptacle, provided with a means, such as a collar, for surface-mounting on a floor, which may or may not include a stem to support it above the floor level, and is sealed against the

entrance of scrub water at the floor level.

l. Junction Box: A box with a blank cover that joins different runs of raceway or cable and provides space for connection and branching of the enclosed conductors.
m. Outlet Box: A box that provides access to a wiring system having pryout openings, knockouts, threaded entries, or hubs in either the sides or the back, or both, for the entrance of conduit, conduit or cable fittings, or cables, with provisions for mounting an outlet box cover, but without provisions for mounting a wiring device directly to the box.
n. Pedestal Floor Box Cover: A floor box cover that, when installed as intended, provides a means for typically vertical or near-vertical mounting of receptacle outlets above the floor's finished surface.
o. Pull Box: A box with a blank cover that joins different runs of raceway and provides access for pulling or replacing the enclosed cables or conductors.
p. Raised-Floor Box: A floor box intended for use in raised floors.
q. Recessed Access Floor Box: A floor box with provisions for mounting wiring devices below the floor surface.
r. Recessed Access Floor Box Cover: A floor box cover with provisions for passage of cords to recessed wiring devices mounted within a recessed floor box.
s. Ring: A sleeve, which is not necessarily round, used for positioning a recessed wiring device flush with the plaster, concrete, drywall, or other wall surface.
t. Ring Cover: A box cover, with raised center portion to accommodate a specific wall or ceiling thickness, for mounting wiring devices or luminaires flush with the surface.
u. Termination Box: An enclosure designed for installation of termination base assemblies consisting of bus bars, terminal strips, or terminal blocks with provision for wire connectors to accommodate incoming or outgoing conductors, or both.

25. Essential Electrical Systems: (healthcare facilities) Those systems designed to ensure continuity of electrical power to designated areas and functions of a healthcare facility during disruption of normal power sources, and also to minimize disruption within the internal wiring system.
26. Fault Limited: Providing or being served by a source of electrical power that is limited to not more than 100 W when tested in accordance with UL 62368-1.

    a. The term "fault limited" is intended to encompass most Class 1, 2, and 3 power-limited sources complying with Article 725 of NFPA 70; Class ES1 and ES2 electrical energy sources that are Class PS1 electrical power sources (e.g., USB); and Class ES3 electrical energy sources that are Class PS1 and PS2 electrical power sources (e.g., PoE). See UL 62368-1 for discussion of classes of electrical energy sources and classes of electrical power sources.

27. Headend: The control center of the MATV system, where incoming signals are amplified, converted, processed, and combined into a common cable along with any locally originated television signals, for transmission to user-interface points. It is also called the "central retransmission facility."
28. High-Performance Building: A building that integrates and optimizes on a life-cycle basis all major high-performance attributes, including energy conservation, environment, safety, security, durability, accessibility, cost-benefit, productivity, sustainability, functionality, and operational considerations.
29. High Power Loudspeaker Array (HPLA): A product providing capability for voice and tone communication to large outdoor areas.
30. Jack: Also commonly called an "outlet," it is the fixed, female connector.
31. Jacket: A continuous nonmetallic outer covering for conductors or cables.
32. Local Operator Console (LOC): Equipment used by authorized personnel and emergency responders to activate and operate a mass notification system (MNS).
33. Luminaire: A complete lighting unit consisting of a light source such as a lamp, together with the parts designed to position the light source and connect it to the power supply. It may also include parts to protect the light source or the ballast or to distribute the light.
34. Master Control Unit: System component that accepts inputs from other control units and may also

perform control-unit functions. The unit has limited capacity for the number of protected zones and is installed at an unattended location or at a location where it is not the attendant's primary function to monitor the security system.

35. Mode: The terms "Active Mode," "Off Mode," and "Standby Mode" are used as defined in the Energy Independence and Security Act (EISA) of 2007.
36. Monitoring: Acquisition, processing, communication, and display of system and equipment status data and event and alarm signals.
37. Monitoring Station: Facility that receives signals and has personnel in attendance at all times to respond to signals. A central station is a monitoring station that is listed.
38. Multi-Outlet Assembly: A type of surface, flush, or freestanding raceway designed to hold conductors, receptacles, and switches, assembled in the field or at the factory.
39. Nonsecure: Unlocked or open. (For doors and gates.)
40. One-Line Diagram: A diagram that shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein. Also called "single-line diagram."
41. Plenum: A compartment or chamber to which one or more air ducts are connected and that forms part of the air distribution system.
42. Plug: Also commonly called a "connector," it is the removable, male telecommunications connector.
43. Protected Zone: A protected premises or an area within a protected premises that is provided with means to prevent an unwanted event.
44. Protective Device: A device that senses when an abnormal current flow, abnormal voltage potential, or other abnormal electrical waveform exists and then disconnects the affected portion of the circuit from the system. Common protective devices include fuses, circuit breakers, relays, ground-fault circuit interrupters, and arc-fault circuit interrupters.
45. Public Switched Telephone Network (PSTN): Analog telephone technology that uses twisted pair cables from a telephone-provider central office for the transmission medium. "PSTN" refers to the telephone network; "POTS" refers to the individual subscriber line.
46. Receptacle: A fixed connecting device arranged for insertion of a power cord plug. Also called a power jack.
47. Receptacle Outlet: One or more receptacles mounted in a box with a suitable protective cover.
48. Screen: A metallic layer, either a foil or braid, placed around a pair or group of conductors.
49. Secure: Closed and locked and with no unlock or open commands pending. (For doors and gates.)
50. Sheath: A continuous metallic covering for conductors or cables.
51. Shield: A metallic layer, either a foil or braid, placed around a pair or group of conductors.
52. Systems Integration: The bringing together of components of several systems containing interacting components to achieve indicated functional operation of combined systems.
53. UL Category Control Number (CCN): An alphabetic or alphanumeric code used to identify product categories covered by UL's Listing, Classification, and Recognition Services.
54. Uplink: The signal from a portable radio to the base station.
55. Voice over Internet Protocol (VoIP): Digital telephone packet technology that uses the internet for its transmission medium.
56. Voltage Class: For specified circuits and equipment, voltage classes are defined as follows:

    a. Control Voltage: Having electromotive force between any two conductors, or between a single conductor and ground, that is supplied from a battery or other Class 2 or Class 3 power-limited source.
    b. Line Voltage: (1) (controls) Designed to operate using the supplied low-voltage power without transformation. (2) (transmission lines, transformers, SPDs) The line-to-line voltage of the supplying power system.
    c. Extra-Low Voltage (ELV): Not having electromotive force between any two conductors, or between a single conductor and ground, exceeding 30 V(ac rms), 42 V(ac peak), or 60 V(dc).
    d. Low Voltage (LV): Having electromotive force between any two conductors, or between a

single conductor and ground, that is rated above 30 V but not exceeding 1000 V.

e. Medium Voltage (MV): Having electromotive force between any two conductors, or between a single conductor and ground, that is rated about 1 kV but not exceeding 69 kV.

f. High Voltage: (1) (circuits) Having electromotive force between any two conductors, or between a single conductor and ground, that is rated above 69 kV but not exceeding 230 kV. (2) (safety) Having sufficient electromotive force to inflict bodily harm or injury.

57. Wire: In accordance with NIST NBS Circular 37 and IEEE standards, in the United States for the purpose of interstate commerce, the definition of "wire" is a slender rod or filament of drawn metal. A group of small wires used as a single wire is properly called a "stranded wire." A wire or stranded wire covered with insulation is properly called an "insulated wire" or a "single-conductor cable." Nevertheless, when the context indicates that the wire is insulated, the term "wire" will be understood to include the insulation.

58. Zone. A defined area within a protected premises. It is a space or area for which an intrusion must be detected and uniquely identified. The sensor or group of sensors must then be assigned to perform the detection, and any interface equipment between sensors and communication must link to master control unit.

1.3 COORDINATION

A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions:

1. Notify [**Architect**][**Construction Manager**][**Owner**][**Tenant**] no fewer than [**seven**]<**Insert number**> days in advance of proposed interruption of electrical service.
2. Do not proceed with interruption of electrical service without [**Architect's**][**Construction Manager's**][**Owner's**][**Tenant's**] written permission.
3. Coordinate interruption with systems impacted by outage including, but not limited to, the following:

    a. Exercising generators.
    b. Emergency lighting.
    c. Elevators.
    d. Fire-alarm systems.

4. Arrange to provide temporary emergency and standby electrical [**service**][**or**][**power**] so facility may remain occupied during the outage in accordance with requirements specified in Section 015000 "Temporary Facilities and Controls." Coordinate power requirements with Owner.

B. Interruption of Existing Telephone Service: Do not interrupt telephone service to facilities occupied by Owner or others unless permitted under the following conditions:

1. Notify [**Architect**][**Construction Manager**][**Owner**][**Tenant**] no fewer than [**seven**]<**Insert number**> days in advance of proposed interruption of telephone service.
2. Do not proceed with interruption of telephone service without [**Architect's**][**Construction Manager's**][**Owner's**][**Tenant's**] written permission.

C. Interruption of Existing Internet Service: Do not interrupt internet service to facilities occupied by Owner or others unless permitted under the following conditions:

1. Notify [**Architect**][**Construction Manager**][**Owner**][**Tenant**] no fewer than [**seven**]<**Insert number**> days in advance of proposed interruption of internet service.
2. Do not proceed with interruption of internet service without [**Architect's**][**Construction Manager's**][**Owner's**][**Tenant's**] written permission.

D. Interruption of Existing Security System: Do not interrupt security system to facilities occupied by Owner or others unless permitted under the following conditions:

1. Notify [**Architect**][**Construction Manager**][**Owner**][**Tenant**] no fewer than [**seven**]<**Insert number**> days in advance of proposed interruption of security system.
2. Do not proceed with interruption of security system without [**Architect's**][**Construction Manager's**][**Owner's**][**Tenant's**] written permission.

E. Interruption of Existing Fire-Alarm System: Do not interrupt fire-alarm system to facilities occupied by Owner or others unless permitted under the following conditions:

1. Notify [**Architect**][**Construction Manager**][**Owner**][**Tenant**] no fewer than [**seven**]<**Insert number**> days in advance of proposed interruption of fire-alarm system.
2. Do not proceed with interruption of fire-alarm system without [**Architect's**][**Construction Manager's**][**Owner's**][**Tenant's**] written permission.

1.4 PREINSTALLATION MEETINGS

A. Electrical Preconstruction Conference: Schedule conference with Architect and Owner, not later than [**10**]<**Insert number**> days after Notice to Proceed. Agenda topics include, but are not limited to, the following:

1. Electrical installation schedule.
2. Status of power system studies.
3. Value analysis proposals and requests for substitution of electrical equipment.
4. Utility work coordination and class of service requests.
5. Commissioning activities.
6. Sustainability activities[**, including Measurement and Verification Plan**].

B. Communications Preconstruction Conference: Schedule conference with Architect and Owner not later than [**10**]<**Insert number**> days after Notice to Proceed. Agenda topics include, but are not limited to, the following:

1. Installation schedule for communications systems.
2. Value analysis proposals and requests for substitution of communications equipment.
3. Utility services work coordination and monitoring service requests.
4. Commissioning activities.
5. Sustainability activities.

C. Electronic Safety and Security Preconstruction Conference: Schedule conference with Architect and Owner not later than [**10**]<**Insert number**> days after Notice to Proceed. Agenda topics include, but are not limited to, the following:

1. Installation schedule for security, fire-alarm, and other life-safety systems.
2. Value analysis proposals and requests for substitution of electronic safety and security equipment.
3. Monitoring services work coordination and monitoring service requests.
4. Commissioning activities.
5. Sustainability activities.

1.5 SEQUENCING

A. Conduct and submit results of power system studies before submitting product data and Shop Drawings

for electrical equipment.

1.6 SCHEDULING

A. <**Insert requirements for unusual scheduling coordination**>.

1.7 ACTION SUBMITTALS

A. Coordination Drawings for Structural Supports: Show coordination of structural supports for equipment and devices, including restraints and bracing for control of seismic and wind loads, with other systems, equipment, and structural supports in the vicinity.

B. Coordination Drawings for Ceiling Areas: Where indicated on drawings, provide reflected ceiling plan(s), supplemented by sections and other details, drawn to scale, in accordance with Section 013100 "Project Management and Coordination," on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Suspended ceiling components.
2. Structural members to which equipment and suspension systems will be attached.
3. Size and location of access panels on ceilings.
4. Elevation, size, and route of sprinkler piping.
5. Elevation, size, and route of plumbing piping.
6. Elevation, size, and route of ductwork.
7. Elevation, size, and route of cable tray.
8. Elevation, size, and route of conduit.
9. Elevation and size of wall-mounted and ceiling-mounted equipment.
10. Access panels.
11. Sprinklers.
12. Air inlets and outlets.
13. Control modules.
14. Luminaires.
15. Communications devices.
16. Speakers.
17. Security devices.
18. Fire-alarm devices.
19. Indicate clear dimensions for maintenance access in front of equipment.
20. Indicate dimensions of fully open access doors.

C. Coordination Drawings for Cable Tray Routing: Reflected ceiling plan(s), supplemented by sections and other details, drawn to scale, in accordance with Section 013100 "Project Management and Coordination," on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Elevation, size, and route of cable trays.
2. Relationships between components and adjacent structural, electrical, and mechanical elements.
3. Vertical and horizontal offsets and transitions.
4. Elevation and size of sleeves for wall, ceiling, and floor cable penetrations.
5. Elevation of ceilings and size of ceiling tiles.
6. Locations of access panels on ceilings.
7. Locations where cable tray crosses or parallels sprinkler piping.
8. Locations where cable tray crosses plumbing piping.
9. Locations where cable tray crosses or parallels ductwork.
10. Locations of access panels on ductwork.
11. Locations where cable tray crosses conduit.

12. Items blocking access around cable trays, including the following:

    a. Light fixtures.
    b. Speakers.
    c. Fire-alarm devices.
    d. Power outlets.
    e. Wall-mounted equipment.
    f. Equipment racks.
    g. Furniture.
    h. Door swings.
    i. Building features.

13. Indicate clear dimension between cable tray and walls or obstructions that are closer than **10 ft (3 m)**.
14. Highlight locations where cable tray is greater than **3 ft (1 m)** above ceilings. Explain how personnel access will be accommodated for cable tray maintenance.

D. Coordination Drawings for Conduit Routing: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items involved:

1. Structural members in paths of conduit groups with common supports.
2. HVAC and plumbing items and architectural features in paths of conduit groups with common supports.

E. Coordination Drawings for Bus Assembly Routing: Floor plans and sections, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items involved:

1. Scaled bus-assembly layouts and relationships between components and adjacent structural, mechanical, and electrical elements.
2. Vertical and horizontal enclosed bus-assembly runs, offsets, and transitions.
3. Clearances for access above and to the side of enclosed bus assemblies.
4. Vertical elevation of enclosed bus assemblies above the floor or bottom of structure.
5. Support locations, type of support, and weight on each support.
6. Location of adjacent construction elements, including luminaires, HVAC and plumbing equipment, fire sprinklers and piping, signal and control devices, and other equipment.

F. Coordination Drawings for Large Equipment Indoor Installations:

1. Location plan, drawn to scale, showing heavy equipment or truck access paths to loading dock or other freight access into building. Indicate available width and height of doors or openings.
2. Floor plan for entry floor and floor where equipment is located, drawn to scale, showing heavy equipment access paths for maintenance and replacement, with the following items shown and coordinated with each other, based on input from installers of the items involved:

    a. Dimensioned concrete bases, outlines of equipment, conduit entries, and grounding equipment locations.
    b. If freight elevator must be used, indicate width and height of door and depth of car. Indicate if large equipment must be tipped to use elevator.
    c. Dimensioned working clearances and dedicated areas below and around electrical equipment where obstructions and tripping hazards are prohibited.

3. Reflected ceiling plans for entry floor and floor where equipment is located, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

a. Support locations, type of support, and weight on each support. Locate structural supports for structure-supported raceways**[, busways,]**[**and seismic bracing**].
b. Location of lighting fixtures, sprinkler piping and sprinklers, ducts and diffusers, and other obstructions, indicating available overhead clearance.
c. Dimensioned working clearances and dedicated areas above and around electrical equipment where foreign systems and equipment are prohibited.

G. Coordination Drawings for Large Equipment Outdoor Installations:

1. Utilities site plan, drawn to scale, showing heavy equipment or truck access paths for maintenance and replacement, with the following items shown and coordinated with each other, based on input from installers of the items involved:

a. Fences and walls, dimensioned concrete bases, outlines of equipment, conduit entries, and grounding and bonding locations.
b. Indicate clear dimensions for fence gates and wall openings.
c. Indicate depth and type of ground cover, and locations of trees, shrubbery, and other obstructions in access path.
d. Indicate clear height below tree branches, overhead lines, bridges, and other overhead obstructions in access path, or where cranes and hoists will be needed to handle large electrical equipment.
e. Support locations, type of support, and weight on each support. Locate structural supports for structure-supported raceways**[, busways,]**[**and seismic bracing**].
f. Dimensioned working clearances and dedicated areas around electrical equipment.

H. Coordination Drawings for Duct Banks:

1. Show duct profiles and coordination with other utilities and underground structures.
2. Include plans and sections, drawn to scale, and show bends and locations of expansion fittings.

I. Sustainable Design Submittals:

1. Electrical Waste Management (Wire): Provide documentation for quantity of abandoned electrical wire that has been removed from Project site, in accordance with Rule 645.5(G) of NFPA 70, and provide verification that abandoned wire containing lead stabilizers has been identified and disposed of in accordance with jurisdictional hazardous waste requirements.
2. Electrical Waste Management (Lamps): Provide documentation that an area has been provided to serve entire Project for collection and storage of fluorescent and HID lamps and ballasts for their appropriate disposal or recycling in accordance with jurisdictional hazardous waste requirements.
3. Electrical Waste Management (Electronics and Batteries): Provide documentation that an area has been provided to serve entire Project for collection and storage of electronics, alkaline batteries, and rechargeable batteries for their appropriate disposal or recycling in accordance with jurisdictional hazardous waste requirements.

1.8 INFORMATIONAL SUBMITTALS

A. Electrical Installation Schedule: At preconstruction meeting, and periodically thereafter as dates change, provide schedule for electrical installation Work to Owner and Architect including, but not limited to, milestone dates for the following activities:

1. Submission of power system studies.
2. Submission of specified coordination drawings.
3. Submission of action submittals specified in Division 26.
4. Orders placed for major electrical equipment.

5. Arrival of major electrical equipment on-site.
6. Preinstallation meetings specified in Division 26.
7. Utility service outages.
8. Utility service inspection and activation.
9. Mockup reviews.
10. Closing of walls and ceilings containing electrical Work.
11. System startup, testing, and commissioning activities for major electrical equipment.
12. System startup, testing, and commissioning activities for emergency lighting.
13. System startup, testing, and commissioning activities for automation systems (SCADA, BMS, lighting, HVAC, fire alarm, fire pump, etc.).
14. Pouring of concrete housekeeping pads for electrical equipment and testing of concrete samples.
15. Requests for special inspections.
16. Requests for inspections by authorities having jurisdiction.

B. Installation Schedule for Communications Systems: At preconstruction meeting, and periodically thereafter as dates change, provide schedule for installation of the communications Work to Owner and Architect including, but not limited to, milestone dates for the following activities:

1. Submission of specified coordination drawings.
2. Submission of action submittals specified in Division 27.
3. Orders placed for major equipment.
4. Arrival of major equipment on-site.
5. Preinstallation meetings specified in Division 27.
6. Telephone and internet service outages.
7. Telephone and internet service inspection and activation.
8. Mockup reviews.
9. Closing of walls and ceilings containing the communications Work.
10. System startup, testing, and commissioning activities for communications equipment.
11. System startup, testing, and commissioning activities for the Work specified in other divisions that depends on the Work specified in Division 27.
12. System startup, testing, and commissioning activities for automation systems (SCADA, BMS, lighting, HVAC, fire alarm, fire pump, etc.).
13. Requests for special inspections.
14. Requests for inspections by authorities having jurisdiction.

C. Installation Schedule for Security, Fire-Alarm, and Other Life-Safety Systems: At preconstruction meeting, and periodically thereafter as dates change, provide schedule for installation of security, fire-alarm, and the other life-safety Work to Owner and Architect including, but not limited to, milestone dates for the following activities:

1. Submission of specified coordination drawings.
2. Submission of action submittals specified in Division 28.
3. Orders placed for major equipment.
4. Arrival of major equipment on-site.
5. Preinstallation meetings specified in Division 28.
6. Security and fire-alarm system outages.
7. Security and fire-alarm system inspection and activation.
8. Mockup reviews.
9. Closing of walls and ceilings containing the security and fire-alarm Work.
10. System startup, testing, and commissioning activities for security and fire-alarm equipment.
11. System startup, testing, and commissioning activities for fire-alarm interfaces with the Work specified in other divisions.
12. System startup, testing, and commissioning activities for automation systems (SCADA, BMS, lighting, HVAC, fire alarm, fire pump, etc.).
13. Requests for special inspections.

14. Requests for inspections by authorities having jurisdiction.

D. Welding certificates.

E. Seismic Performance Certificates: Provide special certification for designated seismic systems as required to meet requirements specified in Section 018123 "Facility Seismic and Wind Criteria" for all designated seismic systems identified on the Drawings or in the Specifications.

1. Include the following information:

a. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
d. Detailed description of conduit support devices and interconnections on which the certification is based and their installation requirements.
e. Equipment manufacturer's written certification for each designated active electrical seismic device and system, stating that it will remain operable following the basis-of-design seismic criteria specified in Section 018123 "Facility Seismic and Wind Criteria."
f. Equipment manufacturer's written certification that components with hazardous contents maintain containment following the basis-of-design seismic criteria specified in Section 018123 "Facility Seismic and Wind Criteria."
g. Evidence demonstrating compliance with these requirements for approval to authorities having jurisdiction after review and acceptance by qualified structural professional engineer.

F. Wind Performance Certificates: Provide special certification for systems and components designated on the Drawings or in the Specifications to be subject to high wind exposure and impact damage.

1. Include the following information:

a. Provide equipment manufacturer's written certification for each designated system and component, stating that it will remain in place and operable following the design wind event and comply with requirements of authorities having jurisdiction.
b. Certification must be based on ICC-ES or similar nationally recognized testing standard procedures acceptable to authorities having jurisdiction.

G. Qualification Statements:

1. For qualified regional manufacturer.
2. For structural professional engineer.
3. For electrical professional engineer.
4. For lighting professional engineer.
5. For EPM specialist.
6. For welder.
7. For ERMC-S-PVC raceway Installer.
8. For medium-voltage cable Installer.
9. For medium-voltage duct Installer.
10. For medium-voltage equipment Installer.
11. For electrical power monitoring Installer.
12. For switchboard Installer.
13. For EVSE Installer.
14. For generator set Installer.
15. For lightning protection system Installer.

16. For theatrical lighting Installer.
17. For exterior athletic lighting Installer.
18. For power quality specialist.
19. For electrical testing and inspecting agency and its on-site electrical testing supervisor.
20. For structural testing and inspecting agency.
21. For outdoor pole testing and inspecting agency.
22. For luminaire photometric testing laboratory.
23. For lighting testing and inspecting agency.
24. For communications design professional.
25. For communications cable Installer.
26. For communications testing and inspecting agency and its on-site communications testing supervisor.
27. For nurse call/code blue system Installer.
28. For security design professional.
29. For fire-alarm system design professional.
30. For mass notification design professional.
31. For IB-PSC design professional.
32. For general radiotelephone operator license (GROL) designer.
33. For emergency communications design professional.
34. For fire-alarm cable Installer and its on-site fire-alarm cable installation supervisor.
35. For security testing and inspecting agency and its on-site security testing supervisor.
36. For intrusion detection systems installer.
37. For perimeter security systems integrator.
38. For fire-alarm testing agency and its on-site fire-alarm testing supervisor.
39. For detention electronics systems Installer.
40. For detention electronics systems integrator.
41. For detention electronics systems testing and inspecting agency.

1.9 CLOSEOUT SUBMITTALS

A. Facility EMP Binders:

1. Complete Set: On [**approved online or cloud solution**][**and**][**USB media that is clearly and permanently labeled with attached placard on lanyard to prevent misplacement**].
2. Volumes 2 and 8: Reproducible hardcopy on archival quality, **28 lb (105 GSM)**, acid-free, bond paper.

B. Operation and Maintenance Data:

1. Provide emergency operation, normal operation, and preventive maintenance manuals for each system, equipment, and device listed below:

   a. <**Insert system, equipment, or device**>.

2. Include the following information:

   a. Manufacturer's operating specifications.
   b. User's guides for software and hardware.
   c. Schedule of maintenance material items recommended to be stored at the Project site.
   d. Detailed instructions covering operation under both normal and abnormal conditions.
   e. Time-current curves for overcurrent protective devices and manufacturer's written instructions for testing and adjusting their settings.
   f. List of load-current and overload-relay heaters with related motor nameplate data.
   g. List of lamp types and photoelectric relays used on the Project, with ANSI and

manufacturers' codes.
h. Manufacturer's instructions for setting field-adjustable components.
i. Manufacturer's instructions for testing, adjusting, and reprogramming microprocessor controls.
j. EPSS: Manufacturer's system checklists, maintenance schedule, and maintenance log sheets in accordance with NFPA 110.
k. Exterior pole inspection and repair procedures.

C. Software and Firmware Operational Documentation: Provide software and firmware operational documentation[**in Facility EPM Binders**], including the following:

1. Software operating and upgrade manuals.
2. Names, versions, and website addresses for locations of installed software.
3. Device address list.
4. Printout of software application and graphic screens.
5. Testing and adjusting of panic and emergency power features.
6. For lighting controls, include the following:

a. Adjustments of scene preset controls, adjustable fade rates, and fade overrides.
b. Operation of adjustable zone controls.

D. Software:

1. Program Software Backup: Provide [**username and password for approved online or cloud solution**][**and**][**USB media that is clearly and permanently labeled with attached placard on lanyard to prevent misplacement**].
2. Provide to Owner upgrades and unrestricted licenses[**for Government use**] for installed and backup software, including operating systems and programming tools required for operation and maintenance.

1.10 MOCKUPS

A. Simple Mockups for Coordinating Accessibility of Electrical Devices around Fixed Furnishings and Equipment:

1. Build simple mockups using art supplies and other inexpensive materials for verification of general arrangement, actual dimensions, and accessibility of <**Insert identification of room and fabrication**> by [**Architect**][**Owner**][**Tenant**]<**Insert approving stakeholders**> prior to fabrication and installation of Work. Depict products from all Divisions requiring coordination, including, but not limited to, fixed furnishings, casework, outlet covers and plates, HVAC controls, exposed raceway, exposed plumbing, equipment, and signage.

B. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.

PART 2 - PRODUCTS

2.1 SUBSTITUTION LIMITATIONS FOR ELECTRICAL EQUIPMENT

A. Substitution requests for electrical equipment will be entertained under the following conditions:

1. Substitution requests may be submitted for consideration prior to the Electrical Preconstruction Conference if accompanied by value analysis data indicating that substitution will comply with the

Project performance requirements while significantly increasing value for Owner throughout life of facility.
2. Substitution requests may be submitted for consideration concurrently with submission of power system study reports when those reports indicate that substitution is necessary for safety of maintenance personnel and facility occupants.
3. Contractor is responsible for sequencing and scheduling power system studies and electrical equipment procurement. After the Electrical Preconstruction Conference, insufficient lead time for electrical equipment delivery will not be considered a valid reason for substitution.

2.2 SUBSTITUTION LIMITATIONS FOR COMMUNICATIONS EQUIPMENT

A. Substitution requests for communications equipment will be entertained under the following conditions:

1. Substitution requests may be submitted for consideration prior to the Communications Preconstruction Conference if accompanied by value analysis data indicating that substitution will comply with the Project performance requirements while significantly increasing value for Owner throughout life of facility.
2. Contractor is responsible for sequencing and scheduling equipment procurement. After the Communications Preconstruction Conference, insufficient lead time for equipment delivery will not be considered a valid reason for substitution.

2.3 SUBSTITUTION LIMITATIONS FOR ELECTRONIC SAFETY AND SECURITY EQUIPMENT

A. Substitution requests for electronic safety and security equipment will be entertained under the following conditions:

1. Substitution requests may be submitted for consideration prior to the Electronic Safety and Security Preconstruction Conference if accompanied by value analysis data indicating that substitution will comply with the Project performance requirements while significantly increasing value for Owner throughout life of facility.
2. Contractor is responsible for sequencing and scheduling equipment procurement. After the Electronic Safety and Security Preconstruction Conference, insufficient lead time for equipment delivery will not be considered a valid reason for substitution.

2.4 FACILITY ELECTRICAL MAINTENANCE PROGRAM (EMP) BINDERS

A. Description: Set of binders containing operation and maintenance data for facility's electrical equipment that was compiled during analysis of installed electrical Work for Facility EMP development.

B. Applicable Standards:

1. Regulatory Requirements: Comply with requirements in NFPA 70B.
2. General Characteristics:

a. Volume 1 - Introduction:

1) Summarize how Facility EMP analysis was performed, how data were collected, and how volumes are organized.
2) Describe Facility EMP and provide recommended policies and procedures for implementing the program and keeping it current.
3) Provide place for Owner to identify contact information for employees responsible for implementing and maintaining Facility EMP.

b. Volume 2 - Facility Safety, Hazards Awareness, and Emergency Procedures:

1) Include training requirements for employees and contractors.
2) Include list of known facility hazards impacting IT&R activities.
3) Include approval and permitting procedures for IT&R activities.
4) Include incident emergency response procedures.
5) Include emergency shutdown procedures.
6) Include electrical disaster recovery procedures.
7) Include procedures for investigating the following incidents:

a) Electrical safety incidents.
b) Equipment malfunctions.
c) Unintended operations or alarms.
d) Operation of protective devices.

c. Volume 3 - Operating Procedures for Electrical Equipment and Controls:

1) <**Insert requirements**>.

d. Volume 4 - Facility Diagrams and Schedules:

1) Include single-line diagrams.
2) Include grounding and bonding diagrams.
3) Include essential wiring diagrams.
4) Include system automation diagrams (SCADA, BMS, lighting, HVAC, etc.).
5) Include records of switchgear, switchboard, and panelboard schedules.
6) Include time-current curves for overcurrent protective devices.
7) Include list of load-current and overload-relay heaters with related motor nameplate data.

e. Volume 5 - Inventory of Facility Equipment Using Electrical Power:

1) Include simplified floor plans showing equipment locations.
2) Identify critical equipment (electrical or otherwise).
3) Include identifying designations and nameplate data.
4) Include warranty and maintenance contract information.

f. Volume 6 - Inventory of Facility Tools, Supplies, and Personnel Protective Equipment:

1) Include schedules of maintenance material items recommended to be stored at facility.
2) Include list of lamp types and photoelectric relays used in facility with ANSI and manufacturers' codes.
3) Include calibration and servicing data for each item.

g. Volume 7 - Inspection, Testing, and Repair (IT&R) Plan:

1) Include tables showing frequency of activities for each item.
2) Include annual schedule with activities mapped to specific days of the year.
3) Include exterior pole inspection and repair procedures.

h. Volume 8 - Inspection, Testing, and Repair (IT&R) Forms:

1) <**Insert requirements**>.

i. Volume 9 - Inspection, Testing, and Repair (IT&R) Procedures:

1) <**Insert requirements**>.

j. Volume 10 - Spare Parts List:

1) Include list of all parts required to perform IT&R procedures.
2) Identify quantities of which parts are recommended to be stored on-site.
3) Include source contact information and budget cost for each item.

k. Volume 11 - Construction Project Closeout Record Documentation:

1) Include records of power system studies and photometric studies.
2) Include records of risk assessment studies.
3) Include records of electrical system startup and commissioning activities.
4) Include records of baseline inspections and tests.
5) Include records of baseline infrared photographs with normal light photographs showing the location, direction, angle, and conditions necessary for reproducing each infrared photograph.
6) Include records of baseline settings for adjustable equipment and devices.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions:

1. <**Insert Project requirements**>.

B. Preinstallation Testing:

1. <**Insert Project requirements**>.

C. Evaluation and Assessment:

1. <**Insert Project requirements**>.

3.2 PREPARATION

A. Protection of In-Place Conditions:

1. <**Insert Project requirements**>.

3.3 DEVELOPMENT OF FACILITY ELECTRICAL MAINTENANCE PROGRAM (EMP)

A. Facility EMP must be developed by qualified EMP specialist.

B. Conduct Facility EMP analysis in accordance with NFPA 70B requirements.

1. Renovation Projects:

a. Facility diagrams must include connected existing equipment for entire facility where

known. Areas of uncertainty should be clearly indicated.

b. Obtain copies of existing operation and maintenance data and existing Facility EMP information from Owner.

c. Facility EMP analysis should identify existing equipment that does not have available operation and maintenance data, and should explain Owner's risks because this equipment is not included in Facility EMP.

d. Data for existing equipment outside scope of the Project may be inserted in Facility EMP Binders without analysis.

e. Data for existing equipment impacted by scope of the Project should be analyzed and documented similar to the Project's new equipment data as much as possible.

C. Compile operation and maintenance data from Facility EMP analysis and submit [**updated**] Facility EMP Binders.

3.4 INSTALLATION OF ELECTRICAL WORK

A. Unless more stringent requirements are specified in the Contract Documents or manufacturers' written instructions, comply with NFPA 70 and NECA NEIS 1 for installation of electrical Work on the Project. Consult Architect for resolution of conflicting requirements.

3.5 CLEANING

A. Electrical or Electronic Waste Management:

1. <**Insert requirements for special handling or diversion of electrical and electronics waste for recycling or disposal**>.

3.6 CLOSEOUT ACTIVITIES

A. Training:

1. [**With assistance from factory-authorized service representatives, train**][**Train**] Owner's maintenance personnel on the following topics:

   a. How to implement [**updated**] Facility EMP.
   b. <**Insert system or equipment**>.

2. [**Provide video recordings of training sessions to Owner.**][**Allow Owner to record training sessions.**]

SECTION 26 05 00 00 - SLEEVES AND SLEEVE SEALS FOR ELECTRICAL RACEWAYS AND CABLING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Round sleeves.
2. Rectangular sleeves.
3. Sleeve-seal systems.
4. Sleeve-seal fittings.
5. Grout.
6. Sealants.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
3. Section 078413 "Penetration Firestopping" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.
4. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding of raceways, electrical power cabling, and communications cabling referenced by this Section.
5. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
6. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
7. Section 270528 "Pathways for Communications Systems" [**and Section 271100 "Communications Equipment Room Fittings"**] specifies additional requirements for raceway materials, routing, locations, and identification of communications equipment and cabling.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of specified product.

B. Sustainable Design Submittals:

1. Product data for sustainable design features for each type of product.

PART 2 - PRODUCTS

2.1 ROUND SLEEVES

A. Steel Wall Sleeves:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Advance Products & Systems, LLC**]
    b. [**CCI Piping Systems**]
    c. [**Flexicraft Industries**]
    d. [**GPT Industries, LLC.**]
    e. [**Specified Technologies Inc.**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Advance Products & Systems, LLC**]
    b. [**CCI Piping Systems**]
    c. [**Flexicraft Industries**]
    d. [**GPT Industries, LLC.**]
    e. [**Specified Technologies Inc.**]
    f. <**Insert manufacturer's name**>

3. Standard Features:

    a. Referenced Standard: ASTM A53/A53M, Type E, Grade B.
    b. Dimensions: Schedule 40; sized so outer diameter of sleeve matches inner diameter of penetration hole.
    c. Corrosion Resistance: Coated with [**Zinc**][**or**][**Gal-vo-plast**] .
    d. Configuration: Plain ends and integral waterstop.

B. Cast-Iron Wall Sleeves:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**American Cast Iron Pipe Company**]
    b. [**Flexicraft Industries**]
    c. [**McWane Ductile; a part of the McWane family of companies**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**American Cast Iron Pipe Company**]
    b. [**Flexicraft Industries**]
    c. [**McWane Ductile; a part of the McWane family of companies**]
    d. <**Insert manufacturer's name**>

3. Standard Features:

a. Description: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe.
b. Configuration: Plain ends and integral waterstop.

C. PVC Pipe Sleeves:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**CCI Piping Systems**]
b. [**GPT Industries, LLC.**]
c. [**Metraflex Company (The)**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**CCI Piping Systems**]
b. [**GPT Industries, LLC.**]
c. [**Metraflex Company (The)**]
d. <**Insert manufacturer's name**>

3. Standard Features:

a. Referenced Standard: ASTM D1785.
b. Dimensions: Schedule 40.

D. PVC Molded Sleeves:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**ABB Electrification Installations Products**]
b. [**American Polywater Corporation**]
c. [**Arlington Industries, Inc.**]
d. [**Reliance Worldwide Corporation**]
e. [**Roxtec Inc.**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB Electrification Installations Products**]
b. [**American Polywater Corporation**]
c. [**Arlington Industries, Inc.**]
d. [**Reliance Worldwide Corporation**]
e. [**Roxtec Inc.**]
f. <**Insert manufacturer's name**>

3. Standard Features: With nailing flange for attaching to wooden forms.

E. PE or PP Molded Sleeves:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**American Polywater Corporation**]
   b. [**Crete-Sleeve**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**American Polywater Corporation**]
   b. [**Crete-Sleeve**]
   c. <**Insert manufacturer's name**>

3. Standard Features: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

F. Round, Galvanized-Steel, Sheet Metal Sleeves:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Benefast**]
   b. [**Specified Technologies Inc.**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Benefast**]
   b. [**Specified Technologies Inc.**]
   c. <**Insert manufacturer's name**>

3. Standard Features: Galvanized-steel sheet; thickness not less than **0.0239 inch (0.6 mm)**; round tube closed with welded longitudinal joint, with tabs for screw-fastening the sleeve to the board.

2.2 RECTANGULAR SLEEVES

A. Rectangular, Galvanized-Steel, Sheet Metal Sleeves:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Abesco Fire LLC**]
b. [**Specified Technologies Inc.**]
c. [**Wiremold; Legrand North America, LLC**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Abesco Fire LLC**]
b. [**Specified Technologies Inc.**]
c. [**Wiremold; Legrand North America, LLC**]
d. <**Insert manufacturer's name**>

3. Standard Features:

a. Material: Galvanized sheet steel.
b. Minimum Metal Thickness:

1) For sleeve cross-section rectangle perimeter less than **50 inch (1270 mm)** and with no side larger than **16 inch (400 mm)**, thickness must be **0.052 inch (1.3 mm)**.
2) For sleeve cross-section rectangle perimeter not less than **50 inch (1270 mm)** or with one or more sides larger than **16 inch (400 mm)**, thickness must be **0.138 inch (3.5 mm)**.

2.3 SLEEVE-SEAL SYSTEMS

A. Sleeve-Seal System:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Advance Products & Systems, LLC**]
b. [**American Polywater Corporation**]
c. [**BWM Company**]
d. [**CALPICO, Inc.**]
e. [**Flexicraft Industries**]
f. [**GPT Industries, LLC.**]
g. [**Metraflex Company (The)**]
h. [**Proco Products, Inc**]
i. [**Roxtec Inc.**]
j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Advance Products & Systems, LLC**]
b. [**American Polywater Corporation**]
c. [**BWM Company**]
d. [**CALPICO, Inc.**]
e. [**Flexicraft Industries**]

f. [**GPT Industries, LLC.**]
g. [**Metraflex Company (The)**]
h. [**Proco Products, Inc**]
i. [**Roxtec Inc.**]
j. <**Insert manufacturer's name**>

3. Standard Features:

a. Modular Sealing Device: Designed for field assembly, to fill annular space between sleeve and raceway or cable or between raceway and cable.
b. Sealing Elements: [**EPDM**][**Nitrile (Buna N)**] rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
c. Pressure Plates: [**Carbon steel**][**Fiber-reinforced plastic**][**Stainless steel**] .
d. Connecting Bolts and Nuts: [**Carbon steel, with corrosion-resistant coating,**][**Stainless steel,**] of length required to secure pressure plates to sealing elements.

2.4 SLEEVE-SEAL FITTINGS

A. Sleeve-Seal Fitting:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Holdrite; a division of Reliance Worldwide Corporation**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Holdrite; a division of Reliance Worldwide Corporation**]
b. <**Insert manufacturer's name**>

3. Standard Features:

a. Description: Manufactured plastic, sleeve-type, waterstop assembly made for embedding in concrete slab or wall.
b. Waterstop Collar: Unit must have plastic or rubber waterstop collar with center opening to match piping OD.

2.5 GROUT

A. Grout for Sealing Penetrations:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Specified Technologies Inc.**]
b. [**W. R. Meadows, Inc**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Specified Technologies Inc.**]
b. [**W. R. Meadows, Inc**]
c. <**Insert manufacturer's name**>

3. Standard Features:

a. Description: Nonshrinking grout; recommended for interior and exterior sealing openings in non-fire-rated walls or floors.
b. Referenced Standard: ASTM C1107/C1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
c. Design Mix: **5000 psi (34.5 MPa)**, 28-day compressive strength.
d. Packaging: Premixed and factory packaged.

2.6 SEALANTS

A. Pourable Sealants:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Carlisle SynTec Systems; a Carlisle Company**]
b. [**GAF**]
c. [**Johns Manville; a Berkshire Hathaway company**]
d. [**Specified Technologies Inc.**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Carlisle SynTec Systems; a Carlisle Company**]
b. [**GAF**]
c. [**Johns Manville; a Berkshire Hathaway company**]
d. [**Specified Technologies Inc.**]
e. <**Insert manufacturer's name**>

3. Standard Features:

a. Description: Single-component, neutral-curing elastomeric sealants of grade indicated below.
b. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces that are not fire rated.

4. Sustainability Characteristics:

    a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than [**510**][**490**] g/L.

B. Foam Sealants:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Innovative Chemical Products (Building Solutions Group)**]
    b. [**The Dow Chemical Company**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Innovative Chemical Products (Building Solutions Group)**]
    b. [**The Dow Chemical Company**]
    c. <**Insert manufacturer's name**>

3. Standard Features:

    a. Description: Multicomponent, liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.
    b. Foam Expansion: Must not damage cables or crack penetrated structure.

4. Sustainability Characteristics:

    a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than [**510**][**490**] g/L.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B and NECA NEIS 91.
3. Electrical Safety: NFPA 70E.
4. Commissioning of Active and Passive Fire Protection Features: NFPA 3 and NFPA 4.
5. Hot Work: NFPA 51B.
6. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
7. Communications Work: BICSI N1.

8. Work in ITE Rooms: NFPA 75.
9. Work in Confined Spaces: NFPA 350.
10. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
11. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Sleeves for Conduits Penetrating Non-Fire-Rated Wall Assemblies: Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.

D. Interfaces with Other Work:

1. Identification: Provide labels for penetrations and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure with engraved metal or laminated-plastic nameplate.
c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

2. Grounding and Bonding:

a. Bonding of Metal Sleeve for Metal Raceway Penetrations: Bond metal raceway to metal sleeve on both sides of penetration.
b. Bonding of Metal Sleeve for Cable Penetrations: Bond equipment grounding conductor for electrical power cables, or cable shield for communications cables, to metal sleeve on both sides of penetration.
c. Bonding is not required for nonmetallic sleeves.
d. Grounding of communications cables entering buildings from outside must be provided at the penetration.

3. Hangers and Supports:

a. Support of Raceways and Cables in Sleeve: Comply with manufacturer's published instructions for supporting raceways or cables on both sides of penetration. Sleeve sealing products are typically not rated for supporting the weight of raceways and cables.

3.2 INSTALLATION OF ROUND SLEEVES

A. Sleeves for Conduits Penetrating Above-Grade, Non-Fire-Rated, Concrete and Masonry-Unit Floors and Walls:

1. Interior Penetrations of Non-Fire-Rated Walls and Floors:

a. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall or floor so no voids remain. Tool exposed surfaces smooth; protect material while curing.
b. Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 079200 "Joint Sealants."

2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
3. Size pipe sleeves to provide [**1/4 inch (6.4 mm)**]<**Insert dimension**> annular clear space between sleeve and raceway or cable, unless sleeve-seal system is to be installed [**or seismic criteria require different clearance**] .

4. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.
5. Install sleeves for floor penetrations. Extend sleeves installed in floors [**2 inch (50 mm)**]<**Insert dimension**> above finished floor level. Install sleeves during erection of floors.
6. Seal space outside of sleeves with approved joint compound for wall assemblies.

B. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

C. Aboveground, Exterior-Wall Penetrations: Seal penetrations using [**steel**][**cast-iron**] pipe sleeves and mechanical sleeve-seal systems. Size sleeves to allow for **1 inch (25 mm)** annular clear space between pipe and sleeve for installing mechanical sleeve seals.

D. Underground, Exterior-Wall and Floor Penetrations:

1. Install [**steel**][**cast-iron**] pipe sleeves with integral waterstops. Size sleeves to allow for **1 inch (25 mm)** annular clear space between raceway or cable and sleeve for installing sleeve-seal system. Install sleeve during construction of floor or wall.
2. Install steel pipe sleeves. Size sleeves to allow for **1 inch (25 mm)** annular clear space between raceway or cable and sleeve for installing sleeve-seal system. Grout sleeve into wall or floor opening.

3.3 INSTALLATION OF RECTANGULAR SLEEVES

A. Install sleeves in existing walls without compromising structural integrity of walls. Do not cut structural elements without reinforcing the wall to maintain the designed weight bearing and wall stiffness.

B. Install conduits and cable with no crossings within the sleeve.

C. Fill opening around conduits and cables with expanding foam without leaving voids.

D. Provide metal sheet covering at both wall surfaces and finish to match surrounding surfaces. Metal sheet must be same material as sleeve.

3.4 INSTALLATION OF SLEEVE-SEAL SYSTEMS

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at raceway entries into building.

B. Install type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

END OF SECTION 26 05 00 00

SECTION 26 05 13 00 - MEDIUM-VOLTAGE CABLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cables.
2. Connectors.
3. Solid terminations.
4. Separable insulated connectors.
5. Splice kits.
6. Medium-voltage tapes.
7. Arc-proofing materials.
8. Fault indicators.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of cable. Include splices and terminations for cables and cable accessories.

B. Samples: **16 inch (400 mm)** lengths for each type of cable specified.

C. Sustainable Design Submittals:

1. Product Data: For each conductor and cable indicating lead content.
2. Product Data: For solvents and adhesives, indicating VOC content.
3. Laboratory Test Reports: For solvents and adhesives, indicating compliance with requirements for low-emitting materials.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Indicate location of each cable, splice, and termination.

B. Material Certificates: For each type of cable and accessory.

C. Design Data: Cable pulling calculations, including conduit size and fill percentage, pulling tensions, cable sidewall pressure, jam probability, voltage drop, and ground wire sizing for each cable.

D. Source quality-control reports.

E. Field quality-control reports.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with IEEE C2 and NFPA 70.

C. Source Limitations: Obtain cables and accessories from single source from single manufacturer.

2.2 CABLES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**General Cable; Prysmian Group North America**]
2. [**Hendrix Wire and Cable; Marmon Holdings, Inc.; Berkshire Hathaway Inc.**]
3. [**Kerite Power Cable; Marmon Holdings, Inc.; Berkshire Hathaway Inc.**]
4. [**Okonite Company (The)**]
5. [**Prysmian Cables and Systems; Prysmian Group North America**]
6. [**Southwire Company, LLC**]
7. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**General Cable; Prysmian Group North America**]
2. [**Hendrix Wire and Cable; Marmon Holdings, Inc.; Berkshire Hathaway Inc.**]
3. [**Kerite Power Cable; Marmon Holdings, Inc.; Berkshire Hathaway Inc.**]
4. [**Okonite Company (The)**]
5. [**Prysmian Cables and Systems; Prysmian Group North America**]
6. [**Southwire Company, LLC**]
7. <**Insert manufacturer's name**>

C. Cable Type: [**Type MV 90**][**Type MV 105**].

D. Conductor Insulation: [**Crosslinked polyethylene**][**Ethylene-propylene rubber**].

1. Voltage Rating: [**5**][**8**][**15**][**25**][**35**] kV.
2. Insulation Thickness: [**100**][**133**] percent insulation level.

E. Conductor: [**Copper**][**Aluminum**].

F. Comply with UL 1072, AEIC CS8[**, ICEA S-93-639/NEMA WC 74, and ICEA S-97-682**][**, and ICEA S-94-649**].

G. Conductor Stranding: [**Compact round, concentric lay, Class B**][**Concentric lay, Class B**].

H. Strand Filling: Conductor interstices are filled with impermeable compound.

I. Lead Content: Less than 300 parts per million.

J. Shielding: [**Copper tape**][**Solid copper wires**], helically applied over semiconducting insulation shield.

K. Shielding and Jacket: Corrugated copper drain wires embedded in extruded, chlorinated, polyethylene jacket.

L. Three-Conductor Cable Assembly: Three insulated, shielded conductors cabled together[**with ground conductors**].

1. Circuit Identification: Color-coded tape (black, red, blue) under the metallic shielding.

M. Cable Sheath: [**Interlocked aluminum**][**Interlocked galvanized steel**][**Corrugated aluminum tube**] applied over cable.

N. Cable Jacket: [**Sunlight-resistant PVC**][**Chlorosulfonated polyethylene**].

2.3 CONNECTORS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**3M**]
2. [**ABB, Electrification Business**]
3. [**DSG-Canusa; Shawcor Ltd.**]
4. [**Eaton**]
5. [**G&W Electric Company**]
6. [**TE Connectivity Ltd.**]
7. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**3M**]
2. [**ABB, Electrification Business**]
3. [**DSG-Canusa; Shawcor Ltd.**]
4. [**Eaton**]
5. [**G&W Electric Company**]
6. [**TE Connectivity Ltd.**]
7. <**Insert manufacturer's name**>

C. Comply with ANSI C119.4 for connectors between aluminum conductors or for connections between aluminum to copper conductors.

D. Copper-Conductor Connectors: [**Copper barrel crimped**][**Aluminum barrel crimped**][**Copper shear bolt**] connectors.

2.4 SOLID TERMINATIONS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide**

products by one of the following][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**3M**]
2. [**ABB, Electrification Business**]
3. [**DSG-Canusa; Shawcor Ltd.**]
4. [**G&W Electric Company**]
5. [**Shawflex; Shawcor Ltd.**]
6. [**TE Connectivity Ltd.**]
7. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**3M**]
2. [**ABB, Electrification Business**]
3. [**DSG-Canusa; Shawcor Ltd.**]
4. [**G&W Electric Company**]
5. [**Shawflex; Shawcor Ltd.**]
6. [**TE Connectivity Ltd.**]
7. <**Insert manufacturer's name**>

C. Multiconductor Cable Sheath Seals: Type recommended by seal manufacturer for type of cable and installation conditions, including orientation.

1. Compound-filled, cast-metal-body, metal-clad cable terminator for metal-clad cable [**with**][**without**] external plastic jacket.
2. Cold-shrink sheath seal kit with preformed sleeve openings sized for cable and insulated conductors.
3. Heat-shrink sheath seal kit with phase- and ground-conductor rejacketing tubes, cable-end sealing boot, and sealing plugs for unused ground-wire openings in boot.
4. Cast-epoxy-resin sheath seal kit with wraparound mold and packaged, two-part, epoxy-resin casting material.

D. Shielded-Cable Terminations: Comply with the following classes of IEEE 48. Insulation class shall be equivalent to that of cable. Include shield ground strap for shielded cable terminations.

1. Class 1 Terminations:

    a. Modular type, furnished as a kit, with stress-relief tube; multiple, molded-silicone-rubber, insulator modules; shield ground strap; and compression-type connector.
    b. Heat-shrink type with heat-shrink inner stress control and outer nontracking tubes; multiple, molded, nontracking skirt modules; and compression-type connector.
    c. Modular type, furnished as a kit, with stress-relief shield terminator; multiple-wet-process, porcelain, insulator modules; shield ground strap; and compression-type connector.
    d. Indoors: Kit with stress-relief tube, nontracking insulator tube, shield ground strap, compression-type connector, and end seal.

2. Class 2 Terminations, Indoors: Kit with stress-relief tube, nontracking insulator tube, shield ground strap, and compression-type connector. Include silicone-rubber tape; cold-shrink-rubber sleeve; or heat-shrink, plastic-sleeve moisture seal for end of insulation whether or not supplied with kits.
3. Class 3 Terminations: Kit with stress cone and compression-type connector.

2.5 SEPARABLE INSULATED CONNECTORS

A. Description: Modular system, complying with IEEE 386, with disconnecting, single-pole, cable terminators and with matching, stationary, plug-in, dead-front terminals designed for cable voltage and for sealing against moisture.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**Richards Manufacturing Co.**]
4. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**Richards Manufacturing Co.**]
4. <**Insert manufacturer's name**>

D. Terminations at Distribution Points: Modular type, consisting of terminators installed on cables and modular, dead-front, terminal junctions for interconnecting cables.

E. Load-Break Cable Terminators: Elbow-type units with 200 A load make/break and continuous-current rating; coordinated with insulation diameter, conductor size, and material of cable being terminated. Include test point on terminator body that is capacitance coupled.

F. Dead-Break Cable Terminators: Elbow-type unit with [**200 A**][**600 A**] continuous-current rating; designed for de-energized disconnecting and connecting; coordinated with insulation diameter, conductor size, and material of cable being terminated. Include test point on terminator body that is capacitance coupled.

G. Dead-Front Terminal Junctions: Modular bracket-mounted groups of dead-front stationary terminals that mate and match with above cable terminators. Two-, three-, or four-terminal units as indicated, with fully rated, insulated, watertight conductor connection between terminals and complete with grounding lug, manufacturer's standard accessory stands, stainless steel mounting brackets, and attaching hardware.

1. Protective Cap: Insulating, electrostatic-shielding, water-sealing cap with drain wire.
2. Portable Feed-Through Accessory: Two-terminal, dead-front junction arranged for removable mounting on accessory stand of stationary terminal junction.
3. Grounding Kit: Jumpered elbows, portable feed-through accessory units, protective caps, test rods suitable for concurrently grounding three phases of feeders, and carrying case.
4. Standoff Insulator: Portable, single dead-front terminal for removable mounting on accessory stand of stationary terminal junction. Insulators suitable for fully insulated isolation of energized cable-elbow terminator.

H. Test-Point Fault Indicators: Applicable current-trip ratings and arranged for installation in test points of load-break separable connectors, and complete with self-resetting indicators capable of being installed with shotgun hot stick and tested with test tool.

I. Tool Set: Shotgun hot stick with energized terminal indicator, fault-indicator test tool, and carrying case.

2.6 SPLICE KITS

A. Description: For connecting medium voltage cables; type as recommended by cable or splicing kit manufacturer for the application.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**3M**]
2. [**ABB, Electrification Business**]
3. [**DSG-Canusa; Shawcor Ltd.**]
4. [**Eaton**]
5. [**Richards Manufacturing Co.**]
6. [**TE Connectivity Ltd.**]
7. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**3M**]
2. [**ABB, Electrification Business**]
3. [**DSG-Canusa; Shawcor Ltd.**]
4. [**Eaton**]
5. [**Richards Manufacturing Co.**]
6. [**TE Connectivity Ltd.**]
7. <**Insert manufacturer's name**>

D. Standard: Comply with IEEE 404.

E. Splicing Products: As recommended, in writing, by splicing kit manufacturer for specific sizes, materials, ratings, and configurations of cable conductors. Include all components required for complete splice, with detailed instructions.

1. Combination tape and cold-shrink-rubber sleeve kit with rejacketing by cast-epoxy-resin encasement or other waterproof, abrasion-resistant material.
2. Heat-shrink splicing kit of uniform, cross-section, polymeric construction with outer heat-shrink jacket.
3. Premolded, cold-shrink-rubber, in-line splicing kit.
4. Premolded, EPDM splicing body kit with cable joint sealed by interference fit of mating parts and cable.
5. Separable multiway splice system with all components for the required splice configuration.

2.7 MEDIUM-VOLTAGE TAPES

A. Description: Electrical grade, insulating tape rated for medium voltage application.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**3M**]
2. [**HellermannTyton**]
3. [**Scapa Industrial; Scapa Group plc**]

4. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**3M**]
2. [**HellermannTyton**]
3. [**Scapa Industrial; Scapa Group plc**]
4. <**Insert manufacturer's name**>

D. Ethylene/propylene rubber-based, **30 mil (0.76 mm)** splicing tape, rated for 130 deg C operation. Minimum **3/4 inch (20 mm)** wide.

E. Silicone rubber-based, **12 mil (0.30 mm)** self-fusing tape, rated for 130 deg C operation. Minimum **1-1/2 inch (38 mm)** wide.

F. Insulating-putty, **125 mil (3.175 mm)** elastic filler tape. Minimum **1-1/2 inch (38 mm)** wide.

2.8 ARC-PROOFING MATERIALS

A. Description: Fire retardant, providing arc flash protection.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**3M**]
2. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**3M**]
2. <**Insert manufacturer's name**>

D. Tape for First Course on Metal Objects: **10 mil (250 micrometer)** thick, corrosion-protective, moisture-resistant, PVC pipe-wrapping tape.

E. Arc-Proofing Tape: Fireproof tape, flexible, conformable, intumescent to **0.3 inch (8 mm)** thick, and compatible with cable jacket.

F. Glass-Cloth Tape: Pressure-sensitive adhesive type, **1 inch (25 mm)** wide.

2.9 FAULT INDICATORS

A. Indicators: [**Automatically**][**Manually**] reset fault indicator[**with inrush restraint feature**], arranged to clamp to cable sheath and provide a display after a fault has occurred in cable. Instrument shall not be affected by heat, moisture, and corrosive conditions and shall be recommended by manufacturer for installation conditions.

B. Resetting Tool: Designed for use with fault indicators, with moisture-resistant storage and carrying case.

2.10 SOURCE QUALITY CONTROL

A. Test and inspect cables according to [**ICEA S-97-682**][**ICEA S-94-649**] before shipping.

B. Test strand-filled cables for water-penetration resistance according to ICEA T-31-610, using a test pressure of **5 psig (35 kPa)**.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install cables according to IEEE 576.

B. Proof conduits prior to conductor installation by passing a wire brush mandrel and then a rubber duct swab through the conduit. Separate the wire brush and the rubber swab by **48 to 72 inch (1200 to 1800 mm)** on the pull rope.

1. Wire Brush Mandrel: Consists of a length of brush approximately the size of the conduit inner diameter with stiff steel bristles and an eye on each end for attaching the pull ropes. If an obstruction is felt, pull the brush back and forth repeatedly to break up the obstruction.
2. Rubber Duct Swab: Consists of a series of rubber discs approximately the size of the conduit inner diameter on a length of steel cable with an eye on each end for attaching the pull ropes. Pull the rubber duct swab through the duct to extract loose debris from the duct.

C. Pull Conductors: Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.

1. Where necessary, use manufacturer-approved pulling compound or lubricant that does not deteriorate conductor or insulation.
2. Use pulling means, including fish tape, cable, rope, and basket-weave cable grips, that do not damage cables and raceways. Do not use rope hitches for pulling attachment to cable.
3. Use pull-in guides, cable feeders, and draw-in protectors as required to protect cables during installation.
4. Do not pull cables with ends unsealed. Seal cable ends with rubber tape.

D. Install exposed cables parallel and perpendicular to surfaces of exposed structural members and follow surface contours where possible.

E. Support cables according to Section 260529 "Hangers and Supports for Electrical Systems."

F. Install direct-buried cables on leveled and tamped bed of **3 inch (75 mm)** thick, clean sand. Separate cables crossing other cables or piping by a minimum of **2 inch (50 mm)** of tamped earth, plus an additional **2 inch (50 mm)** of sand. Install permanent markers at ends of cable runs, changes in direction, and buried splices.

G. Install "buried-cable" warning tape **12 inch (305 mm)** above cables.

H. In manholes, handholes, pull boxes, junction boxes, and cable vaults, train cables around walls by the longest route from entry to exit; support cables at intervals adequate to prevent sag.

I. Install sufficient cable length to remove cable ends under pulling grips. Remove length of conductor damaged during pulling.

J. Install cable splices at pull points and elsewhere as indicated; use standard kits.[**Use dead-front separable watertight connectors in manholes and other locations subject to water infiltration.**]

K. Install terminations at ends of conductors, and seal multiconductor cable ends with standard kits.

L. Install separable insulated-connector components as follows:

1. Protective Cap: At each terminal junction, with one on each terminal to which no feeder is indicated to be connected.
2. Portable Feed-Through Accessory: At each terminal junction, with one on each terminal.
3. Standoff Insulator: At each terminal junction, with one on each terminal.

M. Arc Proofing: Unless otherwise indicated, arc proof medium-voltage cable at locations not protected by conduit, cable tray, direct burial, or termination materials. In addition to arc-proofing tape manufacturer's written instructions, apply arc proofing as follows:

1. Clean cable sheath.
2. Wrap metallic cable components with **10 mil (250 micrometer)** pipe-wrapping tape.
3. Smooth surface contours with electrical insulation putty.
4. Apply arc-proofing tape in one half-lapped layer with coated side toward cable.
5. Band arc-proofing tape with two layers of **1 inch (25 mm)** wide half-lapped, adhesive, glass-cloth tape at each end of the arc-proof tape.

N. Seal around cables passing through fire-rated elements according to Section 078413 "Penetration Firestopping."

O. Install fault indicators on each phase where indicated.

P. Ground shields of shielded cable at terminations, splices, and separable insulated connectors. Ground metal bodies of terminators, splices, cable and separable insulated-connector fittings, and hardware.

Q. Ground shields of shielded cable at one point only. Maintain shield continuity and connections to metal connection hardware at all connection points.

R. Identify cables according to Section 260553 "Identification for Electrical Systems." Identify phase and circuit number of each conductor at each splice, termination, pull point, and junction box. Arrange identification so that it is unnecessary to move the cable or conductor to read the identification.

3.2 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters.
2. After installing medium-voltage cables and before electrical circuitry has been energized, test for compliance with requirements.
3. Perform direct-current High Potential test of each new conductor according to NETA ATS, Ch. 7.3.3. Do not exceed cable manufacturer's recommended maximum test voltage.
4. Perform Partial Discharge test of each new conductor according to NETA ATS, Ch. 7.3.3 and to test equipment manufacturer's recommendations.
5. Perform Dissipation Factor test of each new conductor according to NETA ATS, Ch. 7.3.3 and to test equipment manufacturer's recommendations.

B. Medium-voltage cables will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 26 05 13 00

Task	Specification	Specification Description
26 05 13 00	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling
26 05 13 16	26 05 13 00	Medium-Voltage Cables
26 05 13 16	26 05 19 00	Low-Voltage Electrical Power Conductors and Cables
26 05 13 16	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 19 00 - LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Thermoplastic-insulated wire.
2. Thermoset-insulated wire.
3. Nonmetallic underground conduit with conductors.
4. Metallic sheathed cable.
5. Photovoltaic single-conductor cable.
6. Nonmetallic jacketed cable.
7. Connectors and splices.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 078413 "Penetration Firestopping" specifies materials and methods for sealing penetrations of rated walls and partitions referenced by this Section.
5. Section 260513 "Medium-Voltage Cables" for single-conductor and multiconductor cables, cable splices, and terminations for electrical distribution systems with 601 to 35 000 V.
6. Section 260523 "Control-Voltage Electrical Power Cables" for control systems communications cables and Classes 1, 2, and 3 control cables.
7. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
8. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
9. Section 260533.13 "Conduits for Electrical Systems" specifies installation of raceways referenced by this Section.
10. Section 260536 "Cable Trays for Electrical Systems" specifies cable tray installation referenced by this Section.
11. Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling" specifies installation of sleeves and sleeve seals referenced by this Section.
12. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
13. Section 271313 "Communications Copper Backbone Cabling" for twisted pair cabling used for data circuits.
14. Section 271513 "Communications Copper Horizontal Cabling" for twisted pair cabling used for data circuits.

1.2 DEFINITIONS

A. NICET: National Institute for Certification in Engineering Technologies; a division of the National Society of Professional Engineers (NSPE).

1.3 ACTION SUBMITTALS

A. Product Schedule: Indicate type, use, location, and termination locations.

B. Product Data: For each type of product.

C. Sustainable Design Submittals:

1. Product Data: For each conductor and cable indicating lead content.
2. Product Data: For recycled content, indicating percentage of postconsumer and preconsumer recycled content and cost.
3. Product Data: For solvents and adhesives, indicating VOC content.
4. Laboratory Test Reports: For solvents and adhesives, indicating compliance with requirements for low-emitting materials.

D. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

B. Field Reports:

1. Field reports for infrared scanning.

1.5 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, to conduct tests of complex equipment, to analyze test and equipment data, to plan a job, and to lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; to evaluate tests, test equipment, test results, and power system performance; to recommend actions to maintain or improve system performance; and to lead multi-team projects.

C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2.2 THERMOPLASTIC-INSULATED WIRE

A. Description: Thermoplastic-insulated wire for use in accordance with Article 310 of NFPA 70.

B. UL ZLGR - Type THHN Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Alpha Wire; brand of Belden, Inc.**]
b. [**Belden Inc.**]
c. [**Cerro Wire LLC**]
d. [**Encore Wire Corporation**]
e. [**Okonite Company (The)**]
f. [**Prysmian Cables and Systems; Prysmian Group North America**]
g. [**Southwire Company, LLC**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Alpha Wire; brand of Belden, Inc.**]
b. [**Belden Inc.**]
c. [**Cerro Wire LLC**]
d. [**Encore Wire Corporation**]
e. [**Okonite Company (The)**]
f. [**Prysmian Cables and Systems; Prysmian Group North America**]
g. [**Southwire Company, LLC**]
h. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Thermoplastic-Insulated Wire: UL CCN ZLGR, including UL 83.

4. Standard Features:

a. Referenced Standard: Article 310 of NFPA 70.
b. Insulation Voltage Rating: 600 V.
c. Insulation Temperature Rating: 90 deg C.
d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
e. Conductor Size:[**As indicated on the Drawings.**]

1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

a. Marked "Cable Tray Use" or "CT," indicating compliance with vertical-tray cable flame test.
b. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
c. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
d. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
e. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to

gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
f. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
g. Marked "VW-1," indicating compliance with special vertical flame test.
h. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.

C. UL ZLGR - Type THHW Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Alpha Wire; brand of Belden, Inc.**]
b. [**Encore Wire Corporation**]
c. [**Prysmian Cables and Systems; Prysmian Group North America**]
d. [**Southwire Company, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Alpha Wire; brand of Belden, Inc.**]
b. [**Encore Wire Corporation**]
c. [**Prysmian Cables and Systems; Prysmian Group North America**]
d. [**Southwire Company, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Thermoplastic-Insulated Wire: UL CCN ZLGR, including UL 83.

4. Standard Features:

a. Referenced Standard: Article 310 of NFPA 70.
b. Insulation Voltage Rating: 600 V.
c. Insulation Temperature Rating: [**75 deg C**][**90 deg C**].
d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
e. Conductor Size:[**As indicated on the Drawings.**]

1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

a. Marked "Cable Tray Use" or "CT," indicating compliance with vertical-tray cable flame test.
b. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
c. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
d. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
e. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
f. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.

g. Marked "VW-1," indicating compliance with special vertical flame test.
h. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.

D. UL ZLGR - Type THW Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Alpha Wire; brand of Belden, Inc.**]
b. [**Belden Inc.**]
c. [**Cerro Wire LLC**]
d. [**Encore Wire Corporation**]
e. [**Okonite Company (The)**]
f. [**Prysmian Cables and Systems; Prysmian Group North America**]
g. [**Service Wire Co.**]
h. [**Southwire Company, LLC**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Alpha Wire; brand of Belden, Inc.**]
b. [**Belden Inc.**]
c. [**Cerro Wire LLC**]
d. [**Encore Wire Corporation**]
e. [**Okonite Company (The)**]
f. [**Prysmian Cables and Systems; Prysmian Group North America**]
g. [**Service Wire Co.**]
h. [**Southwire Company, LLC**]
i. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Thermoplastic-Insulated Wire: UL CCN ZLGR, including UL 83.

4. Standard Features:

a. Referenced Standard: Article 310 of NFPA 70.
b. Insulation Voltage Rating: 600 V.
c. Insulation Temperature Rating: [**75 deg C**][**90 deg C**].
d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
e. Conductor Size:[**As indicated on the Drawings.**]

1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

a. Marked "Cable Tray Use" or "CT," indicating compliance with vertical-tray cable flame test.
b. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
c. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
d. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.

e. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
f. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
g. Marked "VW-1," indicating compliance with special vertical flame test.
h. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.

E. UL ZLGR - Type THW-2 Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Alpha Wire; brand of Belden, Inc.**]
   b. [**Belden Inc.**]
   c. [**Cerro Wire LLC**]
   d. [**Encore Wire Corporation**]
   e. [**Okonite Company (The)**]
   f. [**Prysmian Cables and Systems; Prysmian Group North America**]
   g. [**Service Wire Co.**]
   h. [**Southwire Company, LLC**]
   i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Alpha Wire; brand of Belden, Inc.**]
   b. [**Belden Inc.**]
   c. [**Cerro Wire LLC**]
   d. [**Encore Wire Corporation**]
   e. [**Okonite Company (The)**]
   f. [**Prysmian Cables and Systems; Prysmian Group North America**]
   g. [**Service Wire Co.**]
   h. [**Southwire Company, LLC**]
   i. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Thermoplastic-Insulated Wire: UL CCN ZLGR, including UL 83.

4. Standard Features:

   a. Referenced Standard: Article 310 of NFPA 70.
   b. Insulation Voltage Rating: 600 V.
   c. Insulation Temperature Rating: 90 deg C.
   d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
   e. Conductor Size:[**As indicated on the Drawings.**]

      1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

a. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
b. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
c. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
d. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
e. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
f. Marked "VW-1," indicating compliance with special vertical flame test.
g. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.

F. UL ZLGR - Type THWN Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Alpha Wire; brand of Belden, Inc.**]
b. [**Belden Inc.**]
c. [**Cerro Wire LLC**]
d. [**Encore Wire Corporation**]
e. [**Okonite Company (The)**]
f. [**Prysmian Cables and Systems; Prysmian Group North America**]
g. [**Southwire Company, LLC**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Alpha Wire; brand of Belden, Inc.**]
b. [**Belden Inc.**]
c. [**Cerro Wire LLC**]
d. [**Encore Wire Corporation**]
e. [**Okonite Company (The)**]
f. [**Prysmian Cables and Systems; Prysmian Group North America**]
g. [**Southwire Company, LLC**]
h. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Thermoplastic-Insulated Wire: UL CCN ZLGR, including UL 83.

4. Standard Features:

a. Referenced Standard: Article 310 of NFPA 70.
b. Insulation Voltage Rating: 600 V.
c. Insulation Temperature Rating: 75 deg C.
d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
e. Conductor Size:[**As indicated on the Drawings.**]

1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

a. Marked "Cable Tray Use" or "CT," indicating compliance with vertical-tray cable flame test.
b. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
c. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
d. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
e. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
f. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
g. Marked "VW-1," indicating compliance with special vertical flame test.
h. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.

G. UL ZLGR - Type THWN-2 Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Alpha Wire; brand of Belden, Inc.**]
    b. [**Belden Inc.**]
    c. [**Cerro Wire LLC**]
    d. [**Encore Wire Corporation**]
    e. [**Okonite Company (The)**]
    f. [**Prysmian Cables and Systems; Prysmian Group North America**]
    g. [**Southwire Company, LLC**]
    h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Alpha Wire; brand of Belden, Inc.**]
    b. [**Belden Inc.**]
    c. [**Cerro Wire LLC**]
    d. [**Encore Wire Corporation**]
    e. [**Okonite Company (The)**]
    f. [**Prysmian Cables and Systems; Prysmian Group North America**]
    g. [**Southwire Company, LLC**]
    h. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Thermoplastic-Insulated Wire: UL CCN ZLGR, including UL 83.

4. Standard Features:

    a. Referenced Standard: Article 310 of NFPA 70.
    b. Insulation Voltage Rating: 600 V.
    c. Insulation Temperature Rating: 90 deg C.
    d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
    e. Conductor Size:[**As indicated on the Drawings.**]

        1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

    a. Marked "Cable Tray Use" or "CT," indicating compliance with vertical-tray cable flame test.
    b. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
    c. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
    d. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
    e. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
    f. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
    g. Marked "VW-1," indicating compliance with special vertical flame test.
    h. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.

H. UL ZLGR - Type TW Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Alpha Wire; brand of Belden, Inc.**]
    b. [**Belden Inc.**]
    c. [**Cerro Wire LLC**]
    d. [**Encore Wire Corporation**]
    e. [**Okonite Company (The)**]
    f. [**Prysmian Cables and Systems; Prysmian Group North America**]
    g. [**Service Wire Co.**]
    h. [**Southwire Company, LLC**]
    i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Alpha Wire; brand of Belden, Inc.**]
    b. [**Belden Inc.**]
    c. [**Cerro Wire LLC**]
    d. [**Encore Wire Corporation**]
    e. [**Okonite Company (The)**]
    f. [**Prysmian Cables and Systems; Prysmian Group North America**]
    g. [**Service Wire Co.**]
    h. [**Southwire Company, LLC**]
    i. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Thermoplastic-Insulated Wire: UL CCN ZLGR, including UL 83.

4. Standard Features:

    a. Referenced Standard: Article 310 of NFPA 70.
    b. Insulation Voltage Rating: 600 V.
    c. Insulation Temperature Rating: 60 deg C.
    d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].

e. Conductor Size:[**As indicated on the Drawings.**]

1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

a. Marked "Cable Tray Use" or "CT," indicating compliance with vertical-tray cable flame test.
b. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
c. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
d. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
e. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
f. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
g. Marked "VW-1," indicating compliance with special vertical flame test.
h. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.

I. UL ZLGR - Type FEP Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Inc.**]
b. [**Prysmian Cables and Systems; Prysmian Group North America**]
c. [**Southwire Company, LLC**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**Prysmian Cables and Systems; Prysmian Group North America**]
c. [**Southwire Company, LLC**]
d. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Thermoplastic-Insulated Wire: UL CCN ZLGR, including UL 83.

1) Thermoplastic Fluoropolymer Wire: Also investigated in accordance with UL 83A.

4. Standard Features:

a. Referenced Standard: Article 310 of NFPA 70.
b. Covering: None.
c. Insulation Voltage Rating: 600 V.
d. Insulation Temperature Rating: 90 deg C for dry and damp locations.
e. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
f. Conductor Size:[**As indicated on the Drawings.**]

1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

a. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
b. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
c. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
d. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
e. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
f. Marked "VW-1," indicating compliance with special vertical flame test.
g. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.

J. UL ZLGR - Type FEPB Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Inc.**]
b. [**Prysmian Cables and Systems; Prysmian Group North America**]
c. [**Southwire Company, LLC**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**Prysmian Cables and Systems; Prysmian Group North America**]
c. [**Southwire Company, LLC**]
d. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Thermoplastic-Insulated Wire: UL CCN ZLGR, including UL 83.

1) Thermoplastic Fluoropolymer Wire: Also investigated in accordance with UL 83A.

4. Standard Features:

a. Referenced Standard: Article 310 of NFPA 70.
b. Covering: Glass or other suitable braid material.
c. Insulation Voltage Rating: 600 V.
d. Insulation Temperature Rating: 200 deg C for dry locations.
e. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
f. Conductor Size:[**As indicated on the Drawings.**]

1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

a. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
b. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
c. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
d. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
e. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
f. Marked "VW-1," indicating compliance with special vertical flame test.
g. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.

K. UL ZLGR - Type Z Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Belden Inc.**]
   b. [**Okonite Company (The)**]
   c. [**Prysmian Cables and Systems; Prysmian Group North America**]
   d. [**Southwire Company, LLC**]
   e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Belden Inc.**]
   b. [**Okonite Company (The)**]
   c. [**Prysmian Cables and Systems; Prysmian Group North America**]
   d. [**Southwire Company, LLC**]
   e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Thermoplastic-Insulated Wire: UL CCN ZLGR, including UL 83.

      1) Thermoplastic Fluoropolymer Wire: Also investigated in accordance with UL 83A.

4. Standard Features:

   a. Referenced Standard: Article 310 of NFPA 70.
   b. Insulation Voltage Rating: 600 V.
   c. Insulation Temperature Rating: [**90 deg C for dry and damp locations**][**150 deg C for dry locations and special applications**].
   d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
   e. Conductor Size:[**As indicated on the Drawings.**]

      1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

   a. Marked "Cable Tray Use" or "CT," indicating compliance with vertical-tray cable flame test.

b. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
c. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
d. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
e. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
f. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
g. Marked "VW-1," indicating compliance with special vertical flame test.
h. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.

L. UL ZLGR - Type ZW Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Belden Inc.**]
   b. [**Okonite Company (The)**]
   c. [**Prysmian Cables and Systems; Prysmian Group North America**]
   d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Belden Inc.**]
   b. [**Okonite Company (The)**]
   c. [**Prysmian Cables and Systems; Prysmian Group North America**]
   d. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Thermoplastic-Insulated Wire: UL CCN ZLGR, including UL 83.

      1) Thermoplastic Fluoropolymer Wire: Also investigated in accordance with UL 83A.

4. Standard Features:

   a. Referenced Standard: Article 310 of NFPA 70.
   b. Insulation Voltage Rating: 600 V.
   c. Insulation Temperature Rating: [**60 deg C**][**75 deg C**][**85 deg C**][**90 deg C**][**150 deg C**][**200 deg C**][**250 deg C**].
   d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
   e. Conductor Size:[**As indicated on the Drawings.**]

      1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

   a. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
   b. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
   c. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
   d. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to

gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
e. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
f. Marked "VW-1," indicating compliance with special vertical flame test.
g. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.

M. UL ZLGR - Type ZW-2 Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Okonite Company (The)**]
   b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Okonite Company (The)**]
   b. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Thermoplastic-Insulated Wire: UL CCN ZLGR, including UL 83.

      1) Thermoplastic Fluoropolymer Wire: Also investigated in accordance with UL 83A.

4. Standard Features:

   a. Referenced Standard: Article 310 of NFPA 70.
   b. Insulation Voltage Rating: 600 V.
   c. Insulation Temperature Rating: [**75 deg C for wet locations**][**90 deg C for dry and damp locations**][**150 deg C for dry locations and special applications**].
   d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
   e. Conductor Size:[**As indicated on the Drawings.**]

      1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

   a. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
   b. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
   c. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
   d. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
   e. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
   f. Marked "VW-1," indicating compliance with special vertical flame test.
   g. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.

N. UL ZLGR - Type TBS Insulated Switchboard Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Belden Inc.**]
    b. [**Prysmian Cables and Systems; Prysmian Group North America**]
    c. [**Southwire Company, LLC**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Belden Inc.**]
    b. [**Prysmian Cables and Systems; Prysmian Group North America**]
    c. [**Southwire Company, LLC**]
    d. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Thermoplastic-Insulated Wire: UL CCN ZLGR, including UL 83.

        1) Thermoplastic and Fibrous Outer Braid: Also investigated in accordance with UL 83B.

4. Standard Features:

    a. Referenced Standard: Article 310 of NFPA 70.
    b. Insulation Voltage Rating: 600 V.
    c. Insulation Temperature Rating: 90 deg C.
    d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
    e. Conductor Size:[**As indicated on the Drawings.**]

        1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

    a. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
    b. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
    c. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
    d. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
    e. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
    f. Marked "VW-1," indicating compliance with special vertical flame test.
    g. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.

O. UL ZLGR - Thermoplastic-Insulated Submersible Pump Multiconductor Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Cerro Wire LLC**]
b. [**Encore Wire Corporation**]
c. [**Prysmian Cables and Systems; Prysmian Group North America**]
d. [**Southwire Company, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Cerro Wire LLC**]
b. [**Encore Wire Corporation**]
c. [**Prysmian Cables and Systems; Prysmian Group North America**]
d. [**Southwire Company, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Thermoplastic-Insulated Wire: UL CCN ZLGR, including UL 83.

1) Submersible Pump Cable: Also investigated in accordance with UL CCN FDNP, including NSF 61.

4. Standard Features:

a. Referenced Standard: Article 310 of NFPA 70.
b. Insulation Voltage Rating: 600 V.
c. Insulation Material: Type THW.
d. Insulation Temperature Rating: 75 deg C.
e. Conductor Material: Copper.
f. Conductor Size:[**As indicated on the Drawings.**]

1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

a. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
b. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
c. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
d. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
e. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
f. Marked "VW-1," indicating compliance with special vertical flame test.
g. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.

2.3 THERMOSET-INSULATED WIRE

A. Description: Thermoset-insulated wire for use in accordance with Article 310 of NFPA 70.

B. UL ZKST - Type RHH Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Belden Inc.**]
    b. [**Cerro Wire LLC**]
    c. [**Encore Wire Corporation**]
    d. [**Okonite Company (The)**]
    e. [**Prysmian Cables and Systems; Prysmian Group North America**]
    f. [**Service Wire Co.**]
    g. [**Southwire Company, LLC**]
    h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Belden Inc.**]
    b. [**Cerro Wire LLC**]
    c. [**Encore Wire Corporation**]
    d. [**Okonite Company (The)**]
    e. [**Prysmian Cables and Systems; Prysmian Group North America**]
    f. [**Service Wire Co.**]
    g. [**Southwire Company, LLC**]
    h. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Thermoset-Insulated Wire: UL CCN ZKST, including UL 44.

4. Standard Features:

    a. Referenced Standard: Article 310 of NFPA 70.
    b. Insulation Voltage Rating: 600 V.
    c. Insulation Temperature Rating: 90 deg C.
    d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
    e. Conductor Size:[**As indicated on the Drawings.**]

        1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

    a. Marked "Cable Tray Use" or "CT," indicating compliance with vertical-tray cable flame test.
    b. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
    c. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
    d. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
    e. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
    f. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
    g. Marked "VW-1," indicating compliance with special vertical flame test.
    h. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.
    i. Marked "ST1-HF," indicating that combustible materials are halogen-free in accordance

with UL Subject 2885.

1) Marked "ST1-LSHF," indicating that combustible materials are low smoke when also tested in accordance with IEC 61034-2.

C. UL ZKST - Type RHW Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Belden Inc.**]
   b. [**Cerro Wire LLC**]
   c. [**Encore Wire Corporation**]
   d. [**Okonite Company (The)**]
   e. [**Prysmian Cables and Systems; Prysmian Group North America**]
   f. [**Service Wire Co.**]
   g. [**Southwire Company, LLC**]
   h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Belden Inc.**]
   b. [**Cerro Wire LLC**]
   c. [**Encore Wire Corporation**]
   d. [**Okonite Company (The)**]
   e. [**Prysmian Cables and Systems; Prysmian Group North America**]
   f. [**Service Wire Co.**]
   g. [**Southwire Company, LLC**]
   h. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Thermoset-Insulated Wire: UL CCN ZKST, including UL 44.

4. Standard Features:

   a. Referenced Standard: Article 310 of NFPA 70.
   b. Insulation Voltage Rating: 600 V.
   c. Insulation Temperature Rating: 75 deg C.
   d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
   e. Conductor Size:[**As indicated on the Drawings**].

      1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

   a. Marked "Cable Tray Use" or "CT," indicating compliance with vertical-tray cable flame test.
   b. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
   c. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.

d. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
e. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
f. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
g. Marked "VW-1," indicating compliance with special vertical flame test.
h. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.
i. Marked "ST1-HF," indicating that combustible materials are halogen-free in accordance with UL Subject 2885.

1) Marked "ST1-LSHF," indicating that combustible materials are low smoke when also tested in accordance with IEC 61034-2.

D. UL ZKST - Type RHW-2 Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Inc.**]
b. [**Cerro Wire LLC**]
c. [**Encore Wire Corporation**]
d. [**Okonite Company (The)**]
e. [**Prysmian Cables and Systems; Prysmian Group North America**]
f. [**Service Wire Co.**]
g. [**Southwire Company, LLC**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**Cerro Wire LLC**]
c. [**Encore Wire Corporation**]
d. [**Okonite Company (The)**]
e. [**Prysmian Cables and Systems; Prysmian Group North America**]
f. [**Service Wire Co.**]
g. [**Southwire Company, LLC**]
h. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Thermoset-Insulated Wire: UL CCN ZKST, including UL 44.

4. Standard Features:

a. Referenced Standard: Article 310 of NFPA 70.
b. Insulation Voltage Rating: 600 V.
c. Insulation Temperature Rating: 90 deg C.
d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
e. Conductor Size:[**As indicated on the Drawings.**]

1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

a. Marked "Cable Tray Use" or "CT," indicating compliance with vertical-tray cable flame test.
b. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
c. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
d. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
e. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
f. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
g. Marked "VW-1," indicating compliance with special vertical flame test.
h. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.
i. Marked "ST1-HF," indicating that combustible materials are halogen-free in accordance with UL Subject 2885.

1) Marked "ST1-LSHF," indicating that combustible materials are low smoke when also tested in accordance with IEC 61034-2.

E. UL ZKST - Type SA Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Okonite Company (The)**]
b. [**Prysmian Cables and Systems; Prysmian Group North America**]
c. [**Southwire Company, LLC**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Okonite Company (The)**]
b. [**Prysmian Cables and Systems; Prysmian Group North America**]
c. [**Southwire Company, LLC**]
d. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Thermoset-Insulated Wire: UL CCN ZKST, including UL 44.

4. Standard Features:

a. Referenced Standard: Article 310 of NFPA 70.
b. Insulation Voltage Rating: 600 V.
c. Insulation Temperature Rating: [**90 deg C for dry and damp locations**][**200 deg C for special applications**].
d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
e. Conductor Size:[**As indicated on the Drawings.**]

1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

a. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
b. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
c. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
d. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
e. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
f. Marked "VW-1," indicating compliance with special vertical flame test.
g. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.
h. Marked "ST1-HF," indicating that combustible materials are halogen-free in accordance with UL Subject 2885.

1) Marked "ST1-LSHF," indicating that combustible materials are low smoke when also tested in accordance with IEC 61034-2.

F. UL ZKST - Type XHH Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Encore Wire Corporation**]
b. [**Okonite Company (The)**]
c. [**Prysmian Cables and Systems; Prysmian Group North America**]
d. [**Southwire Company, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Encore Wire Corporation**]
b. [**Okonite Company (The)**]
c. [**Prysmian Cables and Systems; Prysmian Group North America**]
d. [**Southwire Company, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Thermoset-Insulated Wire: UL CCN ZKST, including UL 44.

4. Standard Features:

a. Referenced Standard: Article 310 of NFPA 70.
b. Insulation Voltage Rating: 600 V.
c. Insulation Temperature Rating: 90 deg C.
d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
e. Conductor Size:[**As indicated on the Drawings.**]

1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

a. Marked "Cable Tray Use" or "CT," indicating compliance with vertical-tray cable flame test.
b. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
c. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
d. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
e. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
f. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
g. Marked "VW-1," indicating compliance with special vertical flame test.
h. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.
i. Marked "ST1-HF," indicating that combustible materials are halogen-free in accordance with UL Subject 2885.

1) Marked "ST1-LSHF," indicating that combustible materials are low smoke when also tested in accordance with IEC 61034-2.

G. UL ZKST - Type XHHW Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Inc.**]
b. [**Cerro Wire LLC**]
c. [**Encore Wire Corporation**]
d. [**Okonite Company (The)**]
e. [**Prysmian Cables and Systems; Prysmian Group North America**]
f. [**Service Wire Co.**]
g. [**Southwire Company, LLC**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**Cerro Wire LLC**]
c. [**Encore Wire Corporation**]
d. [**Okonite Company (The)**]
e. [**Prysmian Cables and Systems; Prysmian Group North America**]
f. [**Service Wire Co.**]
g. [**Southwire Company, LLC**]
h. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Thermoset-Insulated Wire: UL CCN ZKST, including UL 44.

4. Standard Features:

    a. Referenced Standard: Article 310 of NFPA 70.
    b. Insulation Voltage Rating: 600 V.
    c. Insulation Temperature Rating: [**75 deg C for wet locations**][**90 deg C for dry and damp locations**].
    d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
    e. Conductor Size:[**As indicated on the Drawings.**]

        1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

    a. Marked "Cable Tray Use" or "CT," indicating compliance with vertical-tray cable flame test.
    b. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
    c. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
    d. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
    e. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
    f. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
    g. Marked "VW-1," indicating compliance with special vertical flame test.
    h. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.
    i. Marked "ST1-HF," indicating that combustible materials are halogen-free in accordance with UL Subject 2885.

        1) Marked "ST1-LSHF," indicating that combustible materials are low smoke when also tested in accordance with IEC 61034-2.

H. UL ZKST - Type XHHW-2 Insulated Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Belden Inc.**]
    b. [**Cerro Wire LLC**]
    c. [**Encore Wire Corporation**]
    d. [**Okonite Company (The)**]
    e. [**Prysmian Cables and Systems; Prysmian Group North America**]
    f. [**Service Wire Co.**]
    g. [**Southwire Company, LLC**]
    h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Belden Inc.**]
    b. [**Cerro Wire LLC**]
    c. [**Encore Wire Corporation**]
    d. [**Okonite Company (The)**]
    e. [**Prysmian Cables and Systems; Prysmian Group North America**]
    f. [**Service Wire Co.**]
    g. [**Southwire Company, LLC**]

h. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Thermoset-Insulated Wire: UL CCN ZKST, including UL 44.

4. Standard Features:

   a. Referenced Standard: Article 310 of NFPA 70.
   b. Insulation Voltage Rating: 600 V.
   c. Insulation Temperature Rating: 90 deg C.
   d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
   e. Conductor Size:[**As indicated on the Drawings.**]

      1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

   a. Marked "Cable Tray Use" or "CT," indicating compliance with vertical-tray cable flame test.
   b. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
   c. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
   d. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
   e. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
   f. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
   g. Marked "VW-1," indicating compliance with special vertical flame test.
   h. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.
   i. Marked "ST1-HF," indicating that combustible materials are halogen-free in accordance with UL Subject 2885.

      1) Marked "ST1-LSHF," indicating that combustible materials are low smoke when also tested in accordance with IEC 61034-2.

I. UL ZKST - Type SIS Insulated Switchboard and Switchgear Wire :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Belden Inc.**]
   b. [**Cerro Wire LLC**]
   c. [**Encore Wire Corporation**]
   d. [**Okonite Company (The)**]
   e. [**Prysmian Cables and Systems; Prysmian Group North America**]
   f. [**Service Wire Co.**]
   g. [**Southwire Company, LLC**]
   h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**Cerro Wire LLC**]
c. [**Encore Wire Corporation**]
d. [**Okonite Company (The)**]
e. [**Prysmian Cables and Systems; Prysmian Group North America**]
f. [**Service Wire Co.**]
g. [**Southwire Company, LLC**]
h. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Thermoset-Insulated Wire: UL CCN ZKST, including UL 44.

4. Standard Features:

   a. Referenced Standard: Article 310 of NFPA 70.
   b. Insulation Voltage Rating: 600 V.
   c. Insulation Temperature Rating: 90 deg C.
   d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
   e. Conductor Size:[**As indicated on the Drawings.**]

      1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

   a. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
   b. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
   c. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
   d. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
   e. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
   f. Marked "VW-1," indicating compliance with special vertical flame test.
   g. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.
   h. Marked "ST1-HF," indicating that combustible materials are halogen-free in accordance with UL Subject 2885.

      1) Marked "ST1-LSHF," indicating that combustible materials are low smoke when also tested in accordance with IEC 61034-2.

J. UL ZKST - Thermoset-Insulated Submersible Pump Multiconductor Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Belden Inc.**]
   b. [**Prysmian Cables and Systems; Prysmian Group North America**]
   c. [**Service Wire Co.**]
   d. [**Southwire Company, LLC**]
   e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**Prysmian Cables and Systems; Prysmian Group North America**]
c. [**Service Wire Co.**]
d. [**Southwire Company, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Thermoset-Insulated Wire: UL CCN ZKST, including UL 44.

1) Submersible Pump Cable: Also investigated in accordance with UL CCN FDNP, including NSF 61.

4. Standard Features:

a. Referenced Standard: Article 310 of NFPA 70.
b. Insulation Voltage Rating: 600 V.
c. Insulation Material: Type RHW-2.
d. Insulation Temperature Rating: 90 deg C.
e. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
f. Conductor Size:[**As indicated on the Drawings.**]

1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

a. Marked "Sunlight Resistant" or "SR," indicating compliance with artificial weathering test.
b. Marked "Oil Resistant I" or "PR I," indicating 60 deg C oil resistance.
c. Marked "Oil Resistant II" or "PR II," indicating 75 deg C oil resistance.
d. Marked "Gasoline and Oil Resistant I" or "GR I," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 60 deg C.
e. Marked "Gasoline and Oil Resistant II" or "GR II," indicating suitable for exposure to gasoline at 23 deg C and exposure to mineral oil at 75 deg C.
f. Marked "VW-1," indicating compliance with special vertical flame test.
g. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.
h. Marked "ST1-HF," indicating that combustible materials are halogen-free in accordance with UL Subject 2885.

1) Marked "ST1-LSHF," indicating that combustible materials are low smoke when also tested in accordance with IEC 61034-2.

2.4 NONMETALLIC UNDERGROUND CONDUIT WITH CONDUCTORS

A. Nonmetallic Underground Conduit with Conductors, Type NUCC :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Blue Diamond Industries, LLC**]
b. [**Paige Electric Co, LP**]
c. [**Prysmian Cables and Systems; Prysmian Group North America**]
d. [**Southwire Company, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Blue Diamond Industries, LLC**]
b. [**Paige Electric Co, LP**]
c. [**Prysmian Cables and Systems; Prysmian Group North America**]
d. [**Southwire Company, LLC**]
e. <**Insert manufacturer's name**>

3. Description: A factory assembly of conductors or cables inside a nonmetallic, smooth-wall raceway with a circular cross section.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Type NUCC Conduit with Conductors: UL CCN QQRK, including UL 1990.

5. Standard Features:

a. Referenced Standard: Article 354 of NFPA 70.
b. Conduit Material: [**HDPE-40**][**HDPE-80**][**EPEC-B**].
c. Conduit Sizes: As indicated on the Drawings.
d. Preinstalled Conductors: Provide insulated conductors as indicated on the Drawings.

2.5 METALLIC SHEATHED CABLE

A. UL PJAZ - Metal-Clad Cable, Type MC :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**AFC Cable Systems; Atkore International**]
b. [**Alpha Wire; brand of Belden, Inc.**]
c. [**Belden Inc.**]
d. [**Cerro Wire LLC**]
e. [**Copperweld**]
f. [**Encore Wire Corporation**]
g. [**General Cable; Prysmian Group North America**]
h. [**Okonite Company (The)**]
i. [**Southwire Company, LLC**]
j. [**WESCO**]
k. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**AFC Cable Systems; Atkore International**]
b. [**Alpha Wire; brand of Belden, Inc.**]
c. [**Belden Inc.**]
d. [**Cerro Wire LLC**]
e. [**Copperweld**]
f. [**Encore Wire Corporation**]
g. [**General Cable; Prysmian Group North America**]
h. [**Okonite Company (The)**]
i. [**Southwire Company, LLC**]
j. [**WESCO**]
k. <**Insert manufacturer's name**>

3. Description: A factory assembly of one or more current-carrying insulated conductors in an overall metallic sheath.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Metal-Clad Cable: UL CCN PJAZ, including UL 1569.

5. Standard Features:

   a. Referenced Standard: Article 330 of NFPA 70.
   b. Circuits: [**Single circuit**][**and**][**multicircuit with color-coded conductors**].
   c. Conductors: [**Copper, complying with ASTM B3 for bare annealed copper and with ASTM B8 for stranded conductors**][**Aluminum, complying with ASTM B800 and ASTM B801**].
   d. Ground Conductor: [**Bare**][**Insulated**][**None**].
   e. Conductor Insulation:

      1) Type TFN/THHN/THWN-2. Comply with UL 83.
      2) Type XHHW-2. Comply with UL 44.
      3) <**Insert type and standard**>.

   f. Armor: [**Steel**][**Aluminum**], interlocked.
   g. Jacket: PVC applied over armor.

6. Other Available Features Required by the Project:

   a. Marked "MC-HL," indicating compliance with UL 2225 for use in hazardous (classified) locations.

B. UL AWEZ - Armored Cable, Type AC :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**AFC Cable Systems; Atkore International**]
   b. [**Alpha Wire; brand of Belden, Inc.**]
   c. [**Belden Inc.**]
   d. [**Encore Wire Corporation**]
   e. [**General Cable; Prysmian Group North America**]
   f. [**Okonite Company (The)**]

g. [**Southwire Company, LLC**]
h. [**WESCO**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**AFC Cable Systems; Atkore International**]
b. [**Alpha Wire; brand of Belden, Inc.**]
c. [**Belden Inc.**]
d. [**Encore Wire Corporation**]
e. [**General Cable; Prysmian Group North America**]
f. [**Okonite Company (The)**]
g. [**Southwire Company, LLC**]
h. [**WESCO**]
i. <**Insert manufacturer's name**>

3. Description: A factory assembly of insulated current-carrying conductors with or without an equipment grounding conductor in an overall metallic sheath.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Armored Cable: UL CCN AWEZ, including UL 4.

5. Standard Features:

a. Referenced Standard: Article 320 of NFPA 70.
b. Circuits: [**Single circuit**][**and**][**multicircuit with color-coded conductors**].
c. Conductors: [**Copper, complying with ASTM B3 for bare annealed copper and with ASTM B8 for stranded conductors**][**Aluminum, complying with ASTM B800 and ASTM B801**].
d. Ground Conductor: [**Bare**][**Insulated**][**None**].
e. Armor: [**Steel**][**Aluminum**], interlocked.

6. Other Available Features Required by the Project:

a. Marked "LS" or "For Use in Cable Trays," indicating compliance with UL 1685 flame and limited smoke test.

C. UL PPKV and FHJR - Fire-Resistant Mineral-Insulated Metal-Sheathed Cable, Type MI, for Use in Electrical Circuit Integrity Systems :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**PYROTENAX; brand of nVent Electrical plc**]
b. [**TEC International**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**PYROTENAX; brand of nVent Electrical plc**]
b. [**TEC International**]
c. <**Insert manufacturer's name**>

3. Description: Solid copper conductors encased in compressed metal oxide with an outer metallic sheath, rated 600 V or less.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Mineral-Insulated Metal-Sheathed Cable: UL CCN PPKV, including UL Subject 504.
b. Circuit Integrity: UL CCN FHJR, including UL 2196.

5. Standard Features:

a. Referenced Standard: Article 332 of NFPA 70.
b. Fire-Resistance Rating: [**1 h**][**2 h**].
c. Conductors: Copper, complying with ASTM B3 for bare annealed copper.
d. Insulation: [**Compressed magnesium oxide**]<**Insert material**>.
e. Sheath: [**Copper**]<**Insert material**>.

D. UL PJAZ and FHJR - Fire-Resistant Metal-Clad Cable, Type MC, for Use in Electrical Circuit Integrity Systems :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Marmon Industrial Energy & Infrastructure; division of Marmon Electrical; a Berkshire Hathaway company**]
b. [**Prysmian Cables and Systems; Prysmian Group North America**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Marmon Industrial Energy & Infrastructure; division of Marmon Electrical; a Berkshire Hathaway company**]
b. [**Prysmian Cables and Systems; Prysmian Group North America**]
c. <**Insert manufacturer's name**>

3. Description: A factory assembly of one or more current-carrying insulated conductors in an overall metallic sheath.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Metal-Clad Cable: UL CCN PJAZ, including UL 1569.
b. Circuit Integrity: UL CCN FHJR, including UL 2196.

5. Standard Features:

a. Referenced Standard: Article 330 of NFPA 70.

b. Fire-Resistance Rating: [**1 h**][**2 h**].
c. Circuits: [**Single circuit**][**and**][**multicircuit with color-coded conductors**].
d. Conductors: [**Copper**][**Copper-clad aluminum**].
e. Ground Conductor: [**Bare**][**Insulated**][**None**].
f. Armor: [**Steel**][**Aluminum**], interlocked.
g. Jacket: PVC applied over armor.

6. Other Available Features Required by the Project:

a. Marked "MC-HL," indicating compliance with UL 2225 for use in hazardous (classified) locations.

2.6 PHOTOVOLTAIC SINGLE-CONDUCTOR CABLE

A. Photovoltaic Single-Conductor Cable, Type PV :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Copperweld**]
b. [**Encore Wire Corporation**]
c. [**General Cable; Prysmian Group North America**]
d. [**Service Wire Co.**]
e. [**Southwire Company, LLC**]
f. [**WESCO**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Copperweld**]
b. [**Encore Wire Corporation**]
c. [**General Cable; Prysmian Group North America**]
d. [**Service Wire Co.**]
e. [**Southwire Company, LLC**]
f. [**WESCO**]
g. <**Insert manufacturer's name**>

3. Description: Flexible, insulated and uninsulated, drawn-copper current-carrying conductor with an overall insulation layer or jacket, or both, rated [**2000**][**600**] V.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Photovoltaic Wire: UL CCN ZKLA, including UL 4703.

5. Standard Features:

a. Referenced Standard: Article 609 of NFPA 70.
b. Conductors: Copper, complying with ASTM B3 for bare annealed copper and with ASTM B8 for stranded conductors.

2.7 NONMETALLIC JACKETED CABLE

A. UL PWVX - Nonmetallic-Sheathed Cable, Type NM-B and Type NMC-B :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Belden Inc.**]
    b. [**Cerro Wire LLC**]
    c. [**Copperweld**]
    d. [**Encore Wire Corporation**]
    e. [**Prysmian Cables and Systems; Prysmian Group North America**]
    f. [**Republic Wire Inc.**]
    g. [**Southwire Company, LLC**]
    h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Belden Inc.**]
    b. [**Cerro Wire LLC**]
    c. [**Copperweld**]
    d. [**Encore Wire Corporation**]
    e. [**Prysmian Cables and Systems; Prysmian Group North America**]
    f. [**Republic Wire Inc.**]
    g. [**Southwire Company, LLC**]
    h. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Type NM-B and Type NMC-B Cables: UL CCN PWVX, including UL 719.

4. Standard Features:

    a. Referenced Standard: Article 334 of NFPA 70.
    b. Insulation Voltage Rating: 600 V.
    c. Insulation Temperature Rating: Individual conductors are rated 90 deg C for multiple conductor ampacity calculations; however, final cable ampacity rating must not exceed value for 60 deg C in Table 310.15(C)(1) of NFPA 70.
    d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
    e. Conductor Size:[**As indicated on the Drawings.**]

        1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

    f. Cable Covering:

        1) Type NM-B: Flame retardant and moisture resistant.
        2) Type NMC-B: Flame retardant, moisture resistant, fungus resistant, and corrosion resistant.

B. UL YDUX - Underground Feeder and Branch-Circuit Cable, Type UF and Type UF-B :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**AFC Cable Systems; Atkore International**]
   b. [**Belden Inc.**]
   c. [**Cerro Wire LLC**]
   d. [**Copperweld**]
   e. [**Encore Wire Corporation**]
   f. [**Prysmian Cables and Systems; Prysmian Group North America**]
   g. [**Republic Wire Inc.**]
   h. [**Southwire Company, LLC**]
   i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**AFC Cable Systems; Atkore International**]
   b. [**Belden Inc.**]
   c. [**Cerro Wire LLC**]
   d. [**Copperweld**]
   e. [**Encore Wire Corporation**]
   f. [**Prysmian Cables and Systems; Prysmian Group North America**]
   g. [**Republic Wire Inc.**]
   h. [**Southwire Company, LLC**]
   i. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Type UF and Type UF-B Cables: UL CCN YDUX, including UL 493.

4. Standard Features:

   a. Referenced Standard: Article 340 of NFPA 70.
   b. Insulation Voltage Rating: 600 V.
   c. Insulation Temperature Rating:

      1) Type UF: 60 deg C.
      2) Type UF-B: Individual conductors are rated 90 deg C for multiple conductor ampacity calculations; however, final cable ampacity rating must not exceed value for 60 deg C in Table 310.15(C)(1) of NFPA 70.

   d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
   e. Conductor Size:[**As indicated on the Drawings.**]

      1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

   f. Cable Covering: Flame retardant, moisture resistant, fungus resistant, corrosion resistant, and suitable for direct burial in the earth.

C. UL TYLZ - Service-Entrance Cable, Type SE, Type USE, and Type USE-2 :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Belden Inc.**]
    b. [**Cerro Wire LLC**]
    c. [**Encore Wire Corporation**]
    d. [**Marmon Industrial Energy & Infrastructure; division of Marmon Electrical; a Berkshire Hathaway company**]
    e. [**Okonite Company (The)**]
    f. [**Prysmian Cables and Systems; Prysmian Group North America**]
    g. [**Republic Wire Inc.**]
    h. [**Southwire Company, LLC**]
    i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Belden Inc.**]
    b. [**Cerro Wire LLC**]
    c. [**Encore Wire Corporation**]
    d. [**Marmon Industrial Energy & Infrastructure; division of Marmon Electrical; a Berkshire Hathaway company**]
    e. [**Okonite Company (The)**]
    f. [**Prysmian Cables and Systems; Prysmian Group North America**]
    g. [**Republic Wire Inc.**]
    h. [**Southwire Company, LLC**]
    i. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Service-Entrance Cable: UL CCN TYLZ, including UL 854.

4. Standard Features:

    a. Referenced Standard: Article 338 of NFPA 70.
    b. Insulation Voltage Rating: 600 V.
    c. Insulation Temperature Rating: Not in excess of rating for insulation type specified below:

        1) Type THWN: 75 deg C, dry and wet locations.
        2) Type THWN-2: 90 deg C, dry and wet locations.
        3) Type RHW: 75 deg C, dry and wet locations.
        4) Type XHHW: 90 deg C, dry and damp locations; 75 deg C, wet locations.
        5) Type RHW-2: 90 deg C, dry and wet locations.
        6) Type XHHW-2: 90 deg C, dry and wet locations.

    d. Conductor Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
    e. Conductor Size:[**As indicated on the Drawings.**]

1) Minimum Conductor Size: [**14 AWG**][**12 AWG**][**10 AWG**].

5. Other Available Features Required by the Project:

a. Marked "Style R," indicating that cable assembly includes uninsulated equipment ground conductor with insulated conductors.
b. Marked "Style U," indicating that cable assembly includes uninsulated equipment ground conductor helically wrapped over insulated conductors.
c. Marked "-HF," indicating that combustible materials are halogen-free when tested in accordance with UL Subject 2885.

1) Marked "-LSHF," indicating that combustible materials are low smoke when also tested in accordance with IEC 61034-2.

D. UL QPOR - Power and Control Tray Cable, Type TC :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Alpha Wire; brand of Belden, Inc.**]
b. [**Belden Inc.**]
c. [**Encore Wire Corporation**]
d. [**General Cable; Prysmian Group North America**]
e. [**Okonite Company (The)**]
f. [**Southwire Company, LLC**]
g. [**WESCO**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Alpha Wire; brand of Belden, Inc.**]
b. [**Belden Inc.**]
c. [**Encore Wire Corporation**]
d. [**General Cable; Prysmian Group North America**]
e. [**Okonite Company (The)**]
f. [**Southwire Company, LLC**]
g. [**WESCO**]
h. <**Insert manufacturer's name**>

3. Description: A factory assembly of insulated current-carrying conductors with or without an equipment grounding conductor in a nonmetallic jacket.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Power and Control Tray Cable: UL CCN QPOR, including UL 1277.

5. Standard Features:

a. Comply with NEMA WC 57/ICEA S-73-532 for Type TC cables used for control, thermocouple extension, and instrumentation.
b. Comply with NEMA WC 70/ICEA S-95-658 for Type TC cables used for power distribution.

c. Conductors: [**Copper**][**Aluminum**][**Copper-clad aluminum**].
d. Ground Conductor: [**Bare**][**Insulated**][**None**].
e. Conductor Insulation: Type XHHW-2. Comply with UL 44.

6. Other Available Features Required by the Project:

a. Marked "TC-ER," indicating that cable is designed for use with ASDs, with oversized crosslinked polyethylene insulation, [**spiral-wrapped foil plus 85 percent coverage braided shields and insulated full-size ground wire**][**dual spirally wrapped copper tape shields and three bare symmetrically applied ground wires**], and sunlight- and oil-resistant outer PVC jacket.

1) Marked "TC-ER-JP," indicating that cable is also suitable for pulling through structural members in accordance with Article 336.10(9) of NFPA 70.
2) Marked "TC-ER-HL," indicating that cable is also suitable for use in hazardous (classified) environments.

b. Marked "ST1," indicating compliance with UL 1685 flame and smoke test.
c. Marked "ST1-HF," indicating that combustible materials are halogen-free in accordance with UL Subject 2885.

1) Marked "ST1-LSHF," indicating that combustible materials are low smoke when also tested in accordance with IEC 61034-2.

2.8 CONNECTORS AND SPLICES

A. UL PJOX - Armored and Metal-Clad Cable Fittings :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Installation Products**]
b. [**Adalet; division of Scott Fetzer Co.**]
c. [**American Fittings Corp. (AMFICO)**]
d. [**Arlington Industries, Inc.**]
e. [**Bridgeport Fittings Inc.**]
f. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
g. [**Halex; division of Scott Fetzer Co.**]
h. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
i. [**O-Z/Gedney; brand of Appleton Group**]
j. [**Service Wire Co.**]
k. [**SIGMA Engineered Solutions**]
l. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Installation Products**]
b. [**Adalet; division of Scott Fetzer Co.**]
c. [**American Fittings Corp. (AMFICO)**]
d. [**Arlington Industries, Inc.**]

e. [**Bridgeport Fittings Inc.**]
f. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
g. [**Halex; division of Scott Fetzer Co.**]
h. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
i. [**O-Z/Gedney; brand of Appleton Group**]
j. [**Service Wire Co.**]
k. [**SIGMA Engineered Solutions**]
l. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Type AC and Type MC Cable Connectors: UL CCN PJOX, including UL 514B.

4. Standard Features: For steel and aluminum sheathed cables, designed to connect conductors specified in this Section.

B. UL PPYT - Mineral-Insulated Metallic-Sheathed Cable Fittings :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**TEC International**]
   b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**TEC International**]
   b. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Type MI Cable Fittings: UL CCN PPYT, including UL 514B.

4. Standard Features: For copper sheathed cables, designed to connect conductors specified in this Section.

C. UL ZMVV - Wire Connectors and Soldering Lugs :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Installation Products**]
   b. [**Amphenol TPC Wire & Cable**]
   c. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   d. [**Eaton**]
   e. [**Fastenal Co.**]

f. [**Gardner Bender; brand of ECM Industries LLC; division of nVent Electric plc**]
g. [**Hillsdale Terminal**]
h. [**Ideal Industries, Inc.**]
i. [**ILSCO; brand of ECM Industries LLC; division of nVent Electric plc**]
j. [**Marinco Power Products**]
k. [**Morris Products Inc.**]
l. [**Newark; an Avnet Company**]
m. [**Panduit Corp**]
n. [**Penn-Union Corp.; subsidiary of Nesco, Inc.**]
o. [**TE Connectivity Ltd.**]
p. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Installation Products**]
b. [**Amphenol TPC Wire & Cable**]
c. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Eaton**]
e. [**Fastenal Co.**]
f. [**Gardner Bender; brand of ECM Industries LLC; division of nVent Electric plc**]
g. [**Hillsdale Terminal**]
h. [**Ideal Industries, Inc.**]
i. [**ILSCO; brand of ECM Industries LLC; division of nVent Electric plc**]
j. [**Marinco Power Products**]
k. [**Morris Products Inc.**]
l. [**Newark; an Avnet Company**]
m. [**Panduit Corp**]
n. [**Penn-Union Corp.; subsidiary of Nesco, Inc.**]
o. [**TE Connectivity Ltd.**]
p. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Wire Connectors and Soldering Lugs: UL CCN ZMVV, including UL 486A-486B or UL 486C.

4. Standard Features:

a. One piece, seamless, designed to terminate conductors specified in this Section.
b. Material: [**Copper**][**Aluminum**][**Bronze**].
c. Type: [**One**][**Two**] hole with [**standard**][**long**] barrels.
d. Termination: [**Compression**][**Crimp**].

PART 3 - EXECUTION

3.1 CONDUCTOR MATERIAL APPLICATIONS

A. Feeders:

1. Copper; solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
2. Copper for feeders smaller than No. 4 AWG; copper, aluminum, or copper-clad aluminum for feeders No. 4 AWG and larger. Conductors must be solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

B. Branch Circuits:

1. Material: [**Copper**][**Aluminum**][**Copper-clad aluminum**].

a. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
b. Solid for No. 12 AWG and smaller; stranded for No. 10 AWG and larger.

C. ASD Output Circuits Cable: Extra-flexible stranded for all sizes.

D. PV Circuits: [**Copper**][**Aluminum**][**Copper-clad aluminum**]; Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

3.2 CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS

A. Service Entrance: [**Type THHN/THWN-2, single conductors in raceway**][**Type XHHW-2, single conductors in raceway**][**Type USE, single conductor in raceway**][**Mineral-insulated, metal-sheathed cable, Type MI**][**Multiconductor cable, Type SE**].

B. Exposed Feeders: [**Type THHN/THWN-2, single conductors in raceway**][**Type XHHW-2, single conductors in raceway**][**Armored cable, Type AC**][**Metal-clad cable, Type MC**][**Mineral-insulated, metal-sheathed cable, Type MI**][**Nonmetallic-sheathed cable, Type NM**].

C. Feeders Concealed in Ceilings, Walls, Partitions, and Crawlspaces: [**Type THHN/THWN-2, single conductors in raceway**][**Armored cable, Type AC**][**Metal-clad cable, Type MC**][**Mineral-insulated, metal-sheathed cable, Type MI**][**Nonmetallic-sheathed cable, Type NM**].

D. Feeders Concealed in Concrete, below Slabs-on-Grade, and Underground: [**Type THHN/THWN-2, single conductors in raceway**][**Type XHHW-2, single conductors in raceway**][**Underground feeder cable, Type UF**].

E. Feeders Installed below Raised Flooring: [**Type THHN/THWN-2, single conductors in raceway**][**Armored cable, Type AC**][**Metal-clad cable, Type MC**][**Mineral-insulated, metal-sheathed cable, Type MI**].

F. Feeders in Cable Tray: [**Type THHN/THWN-2, single conductors in raceway**][**Type XHHW-2, single conductors larger than No. 1/0 AWG**][**Armored cable, Type AC**][**Metal-clad cable, Type MC**][**Mineral-insulated, metal-sheathed cable, Type MI**][**Nonmetallic-sheathed cable, Type NM**].

G. Exposed Branch Circuits, Including in Crawlspaces: [**Type THHN/THWN-2, single conductors in raceway**][**Armored cable, Type AC**][**Metal-clad cable, Type MC**][**Mineral-insulated, metal-sheathed cable, Type MI**][**Nonmetallic-sheathed cable, Type NM**].

H. Branch Circuits Concealed in Ceilings, Walls, and Partitions: [**Type THHN/THWN-2, single conductors in raceway**][**Armored cable, Type AC**][**Metal-clad cable, Type MC**][**Mineral-insulated, metal-sheathed cable, Type MI**][**Nonmetallic-sheathed cable, Type NM**].

I. Branch Circuits Concealed in Concrete, below Slabs-on-Grade, and Underground: [**Type THHN/THWN-2, single conductors in raceway**][**Type XHHW-2, single conductors in raceway**][**Underground branch-circuit cable, Type UF**].

J. Branch Circuits Installed below Raised Flooring: [**Type THHN/THWN-2, single conductors in raceway**][**Armored cable, Type AC**][**Metal-clad cable, Type MC**][**Mineral-insulated, metal-sheathed cable, Type MI**].

K. Branch Circuits in Cable Tray: [**Type THHN/THWN-2, single conductors in raceway**][**Type XHHW-2, single conductors larger than No. 1/0 AWG**][**Armored cable, Type AC**][**Metal-clad cable, Type MC**][**Mineral-insulated, metal-sheathed cable, Type MI**][**Nonmetallic-sheathed cable, Type NM**].

L. Cord Drops and Portable Appliance Connections: Type SO, hard service cord with stainless steel, wire-mesh, strain relief device at terminations to suit application.

M. ASD Output Circuits: [**Type XHHW-2 in metal conduit**][**Type TC-ER cable with braided shield**][**Type TC-ER cable with dual tape shield**].

N. PV Circuits, Type USE-2: For PV source circuits rated at 600 V or less.

O. PV Circuits, Type PV: For PV source circuits rated at [**600**][**1000**][**2000**] V.

3.3 INSTALLATION OF LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Temporary Electric Power Work: NECA NEIS 200.
5. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
6. Work in Confined Spaces: NFPA 350.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
8. Installation of Type AC and Type MC Cables: NECA NEIS 120.
9. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Conceal cables in finished walls, ceilings, and floors unless otherwise indicated.
2. Complete raceway installation between conductor and cable termination points prior to pulling conductors and cables.
3. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
4. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.
5. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.
6. Provide support for cables.
7. Complete cable tray systems installation prior to installing conductors and cables.
8. Connections:

    a. Tighten electrical connectors and terminals in accordance with manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

b. Make splices, terminations, and taps that are compatible with conductor material[**and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors**].

1) Use oxide inhibitor in each splice, termination, and tap for aluminum conductors.

9. Wiring at Outlets: Install conductor at each outlet, with at least [**6 inch (150 mm)**][**12 inch (300 mm)**] of slack.

D. Interfaces with Other Work:

1. Identification:

a. Identify and color-code conductors and cables.
b. Identify each spare conductor at each end with identity number and location of other end of conductor, and identify as spare conductor.

2. Sleeves and Sleeve Seals: Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies.
3. Firestopping: Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly.

3.4 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

1. <**Insert requirements**>.

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

D. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.
2. After installing conductors and cables and before electrical circuitry has been energized, test service entrance and feeder conductors for compliance with requirements.
3. After installing conductors and cables and before electrical circuitry has been energized, test [**service entrance and feeder conductors**][**and**][**conductors**] feeding the following critical equipment and services for compliance with requirements:

a. <**Insert, in separate subparagraphs, critical equipment and services to be tested**>.

4. Perform each of the following visual and electrical tests:

a. Inspect exposed sections of conductor and cable for physical damage and correct connection in accordance with the single-line diagram.
b. Test bolted connections for high resistance using one or more of the following:

1) A low-resistance ohmmeter.
2) Calibrated torque wrench.
3) Thermographic survey.

c. Inspect compression-applied connectors for correct cable match and indentation.
d. Inspect for correct identification.
e. Inspect cable jacket and condition.
f. Insulation-resistance test on each conductor for ground and adjacent conductors. Apply a potential of 500 V(dc) for 300 V rated cable and 1000 V(dc) for 600 V rated cable for a one-minute duration.
g. Continuity test on each conductor and cable.
h. Uniform resistance of parallel conductors.

E. Nonconforming Work:

1. Wire or cable assembly will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

3.5 MAINTENANCE

A. Infrared Scanning of Splices: Two months after Substantial Completion, perform infrared scan of splices, joints, and connections in conductors 3 AWG and larger. Remove covers so splices, joints, and connections are accessible to portable scanner. Take visible light photographs at same locations and orientations as infrared scans for documentation to ensure follow-on scans match same conditions for valid comparison. Correct deficiencies determined during the scan.

1. Follow-On Infrared Scanning: Perform follow-up infrared scan of splices at 11 months after Substantial Completion.
2. Instrument: Use infrared-scanning device designed to measure temperature or to detect significant deviations from normal values. Provide documentation of device calibration.
3. Field Reports for Infrared Scanning: Prepare certified report that identifies cables splices checked and that describes scanning results. Include notation of deficiencies detected, remedial actions taken, and scanning observations after remedial action.

END OF SECTION 26 05 19 00

Task	Specification	Specification Description
26 05 19 00	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 19 13 - UNDERFLOOR RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Underfloor raceway products.
2. Underfloor raceway fittings.
3. Maintenance material items.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
2. [**Section 013100 "Project Management and Coordination"**] specifies preinstallation conference procedures.
3. Section 033000 "Cast-in-Place Concrete" specifies installation of concrete surrounding underfloor raceways.
4. Section 034100 "Precast Structural Concrete" specifies precast concrete units used as cellular concrete floor raceways.
5. Section 053100 "Steel Decking" specifies rough-in of underfloor duct distribution system.
6. Section 260519 "Low-Voltage Electrical Power Conductors and Cables" specifies installation of wiring for the Work specified in this Section.
7. Section 260526 "Grounding and Bonding for Electrical Systems" specifies installation of grounding and bonding for the Work specified in this Section.
8. Section 260533.16 "Boxes and Covers for Electrical Systems" specifies installation of cover plates for outlet, device, and junction boxes.
9. Section 260553 "Identification for Electrical Systems" specifies installation of labels and warning signs for the Work specified in this Section.
10. Section 262726 "Wiring Devices" specifies installation of receptacles and connectors.
11. Section 271513 "Communications Copper Horizontal Cabling" specifies installation of twisted pair jacks, outlets, assemblies, and cover plates.
12. Section 271523 "Communications Optical Fiber Horizontal Cabling" specifies installation of optical fiber jacks, outlets, assemblies, and cover plates.
13. Section 271533 "Communications Coaxial Horizontal Cabling" specifies installation of coaxial jacks, outlets, assemblies, and cover plates.

1.2 DEFINITIONS

A. Activation: Nomenclature used by some manufacturers for a service fitting.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference [**at the Project site**][**by web conference**].

B. Preinstallation Coordination Meeting(s): For coordination of structural, electrical, and interior finishes Work for installation of underfloor raceways. Conduct meeting(s) [**at the Project site**][**as web conference**].

1. Attendees: Installers, fabricators, representatives of manufacturers, and administrants for field tests and inspections. Notify Architect [**Construction Manager**][**and the Owner]** of scheduled meeting dates.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of specified product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Include operating characteristics, electrical characteristics, and furnished accessories.
3. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing laboratory, certifying that model number corresponding to specified product complies with specified listing criteria.

B. Shop Drawings: Prepare and submit the following:

1. Drawings, Diagrams, and Supporting Documents Detailing Fabrication and Assembly of Underfloor Raceways:

a. Include floor plans, elevations, sections, and details.
b. Identify components and accessories, such as expansion-joint assemblies, straight raceway lengths, preset and afterset inserts, and service fittings.
c. Detail preparation and installation methods and instructions.
d. Provide dimensions locating raceway header and distribution elements. Include spacing between preset inserts and between preset inserts and ends of duct runs, walls, columns, junction boxes, and header duct connections.
e. Provide raceway fill charts for each duct size provided for each conductor size the duct is identified to accept. Provide separate charts for power and communication conductors and cables.
f. Show connections between raceway elements and relationships between components and adjacent structural and architectural elements, including slab reinforcement, floor finish work, permanent partitions, expansion joints [**architectural module lines**][**and pretensioning or post-tensioning components**] .
g. Indicate height of preset inserts, junction boxes, and raceways coordinated with depth of concrete slab and floor fill.
h. Indicate thickening of slabs where required for adequate encasement of raceway components.
i. Document coordination of exposed components with floor-covering materials to ensure that fittings and trim are suitable for indicated floor-covering material.
j. Revise locations from those indicated in the Contract Documents, as required to suit field conditions and to ensure a functioning layout. Identify proposed deviations from the Contract Documents.
k. Show details of connections and terminations of underfloor raceways at panelboards and communication terminal equipment in equipment rooms, wire closets, and similar spaces.

l. Identify those cells of cellular floor deck that are to be connected and fitted for the following underfloor distribution:

1) Power.
2) Voice.
3) Data.
4) Signal.
5) Communications.

C. Samples for Verification: For each underfloor raceway product, in specified finish, including the following:

1. Service fittings and flush and recessed outlet and junction-box covers.
2. A section of each service raceway configuration, with specified preset insert and service fitting installed.
3. A junction box of each size and type for use with underfloor raceway.
4. A section of each header raceway configuration, complete with provisions for connection with service raceway.
5. A section of trench-type raceway, complete with cover and required trim.
6. A junction box of each size and type for use with trench-type raceway, complete with cover and trim.

D. Field QC Reports: For specified tests and inspections.

1.5 INFORMATIONAL SUBMITTALS

A. Manufacturer's Published Instructions: For each type of specified product.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For underfloor raceways.

1. In addition to items specified in Section 260010 "Supplemental Requirements for Electrical," include the following:

a. Manufacturer's published instructions for locating preset inserts and for installing afterset inserts.
b. Dimensioned locations for all ducts, junction boxes, and preset inserts. Typical spacing designation must be accepted only for preset insert spacing along a continuous length of duct.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Spare parts.

B. Special tools.

1.8 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician I: Possessing active NICET EPT Level I certification. Able to work safely around electrical power equipment and cabling under supervision.

B. Electrical Power Testing (EPT) Technician II: Possessing active NICET EPT Level II certification. Able to isolate and ground electrical power equipment, to connect test equipment, and to conduct and document standard tests of basic equipment.

C. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, to conduct tests of complex equipment, to analyze test and equipment data, to plan a job, and to lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

D. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; to evaluate tests, test equipment, test results, and power system performance; to recommend actions to maintain or improve system performance; and to lead multi-team projects.

E. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

B. Seismic and Wind Performance: Installed assembly must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

1. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events [**and unit must be fully operational after seismic events**] .

2. Component Importance Factor (Ip): [**1.0**][**1.5**] .

3. Component Amplification Factor (ap): [**1.0**][**2.5**].

4. Component Response Modification Factor (Rp): [**1.5**][**2.0**][**2.5**][**6.0**].

5. Component Overstrength Factor (Ωo): [**1.5**][**2.5**].

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change: [**120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces**].

2.2 UNDERFLOOR RACEWAY PRODUCTS

A. Flat-Top, Steel Underfloor Raceways :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**MonoSystems, Inc**]
b. [**Square D; Schneider Electric USA**]
c. [**Walker Systems, Inc.**]

2. Source Limitations: Obtain underfloor raceway components for each system from single source from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Underfloor Raceways: UL Solutions product category UL CCN RKCZ, including UL 884.

4. Standard Features:

    a. Product Reference Standard(s): Article 390 of NFPA 70.
    b. Configuration: Steel, rectangular, flat-top, single-channel raceways with premanufactured inserts.
    c. Materials: One-piece, continuous weld, minimum **0.0598 inch (1.5 mm)** thick steel, with [**corrosion-resistant**][**galvanized**] coating inside and out after welding.
    d. Cross-Section Shape: Rectangular, with rounded corners.

    e. Number of Longitudinal Channels: [**Two**][**Three**][**Four**] , separated by steel wall(s).

    f. Number of Levels: [**One**][**Two**] .

    g. Minimum Bending Radius for Communication Cables: Combination of raceways, fittings, inserts, junction boxes, service fittings, and mounting and connection arrangements for wiring devices and jacks must provide a [**2 inch (50 mm)**] minimum bending radius for communication cables.

5. Service Raceways: Fitted with preset inserts.

    a. Nominal Multichannel Underfloor Raceway Dimensions:

        1) Depth: **1-3/8 inch (35 mm)**.
        2) Overall Width: [**6 inch (150 mm)**][**10 inch (250 mm)**][**15 inch (375 mm)**].
        3) Power Service Channel Width: [**3-1/2 inch (88 mm)**][**4-3/8 inch (110 mm)**].
        4) Communication Service Channel Width: [**3-1/2 inch (88 mm)**][**4 inch (100 mm)**][**6-1/2 inch (163 mm)**].

    b. Nominal Single-Channel Underfloor Raceway Dimensions:

        1) Depth: **1-1/2 inch (38 mm)**.
        2) Power Service Raceway Width: **3-1/4 inch (81 mm)**.
        3) Communication Service Raceway Width: [**3-1/4 inch (81 mm)**][**6 inch (150 mm)**] .

        4) Number of Single-Channel Raceways per Run: [**One**][**Two**][**Three**][**Four**][**Five**] unless otherwise indicated.

    c. Preset Inserts: [**Rectangular**][**Round**] .

        1) Spacing: [**12 inch (300 mm)**][**24 inch (600 mm)**] on center.

            a) Rectangular Insert Size: Rectangular dimensions as required to accommodate mounting and connection of flush- and surface-mounted, [**single-**][**and multiple-**] outlet service fittings or to connect to wiring extensions for feeding wall outlets for [**power**][**communications**][**power and**

communications].

b) Round Insert Size: [**2 inch (50 mm)**] in diameter.

2) Equip each insert with a disposable cover, and select insert height so cover is **1/8 inch (3 mm)** below surface of concrete.

3) Arrange insert for optional attachment of flush-, surface-, or wiring-extension service fitting to replace disposable cover. Arrange brackets, mountings, barriers, and floor access covers to support, isolate, and provide access to [**flush**][**surface**] outlet-mounting connector, jack, and receptacle devices.

6. Header Raceways: [**Single-**][**Multi**] channel, without preset inserts (blank raceway).

a. Nominal Raceway Dimensions:

1) Depth: [**Same as service raceways**][**2-1/2 inch (63 mm)**][**2-3/4 inch (69 mm)**][**3 inch (75 mm)**][**3-1/2 inch (88 mm)**] .

2) Power Header Raceway Width: [**3-1/2 inch (88 mm)**][**4-3/8 inch (110 mm)**].

3) Communication Header Raceway Width: [**3-1/2 inch (88 mm)**][**4 inch (100 mm)**][**6-1/2 inch (163 mm)**] .

b. Arrangement: [**In same plane as**][**Below**] service raceways.

c. Connections: Arranged to connect with service raceways at [**single**][**two**] -level junction boxes.

B. Flush, Flat-Top, Steel Underfloor Raceways :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Walker Systems, Inc.**]

2. Source Limitations: Obtain underfloor raceway components for each system from single source from single manufacturer.

3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Underfloor Raceways: UL Solutions product category UL CCN RKCZ, including UL 884.

4. Standard Features:

a. Configuration: [**Single**][**multichannel**] underfloor raceways installed on floor slab with top of raceway flush with concrete topping added hereafter, and then covered with finish material.

b. Material: Steel.

c. Cross-Section Shape: Rectangular, [**single channel**][**and**][**multichannel, separated by steel wall(s)**] .

d. Listed and labeled for installation with top flush with concrete floor.

e. Number of Levels: One.

5. Service Raceways: Fitted with preset inserts.

    a. Number of Longitudinal Channels per Multichannel Raceway: [**Two**][**Three**] .

    b. Number of Single-Channel Raceways per Run: [**One**][**Two**][**Three**] unless otherwise indicated.
    c. Nominal Channel Dimensions: **3 inch (75 mm)** wide by **1-1/4 inch (31 mm)** deep.
    d. Preset Inserts: Threaded opening with removable steel plug that is flush with top of raceway when screwed in place.

        1) Spacing: [**12 inch (300 mm)**][**24 inch (600 mm)**] on center, full length of each service raceway.
        2) Arrangement: Stagger insert locations on parallel raceways or channels to accommodate placement of adjacent service fittings.
        3) Size: **1-5/8 inch (41 mm)** diameter.

6. Trench Duct Crossunder: Fitting attached to underside of trench duct.

    a. Nominal Channel Dimensions: Same as service raceways.
    b. Arrangement: Offset by depth of trench duct.
    c. Connections: Arranged to connect trench duct to flush duct through factory-cut, grommeted openings.

7. Header Raceways: Raceways same as service raceways, except without preset inserts (blank raceway).

    a. Nominal Channel Dimensions: Same as service raceways.
    b. Arrangement: In same plane as service raceways.
    c. Connections: Arranged to connect with service raceways at junction boxes.

C. Cellular Metal, Steel Underfloor Raceways :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**ASC Steel Deck; ASC Profiles, LLC**]
    b. [**Dennis Filges Company, Inc**]
    c. [**Epic Metals Corporation**]
    d. [**HH Robertson**]
    e. [**United Steel Deck, Inc.**]
    f. [**Walker Systems, Inc.**]

2. Source Limitations: Obtain underfloor raceway components for each system from single source from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Underfloor Raceways: UL Solutions product category UL CCN RKCZ, including UL 884.

4. Standard Features:

a. Configuration: Multichannel, cellular, underfloor service raceways installed on floor slab with top of raceway flush concrete topping added hereafter, and then covered with finish material.
b. Material:

1) Galvanized-steel sheet, ASTM A653/A653M, Structural Steel (SS), Grade **33 (230)** minimum, [**G60 (Z180)**][**G90 (Z275)**] zinc coating.
2) Galvanized- and shop-primed steel sheet, ASTM A653/A653M, Structural Steel (SS), Grade **33 (230)**, **G60 (Z180)** zinc coating; with underside surface cleaned, pretreated, and primed with manufacturer's standard [**gray**][**white**] baked-on, rust-inhibitive primer.

c. Number of Longitudinal Cells: Three, separated by steel walls.
d. Nominal Dimensions of Cells:

1) Overall Depth: **1-1/4 inch (31 mm)** unless otherwise indicated.
2) Cross-Sectional Area of Cells: Power cells: **5-1/2 sq. inch (34.4 sq. cm)**; communication system cells: **16 sq. inch (100 sq. cm)**.

e. Minimum Bending Radius for Communication Cables: Combination of raceways, fittings, inserts, junction boxes, service fittings, and mounting and connection arrangements for wiring devices and jacks must provide a [**2 inch (50 mm)**] minimum bending radius for communication cables.

5. Service Raceways: Fitted with preset inserts.

a. Preset Inserts: Rectangular-shaped metal housing assemblies arranged to provide electrical outlet access to each cell of each raceway designated for service raceway use. Inserts must be provided throughout the entire length of each such raceway.

1) Spacing: [**12 inch (300 mm)**][**24 inch (600 mm)**][**30 inch (750 mm)**] on center.
2) Include housing and connecting provisions for a flush or recessed, single-, double-, or triple-outlet service fitting.
3) Include mounting and connecting provisions for a surface, single- or multiple-outlet service fitting.
4) Include connecting provisions for a wiring-extension service fitting to feed wall outlets.
5) Equip each insert with a disposable cover plate arranged for installation with top **1/8 inch (3 mm)** below surface of concrete. Arrange insert to receive a flush-, recessed-, or wiring-extension service fitting to replace disposable top.

6. Header Assembly: A junction box and raceway arrangement positioned to feed wires and cables to service raceways.

a. Three-compartment junction box connecting blank, [**multicell cellular**][**flat-top, multichannel**] header raceway (no inserts) with cellular service raceways at right angles to header raceway.
b. Cellular header raceway must be made of the same material and have the same nominal dimensions as service raceways.
c. Provide capability for service raceways to be run in both perpendicular directions at the intersection with header raceway.

D. Trench-Type, Steel Underfloor Raceways :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the**

following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following] :

a. [**Dennis Filges Company, Inc**]
b. [**HH Robertson**]
c. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Square D; Schneider Electric USA**]
e. [**Walker Systems, Inc.**]

2. Source Limitations: Obtain underfloor raceway components for each system from single source from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Underfloor Raceways: UL Solutions product category UL CCN RKCZ, including UL 884.

4. Standard Features:

   a. Configuration: Trench-type raceways used as header or feeder raceways to serve service raceways.
   b. Trench: Steel, shop or factory welded and fabricated to indicated sizes. Include the following features:

      1) Slab Depth Adjustment: Minimum of minus **1/8 inch (3 mm)** to plus **5/8 inch (17 mm)** before and during concrete placement.
      2) Cover Supports: Height adjustable, with leveling screws to rigidly support cover assembly.
      3) Screed Strip: Extruded aluminum along both edges at proper elevation without requiring shim material.
      4) Trim Strip: Select to accommodate floor finish material.
      5) Partitions: Arranged to separate channels and isolate wiring of different systems.

      6) Grommeted openings in active floor cells or service raceways.
      7) Manufacturer's standard corrosion-resistant finish, applied after fabrication.

   c. Cover Plates: Removable, steel plates, **1/4 inch (6 mm)** thick, each weighing **60 lb. (27 kg)** or less with full gasket attached to side units. Fabricate intermediate supports to limit unsupported spans to [**15 inch (375 mm)**] or less. Fabricate covers with appropriate depth recess to receive indicated floor finish.

2.3 UNDERFLOOR RACEWAY FITTINGS

A. Electrical Connection Components for Cellular Steel Floor Decks:

1. Source Limitations for Electrified Cellular Steel Floor-Deck Components: Obtain electrical components, such as preset inserts, afterset inserts, service fittings, header ducts, and trench header ducts, from cellular steel floor-deck manufacturer.
2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or

more of the following guide information and corresponding standards:

a. Underfloor Raceway Fittings: UL Solutions product category UL CCN RKQX, including UL 884.

3. Standard Features:

a. Product Reference Standard(s): Article 390 of NFPA 70.
b. Preset Inserts: Rectangular metal-housing assemblies.

1) Spacing: [**12 inch (300 mm)**][**24 inch (600 mm)**][**30 inch (750 mm)**] on center.
2) Size: As required to provide electrical outlet access to each cell of each group of three cells that is designated for electrical service raceway use.
3) Equip each insert with a disposable cover arranged for installation with top **1/8 inch (3 mm)** below surface of concrete. Arrange insert to receive a flush-, recessed-, or wiring-extension service fitting to replace disposable cover.

4) Include housing and connecting provisions for a [**flush or recessed**][**surface**] service fitting, [**single**][**double**][**triple**] outlet.
5) Include connecting provisions for a wiring-extension service fitting to feed wall outlets.

B. Electrical Connection Components for Cellular Concrete Floor Decks:

1. Source Limitations for Electrified Cellular Concrete Floor-Deck Components: Obtain electrical components, such as preset inserts, afterset inserts, service fittings, header ducts, and trench header ducts, from cellular concrete floor-deck manufacturer or from single source from single manufacturer.
2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Underfloor Raceway Fittings: UL Solutions product category UL CCN RKQX, including UL 884.

3. Standard Features:

a. Product Reference Standard(s): Article 390 of NFPA 70.
b. Afterset Inserts: Round metal-nipple assembly with internal and external threading, arranged to screw into plug driven into **1-7/8 inch (47 mm)** hole drilled through floor fill, where present, and deck-cell wall into floor raceway cell.

1) Inserts must be compatible with floor-mounting service fittings.
2) Inserts must provide wiring path from cell to [**power**][**communication**][**power and communication**]
[**wall**][**and**][**ceiling**] outlets.
3) Inserts must provide wiring path from cell to header raceway.

C. Underfloor Raceway Service Fittings/Activations:

1. Source Limitations: Obtain underfloor raceway service fittings and hardware for each system from single source from single manufacturer.
2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical**

testing laboratory recognized by authorities having jurisdiction] in accordance with one or more of the following guide information and corresponding standards:

a. Underfloor Raceway Fittings: UL Solutions product category UL CCN RKQX, including UL 884.

3. Standard Features:

a. Product Reference Standard(s): Article 390 of NFPA 70.
b. Exposed Parts Finish: [**Brass**][**Brushed aluminum**].

c. Flush, Single-System Service Fitting for Round Inserts: Include mounting and cover to support and provide access to single connector, jack, or receptacle device; mounted flush with floor within body of insert.

1) Connector, Jack, and Receptacle Devices: Single modular type.
2) Power Receptacle Outlet: Suitable for 20 A, 120 V device.

d. Flush System Service Fitting for Rectangular Inserts: Include mounting, hinged cover, and trim to support and provide access to connector, jack, or receptacle devices mounted flush with floor within insert.

1) System Type: [**Single**][**multiple**] .
2) Connector, Jack, and Receptacle Devices: Modular type.
3) Power Receptacle Rating: 20 A, 120 V unless otherwise indicated.

4) Recess-Mounted Service Fitting: Modular fittings compatible with preset inserts. Include device plates for indicated systems and provisions for receptacles, jacks, and connectors. Include hinged flush covers with recessed depth to match thickness of floor finish material. Provide for internally mounted receptacle- and communication-jack and connector assemblies.

e. Surface-Mounted Service Fitting: Modular pedestal type, with locking attachment matched to insert floor opening.

1) Power-outlet, double-faced, surface-mounted unit for duplex receptacle on both sides.
2) Power-outlet, single-faced, surface-mounted unit for duplex receptacle on one side.
3) Communication-outlet, double-faced, surface-mounted unit.

a) Include bushed openings on both sides; **1 inch (25 mm)** minimum diameter; insulated with nonconducting material.
b) Include provisions for modular dual fiber-optic connector assembly on both sides.
c) Include provisions for modular dual jack-connector assembly, rated for [**Category 5**][**Category 5e**][**Category 6**] on both sides.

4) Communication-outlet, single-faced, surface-mounted unit with bushed opening on one side; **1 inch (25 mm)** minimum diameter; insulated with nonconducting material.
5) Combination surface-mounted unit for duplex receptacle on one side and with communication cable connection provision on opposite side.

a) Include bushed opening; **1 inch (25 mm)** minimum diameter; insulated with nonconducting material.
b) Include provisions for modular dual fiber-optic connector assembly.
c) Include provisions for modular dual jack-connector assembly, rated for

[**Category 5**][**Category 5e**][**Category 6**] .

6) Flush-Mounted Service Fittings: Modular fittings compatible with preset inserts and must include covers, provisions for receptacles jacks and connector assemblies and wiring extensions to wall-mounted outlets, and associated device plates for indicated systems. Include flush covers, recessed to suit floor finish material.

7) Wiring-Extension Service Fittings: Arrangement of brackets and mountings to support and provide access to wiring or cabling of a cell, and to connect the cable or raceway that extends the system to an individual wall outlet. Provide for connection of [**ERMC**][**FMC**][**ENT**][**Type MC cable**] for power extensions, and [**ERMC**][**FMC**][**ENT**][**optical fiber/communication cable raceway**] for communication system extensions.

D. Underfloor Raceway Adapter Fittings:

1. Source Limitations: Obtain underfloor raceway adapter fittings for each system from single source from single manufacturer.
2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Underfloor Raceway Fittings: UL Solutions product category UL CCN RKQX, including UL 884.

3. Standard Features:

a. Product Reference Standard(s): Article 390 of NFPA 70.
b. Description: Couplings, expansion-joint sleeves, cross-under offsets, vertical and horizontal elbows, grounding screws, adapters, end caps, and other fittings suitable for use with basic components to form a complete installation.
c. Compatible with raceway and outlet system and must be listed for use with raceway systems and components delivered.

E. Underfloor Raceway Supports and Hardware:

1. Source Limitations: Obtain underfloor raceway supports and hardware components for each system from single source from single manufacturer.
2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Underfloor Raceway Fittings: UL Solutions product category UL CCN RKQX, including UL 884.

3. Standard Features:

a. Product Reference Standard(s): Article 390 of NFPA 70.
b. Supports and hardware must be compatible with raceway and outlet system and must be listed for use with raceway systems and components delivered.
c. Supports: Adjustable for height and arranged to maintain alignment and spacing of raceways during concrete placement. Include hold-down straps.

F. Underfloor Raceway Junction Boxes:

1. Configuration: Raceway manufacturer's standard enclosure for indicated type, quantity, arrangement, and configuration of raceways at each raceway junction, intersection, and access location. Include the following accessories and features:

a. Mounting brackets.
b. Escutcheons and holders to accommodate surrounding floor covering.
c. Means for leveling and height adjustment more than **3/8 inch (10 mm)** before and after concrete is placed.
d. Boxes must withstand a minimum [**300 lb (136 kg)**] concentrated load. Internal supports must be provided as needed to meet this requirement.
e. All boxes must provide **2 inch (50 mm)** minimum bend radius for data and communication cables.
f. Raceway Openings: For underfloor raceways and conduits arranged to accommodate raceway layout.

g. Covers must have appropriate depth recess to receive specific floor finish material.
h. Partitions to separate wiring of different systems.

2.4 MAINTENANCE MATERIAL ITEMS

A. Spare Parts: Furnish to the Owner spare parts, for repairing underfloor raceway, that are packaged with protective covering for storage on-site and identified with labels describing contents. [**Include the following:**]

1. Afterset Inserts:

a. Furnish quantity equal to [**10**] percent of service fittings installed, but no fewer than units.
b. Furnish quantity equal to [**5**] percent of each type of preset insert installed, but no fewer than units.

2. Service Fittings: Furnish [**three**] of each type of service fitting indicated for each **100 ft (30 m)** of distribution raceway or active-floor-cell length.
3. Outlet Blanking Covers: Furnish quantity equal to [**10**] percent of each type of floor opening installed for outlets.

B. Special Tools: Furnish to the Owner proprietary or special equipment required to operate, maintain, repair, adjust, or implement future changes to underfloor raceway, that are packaged with protective covering for storage on-site and identified with labels describing contents. [**Include the following:**]

1. Electronic Instruments: Furnish [**one**] electronic instrument(s) and accessories, in accordance with underfloor raceway manufacturer's published instructions for detecting, locating, and uncovering preset inserts in metal raceway under floor covering and up to **3/8 inch (10 mm)** of concrete fill.
2. Electric Drill: Furnish [**one**] variable-speed electric drill(s), **1/2 inch (13 mm)** capacity.

3. Hole Saw: Furnish [**one**] diamond bit hole saw(s), for dry concrete, [**2 inch (50 mm)**] size.
4. Afterset Insert Installation Tool: Furnish [**one**] installation tool(s) selected in accordance with manufacturer's published instructions for installing afterset inserts.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B and NECA NEIS 91.
3. Electrical Safety: NFPA 70E.
4. Commissioning of Electrical Systems: NECA NEIS 90.
5. Hot Work: NFPA 51B.
6. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
7. Communications Work: BICSI N1.
8. Work in Health Care Facilities: NFPA 99 and Article 517 of NFPA 70.
9. Work in Confined Spaces: NFPA 350.
10. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
11. Evaluation of Unlabeled Electrical Equipment: NFPA 791.
12. Work in Museums, Libraries, Places of Worship, and Historic Structures: NFPA 909 and NFPA 914.
13. Consult Architect for resolution of conflicting requirements, as directed by the Owner.

C. Interfaces with Other Work:

1. Identification: Provide labels for underfloor raceway products and associated electrical equipment.

    a. Identify field-installed conductors, interconnecting wiring, and components.
    b. Label each enclosure with engraved metal or laminated-plastic nameplate.
    c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

    d. Install a marker at the center of the last insert of each cell and channel of each straight run of metal underfloor service raceway to locate the insert and identify the system.

        1) Install markers at last inserts on both sides of permanent walls and at first inserts adjacent to each junction box.
        2) Install markers flush at screed line before pouring slab or placing fill. Extend marker with grommeted screw when floor covering is placed. Do not extend through carpet.
        3) Use slotted-head screw to identify electrical power; use Phillips-head screw to identify conventional communications.
        4) Use another distinctive screw head to identify third system, such as special-purpose wiring.

2. Grounding and Bonding:

a. Equipment Grounding Conductors: Provide and route insulated equipment grounding conductors with other feeder or branch circuit conductors. Bond equipment grounding conductor to underfloor raceway products using provided hardware in accordance with manufacturer's published instructions.
b. Equipment Bonding Conductors: Provide equipment bonding straps or jumpers where additional bonding is indicated on the Drawings between underfloor raceway products and adjacent metallic equipment, enclosures, piping, or building structure. Route bonding conductors along shortest and straightest paths possible unless otherwise indicated or required by NFPA 70. Avoid obstructing access panels or placing conductors where they may be subjected to strain, impact, or damage.

3. Coordinate installation of new underfloor raceway products with existing conditions.
4. Coordinate installation of underfloor raceway products with installation of concrete.

3.3 INSTALLATION OF UNDERFLOOR RACEWAY PRODUCTS

A. Install underfloor raceway products aligned and leveled and, unless otherwise indicated, parallel or perpendicular to floor supports.

B. Maintain arrangement of conductor services throughout the raceway system.

C. Install a concrete mud slab for support of cellular metal, flush duct, or trench duct raceway. Construct mud slab with wire mesh in the top **1 inch (25 mm)** of concrete.

D. Install a vapor barrier between the cellular metal raceway and a substrate in contact with earth.

E. Arrange supports to attain proper elevation, alignment, and spacing of raceways. Fasten supports securely at ends and at intervals not to exceed **60 inch (1500 mm)**, to prevent movement during concrete pour.

F. Level raceway components with finished slab and make adjustments in raceway component elevation to accommodate indicated floor finishes.

G. Underfloor Raceway Junction Boxes: Install tops level and flush with finished floor. Install blank closure plates or plugs to close unused junction-box openings. Grout boxes in place to prevent movement during construction. Place top covers in inverted position during construction to prevent damage to surface of cover. Reinstall covers in proper position prior to final acceptance of the Work.

H. Install preset inserts per manufacturer's instructions.

I. Adjust supports to maintain a **1/8 to 3/8 inch (3.0 to 10 mm)** finished concrete cover over preset inserts.

J. Remove burrs, sharp edges, dents, and mechanical defects.

K. Cap or plug boxes, insert- and service-fitting openings, and open ends of raceways.

L. Install expansion fittings with suitable bonding jumper where raceways cross building expansion joints.

M. Ground and bond underfloor raceway components to create a continuous bonding path.

N. Seal raceways, cells, junction boxes, and inserts to prevent water, concrete, or foreign matter from entering raceways before and during pouring slab or placing fill. Tape joints or seal with compound, in accordance with underfloor raceway manufacturer's published instructions.

O. Install concrete surrounding underfloor raceways.

P. Afterset Inserts: Cut, hole saw, and drill slab and raceways to allow for installation at locations indicated on plans.

Q. Wiring must comply with NFPA 70 requirements for wet locations.

1. Install wiring from outlet insert toward junction boxes, then to termination at panel.
2. Splices: All splices and taps must be made in junction boxes. No splices or taps must be made in raceways or outlet inserts.

3.4 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections, including Grounding:

1. [**the Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections [**with assistance of factory-authorized service representative**] .

B. Field QC tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**], as directed by the Owner.

C. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.
2. Perform visual inspection of interior of each [**junction box**][**section of trench raceway**] to verify absence of dirt, dust, construction debris, and moisture. Replace damaged and malfunctioning components.
3. Prior to and after concrete pour, perform point-to-point tests of ground continuity and resistance of ground path between the most remote accessible fitting on each branch of each underfloor raceway system and the main electrical distribution grounding system.

    a. Determine cause and perform correction of any point-to-point resistance value that exceeds 0.05 Ω.
    b. Comply with NETA Acceptance Testing Specification about safety, suitability of test equipment, test instrument calibration, and test report and records.

D. Nonconforming Work:

1. Underfloor raceway products will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field QC Reports: Collect, assemble, and submit test and inspection reports.

3.5 CLEANING

A. Clean and swab out underfloor raceways, inserts, and junction boxes after finish has been applied to floor slab, and remove foreign material, dirt, and moisture. Leave interiors clean and dry.

3.6 PROTECTION

A. Protect underfloor raceway products from damage. Do not use the installed duct system as working platforms or walkways. Do not allow equipment or heavy traffic over duct during construction period, without first installing ramps over the duct. Ramps must be designed so that imposed loads are not transferred to the duct. Components of the system that are damaged during construction must be replaced.

END OF SECTION 26 05 19 13

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
26 05 19 13	26 05 19 00	Low-Voltage Electrical Power Conductors and Cables
26 05 19 13	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 19 16 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Communications-circuit accessories.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. [**Section 013100 "Project Management and Coordination"**]<**Insert Section number and title**> for preinstallation conference procedures.
5. Section 061000 "Rough Carpentry" furnishes equipment backing panels installed by this Section.
6. Section 260526 "Grounding and Bonding for Electrical Systems" specifies the following installed by this Section:

    a. Grounding and bonding conductors.
    b. Grounding and bonding clamps.
    c. Grounding and bonding bushings.
    d. Grounding and bonding hubs.
    e. Grounding and bonding connectors.
    f. Intersystem bonding bridge grounding connector.
    g. Grounding and bonding busbars.
    h. Signal reference grids.

7. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases for communications equipment installed by this Section.
8. Section 260533.16 "Boxes and Covers for Electrical Systems" furnishes the following installed by this Section:

    a. Metallic outlet boxes, device boxes, rings, and covers.
    b. Junction boxes and pull boxes.
    c. Cover plates for device boxes.

9. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration isolation and seismic-control devices referenced by this Section.
10. Section 260553 "Identification for Electrical Systems" specifies labels and warning signs for communications pathways installed by this Section.
11. Section 262716 "Electrical Cabinets and Enclosures" specifies the following installed by this Section:

    a. Cabinets and cutout boxes.
    b. Termination boxes.
    c. Miscellaneous enclosures.

d. Rack or frame systems.
e. Enclosure-mounted relocatable power taps.

12. Section 262719 "Multi-Outlet Assemblies" specifies the following installed by this Section:

    a. Wall-mounted, surface metal raceway multi-outlet assemblies.
    b. Indoor service poles.

13. Section 262726.33 "General-Grade Duplex Straight-Blade Receptacles" specifies duplex receptacles installed by this Section.
14. Section 262726.39 "Locking Receptacles" specifies locking receptacles installed by this Section.
15. Section 262726.51 "Connectors, Cords, and Plugs" specifies pendant flexible cords and connectors installed by this Section.
16. Section 270528 "Pathways for Communications Systems" specifies cable pathways serving communications equipment room fittings installed under this Section.

1.2 DEFINITIONS

A. Abbreviations for Communications Spaces:

1. EF: Entrance facility; generally serves campus or building. EF may include an ER.
2. ER: Equipment room; generally serves campus or building.
3. TE: Telecommunications enclosure; generally serves a single tenant or floor.
4. TR: Telecommunications room; generally serves a single tenant or floor.

B. Abbreviations for Communications Facilities:

1. HC: Horizontal cross-connect; also called "floor distributor" (FD).
2. IC: Intermediate cross-connect; also called "building distributor" (BD).
3. MC: Main cross-connect; also called "campus distributor" (CD).

C. Abbreviations for Grounding and Bonding:

1. BBC: Backbone bonding conductor, for connecting multiple TBBs serving the same floor.
2. PBB: Primary bonding busbar; located in main distribution frame room, ideally near electrical service entrance.
3. RBB: Rack bonding busbar; located in equipment cabinets and racks.
4. SBB: Secondary bonding busbar; located in intermediate distribution frame rooms.
5. TBB: Telecommunications bonding backbone, for connecting SBBs to PBB.
6. TBC: Telecommunications bonding conductor, for connecting PBB to intersystem bonding termination device or busbar at electrical service entrance.
7. TEBC: Telecommunications equipment bonding conductor, for connecting RBBs to SBBs or PBB.
8. UBC: Unit bonding conductor, for connecting individual communications equipment to RBBs or SBBs.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

B. Preinstallation Coordination Meeting(s): For communications equipment room planning. Conduct meeting(s) [**as videoconference**][**or**][**at Project site**]<**Insert location**> before <**Insert construction activity**>.

1. Attendees: Representative of Owner's information and communications technology staff[**that will be installing electronic equipment**][**and cables**], installers, fabricators, representatives of manufacturers, and administrants for field tests and inspections. Notify Architect[**, Construction Manager**][**, and Owner's Commissioning Authority**] of scheduled meeting dates.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing laboratory, certifying that model number corresponding to specified product complies with specified listing criteria.

B. Shop Drawings: Prepare and submit the following:

1. Communications Equipment Room Drawings, Diagrams, and Supporting Documents:

a. Include plans, elevations, sections, details, and attachments to other work.
b. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
c. Equipment Racks and Cabinets: Indicate workspace requirements and access for cable connections.
d. Switchboards, Panelboards, and Safety Switches: Indicate workspace requirements and access for cable connections.
e. Grounding and Bonding: Indicate location of busbars and their mounting details showing standoff insulators and wall mounting brackets.
f. Cable Trays, Large Raceways, Ducts, and Piping: Indicate elevation and route of vertical and horizontal cable trays, raceways or ducts larger than **2 inch (50 mm)** wide, and fire-suppression piping located inside communications equipment room.
g. Luminaires: Indicate elevation, orientation, and size of luminaires inside the communications equipment room for coordination with cable trays, equipment racks, cabinets, and other equipment.
h. Access Panels: Indicate locations, dimensions, and clearances required to open access panels in ducts, walls, or ceilings inside communications equipment room.
i. Controls: Indicate locations of sensors, switches, and push-buttons for HVAC, fire suppression, fire alarm, and standby power.
j. Adjust configurations and locations of distribution frames, cross-connects, and patch panels in equipment rooms to accommodate and optimize configurations and space requirements of communications equipment.
k. Adjust configurations and locations of equipment with distribution frames, cross-connects, and patch panels of cabling systems of other communications, electronic safety and security, and related systems that share space in equipment room.
l. Coordinate location of power raceways and receptacles with locations of communications equipment requiring electrical power to operate.

1.5 INFORMATIONAL SUBMITTALS

A. Manufacturers' published instructions.

1.6 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician I: Possessing active NICET EPT Level I certification. Able to work safely around electrical power equipment and cabling under supervision.

B. Electrical Power Testing (EPT) Technician II: Possessing active NICET EPT Level II certification. Able to isolate and ground electrical power equipment, to connect test equipment, and to conduct and document standard tests of basic equipment.

C. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, to conduct tests of complex equipment, to analyze test and equipment data, to plan a job, and to lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

D. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; to evaluate tests, test equipment, test results, and power system performance; to recommend actions to maintain or improve system performance; and to lead multi-team projects.

E. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

B. Seismic and Wind Performance: Installed assembly must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

1. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events[**, and unit must be fully operational after seismic events**].
2. Component Importance Factor (Ip): [**1.0**][**1.5**].
3. Component Amplification Factor (ap): [**1.0**][**2.5**]<**Insert value**>.
4. Component Response Modification Factor (Rp): [**1.5**][**2.0**][**2.5**][**6.0**]<**Insert value**>.
5. Component Overstrength Factor (Ωo): [**1.5**][**2.5**]<**Insert value**>.

2.2 COMMUNICATIONS-CIRCUIT ACCESSORIES

A. Description: This category covers devices intended for connecting communications circuits in accordance with Article 800 of NFPA 70.

B. UL DUXR - 66-Style or 110-Style Cross-Connect Frame :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Canada ULC**]
b. [**CommScope, Inc**]
c. [**Optical Cable Corporation (OCC)**]
d. [**Ortronics, Inc.**]
e. [**Panduit Corp**]
f. [**Siemon Co. (The)**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Canada ULC**]
b. [**CommScope, Inc**]
c. [**Optical Cable Corporation (OCC)**]
d. [**Ortronics, Inc.**]
e. [**Panduit Corp**]
f. [**Siemon Co. (The)**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. For Communications Circuits: UL CCN DUXR; including UL 1863 and UL 467.
b. For Audio/Video, Data, and Signaling Circuits: UL CCN DUXR; including UL 1977 and UL 467.

5. Standard Features: This product type includes the frame only. Block inserts and related termination equipment are specified in communications cabling Sections.

C. UL DUXR - Patch Panel :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**CommScope, Inc**]
b. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Legrand AV Inc.; Legrand North America, LLC**]
d. [**Leviton Manufacturing Co., Inc.**]
e. [**Ortronics, Inc.**]
f. [**Panduit Corp**]
g. [**Pass & Seymour; Legrand North America, LLC**]
h. [**Siemon Co. (The)**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**CommScope, Inc**]

b. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Legrand AV Inc.; Legrand North America, LLC**]
d. [**Leviton Manufacturing Co., Inc.**]
e. [**Ortronics, Inc.**]
f. [**Panduit Corp**]
g. [**Pass & Seymour; Legrand North America, LLC**]
h. [**Siemon Co. (The)**]
i. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. For Communications Circuits: UL CCN DUXR; including UL 1863 and UL 467.
   b. For Audio/Video, Data, and Signaling Circuits: UL CCN DUXR; including UL 1977 and UL 467.

5. Standard Features:

   a. Mounting: [**Equipment rack**][**Wall**].
   b. Style: [**Modular**][**Prepopulated 110 punch down**].
   c. EMI Compatibility: [**Shielded**][**Unshielded**].
   d. Configuration: [**Standard**][**High density**]; [**flat**][**angled**].
   e. Include provisions for labeling ports.
   f. Distribution Port Quantity: [**12**][**24**][**48**][**72**][**144**]<**Insert quantity**>.
   g. Cable Type: [**Cat. 5e**][**Cat. 6**][**Cat. 6a**][**Optical fiber**]<**Insert cable type**>.

PART 3 - EXECUTION

3.1 PREPARATION

A. Contact telecommunications service provider and arrange for installation of demarcation point, protected entrance terminals, and a housing when so directed by service provider.

3.2 SELECTION OF GROUNDING AND BONDING PRODUCTS FOR COMMUNICATIONS

A. Grounding and Bonding Conductors:

1. Communications Busbar Connections:

   a. TBC: Not smaller than [**1/0 AWG**][**3/0 AWG**]<**Insert wire size**> and no smaller than largest TBB.
   b. TBB: Not smaller than 2 kcmil per linear ft of conductor length, but not larger than 750 kcmil, unless otherwise indicated on Drawings.
   c. BBC: Not smaller than largest TBB to which it is connected unless otherwise indicated on Drawings.
   d. TEBC: Not smaller than [**2 AWG**]<**Insert wire size**> unless otherwise indicated on Drawings. Provide bolted connectors.
   e. UBC: Not smaller than [**6 AWG**]<**Insert wire size**> unless otherwise indicated on

Drawings. Provide bolted connectors.

f. Bonding Conductors to Structural Steel: Not smaller than [**6 AWG**]<**Insert wire size**> unless otherwise indicated on Drawings. Provide bolted clamp connectors.

2. Cable Tray Connections:

a. Cable Tray Equipment Grounding Conductor: [**8 AWG**][**6 AWG**][**4 AWG**].
b. Cable Tray Bonding Jumper: If not supplied by cable manufacturer, provide bonding jumper not smaller than [**10 AWG**][**6 AWG**] and not longer than **12 inch (300 mm)**. If jumper is wire, it must be terminated with lug having [**one hole and standard barrel for one crimp**][**two holes and long barrel for two crimps**]. If jumper is flexible braid, it must be terminated with [**one- or two-hole ferrule**][**one-hole ferrule**]. Attach with bonding screw or connector provided by cable tray manufacturer.

3. Underground Connections: Not smaller than [**2 AWG**]<**Insert wire size**>. Provide welded connectors, except bolted connectors may be used in handholes or manholes and as otherwise indicated on Drawings.

B. Grounding and Bonding Busbars:

1. PBB:

a. Dimensions: [**1/4 inch thick by 4 inch high (6.3 mm thick by 100 mm high)**]<**Insert dimensions**>.
b. Stand-Off Distance: [**2 inch (50 mm)**][**4 inch (100 mm)**]<**Insert dimension**>.

2. SBB:

a. Dimensions: [**1/4 inch thick by 4 inch high (6.3 mm thick by 100 mm high)**]<**Insert dimensions**>.
b. Stand-Off Distance: [**2 inch (50 mm)**][**4 inch (100 mm)**]<**Insert dimension**>.

C. Access Floor Signal Reference Grid:

1. Provide low-impedance path between telecommunications cabinets, equipment racks, and reference grid, by installing [**6 AWG**]<**Insert wire size**> bonding conductors in a grid pattern under the floor.

a. Install grid bonding conductors on **4 ft (1200 mm)** centers, so as to permit bonding of one structural pedestal for each access floor tile. Connect grid conductors together where they cross each other.
b. Bond SBBs in room to two or more bonding conductors of reference grid with TEBCs.
c. Bond equipment to nearest SBB and to reference grid with TEBCs.
d. Bond conduits and piping entering equipment room with TEBCs to nearest SBB and to grid conductor nearest entry into room.

D. Signal Reference Grid Wire Mesh:

1. Provide low-impedance path between telecommunications cabinets, equipment racks, and reference grid, by installing wire mesh [**in concrete floor slab**][**above ceiling**] with the following features:

a. Wire mesh, 10 AWG solid copper, **2 inch (50 mm)** spacing.
b. Wire mesh, 10 AWG solid copper, **3 inch (75 mm)** spacing.
c. Wire mesh, 10 AWG solid copper, **4 inch (100 mm)** spacing.
d. Wire mesh, 10 AWG solid copper, **6 inch (150 mm)** spacing.

e. Wire mesh, 10 AWG solid copper, **12 inch (300 mm)** spacing.
f. Wire mesh, 8 AWG solid copper, **4 inch (100 mm)** spacing.
g. Wire mesh, 8 AWG solid copper, **6 inch (150 mm)** spacing.
h. Wire mesh, 8 AWG solid copper, **8 inch (200 mm)** spacing.
i. Wire mesh, 8 AWG solid copper, **12 inch (300 mm)** spacing.
j. Wire mesh, 6 AWG solid copper, **4 inch (100 mm)** spacing.
k. Wire mesh, 6 AWG solid copper, **6 inch (150 mm)** spacing.
l. Wire mesh, 6 AWG solid copper, **8 inch (200 mm)** spacing.
m. Wire mesh, 6 AWG solid copper, **12 inch (300 mm)** spacing.
n. Wire mesh, 6 AWG solid copper, **24 inch (610 mm)** spacing.
o. Wire mesh, 4 AWG solid copper, **4 inch (100 mm)** spacing.
p. Wire mesh, 4 AWG solid copper, **6 inch (150 mm)** spacing.
q. Wire mesh, 4 AWG solid copper, **12 inch (300 mm)** spacing.
r. Wire mesh, 2 AWG solid copper, **4 inch (100 mm)** spacing.
s. Wire mesh, 2 AWG solid copper, **6 inch (150 mm)** spacing.
t. Wire mesh, 2 AWG solid copper, **12 inch (300 mm)** spacing.
u. Wire mesh, 2 AWG solid copper, **24 inch (610 mm)** spacing.

E. Signal Reference Grid Tape Mesh:

1. Provide low-impedance path between telecommunications cabinets, equipment racks, and reference grid, by installing tape mesh under floor finish with the following features:

a. Wire mesh, **2 inch (50 mm)** by **16 mil (0.4 mm)** solid copper, **12 inch (300 mm)** spacing.
b. Wire mesh, **2 inch (50 mm)** by **16 mil (0.4 mm)** solid copper, **24 inch (610 mm)** spacing.

3.3 SELECTION OF COLORS AND IDENTIFICATION MARKINGS

A. Comply with 29 CFR 1910.144 for color identification of hazards, and the following:

1. Fire-protection[**and fire-alarm**] equipment[**, including raceways,**] must be finished, painted, or suitably marked safety red.
2. Ceiling-mounted hangers, supports, cable trays, and raceways must be finished, painted, or suitably marked safety yellow where less than [**7.7 ft (2.3 m)**]<**Insert height**> above finished floor.

B. Pipe and Conduit Labeling: Comply with ASME A13.1[**and IEEE C2**].

C. Color Coding Scheme for Communications Cable and Terminations: Comply with BICSI N1 and TIA-598.

D. Accessible Fittings for Raceways: Identify cover of junction and pull box of the following systems with wiring system legend and system voltage. System legends must be as follows:

1. "COMMUNICATIONS."
2. "FIRE ALARM."
3. "SECURITY."
4. <**Insert name**>.

E. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations of high visibility. Identify by system and circuit designation.

F. Locations of Underground Lines: Underground-line warning tape for communication, control wiring, and optical-fiber cable.

G. Communications Vaults, Manholes, Handholes, and Pull and Junction Boxes: For conductors in vaults, pull and junction boxes, manholes, and handholes, use [**vinyl wraparound labels**][**self-adhesive wraparound labels**][**snap-around labels**][**snap-around color-coding bands**][**self-adhesive vinyl tape**] to identify phase.

1. Locate identification at changes in direction, at penetrations of walls and floors, at **50 ft (15 m)** maximum intervals in straight runs, and at **25 ft (7.6 m)** maximum intervals in congested areas.

H. Control-Circuit Conductor Identification: For conductors and cables in pull and junction boxes, manholes, and handholes, use [**write-on tags**][**self-adhesive labels**] with conductor or cable designation, origin, and destination.

I. Control-Circuit Conductor Termination Identification: For identification at terminations, provide [**heat-shrink preprinted tubes**][**self-adhesive labels**] with conductor designation.

J. Conductors to Be Extended in Future: Attach [**write-on tags**][**marker tape**] to conductors[**and list source**].

K. Auxiliary Electrical Systems Conductor Identification: [**Marker tape**][**Self-adhesive vinyl tape**] that is uniform and consistent with system used by manufacturer for factory-installed connections.

L. Equipment and Cabling Identification for Administrative Records and Labeling: Comply with TIA-606 requirements for [**Class 1**][**Class 2**][**Class 3**][**Class 4**] network administration.

M. Equipment Identification Labels:

1. Black letters on white field.
2. Indoor Equipment: [**Self-adhesive label**][**Baked-enamel signs**][**Metal-backed butyrate signs**][**Laminated acrylic or melamine plastic sign**].
3. Outdoor Equipment: [**Laminated acrylic or melamine sign**][**Stenciled legend 4 inch (100 mm) high**].
4. Equipment to Be Labeled:

    a. Racks, Frames, and Enclosures: Identify front and rear of each enclosure with self-adhesive labels[**containing equipment designation**].
    b. Patch Panels: [**Label individual rows in each rack, starting at top and working down, with self-adhesive labels.**][**Label individual rows and outlets, starting at to left and working down, with self-adhesive labels.**]
    c. Communications cabinets.
    d. Access doors and panels for concealed communications items.
    e. Emergency system boxes and enclosures.
    f. Contactors.
    g. Remote-controlled switches, dimmer modules, and control devices.
    h. Monitoring and control equipment.
    i. Fire-alarm equipment.
    j. Security equipment.
    k. Life-safety communications equipment.
    l. <**Insert equipment**>.

N. Backbone Cables: Label each cable with a [**vinyl-wraparound label**][**snap-around label**][**self-adhesive wraparound label**] indicating the location of the far or other end of the backbone cable. Patch panel or punch down block where cable is terminated should be labeled identically.

O. Horizontal Cables: Label each cable with a [**vinyl-wraparound label**][**snap-around label**][**self-adhesive wraparound label**].

P. Cover Plates: Label individual cover plates with self-adhesive labels. Place label at top of cover plate. Identify cover plate in accordance with TIA-606.

Q. Cable Ties: General purpose, for attaching tags, except as listed below:

1. Outdoors: UV-stabilized nylon.
2. In Spaces Handling Environmental Air: Plenum rated.

3.4 SELECTION OF SIGNS AND HAZARD MARKINGS

A. Comply with 29 CFR 1910.145 for danger, caution, warning, and safety instruction signs.

B. Signs, labels, and tags required for personnel safety must comply with the following standards:

1. Safety Colors: NEMA Z535.1.
2. Facility Safety Signs: NEMA Z535.2.
3. Safety Symbols: NEMA Z535.3.
4. Product Safety Signs and Labels: NEMA Z535.4.
5. Safety Tags and Barricade Tapes for Temporary Hazards: NEMA Z535.5.

C. Electrical Hazard Warnings:

1. Multiple Power Sources Warning Legend: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT/RACK HAS MULTIPLE POWER SOURCES."
2. <**Insert names and wording of warning signs or labels**>.

D. Operating Instruction Signs: [**Self-adhesive labels**][**Baked-enamel warning signs**][**Metal-backed, butyrate warning signs**][**Laminated acrylic or melamine plastic signs**].

E. Emergency Operating Instruction Signs: [**Self-adhesive labels**][**Baked-enamel warning signs**][**Metal-backed, butyrate warning signs**][**Laminated acrylic or melamine plastic signs**] with white legend on red background with minimum **3/8 inch (10 mm)** high letters for emergency instructions at equipment used for <**Insert emergency operations**>.

F. Label TBC, TBBs, and BBCs at attachment points with legend: "WARNING! COMMUNICATIONS BONDING CONDUCTOR. DO NOT REMOVE OR DISCONNECT!"

3.5 INSTALLATION OF FITTINGS FOR ENTRANCE FACILITY

A. Reference Standards for Installation: Unless more stringent installation requirements are specified in Contract Documents or manufacturers' published instructions, comply with the following:

1. Designated Critical Operations Areas: Comply with Article 708 of NFPA 70.
2. Communications Systems: Comply with Ch. 8 of NFPA 70 and with BICSI N1.
3. Grounding and Bonding: Comply with Article 250 of NFPA 70 and with BICSI N3.
4. Consult Architect for resolution of conflicting requirements.

B. Provide the following specified products in entrance facility room or space as indicated on Drawings:

1. Equipment backing panel .

a. Install from **6 inch (150 mm)** to **8 ft, 6 inch (2588 mm)** above finished floor. If plywood is

fire treated, ensure that fire-treatment stamp is visible after installation.

2. PBB .
3. NEMA 5-20R [**isolated ground,**][**extra-heavy-duty,**]<**Insert description**> duplex straight-blade receptacle, outlet box, and cover plate .
4. [**NEMA L5-20R**][**NEMA L6-20R**][**NEMA L14-20R**][**, isolated ground,**]<**Insert description**> locking receptacle, outlet box, and cover plate .
5. [**NEMA L5-20R**][**NEMA L6-20R**][**NEMA L14-20R**][**, isolated ground,**]<**Insert description**> pendant, extra-hard-usage, jacketed, flexible cord and connector .
6. Surface-mounted multi-outlet assembly .
7. Indoor service pole .
8. [**19 inch open**][**19 inch enclosed**][**23 inch open**][**23 inch enclosed**] equipment rack with RBB and enclosure-mounted relocatable power tap .
9. 66-style or 110-style cross-connect frame .
10. Patch panel .

3.6 INSTALLATION OF FITTINGS FOR EQUIPMENT ROOM

A. Reference Standards for Installation: Unless more stringent installation requirements are specified in Contract Documents or manufacturers' published instructions, comply with the following:

1. Designated Critical Operations Areas: Comply with Article 708 of NFPA 70.
2. Communications Systems: Comply with Ch. 8 of NFPA 70 and with BICSI N1.
3. Grounding and Bonding: Comply with Article 250 of NFPA 70 and with BICSI N3.
4. Consult Architect for resolution of conflicting requirements.

B. Provide the following specified products in entrance facility room or space as indicated on Drawings:

1. Equipment backing panel .

    a. Install from **6 inch (150 mm)** to **8 ft, 6 inch (2588 mm)** above finished floor. If plywood is fire treated, ensure that fire-treatment stamp is visible after installation.

2. PBB .
3. NEMA 5-20R [**isolated ground,**][**extra-heavy-duty,**]<**Insert description**> duplex straight-blade receptacle, outlet box, and cover plate .
4. [**NEMA L5-20R**][**NEMA L6-20R**][**NEMA L14-20R**][**, isolated ground,**]<**Insert description**> locking receptacle, outlet box, and cover plate .
5. [**NEMA L5-20R**][**NEMA L6-20R**][**NEMA L14-20R**][**, isolated ground,**]<**Insert description**> pendant, extra-hard-usage, jacketed, flexible cord and connector .
6. Surface-mounted multi-outlet assembly .
7. Indoor service pole .
8. [**19 inch open**][**19 inch enclosed**][**23 inch open**][**23 inch enclosed**] equipment rack with RBB and enclosure-mounted relocatable power tap .
9. 110-style cross-connect frame .
10. Patch panel .

3.7 INSTALLATION OF FITTINGS FOR TELECOMMUNICATIONS ROOMS

A. Reference Standards for Installation: Unless more stringent installation requirements are specified in Contract Documents or manufacturers' published instructions, comply with the following:

1. Designated Critical Operations Areas: Comply with Article 708 of NFPA 70.
2. Communications Systems: Comply with Ch. 8 of NFPA 70 and with BICSI N1.

3. Grounding and Bonding: Comply with Article 250 of NFPA 70 and with BICSI N3.
4. Consult Architect for resolution of conflicting requirements.

B. Provide the following specified products in intermediate distribution frame room or space as indicated on Drawings:

1. Equipment backing panel .

   a. Install from **6 inch (150 mm)** to **8 ft, 6 inch (2588 mm)** above finished floor. If plywood is fire treated, ensure that fire-treatment stamp is visible after installation.

2. SBB .
3. NEMA 5-20R [**isolated ground,**][**extra-heavy-duty,**]<**Insert description**> duplex straight-blade receptacle, outlet box, and cover plate .
4. [**NEMA L5-20R**][**NEMA L6-20R**][**NEMA L14-20R**][**, isolated ground,**]<**Insert description**> locking receptacle, outlet box, and cover plate .
5. [**NEMA L5-20R**][**NEMA L6-20R**][**NEMA L14-20R**][**, isolated ground,**]<**Insert description**> pendant, extra-hard-usage, jacketed, flexible cord and connector .
6. Surface-mounted multi-outlet assembly .
7. Indoor service pole .
8. [**19 inch open**][**19 inch enclosed**][**23 inch open**][**23 inch enclosed**] equipment rack with RBB and enclosure-mounted relocatable power tap .
9. 110-style cross-connect frame .
10. Patch panel .

3.8 INSTALLATION OF BONDING FOR COMMUNICATIONS

A. Grounding of Communications: Bond PBB and SBBs to grounding electrode conductors at electrical power service entrance, and at electrical power derived systems serving communications equipment, using intersystem bonding termination device.

1. Structural Steel: Where structural steel of steel frame building is readily accessible within room or space, bond each SBB and PBB to vertical steel of building frame.

B. Comply with manufacturer's published instructions.

C. Reference Standards:

1. Bonding of Communications: Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with BICSI N3.
2. Consult Architect for resolution of conflicting requirements.

D. Special Techniques:

1. Bonding of Busbars:

   a. Indicate locations of grounding busbars on Drawings. Install busbars horizontally, on insulated spacers **12 inch (300 mm)** above finished floor unless otherwise indicated.
   b. Where busbars are indicated on both sides of doorways, route bonding conductor up to top of door frame, across top of doorway, and down; connect to continuation of horizontal busbar.

2. Bonding Conductors:

a. Stacking of conductors under a single bolt is not permitted when connecting to busbars.
b. Assemble wire connector to conductor, complying with manufacturer's published instructions and as follows:

1) Use crimping tool and die specific to connector.
2) Pretwist conductor.
3) Apply antioxidant compound to bolted and compression connections.

c. Install in straightest and shortest route between origination and termination point, and no longer than required. Bend radius must not be smaller than 10 times diameter of conductor. No single bend may exceed 90 degrees.
d. Install without splices.
e. Support conductors at not more than **36 inch (900 mm)** intervals.
f. Outside telecommunications rooms, install conductors in metric designator 21 (trade size 3/4) PVC-80 conduit until conduit enters telecommunications room. Install bonding conductors in EMT-A or EMT-SS when routed through plenum. Do not install bonding conductors in EMT-S unless otherwise indicated on Drawings.

1) If bonding conductor must be installed in EMT-S or other ferrous metallic raceway, bond conductor to raceway using grounding bushing and bond both ends of raceway to SBB.

3. Provide TBC and terminate ends to PBB and intersystem bonding [**termination device**][**busbar**] at electrical service entrance in accordance with Section 250.94, "Bonding for Communication Systems," of NFPA 70.
4. Busbar Interconnections: Bond SBBs to PBB with TBBs. If more than one TBB is installed, bond TBBs together with BBCs where required by TIA-607.
5. Communications Enclosures: Bond metallic enclosures of telecommunications equipment with UBCs to nearest SBB or PBB.
6. Equipment Racks: Bond metallic components of enclosures to RBB using UBCs. Provide [**top-mounted**][**vertically mounted**] RBB if not provided by enclosure or rack manufacturer. Bond RBB to SBB with TEBC. Power connection must comply with NFPA 70; equipment grounding conductor in power cord of cord- and plug-connected equipment must be considered supplemental to bonding requirements in this Section.
7. Shielded Cable: Bond shield of shielded cable to SBB in communications rooms and spaces. Comply with TIA-568.1 and TIA-568.2 when grounding shielded balanced twisted-pair cables.
8. Primary Protector: Bond to PBB with insulated bonding conductor.
9. Electrical Power Panelboards: Where electrical panelboards for communications equipment are located in same room or space, bond each ground bar of panelboard to SBB.
10. Cable Trays: Provide continuous electrical path by installing bonding clips and jumpers. Bond each end to nearest SBB.
11. Ladder Racks: Provide continuous electrical path by installing bonding clips and jumpers. Bond each end to nearest SBB.
12. Access Floors: Bond metal parts of access floors to SBB.
13. <**Insert connections for other equipment**>.

3.9 FIELD QUALITY CONTROL FOR BONDING OF COMMUNICATIONS

A. Administrant for Grounding and Bonding Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections

on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

1. <**Insert requirements**>.

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

D. Tests and Inspections:

1. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with calibrated torque wrench in accordance with manufacturer's published instructions.
2. Test bonding connections of system using AC earth ground-resistance tester, taking two-point bonding measurements in each telecommunications equipment room containing PBB or SBB, using process recommended by BICSI N1. Conduct tests with facility in operation.

a. Measure resistance between PBB and electrical service intersystem termination point. Maximum acceptable value is 100 mΩ.

1) If measured resistance from electrical service equipment to ground exceeds [**5 Ω**]<**Insert resistance**>, notify Architect and include recommendations to reduce resistance to ground.

b. Measure resistance between SBBs and PBB. Maximum acceptable value is 100 mΩ.

3. Test for ground loop currents using digital clamp-on ammeter, with full scale not more than 10 A, displaying current in increments of 0.01 A at accuracy of plus or minus 2.0 percent.

a. With grounding infrastructure completed and communications system electronics operating, measure current in bonding conductors connected to PBB[**and to SBBs**]. Maximum acceptable AC current level is 1 A.

E. Nonconforming Work:

1. Communications bonding will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Collect, assemble, and submit test and inspection reports.

3.10 PROTECTION

A. After installation, protect communications equipment room fittings from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

END OF SECTION 26 05 19 16

SECTION 26 05 19 16A - COMMUNICATIONS COPPER BACKBONE CABLING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Backbone communications cables.
2. Communications-, audio/video-, data-, and other signaling-circuit accessories.

B. Products Furnished, but Not Installed, under This Section:

1. <**Insert products furnished, but not installed**>.

C. Products Installed, but Not Furnished, under This Section:

1. See Section 270553 "Identification for Communications Systems" for communications equipment labels.
2. See Section 271513 "Communications Copper Horizontal Cabling" for Type CM, CMG, and CMX cabling.

D. Related Requirements:

1. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
2. Section 270010 "Supplemental Requirements for Communications" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.

1.2 UNIT PRICES

A. See Section 012200 "Unit Prices" for description of unit prices affecting items specified in this Section.

1.3 ALTERNATES

A. See Section 012300 "Alternates" for description of alternates affecting items specified in this Section.

1.4 DEFINITIONS

A. Cable Types:

1. FTP: Foil shielded twisted pair.
2. F/FTP: Bundle of FTP cables with overall foil shield.
3. F/UTP: Bundle of UTP cables with overall foil shield.
4. S/FTP: Bundle of FTP cables with overall braided shield.
5. S/UTP: Bundle of UTP cables with overall braided shield.
6. UTP: Unshielded twisted pair.

B. Cross-Connect: A facility enabling the termination of cable elements and their interconnection or cross-connection.

C. EMI: Electromagnetic interference.

D. IDC: Insulation displacement connector.

1.5 SEQUENCING

A. Wet-work in spaces must be completely dry, and HVAC system must be operating and maintaining ambient temperature and humidity conditions within manufacturer's recommended limits, before delivering and installing cables and connecting materials.

1.6 ACTION SUBMITTALS

A. Product Data:

1. Backbone communications cable.
2. Communications-, audio/video-, data-, and other signaling-circuit accessories.

B. Shop Drawings:

1. Cable labeling schedules.
2. Cabling administration diagrams.
3. Wiring diagrams.
4. Cross-connect and patch panel details.
5. Twisted-pair cable testing plan.

C. Field quality-control reports.

D. Sustainable design submittals.

1. Backbone communications cable.

1.7 INFORMATIONAL SUBMITTALS

A. Manufacturers' Published Instructions:

1. Backbone communications cable.
2. Communications-, audio/video-, data-, and other signaling-circuit accessories.

B. Field Reports:

1. Factory Test Reports:

a. Backbone communications cable.

1.8 CLOSEOUT SUBMITTALS

A. Warranty documentation.

1.9 MAINTENANCE MATERIAL SUBMITTALS

A. Spare Parts: For communications-, audio/video-, data-, and other signaling-circuit accessories.

B. Special Tools: For communications-, audio/video-, data-, and other signaling-circuit accessories.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Test cables upon receipt at Project site.

1. Test each pair of twisted-pair cable for open and short circuits.

1.11 WARRANTY FOR COMMUNICATIONS COPPER BACKBONE CABLE ASSEMBLIES

A. Special Installer Extended Warranty: Installer warrants that fabricated and installed communications copper backbone cable assemblies perform in accordance with specified requirements and agrees to repair or replace cable assemblies that fail to perform as specified within extended-warranty period.

1. Extended-Warranty Period: [**Two**][**Three**][**Four**]<**Insert number**> years from date of Substantial Completion; full coverage for labor, materials, and equipment.

PART 2 - PRODUCTS

2.1 BACKBONE COMMUNICATIONS CABLES

A. Description: This category covers multiple conductor jacketed communications cable for telephone and other communications circuits for use in risers and plenums as described in Article 800 of NFPA 70.

B. Performance Criteria:

1. Regulatory Requirements:

a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2. Listing Criteria:

a. Certified Cable: UL CCN DUZX; including UL 444.
b. Verified Cable: UL CCN DVBI; including TIA-568.2.
c. Type CMP: NFPA 262.
d. Type CMR: UL 1666.
e. Limited Smoke: Marked "-LS" in accordance with UL 1685.
f. Halogen-Free: Marked "-HF" in accordance with UL Subject 2885.
g. Low Smoke and Halogen-Free: Marked "-LSHF" in accordance with IEC 61034-2.
h. Cable Heating Test: Marked "-LP" with current rating and temperature rating.

C. Source Quality Control:

1. Product Data: Prepare and submit catalog cuts, brochures, and performance data illustrating size, physical appearance, and other characteristics of product.

2. Sustainable Design Submittals: Prepare and submit documentation for the following:

    a. Product Data: For each conductor and cable indicating lead content of less than 300 parts per million.
    b. Environmental Product Declaration: For each product.
    c. Health Product Declaration: For each product.
    d. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
    e. Third-Party Certifications: For each product.
    f. Third-Party Certified Life Cycle Assessment: For each product.

3. Manufacturer's Published Instructions: Prepare and submit installation, testing, and operating instructions for product.
4. Factory Tests:

    a. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.
    b. Testing Administrant: [**Owner will engage**][**Engage**] qualified electrical testing agency to evaluate cable reels.
    c. Factory Tests and Inspections: Test and inspect cable on reels, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with TIA-568.2 before delivering to site. Affix label with name and date of [**manufacturer's**][**qualified electrical testing laboratory's**] certification of system compliance.
    d. Nonconforming Work:

        1) Cable reels that do not pass tests and inspections will be considered defective.

    e. Factory Test Reports: Prepare and submit factory test and inspection reports.

D. UL DUZX and DVBI - Type CMP, Category 3 Communications Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**CommScope, Inc**]
    b. [**Hitachi Cable America Inc.**]
    c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    d. [**Mohawk; a division of Belden Networking, Inc.**]
    e. [**Molex Premise Networks**]
    f. [**Panduit Corp**]
    g. [**Prysmian Cables and Systems; Prysmian Group North America**]
    h. [**Superior Essex Inc.; subsidiary of LS Corp.**]
    i. [**West Penn Wire; brand of Belden, Inc.**]
    j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**CommScope, Inc**]
    b. [**Hitachi Cable America Inc.**]
    c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell**

Incorporated]
d. [**Mohawk; a division of Belden Networking, Inc.**]
e. [**Molex Premise Networks**]
f. [**Panduit Corp**]
g. [**Prysmian Cables and Systems; Prysmian Group North America**]
h. [**Superior Essex Inc.; subsidiary of LS Corp.**]
i. [**West Penn Wire; brand of Belden, Inc.**]
j. <**Insert manufacturer's name**>

3. Product Marking: Type CMP; Category 3.
4. Options:

a. Quantity of Pairs: [**25**][**50**][**100**]<**Insert number**>.
b. Shielding/Screening: [**UTP**][**FTP**][**F/UTP**][**F/FTP**].
c. Jacket:
[**White**][**Gray**][**Blue**][**Yellow**][**Orange**][**Pink**][**Green**][**Red**][**Black**][**Brown**][**Beige**][**Mauve**]<**Insert color**> thermoplastic.

E. UL DUZX and DVBI - Type CMP, Category 5e Communications Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**CommScope, Inc**]
b. [**Hitachi Cable America Inc.**]
c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Mohawk; a division of Belden Networking, Inc.**]
e. [**Molex Premise Networks**]
f. [**Panduit Corp**]
g. [**Prysmian Cables and Systems; Prysmian Group North America**]
h. [**Superior Essex Inc.; subsidiary of LS Corp.**]
i. [**West Penn Wire; brand of Belden, Inc.**]
j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**CommScope, Inc**]
b. [**Hitachi Cable America Inc.**]
c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Mohawk; a division of Belden Networking, Inc.**]
e. [**Molex Premise Networks**]
f. [**Panduit Corp**]
g. [**Prysmian Cables and Systems; Prysmian Group North America**]
h. [**Superior Essex Inc.; subsidiary of LS Corp.**]
i. [**West Penn Wire; brand of Belden, Inc.**]
j. <**Insert manufacturer's name**>

F. UL DUZX and DVBI - Type CMP, Category 6 Communications Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the**

following][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**CommScope, Inc**]
b. [**Hitachi Cable America Inc.**]
c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Mohawk; a division of Belden Networking, Inc.**]
e. [**Molex Premise Networks**]
f. [**Panduit Corp**]
g. [**Prysmian Cables and Systems; Prysmian Group North America**]
h. [**Superior Essex Inc.; subsidiary of LS Corp.**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**CommScope, Inc**]
b. [**Hitachi Cable America Inc.**]
c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Mohawk; a division of Belden Networking, Inc.**]
e. [**Molex Premise Networks**]
f. [**Panduit Corp**]
g. [**Prysmian Cables and Systems; Prysmian Group North America**]
h. [**Superior Essex Inc.; subsidiary of LS Corp.**]
i. <**Insert manufacturer's name**>

3. Product Marking: Type CMP; Category 6.
4. Options:

a. Quantity of Pairs: [**24**][**Four**]<**Insert number**>.
b. Shielding/Screening: [**UTP**][**FTP**][**F/UTP**][**F/FTP**].
c. Jacket: [**White**][**Gray**][**Blue**][**Yellow**]<**Insert color**> thermoplastic.

G. UL DUZX and DVBI - Type CMP, Category 6A Communications Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**CommScope, Inc**]
b. [**Hitachi Cable America Inc.**]
c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Molex Premise Networks**]
e. [**Panduit Corp**]
f. [**Prysmian Cables and Systems; Prysmian Group North America**]
g. [**Superior Essex Inc.; subsidiary of LS Corp.**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

a. [**CommScope, Inc**]
b. [**Hitachi Cable America Inc.**]
c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Molex Premise Networks**]
e. [**Panduit Corp**]
f. [**Prysmian Cables and Systems; Prysmian Group North America**]
g. [**Superior Essex Inc.; subsidiary of LS Corp.**]
h. <**Insert manufacturer's name**>

3. Product Marking: Type CMP; Category 6A.
4. Options:

a. Quantity of Pairs: [**Four**]<**Insert number**>.
b. Shielding/Screening: [**UTP**][**FTP**][**F/UTP**][**F/FTP**].
c. Jacket: [**White**][**Gray**][**Blue**][**Yellow**]<**Insert color**> thermoplastic.

H. UL DUZX and DVBI - Type CMR, Category 3 Communications Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Inc.**]
b. [**CommScope, Inc**]
c. [**Hitachi Cable America Inc.**]
d. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
e. [**Leviton Manufacturing Co., Inc.**]
f. [**Mohawk; a division of Belden Networking, Inc.**]
g. [**Molex Premise Networks**]
h. [**Panduit Corp**]
i. [**Prysmian Cables and Systems; Prysmian Group North America**]
j. [**Superior Essex Inc.; subsidiary of LS Corp.**]
k. [**West Penn Wire; brand of Belden, Inc.**]
l. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**CommScope, Inc**]
c. [**Hitachi Cable America Inc.**]
d. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
e. [**Leviton Manufacturing Co., Inc.**]
f. [**Mohawk; a division of Belden Networking, Inc.**]
g. [**Molex Premise Networks**]
h. [**Panduit Corp**]
i. [**Prysmian Cables and Systems; Prysmian Group North America**]
j. [**Superior Essex Inc.; subsidiary of LS Corp.**]

k. [**West Penn Wire; brand of Belden, Inc.**]
l. <**Insert manufacturer's name**>

3. Product Marking: Type CMR; Category 3.
4. Options:

a. Quantity of Pairs: [**25**][**50**][**100**]<**Insert number**>.
b. Shielding/Screening: [**UTP**][**FTP**][**F/UTP**][**F/FTP**].
c. Jacket:
[**White**][**Gray**][**Blue**][**Yellow**][**Orange**][**Pink**][**Green**][**Red**][**Black**][**Brown**][**Beige**][**Mauve**]<**Insert color**> thermoplastic.

I. UL DUZX and DVBI - Type CMR, Category 5e Communications Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Inc.**]
b. [**CommScope, Inc**]
c. [**Hitachi Cable America Inc.**]
d. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
e. [**Leviton Manufacturing Co., Inc.**]
f. [**Mohawk; a division of Belden Networking, Inc.**]
g. [**Molex Premise Networks**]
h. [**Panduit Corp**]
i. [**Prysmian Cables and Systems; Prysmian Group North America**]
j. [**Superior Essex Inc.; subsidiary of LS Corp.**]
k. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**CommScope, Inc**]
c. [**Hitachi Cable America Inc.**]
d. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
e. [**Leviton Manufacturing Co., Inc.**]
f. [**Mohawk; a division of Belden Networking, Inc.**]
g. [**Molex Premise Networks**]
h. [**Panduit Corp**]
i. [**Prysmian Cables and Systems; Prysmian Group North America**]
j. [**Superior Essex Inc.; subsidiary of LS Corp.**]
k. <**Insert manufacturer's name**>

3. Product Marking: Type CMR; Category 5e.
4. Options:

a. Quantity of Pairs: [**25**][**50**]<**Insert number**>.
b. Shielding/Screening: [**UTP**][**FTP**][**F/UTP**][**F/FTP**].
c. Jacket: [**White**][**Gray**]<**Insert color**> thermoplastic.

J. UL DUZX and DVBI - Type CMR, Category 6 Communications Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Belden Inc.**]
    b. [**CommScope, Inc**]
    c. [**Hitachi Cable America Inc.**]
    d. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    e. [**Leviton Manufacturing Co., Inc.**]
    f. [**Mohawk; a division of Belden Networking, Inc.**]
    g. [**Molex Premise Networks**]
    h. [**Panduit Corp**]
    i. [**Prysmian Cables and Systems; Prysmian Group North America**]
    j. [**Superior Essex Inc.; subsidiary of LS Corp.**]
    k. [**TE Connectivity Ltd.**]
    l. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Belden Inc.**]
    b. [**CommScope, Inc**]
    c. [**Hitachi Cable America Inc.**]
    d. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    e. [**Leviton Manufacturing Co., Inc.**]
    f. [**Mohawk; a division of Belden Networking, Inc.**]
    g. [**Molex Premise Networks**]
    h. [**Panduit Corp**]
    i. [**Prysmian Cables and Systems; Prysmian Group North America**]
    j. [**Superior Essex Inc.; subsidiary of LS Corp.**]
    k. [**TE Connectivity Ltd.**]
    l. <**Insert manufacturer's name**>

3. Product Marking: Type CMR; Category 6.
4. Options:

    a. Quantity of Pairs: [**24**][**Four**]<**Insert number**>.
    b. Shielding/Screening: [**UTP**][**FTP**][**F/UTP**][**F/FTP**].
    c. Jacket: [**White**][**Gray**][**Blue**][**Yellow**]<**Insert color**> thermoplastic.

K. UL DUZX and DVBI - Type CMR, Category 6A Communications Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Belden Inc.**]
    b. [**CommScope, Inc**]
    c. [**Hitachi Cable America Inc.**]

d. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
e. [**Molex Premise Networks**]
f. [**Panduit Corp**]
g. [**Prysmian Cables and Systems; Prysmian Group North America**]
h. [**Superior Essex Inc.; subsidiary of LS Corp.**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**CommScope, Inc**]
c. [**Hitachi Cable America Inc.**]
d. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
e. [**Molex Premise Networks**]
f. [**Panduit Corp**]
g. [**Prysmian Cables and Systems; Prysmian Group North America**]
h. [**Superior Essex Inc.; subsidiary of LS Corp.**]
i. <**Insert manufacturer's name**>

3. Product Marking: Type CMR; Category 6A.
4. Options:

a. Quantity of Pairs: [**Four**]<**Insert number**>.
b. Shielding/Screening: [**UTP**][**FTP**][**F/UTP**][**F/FTP**].
c. Jacket: [**White**][**Gray**][**Blue**][**Yellow**]<**Insert color**> thermoplastic.

L. UL DUZX and DVBI - Type CMR, Category 8 Communications Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**CommScope, Inc**]
b. [**Superior Essex Inc.; subsidiary of LS Corp.**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**CommScope, Inc**]
b. [**Superior Essex Inc.; subsidiary of LS Corp.**]
c. <**Insert manufacturer's name**>

3. Product Marking: Type CMR; Category 8.
4. Options:

a. Quantity of Pairs: [**Four**]<**Insert number**>.
b. Shielding/Screening: [**F/FTP**][**S/FTP**].
c. Jacket: [**White**][**Gray**][**Blue**][**Yellow**]<**Insert color**> thermoplastic.

M. UL DUZX and DVBI - Type CMR-LS, Category 3 Communications Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Superior Essex Inc.; subsidiary of LS Corp.**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Superior Essex Inc.; subsidiary of LS Corp.**]
   c. <**Insert manufacturer's name**>

3. Product Marking: Type CMR-LS; Category 3.
4. Options:

   a. Quantity of Pairs: [**25**][**50**][**100**]<**Insert number**>.
   b. Shielding/Screening: [**UTP**][**FTP**][**F/UTP**][**F/FTP**].
   c. Jacket:
   [**White**][**Gray**][**Blue**][**Yellow**][**Orange**][**Pink**][**Green**][**Red**][**Black**][**Brown**][**Beige**][**Mauve**]<**Insert color**> thermoplastic.

N. UL DUZX and DVBI - Type CMR-LS, Category 5e Communications Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Superior Essex Inc.; subsidiary of LS Corp.**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Superior Essex Inc.; subsidiary of LS Corp.**]
   c. <**Insert manufacturer's name**>

3. Product Marking: Type CMR-LS; Category 5e.
4. Options:

   a. Quantity of Pairs: [**25**][**50**]<**Insert number**>.
   b. Shielding/Screening: [**UTP**][**FTP**][**F/UTP**][**F/FTP**].

c. Jacket: [**White**][**Gray**]<**Insert color**> thermoplastic.

O. UL DUZX and DVBI - Type CMR-LS, Category 6 Communications Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Superior Essex Inc.; subsidiary of LS Corp.**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Superior Essex Inc.; subsidiary of LS Corp.**]
   c. <**Insert manufacturer's name**>

3. Product Marking: Type CMR-LS; Category 6.
4. Options:

   a. Quantity of Pairs: [**24**][**Four**]<**Insert number**>.
   b. Shielding/Screening: [**UTP**][**FTP**][**F/UTP**][**F/FTP**].
   c. Jacket: [**White**][**Gray**][**Blue**][**Yellow**]<**Insert color**> thermoplastic.

P. UL DUZX and DVBI - Type CMR-LSHF, Category 3 Communications Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Superior Essex Inc.; subsidiary of LS Corp.**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Superior Essex Inc.; subsidiary of LS Corp.**]
   c. <**Insert manufacturer's name**>

3. Product Marking: Type CMR-LSHF; Category 3.
4. Options:

   a. Quantity of Pairs: [**25**][**50**][**100**]<**Insert number**>.

b. Shielding/Screening: [**UTP**][**FTP**][**F/UTP**][**F/FTP**].
c. Jacket:
[**White**][**Gray**][**Blue**][**Yellow**][**Orange**][**Pink**][**Green**][**Red**][**Black**][**Brown**][**Beige**][**Mauve**]<**Insert color**> thermoplastic.

Q. UL DUZX and DVBI - Type CMR-LSHF, Category 5e Communications Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**CommScope, Inc**]
b. [**Hitachi Cable America Inc.**]
c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Superior Essex Inc.; subsidiary of LS Corp.**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**CommScope, Inc**]
b. [**Hitachi Cable America Inc.**]
c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Superior Essex Inc.; subsidiary of LS Corp.**]
e. <**Insert manufacturer's name**>

3. Product Marking: Type CMR-LSHF; Category 5e.
4. Options:

a. Quantity of Pairs: [**25**][**50**]<**Insert number**>.
b. Shielding/Screening: [**UTP**][**FTP**][**F/UTP**][**F/FTP**].
c. Jacket: [**White**][**Gray**]<**Insert color**> thermoplastic.

R. UL DUZX and DVBI - Type CMR-LSHF, Category 6 Communications Cable :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**CommScope, Inc**]
b. [**Hitachi Cable America Inc.**]
c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Superior Essex Inc.; subsidiary of LS Corp.**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**CommScope, Inc**]

b. [**Hitachi Cable America Inc.**]
c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Superior Essex Inc.; subsidiary of LS Corp.**]
e. <**Insert manufacturer's name**>

3. Product Marking: Type CMR-LSHF; Category 6.
4. Options:

a. Quantity of Pairs: [**24**][**Four**]<**Insert number**>.
b. Shielding/Screening: [**UTP**][**FTP**][**F/UTP**][**F/FTP**].
c. Jacket: [**White**][**Gray**][**Blue**][**Yellow**]<**Insert color**> thermoplastic.

2.2 COMMUNICATIONS-, AUDIO/VIDEO-, DATA-, AND OTHER SIGNALING-CIRCUIT ACCESSORIES

A. Description: This category covers devices intended for use in residential or commercial communications-station applications for connections to communications circuit as defined in Article 800 of NFPA 70.

B. Performance Criteria:

1. Regulatory Requirements:

a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
b. <**Insert requirements**>.

2. Listing Criteria:

a. Communications-Circuit Accessories: UL CCN DUXR; including UL 1863.
b. Audio/Video-, Data-, and Other Signaling-Circuit Accessories: UL CCN DUXR; including UL 1977.
c. For Use in Air-Handling Spaces: UL 2043.

C. Source Quality Control:

1. Product Data: Prepare and submit catalog cuts, brochures, and performance data illustrating size, physical appearance, and other characteristics of product.
2. Manufacturer's Published Instructions: Prepare and submit installation, testing, and operating instructions for product.

D. UL DUXR - Connecting Block :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**CommScope, Inc**]
b. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Panduit Corp**]

e. [**Siemon Co. (The)**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**CommScope, Inc**]
b. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Panduit Corp**]
e. [**Siemon Co. (The)**]
f. <**Insert manufacturer's name**>

3. Options:

a. Configuration: [**110-style IDC for Category 5e**][**110-style IDC for Category 6**][**66-style IDC for Category 5e**].
b. Quantity of Terminations: Number of cables terminated on block, plus [**25**]<**Insert number**> percent spare, integral with connector bodies, including plugs and jacks where indicated.

E. UL DUXR - Cross-Connect :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Inc.**]
b. [**CommScope, Inc**]
c. [**Panduit Corp**]
d. [**Siemon Co. (The)**]
e. [**TE Connectivity Ltd.**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**CommScope, Inc**]
c. [**Panduit Corp**]
d. [**Siemon Co. (The)**]
e. [**TE Connectivity Ltd.**]
f. <**Insert manufacturer's name**>

3. Options:

a. Number of Terminals per Field: [**One**]<**Insert number**> for each conductor in assigned cables.
b. Performance Rating: [**Category 5e**][**Category 6**][**Category 6A**][**Category 8**].

F. UL DUXR - Patch Panel :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Belden Inc.**]
    b. [**CommScope, Inc**]
    c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    d. [**Leviton Manufacturing Co., Inc.**]
    e. [**Panduit Corp**]
    f. [**Siemon Co. (The)**]
    g. [**TE Connectivity Ltd.**]
    h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Belden Inc.**]
    b. [**CommScope, Inc**]
    c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    d. [**Leviton Manufacturing Co., Inc.**]
    e. [**Panduit Corp**]
    f. [**Siemon Co. (The)**]
    g. [**TE Connectivity Ltd.**]
    h. <**Insert manufacturer's name**>

3. General Characteristics:

    a. Universal T568A and T568B wiring labels.
    b. Labeling areas adjacent to conductors.
    c. Replaceable connectors.
    d. 24 or 48 ports.
    e. Construction: 16-gauge steel and mountable on **19 inch (483 mm)** equipment racks.

4. Options:

    a. Number of Jacks per Field: One for each four-pair [**twisted-pair cable indicated**][**conductor group of indicated cables, plus spares and blank positions adequate to suit specified expansion criteria**].
    b. Performance Rating: [**Category 5e**][**Category 6**][**Category 6A**][**Category 8**].

G. UL DUXR - 8P8C Plugs and Plug Assemblies :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Belden Inc.**]
    b. [**CommScope, Inc**]
    c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]

d. [**Leviton Manufacturing Co., Inc.**]
e. [**Molex Premise Networks**]
f. [**Panduit Corp**]
g. [**Siemon Co. (The)**]
h. [**TE Connectivity Ltd.**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**CommScope, Inc**]
c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Leviton Manufacturing Co., Inc.**]
e. [**Molex Premise Networks**]
f. [**Panduit Corp**]
g. [**Siemon Co. (The)**]
h. [**TE Connectivity Ltd.**]
i. <**Insert manufacturer's name**>

3. General Characteristics:

a. Male; 8P8C; color-coded modular telecommunications connector designed for termination of a single, four-pair, 100 Ω UTP or FTP cable.
b. Marked to indicate transmission performance.

4. Options:

a. Performance Rating: [**Category 5e**][**Category 6**][**Category 6A**][**Category 8**].

H. UL DUXR - 8P8C Jacks and Jack Assemblies :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Inc.**]
b. [**CommScope, Inc**]
c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Leviton Manufacturing Co., Inc.**]
e. [**Molex Premise Networks**]
f. [**Panduit Corp**]
g. [**Siemon Co. (The)**]
h. [**TE Connectivity Ltd.**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**CommScope, Inc**]

c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Leviton Manufacturing Co., Inc.**]
e. [**Molex Premise Networks**]
f. [**Panduit Corp**]
g. [**Siemon Co. (The)**]
h. [**TE Connectivity Ltd.**]
i. <**Insert manufacturer's name**>

3. General Characteristics:

a. Female; 8P8C; color-coded modular telecommunications connector designed for termination of a single, four-pair, 100 Ω UTP or FTP cable.
b. Designed to snap into patch panel or cover plate.
c. Marked to indicate transmission performance.

4. Options:

a. Performance Rating: [**Category 5e**][**Category 6**][**Category 6A**][**Category 8**].

I. UL DUXR - Patch Cords :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Inc.**]
b. [**CommScope, Inc**]
c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Leviton Manufacturing Co., Inc.**]
e. [**Molex Premise Networks**]
f. [**Panduit Corp**]
g. [**Siemon Co. (The)**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**CommScope, Inc**]
c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Leviton Manufacturing Co., Inc.**]
e. [**Molex Premise Networks**]
f. [**Panduit Corp**]
g. [**Siemon Co. (The)**]
h. <**Insert manufacturer's name**>

3. General Characteristics:

a. Factory-made, four-pair cables; terminated with an 8P8C plug at each end.
b. Bend-relief-compliant boots and color-coded icons to ensure Category 6 performance.

c. Latch guards to protect against snagging.
d. Color-coded boots for circuit identification.

4. Options:

a. Length: [3 ft (0.9 m)][4 ft (1.2 m)]<**Insert length**>.
b. Performance Rating: [**Category 5e**][**Category 6**][**Category 6A**][**Category 8**].

J. Accessories:

1. Spare Parts: Furnish to Owner spare parts, for repairing cable assemblies and accessories, that are packaged with protective covering for storage on-site and identified with labels describing contents.[**Include the following:**]

a. Connecting Blocks: [**One**]<**Insert number**> of each type.
b. Patch Panels: [**One**]<**Insert number**> of each type.
c. Plugs: [**Ten**]<**Insert number**> of each type.
d. Jacks: [**Ten**]<**Insert number**> of each type.

2. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to cable assemblies and accessories, that are packaged with protective covering for storage on-site and identified with labels describing contents.[**Include the following:**]

a. <**Insert name of special tool**>.

PART 3 - EXECUTION

3.1 PREPARATION

A. Shop Drawings: Prepare and submit the following:

1. Cable Labeling Schedules: Submit electronic files[**using software and format requested by Owner**].
2. Cabling Administration Diagrams: Submit diagrams and supporting electronic files[**using software and format requested by Owner**].

a. Coordinate layout and installation of telecommunications pathways and cabling with Owner's telecommunications and LAN equipment and service suppliers.

3. Wiring Diagrams:

a. Telecommunications rooms plans and elevations.
b. Telecommunications pathways.
c. Telecommunications system access points.
d. Telecommunications grounding system.
e. Cross-connects.
f. Patch panels.
g. Patch cords.

4. Cross-Connect and Patch Panel Details: Include mounting assemblies, elevations, and physical relationship between installed components.
5. Twisted-Pair Cable Testing Plan: Include list of cables to be tested, identification of tests to be

performed, pass/fail criteria, and copy of testing procedures (may be separate volume). Indicate Installer's required tests for warranty compliance.

3.2 SELECTION OF COMMUNICATIONS COPPER BACKBONE CABLING

A. Air-Handling Spaces:

1. Type CMP[**in listed plenum communications raceway**][**in listed cable routing assembly**].
2. Type CMR or Type CMP[**, Type CM, Type CMG, or Type CMX**] in metallic conduit installed in accordance with Rule 300.22 of NFPA 70.

B. Vertical Chases:

1. Type CMR.
2. Type CMP or Type CMR[**in listed plenum or riser communications raceway**][**in metallic conduit installed in accordance with Rule 300.22 of NFPA 70**].

3.3 INSTALLATION OF COMMUNICATIONS COPPER BACKBONE CABLING

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation:

1. Communications Cable Assemblies: Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with BICSI N1.
2. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Cabling system consists of backbone cables, intermediate and main cross-connects, mechanical terminations, and patch cords or jumpers used for backbone-to-backbone cross-connection.

    a. Provide interconnections between communications equipment rooms, main terminal space, and entrance facilities in the telecommunications cabling system structure.
    b. Backbone cabling cross-connects may be located in communications equipment rooms or at entrance facilities. Bridged taps and splitters may not be used as part of backbone cabling.

2. Drawings indicate general arrangement of pathways and fittings.
3. Wiring Methods:

    a. Raceway and Tray: Install cables in raceways and cable trays, except within consoles, cabinets, desks, and counters[**and except in accessible ceiling spaces, attics, and gypsum board partitions where unenclosed wiring method may be used**]. Conceal raceway and cables, except in unfinished spaces.

        1) Install plenum cable in environmental air spaces, including plenum ceilings.
        2) Comply with requirements for raceways and boxes specified in Section 270528 "Pathways for Communications Systems."

    b. Open-Cable: Route conductors and cables in accessible ceilings, walls, and floors where possible.

c. Within Enclosures: Bundle, lace, and train cables within enclosures. Connect to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools. Install cables parallel with or at right angles to sides and back of enclosure.

4. General Requirements for Cabling:

a. Install 110-style IDC termination hardware unless otherwise indicated.
b. Do not untwist twisted-pair cables more than **1/2 inch (12 mm)** from the point of termination to maintain cable geometry.
c. Terminate all conductors; no cable may contain unterminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
d. Cables may not be spliced. Secure and support cables at intervals not exceeding **30 inch (760 mm)** and not more than **6 inch (150 mm)** from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
e. Install lacing bars to restrain cables, prevent straining connections, and prevent bending cables to smaller radii than minimums recommended by manufacturer.
f. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii. Use lacing bars and distribution spools.
g. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation, and replace it with new cable.
h. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps may not be used for heating.
i. In the communications equipment room, install **10 ft (3 m)** long service loop on each end of cable.
j. Pulling Cable: Monitor cable pull tensions.

5. Open-Cable Installation:

a. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
b. Suspend twisted-pair cabling, not in a wireway or pathway, a minimum of **8 inch (200 mm)** above ceilings by cable supports not more than [**5 ft (1.5 m)**]<**Insert dimension**> apart.
c. Cable may not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.

6. Installation of Cable Routed Exposed under Raised Floors:

a. Install plenum-rated cable only.
b. Install cabling after the flooring system has been installed in raised floor areas.
c. Coil cable [**6 ft (1.8 m)**]<**Insert dimension**> long not less than [**12 inch (300 mm)**]<**Insert dimension**> in diameter below each feed point.

7. Group connecting hardware for cables into separate logical fields.
8. Separation from EMI Sources:

a. Comply with BICSI N1 for separating unshielded copper communication cable from potential EMI sources, including electrical power lines and equipment.
b. Separate open communications cables or cables in nonmetallic raceways from unshielded power conductors and electrical equipment as follows:

1) Power Rating Less Than 2 kVA: Minimum **5 inch (127 mm)**.
2) Power Rating between 2 and 5 kVA: Minimum **12 inch (300 mm)**.
3) Power Rating More Than 5 kVA: Minimum **24 inch (600 mm)**.

c. Separate communications cables in grounded metallic raceways from unshielded power lines or electrical equipment as follows:

1) Power Rating Less Than 2 kVA: Minimum **2-1/2 inch (64 mm)**.
2) Power Rating between 2 and 5 kVA: Minimum **6 inch (150 mm)**.
3) Power Rating More Than 5 kVA: Minimum **12 inch (300 mm)**.

d. Separate communications cables in grounded metallic raceways from power lines and electrical equipment located in grounded metallic conduits or enclosures as follows:

1) Power Rating Less Than 2 kVA: No minimum distance.
2) Power Rating between 2 and 5 kVA: Minimum **3 inch (76 mm)**.
3) Power Rating More Than 5 kVA: Minimum **6 inch (150 mm)**.

e. Separate communications cables from electrical motors and transformers rated 5 kVA or 5 HP and larger minimum **48 inch (1200 mm)**.
f. Separate communications cables from fluorescent luminaires minimum **5 inch (127 mm)**.

9. Identify system components, wiring, and cabling in accordance with TIA-606.

a. Color-code cross-connect fields and apply colors to voice and data service backboards, connections, covers, and labels.
b. Paint and label colors for equipment identification must comply with TIA-606 for [**Class 2**][**Class 3**][**Class 4**] level of administration[**, including optional identification requirements of this standard**].

10. Cable and Wire Identification:

a. Label each cable within **4 inch (100 mm)** of each termination and tap, where it is accessible in cabinet or junction or outlet box, and elsewhere as indicated.
b. Each wire connected to building-mounted devices is not required to be numbered at device if wire color is consistent with associated wire connected and numbered within panel or cabinet.
c. Exposed Cables and Cables in Cable Trays and Wire Troughs: Label each cable at intervals not exceeding **15 ft (4.5 m)**.
d. Label each terminal strip, and screw terminal in each cabinet, rack, or panel.

1) Individually number wiring conductors connected to terminal strips, and identify each cable or wiring group, extended from panel or cabinet to building-mounted device, with name and number of particular device.
2) Label each unit and field within distribution racks and frames.

e. Identification within Connector Fields in Equipment Rooms and Wiring Closets: Label each connector and each discrete unit of cable-terminating and -connecting hardware. Where similar jacks and plugs are used for both voice and data communication cabling, use different color for jacks and plugs of each service.

11. Cable Schedule: Install in prominent location in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Protect with rigid frame and clear plastic cover. Furnish electronic copy of final comprehensive schedules for Project.
12. Cabling Administration Drawings: Show building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for telecommunications closets,[**backbone pathways and cables,**][**entrance pathways and cables,**] terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways,

and equipment grounding conductors.

13. <**Insert more stringent installation requirements that supplement or supersede listed standards and manufacturers' published instructions**>.

D. Interfaces with Other Work:

1. Entrance Facilities: Coordinate backbone cabling with Section 271100 "Communications Equipment Room Fittings" for cabinets, racks, and protectors and demarcation point provided by communications service provider.
2. Coordinate with Section 078413 "Penetration Firestopping" for sealing fire-rated penetrations.
3. Coordinate with Section 260533.16 "Boxes and Covers for Electrical Systems" for installation of outlet boxes and cover plates.
4. Coordinate with Section 270526 "Grounding and Bonding for Communications Systems" for grounding communications cabling and connectors.
5. Coordinate with Section 270528 "Pathways for Communications Systems" for installation of provisions for routing and terminating cable assemblies.
6. Coordinate with Section 270529 "Hangers and Supports for Communications Systems" for installation of cable supports.
7. Coordinate with Section 270536 "Cable Trays for Communications Systems" for installation of cable trays.
8. Coordinate installation of new products for <**Insert system or product family/category**> with existing conditions.

    a. <**Insert requirements for transition between new and existing**>.

9. Coordinate with <**Insert Section number and title**> for <**Insert description of interfacing related Work**>.

    a. <**Insert requirements for transition between this Section and related Work**>.

3.4 FIELD QUALITY CONTROL OF COMMUNICATIONS COPPER BACKBONE CABLING

A. Acceptance Testing Preparation:

1. <**Insert requirements**>.

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

C. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.
2. Visually inspect jacket materials for certification markings. Inspect cabling terminations in communications equipment rooms for compliance with color-coding for pin assignments, and inspect cabling connections for compliance with TIA-568.1.
3. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
4. Test cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not cross-connection.

    a. Test instruments must meet or exceed applicable requirements in TIA-568.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test

equipment manufacturer for channel or link test configuration.

D. Nonconforming Work:

1. Cable assemblies will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective cable assemblies and retest.

E. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

3.5 PROTECTION

A. After installation, protect cable assemblies and accessories from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

END OF SECTION 26 05 19 16A

SECTION 26 05 19 16B - COMMUNICATIONS COAXIAL HORIZONTAL CABLING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Communications coaxial cable.
2. CATV coaxial cable.
3. Coaxial cable hardware.
4. Grounding.
5. Identification products.

1.2 DEFINITIONS

A. BICSI: Building Industry Consulting Service International.

B. EMI: Electromagnetic interference.

C. IDC: Insulation displacement connector.

D. LAN: Local area network.

E. RCDD: Registered Communications Distribution Designer.

1.3 COAXIAL HORIZONTAL CABLING DESCRIPTION

A. Coaxial horizontal cabling system is to provide interconnections between Distributor A, Distributor B, or Distributor C and the equipment outlet, otherwise known as "Cabling Subsystem 1" in the telecommunications cabling system structure. Cabling system consists of horizontal cables, mechanical terminations, and patch cords or jumpers used for horizontal-to-horizontal cross-connection.

1.4 ACTION SUBMITTALS

A. Product Data:

1. Communications coaxial cable.
2. CATV coaxial cable.
3. Coaxial cable hardware.
4. Grounding.
5. Identification products.

B. Product Data Submittals: For each product.

1. Nominal OD.
2. Minimum bending radius.
3. Maximum pulling tension.

C. Shop Drawings:

1. System Labeling Schedule:

a. Electronic copy of labeling schedules, in software and format selected by Owner.
b. Electronic copy of labeling schedules that are part of the cabling and asset identification system of the software.

2. Cabling administration drawings and printouts.

D. Sustainable Design Submittals:

1. Environmental Product Declaration: For each product.
2. Health Product Declaration: For each product.
3. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
4. Environmental Product Declaration: For each product.
5. Environmental Product Declaration: For each product.
6. Environmental Product Declaration: For each product.
7. Third-Party Certifications: For each product.
8. Third-Party Certified Life Cycle Assessment: For each product.
9. Samples: For telecommunications jacks and plugs, [**in specified finish, one for each type and configuration**][**and faceplates for color selection and evaluation of technical features**].

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For [**RCDD,**][**Installer,**]installation supervisor, and field inspector.

B. Source quality-control reports.

C. Field quality-control reports.

D. Maintenance Data: For splices and connectors to include in maintenance manuals.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For coaxial cable, splices, and connectors to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Connecting Blocks: [**One**]<**Insert number**> of each type.
2. Jacks: [**Ten**]<**Insert number**> of each type.
3. Patch-Panel Units: [**One**]<**Insert number**> of each type.
4. Plugs: [**Ten**]<**Insert number**> of each type.

1.8 QUALITY ASSURANCE

A. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.

1. Layout Responsibility: Preparation of Shop Drawings[**and Cabling Administration Drawings**][**, Cabling Administration Drawings, and field testing program development**] by an [**RCDD**][**Technician**].
2. Installation Supervision: Installation is to be under the direct supervision of [**Technician**][**Level 2 Installer**], who is to be present at all times when Work of this Section is performed at Project site.

B. Testing Agency Qualifications: Testing agency must have personnel certified by BICSI on staff.

1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Test cables upon receipt at Project site.

1. Test each coaxial cable [**on the reel**] for continuity.

1.10 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install cables and connecting materials until wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.11 COORDINATION

A. Coordinate layout and installation of telecommunications pathways and cabling with Owner's telecommunications and LAN equipment and service suppliers.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: Horizontal cabling system is to comply with transmission standards in TIA-568-C.1, when tested according to test procedures of this standard, and the requirements of TIA-568-C.4.

B. Telecommunications Pathways and Spaces: Comply with TIA-569-D.

C. Grounding: Comply with TIA-607-B.

2.2 GENERAL CABLE CHARACTERISTICS

A. Communications Cable: Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with the applicable standard and NFPA 70 for the following types:

1. Communications, Plenum Rated, Type CMP: Complying with UL 1685[**or Type CMP in listed plenum communications raceway**][**or Type CMP in listed cable routing assembly**].
2. Communications, Plenum Rated: Type CM, Type CMG, Type CMP, Type CMR, or Type CMX in metallic conduit installed in accordance with NFPA 70, Article 300.22, "Wiring in Ducts, Plenums, and Other Air-Handling Spaces."

B. CATV Cable: Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with the applicable standard and NFPA 70 for the following types:

1. CATV Plenum Rated: Type CATVP [**installed in riser raceways or cable routing assemblies**], complying with NFPA 262.
2. CATV Cable: Type CATV[**, or CATVP or CATVR**][**installed in general purpose, riser, or plenum communications raceways or cable routing assemblies**] in fireproof riser shafts with firestops at each penetration.

2.3 COMMUNICATIONS COAXIAL CABLE

A. Description: Coaxial cable with a 75-ohm characteristic impedance designed for broadband data transmission.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Alpha Wire; brand of Belden, Inc.**]
2. [**Belden Inc.**]
3. [**CommScope, Inc**]
4. [**Prysmian Cables and Systems; Prysmian Group North America**]
5. [**Southwire Company, LLC**]
6. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Alpha Wire; brand of Belden, Inc.**]
2. [**Belden Inc.**]
3. [**CommScope, Inc**]
4. [**Prysmian Cables and Systems; Prysmian Group North America**]
5. [**Southwire Company, LLC**]
6. <**Insert manufacturer's name**>

D. NFPA and UL compliance, listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444, UL 13, and with NFPA 70, "Class 1, Class 2, and Class 3 Remote-Control, Signaling, and Power-Limited Circuits" and "Communications Circuits" articles. Types are as follows:

1. RG-6/U: UL Type [**CMP**][**and**][**CL2P**].

    a. No. [**16**][**18**]<**Insert size**> AWG, solid, copper-covered steel conductor.
    b. Plenum rated.
    c. Gas-injected, foam-PE insulation.
    d. Shielded with 100 percent aluminum tape and [**40**][**60**] percent aluminum braid.
    e. Double shielded with 100 percent aluminum foil shield, 60 percent aluminum braided inner shield, and 40 percent aluminum braided outer shield.
    f. Jacketed with [**black**][**white**] PVC or PE.
    g. Suitable for indoor installations.

2. RG-11/U: UL Type [**CMP**][**and**][**CL2P**].

    a. No. [**14**]<**Insert size**> AWG, solid, copper-covered steel conductor.
    b. Plenum rated. Suitable for outdoor installations in ambient temperatures ranging from

minus 40 to plus 85 deg F (minus 40 to plus 30 deg C).

c. Gas-injected, foam-PE insulation.
d. Shielded with 100 percent aluminum tape and [**40**][**60**] percent aluminum braid.
e. Double shielded with 100 percent aluminum foil shield, 60 percent aluminum braided inner shield, and 40 percent aluminum braided outer shield.
f. Jacketed with sunlight-resistant, [**black**][**white**] PVC or PE.

3. RG-59/U: UL Type [**CMP**][**and**][**CL2P**].

a. No. [**20**]<**Insert size**> AWG, solid copper conductor.
b. Plenum rated.
c. Gas-injected, foam-PE insulation.
d. Single shielded with 100 percent aluminum shield and 40 percent aluminum braid.
e. PVC jacket.

2.4 CATV COAXIAL CABLE

A. Description: Coaxial cable with a 75-ohm characteristic impedance designed for CATV transmission.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Alpha Wire; brand of Belden, Inc.**]
2. [**Belden Inc.**]
3. [**CommScope, Inc**]
4. [**Prysmian Cables and Systems; Prysmian Group North America**]
5. [**Southwire Company, LLC**]
6. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Alpha Wire; brand of Belden, Inc.**]
2. [**Belden Inc.**]
3. [**CommScope, Inc**]
4. [**Prysmian Cables and Systems; Prysmian Group North America**]
5. [**Southwire Company, LLC**]
6. <**Insert manufacturer's name**>

D. NFPA and UL compliance, listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 1655 and with NFPA 70, "Community Antenna Television and Radio Distribution Systems" Article. Types are as follows:

1. RG-6/U: UL Type CATVP.

a. No. 18 AWG, solid, copper-covered steel conductor.
b. Plenum rated.
c. Gas-injected, foam-PE insulation.
d. Shielded with 100 percent aluminum tape and [**40**][**60**] percent aluminum braid.
e. Double shielded with 100 percent aluminum foil shield, 60 percent aluminum braided inner shield, and 40 percent aluminum braided outer shield.
f. Jacketed with [**black**][**white**] PVC or PE.
g. Suitable for indoor installations.

2.5 COAXIAL CABLE HARDWARE

A. Description: Hardware designed to connect, splice, and terminate coaxial cable with a 75-ohm characteristic impedance.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Leviton Manufacturing Co., Inc.**]
2. [**Liebert; Vertiv Holdings Co.**]
3. [**Siemon Co. (The)**]
4. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Leviton Manufacturing Co., Inc.**]
2. [**Liebert; Vertiv Holdings Co.**]
3. [**Siemon Co. (The)**]
4. <**Insert manufacturer's name**>

D. Coaxial-Cable Connectors: Type BNC, 75 ohms.

E. Jacks and Jack Assemblies: Modular, color-coded, with female Type BNC connectors.

F. Patch Cords: Factory-made cables in [**36-inch (900-mm)**][**48-inch (1200-mm)**]<**Insert length**>lengths; terminated with a male Type BNC connector at each end.

G. Faceplates:

1. Plastic Faceplate: High-impact plastic. Coordinate color with Section 262726 "Wiring Devices."
2. Metal Faceplate: [**Stainless steel**][**Brass**]<**Insert description**>, complying with requirements in Section 262726 "Wiring Devices."
3. For use with snap-in jacks accommodating any combination of twisted pair, optical-fiber, and coaxial work area cords.
    a. Flush-mounted jacks, positioning the cord at a 90-degree angle from faceplate surface.
4. Legend:
    a. Factory labeled by silk-screening or engraving [**for**][**stainless steel**][**brass**]<**Insert description**>[**faceplates**].
    b. Machine printed, in the field, using adhesive-tape label.
    c. Snap-in, clear-label covers and machine-printed paper inserts.

2.6 GROUNDING

A. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems" for grounding conductors and connectors.

B. Comply with TIA-607-B.

2.7 IDENTIFICATION PRODUCTS

A. Comply with TIA-606-B and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

2.8 SOURCE QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to evaluate cables.

B. Cable will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 ENTRANCE FACILITIES

A. Coordinate horizontal cabling with the protectors and demarcation point provided by communications service provider.

3.2 WIRING METHODS

A. Wiring Method, Raceways: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters[**and except in accessible ceiling spaces, in attics, and in gypsum board partitions where unenclosed wiring method may be used**]. Conceal raceway and cables except in unfinished spaces.

1. Install plenum cable in environmental air spaces, including plenum ceilings.
2. Comply with requirements for raceways and boxes specified in Section 270528 "Pathways for Communications Systems."

B. Wiring Method, Concealed: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

C. Wiring within Enclosures: Bundle, lace, and train cables within enclosures. Connect to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

3.3 INSTALLATION OF PATHWAYS

A. Comply with Section 271100 "Communications Equipment Room Fittings." Comply with requirements in Section 270528 "Pathways for Communications Systems" for installation of conduits and wireways.

B. Comply with Section 270528.29 "Hangers and Supports for Communications Systems."

C. Drawings indicate general arrangement of pathways and fittings.

D. Comply with NFPA 70 for pull-box sizing and length of conduit and number of bends between pull points.

E. Install manufactured conduit sweeps and long-radius elbows whenever possible.

F. Pathway Installation in Communications Equipment Rooms:

1. Position conduit ends adjacent to a corner on backboard where a single piece of plywood is installed, or in the corner of room where multiple sheets of plywood are installed around perimeter walls of room.
2. Install cable trays to route cables if conduits cannot be located in these positions.
3. Secure conduits to backboard when entering room from overhead.
4. Extend conduits [**3 inches (76 mm)**]<**Insert dimension**> above finished floor.
5. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

G. Backboards: Install backboards with **96-inch (2440-mm)** dimension vertical. Butt adjacent sheets tightly, and form smooth gap-free corners and joints.

3.4 INSTALLATION OF COAXIAL HORIZONTAL CABLES

A. Comply with NECA 1 and NECA/BICSI 568.

B. General Requirements for Cabling:

1. Comply with BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems," "Cable Termination Practices" Section.
2. Terminate all conductors; no cable is to contain unterminated elements. Make terminations only at indicated outlets, terminals, and patch panels.
3. Cables may not be spliced. Secure and support cables at intervals not exceeding **30 inches (760 mm)** and not more than **6 inches (150 mm)** from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
4. Install lacing bars to restrain cables, to prevent straining connections, and to prevent bending cables to smaller radii than minimums recommended by manufacturer.
5. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems," "Cable Termination Practices" Section. Use lacing bars and distribution spools.
6. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
7. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps are not to be used for heating.
8. In the communications equipment room, install a **10-foot- (3-m-)** long service loop on each end of cable.
9. Pulling Cable: Comply with BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems," "Pulling Cable" Section. Monitor cable pull tensions.

C. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
2. Suspend coaxial cable not in a wireway or pathway a minimum of **8 inches (200 mm)** above ceilings by cable supports not more than [**60 inches (1524 mm)**]<**Insert dimension**> apart.
3. Cable is not to be run through structural members or in contact with pipes, ducts, or other potentially damaging items.

D. Installation of Cable Routed Exposed under Raised Floors:

1. Install plenum-rated cable only.
2. Install cabling after the flooring system has been installed in raised floor areas.
3. Coil cable [**6 feet (1800 mm)**]<**Insert size**> long not less than [**12 inches (300 mm)**]<**Insert size**> in diameter below each feed point.

E. Outdoor Coaxial Cable Installation:

1. Install outdoor connections in enclosures complying with NEMA 250, Type 4X. Install corrosion-resistant connectors with properly designed O-rings to keep out moisture.
2. Attach antenna lead-in cable to support structure at intervals not exceeding **36 inches (915 mm)**.

F. Group connecting hardware for cables into separate logical fields.

G. Separation from EMI Sources:

1. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment is to be as follows:

   a. Electrical Equipment Rating Less Than 2 kVA: A minimum of **5 inches (127 mm)**.
   b. Electrical Equipment Rating Between 2 and 5 kVA: A minimum of **12 inches (300 mm)**.
   c. Electrical Equipment Rating More Than 5 kVA: A minimum of **24 inches (610 mm)**.

2. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment is to be as follows:

   a. Electrical Equipment Rating Less Than 2 kVA: A minimum of **2-1/2 inches (64 mm)**.
   b. Electrical Equipment Rating Between 2 and 5 kVA: A minimum of **6 inches (150 mm)**.
   c. Electrical Equipment Rating More Than 5 kVA: A minimum of **12 inches (300 mm)**.

3. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures is to be as follows:

   a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
   b. Electrical Equipment Rating Between 2 and 5 kVA: A minimum of **3 inches (76 mm)**.
   c. Electrical Equipment Rating More Than 5 kVA: A minimum of **6 inches (150 mm)**.

4. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of **48 inches (1200 mm)**.
5. Separation between Communications Cables and Fluorescent Fixtures: A minimum of **5 inches (127 mm)**.

3.5 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping."

B. Comply with TIA-569-D, Annex A, "Firestopping."

C. Comply with BICSI TDMM, "Firestopping Systems" Article.

3.6 INSTALLATION OF GROUNDING

A. Install grounding according to BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.

B. Comply with TIA-607-B and NECA/BICSI-607.

C. Locate grounding bus bar to minimize the length of bonding conductors. Fasten to wall allowing at least **2-inch (50-mm)** clearance behind the grounding bus bar. Connect grounding bus bar with a minimum No. 4 AWG grounding electrode conductor from grounding bus bar to suitable electrical building ground.

D. Bond metallic equipment to the grounding bus bar, using not smaller than No. 6 AWG equipment grounding conductor.

3.7 IDENTIFICATION

A. Identify system components, wiring, and cabling complying with TIA-606-B. Comply with requirements for identification specified in Section 260529 "Hangers and Supports for Electrical Systems."

1. Administration Class: [**Class 1**][**Class 2**][**Class 3**][**Class 4**].
2. Color-code fields and apply colors to voice and data service backboards, connections, covers, and labels.

B. Cable Schedule: Install in a prominent location in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Protect with rigid frame and clear plastic cover. Furnish an electronic copy of final comprehensive schedules for Project.

C. Cabling Administration Drawings: Show building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for telecommunications closets, [**horizontal pathways and cables,**][**entrance pathways and cables,**] terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors.

D. Cable and Wire Identification:

1. Label each cable within **4 inches (100 mm)** of each termination and tap, where it is accessible in a cabinet or junction or outlet box, and elsewhere as indicated.
2. Each wire connected to building-mounted devices is not required to be numbered at device if color of wire is consistent with associated wire connected and numbered within panel or cabinet.
3. Exposed Cables and Cables in Cable Trays and Wire Troughs: Label each cable at intervals not exceeding **15 feet (4.5 m)**.
4. Label each terminal strip and screw terminal in each cabinet, rack, or panel.

    a. Individually number wiring conductors connected to terminal strips and identify each cable or wiring group being extended from a panel or cabinet to a building-mounted device with name and number of particular device as shown.
    b. Label each unit and field within distribution racks and frames.

5. Identification within Connector Fields in Equipment Rooms and Wiring Closets: Label each connector and each discrete unit of cable-terminating and connecting hardware. Where similar jacks and plugs are used for both voice and data communications cabling, use a different color for jacks and plugs of each service.

E. Labels are to be preprinted or computer-printed type with printing area and font color that contrasts with cable jacket color but still complies with requirements in TIA 606-B, for the following:

1. Cables use flexible vinyl or polyester that flexes as cables are bent.

3.8 FIELD QUALITY CONTROL

A. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**].

D. Tests and Inspections:

1. Visually inspect coaxial jacket materials for NRTL certification markings.
2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
3. Test coaxial horizontal copper cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination.

E. Data for each measurement are to be documented. Data for submittals are to be printed in a summary report that is formatted similar to Table 10.1 in BICSI TDMM, or transferred from the instrument to the computer, saved as text files, and printed and submitted.

F. Remove and replace cabling where test results indicate that they do not comply with specified requirements.

G. End-to-end cabling will be considered defective if it does not pass tests and inspections.

H. Prepare test and inspection reports.

END OF SECTION 26 05 19 16B

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
26 05 19 16	26 05 13 00	Medium-Voltage Cables
26 05 19 16	26 05 19 00	Low-Voltage Electrical Power Conductors and Cables
26 05 19 16	26 05 23 00	Control-Voltage Electrical Power Cables

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 23 00 - CONTROL-VOLTAGE ELECTRICAL POWER CABLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Backboards.
2. Category 5e balanced twisted pair cable.
3. Category 6 balanced twisted pair cable.
4. Category 6a balanced twisted pair cable.
5. Balanced twisted pair cable hardware.
6. Twin-axial data highway cable.
7. RS-232 cable.
8. RS-485 cable.
9. Control cable.
10. Control-circuit conductors.
11. Fire-alarm wire and cable.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 ACTION SUBMITTALS

A. Product Data:

1. Backboards.
2. Category 5e balanced twisted pair cable.
3. Category 6 balanced twisted pair cable.
4. Category 6a balanced twisted pair cable.
5. Balanced twisted pair cable hardware.
6. Twin-axial data highway cable.
7. RS-232 cable.
8. RS-485 cable.
9. Control cable.
10. Control-circuit conductors.
11. Fire-alarm wire and cable.

B. Sustainable Design Submittals:

1. Product Data: For each conductor and cable indicating lead content.
2. Environmental Product Declaration: For each product.
3. Health Product Declaration: For each product.
4. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
5. Environmental Product Declaration: For each product.
6. Environmental Product Declaration: For each product.

7. Environmental Product Declaration: For each product.
8. Third-Party Certifications: For each product.
9. Third-Party Certified Life Cycle Assessment: For each product.

1.3 INFORMATIONAL SUBMITTALS

A. Source quality-control reports.

B. Field quality-control reports.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Flame Travel and Smoke Density in Plenums: As determined by testing identical products according to NFPA 262, by a qualified testing agency. Identify products for installation in plenums with appropriate markings of applicable testing agency.

1. Flame Travel Distance: **60 inch (1520 mm)** or less.
2. Peak Optical Smoke Density: 0.5 or less.
3. Average Optical Smoke Density: 0.15 or less.

C. Flame Travel and Smoke Density for Riser Cables in Non-Plenum Building Spaces: As determined by testing identical products according to UL 1666.

D. Flame Travel and Smoke Density for Cables in Non-Riser Applications and Non-Plenum Building Spaces: As determined by testing identical products according to UL 1685.

2.2 BACKBOARDS

A. Description: Plywood, [**fire-retardant treated,**]**3/4 by 48 by 96 inch (19 by 1220 by 2440 mm)**. Comply with requirements for plywood backing panels in Section 061000 "Rough Carpentry."

B. Painting: Paint plywood on all sides and edges with [**flat**][**eggshell**][**black**]<**Insert color**>[**latex**][**alkyd**] paint. Comply with requirements in Section 099123 "Interior Painting."

1. Lead Content: Less than 300 parts per million.

2.3 CATEGORY 5e BALANCED TWISTED PAIR CABLE

A. Description: Four-pair, balanced-twisted pair cable, certified to meet transmission characteristics of Category 5e cable at frequencies up to 100 MHz.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AMP NETCONNECT; a TE Connectivity Ltd. company**]
2. [**Belden Inc.**]
3. [**Berk-Tek, a Leviton Company**]
4. [**CommScope, Inc**]
5. [**General Cable; Prysmian Group North America**]
6. [**Hitachi Cable America Inc.**]
7. [**Mohawk; a division of Belden Networking, Inc.**]
8. [**West Penn Wire; brand of Belden, Inc.**]
9. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AMP NETCONNECT; a TE Connectivity Ltd. company**]
2. [**Belden Inc.**]
3. [**Berk-Tek, a Leviton Company**]
4. [**CommScope, Inc**]
5. [**General Cable; Prysmian Group North America**]
6. [**Hitachi Cable America Inc.**]
7. [**Mohawk; a division of Belden Networking, Inc.**]
8. [**West Penn Wire; brand of Belden, Inc.**]
9. <**Insert manufacturer's name**>

D. Standard: Comply with ICEA S-90-661, NEMA WC 63.1, and TIA-568-C.2 for Category 5e cables.

E. Conductors: 100 ohm, No. 24 AWG solid copper.

1. Lead Content: Less than 300 parts per million.

F. Shielding/Screening: [**Unshielded twisted pairs (UTP)**][**Shielded twisted pairs (FTP)**][**Screened twisted pairs (F/UTP)**][**Screened and shielded twisted pairs (F/FTP)**].

G. Cable Rating: [**Riser**][**Plenum**].

H. Jacket: [**White**][**Gray**]<**Insert color**> thermoplastic.

2.4 CATEGORY 6 BALANCED TWISTED PAIR CABLE

A. Description: Four-pair, balanced-twisted pair cable,[**with internal spline,**] certified to meet transmission characteristics of Category 6 cable at frequencies up to 250 MHz.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**3M**]
2. [**AMP NETCONNECT; a TE Connectivity Ltd. company**]
3. [**Belden Inc.**]
4. [**Berk-Tek, a Leviton Company**]
5. [**CommScope, Inc**]
6. [**General Cable; Prysmian Group North America**]
7. [**Genesis; Resideo Technologies, Inc.**]
8. [**Hitachi Cable America Inc.**]
9. [**Mohawk; a division of Belden Networking, Inc.**]
10. [**Prysmian Cables and Systems; Prysmian Group North America**]

11. [**Superior Essex Inc.; subsidiary of LS Corp.**]
12. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**3M**]
2. [**AMP NETCONNECT; a TE Connectivity Ltd. company**]
3. [**Belden Inc.**]
4. [**Berk-Tek, a Leviton Company**]
5. [**CommScope, Inc**]
6. [**General Cable; Prysmian Group North America**]
7. [**Genesis; Resideo Technologies, Inc.**]
8. [**Hitachi Cable America Inc.**]
9. [**Mohawk; a division of Belden Networking, Inc.**]
10. [**Prysmian Cables and Systems; Prysmian Group North America**]
11. [**Superior Essex Inc.; subsidiary of LS Corp.**]
12. <**Insert manufacturer's name**>

D. Standard: Comply with NEMA WC 66/ICEA S-116-732 and TIA-568-C.2 for Category 6 cables.

E. Conductors: 100 ohm, No. 23 AWG solid copper.

1. Lead Content: Less than 300 parts per million.

F. Shielding/Screening: [**Unshielded twisted pairs (UTP)**][**Shielded twisted pairs (FTP)**][**Screened twisted pairs (F/UTP)**][**Screened and shielded twisted pairs (F/FTP)**].

G. Cable Rating: [**Riser**][**Plenum**].

H. Jacket: [**White**][**Gray**][**Blue**][**Yellow**]<**Insert color**> thermoplastic.

2.5 CATEGORY 6a BALANCED TWISTED PAIR CABLE

A. Description: Four-pair, balanced-twisted pair cable,[**with internal spline,**] certified to meet transmission characteristics of Category 6a cable at frequencies up to 500 MHz.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**3M**]
2. [**AMP NETCONNECT; a TE Connectivity Ltd. company**]
3. [**Belden Inc.**]
4. [**Berk-Tek, a Leviton Company**]
5. [**CommScope, Inc**]
6. [**General Cable; Prysmian Group North America**]
7. [**Genesis; Resideo Technologies, Inc.**]
8. [**Hitachi Cable America Inc.**]
9. [**Mohawk; a division of Belden Networking, Inc.**]
10. [**Prysmian Cables and Systems; Prysmian Group North America**]
11. [**Superior Essex Inc.; subsidiary of LS Corp.**]
12. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. [**3M**]
2. [**AMP NETCONNECT; a TE Connectivity Ltd. company**]
3. [**Belden Inc.**]
4. [**Berk-Tek, a Leviton Company**]
5. [**CommScope, Inc**]
6. [**General Cable; Prysmian Group North America**]
7. [**Genesis; Resideo Technologies, Inc.**]
8. [**Hitachi Cable America Inc.**]
9. [**Mohawk; a division of Belden Networking, Inc.**]
10. [**Prysmian Cables and Systems; Prysmian Group North America**]
11. [**Superior Essex Inc.; subsidiary of LS Corp.**]
12. **<Insert manufacturer's name>**

D. Standard: Comply with TIA-568-C.2 for Category 6a cables.

E. Conductors: 100 ohm, No. 23 AWG solid copper.

1. Lead Content: Less than 300 parts per million.

F. Shielding/Screening: [**Unshielded twisted pairs (UTP)**][**Shielded twisted pairs (FTP)**][**Screened twisted pairs (F/UTP)**][**Screened and shielded twisted pairs (F/FTP)**].

G. Cable Rating: [**Riser**][**Plenum**].

H. Jacket: [**White**][**Gray**][**Blue**][**Yellow**]<**Insert color**> thermoplastic.

2.6 BALANCED TWISTED PAIR CABLE HARDWARE

A. Description: Hardware designed to connect, splice, and terminate balanced twisted pair copper communications cable.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**3M**]
2. [**American Technology Systems Industries, Inc**]
3. [**AMP NETCONNECT; a TE Connectivity Ltd. company**]
4. [**Belden Inc.**]
5. [**Berk-Tek, a Leviton Company**]
6. [**CommScope, Inc**]
7. [**Dynacom Corporation**]
8. [**General Cable; Prysmian Group North America**]
9. [**Genesis; Resideo Technologies, Inc.**]
10. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
11. [**Leviton Manufacturing Co., Inc.**]
12. [**Mohawk; a division of Belden Networking, Inc.**]
13. [**Molex Premise Networks**]
14. [**Panduit Corp**]
15. [**Prysmian Cables and Systems; Prysmian Group North America**]
16. [**Siemon Co. (The)**]
17. [**Superior Essex Inc.; subsidiary of LS Corp.**]

18. **<Insert manufacturer's name>**

C. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. [**3M**]
2. [**American Technology Systems Industries, Inc**]
3. [**AMP NETCONNECT; a TE Connectivity Ltd. company**]
4. [**Belden Inc.**]
5. [**Berk-Tek, a Leviton Company**]
6. [**CommScope, Inc**]
7. [**Dynacom Corporation**]
8. [**General Cable; Prysmian Group North America**]
9. [**Genesis; Resideo Technologies, Inc.**]
10. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
11. [**Leviton Manufacturing Co., Inc.**]
12. [**Mohawk; a division of Belden Networking, Inc.**]
13. [**Molex Premise Networks**]
14. [**Panduit Corp**]
15. [**Prysmian Cables and Systems; Prysmian Group North America**]
16. [**Siemon Co. (The)**]
17. [**Superior Essex Inc.; subsidiary of LS Corp.**]
18. **<Insert manufacturer's name>**

D. General Requirements for Balanced Twisted Pair Cable Hardware:

1. Comply with the performance requirements of [**Category 5e**][**Category 6**][**Category 6a**][**Category 7**].
2. Comply with TIA-568-C.2, IDC type, with modules designed for punch-down caps or tools.
3. Cables must be terminated with connecting hardware of same category or higher.

E. Source Limitations: [**Obtain balanced twisted pair cable hardware from single source from single manufacturer**][**Obtain balanced twisted pair cable hardware from same manufacturer as balanced twisted pair cable, from single source**].

F. Connecting Blocks: [**110-style IDC for Category 5e**][**110-style IDC for Category 6**][**66-style IDC for Category 5e**]. Provide blocks for the number of cables terminated on the block, plus [**25**]**<Insert number>** percent spare, integral with connector bodies, including plugs and jacks where indicated.

G. Cross-Connect: Modular array of connecting blocks arranged to terminate building cables and permit interconnection between cables.

1. Number of Terminals per Field: [**One**]**<Insert number>** for each conductor in assigned cables.

H. Patch Panel: Modular panels housing numbered jack units with IDC-type connectors at each jack location for permanent termination of pair groups of installed cables.

1. Features:

a. Universal T568A and T568B wiring labels.
b. Labeling areas adjacent to conductors.
c. Replaceable connectors.
d. 24 or 48 ports.

2. Construction: 16-gauge steel and mountable on **19 inch (483 mm)** equipment racks.

3. Number of Jacks per Field: One for each four-pair [**cable indicated**][**conductor group of indicated cables, plus spares and blank positions adequate to suit specified expansion criteria**].

I. Patch Cords: Factory-made, four-pair cables in [**36 inch (900 mm)**][**48 inch (1200 mm)**]<**Insert length**>lengths; terminated with an eight-position modular plug at each end.

1. Patch cords must have bend-relief-compliant boots and color-coded icons to ensure performance. Patch cords must have latch guards to protect against snagging.
2. Patch cords must have color-coded boots for circuit identification.

J. Plugs and Plug Assemblies:

1. Male; eight position; color-coded modular telecommunications connector designed for termination of a single four-pair 100 ohm unshielded or shielded balanced twisted pair cable.
2. Comply with IEC 60603-7-1, IEC 60603-7-2, IEC 60603-7-3, IEC 60603-7-4, and IEC 60603-7.5.
3. Marked to indicate transmission performance.

K. Jacks and Jack Assemblies:

1. Female; eight position; modular; fixed telecommunications connector designed for termination of a single four-pair 100 ohm unshielded or shielded balanced twisted pair cable.
2. Designed to snap-in to a patch panel or faceplate.
3. Standards:

    a. Category 5e, unshielded balanced twisted pair cable must comply with IEC 60603-7-2.
    b. Category 5e, shielded balanced twisted pair cable must comply with IEC 60603-7-3.
    c. Category 6, unshielded balanced twisted pair cable must comply with IEC 60603-7-4.
    d. Category 6, shielded balanced twisted pair cable must comply with IEC 60603-7.5.
    e. Category 6a, unshielded balanced twisted pair cable must comply with IEC 60603-7-41.
    f. Category 6a, shielded balanced twisted pair cable must comply with IEC 60603-7.51.

4. Marked to indicate transmission performance.

L. Faceplate:

1. [**Two**][**Four**][**Six**] port, vertical single-gang faceplates designed to mount to single-gang wall boxes.
2. [**Eight**][**10**][**12**] port, vertical double-gang faceplates designed to mount to double-gang wall boxes.
3. Plastic Faceplate: High-impact plastic. Coordinate color with Section 260533.16 "Boxes and Covers for Electrical Systems."
4. Metal Faceplate: [**Stainless steel**][**Brass**]<**Insert description**>, complying with requirements in Section 260533.16 "Boxes and Covers for Electrical Systems."
5. For use with snap-in jacks accommodating any combination of balanced twisted pair, optical fiber, and coaxial work area cords.

    a. Flush mounting jacks, positioning the cord at a 45-degree angle.

M. Legend:

1. Machine printed, in the field, using adhesive-tape label.
2. Snap-in, clear-label covers and machine-printed paper inserts.

2.7 TWIN-AXIAL DATA HIGHWAY CABLE

A. Standard Cable: NFPA 70, Type CM.

1. Paired, <**Insert number**> pairs, [**No. 20**][**No. 22**][**No. 24**] AWG, stranded [**(7x28)**][**(7x30)**][**(7x32)**] tinned-copper conductors.
2. Polypropylene insulation.
3. Individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage.
4. PVC jacket.
5. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned-copper drain wire.
6. Flame Resistance: Comply with UL 1685.
7. Lead Content: Less than 300 parts per million.

B. Plenum-Rated Cable: NFPA 70, Type CMP.

1. Paired, <**Insert number**> pairs, [**No. 20**][**No. 22**][**No. 24**] AWG, stranded [**(7x28)**][**(7x30)**][**(7x32)**] tinned-copper conductors.
2. Plastic insulation.
3. Individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage.
4. Plastic jacket.
5. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned-copper drain wire.
6. Flame Resistance: Comply with NFPA 262.
7. Lead Content: Less than 300 parts per million.

2.8 RS-232 CABLE

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Allied Wire & Cable Inc.**]
2. [**Belden Inc.**]
3. [**General Cable; Prysmian Group North America**]
4. [**Genesis; Resideo Technologies, Inc.**]
5. [**Southwire Company, LLC**]
6. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Allied Wire & Cable Inc.**]
2. [**Belden Inc.**]
3. [**General Cable; Prysmian Group North America**]
4. [**Genesis; Resideo Technologies, Inc.**]
5. [**Southwire Company, LLC**]
6. <**Insert manufacturer's name**>

C. PVC-Jacketed, TIA 232-F:

1. [**Three**][**Nine**], No. 22 AWG, stranded (7x30) tinned copper conductors.
2. Lead Content: Less than 300 parts per million.
3. Polypropylene insulation.
4. Aluminum foil-polyester tape shield with 100 percent shield coverage.
5. PVC jacket.

6. Conductors are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
7. NFPA 70 Type: Type CM.
8. Flame Resistance: Comply with UL 1581.

D. Plenum-Type, TIA 232-F:

1. [**Three**][**Nine**], No. 22 AWG, stranded (7x30) tinned copper conductors.
2. Lead Content: Less than 300 parts per million.
3. PE insulation.
4. Aluminum foil-polyester tape shield with 100 percent shield coverage.
5. Fluorinated ethylene propylene jacket.
6. Conductors are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
7. Flame Resistance: Comply with NFPA 262.

2.9 RS-485 CABLE

A. Standard Cable: NFPA 70, Type CMG.

1. Paired, [**one pair**][**two pairs**], twisted, No. 22 AWG, stranded (7x30) tinned-copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with UL 1685.
6. Lead Content: Less than 300 parts per million.

B. Plenum-Rated Cable: NFPA 70, Type CMP.

1. Paired, [**one pair**][**two pairs**], No. 22 AWG, stranded (7x30) tinned-copper conductors.
2. Fluorinated ethylene propylene insulation.
3. Unshielded.
4. Fluorinated ethylene propylene jacket.
5. Flame Resistance: NFPA 262.
6. Lead Content: Less than 300 parts per million.

2.10 CONTROL CABLE

A. Paired Cable: NFPA 70, Type CMG.

1. [**One**][**Multi-**]pair, twisted, [**No. 16 AWG, stranded (19x29)**][**No. 18 AWG, stranded (19x30)**] tinned-copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with UL 1685.
6. Lead Content: Less than 300 parts per million.

B. Plenum-Rated, Paired Cable: NFPA 70, Type CMP.

1. [**One**][**Multi-**]pair, twisted, [**No. 16 AWG, stranded (19x29)**][**No. 18 AWG, stranded (19x30)**] tinned-copper conductors.
2. PVC insulation.
3. Unshielded.

4. PVC jacket.
5. Flame Resistance: Comply with NFPA 262.
6. Lead Content: Less than 300 parts per million.

2.11 CONTROL-CIRCUIT CONDUCTORS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Encore Wire Corporation**]
2. [**General Cable; Prysmian Group North America**]
3. [**Service Wire Co.**]
4. [**Southwire Company, LLC**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

1. [**Encore Wire Corporation**]
2. [**General Cable; Prysmian Group North America**]
3. [**Service Wire Co.**]
4. [**Southwire Company, LLC**]
5. <**Insert manufacturer's name**>

C. Class 1 Control Circuits: Stranded copper, [**Type THHN/THWN-2, complying with UL 83 in raceway**][**Type THW, complying with UL 83 in raceway**][**Type XHHW-2, complying with UL 44 in raceway**][**Type TC, complying with UL 1277 in raceway**][**Type MC, complying with UL 1569**].

D. Class 2 Control Circuits: Stranded copper, [**Type THHN/THWN-2, complying with UL 83 in raceway**][**Type XHHW-2, complying with UL 44 in raceway**][**power-limited cable, concealed in building finishes**][**power-limited tray cable, in cable tray**].

E. Class 3 Remote-Control and Signal Circuits: Stranded copper, [**Type THHN/THWN-2, complying with UL 83 in raceway**][**Type XHHW-2, complying with UL 44 in raceway**][**power-limited cable, concealed in building finishes**][**power-limited tray cable, in cable tray**][**Type TW or Type TF, complying with UL 83, in raceway**].

F. Class 2 Control Circuits and Class 3 Remote-Control and Signal Circuits That Supply Critical Circuits: Circuit Integrity (CI) cable.

1. Smoke control signaling and control circuits.
2. <**Insert list of critical circuits that require CI cable**>.

2.12 FIRE-ALARM WIRE AND CABLE

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Allied Wire & Cable Inc.**]
2. [**CommScope, Inc**]
3. [**Comtran Corporation**]

4. [**Genesis; Resideo Technologies, Inc.**]
5. [**Prysmian Cables and Systems; Prysmian Group North America**]
6. [**Radix Wire**]
7. [**Rockbestos-Suprenant Cable Corp.**]
8. [**Superior Essex Inc.; subsidiary of LS Corp.**]
9. [**West Penn Wire; brand of Belden, Inc.**]
10. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Allied Wire & Cable Inc.**]
2. [**CommScope, Inc**]
3. [**Comtran Corporation**]
4. [**Genesis; Resideo Technologies, Inc.**]
5. [**Prysmian Cables and Systems; Prysmian Group North America**]
6. [**Radix Wire**]
7. [**Rockbestos-Suprenant Cable Corp.**]
8. [**Superior Essex Inc.; subsidiary of LS Corp.**]
9. [**West Penn Wire; brand of Belden, Inc.**]
10. <**Insert manufacturer's name**>

C. General Wire and Cable Requirements: NRTL listed and labeled as complying with NFPA 70, Article 760.

1. Lead Content: Less than 300 parts per million.

D. Signaling Line Circuits: Twisted, shielded pair, [**not less than**][**No. 18 AWG**]<**Insert wire size**>[**size as recommended by system manufacturer**].

1. Circuit Integrity Cable: Twisted shielded pair, NFPA 70, Article 760, Classification CI, for power-limited fire-alarm signal service Type FPL. NRTL listed and labeled as complying with UL 1424 and UL 2196 for a two-hour rating.

E. Non-Power-Limited Circuits: Solid-copper conductors with 600 V rated, 75 deg C, color-coded insulation, and complying with requirements in UL 2196 for a two-hour rating.

1. Control-Voltage Circuits: No. 16 AWG, minimum, in pathway.
2. Low-Voltage Circuits: No. 12 AWG, minimum, in pathway.
3. Multiconductor Armored Cable: NFPA 70, Type MC, copper conductors, Type TFN/THHN conductor insulation, copper drain wire, copper armor[**with outer jacket**] with red identifier stripe, NTRL listed for fire-alarm and cable tray installation, plenum rated.

2.13 SOURCE QUALITY CONTROL

A. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to evaluate cables.

B. Factory test twisted pair cables according to TIA-568-C.2.

C. Cable will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Test cables on receipt at Project site.

1. Test each pair of twisted pair cable for open and short circuits.

3.2 INSTALLATION OF RACEWAYS AND BOXES

A. Comply with requirements in Section 260533.13 "Conduits for Electrical Systems" for raceway selection and installation requirements for conduits as supplemented or modified in this Section.

B. Comply with requirements in Section 260533.23 "Surface Raceways for Electrical Systems" for raceway selection and installation requirements for wireways as supplemented or modified in this Section.

C. Comply with requirements in Section 260533.16 "Boxes and Covers for Electrical Systems" for raceway selection and installation requirements for boxes as supplemented or modified in this Section.

1. Outlet boxes must be no smaller than **2 inch (50 mm)** wide, **3 inch (75 mm)** high, and **2-1/2 inch (64 mm)** deep.
2. Outlet boxes for cables must be no smaller than **4 inch (102 mm)** square by [**1-1/2 inch (38 mm)**][**2-1/8 inch (53 mm)**] deep with extension ring sized to bring edge of ring to within **1/8 inch (3.1 mm)** of the finished wall surface.
3. Flexible metal conduit must not be used.

D. Comply with TIA-569-D for pull-box sizing and length of conduit and number of bends between pull points.

E. Install manufactured conduit sweeps and long-radius elbows if possible.

F. Raceway Installation in Equipment Rooms:

1. Position conduit ends adjacent to a corner on backboard if a single piece of plywood is installed, or in the corner of the room if multiple sheets of plywood are installed around perimeter walls of the room.
2. Install cable trays to route cables if conduits cannot be located in these positions.
3. Secure conduits to backboard if entering the room from overhead.
4. Extend conduits [**3 inch (75 mm)**]<**Insert dimension**> above finished floor.
5. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

G. Backboards: Install backboards with **96 inch (2440 mm)** dimension vertical. Butt adjacent sheets tightly and form smooth gap-free corners and joints.

3.3 INSTALLATION OF CONDUCTORS AND CABLES

A. Comply with NECA 1.

B. General Requirements for Cabling:

1. Comply with TIA-568-C Series of standards.
2. Comply with BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems."
3. Terminate all conductors; cable must not contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
4. Cables may not be spliced and must be continuous from terminal to terminal. Do not splice cable between termination, tap, or junction points.
5. Cables serving a common system may be grouped in a common raceway. Install network cabling and control wiring and cable in separate raceway from power wiring. Do not group conductors from different systems or different voltages.
6. Secure and support cables at intervals not exceeding **30 inch (760 mm)** and not more than **6 inch (150 mm)** from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
7. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems." Install lacing bars and distribution spools.
8. Do not install bruised, kinked, scored, deformed, or abraded cable. Remove and discard cable if damaged during installation and replace it with new cable.
9. Cold-Weather Installation: Bring cable to room temperature before dereeling. Do not use heat lamps for heating.
10. Pulling Cable: Comply with BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems." Monitor cable pull tensions.
11. Support: Do not allow cables to lie on removable ceiling tiles.
12. Secure: Fasten securely in place with hardware specifically designed and installed so as to not damage cables.
13. Provide strain relief.
14. Keep runs short. Allow extra length for connecting to terminals. Do not bend cables in a radius less than 10 times the cable OD. Use sleeves or grommets to protect cables from vibration at points where they pass around sharp corners and through penetrations.
15. Ground wire must be copper, and grounding methods must comply with IEEE C2. Demonstrate ground resistance.

C. Balanced Twisted Pair Cable Installation:

1. Comply with TIA-568-C.2.
2. Install termination hardware as specified in Section 271513 "Communications Copper Horizontal Cabling" unless otherwise indicated.
3. Do not untwist balanced twisted pair cables more than **1/2 inch (12 mm)** at the point of termination to maintain cable geometry.

D. Installation of Control-Circuit Conductors:

1. Install wiring in raceways.
2. Use insulated spade lugs for wire and cable connection to screw terminals.

E. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
2. Suspend copper cable not in a wireway or pathway a minimum of **8 inch (200 mm)** above ceilings by cable supports not more than [**30 inch (760 mm)**]<**Insert dimension**> apart.
3. Cable must not be run through or on structural members or in contact with pipes, ducts, or other potentially damaging items. Do not run cables between structural members and corrugated panels.

F. Installation of Cable Routed Exposed under Raised Floors:

1. Install plenum-rated cable only.

2. Install cabling after the flooring system has been installed in raised floor areas.
3. Below each feed point, neatly coil a minimum of [72 inch (1830 mm)]<**Insert dimension**> of cable in a coil not less than [12 inch (305 mm)]<**Insert dimension**> in diameter.

G. Separation from EMI Sources:

1. Comply with BICSI TDMM and TIA-569-D recommendations for separating unshielded copper voice and data communications cable from potential EMI sources including electrical power lines and equipment.
2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment must be as follows:

   a. Electrical Equipment or Circuit Rating Less Than 2 kVA: A minimum of **5 inch (127 mm)**.
   b. Electrical Equipment or Circuit Rating between 2 and 5 kVA: A minimum of **12 inch (305 mm)**.
   c. Electrical Equipment or Circuit Rating More Than 5 kVA: A minimum of **24 inch (600 mm)**.

3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment must be as follows:

   a. Electrical Equipment or Circuit Rating Less Than 2 kVA: A minimum of **2-1/2 inch (64 mm)**.
   b. Electrical Equipment or Circuit Rating between 2 and 5 kVA: A minimum of **6 inch (150 mm)**.
   c. Electrical Equipment or Circuit Rating More Than 5 kVA: A minimum of **12 inch (305 mm)**.

4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures must be as follows:

   a. Electrical Equipment or Circuit Rating Less Than 2 kVA: No requirement.
   b. Electrical Equipment or Circuit Rating between 2 and 5 kVA: A minimum of **3 inch (75 mm)**.
   c. Electrical Equipment or Circuit Rating More Than 5 kVA: A minimum of **6 inch (150 mm)**.

5. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or 5 HP and Larger: A minimum of **48 inch (1200 mm)**.
6. Separation between Communications Cables and Fluorescent Fixtures: A minimum of **5 inch (127 mm)**.

3.4 REMOVAL OF CONDUCTORS AND CABLES

A. Remove abandoned conductors and cables. Abandoned conductors and cables are those installed that are not terminated at equipment and are not identified with a tag for future use.

3.5 CONTROL-CIRCUIT CONDUCTORS

A. Minimum Conductor Sizes:

1. Class 1 remote-control and signal circuits; [**No 14 AWG**]<**Insert wire size**>.
2. Class 2 low-energy, remote-control, and signal circuits; [**No. 16 AWG**]<**Insert wire size**>.
3. Class 3 low-energy, remote-control, alarm, and signal circuits; [**No 12 AWG**]<**Insert wire size**>.

3.6 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping."

B. Comply with TIA-569-D, Annex A, "Firestopping."

C. Comply with BICSI TDMM, "Firestopping" Chapter.

3.7 GROUNDING

A. For data communication wiring, comply with TIA-607-B and with BICSI TDMM, "Bonding and Grounding (Earthing)" Chapter.

B. For control-voltage wiring and cabling, comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.8 IDENTIFICATION

A. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. Identify data and communications system components, wiring, and cabling according to TIA-606-B; label printers must use label stocks, laminating adhesives, and inks complying with UL 969.

C. Identify each wire on each end and at each terminal with a number-coded identification tag. Each wire must have a unique tag.

3.9 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Visually inspect cable jacket materials for UL or third-party certification markings. Inspect cabling terminations to confirm color-coding for pin assignments, and inspect cabling connections to confirm compliance with TIA-568-C.1.
2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
3. Test cabling for direct-current loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination, but not after cross-connection.

    a. Test instruments must meet or exceed applicable requirements in TIA-568-C.2. Perform tests with a tester that complies with performance requirements in its "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in its "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.

B. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.

C. End-to-end cabling will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

SECTION 26 05 26 00 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Grounding and bonding conductors.
2. Grounding and bonding clamps.
3. Grounding and bonding bushings.
4. Grounding and bonding hubs.
5. Grounding and bonding connectors.
6. Intersystem bonding bridge grounding connectors.
7. Grounding and bonding busbars.
8. Signal reference grids.
9. Grounding (earthing) electrodes.
10. Grounding electrode enclosures.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 264113 "Lightning Protection for Structures" specifies bonding of lightning protection grounding electrodes to facility grounding electrodes.
5. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs installed by this Section.
6. Section 270528 "Pathways for Communications Systems"[**and Section 271100 "Communications Equipment Room Fittings"**] specifies additional requirements for identification and grounding and bonding of communications equipment, raceways, boxes, and cable trays.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.

a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for

submitted product.

B. Shop Drawings: Prepare and submit the following:

1. Plans showing dimensioned locations of grounding features described in "Field Quality Control for Grounding and Bonding" Article, including the following:

a. Grounding electrode access enclosures.
b. Grounding electrodes.
c. Grounding arrangements and connections for separately derived systems.
d. <**Insert items**>.

C. Sustainable Design Submittals:

1. Product data for sustainable design features for each type of product.

D. Field quality-control reports.

1.3 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data:

1. In addition to items specified in Section 260010 "Supplemental Requirements for Electrical," include the following:

a. Plans showing locations of grounding features described in "Field Quality Control for Grounding and Bonding" Article, including the following:

1) Grounding electrode access enclosures.
2) Grounding electrodes.
3) Grounding arrangements and connections for separately derived systems.
4) <**Insert items**>.

b. Instructions for periodic testing and inspection of grounding features at [**test wells**][**ring electrodes**][**grounding connections for separately derived systems**]<**Insert locations**> based on [**NETA MTS**][**NFPA 70B**]<**Insert reference**>.

1) Tests must determine if ground-resistance or impedance values remain within specified maximums, and instructions must recommend corrective action if values do not.
2) Include recommended testing intervals.

1.5 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, conduct tests of complex equipment, analyze test and equipment data, plan a job, and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical

tests.

B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems, evaluate tests, test equipment, test results, and power system performance, recommend actions to maintain or improve system performance, and lead multi-team projects.

C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

1.6 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

A. Soil Resistivity: Grounding (earthing) Work on the Project must account for soil resistivity conditions specified in Section 018116 "Facility Environmental Requirements."

B. Electrical and ICT Equipment Grounding (Earthing): Do not exceed [**25 Ω**][**10 Ω**]<**Insert resistance value**> resistance to ground (earth).

1. Contact Architect for resolution if 25 Ω specified resistance to ground (earth) is not attained after complying with prescriptive requirements in Article 250 of NFPA 70.
2. Contact Architect for resolution if [**10 Ω**]<**Insert resistance value**> specified resistance to ground (earth) is not attained after second attempt to increase effectiveness of grounding (earthing) electrode.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

B. <**Insert additional performance requirements for the Project**>.

2.2 GROUNDING AND BONDING CONDUCTORS

A. Equipment Grounding Conductor:

1. Standard Features: 600 V, [**THHN/THWN-2**][**or**][**THWN-2**], [**copper**][**or**][**tinned-copper**] wire or cable, green color, in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Isolated Equipment Grounding Conductor:

1. Standard Features: 600 V, [**THHN/THWN-2**][**or**][**THWN-2**], [**copper**][**or**][**tinned-copper**] wire or cable, green color with one or more yellow stripes, in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

C. ASTM - Bare Copper Grounding and Bonding Conductor:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ERICO; brand of nVent Electrical plc**]
   b. [**Harger Lightning & Grounding; business of Harger, Inc.**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ERICO; brand of nVent Electrical plc**]
   b. [**Harger Lightning & Grounding; business of Harger, Inc.**]
   c. <**Insert manufacturer's name**>

3. Standard Features: Complying with one or more of the following:

   a. Soft or Annealed Copper Wire: ASTM B3.
   b. Concentric-Lay Stranded Copper Conductor: ASTM B8.
   c. Tin-Coated Soft or Annealed Copper Wire: ASTM B33.
   d. 19-Wire Combination Unilay-Stranded Copper Conductor: ASTM B787/B787M.

4. Sustainable Design Features:

   a. Lead Content for Electrical Wire and Cable: Less than 300 ppm.
   b. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
   e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
   f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

D. UL KDER - Armored Grounding Wire:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**LS Cable & System USA; subsidiary of LS Corp.**]
   b. [**Southwire Company, LLC**]
   c. [**Superior Essex Inc.; subsidiary of LS Corp.**]
   d. [**Viakon; brand of Conductores Monterrey S.A. de C.V.; a subsidiary of Xignux**]
   e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**LS Cable & System USA; subsidiary of LS Corp.**]
    b. [**Southwire Company, LLC**]
    c. [**Superior Essex Inc.; subsidiary of LS Corp.**]
    d. [**Viakon; brand of Conductores Monterrey S.A. de C.V.; a subsidiary of Xignux**]
    e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

4. Standard Features: Single corrosion-resistant copper, aluminum, or copper-clad aluminum conductor within helically formed steel armor.
5. Sustainable Design Features:

    a. Lead Content for Electrical Wire and Cable: Less than 300 ppm.
    b. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
    f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

E. UL KDSH - Protector Grounding Conductor:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Superior Essex Inc.; subsidiary of LS Corp.**]
    b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Superior Essex Inc.; subsidiary of LS Corp.**]
    b. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

4. Standard Features:

a. Conductors intended to be used for grounding primary protector or metallic members of cable sheath in accordance with Chapters 7 and 8 of NFPA 70.
b. Color: [**Light olive gray**][**or**][**green**].

5. Sustainable Design Features:

a. Lead Content for Electrical Wire and Cable: Less than 300 ppm.
b. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.3 GROUNDING AND BONDING CLAMPS

A. Description: Clamps suitable for attachment of grounding and bonding conductors to grounding electrodes, pipes, tubing, and rebar. Grounding and bonding clamps specified in this article are also suitable for use with communications applications.

B. UL KDER and KDSH - Hex-Fitting-Type Pipe and Rod Grounding and Bonding Clamp :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**America Fujikura Ltd. (AFL); Fujikura Ltd.**]
c. [**Arlington Industries, Inc.**]
d. [**Cooper B-line; brand of Eaton, Electrical Sector**]
e. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
f. [**ERICO; brand of nVent Electrical plc**]
g. [**Galvan Industries, Inc.; Electrical Products Division, LLC**]
h. [**Greaves Corp.; Essex Products Group, Inc.**]
i. [**Harger Lightning & Grounding; business of Harger, Inc.**]
j. [**ILSCO; brand of ECM Industries LLC; division of nVent Electric plc**]
k. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
l. [**Panduit Corp**]
m. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
n. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. [**America Fujikura Ltd. (AFL); Fujikura Ltd.**]
    c. [**Arlington Industries, Inc.**]
    d. [**Cooper B-line; brand of Eaton, Electrical Sector**]
    e. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
    f. [**ERICO; brand of nVent Electrical plc**]
    g. [**Galvan Industries, Inc.; Electrical Products Division, LLC**]
    h. [**Greaves Corp.; Essex Products Group, Inc.**]
    i. [**Harger Lightning & Grounding; business of Harger, Inc.**]
    j. [**ILSCO; brand of ECM Industries LLC; division of nVent Electric plc**]
    k. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
    l. [**Panduit Corp**]
    m. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    n. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
    b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

5. Standard Features:

    a. Two pieces with [**zinc-plated**][**stainless steel**] bolts.
    b. Clamp Material: [**Silicon bronze**][**Die-cast zinc alloy**][**Aluminum**][**Brass**][**Tinned brass**].
    c. Listed for outdoor use.

6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
    e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL KDER and KDSH - U-Bolt-Type Pipe and Rod Grounding and Bonding Clamp :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**America Fujikura Ltd. (AFL); Fujikura Ltd.**]
c. [**Arlington Industries, Inc.**]
d. [**Cooper B-line; brand of Eaton, Electrical Sector**]
e. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
f. [**ERICO; brand of nVent Electrical plc**]
g. [**Galvan Industries, Inc.; Electrical Products Division, LLC**]
h. [**Greaves Corp.; Essex Products Group, Inc.**]
i. [**Harger Lightning & Grounding; business of Harger, Inc.**]
j. [**ILSCO; brand of ECM Industries LLC; division of nVent Electric plc**]
k. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
l. [**Panduit Corp**]
m. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
n. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**America Fujikura Ltd. (AFL); Fujikura Ltd.**]
c. [**Arlington Industries, Inc.**]
d. [**Cooper B-line; brand of Eaton, Electrical Sector**]
e. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
f. [**ERICO; brand of nVent Electrical plc**]
g. [**Galvan Industries, Inc.; Electrical Products Division, LLC**]
h. [**Greaves Corp.; Essex Products Group, Inc.**]
i. [**Harger Lightning & Grounding; business of Harger, Inc.**]
j. [**ILSCO; brand of ECM Industries LLC; division of nVent Electric plc**]
k. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
l. [**Panduit Corp**]
m. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
n. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

5. Standard Features:

a. Clamp Material: [**Aluminum**][**Brass**][**Tinned brass**].
b. Listed for outdoor use.

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

D. UL KDER and KDSH - Strap-Type Pipe and Rod Grounding and Bonding Clamp :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
   c. [**ERICO; brand of nVent Electrical plc**]
   d. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
   e. [**Panduit Corp**]
   f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
   c. [**ERICO; brand of nVent Electrical plc**]
   d. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
   e. [**Panduit Corp**]
   f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
   b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

5. Standard Features:

   a. Clamp Material: [**Aluminum**][**Copper**][**Tinned copper**][**Galvanized steel**].
   b. Listed for outdoor use.

6. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced

(extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

E. UL KDER - Beam Grounding and Bonding Clamp :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Anderson; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
   c. [**Panduit Corp**]
   d. [**Penn-Union Corp.; subsidiary of Nesco, Inc.**]
   e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Anderson; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
   c. [**Panduit Corp**]
   d. [**Penn-Union Corp.; subsidiary of Nesco, Inc.**]
   e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
   b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

5. Standard Features: Mechanical-type, terminal, ground wire access from four directions; with dual, tin-plated or silicon bronze bolts.
6. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
   d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

F. UL KDER - Exothermically Welded Connection :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**ALLTEC LLC**]
   c. [**Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
   d. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
   e. [**ERICO; brand of nVent Electrical plc**]
   f. [**Harger Lightning & Grounding; business of Harger, Inc.**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**ALLTEC LLC**]
   c. [**Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
   d. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
   e. [**ERICO; brand of nVent Electrical plc**]
   f. [**Harger Lightning & Grounding; business of Harger, Inc.**]
   g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
   b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

5. Standard Features: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.
6. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
   d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
   e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

G. UL KDER - Raised-Floor Signal Reference Grid Clamp :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB, Electrification Business**]
    b. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
    d. [**Cooper B-line; brand of Eaton, Electrical Sector**]
    e. [**ERICO; brand of nVent Electrical plc**]
    f. [**Harger Lightning & Grounding; business of Harger, Inc.**]
    g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
    d. [**Cooper B-line; brand of Eaton, Electrical Sector**]
    e. [**ERICO; brand of nVent Electrical plc**]
    f. [**Harger Lightning & Grounding; business of Harger, Inc.**]
    g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
    b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

5. Standard Features: Mechanical-type, stamped-steel terminal with hex head screw.
6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
    e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.4 GROUNDING AND BONDING BUSHINGS

A. Description: Bonding bushings connect conduit fittings, tubing fittings, threaded metal conduit, and unthreaded metal conduit to metal boxes and equipment enclosures, and have one or more bonding screws intended to provide electrical continuity between bushing and enclosure. Grounding bushings have provision for connection of bonding or grounding conductor and may or may not also have bonding screws.

B. UL KDER - Bonding Bushing :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB, Electrification Business**]
    b. [**Arlington Industries, Inc.**]
    c. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
    d. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    e. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
    f. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. [**Arlington Industries, Inc.**]
    c. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
    d. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    e. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
    f. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

5. Standard Features: Threaded bushing with insulated throat.
6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL KDER - Grounding Bushing :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Arlington Industries, Inc.**]
   c. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
   d. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   e. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
   f. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Arlington Industries, Inc.**]
   c. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
   d. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   e. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
   f. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

5. Standard Features: Threaded bushing with insulated throat and mechanical-type wire terminal.
6. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
   d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
   e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.5 GROUNDING AND BONDING HUBS

A. UL KDER - Grounding and Bonding Hub :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB, Electrification Business**]
    b. [**Arlington Industries, Inc.**]
    c. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    d. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
    e. [**Greaves Corp.; Essex Products Group, Inc.**]
    f. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
    g. [**Penn-Union Corp.; subsidiary of Nesco, Inc.**]
    h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. [**Arlington Industries, Inc.**]
    c. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    d. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
    e. [**Greaves Corp.; Essex Products Group, Inc.**]
    f. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
    g. [**Penn-Union Corp.; subsidiary of Nesco, Inc.**]
    h. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

5. Standard Features: Insulated, gasketed, watertight hub with mechanical-type wire terminal.
6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
    e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.6 GROUNDING AND BONDING CONNECTORS

A. UL KDER - Pressure-Type Grounding and Bonding Busbar Cable Connector :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB, Electrification Business**]
    b. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
    b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

5. Standard Features: Copper or copper alloy, for compression bonding of one or more conductor directly to copper busbar. Listed for direct burial.
6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
    e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

B. UL KDER - Lay-In Lug Mechanical-Type Grounding and Bonding Busbar Terminal :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Chatsworth Products, Inc.**]
c. [**Greaves Corp.; Essex Products Group, Inc.**]
d. [**ILSCO; brand of ECM Industries LLC; division of nVent Electric plc**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Chatsworth Products, Inc.**]
c. [**Greaves Corp.; Essex Products Group, Inc.**]
d. [**ILSCO; brand of ECM Industries LLC; division of nVent Electric plc**]
e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

5. Standard Features: Mechanical-type, [**aluminum**][**copper rated for direct burial**] terminal with set screw.
6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL KDER - Crimped Lug Pressure-Type Grounding and Bonding Busbar Terminal :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Harger Lightning & Grounding; business of Harger, Inc.**]
c. [**ILSCO; brand of ECM Industries LLC; division of nVent Electric plc**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Harger Lightning & Grounding; business of Harger, Inc.**]
c. [**ILSCO; brand of ECM Industries LLC; division of nVent Electric plc**]
d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

5. Standard Features: Cast silicon bronze, solderless compression-type wire terminals; with long barrel and two holes spaced on **5/8 or 1 inch (16 or 25 mm)** centers for two-bolt connection to busbar.
6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

D. UL KDER - Split-Bolt Service-Post Pressure-Type Grounding and Bonding Busbar Terminal :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Panduit Corp**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Panduit Corp**]
b. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in

accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

5. Standard Features: Bolts that surround cable and bond to cable under compression when nut is tightened after assembly is screwed into busbar opening.
6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

E. UL KDER - Crimped Pressure-Type Grounding and Bonding Cable Connector :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**aIIG Fabrication (formerly ALT)**]
c. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**ILSCO; brand of ECM Industries LLC; division of nVent Electric plc**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**aIIG Fabrication (formerly ALT)**]
c. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**ILSCO; brand of ECM Industries LLC; division of nVent Electric plc**]
e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

5. Standard Features: Crimp-and-compress connectors that bond to conductor when connector is compressed around conductor.

    a. [**Copper**][**Copper alloy**][**Tinned copper**], C and H shaped.

6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
    e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

F. UL KDER - Split-Bolt Pressure-Type Grounding and Bonding Cable Connector :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB, Electrification Business**]
    b. [**allG Fabrication (formerly ALT)**]
    c. [**ERICO; brand of nVent Electrical plc**]
    d. [**Greaves Corp.; Essex Products Group, Inc.**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. [**allG Fabrication (formerly ALT)**]
    c. [**ERICO; brand of nVent Electrical plc**]
    d. [**Greaves Corp.; Essex Products Group, Inc.**]
    e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
    b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

5. Standard Features: Bolts that surround cable and bond to cable under compression when nut is tightened.

a. [**Copper**][**Copper alloy**][**Tinned copper**].

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

G. UL KDER - Signal Reference Grid Grounding and Bonding Connector :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
d. [**ERICO; brand of nVent Electrical plc**]
e. [**Harger Lightning & Grounding; business of Harger, Inc.**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
d. [**ERICO; brand of nVent Electrical plc**]
e. [**Harger Lightning & Grounding; business of Harger, Inc.**]
f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

5. Standard Features: Combination of compression wire connectors, access floor grounding clamps, bronze U-bolt grounding clamps, and copper split-bolt connectors, designed for the purpose.
6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.7 INTERSYSTEM BONDING BRIDGE GROUNDING CONNECTORS

A. Description: Devices that provide means for connecting communications systems grounding and bonding conductors at service equipment or at disconnecting means for buildings or structures.

B. UL KDSH - One-Piece Intersystem Bonding Bridge Grounding Connector :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Galvan Industries, Inc.; Electrical Products Division, LLC**]
   b. [**Madison Electric Products; business of Southwire Company, LLC**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Galvan Industries, Inc.; Electrical Products Division, LLC**]
   b. [**Madison Electric Products; business of Southwire Company, LLC**]
   c. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

4. Standard Features: Zinc-alloy one-piece construction; six terminating points; gangable.
5. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced

(extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL KDSH - Two-Piece Intersystem Bonding Bridge Grounding Connector :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
   c. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
   c. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   d. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

4. Standard Features: [**Zinc-alloy**][**Copper**] body and polycarbonate cover; four terminating points.
5. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
   d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
   e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.8 GROUNDING AND BONDING BUSBARS

A. Description: Miscellaneous grounding and bonding devices that serve as common connection for multiple grounding and bonding conductors.

B. UL KDER - Equipment Room Grounding and Bonding Busbar :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**allG Fabrication (formerly ALT)**]
    b. [**Chatsworth Products, Inc.**]
    c. [**Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
    d. [**Cooper B-line; brand of Eaton, Electrical Sector**]
    e. [**ERICO; brand of nVent Electrical plc**]
    f. [**Harger Lightning & Grounding; business of Harger, Inc.**]
    g. [**Hoffman; brand of nVent Electrical plc**]
    h. [**ILSCO; brand of ECM Industries LLC; division of nVent Electric plc**]
    i. [**Panduit Corp**]
    j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**allG Fabrication (formerly ALT)**]
    b. [**Chatsworth Products, Inc.**]
    c. [**Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
    d. [**Cooper B-line; brand of Eaton, Electrical Sector**]
    e. [**ERICO; brand of nVent Electrical plc**]
    f. [**Harger Lightning & Grounding; business of Harger, Inc.**]
    g. [**Hoffman; brand of nVent Electrical plc**]
    h. [**ILSCO; brand of ECM Industries LLC; division of nVent Electric plc**]
    i. [**Panduit Corp**]
    j. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

5. Standard Features:

    a. Bus: Rectangular bar of annealed copper.
    b. Mounting Stand-Off Insulators: Lexan or PVC.

        1) Comply with UL 891 for use in 600 V switchboards, impulse tested at 5000 V.

6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability

report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (lgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

7. Other Available Features Required by the Project:

a. Dimensions: [**1/4 by 4 inch (6.3 by 100 mm)**]<**Insert dimensions**> in cross section; length as indicated on the Drawings.

b. Predrilled Hole Pattern: [**Complying with BICSI N3 and TIA-607**][**9/32 inch (7.14 mm) holes spaced 1-1/8 inch (28 mm) apart**][**Suitable for installing specified grounding and bonding connectors**].

c. Mounting Hardware: Stand-off brackets that provide [**2 inch (50 mm)**][**4 inch (100 mm)**]<**Insert dimension**> clearance to access rear of bus. Brackets and bolts must be stainless steel.

C. UL KDER - Rack and Cabinet Bonding Busbar :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Chatsworth Products, Inc.**]
b. [**Cooper B-line; brand of Eaton, Electrical Sector**]
c. [**Harger Lightning & Grounding; business of Harger, Inc.**]
d. [**Hoffman; brand of nVent Electrical plc**]
e. [**Panduit Corp**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Chatsworth Products, Inc.**]
b. [**Cooper B-line; brand of Eaton, Electrical Sector**]
c. [**Harger Lightning & Grounding; business of Harger, Inc.**]
d. [**Hoffman; brand of nVent Electrical plc**]
e. [**Panduit Corp**]
f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

5. Standard Features:

   a. Bus: Rectangular bar of hard-drawn solid copper.
   b. Horizontal Mounting Dimensions: Designed for mounting in [**19 inch (483 mm)**][**23 inch (584 mm)**] wide equipment racks or cabinets.
   c. Vertical Mounting Dimensions: Designed for mounting in [**72 inch (1827 mm)**][**36 inch (914 mm)**] high equipment racks or cabinets.
   d. Predrilled Hole Pattern: Accepts connectors for grounding and bonding conductor sizes 14 AWG to 2/0 AWG.
   e. Mounting Hardware: Stainless steel or copper-plated, for attachment to rack.

6. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
   d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
   e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.9 SIGNAL REFERENCE GRIDS

A. Description: Means for providing low-impedance path to ground over a large area, approximating an equipotential plan, while simultaneously mitigating large current spikes from faults or lightning.

B. UL KDER - Mesh-Type Signal Reference Grid :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
   c. [**Harger Lightning & Grounding; business of Harger, Inc.**]
   d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
   c. [**Harger Lightning & Grounding; business of Harger, Inc.**]
   d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.

4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

5. Standard Features: Conductive metal wire mesh for field-fabrication of grid.

    a. Wire Size: [**8 AWG**][**6 AWG**][**4 AWG**][**2 AWG**].
    b. Wire Material: [**Copper**][**Copper-clad steel**].
    c. Spacing: [**4 inch (102 mm)**][**8 inch (203 mm)**][**12 inch (305 mm)**][**24 inch (610 mm)**].
    d. Welded or brazed intersections.

6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
    e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL KDER - Tape-Type Signal Reference Grid :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
    b. [**ERICO; brand of nVent Electrical plc**]
    c. [**Harger Lightning & Grounding; business of Harger, Inc.**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
    b. [**ERICO; brand of nVent Electrical plc**]
    c. [**Harger Lightning & Grounding; business of Harger, Inc.**]
    d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

5. Standard Features: Conductive copper tape for field-fabrication of grid.

   a. Copper Tape Dimensions: [**16 mil (0.4 mm) (26 ga.) thick by 2 inch (51 mm) wide**][**40 mil (1 mm) (18 ga.) thick by 1.6 inch (40 mm) wide**]<**Insert dimensions**>.
   b. Spacing: [**24 inch (610 mm)**]<**Insert dimension**>.
   c. Welded or brazed fittings for intersections.

6. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
   d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
   e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.10 GROUNDING (EARTHING) ELECTRODES

A. UL KDER - Rod Electrode :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**allG Fabrication (formerly ALT)**]
   c. [**Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
   d. [**ERICO; brand of nVent Electrical plc**]
   e. [**Galvan Industries, Inc.; Electrical Products Division, LLC**]
   f. [**Harger Lightning & Grounding; business of Harger, Inc.**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**allG Fabrication (formerly ALT)**]
   c. [**Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
   d. [**ERICO; brand of nVent Electrical plc**]
   e. [**Galvan Industries, Inc.; Electrical Products Division, LLC**]
   f. [**Harger Lightning & Grounding; business of Harger, Inc.**]
   g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in

accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

5. Standard Features: [**Copper-clad**][**Zinc-coated**][**Stainless**] steel[**, sectional type**]; [**3/4 inch by 10 ft (19 mm by 3 m)**][**5/8 inch by 8 ft (16 mm by 2.4 m)**].
6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

B. UL KDER - Chemically Charged Rod Electrode :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**aIIG Fabrication (formerly ALT)**]
b. [**ALLTEC LLC**]
c. [**ERICO; brand of nVent Electrical plc**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**aIIG Fabrication (formerly ALT)**]
b. [**ALLTEC LLC**]
c. [**ERICO; brand of nVent Electrical plc**]
d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

5. Standard Features: Copper tube, straight or L-shaped, charged electrode enhancement material.

a. Termination: Factory-attached 4/0 AWG bare conductor at least **48 inch (1200 mm)** long.
b. Backfill Material: Electrode manufacturer's recommended material.

6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
    e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

7. Other Available Features Required by the Project:

    a. Electrode Enhancement Material: [**Nonhazardous electrolytic chemical salts**]<**Insert enhancement material**>.

C. UL KDER - Plate Electrode :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ALLTEC LLC**]
    b. [**Galvan Industries, Inc.; Electrical Products Division, LLC**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ALLTEC LLC**]
    b. [**Galvan Industries, Inc.; Electrical Products Division, LLC**]
    c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

5. Standard Features: **1/4 inch (6 mm)** thick, hot-dip galvanized.
6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.11 GROUNDING ELECTRODE ENCLOSURES

A. Description: Enclosures designed to protect grounding electrodes from damage while providing access for inspection and testing of the grounding system.

B. Grounding Electrode Access Well Enclosure :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ERICO; brand of nVent Electrical plc**]
    b. [**Harger Lightning & Grounding; business of Harger, Inc.**]
    c. [**Quazite; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ERICO; brand of nVent Electrical plc**]
    b. [**Harger Lightning & Grounding; business of Harger, Inc.**]
    c. [**Quazite; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
    d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Standard Features:

    a. Well Material: [**Concrete**][**HDPE**][**Schedule 40 PVC**].
    b. Cover Material: [**Cast iron**][**Concrete**][**HDPE**][**Plastic**][**Steel**].
    c. Cover Strength: [**Sidewalk or turf use**][**Driveway use**]<**Insert rating**>.

5. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Material Reuse: Product is salvaged, refurbished, or reused.
    c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard

development organization, is publicly available for product.

f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Round:

1) Nominal Diameter: [**8 inch (200 mm)**][**9 inch (230 mm)**][**10 inch (250 mm)**][**12 inch (300 mm)**][**13 inch (330 mm)**]<**Insert dimension**>.
2) Nominal Height: [**10 inch (250 mm)**][**12 inch (300 mm)**][**18 inch (450 mm)**][**24 inch (600 mm)**][**30 inch (760 mm)**][**36 inch (910 mm)**][**48 inch (1220 mm)**]<**Insert dimension**>.
3) Slotted sides for installation after grounding connections made.

b. Rectangular:

1) Nominal Width: [**2 inch (50 mm)**][**12 inch (300 mm)**][**13 inch (330 mm)**][**17 inch (430 mm)**][**36 inch (910 mm)**]<**Insert dimension**>.
2) Nominal Length: [**10 inch (250 mm)**][**12 inch (300 mm)**][**13 inch (330 mm)**][**17 inch (430 mm)**][**18 inch (450 mm)**][**24 inch (600 mm)**][**36 inch (910 mm)**][**42 inch (1070 mm)**]<**Insert dimension**>.
3) Nominal Height: [**12 inch (300 mm)**][**18 inch (450 mm)**][**24 inch (600 mm)**][**30 inch (760 mm)**]<**Insert dimension**>.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine facility's grounding electrode system and equipment grounding for compliance with requirements for maximum ground-resistance level and other conditions affecting performance of grounding and bonding of electrical system.

B. Inspect test results of grounding system measured at point of electrical service equipment connection.

C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

D. Proceed with connection of electrical service equipment only after unsatisfactory conditions have been corrected.

3.2 SELECTION OF GROUNDING AND BONDING PRODUCTS

A. Grounding and Bonding Conductors:

1. Provide solid conductor for [**8 AWG**]<**Insert wire size**> and smaller, and stranded conductors for [**6 AWG**]<**Insert wire size**> and larger unless otherwise indicated.
2. Custom-Length Insulated Equipment Bonding Jumpers: 6 AWG, 19-strand, Type THHN.
3. Bonding Cable: 28 kcmil, 14 strands of 17 AWG conductor, **1/4 inch (6 mm)** in diameter.
4. Bonding Conductor: 4 AWG or 6 AWG, stranded conductor.
5. Bonding Jumper: Copper tape, braided conductors terminated with copper ferrules; **1-5/8 inch (41 mm)** wide and **1/16 inch (1.6 mm)** thick.

6. Tinned Bonding Jumper: Tinned-copper tape, braided conductors terminated with copper ferrules; 1-5/8 inch (41 mm) wide and 1/16 inch (1.6 mm) thick.
7. Underground Grounding Conductors: Install bare [**tinned-**]copper conductor, [**2/0 AWG**]<**Insert wire size**> minimum.

B. Grounding and Bonding Connectors:

1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
2. Underground Connections: Welded connectors except at test wells and as otherwise indicated.
3. Connections to Ground Rods at Test Wells: Bolted connectors.
4. Connections to Structural Steel: Welded connectors.

C. Grounding and Bonding Busbars: Provide in electrical equipment rooms, in rooms housing service equipment, and elsewhere as indicated on the Drawings.

D. Substation Signal Reference Grid:

1. Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with IEEE C2.

a. Install [**8 AWG**][**6 AWG**]<**Insert wire size from fault calculation**> bonding conductors below grade in a grid pattern on 2 ft (600 mm) centers. Bond grid conductors with exothermic welds where they cross each other.
b. Grid must fill entire area inside equipment yard fence, and extend minimum 6.5 ft (2 m) outside fence, so someone walking or running outside yard may not touch fence or open gate without first stepping inside grid.
c. Bond each metal fence post and gate post to at least two grid conductors.
d. Inside grid, bond equipment reinforcing steel inside bases and sidewalks to at least two grid conductors.
e. Bond underground metal pipe and conduit passing under grid to nearest grid conductor at both ends.

E. Signal Reference Grid Tape Mesh:

1. Install tape mesh under floor finish with the following features:

a. Tape mesh, 2 inch (50 mm) by 16 mil (0.4 mm) solid copper, [12 inch (300 mm)][24 inch (610 mm)] spacing.

3.3 SELECTION OF GROUNDING AND BONDING PRODUCTS FOR COMMUNICATIONS

A. Comply with Section 270528 "Pathways for Communications Systems" and Section 271100 "Communications Equipment Room Fittings."

3.4 SELECTION OF GROUNDING AND BONDING PRODUCTS FOR TOWERS AND ANTENNAS

A. Special Techniques:

1. Ring Electrode: Buried at least 30 inch (760 mm) below grade and at least 24 inch (610 mm) from base of tower or mounting.
2. Bond each tower base and metallic frame of dish to ring electrode, buried at least 18 inch (460 mm) below grade.
3. Bond ring electrode and antenna bonding conductors to equipment room PBB or SBB, buried at least 30 inch (760 mm) below grade.

4. Bond metal fences located within **6 ft (1.8 m)** of towers and antennas to ring electrode, buried at least **18 inch (460 mm)** below grade.
5. Special Requirements for Roof-Mounted Towers:

    a. Roof Ring: Meet requirements for ring electrode except conductors must comply with NFPA 780.
    b. Bond tower base footings steel, SBB in equipment room, and antenna support guys to roof ring.
    c. Connect roof ring to perimeter conductors of lightning protection system.

6. Special Requirements for Waveguides and Coaxial Cable:

    a. Bond cable shields at point of entry into building to nearest SBB and to cable entrance plate, using 2 AWG bonding conductors.
    b. Bond coaxial cable surge arrester to ring electrode or roof ring using bonding conductor size recommended by surge-arrester manufacturer.

3.5 INSTALLATION OF GROUNDING AND BONDING

A. Comply with manufacturer's published instructions.

B. Reference Standards:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
5. Communications Work: BICSI N1.
6. Work in ITE Rooms: NFPA 75.
7. Work in Health Care Facilities: NFPA 99 and Article 517 of NFPA 70.
8. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
9. Work in Confined Spaces: NFPA 350.
10. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
11. Ground Bonding Common with Lightning Protection System: Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor, and install in conduit.
12. Consult Architect for resolution of conflicting requirements.

C. Special Techniques:

1. Grounding and Bonding Conductors:

    a. Route along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.
    b. Underground Grounding Conductors:

        1) Bury at least **30 inch (750 mm)** below grade.
        2) Duct-Bank Grounding Conductor: Bury **12 inch (300 mm)** above duct bank when indicated as part of duct-bank installation.

2. Grounding and Bonding Connectors: Make connections so possibility of galvanic action or

electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.

a. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
b. Make connections with clean, bare metal at points of contact.
c. Make aluminum-to-steel connections with stainless steel separators and mechanical clamps.
d. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
e. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.
f. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.

1) Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate adjacent parts.
2) Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.
3) Use exothermic-welded connectors for outdoor locations; if disconnect-type connection is required, use bolted clamp.

g. Grounding and Bonding for Piping:

1) Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes; use bolted clamp connector or bolt lug-type connector to pipe flange by using one of lug bolts of flange. Where dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
2) Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with bolted connector.
3) Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.

h. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install [**tinned**]bonding jumper to bond across flexible duct connections to achieve continuity.
i. Grounding for Steel Building Structure: Install driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than **60 ft (18 m)** apart.

3. Grounding and Bonding Busbars:

a. Install busbar horizontally, on insulated spacers **2 inch (50 mm)** minimum from wall, **6 inch (150 mm)** above finished floor unless otherwise indicated.
b. Where busbars are indicated on both sides of doorways, route bonding conductor up to top of door frame, across top of doorway, and down; connect to continuation of horizontal busbar.

4. Electrodes:

a. Ground Rods: Drive rods until tops are **2 inch (50 mm)** below finished floor or final grade unless otherwise indicated.

1) Interconnect ground rods with grounding electrode conductor below grade and as

otherwise indicated. Make connections without exposing steel or damaging coating if any.

2) Use exothermic welds for below-grade connections.

b. For grounding electrode system, install at least [**three**]<**Insert number**> rods spaced at least one-rod length from each other and located at least same distance from other grounding electrodes, and connect to service grounding electrode conductor.

c. Test Wells: Ground rod driven through drilled hole in bottom of handhole. Handholes are specified in Section 260543 "Underground Ducts and Raceways for Electrical Systems," and must be at least **12 inch (300 mm)** deep, with cover.

1) Install at least one test well for each service unless otherwise indicated. Install at ground rod electrically closest to service entrance. Set top of test well flush with finished grade or floor.

d. Ring Electrode: Install grounding conductor, electrically connected to each building structure ground rod and to each [**steel column**][**indicated item**], extending around perimeter of [**building**][**area or item indicated**].

1) Install tinned-copper conductor not less than [**2/0 AWG**]<**Insert wire size**> for ring electrode and for taps to building steel.

2) Bury ring electrode not less than [**24 inch (600 mm)**]<**Insert dimension**> from building's foundation.

e. Concrete-Encased Electrode (Ufer Ground):

1) Fabricate in accordance with NFPA 70; use minimum of [**20 ft (6 m)**]<**Insert dimension**> of bare copper conductor not smaller than [**4 AWG**]<**Insert wire size**>.

a) If concrete foundation is less than [**20 ft (6 m)**]<**Insert dimension**> long, coil excess conductor within base of foundation.

b) Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor below grade and connect to building's grounding grid or to grounding electrode external to concrete.

2) Fabricate in accordance with NFPA 70; using electrically conductive coated steel reinforcing bars or rods, at least **20 ft (6.0 m)** long. If reinforcing is in multiple pieces, connect together by usual steel tie wires or exothermic welding to create required length.

5. Grounding at Service:

a. Equipment grounding conductors and grounding electrode conductors must be connected to ground busbar. Install main bonding jumper between neutral and ground buses.

6. Grounding Separately Derived Systems:

a. Permanent Generators: Install grounding electrode(s) at location of permanent generators having switched neutral connections. Electrode must be connected to equipment grounding conductor and to frame of generator.

7. Grounding Underground Distribution System Components:

a. Duct-Bank Grounding Conductor: Bury **12 inch (300 mm)** above duct bank when indicated as part of duct-bank installation.

b. Comply with IEEE C2 grounding requirements.
c. Grounding Manholes and Handholes: Install driven ground rod through manhole or handhole floor, close to wall, and set rod depth so **4 inch (100 mm)** will extend above finished floor. If necessary, install ground rod before manhole is placed and provide 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from **2 inch (50 mm)** above to **6 inch (150 mm)** below concrete. Seal floor opening with waterproof, nonshrink grout.
d. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with 4 AWG minimum, stranded, hard-drawn copper bonding conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields in accordance with manufacturer's published instructions with splicing and termination kits.
e. Pad-Mounted Transformers and Switches: Install two ground rods and ring electrode around pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated with substations by connecting them to underground cable and grounding electrodes. Install tinned-copper conductor not less than 2 AWG for ring electrode and for taps to equipment grounding terminals. Bury ring electrode not less than **6 inch (150 mm)** from foundation.

8. Equipment Grounding and Bonding:

a. Install insulated equipment grounding conductors with feeders and branch circuits.
b. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:

1) Feeders and branch circuits.
2) Lighting circuits.
3) Receptacle circuits.
4) Single-phase motor and appliance branch circuits.
5) Three-phase motor and appliance branch circuits.
6) Flexible raceway runs.
7) Armored and metal-clad cable runs.
8) Busway Supply Circuits: Install insulated equipment grounding conductor from grounding bus in switchgear, switchboard, or distribution panel to equipment grounding bar terminal on busway.
9) X-Ray Equipment Circuits: Install insulated equipment grounding conductor in circuits supplying x-ray equipment.

c. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.
d. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.
e. Isolated Grounding Receptacle Circuits: Install insulated equipment grounding conductor connected to receptacle grounding terminal. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of applicable derived system or service unless otherwise indicated.
f. Isolated Equipment Enclosure Circuits: For designated equipment supplied by branch circuit or feeder, isolate equipment enclosure from supply circuit raceway with nonmetallic raceway fitting listed for the purpose. Install fitting where raceway enters enclosure, and install separate insulated equipment grounding conductor. Isolate conductor from raceway

and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of applicable derived system or service unless otherwise indicated.

g. Poles Supporting Outdoor Lighting Fixtures: Bond insulated equipment grounding conductor to equipment grounding terminal inside pole base.

h. Metallic Fences: Comply with requirements of IEEE C2.

1) Grounding Conductor: Bare[**, tinned**] copper, not less than [**8 AWG**]<**Insert wire size**>.

2) Gates: Must be bonded to grounding conductor with flexible bonding jumper.

3) Barbed Wire: Strands must be bonded to grounding conductor.

9. Fence Grounding:

a. Grounding Method: At each grounding location, drive grounding rod vertically until top is **6 inch (150 mm)** below finished grade. Connect rod to fence with 6 AWG conductor. Connect conductor to each fence component at grounding location.

b. Fences greater than **100 ft (30 m)** of Buildings, Structures, Walkways, and Roadways: Ground fence at maximum intervals of [**1500 ft (450 m)**]<**Insert lesser distance if grounding resistance is high**>.

c. Fences within **100 ft (30 m)** of Buildings, Structures, Walkways, and Roadways: Ground fence at maximum intervals of [**750 ft (225 m)**]<**Insert lesser distance if grounding resistance is high**>.

1) Gates and Other Fence Openings: Ground fence on each side of opening.

a) Bond metal gates to gate posts by connecting bonding jumper between gate post and gate frame.

b) Bond across openings, with and without gates, except at openings indicated as intentional fence discontinuities. Use 2 AWG wire and bury it at least **18 inch (460 mm)** below finished grade.

d. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of power line crossing and at maximum distance of **150 ft (45 m)** on each side of crossing.

e. Bonding to Lightning-Protection System: If fence terminates at lightning-protected building or structure, ground fence and bond fence grounding conductor to lightning-protection down conductor or lightning-protection grounding conductor, complying with NFPA 780.

3.6 FIELD QUALITY CONTROL FOR GROUNDING AND BONDING

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

1. <**Insert requirements**>.

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

D. Tests and Inspections:

1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with calibrated torque wrench in accordance with manufacturer's published instructions.
3. Test completed grounding system at each location where maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal[**, at ground test wells**][**, and at individual ground rods**]. Make tests at ground rods before conductors are connected.

    a. Measure ground resistance no fewer than two full days after last trace of precipitation and without soil being moistened by means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
    b. Perform tests by fall-of-potential method in accordance with IEEE Std 81.
    c. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Architect promptly and include recommendations to reduce ground resistance.

4. Prepare dimensioned Drawings locating each test well, ground rod and ground-rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to record of tests and observations. Include number of rods driven and their depth at each location, and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.

E. Nonconforming Work:

1. Grounding system will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective components and retest.

F. Collect, assemble, and submit test and inspection reports.

1. Report measured ground resistances that exceed the following values:

    a. Power and Lighting Equipment or System with Capacity of 500 kVA and Less: [**10 Ω**]<**Insert ohms**>.
    b. Power and Lighting Equipment or System with Capacity of 500 to 1000 kVA: [**5 Ω**]<**Insert ohms**>.
    c. Power and Lighting Equipment or System with Capacity More Than 1000 kVA: [**3 Ω**]<**Insert ohms**>.
    d. Power Distribution Units or Panelboards Serving Electronic Equipment: [**1 Ω**][**3 Ω**]<**Insert ohms**>.
    e. Substations and Pad-Mounted Equipment: [**5 Ω**]<**Insert ohms**>.
    f. Manhole Grounds: [**10 Ω**]<**Insert ohms**>.
    g. <**Insert application and maximum ground-resistance**>.

3.7 PROTECTION

A. After installation, protect grounding and bonding cables and equipment from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

END OF SECTION 26 05 26 00

Task	Specification	Specification Description
26 05 26 00	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 43 00 - CONDUITS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Type EMT duct raceways and elbows.
2. Type ENT duct raceways and fittings.
3. Type HDPE and Type EPEC duct raceways and fittings.
4. Type ERMC duct raceways, elbows, couplings, and nipples.
5. Type FMC duct raceways.
6. Type FMT duct raceways.
7. Type IMC duct raceways.
8. Type LFMC duct raceways.
9. Type LFNC duct raceways.
10. Type PVC duct raceways and fittings.
11. Type RTRC duct raceways and fittings.
12. Fittings for conduit, tubing, and cable.
13. Joint compounds.
14. Solvent cements.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies temperature, humidity, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies seismic hazard, wind hazard, other structural load design conditions applicable to the Work specified in this Section.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
4. Section 078413 "Penetration Firestopping" specifies firestopping referenced by this Section.
5. Section 260519 "Low-Voltage for Electrical Power Conductors and Cables" specifies nonmetallic underground conduit with conductors (Type NUCC).
6. Section 260529 "Hangers and Supports for Electrical Systems" specifies conduit hangers and supports referenced by this Section.
7. Section 260543 "Underground Ducts and Raceways for Electrical Systems" specifies exterior duct banks, manholes, and underground utility construction.
8. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels.
9. Section 270528 "Pathways for Communications Systems"[**and Section 271100 "Communications Equipment Room Fittings"**] specifies additional requirements for installation of conduits for communications cabling.

1.2 REFERENCES

A. Abbreviations and Acronyms for Electrical Raceway Types:

1. EMT: Electrical metallic tubing.
2. EMT-A: Aluminum electrical metallic tubing.
3. EMT-S: Steel electrical metallic tubing.

4. EMT-SS: Stainless steel electrical metallic tubing.
5. ENT: Electrical nonmetallic tubing.
6. EPEC: Electrical HDPE underground conduit (thin wall).
7. EPEC-A: Type A electrical HDPE underground conduit.
8. EPEC-B: Type B electrical HDPE underground conduit.
9. ERMC: Electrical rigid metal conduit.
10. ERMC-A: Aluminum electrical rigid metal conduit.
11. ERMC-S: Steel electrical rigid metal conduit.
12. ERMC-S-G: Galvanized-steel electrical rigid metal conduit.
13. ERMC-S-PVC: PVC-coated-steel electrical rigid metal conduit.
14. ERMC-SS: Stainless steel electrical rigid metal conduit.
15. FMC: Flexible metal conduit.
16. FMC-A: Aluminum flexible metal conduit.
17. FMC-S: Steel flexible metal conduit.
18. FMT: Steel flexible metallic tubing.
19. FNMC: Flexible nonmetallic conduit. See "LFNC."
20. HDPE: HDPE underground conduit (thick wall).
21. HDPE-40: Schedule 40 HDPE underground conduit.
22. HDPE-80: Schedule 80 HDPE underground conduit.
23. IMC: Steel electrical intermediate metal conduit.
24. LFMC: Liquidtight flexible metal conduit.
25. LFMC-A: Aluminum liquidtight flexible metal conduit.
26. LFMC-S: Steel liquidtight flexible metal conduit.
27. LFMC-SS: Stainless steel liquidtight flexible metal conduit.
28. LFNC: Liquidtight flexible nonmetallic conduit.
29. LFNC-A: Layered (Type A) liquidtight flexible nonmetallic conduit.
30. LFNC-B: Integral (Type B) liquidtight flexible nonmetallic conduit.
31. LFNC-C: Corrugated (Type C) liquidtight flexible nonmetallic conduit.
32. PVC: Rigid PVC conduit.
33. PVC-40: Schedule 40 rigid PVC conduit.
34. PVC-80: Schedule 80 rigid PVC Conduit.
35. PVC-A: Type A rigid PVC concrete-encased conduit.
36. PVC-EB: Type EB rigid PVC concrete-encased underground conduit.
37. RGS: See ERMC-S-G.
38. RMC: See ERMC.
39. RTRC: Reinforced thermosetting resin conduit.
40. RTRC-AG: Low-halogen, aboveground reinforced thermosetting resin conduit.
41. RTRC-AG-HW: Heavy wall, low-halogen, aboveground reinforced thermosetting resin conduit.
42. RTRC-AG-SW: Standard wall, low-halogen, aboveground reinforced thermosetting resin conduit.
43. RTRC-AG-XW: Extra heavy wall, low-halogen, aboveground reinforced thermosetting resin conduit.
44. RTRC-BG: Low-halogen, belowground reinforced thermosetting resin conduit.

B. Definitions:

1. Conduit: A structure containing one or more duct raceways.
2. Direct Buried: Installed underground without encasement in concrete or other protective material.
3. Duct Bank: An arrangement of conduit providing one or more continuous duct raceways between two points.
4. Duct Raceway: A single enclosed raceway for conductors or cable.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product data for sustainable design features for each type of product.

C. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

1.5 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures; conduct tests of complex equipment; analyze test and equipment data; plan a job; and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.

C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

D. ERMC-S-PVC Installers: Installer possessing active qualifications specified in Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by ERMC-S-PVC manufacturer prior to starting installation.

E. Communications Testing and Inspecting Agency: Entity possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site communications testing supervisor must have [**BICSI Technician (TECH)**]<**Insert certification program**> certification and documented training, and be experienced with testing communications equipment in accordance with [**BICSI**]<**Insert code enforced by authorities having jurisdiction**> testing standards.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

B. <**Insert additional performance requirements for the Project**>.

2.2 TYPE EMT DUCT RACEWAYS AND ELBOWS

A. UL FJMX - Aluminum Electrical Metal Tubing (EMT-A) and Elbows:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**American Conduit; Norsk Hydro ASA, Hydro Extrusion USA LLC**]
   b. [**Patriot Aluminum Products, LLC**]
   c. [**Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway**]
   d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**American Conduit; Norsk Hydro ASA, Hydro Extrusion USA LLC**]
   b. [**Patriot Aluminum Products, LLC**]
   c. [**Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway**]
   d. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. UL CCN FJMX; including UL 797A.

4. Standard Features:

   a. Material: Aluminum.
   b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
   d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
   e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Colors: As indicated on the Drawings.

B. UL FJMX - Stainless Steel Electrical Metal Tubing (EMT-SS) and Elbows:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Calconduit; Atkore International**]
b. [**Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Calconduit; Atkore International**]
b. [**Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V**]
c. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN FJMX; including UL 797A.

4. Standard Features:

a. Material: Stainless steel.
b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Colors: As indicated on the Drawings.

C. UL FJMX - Steel Electrical Metal Tubing (EMT-S) and Elbows:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the**

following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

a. [**Allied Tube & Conduit; Atkore International**]
b. [**Calconduit; Atkore International**]
c. [**Emerson Electric Co., Automation Solutions**]
d. [**Picoma; Zekelman Industries**]
e. [**Republic Conduit; Nucor Corporation, Nucor Tubular Products**]
f. [**Topaz Lighting & Electric**]
g. [**Western Tube; Zekelman Industries**]
h. [**Wheatland Tube; Zekelman Industries**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Allied Tube & Conduit; Atkore International**]
b. [**Calconduit; Atkore International**]
c. [**Emerson Electric Co., Automation Solutions**]
d. [**Picoma; Zekelman Industries**]
e. [**Republic Conduit; Nucor Corporation, Nucor Tubular Products**]
f. [**Topaz Lighting & Electric**]
g. [**Western Tube; Zekelman Industries**]
h. [**Wheatland Tube; Zekelman Industries**]
i. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN FJMX; including UL 797.

4. Standard Features:

a. Material: Steel.
b. Exterior Coating: [**Zinc**][**Alternate corrosion-resistant coating**].
c. Interior Coating: [**Zinc with organic top coating**][**Zinc**][**Organic coating**].
d. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Colors: As indicated on the Drawings.

2.3 TYPE ENT DUCT RACEWAYS AND FITTINGS

A. UL FKHU - Electrical Nonmetallic Tubing (ENT) and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Cantex Inc.**]
c. [**JM Eagle**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Cantex Inc.**]
c. [**JM Eagle**]
d. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN FKHU; including UL 1653.

4. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

5. Other Available Features Required by the Project:

a. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade**

size 3/4)].

b. Fittings:

1) Mechanically Attached Fittings: UL 1653.
2) Solvent-Attached Fittings: UL 651.

2.4 TYPE HDPE AND TYPE EPEC DUCT RACEWAYS AND FITTINGS

A. UL EAZX - Schedule 40 Electrical HDPE Underground Conduit (HDPE-40):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Blue Diamond Industries, LLC**]
b. [**JM Eagle**]
c. [**Petroflex North America**]
d. [**Prysmian Cables and Systems; Prysmian Group North America**]
e. [**Southwire Company, LLC**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Blue Diamond Industries, LLC**]
b. [**JM Eagle**]
c. [**Petroflex North America**]
d. [**Prysmian Cables and Systems; Prysmian Group North America**]
e. [**Southwire Company, LLC**]
f. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN EAZX; including UL 651A.

4. Standard Features:

a. Dimensional Specifications: Schedule 40.

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute

standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

B. UL EAZX - Schedule 80 Electrical HDPE Underground Conduit (HDPE-80):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Blue Diamond Industries, LLC**]
b. [**JM Eagle**]
c. [**Petroflex North America**]
d. [**Prysmian Cables and Systems; Prysmian Group North America**]
e. [**Southwire Company, LLC**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Blue Diamond Industries, LLC**]
b. [**JM Eagle**]
c. [**Petroflex North America**]
d. [**Prysmian Cables and Systems; Prysmian Group North America**]
e. [**Southwire Company, LLC**]
f. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN EAZX; including UL 651A.

4. Standard Features:

a. Dimensional Specifications: Schedule 80.

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute

standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

C. UL EAZX - Type A Electrical HDPE Underground Conduit (EPEC-A):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN EAZX; including UL 651A.

4. Standard Features:

a. Dimensional Specifications: Type A.

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

D. UL EAZX - Type B Electrical HDPE Underground Conduit (EPEC-B):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. UL CCN EAZX; including UL 651A.

4. Standard Features:

   a. Dimensional Specifications: Type B.

5. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
   d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
   e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

   a. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

2.5 TYPE ERMC DUCT RACEWAYS, ELBOWS, COUPLINGS, AND NIPPLES

A. UL DYWV - Aluminum Electrical Rigid Metal Conduit (ERMC-A), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Allied Tube & Conduit; Atkore International**]
c. [**American Conduit; Norsk Hydro ASA, Hydro Extrusion USA LLC**]
d. [**Appleton; Emerson Electric Co., Automation Solutions**]
e. [**Calconduit; Atkore International**]
f. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
g. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
h. [**Patriot Aluminum Products, LLC**]
i. [**Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway**]
j. [**Republic Conduit; Nucor Corporation, Nucor Tubular Products**]
k. [**Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V**]
l. [**Topaz Lighting & Electric**]
m. [**Western Tube; Zekelman Industries**]
n. [**Wheatland Tube; Zekelman Industries**]
o. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Allied Tube & Conduit; Atkore International**]
c. [**American Conduit; Norsk Hydro ASA, Hydro Extrusion USA LLC**]
d. [**Appleton; Emerson Electric Co., Automation Solutions**]
e. [**Calconduit; Atkore International**]
f. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
g. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
h. [**Patriot Aluminum Products, LLC**]
i. [**Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway**]
j. [**Republic Conduit; Nucor Corporation, Nucor Tubular Products**]
k. [**Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V**]
l. [**Topaz Lighting & Electric**]
m. [**Western Tube; Zekelman Industries**]
n. [**Wheatland Tube; Zekelman Industries**]
o. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DYWV; including UL 6A.

4. Standard Features:

a. Material: Aluminum.
b. Protective Coating: Provide protective coating for [**use in concrete**][**direct burial**][**use in severely corrosive environment**].
c. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability

report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Colors: As indicated on the Drawings.

B. UL DYWV - Stainless Steel Electrical Rigid Metal Conduit (ERMC-SS), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Allied Tube & Conduit; Atkore International**]
c. [**Calconduit; Atkore International**]
d. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
e. [**Patriot Aluminum Products, LLC**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Allied Tube & Conduit; Atkore International**]
c. [**Calconduit; Atkore International**]
d. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
e. [**Patriot Aluminum Products, LLC**]
f. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DYWV; including UL 6A.

4. Standard Features:

a. Material: Stainless steel.
b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Colors: As indicated on the Drawings.

C. UL DYIX - Galvanized-Steel Electrical Rigid Metal Conduit (ERMC-S-G), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Allied Tube & Conduit; Atkore International**]
b. [**Calconduit; Atkore International**]
c. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
d. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
e. [**Patriot Aluminum Products, LLC**]
f. [**Republic Conduit; Nucor Corporation, Nucor Tubular Products**]
g. [**Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V**]
h. [**Topaz Lighting & Electric**]
i. [**Western Tube; Zekelman Industries**]
j. [**Wheatland Tube; Zekelman Industries**]
k. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Allied Tube & Conduit; Atkore International**]
b. [**Calconduit; Atkore International**]
c. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
d. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
e. [**Patriot Aluminum Products, LLC**]
f. [**Republic Conduit; Nucor Corporation, Nucor Tubular Products**]
g. [**Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V**]
h. [**Topaz Lighting & Electric**]
i. [**Western Tube; Zekelman Industries**]
j. [**Wheatland Tube; Zekelman Industries**]
k. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in

accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DYIX; including UL 6.

4. Standard Features:

a. Exterior Coating: Zinc.
b. Interior Coating: [**Zinc with organic top coating**][**Zinc**][**Organic coating**].
c. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Colors: As indicated on the Drawings.

D. UL DYIX - PVC-Coated-Steel Electrical Rigid Metal Conduit (ERMC-S-PVC), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Bluesteel Services LLC**]
c. [**Calbond; Atkore International**]
d. [**KorKap; Robroy Industries**]
e. [**Perma-Cote; Robroy Industries**]
f. [**Plasti-Bond; Robroy Industries**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Bluesteel Services LLC**]
c. [**Calbond; Atkore International**]
d. [**KorKap; Robroy Industries**]

e. [**Perma-Cote; Robroy Industries**]
f. [**Plasti-Bond; Robroy Industries**]
g. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. UL CCN DYIX; including UL 6.

4. Standard Features:

   a. Exterior Coating: PVC complying with NEMA RN 1.
   b. Interior Coating: [**Zinc with organic top coating**][**Zinc**][**Organic coating**].
   c. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
   d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
   e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

   a. Colors: As indicated on the Drawings.
   b. Conduit Fittings for Hazardous (Classified) Locations: UL 1203.
   c. Expansion and Deflection Fittings: UL 651 with flexible bonding jumper.

2.6 TYPE FMC DUCT RACEWAYS

A. UL DXUZ - Steel Flexible Metal Conduit (FMC-S):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Anaconda Sealtite; Anamet Electrical, Inc**]
   c. [**Electri-Flex Company**]
   d. [**International Metal Hose Co.**]
   e. [**Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway**]

f. [**Topaz Lighting & Electric**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Anaconda Sealtite; Anamet Electrical, Inc**]
c. [**Electri-Flex Company**]
d. [**International Metal Hose Co.**]
e. [**Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway**]
f. [**Topaz Lighting & Electric**]
g. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DXUZ; including UL 1.

4. Standard Features:

a. Material: Steel.
b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Colors: As indicated on the Drawings.

B. UL DXUZ - Aluminum Flexible Metal Conduit (FMC-A):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]

b. [**Anaconda Sealtite; Anamet Electrical, Inc**]
c. [**Electri-Flex Company**]
d. [**Topaz Lighting & Electric**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Anaconda Sealtite; Anamet Electrical, Inc**]
c. [**Electri-Flex Company**]
d. [**Topaz Lighting & Electric**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DXUZ; including UL 1.

4. Standard Features:

a. Material: Aluminum.
b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Colors: As indicated on the Drawings.

2.7 TYPE FMT DUCT RACEWAYS

A. UL ILJW - Steel Flexible Metallic Tubing (FMT):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

a. [**Electri-Flex Company**]
b. [**International Metal Hose Co**]
c. [**Liquid Tight Connector Co.**]
d. [**Southwire Company, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Electri-Flex Company**]
b. [**International Metal Hose Co**]
c. [**Liquid Tight Connector Co.**]
d. [**Southwire Company, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN ILJW; including UL Subject 1652.

4. Standard Features:

a. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Colors: As indicated on the Drawings.

2.8 TYPE IMC DUCT RACEWAYS

A. UL DYBY - Steel Intermediate Metal Conduit (IMC):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following]:

a. [**ABB, Electrification Business**]
b. [**Allied Tube & Conduit; Atkore International**]
c. [**Calconduit; Atkore International**]
d. [**Republic Conduit; Nucor Corporation, Nucor Tubular Products**]
e. [**Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V**]
f. [**Topaz Lighting & Electric**]
g. [**Western Tube; Zekelman Industries**]
h. [**Wheatland Tube; Zekelman Industries**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Allied Tube & Conduit; Atkore International**]
c. [**Calconduit; Atkore International**]
d. [**Republic Conduit; Nucor Corporation, Nucor Tubular Products**]
e. [**Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V**]
f. [**Topaz Lighting & Electric**]
g. [**Western Tube; Zekelman Industries**]
h. [**Wheatland Tube; Zekelman Industries**]
i. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DYBY; including UL 1242.

4. Standard Features:

a. Exterior Coating: [**Zinc**][**Alternative corrosion-resistant coating**].
b. Interior Coating: [**Zinc with organic top coating**][**Zinc**][**Organic coating**].
c. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

    a. Colors: As indicated on the Drawings.

2.9 TYPE LFMC DUCT RACEWAYS

A. UL DXHR - Steel Liquidtight Flexible Metal Conduit (LFMC-S):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB, Electrification Business**]
    b. [**Anaconda Sealtite; Anamet Electrical, Inc**]
    c. [**Electri-Flex Company**]
    d. [**International Metal Hose Co**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. [**Anaconda Sealtite; Anamet Electrical, Inc**]
    c. [**Electri-Flex Company**]
    d. [**International Metal Hose Co**]
    e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. UL CCN DXHR; including UL 360.

4. Standard Features:

    a. Material: Steel.
    b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
    e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate

scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

   a. Colors: As indicated on the Drawings.

B. UL DXHR - Stainless Steel Liquidtight Flexible Metal Conduit (LFMC-SS):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Anaconda Sealtite; Anamet Electrical, Inc**]
   c. [**Electri-Flex Company**]
   d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Anaconda Sealtite; Anamet Electrical, Inc**]
   c. [**Electri-Flex Company**]
   d. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. UL CCN DXHR; including UL 360.

4. Standard Features:

   a. Material: Stainless steel.
   b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
   d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
   e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

    a. Colors: As indicated on the Drawings.

2.10 TYPE LFNC DUCT RACEWAYS

A. UL DXOQ - Layered (Type A) Liquidtight Flexible Nonmetallic Conduit (LFNC-A):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**AFC Cable Systems; Atkore International**]
    b. [**Electri-Flex Company**]
    c. [**Topaz Lighting & Electric**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**AFC Cable Systems; Atkore International**]
    b. [**Electri-Flex Company**]
    c. [**Topaz Lighting & Electric**]
    d. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. UL CCN DXOQ; including UL 1660.

4. Standard Features:

    a. Type A conduit with smooth seamless inner core and cover bonded together with one or more reinforcement layers between core and cover.
    b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].
    c. Markings: [**80 deg C dry**][**90 deg C dry**][**105 deg C dry**][**70 deg C oil resistant**][**Sunlight resistant**][**Outdoor**][**Direct burial**][**Complies with flame test in cable trays**].

5. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Colors: As indicated on the Drawings.

B. UL DXOQ - Integral (Type B) Liquidtight Flexible Nonmetallic Conduit (LFNC-B):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Cambridge Resources**]
c. [**Electri-Flex Company**]
d. [**Superflex Ltd.**]
e. [**Topaz Lighting & Electric**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Cambridge Resources**]
c. [**Electri-Flex Company**]
d. [**Superflex Ltd.**]
e. [**Topaz Lighting & Electric**]
f. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DXOQ; including UL 1660.

4. Standard Features:

a. Type B conduit with smooth inner surface with integral reinforcement within conduit wall.
b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].
c. Markings: [**80 deg C dry**][**90 deg C dry**][**105 deg C dry**][**70 deg C oil resistant**][**Sunlight resistant**][**Outdoor**][**Direct burial**][**Complies with flame test in cable trays**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project

site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Colors: As indicated on the Drawings.

C. UL DXOQ - Corrugated (Type C) Liquidtight Flexible Nonmetallic Conduit (LFNC-C):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**HellermannTyton**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**HellermannTyton**]
c. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DXOQ; including UL 1660.

4. Standard Features:

a. Type C conduit with corrugated internal and external surfaces without integral reinforcement within conduit wall.
b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].
c. Markings: [**80 deg C dry**][**90 deg C dry**][**105 deg C dry**][**70 deg C oil resistant**][**Sunlight resistant**][**Outdoor**][**Direct burial**][**Complies with flame test in cable trays**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute

standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Colors: As indicated on the Drawings.

2.11 TYPE PVC DUCT RACEWAYS AND FITTINGS

A. UL DZYR - Schedule 40 Rigid PVC Conduit (PVC-40) and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Calconduit; Atkore International**]
c. [**JM Eagle**]
d. [**NAPCO; Westlake Chemical Corp.**]
e. [**National Pipe and Plastic, Inc. (Oldcastle)**]
f. [**Opti-Com Manufacturing Network, Inc (OMNI)**]
g. [**Topaz Lighting & Electric**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Calconduit; Atkore International**]
c. [**JM Eagle**]
d. [**NAPCO; Westlake Chemical Corp.**]
e. [**National Pipe and Plastic, Inc. (Oldcastle)**]
f. [**Opti-Com Manufacturing Network, Inc (OMNI)**]
g. [**Topaz Lighting & Electric**]
h. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DZYR; including UL 651.

4. Standard Features:

a. Dimensional Specifications: Schedule 40.
b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].
c. Markings: [**For use with maximum 90 deg C wire**][**For directional boring applications**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

B. UL DZYR - Schedule 80 Rigid PVC Conduit (PVC-80) and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Calconduit; Atkore International**]
c. [**JM Eagle**]
d. [**National Pipe and Plastic, Inc. (Oldcastle)**]
e. [**Opti-Com Manufacturing Network, Inc (OMNI)**]
f. [**Topaz Lighting & Electric**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Calconduit; Atkore International**]
c. [**JM Eagle**]
d. [**National Pipe and Plastic, Inc. (Oldcastle)**]
e. [**Opti-Com Manufacturing Network, Inc (OMNI)**]
f. [**Topaz Lighting & Electric**]
g. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DZYR; including UL 651.

4. Standard Features:

a. Dimensional Specifications: Schedule 80.
b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].
c. Markings: [**For use with maximum 90 deg C wire**][**For directional boring applications**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL DZYR - Type A Rigid PVC Concrete-Encased Conduit (PVC-A) and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Southern Pipe, Inc.**]
   b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Southern Pipe, Inc.**]
   b. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. UL CCN DZYR; including UL 651.

4. Standard Features:

   a. Dimensional Specifications: Type A.
   b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
   d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard

development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

D. UL DZYR - Type EB Rigid PVC Concrete-Encased Underground Conduit (PVC-EB) and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**JM Eagle**]
b. [**Southern Pipe, Inc.**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**JM Eagle**]
b. [**Southern Pipe, Inc.**]
c. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DZYR; including UL 651.

4. Standard Features:

a. Dimensional Specifications: Type EB.
b. Minimum Trade Size: [**Metric designator 53 (trade size 2)**][**Metric designator 78 (trade size 3)**][**Metric designator 103 (trade size 4)**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.12 TYPE RTRC DUCT RACEWAYS AND FITTINGS

A. UL DZKT - Heavy Wall, Low-Halogen, Aboveground Reinforced Thermosetting Resin Conduit (RTRC-AG-HW) and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Champion Fiberglass, Inc**]
    b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Champion Fiberglass, Inc**]
    b. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. UL CCN DZKT; including UL 2515.

4. Standard Features:

    a. Additional Characteristics: Type AG-HW.
    b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
    e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

B. UL DZKT - Standard Wall, Low-Halogen, Aboveground Reinforced Thermosetting Resin Conduit (RTRC-AG-SW) and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Champion Fiberglass, Inc**]
    b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

a. [**Champion Fiberglass, Inc**]
b. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DZKT; including UL 2515.

4. Standard Features:

a. Additional Characteristics: Type SW.
b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL DZKT - Extra Heavy Wall, Low-Halogen, Aboveground Reinforced Thermosetting Resin Conduit (RTRC-AG-XW) and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Champion Fiberglass, Inc**]
b. [**FRE Composites**]
c. [**United Fiberglass of America (UFA)**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Champion Fiberglass, Inc**]
b. [**FRE Composites**]
c. [**United Fiberglass of America (UFA)**]
d. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. UL CCN DZKT; including UL 2515 and UL 2515A.

4. Standard Features:

    a. Additional Characteristics: Type AG-XW.
    b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
    e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

D. UL DZKT - Low-Halogen, Belowground Reinforced Thermosetting Resin Conduit (RTRC-BG) and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Champion Fiberglass, Inc**]
    b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Champion Fiberglass, Inc**]
    b. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. UL CCN DZKT; including UL 2420.

4. Standard Features:

    a. Additional Characteristics: Type BG.

b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.13 FITTINGS FOR CONDUIT, TUBING, AND CABLE

A. UL EBMB - Duct Fittings for Hazardous (Classified) Locations:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
b. [**Power Feed-Thru Systems and Connectors LLC**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
b. [**Power Feed-Thru Systems and Connectors LLC**]
c. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN EBMB; including UL 1203.

4. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project

site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

B. UL DWTT - Fittings for Type ERMC, Type IMC, Type PVC, Type HDPE, Type EPEC, and Type RTRC Duct Raceways:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Appleton; Emerson Electric Co., Automation Solutions**]
   c. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
   d. [**Konkore Fittings; Atkore International**]
   e. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
   f. [**Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway**]
   g. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   h. [**Southwire Company, LLC**]
   i. [**Topaz Lighting & Electric**]
   j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Appleton; Emerson Electric Co., Automation Solutions**]
   c. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
   d. [**Konkore Fittings; Atkore International**]
   e. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
   f. [**Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway**]
   g. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   h. [**Southwire Company, LLC**]
   i. [**Topaz Lighting & Electric**]
   j. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. UL CCN DWTT; including UL 514B.

4. Standard Features:

   a. Material: [**Steel**][**Die cast**].
   b. Coupling Method: [**Compression coupling**][**Raintight compression coupling with distinctive color gland nut**][**Setscrew coupling. Setscrew couplings with only single screw per conduit are unacceptable**].

c. Expansion and Deflection Fittings: UL 651 with flexible bonding jumper.

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL FKAV - Fittings for Type EMT Duct Raceways:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Allied Tube & Conduit; Atkore International**]
c. [**Appleton; Emerson Electric Co., Automation Solutions**]
d. [**Calconduit; Atkore International**]
e. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
f. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
g. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
h. [**Southwire Company, LLC**]
i. [**Topaz Lighting & Electric**]
j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Allied Tube & Conduit; Atkore International**]
c. [**Appleton; Emerson Electric Co., Automation Solutions**]
d. [**Calconduit; Atkore International**]
e. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
f. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
g. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
h. [**Southwire Company, LLC**]
i. [**Topaz Lighting & Electric**]
j. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN FKAV; including UL 514B.

4. Standard Features:

    a. Material: [**Steel**][**Die cast**].
    b. Coupling Method: [**Compression coupling**][**Raintight compression coupling with distinctive color gland nut**][**Setscrew coupling. Setscrew couplings with only single screw per conduit are unacceptable**].
    c. Expansion and Deflection Fittings: UL 651 with flexible bonding jumper.

5. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
    e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

D. UL ILNR - Fittings for Type FMC Duct Raceways:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**American Fittings Corp. (AMFICO)**]
    b. [**Liquid Tight Connector Co.**]
    c. [**Southwire Company, LLC**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**American Fittings Corp. (AMFICO)**]
    b. [**Liquid Tight Connector Co.**]
    c. [**Southwire Company, LLC**]
    d. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. UL CCN ILNR; including UL 514B.

4. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts

of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

E. UL DXAS - Fittings for Type LFMC and Type LFNC Duct Raceways:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Arlington Industries, Inc.**]
   b. [**Liquid Tight Connector Co.**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Arlington Industries, Inc.**]
   b. [**Liquid Tight Connector Co.**]
   c. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. UL CCN DXAS; including UL 514B.

4. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
   d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
   e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.14 JOINT COMPOUNDS

A. UL FOIZ - Electrically Conductive Corrosion-Resistant Compound for Threaded Conduit:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. UL CCN FOIZ; including UL Subject 2419.

4. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
   c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
   d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
   e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.15 SOLVENT CEMENTS

A. UL VBEW - Solvent Cements for Nonmetallic Duct Raceways and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the

following:

a. **<Insert manufacturer's name>**

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Solvent Cements: UL CCN VBEW; including UL 340.
b. Solvent Cement Compatibility with PVC Conduit Fittings: UL CCN DWTT; including UL 514B. Follow solvent manufacturer's published instructions.
c. Solvent Cement Compatibility with Rigid PVC Conduit: UL CCN DZYR; including UL 651. Follow solvent manufacturer's published instructions.
d. Solvent Cement Compatibility with Rigid EPEC and HDPE Underground Conduit: UL CCN EAZX; including UL 651A. Follow solvent manufacturer's published instructions.

4. Sustainable Design Features:

a. Solvent cements for use with nonmetallic raceways and covers have VOC content less than [**510**][**490**] g/L.
b. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
c. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
d. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
e. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
f. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

PART 3 - EXECUTION

3.1 SELECTION OF CONDUITS FOR ELECTRICAL SYSTEMS

A. Unless more stringent requirements are specified in the Contract Documents or manufacturer's published instructions, comply with NFPA 70 for selection of duct raceways. Consult Architect for resolution of conflicting requirements.

B. Special Instructions Regarding HDPE Conduits: Although Article 353 of NFPA 70 permits use of HDPE conduits where encased in concrete aboveground, UL CCN EAZX listing requirements state that HDPE[**and EPEC**] underground conduits are intended only for use where direct buried with or without being encased in concrete. Specified Type HDPE[**and Type EPEC**] underground conduits are not permitted to be used aboveground on the Project.

C. Outdoors:

1. Exposed and Subject to Severe Physical Damage: [**ERMC**][**IMC**].
2. Exposed and Subject to Physical Damage: [**ERMC**][**IMC**][**Corrosion-resistant EMT**].
3. Exposed and Not Subject to Physical Damage: [**ERMC**][**IMC**][**Corrosion-resistant EMT**][**PVC-80**][**RTRC-AG**].

4. Concealed Aboveground: [**ERMC**][**IMC**][**EMT**][**PVC-80**][**PVC-40**][**RTRC-AG**].
5. Direct Buried: [**PVC-80**][**PVC-40**][**HDPE-80**][**HDPE-40**][**RTRC-BG**].
6. Concrete Encased Not in Trench: [**PVC-80**][**PVC-40**][**PVC-A**][**RTRC-BG**].
7. Concrete Encased in Trench: [**PVC-80**][**PVC-40**][**PVC-A**][**PVC-EB**][**HDPE-80**][**HDPE-40**][**EPEC-A**][**EPEC-B**][**RTRC-BG**].
8. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): [**LFMC**][**LFNC-A**][**LFNC-B**].

D. Indoors:

1. Hazardous Classified Locations: [**ERMC**][**IMC**].
2. Exposed and Subject to Severe Physical Damage: [**ERMC**][**IMC**].
3. Exposed and Subject to Physical Damage: [**ERMC**][**IMC**][**EMT**].
4. Exposed and Not Subject to Physical Damage: [**ERMC**][**IMC**][**EMT**][**PVC-80**][**RTRC-AG**].
5. Concealed in Ceilings and Interior Walls and Partitions: [**ERMC**][**IMC**][**EMT**][**PVC-80**][**PVC-40**][**RTRC-AG**].
6. Damp or Wet Locations: [**ERMC**][**IMC**][**RTRC-AG**][**Corrosion-resistant EMT**].
7. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): [**LFMC**][**FMC**][**LFNC-A**][**LFNC-B**].
8. Circuits Operating Above 60 Hz: [**EMT-A**][**ERMC-A**][**RTRC-AG**]. Provide nonmetallic sleeve where aluminum duct raceways pass through concrete.

E. Duct Fittings: Select fittings in accordance with NEMA FB 2.10 guidelines.

1. ERMC and IMC: Provide threaded-type fittings unless otherwise indicated.

3.2 INSTALLATION OF CONDUITS FOR ELECTRICAL SYSTEMS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Commissioning of Active and Passive Fire Protection Features: NFPA 3 and NFPA 4.
4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
5. Communications Work: BICSI N1.
6. Life Safety and Means of Egress Work: NFPA 101.
7. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
8. Work in Confined Spaces: NFPA 350.
9. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
10. Type EMT-A: Article 358 of NFPA 70 and NECA NEIS 102.
11. Type EMT-SS: Article 358 of NFPA 70 and NECA NEIS 101.
12. Type EMT-S: Article 358 of NFPA 70 and NECA NEIS 101.
13. Type ENT: Article 362 of NFPA 70 and NECA NEIS 102.
14. Type HDPE and Type EPEC: Article 353 of NFPA 70 and NECA NEIS 111.
15. Type ERMC-A: Article 344 of NFPA 70 and NECA NEIS 102.
16. Type ERMC-SS: Article 344 of NFPA 70 and NECA NEIS 101.
17. Type ERMC-S: Article 344 of NFPA 70 and NECA NEIS 101.
18. Type FMC-S: Article 348 of NFPA 70 and NECA NEIS 101.
19. Type FMC-A: Article 348 of NFPA 70 and NECA NEIS 102.
20. Type FMT: Article 360 of NFPA 70 and NECA NEIS 101.
21. Type IMC: Article 342 of NFPA 70 and NECA NEIS 101.

22. Type LFMC: Article 350 of NFPA 70 and NECA NEIS 101.
23. Type LFNC: Article 342 of NFPA 70 and NECA NEIS 111.
24. Type PVC: Article 356 of NFPA 70 and NECA NEIS 111.
25. Type RTRC: Article 355 of NFPA 70 and NECA NEIS 111.
26. Expansion Fittings: NEMA FB 2.40.
27. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. General Requirements for Installation of Duct Raceways:

a. Complete duct raceway installation before starting conductor installation.
b. Provide stub-ups through floors with coupling threaded inside for plugs, set flush with finished floor. Plug coupling until conduit is extended above floor to final destination or a minimum of **2 ft (0.6 m)** above finished floor.
c. Install no more than equivalent of three 90-degree bends in conduit run[**except for control wiring conduits, for which no more than equivalent of two 90-degree fewer bends are permitted**]. Support within **12 inch (300 mm)** of changes in direction.
d. Make bends in duct raceway using large-radius preformed ells except for parallel bends. Field bending must be in accordance with NFPA 70 minimum radii requirements. Provide only equipment specifically designed for material and size involved.
e. Conceal conduit within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.
f. Support conduit within **12 inch (300 mm)** of enclosures to which attached.
g. Install duct sealing fittings at accessible locations in accordance with NFPA 70 and fill them with listed sealing compound. For concealed duct raceways, install fitting in flush steel box with blank cover plate having finish similar to that of adjacent plates or surfaces. Install duct sealing fittings in accordance with NFPA 70.
h. Install devices to seal duct raceway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal interior of duct raceways at the following points:

1) Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
2) Where an underground service duct raceway enters a building or structure.
3) Conduit extending from interior to exterior of building.
4) Conduit extending into pressurized duct raceway and equipment.
5) Conduit extending into pressurized zones that are automatically controlled to maintain different pressure set points.
6) Where otherwise required by NFPA 70.

i. Do not install duct raceways or electrical items on "explosion-relief" walls or rotating equipment.
j. Do not install conduits within **2 inch (50 mm)** of the bottom side of a metal deck roof.
k. Keep duct raceways at least **6 inch (150 mm)** away from parallel runs of flues and steam or hot-water pipes. Install horizontal duct raceway runs above water and steam piping.
l. Cut conduit perpendicular to the length. For conduits metric designator 53 (trade size 2) and larger, use roll cutter or a guide to make cut straight and perpendicular to the length. Ream inside of conduit to remove burrs.
m. Install pull wires in empty duct raceways. Provide polypropylene or monofilament plastic line with not less than **200 lb (90 kg)** tensile strength. Leave at least **12 inch (300 mm)** of slack at both ends of pull wire. Cap underground duct raceways designated as spare above grade alongside duct raceways in use.
n. Install duct raceways square to the enclosure and terminate at enclosures without hubs with locknuts on both sides of enclosure wall. Install locknuts hand tight, plus one-quarter turn more.

1) Termination fittings with shoulders do not require two locknuts.

o. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install bushings on conduits up to metric designator 35 (trade size 1-1/4) and insulated throat metal bushings on metric designator 41 (trade size 1-1/2) and larger conduits terminated with locknuts.[**Install insulated throat metal grounding bushings on service conduits**].

2. Types EMT-A, ERMC-A, and FMC-A: Do not install aluminum duct raceways or fittings in contact with concrete or earth.
3. Types ERMC and IMC:

a. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound that maintains electrical conductivity to threads of duct raceway and fittings before making up joints. Follow compound manufacturer's published instructions.

4. Type ERMC-S-PVC:

a. Follow manufacturer's installation instructions for clamping, cutting, threading, bending, and assembly.
b. Provide PVC-coated sealing locknut for exposed male threads transitioning into female NPT threads that do not have sealing sleeves, including transitions from PVC couplings/female adapters to Type ERMC-S-PVC elbows in direct-burial applications. PVC-coated sealing locknuts must not be used in place of conduit hub. PVC-coated sealing locknut must cover exposed threads on Type ERMC-S-PVC duct raceway.
c. Coat field-cut threads on PVC-coated duct raceway with manufacturer-approved corrosion-preventing conductive compound prior to assembly.

5. Types FMC, LFMC, and LFNC:

a. Provide a maximum of [**36 inch (915 mm)**][**72 inch (1830 mm)**] of flexible conduit for [**recessed and semirecessed luminaires,**]equipment subject to vibration, noise transmission, or movement; and for transformers and motors.

6. Types PVC, HDPE, and EPEC:

a. Do not install Type PVC, Type HDPE, or Type EPEC conduit where ambient temperature exceeds [**122 deg F (50 deg C)**]<**Insert temperature**>. Conductor ratings must be limited to 75 deg C except where installed in a trench outside buildings with concrete encasement, where 90 deg C conductors are permitted.
b. Comply with manufacturer's published instructions for solvent welding and fittings.
c. Join joints with solvent cement in accordance with manufacturer's published instructions and allowed to cure before handling. Joints to be bent, pushed, or pulled must set for minimum 24 h after joining.

7. Type RTRC: Do not install Type RTRC conduit where ambient temperature exceeds [**230 deg F (110 deg C)**]<**Insert temperature**>.
8. Duct Raceways Embedded in Slabs:

a. [**Run duct raceways larger than metric designator 27 (trade size 1) below concrete slab**][**Run duct raceways larger than metric designator 27 (trade size) parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place duct raceway close to slab support. Secure duct raceways to reinforcement at maximum 10 ft (3 m) intervals**].
b. Arrange duct raceways to cross building expansion joints with expansion fittings at right

angles to the joint.

c. Arrange duct raceways to ensure that each is surrounded by minimum of [**1 inch (25 mm)**][**2 inch (50 mm)**]<**Insert dimension**> of concrete without voids.

d. Do not embed threadless fittings in concrete unless locations have been specifically approved by Architect.

e. Change from ENT to [**PVC-80**][**PVC-40**][**ERMC**][**or**][**IMC**] before rising above floor.

9. Stub-ups to Above Recessed Ceilings:

a. Provide EMT, IMC, or ERMC for duct raceways.

b. Provide a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.

10. Duct Raceway Terminations at Locations Subject to Moisture or Vibration:

a. Provide insulating bushings to protect conductors, including conductors smaller than 4 AWG.[**Install insulated throat metal grounding bushings on service conduits**].

11. Duct Fittings: Install fittings in accordance with NEMA FB 2.10 guidelines.

a. ERMC-S-PVC: Provide only fittings listed for use with this type of conduit. Patch and seal joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Provide sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.

b. EMT: Provide [**setscrew**][**compression**], [**steel**][**cast-metal**] fittings. Comply with NEMA FB 2.10.

c. Flexible Conduit: Provide only fittings listed for use with flexible conduit type. Comply with NEMA FB 2.20.

12. Expansion-Joint Fittings:

a. Install in runs of aboveground PVC that are located where environmental temperature change may exceed **30 deg F (17 deg C)** and that have straight-run length that exceeds **25 ft (7.6 m)**. Install in runs of aboveground ERMC[**and EMT**] conduit that are located where environmental temperature change may exceed **100 deg F (55 deg C)** and that have straight-run length that exceeds **100 ft (30 m)**.

b. Install type and quantity of fittings that accommodate temperature change listed for the following locations:

1) Outdoor Locations Not Exposed to Direct Sunlight: [**125 deg F (70 deg C)**]<**Insert temperature**> temperature change.

2) Outdoor Locations Exposed to Direct Sunlight: [**155 deg F (86 deg C)**]<**Insert temperature**> temperature change.

3) Indoor Spaces Connected with Outdoors without Physical Separation: [**125 deg F (70 deg C)**]<**Insert temperature**> temperature change.

4) Attics: [**135 deg F (75 deg C)**]<**Insert temperature**> temperature change.

5) <**Insert location and corresponding temperature change**>.

c. Install fitting(s) that provide expansion and contraction for at least **0.00041 inch per foot of length of straight run per deg F (0.06 mm per meter of length of straight run per deg C)** of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least **0.000078 inch per foot of length of straight run per deg F (0.0115 mm per meter of length of straight run per deg C)** of temperature change for metal conduits.

d. Install expansion fittings at locations where conduits cross building or structure expansion joints.

e. Install expansion-joint fitting with position, mounting, and piston setting selected in accordance with manufacturer's published instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.

13. Duct Raceways Penetrating Rooms or Walls with Acoustical Requirements: Seal duct raceway openings on both sides of rooms or walls with acoustically rated putty[**or firestopping**].
14. Identification: Provide labels for conduit assemblies, duct raceways, and associated electrical equipment.

    a. Provide warning signs.

15. <**Insert more stringent installation requirements that supplement or supersede listed standards and manufacturer's published instructions**>.

D. Interfaces with Other Work:

1. Firestop penetrations of fire-rated floor and wall assemblies.
2. Provide conduit hangers and supports.
3. Coordinate installation of new products for <**Insert system or product family/category**> with existing conditions.

    a. <**Insert requirements for transition between new and existing**>.

4. Coordinate with <**Insert Section number and title**> for <**Insert description of interfacing related Work**>.

    a. <**Insert requirements for transition between this Section and related Work**>.

3.3 FIELD QUALITY CONTROL OF CONDUITS FOR ELECTRICAL SYSTEMS

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Administrant for Communications Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified communications testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified communications testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

C. Acceptance Testing Preparation:

1. <**Insert requirements**>.

D. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

E. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.
2. Pull solid aluminum or wood test mandrel through duct to prove joint integrity and adequate bend radii, and test for out-of-round duct. Provide minimum **12 inch (300 mm)** long mandrel equal to duct size minus **1/4 inch (6 mm)**. If obstructions are indicated, remove obstructions and retest.
3. Conduit Placement:

    a. Verify that center-line location and offsets are in accordance with the Drawings.
    b. Verify that hangers and supports for conduits are attached to structure [**in accordance with the Drawings**][**as directed by qualified structural engineer**].
    c. Verify that nuts on bolts or hanger rods are secure.
    d. Verify that space between raceways and cored holes are filled with non-shrinking grout or other approved material indicated on the Drawings and the Specifications.
    e. Verify that expansion devices are installed at locations indicated on the Drawings and the Specifications.
    f. Verify that ends are cut square to provide flush-butting surfaces when spliced and inside edges are free of burrs that could impede installation of cables.
    g. Verify minimum separation of utilities, or that approved mechanical protection has been provided to surrounding conduit(s) where minimum separation cannot be achieved.

4. Document all changes on Record Drawings.

F. Nonconforming Work:

1. Conduit will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

G. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

3.4 CLEANING

A. Verify that bentonite or other drilling fluids are contained and removed, and site is restored to its original or improved condition.

3.5 PROTECTION

A. Protect coatings, finishes, and cabinets from damage and deterioration.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 26 05 43 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 43 00A - UNDERGROUND DUCTS AND UTILITY STRUCTURES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Type EPEC raceways and fittings.
2. Type ERMC-SS raceways, elbows, couplings, and nipples.
3. Type ERMC-S raceways, elbows, couplings, and nipples.
4. Type IMC raceways.
5. Type PVC raceways and fittings.
6. Type RTRC-BG raceways and fittings.
7. Fittings for conduit, tubing, and cable.
8. Electrically conductive corrosion-resistant compounds for threaded conduit.
9. Solvent cements.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" specifies seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. [**Section 013100 "Project Management and Coordination"**]<**Insert Section number and title**> specifies preinstallation conference procedures.
4. Section 260519 "Low-Voltage for Electrical Power Conductors and Cables" specifies nonmetallic underground conduit with conductors (Type NUCC).
5. Section 260553 "Identification for Electrical Systems" specifies underground-line warning tape and concrete cable routing markers (warning planks).

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

B. Preinstallation Coordination Meeting(s): For underground ducts and raceways. Conduct meeting(s) [**as videoconference**][**or**][**at Project site**]<**Insert location**> before <**Insert construction activity**>.

1. Attendees: Installers, fabricators, representatives of manufacturers, and administrants for field tests and inspections. Notify Architect[**, Construction Manager**][**, and Owner's Commissioning Authority**] of scheduled meeting dates.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. For concrete and steel used in precast concrete [**manholes**][**and**][**handholes**], also include product certificates as required by ASTM C858.

B. Sustainable Design Product Data:

1. Laboratory Test Reports: For solvents and adhesives, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings:

1. Electric Utility Duct Banks and Structures:

a. Include plans, elevations, sections, and details, including attachments to other Work.
b. Indicate locations of private property boundaries and utility easements.
c. Include information required for approval by electric utility and for obtaining public space utility work permits.

2. Precast or Factory-Fabricated Concrete Structures:

a. Include plans, elevations, sections, and details, including attachments to other Work.
b. Include duct entry provisions, including locations and duct sizes, and methods and materials for waterproofing duct entry locations.
c. Include reinforcement details.
d. Include frame and cover design and manhole chimneys.
e. Include [**ladder**][**step**] details.
f. Include grounding details.
g. Include dimensioned locations of cable rack inserts, pulling-in and lifting irons, sumps, and other accessories.
h. Include joint details.

3. Factory-Fabricated Handholes and Boxes Other Than Precast Concrete:

a. Include dimensioned plans, sections, and elevations, and fabrication and installation details.
b. Include duct entry provisions, including locations and duct sizes, and methods and materials for waterproofing duct entry locations.
c. Include cover design.
d. Include grounding details.
e. Include dimensioned locations of cable rack inserts, pulling-in and lifting irons, and other accessories.

D. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturer's Published Instructions: Prepare and submit installation, testing, and operating instructions for product.

B. Field Reports:

1. Factory Test Reports: For handholes and boxes.
2. Manufacturer's field reports for field quality-control support.

PART 2 - PRODUCTS

2.1 TYPE EPEC RACEWAYS AND FITTINGS

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 651A and UL CCN EAZX.

B. Schedule 40 Electrical HDPE Underground Conduit (EPEC-40):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Blue Diamond Industries, LLC**]
b. [**JM Eagle**]
c. [**Petroflex North America**]
d. [**Prysmian Cables and Systems; Prysmian Group North America**]
e. [**Southwire Company, LLC**]
f. <**Insert manufacturer's name**>

2. Dimensional Specifications: Schedule 40.
3. Options:

a. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

C. Schedule 80 Electrical HDPE Underground Conduit (EPEC-80):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Blue Diamond Industries, LLC**]
b. [**JM Eagle**]
c. [**Petroflex North America**]
d. [**Prysmian Cables and Systems; Prysmian Group North America**]
e. [**Southwire Company, LLC**]
f. <**Insert manufacturer's name**>

2. Dimensional Specifications: Schedule 80.
3. Options:

a. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

D. Type A Electrical HDPE Underground Conduit (EPEC-A):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

a. <**Insert manufacturer's name**>

2. Dimensional Specifications: Type A.
3. Options:

a. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

E. Type B Electrical HDPE Underground Conduit (EPEC-B):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. <**Insert manufacturer's name**>

2. Dimensional Specifications: Type B.
3. Options:

a. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

2.2 TYPE ERMC-SS RACEWAYS, ELBOWS, COUPLINGS, AND NIPPLES

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 6A and UL CCN DYWV.

B. Stainless Steel Electrical Rigid Metal Conduit (ERMC-SS), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Allied Tube & Conduit; Atkore International**]
c. [**Calconduit; Atkore International**]
d. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
e. [**Patriot Aluminum Products, LLC**]
f. <**Insert manufacturer's name**>

2. Material: Stainless steel.
3. Options:

a. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].
b. Colors: As indicated on Drawings.

2.3 TYPE ERMC-S RACEWAYS, ELBOWS, COUPLINGS, AND NIPPLES

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 6 and UL CCN DYIX.

B. Galvanized-Steel Electrical Rigid Metal Conduit (ERMC-S-G), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Allied Tube & Conduit; Atkore International**]
b. [**Calconduit; Atkore International**]
c. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
d. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
e. [**Patriot Aluminum Products, LLC**]
f. [**Republic Conduit; Nucor Corporation, Nucor Tubular Products**]
g. [**Topaz Lighting & Electric**]
h. [**Western Tube; Zekelman Industries**]
i. [**Wheatland Tube; Zekelman Industries**]
j. <**Insert manufacturer's name**>

2. Exterior Coating: Zinc.
3. Options:

a. Interior Coating: [**Zinc with organic top coating**][**Zinc**][**Organic coating**].
b. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].
c. Colors: As indicated on Drawings.

C. PVC-Coated-Steel Electrical Rigid Metal Conduit (ERMC-S-PVC), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Bluesteel Services LLC**]
c. [**Calbond; Atkore International**]
d. [**KorKap; Robroy Industries**]
e. [**Perma-Cote; Robroy Industries**]
f. [**Plasti-Bond; Robroy Industries**]
g. <**Insert manufacturer's name**>

2. Additional Characteristics:
3. Fittings for PVC-Coated Conduit:

a. Minimum coating thickness of **0.040 inch**, with overlapping sleeves protecting threaded joints.
b. Conduit bodies must be Form 8 with effective seal and positive placement feature to ease and assure proper installation. Certified results confirming seal performance at 15 psig

(positive) and 25 inch Hg (vacuum) for 72 hours must be available. Conduit bodies must be supplied with plastic-encapsulated stainless steel cover screws.

c. Form **2 inch** long or one pipe diameter long, whichever is less, PVC sleeve at openings of female fittings, except unions. Inside sleeve diameter must be matched to outside diameter of metal conduit.
d. PVC coating on outside of conduit couplings must be protected from tool damage during installation.
e. Female threads on fittings and couplings must be protected by urethane coating.
f. Fittings must be from same manufacturer as conduit.
g. Beam clamps and U bolts must be formed and sized to fit outside diameter of coated conduit. Plastic-encapsulated nuts must cover exposed portions of threads.

4. Options:

a. Exterior Coating: PVC complying with NEMA RN 1[**and marked ETL Verified PVC-001**].
b. Interior Coating: [**Zinc with organic top coating**][**Zinc**][**Organic coating**].
c. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].
d. Colors: As indicated on Drawings.
e. Conduit Fittings for Hazardous (Classified) Locations: UL 1203.
f. Expansion and Deflection Fittings: UL 651 with flexible external bonding jumper.

2.4 TYPE IMC RACEWAYS

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 1242 and UL CCN DYBY.

B. Steel Electrical Intermediate Metal Conduit (IMC):

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Allied Tube & Conduit; Atkore International**]
c. [**Calconduit; Atkore International**]
d. [**Republic Conduit; Nucor Corporation, Nucor Tubular Products**]
e. [**Topaz Lighting & Electric**]
f. [**Western Tube; Zekelman Industries**]
g. [**Wheatland Tube; Zekelman Industries**]
h. <**Insert manufacturer's name**>

2. Options:

a. Exterior Coating: [**Zinc**][**Alternative corrosion-resistant coating**].
b. Interior Coating: [**Zinc with organic top coating**][**Zinc**][**Organic coating**].
c. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].
d. Colors: As indicated on Drawings.

2.5 TYPE PVC RACEWAYS AND FITTINGS

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 651 and UL CCN DZYR.

B. Schedule 40 Rigid PVC Conduit (PVC-40) and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Calconduit; Atkore International**]
c. [**JM Eagle**]
d. [**NAPCO; Westlake Chemical Corp.**]
e. [**Opti-Com Manufacturing Network, Inc (OMNI)**]
f. [**Topaz Lighting & Electric**]
g. <**Insert manufacturer's name**>

2. Dimensional Specifications: Schedule 40.
3. Options:

a. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].
b. Markings: [**For use with maximum 90 deg C wire.**][**For directional boring applications.**]

C. Schedule 80 Rigid PVC Conduit (PVC-80) and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Calconduit; Atkore International**]
c. [**JM Eagle**]
d. [**Opti-Com Manufacturing Network, Inc (OMNI)**]
e. [**Topaz Lighting & Electric**]
f. <**Insert manufacturer's name**>

2. Dimensional Specifications: Schedule 80.
3. Options:

a. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].
b. Markings: [**For use with maximum 90 deg C wire.**][**For directional boring applications.**]

D. Type A Rigid PVC Concrete-Encased Conduit (PVC-A) and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

a. [**Southern Pipe, Inc.**]
b. <**Insert manufacturer's name**>

2. Dimensional Specifications: Type A.
3. Options:

a. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

E. Type EB Rigid PVC Concrete-Encased Underground Conduit (PVC-EB) and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**JM Eagle**]
b. [**Southern Pipe, Inc.**]
c. <**Insert manufacturer's name**>

2. Dimensional Specifications: Type EB.
3. Options:

a. Minimum Trade Size: [**Metric designator 53 (trade size 2)**][**Metric designator 78 (trade size 3)**][**Metric designator 103 (trade size 4)**].

2.6 TYPE RTRC-BG RACEWAYS AND FITTINGS

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 2420 and UL CCN DZKT, for Type BG.

B. Low-Halogen, Belowground Reinforced Thermosetting Resin Conduit (RTRC-BG) and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. <**Insert manufacturer's name**>

2. Options:

a. Minimum Trade Size: [**Metric designator 16 (trade size 1/2)**][**Metric designator 21 (trade size 3/4)**].

2.7 FITTINGS FOR CONDUIT, TUBING, AND CABLE

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.

B. Metallic Fittings for Type ERMC, Type IMC, Type PVC, Type EPEC, and Type RTRC Raceways:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Appleton; Emerson Electric Co., Automation Solutions**]
c. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
d. [**Konkore Fittings; Atkore International**]
e. [**O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group**]
f. [**Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway**]
g. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
h. [**Southwire Company, LLC**]
i. [**Topaz Lighting & Electric**]
j. <**Insert manufacturer's name**>

2. General Characteristics: UL 514B and UL CCN DWTT.
3. Options:

a. Material: [**Steel**][**Die cast**].
b. Coupling Method: [**Compression coupling**][**Raintight compression coupling with distinctive color gland nut**][**Setscrew coupling. Setscrew couplings with only single screw per conduit are unacceptable**].
c. Conduit Fittings for Hazardous (Classified) Locations: UL 1203.
d. Expansion and Deflection Fittings: UL 651 with flexible external bonding jumper.

2.8 ELECTRICALLY CONDUCTIVE CORROSION-RESISTANT COMPOUNDS FOR THREADED CONDUIT

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL Subject 2419 and UL CCN FOIZ.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. <**Insert manufacturer's name**>

2.9 SOLVENT CEMENTS

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: As recommended by conduit manufacturer in accordance with UL 514B and UL CCN DWTT.
3. Sustainability Characteristics:

a. VOC Content: [**510**][**490**]<**Insert value**> g/L or less for [**PVC**][**CPVC**] conduit and fittings.
b. Low-Emitting Material Requirements: As recommended by solvent and adhesive manufacturer and that complies with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

B. Solvent Cements for Type PVC Raceways and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. <**Insert manufacturer's name**>

2.10 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND WIRING

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics:

a. ASTM C858 for design and manufacturing processes.
b. SCTE 77.

2.11 MANHOLES FOR EXTERIOR UNDERGROUND WIRING

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics:

a. ASTM C858 for design and manufacturing processes.
b. SCTE 77.

B. Cast-in-Place Concrete Manholes:

1. Description: Underground utility structures, constructed in place, complete with accessories, hardware, and features. Include concrete knockout panels for duct entrance and sleeve for ground rod.

2. Additional Criteria: Comply with Section 033000 "Cast-in-Place Concrete."

2.12 SOURCE QUALITY CONTROL

A. Factory Tests for Handholes and Boxes:

1. Testing Administrant: [**Owner will engage**][**Engage**] qualified structural testing agency to evaluate handholes and boxes.

a. Tests of materials must be performed by independent testing agency.
b. Strength tests of complete boxes and covers must be by independent testing agency or manufacturer. Qualified registered professional engineer must certify tests by manufacturer.

2. Factory Tests and Inspections: Perform the following tests and inspections on handholes and boxes, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, before delivering to site. Affix label with name and date of [**manufacturer's**][**qualified testing laboratory's**] certification of system compliance.

a. Precast Concrete Utility Structures: Test and inspect in accordance with ASTM C1037.
b. Polymer Concrete and Nonconcrete Handhole and Pull-Box Prototypes: Test prototypes of handholes and boxes for compliance with SCTE 77. Strength tests must be for specified tier ratings of products supplied. Testing machine pressure gages must have current calibration certification, complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

3. Nonconforming Work:

a. Equipment that does not pass tests and inspections will be considered defective.

4. Factory Test Reports: Prepare and submit factory test and inspection reports.

PART 3 - EXECUTION

3.1 INSTALLATION OF DUCTS AND DUCT BANKS

A. Reference Standards:

1. Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with NEMA TCB 2 for installation of underground ducts and duct banks.
2. Consult Architect for resolution of conflicting requirements.

B. Special Techniques:

1. Where indicated on Drawings, install duct, spacers, and accessories into duct-bank configuration shown. Duct installation requirements in this Section also apply to duct bank.
2. Steel raceway, bends, and fittings in [**single duct run or duct bank**][**on Project**] must be of same type.
3. Slope: Pitch duct minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope duct from high point between two manholes to drain in both directions.

4. Expansion and Deflection Fittings: Install expansion and deflection fitting in each duct in area of disturbed earth adjacent to manhole or handhole.
5. Install expansion fitting near center of straight line duct with calculated expansion of more than **3/4 inch**.
6. Curves and Bends:

    a. Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with minimum radius of [**48 inch**][**12.5 ft**][**25 ft**], both horizontally and vertically, at other locations unless otherwise indicated.
    b. Field bending must be in accordance with NFPA 70 minimum radii requirements, except bends over 45 degrees must be made with minimum radius of [**48 inch**][**12.5 ft**][**25 ft**]. Use only equipment specifically designed for material and size involved. Use PVC heating bender for bending PVC conduit.
    c. Duct must have maximum of 180 degrees of bends between pull points.

7. Joints: Use solvent-cemented joints in nonmetallic duct and fittings and make watertight in accordance with manufacturer's published instructions. Stagger couplings so those of adjacent duct do not lie in same plane. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with minimum **3 inch** of concrete for minimum of **12 inch** on each side of coupling.

    a. Install insulated grounding bushings on steel raceway terminations that are less than **12 inch** below grade or floor level and do not terminate in hubs.

8. Installation Adjacent to High-Temperature Steam Lines: Where duct is installed parallel to underground steam lines, perform calculations showing duct will not be subject to environmental temperatures above **104 deg F**. Where environmental temperatures are calculated to rise above **104 deg F**, and anywhere duct crosses above underground steam line, install insulation blankets listed for direct burial to isolate duct bank from steam line to maintain maximum environmental temperature of **104 deg F**.
9. End Bell Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately **10 inch** o.c. for **5 inch** duct, and vary proportionately for other duct sizes.

    a. Begin change from regular spacing to end-bell spacing **10 ft** from end bell, without reducing duct slope and without forming trap in line.
    b. Grout end bells into structure walls from both sides to provide watertight entrances.

10. Duct Terminators for Entrances to Cast-in-Place Manholes and Concrete Handholes: Use manufactured, cast-in-place duct terminators, with entrances into structure spaced approximately **6 inch** o.c. for **4 inch** duct, and vary proportionately for other duct sizes.

    a. Begin change from regular spacing to terminator spacing **10 ft** from terminator, without reducing duct line slope and without forming trap in line.

11. Building Wall Penetrations: Make transition from underground duct to steel raceway at least **10 ft** outside building wall, without reducing duct line slope away from building and without forming trap in line. Use fittings manufactured for transition to steel raceway type installed. Install steel raceway penetrations of building walls as specified in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."
12. Install manufactured steel raceway elbows for stub-ups at poles unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.

    a. Couple steel elbows to ducts with adapters designed for this purpose, and encase coupling with minimum **3 inch** of concrete for minimum of **12 inch** on each side of coupling.

13. Sealing: Provide temporary closure at terminations of duct with pulled cables. Seal spare duct at terminations. Use sealing compound and plugs to withstand at least **15 psig** hydrostatic pressure.
14. Pulling Cord: Install **200 lbf** test nylon cord in empty ducts.
15. Concrete-Encased Ducts and Duct Bank:

    a. Excavate trench bottom to provide firm and uniform support for duct. Prepare trench bottoms as specified in Section 312000 "Earth Moving" for pipes **6 inch** or less in nominal diameter.
    b. Width: Excavate trench [**3 inch**][**12 inch**] wider than duct on each side.
    c. Depth: Install so top of duct envelope is at least **24 inch** below finished grade in areas not subject to deliberate traffic, and at least **30 inch** below finished grade in deliberate traffic paths for vehicles unless otherwise indicated. Install so top of duct envelope is below local frost line.
    d. Support duct on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.
    e. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than [**four**][**five**] spacers per **20 ft** of duct. Place spacers within **24 inch** of duct ends. Stagger spacers approximately **6 inch** between tiers. Secure spacers to earth and to duct to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
    f. Minimum Space between Ducts: **3 inch** between edge of duct and exterior envelope wall, **2 inch** between ducts for like services, and **4 inch** between power and communications ducts.
    g. Elbows:

        1) Use manufactured duct elbows for stub-ups and at changes of direction in duct unless otherwise indicated. Extend encasement throughout length of elbow.
        2) Use manufactured steel elbows for stub-ups, at building entrances, and at changes of direction in duct run.

    h. Stub-ups to Outdoor Equipment: Extend concrete-encased steel raceway horizontally minimum of **60 inch** from edge of equipment base.

        1) Stub-ups must [**terminate in coupling installed flush with**][**be minimum 4 inchabove**] finished floor and minimum **3 inch** from conduit side to edge of slab.

    i. Stub-ups to Indoor Equipment: Extend concrete-encased steel raceway horizontally minimum of **60 inch** from edge of wall. Install insulated grounding bushings on terminations at equipment.

        1) Stub-ups must [**terminate in coupling installed flush with**][**be minimum 4 inchabove**] finished floor and no less than **3 inch** from conduit side to edge of slab.

    j. Reinforcement: Reinforce concrete-encased duct where crossing disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.
    k. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
    l. Concrete Cover: Install minimum of **3 inch** of concrete cover between edge of duct to exterior envelope wall, **2 inch** between duct of like services, and **4 inch** between power and communications ducts.
    m. Place minimum **6 inch** of engineered fill above concrete encasement of duct.
    n. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.

1) Start at one end and finish at other, allowing for expansion and contraction of duct as its temperature changes during and after pour. Use expansion fittings installed in accordance with manufacturer's published instructions, or use other specific measures to prevent expansion-contraction damage.
2) If more than one pour is necessary, terminate each pour in vertical plane and install **3/4 inch** reinforcing-rod dowels extending minimum of **18 inch** into concrete on both sides of joint near corners of envelope.

o. Pouring Concrete: Comply with requirements in "Concrete Placement" Article in Section 033000 "Cast-in-Place Concrete." Place concrete carefully during pours to prevent voids under and between duct and at exterior surface of envelope. Do not allow heavy mass of concrete to fall directly onto ducts. Allow concrete to flow around duct and rise up in middle, uniformly filling open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-installation application.

16. Direct-Buried Duct and Duct Bank:

a. Excavate trench bottom to provide firm and uniform support for duct. Comply with requirements in Section 312000 "Earth Moving" for preparation of trench bottoms for pipes less than **6 inch** in nominal diameter.
b. Width: Excavate trench [**3 inch**][**12 inch**] wider than duct on each side.
c. Depth: Install top of duct at least **36 inch** below finished grade unless otherwise indicated.
d. Set elevation of top of duct bank below frost line.
e. Place minimum **3 inch** of sand as bed for duct. Place sand to minimum of **6 inch** above top level of duct.
f. Support ducts on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.
g. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than [**four**][**five**] spacers per **20 ft** of duct. Place spacers within **24 inch** of duct ends. Stagger spacers approximately **6 inch** between tiers. Secure spacers to earth and to ducts to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
h. Install duct with minimum of **3 inch** between ducts for like services and **6 inch** between power and communications duct.
i. Install manufactured duct elbows for stub-ups, at building entrances, and at changes of direction in duct direction unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
j. Install manufactured steel elbows for stub-ups, at building entrances, and at changes of direction in duct.

1) Couple RNC duct to steel raceway with adapters designed for this purpose, and encase coupling with minimum **3 inch** of concrete.
2) Stub-ups to Outdoor Equipment: Extend concrete-encased steel raceway horizontally minimum of **60 inch** from edge of base. Install insulated grounding bushings on terminations at equipment.

a) Stub-ups must [**terminate in coupling installed flush with**][**be minimum 4 inch above**] finished base and minimum **3 inch** from conduit side to edge of base.

3) Stub-ups to Indoor Equipment: Extend concrete-encased steel raceway horizontally on exterior of wall minimum of **60 inch** from edge of wall. Install insulated grounding bushings on terminations at equipment.
4) Stub-ups through interior floors must [**terminate in coupling installed flush**

with][**be minimum 4 inch above**] finished floor and no less than **3 inch** from conduit side to edge of equipment pad or floor slab.

k. After installing first tier of duct, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand place backfill to **4 inch** over duct and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction. Comply with requirements in Section 312000 "Earth Moving" for installation of backfill materials.

17. Warning Planks: Bury warning planks approximately **12 inch** above direct-buried duct, placing them **36 inch** o.c. Align planks along width and along centerline of duct or duct bank. Provide additional plank for each **12 inch** increment of duct-bank width over nominal **18 inch**. Space additional planks **12 inch** apart, horizontally across width of ducts.
18. Underground-Line Warning Tape: Bury [**nonconducting**][**conducting**] underground line specified in Section 260553 "Identification for Electrical Systems" no less than **12 inch** above concrete-encased duct and duct banks[**and approximately 12 inch below grade**]. Align tape parallel to and within **3 inch** of centerline of duct bank. Provide additional warning tape for each **12 inch** increment of duct-bank width over nominal **18 inch**. Space additional tapes **12 inch** apart, horizontally across width of ducts.
19. Ground ducts and duct banks in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Interfaces with Other Work:

1. Coordinate installation of new products for <**Insert system or product group**> with existing conditions.

a. <**Insert requirements for transition between new and existing**>.

2. Coordinate with <**Insert Section number and title**> for <**Insert description of interfacing related Work**>.

a. <**Insert requirements for transition between this Section and related Work**>.

3.2 INSTALLATION OF CONCRETE MANHOLES, HANDHOLES, AND BOXES

A. Reference Standards:

1. Precast Concrete Handholes: Comply with ASTM C891 unless otherwise indicated.
2. Consult Architect for resolution of conflicting requirements.

B. Special Techniques:

1. Cast-in-Place Manholes:

a. Finish interior surfaces with smooth-troweled finish.
b. Knockouts for Future Duct Connections: Form and pour concrete knockout panels **1-1/2 to 2 inch** thick, arranged as indicated.
c. Comply with requirements in Section 033000 "Cast-in-Place Concrete" for cast-in-place concrete, formwork, and reinforcement.

2. Precast Concrete Handholes and Manholes:

a. Install units level and plumb and with orientation and depth coordinated with connecting duct to minimize bends and deflections required for proper entrances.
b. Unless otherwise indicated, support units on level bed of crushed stone or gravel graded from **1 inch** sieve to **No. 4** sieve and compacted to same density as adjacent undisturbed earth.
c. Field-cut openings for conduits in accordance with enclosure manufacturer's published instructions. Cut wall of enclosure with tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

3. Elevations:

a. Manhole Roof: Install with rooftop at least **15 inch** below finished grade.
b. Manhole Frame: In paved areas and trafficways, set frames flush with finished grade. Set other manhole frames **1 inch** above finished grade.
c. Install handholes with bottom below frost line, <**Insert depth of frost line below grade at Project site**> below grade.
d. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes **1 inch** above finished grade.
e. Where indicated, cast handhole cover frame integrally with handhole structure.

4. Drainage: Install drains in bottom of manholes where indicated. Coordinate with drainage provisions indicated.
5. Manhole Access: Circular opening in manhole roof; sized to match cover size.

a. Manholes with Fixed Ladders: Offset access opening from manhole centerlines to align with ladder.
b. Install chimney, constructed of [**precast concrete**][**cast-iron**] collars and rings, and cast-iron frame to connect cover with manhole roof opening. Provide moisture-tight joints and waterproof grouting for frame and chimney.

6. Waterproofing: Apply waterproofing to exterior surfaces of manholes[**and handholes**] after concrete has cured at least three days. Waterproofing materials and installation are specified in [**Section 071353 "Elastomeric Sheet Waterproofing"**][**Section 071354 "Thermoplastic Sheet Waterproofing"**]<**Insert waterproofing Section**>. After duct has been connected and grouted, and before backfilling, waterproof joints and connections, and touch up abrasions and scars. Waterproof exterior of manhole chimneys after mortar has cured at least three days.
7. Dampproofing: Apply dampproofing to exterior surfaces of manholes[**and handholes**] after concrete has cured at least three days. Dampproofing materials and installation are specified in Section 071113 "Bituminous Dampproofing." After ducts are connected and grouted, and before backfilling, dampproof joints and connections, and touch up abrasions and scars. Dampproof exterior of manhole chimneys after mortar has cured at least three days.
8. Hardware: Install removable hardware, including pulling eyes, cable stanchions, [**and**]cable arms, [**and insulators,**]as required for installation and support of cables and conductors and as indicated.
9. Fixed Manhole Ladders: Arrange to provide for safe entry with maximum clearance from cables and other items in manholes.
10. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than **3-7/8 inch** for manholes and **2 inch** for handholes, for anchor bolts installed in field. Use minimum of two anchors for each cable stanchion.
11. Ground manholes, handholes, and boxes in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Interfaces with Other Work:

1. Coordinate installation of new products for <**Insert system or product group**> with existing

conditions.

a. <**Insert requirements for transition between new and existing**>.

2. Coordinate with <**Insert Section number and title**> for <**Insert description of interfacing related Work**>.

a. <**Insert requirements for transition between this Section and related Work**>.

3.3 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

A. Reference Standards:

1. <**Insert reference standard**> for <**Insert reason**>.
2. Consult Architect for resolution of conflicting requirements.

B. Special Techniques:

1. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting duct, to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of duct, and seal joint between box and extension as recommended by manufacturer.
2. Unless otherwise indicated, support units on level bed of crushed stone or gravel, graded from **1/2 inch** sieve to **No. 4** sieve and compacted to same density as adjacent undisturbed earth.
3. Elevation: In paved areas and trafficways, set cover flush with finished grade. Set covers of other handholes **1 inch** above finished grade.
4. Install handholes and boxes with bottom below frost line, <**Insert depth of frost line below grade at Project site**> below grade.
5. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in enclosure.
6. Field cut openings for duct in accordance with enclosure manufacturer's published instructions. Cut wall of enclosure with tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.
7. For enclosures installed in [**asphalt paving**][**and**]<**Insert material**> and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour concrete ring encircling, and in contact with enclosure entry, and with top surface screeded to top of box cover frame. Bottom of ring must rest on [**compacted earth**]<**Insert material**>.

a. Concrete: **3000 psi**, 28-day strength, complying with Section 033000 "Cast-in-Place Concrete," with troweled finish.
b. Dimensions: [**10 inch wide by 12 inch deep**]<**Insert dimensions**>.

8. Ground handholes and boxes in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Interfaces with Other Work:

1. Coordinate installation of new products for <**Insert system or product group**> with existing conditions.

a. <**Insert requirements for transition between new and existing**>.

2. Coordinate with <**Insert Section number and title**> for <**Insert description of interfacing**

related Work>.

a. <**Insert requirements for transition between this Section and related Work**>.

3.4 FIELD QUALITY CONTROL

A. Acceptance Testing Preparation:

1. <**Insert requirements**>.

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

C. Tests and Inspections:

1. Demonstrate capability and compliance with requirements on completion of installation of underground duct, duct bank, and utility structures.
2. Pull solid aluminum or wood test mandrel through duct to prove joint integrity and adequate bend radii, and test for out-of-round duct. Provide minimum **12 inch** long mandrel equal to duct size minus **1/4 inch**. If obstructions are indicated, remove obstructions and retest.
3. Test manhole[**and handhole**] grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Section 260526 "Grounding and Bonding for Electrical Systems."

D. Nonconforming Work:

1. Underground ducts, raceways, and structures will be considered defective if they do not pass tests and inspections.
2. Correct deficiencies and retest as specified above to demonstrate compliance.

E. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at Project site.

END OF SECTION 26 05 43 00A

Task	Specification	Specification Description
26 05 43 00	26 01 00 00	Supplemental Requirements for Electrical
26 05 43 00	26 05 19 00	Low-Voltage Electrical Power Conductors and Cables
26 05 43 00	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling

SECTION 26 05 46 00 - POLES FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Lighting standards.
2. Lighting standard accessories.
3. Utility poles.
4. Utility pole accessories.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies temperature, humidity, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies seismic hazard, wind hazard, other structural design conditions applicable to the Work specified in this Section.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work.
4. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding components referenced by this Section.
5. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers and supports referenced by this Section.
6. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
7. Section 260573 "Power System Studies" specifies arc-flash hazard analysis and warning labels referenced by this Section.
8. [**Section 262726 "Wiring Devices"**][**Section 262726.31 "General-Grade Single Straight-Blade Receptacles"**][**and**][**Section 262726.33 "General-Grade Duplex Straight-Blade Receptacles"**] specify receptacles referenced by this Section.
9. Section 270528 "Pathways for Communications Systems" specifies additional requirements for raceway materials, routing, locations, and identification of communications equipment and cabling.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include data on construction details, profiles, EPA, cable entrances, materials, dimensions, weight, rated design load, and ultimate strength of individual components.
2. Include finishes for lighting poles and luminaire-supporting devices.
3. Anchor bolts.
4. Manufactured pole foundations.
5. Product Certificates: Include product certificate, signed by manufacturers of poles, certifying that products are designed for indicated load requirements in accordance with AASHTO LTS-6-M and that load imposed by luminaire and attachments has been included in design. The certification must be based on design calculations signed and sealed by a professional engineer.
6. Include manufacturer's sample extended warranty language.

B. Samples: Submit finish samples for each exposed lighting pole, standard, and luminaire-supporting

device and for each color and texture specified.

C. Shop Drawings: Prepare and submit the following:

1. Plans, elevations, sections, and [**mounting**][**and**][**attachment**] details.
2. Details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Details of fabrication and assembly of [**poles**][**and**][**pole accessories**].
4. Foundation construction details, including material descriptions, dimensions, anchor bolts, support devices, and calculations, signed and sealed by a professional engineer licensed in the state of installation.
5. Anchor bolt templates keyed to specific poles and certified by manufacturer.
6. Method and procedure of pole installation. Include manufacturer's published installations.

D. Field quality-control reports.

1.3 INFORMATIONAL SUBMITTALS

A. Material Test Reports:

1. For each foundation component, by qualified testing laboratory.
2. For each pole, by qualified testing laboratory.

B. Soil test reports.

C. Manufacturer's published instructions.

D. Field Reports:

1. Manufacturer's field reports for field quality-control support.

1.4 CLOSEOUT SUBMITTALS

A. Warranty documentation.

1.5 WARRANTY

A. Special Installer Extended Warranty: Installer warrants that fabricated and installed [**pole(s)**][**and luminaire-lowering device(s)**] perform in accordance with specified requirements and agrees to repair or replace products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.

1. Extended-Warranty Period: [**Two**][**Three**][**Four**]<**Insert number**> years from date of Substantial Completion; full coverage for labor, materials, and equipment.

B. Special Manufacturer Extended Warranty: Manufacturer warrants that [**pole(s)**][**and luminaire-lowering device(s)**] perform in accordance with specified requirements and agrees to provide repair or replacement of products that fail to perform as specified within extended-warranty period, including materials that corrode, fade, stain, perforate, erode, or chalk due to effects of weather or solar radiation. Manufacturer may exclude lightning damage, hail damage, vandalism, abuse, or unauthorized repairs from special warranty period. Warranty must convey to Owner upon acceptance of the Work.

1. Extended-Warranty Period: [**Five**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.
2. Warranty Period for Corrosion Resistance: [**Five**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.
3. Warranty Period for Color Retention: [**Five**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Description: <**Insert brief description of desired system, assembly, or equipment**>.

B. Performance Criteria:

1. Regulatory Requirements:

   a. Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2. Utility Approval: Comply with <**Insert name of utility**> requirements.
3. General Characteristics:

   a. Structural Characteristics: Comply with AASHTO LTS-6-M.
   b. Dead Load: Weight of luminaire and its horizontal and vertical supports, lowering devices, and supporting structure, applied in accordance with AASHTO LTS-6-M.
   c. Live Load: Single load of **500 lb** distributed in accordance with AASHTO LTS-6-M.
   d. Ice Load: Load of **3 lb/ft2**, applied in accordance with AASHTO LTS-6-M for applicable areas on the Ice Load Map.
   e. Wind Load for Poles Exceeding 50 ft (15 m) Height:

      1) Basic Wind Speed: [**100 mile/h**][**90 mile/h**]<**Insert value from AASHTO LTS-6-M for this Project**>.
      2) Wind Importance Factor: [**1.0**]<**Insert value from AASHTO LTS-6-M**>.
      3) Minimum Design Life: [**50 years**]<**Insert value from AASHTO LTS-6-M**>.
      4) Velocity Conversion Factor: [**1.0**]<**Insert value from AASHTO LTS-6-M**>.

   f. Wind Load for Poles Not Exceeding 50 ft (15 m) Height:

      1) Basic Wind Speed: [**100 mile/h**][**90 mile/h**]<**Insert value from AASHTO LTS-6-M for this Project**>.
      2) Wind Importance Factor: [**1.0**]<**Insert value from AASHTO LTS-6-M**>.
      3) Minimum Design Life: [**25 years**]<**Insert value from AASHTO LTS-6-M**>.
      4) Velocity Conversion Factor: [**1.0**]<**Insert value from AASHTO LTS-6-M**>.

   g. Strength Analysis: For each pole, multiply the actual EPA of luminaires and brackets by a factor of [**1.1**]<**Insert number**> to obtain the EPA used in pole selection strength analysis.
   h. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
   i. General Finish Requirements:

      1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

2) Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.2 LIGHTING STANDARDS

A. Steel Lighting Standard:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**American LitePole**]
b. [**Appleton; Emerson Electric Co., Automation Solutions**]
c. [**Bridgewell Resources**]
d. [**Cooper Lighting Solutions; Signify North America Corp.**]
e. [**E-conolight**]
f. [**H.E. Williams**]
g. [**Hapco**]
h. [**Hubbell Electrical Solutions; Hubbell Incorporated**]
i. [**Kim Lighting; brand of GE Current, a Daintree company; American Industrial Partners (AIP)**]
j. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
k. [**LSI Industries**]
l. [**Millerbernd Manufacturing Company**]
m. [**NAFCO; brand of Wisconsin Lighting Lab, Inc.**]
n. [**RAB Lighting**]
o. [**Ruud Lighting; brand of Cree Lighting; subsidiary of Ideal Industries, Inc.**]
p. [**Union Metal Industries Corp.**]
q. **<Insert manufacturer's name>**

2. Source Limitations: [**Obtain lighting standards from single manufacturer or producer**][**For lighting standards, obtain each color, grade, finish, type, and variety of lighting standard from single source with resources to provide products of consistent quality in appearance and physical properties**].
3. Standard Features:

a. Comply with requirements in Article 410 of NFPA 70 for luminaire supports.
b. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
c. General Finish Requirements:

1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
2) Appearance of the Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

d. Carbon Steel Poles: Comply with ASTM A500/A500M, Grade B carbon steel with a minimum yield of **46,000 psig**; one-piece construction up to **40 ft** in height with access handhole in lighting standard wall.

1) Shape: [**Round, tapered**][**Round, straight**][**Square, tapered**][**Square, straight**].
2) Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.

e. Stainless Steel Poles: Comply with [**ASTM A240/A240M**][**ASTM A666**], stainless steel with a minimum yield of **55,000 psig**; one-piece construction up to **40 ft** in height with access handhole in lighting standard wall.

1) Shape: [**Round, tapered**][**Round, straight**][**Square, tapered**][**Square, straight**].
2) Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.

f. Steel Mast Arms: [**Single-arm**][**Truss**][**Davit**] type, continuously welded to lighting standard attachment plate. Material and finish same as plate.

g. Brackets for Luminaires: Detachable, cantilever, without underbrace.

1) Adaptor fitting welded to lighting standard, allowing the bracket to be bolted to the lighting standard-mounted adapter, then bolted together with [**stainless steel**][**galvanized-steel**] bolts.
2) Cross Section: Tapered oval, with straight tubular end section to accommodate luminaire. Match lighting standard material and finish.

h. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to lighting standard top.

i. Grounding and Bonding Lugs: Welded **1/2 inch** threaded lug, listed for attaching grounding and bonding conductors of type and size indicated, and accessible through handhole.

j. Steps: Fixed steel, with nonslip treads.

1) For climbing positions, install at **15 inch** vertical spacing, alternating on opposite sides of lighting standard, oriented 180 degrees from each other; first step must be at an elevation **10 ft** above finished grade.
2) For working positions, install steps on opposite side of lighting standard, oriented 180 degrees from each other at the same elevation.

k. Handhole: Oval shaped, with minimum clear opening of **2-1/2-by-5 inch**, with cover secured by stainless steel captive screws.

l. Intermediate Handhole and Cable Support: Weatherproof, **3-by-5 inch** handhole located at midpoint of lighting standard, with cover for access to internal welded attachment lug for electric cable support grip.

m. Cable Support Grip: Wire-mesh type with rotating attachment eye, sized for diameter of cable and rated for a minimum load equal to weight of supported load multiplied by a 5.0 safety factor.

n. Platform for Lamp Ballast Servicing: Factory fabricated of steel, with finish matching that of lighting standard.

o. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.

p. Galvanized Finish: After fabrication, hot-dip galvanize in accordance with ASTM A123/A123M.

q. Factory-Painted Finish: Comply with NAAMM/NOMMA AMP 500 recommendations for applying and designating finishes.

1) Surface Preparation: Clean surfaces in accordance with SSPC-SP 1 to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, in accordance with SSPC-SP 5/NACE No. 1 or SSPC-SP 8.
2) Interior Surfaces of Pole: One coat of bituminous paint, or otherwise treat for equal corrosion protection.

3) Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.

a) Color: [**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**].

r. Powder-Coat Finish: Comply with NAAMM/NOMMA AMP 500 recommendations for applying and designating finishes.

1) Surface Preparation: Clean surfaces in accordance with SSPC-SP 1 to remove dirt, oil, grease, and other contaminants that could impair powder-coat bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, in accordance with SSPC-SP 5/NACE No. 1 or SSPC-SP 8.
2) Powder Coat: Comply with AAMA 2604.

a) Electrostatic-applied powder coating; single application and cured to a minimum **2.5 to 3.5 mil** dry film thickness. Coat interior and exterior of lighting standard for equal corrosion protection.
b) Color: [**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**].

4. Other Available Features Required by the Project:

a. Fasteners: [**Stainless steel**][**Galvanized steel**]<**Insert finish or grade**>, size and type as determined by manufacturer. Corrosion-resistant items compatible with support components.

1) Materials: Compatible with lighting standards as well as the substrates to which lighting standards are fastened and may not cause galvanic action at contact points.
2) Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.

B. Aluminum Lighting Standard:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**American LitePole**]
b. [**Appleton; Emerson Electric Co., Automation Solutions**]
c. [**Bridgewell Resources**]
d. [**Cooper Lighting Solutions; Signify North America Corp.**]
e. [**E-conolight**]
f. [**H.E. Williams**]
g. [**Hapco**]
h. [**Hubbell Electrical Solutions; Hubbell Incorporated**]
i. [**Kim Lighting; brand of GE Current, a Daintree company; American Industrial Partners (AIP)**]
j. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
k. [**LSI Industries**]
l. [**Lyte Poles; brand of DWM Holdings, Inc.**]
m. [**NAFCO; brand of Wisconsin Lighting Lab, Inc.**]
n. [**Ruud Lighting; brand of Cree Lighting; subsidiary of Ideal Industries, Inc.**]
o. [**Sentry Electric, LLC**]

p. [**Union Metal Industries Corp.**]
q. [**Valmont Industries, Inc.**]
r. <**Insert manufacturer's name**>

2. Source Limitations: [**Obtain lighting standards from single manufacturer or producer**][**For lighting standards, obtain each color, grade, finish, type, and variety of lighting standard from single source with resources to provide products of consistent quality in appearance and physical properties**].
3. Standard Features:

a. Comply with requirements in Article 410 of NFPA 70 for luminaire supports.
b. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
c. General Finish Requirements:

1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
2) Appearance of the Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

d. [**Seamed**][**Seamless**], extruded structural tube complying with ASTM B221, [**Alloy 6063-T6**][**Alloy 6061-T6**], with access handhole in in lighting standard wall.

1) Shape: [**Round, tapered**][**Round, straight**][**Square, tapered**][**Square, straight**].
2) Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.

e. Mast Arms: [**Aluminum**][**Steel**][**Single-arm**][**Truss**][**Davit**] type, continuously welded to lighting standard attachment plate. Material and finish same as plate.
f. Brackets for Luminaires: Detachable, cantilever, without underbrace.

1) Adaptor fitting welded to lighting standard, allowing the bracket to be bolted to the lighting standard-mounted adapter, then bolted together with [**stainless steel**][**galvanized-steel**] bolts.
2) Cross Section: Tapered oval, with straight tubular end section to accommodate luminaire. Match lighting standard material and finish.

g. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to lighting standard top.
h. Grounding and Bonding Lugs: Bolted **1/2 inch** threaded lug, listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.
i. Handhole: Oval shaped, with minimum clear opening of **2-1/2 by 5 inch**, with cover secured by stainless steel captive screws.
j. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.
k. Aluminum Finish: Comply with NAAMM/NOMMA AMP 500 recommendations for applying and designating finishes.

1) Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
2) Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20 requirements; and seal aluminum surfaces with clear, hard-coat wax.
3) Class I, Clear-Anodic Finish: AA-M32C22A41 (Mechanical Finish: Medium satin;

Chemical Finish: Etched, medium matte; Anodic Coating: Architectural Class I clear coating of 0.018 mm or thicker), complying with AAMA 611.

4) Class I, Color-Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: Medium; Chemical Finish: Etched, medium matte; Anodic Coating: Architectural Class I integrally colored or electrolytically deposited color coating 0.018 mm or thicker), complying with AAMA 611.

l. Factory-Painted Finish: Comply with NAAMM/NOMMA AMP 500 recommendations for applying and designating finishes.

1) Surface Preparation: Clean surfaces to comply with SSPC-SP 1 to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, in accordance with SSPC-SP 5/NACE No. 1 or SSPC-SP 8.
2) Interior Surfaces of Pole: One coat of bituminous paint, or otherwise treat for equal corrosion protection.
3) Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.

a) Color: [**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**].

m. Powder-Coat Finish: Comply with NAAMM/NOMMA AMP 500 recommendations for applying and designating finishes.

1) Surface Preparation: Clean surfaces to comply with SSPC-SP 1 to remove dirt, oil, grease, and other contaminants that could impair powder coat bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, in accordance with SSPC-SP 5/NACE No. 1 or SSPC-SP 8.
2) Powder coat must comply with AAMA 2604.

a) Electrostatic applied powder coating; single application with a minimum **2.5 to 3.5 mil** dry film thickness; cured in accordance with manufacturer's published instructions. Coat interior and exterior of lighting standard for equal corrosion protection.
b) Color: [**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**].

4. Other Available Features Required by the Project:

a. Fasteners: [**Stainless steel**][**Galvanized steel**]<**Insert finish or grade**>, size and type as determined by manufacturer. Corrosion-resistant items compatible with support components.

1) Materials: Compatible with lighting standards as well as to substrates to which lighting standards are fastened and may not cause galvanic action at contact points.
2) Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.

C. Fiberglass Lighting Standard:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Alliance; a division of GEOTEK**]
b. [**Bridgewell Resources**]
c. [**CMT; a Valmont Company**]
d. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
e. [**PLP Composite Technologies, Inc**]
f. [**Shakespeare; a Valmont Company**]
g. [**Valmont Industries, Inc.**]
h. [**Whately; a Valmont Company**]
i. [**Wood Preservers, Inc.**]
j. **<Insert manufacturer's name>**

2. Source Limitations: [**Obtain lighting standards from single manufacturer or producer**][**For lighting standards, obtain each color, grade, finish, type, and variety of lighting standard from single source with resources to provide products of consistent quality in appearance and physical properties**].
3. Standard Features:

a. Comply with requirements in Article 410 of NFPA 70 for luminaire supports.
b. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
c. General Finish Requirements:

1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
2) Appearance of the Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

d. Designed specifically for supporting luminaires, with factory-formed cable entrance and handhole.
e. Not less than 65 percent by weight of fiberglass roving, with resin and pigment making up the remainder.
f. Roving must be continuously applied with uniform tension, with multiple layers placed to meet axial and compressive strength requirements.
g. Shape: [**Round, tapered**][**Round, straight**][**Square, tapered**][**Square, straight**].
h. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
i. Surface Finish: Smooth and uniform along surface of lighting standard.
j. Paint Finish: Pigmented polyurethane, with a minimum dry film thickness of **1.5 mil**. Polyurethane may be omitted if the surface layer of the lighting standard is inherently UV inhibited.
k. Mast Arms: [**Aluminum**][**Steel**][**Fiberglass**][**Single-arm**][**Truss**][**Davit**] type, continuously welded to lighting standard attachment plate. Material and finish same as plate. Adaptor plate must be steel hot-dip galvanized in accordance with ASTM A153/A153M or Alloy 6061-T6 aluminum encased within fiberglass roving, allowing the mast arm adaptor to be bolted to the lighting standard.
l. Brackets for Luminaires: Detachable, cantilever, without underbrace.

1) Adaptor Fitting: Steel, hot-dip galvanized in accordance with ASTM A153/A153M, or Alloy 6061-T6 aluminum, permanently bonded within fiberglass roving, allowing the bracket to be bolted to the lighting standard-mounted adapter. Bolt together with [**stainless steel**][**galvanized-steel**] bolts; use anti-seize compound when bolting dissimilar metals.
2) Cross Section: Tapered oval, with straight tubular end section to accommodate luminaire. Match lighting standard material and finish.

m. Pole-Top Tenons: Steel, hot-dip galvanized in accordance with ASTM A153/A153M, or Alloy 6061-T6 aluminum, permanently bonded to the fiberglass shaft. Fabricated to support luminaire or luminaires and brackets indicated.
n. Handhole: Oval shaped, with minimum clear opening of **2-1/2 by 5 inch**, with cover secured by stainless steel captive screws.
o. Grounding: Bare, stranded copper, 6 AWG, [**suspended inside of lighting standard**][**inside 3/4 inch conduit fastened to the interior of the lighting standard**], connected to luminaire(s), ground lug near handhole, and ground rod.
p. Grounding and Bonding Lugs: Bolted **1/2 inch** threaded lug, listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.

4. Other Available Features Required by the Project:

a. Resin Color: [**Black**][**Dark**][**Bronze**]<**Insert color**>; uniform coloration throughout entire wall thickness.
b. Anchor Base: Integral galvanized-steel or aluminum casting, enclosing and permanently bonded to the exterior of the fiberglass shaft.
c. Fasteners: [**Stainless steel**][**Galvanized steel**]<**Insert finish or grade**>, size and type as determined by manufacturer. Corrosion-resistant items compatible with support components.

1) Materials: Compatible with lighting standards as well as the substrates to which lighting standards are fastened and may not cause galvanic action at contact points.
2) Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.

D. Laminated Wood Lighting Standard:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Bell Lumber and Pole Company**]
b. [**Hughes Brothers, Inc.**]
c. [**Laminated Wood Systems, Inc.**]
d. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
e. [**McFarland Cascade**]
f. [**Timber Technologies, LLC**]
g. [**TimberWood Products; J.H. Baxter & Co.**]
h. [**Valmont Industries, Inc.**]
i. <**Insert manufacturer's name**>

2. Source Limitations: [**Obtain lighting standards from single manufacturer or producer**][**For lighting standards, obtain each color, grade, finish, type, and variety of lighting standard from single source with resources to provide products of consistent quality in appearance and physical properties**].
3. Standard Features:

a. Comply with requirements in Article 410 of NFPA 70 for luminaire supports.
b. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
c. General Finish Requirements:

1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
2) Appearance of the Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

d. Species and Grades for Structural Laminated Timber: Complying with APA A190.1. Use [**Southern pine**][**Douglas fir**][**Alaska cedar**][**any species listed in APA 117**], engineered and fabricated to withstand indicated structural loads without exceeding allowable design working stresses in accordance with [**APA 117**][**AWPA/ANSI O5.2**].
e. Features include [**wood bracket**][**wood crossarm**][**lighting standard-top adaptor**]<**Insert items**> for mounting luminaire(s), metal lighting standard cap, and concealed raceway path connected to access handhole.
f. Mounting Provisions: [**Embedded**]<**Insert description of other mounting unless detailed on the Drawings**>.
g. Appearance Grade: Architectural appearance grade complying with AITC 110.
h. Preservative Treatment:

1) Exposure: Comply with [**AWPA U1, Use Category UC4A**][**AWPA U1, Use Category UC4B**][**AWPA U1, Use Category UC4C**].
2) Treatment after Dressing and End Cutting: Comply with AWPA M4 for surface cuts to a depth of more than **1/16 inch**.

i. Adhesive: Wet-use type complying with ASTM D2559.
j. End Sealer: Manufacturer's standard, transparent, colorless wood sealer that is effective in retarding the transmission of moisture at cross-grain cuts and is compatible with indicated finish.
k. Penetrating Sealer: Manufacturer's standard, transparent, penetrating wood sealer that is compatible with indicated finish.
l. Finish: [**Natural, unstained wood**][**Semitransparent stain applied after erection**][**Factory-applied semitransparent stain**], color as selected by Architect.

4. Other Available Features Required by the Project:

a. Fasteners: [**Stainless steel**][**Galvanized steel**]<**Insert finish or grade**>, size and type as determined by manufacturer. Corrosion-resistant items compatible with support components.

1) Materials: Compatible with lighting standards as well as to substrates to which lighting standards are fastened and may not cause galvanic action at contact points.
2) Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.

E. Wood Lighting Standard:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**American Pole & Timber**]
b. [**Baldwin Pole & Piling Co., Inc.**]
c. [**Bell Lumber and Pole Company**]
d. [**Cavawood Architectural Products**]
e. [**Cobb Lumber Company**]

f. [**Cox Utility Products Division**]
g. [**Guelph Utility Pole Co., Ltd.; a Stella-Jones company**]
h. [**Koppers Performance Chemicals**]
i. [**Langdale Forest Products Company**]
j. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
k. [**McFarland Cascade**]
l. [**Stella-Jones**]
m. [**T.R. Miller Mill Co., Inc.**]
n. [**Texas Electric Cooperatives, Inc.**]
o. [**Thomasson Company**]
p. [**TimberWood Products; J.H. Baxter & Co.**]
q. [**United Wood Treating Company**]
r. [**Wood Preservers, Inc.**]
s. <**Insert manufacturer's name**>

2. Source Limitations: [**Obtain lighting standards from single manufacturer or producer**][**For lighting standards, obtain each color, grade, finish, type, and variety of lighting standard from single source with resources to provide products of consistent quality in appearance and physical properties**].
3. Standard Features:

a. Comply with requirements in Article 410 of NFPA 70 for luminaire supports.
b. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
c. General Finish Requirements:

1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
2) Appearance of the Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

d. [**Douglas fir**][**Southern yellow pine**], [**machine trimmed by turning,**] for wood species used; and bored, roofed, and grained before treatment.

1) Pole Brand: Brand the manufacturer's trademark and date of treatment, height and class of lighting standard, wood species, preservation code, and retention. Brand must be placed so that the bottom of the brand is minimum **10 ft** from lighting standard butt.
2) Mounting Provisions: Embedded.

e. Preservative Treatment: Treat in accordance with [**AWPA U1, Use Category UC4A**][**AWPA U1, Use Category UC4B**][**AWPA U1, Use Category UC4C**].
f. Luminaire Brackets: Comply with NEMA/ANSI C136.13.

4. Other Available Features Required by the Project:

a. Fasteners: [**Stainless steel**][**Galvanized steel**]<**Insert finish or grade**>, size and type as determined by manufacturer. Corrosion-resistant items compatible with support components.

1) Materials: Compatible with lighting standards as well as the substrates to which lighting standards are fastened and may not cause galvanic action at contact points.
2) Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after

fabrication unless otherwise indicated.

F. Prestressed Concrete Lighting Standard:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Baldwin Pole & Piling Co., Inc.**]
   b. [**Holophane; an Acuity Brands company**]
   c. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
   d. [**Lonestar Prestress Mfg., Inc.**]
   e. [**NOV Ameron**]
   f. [**Pre-Cast Specialties, Inc.**]
   g. [**Seminole Pole, Inc.**]
   h. [**StressCrete Group**]
   i. <**Insert manufacturer's name**>

2. Source Limitations: [**Obtain lighting standards from single manufacturer or producer**][**For lighting standards, obtain each color, grade, finish, type, and variety of lighting standard from single source with resources to provide products of consistent quality in appearance and physical properties**].
3. Standard Features:

   a. Comply with requirements in Article 410 of NFPA 70 for luminaire supports.
   b. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
   c. General Finish Requirements:

      1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
      2) Appearance of the Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

   d. Comply with ASTM C1089[**and manufactured by centrifugal spin-casting process**][**and manufactured by static-casting method**].

      1) Shape: [**Round, tapered**][**Round, straight**][**Square, tapered**][**Square, straight**].
      2) Mounting Provisions: [**Steel butt flange for bolted mounting to foundation or breakaway support**][**Embedded**].
      3) Finishing: Capped at top and plugged at bottom. Seat each reinforcing strand with epoxy adhesive.
      4) Grounding: Continuous copper ground wire cast into lighting standard. Terminate at top of lighting standard[**and attach to 24 inch lighting rod**].
      5) Raceway: Smooth, internal, and not less than **3 inch** in diameter.

   e. Concrete: Minimum 28-day compressive strength of [**7000 psi**]<**Insert value**>.
   f. Cured with wet steam and aged for a minimum of 15 days prior to installation.
   g. Reinforcement: [**Reinforcing bars complying with ASTM A615/A615M**][**Cold-drawn spiral wire complying with ASTM A1064/A1064M**][**Prestressing strand, 270 K, complying with ASTM A416/A416M**].
   h. Surface Treatment: Hard, nonporous, and resistant to water, frost, and road and soil chemicals; and must have a maximum water-absorption rate of 3 percent.

i. Finish Texture: [**Standard form**][**Polished exposed aggregate**][**Etched exposed aggregate**].

1) Exposed aggregate must be of <**Insert aggregate type selected from manufacturers' lists**> type.

j. Nameplate: Aluminum cast into lighting standard wall at approximately **5 ft** above ground line, listing name of manufacturer, the Project identifier, overall height, and approximate weight.

k. Pole Brackets: Comply with NEMA/ANSI C136.31.

4. Other Available Features Required by the Project:

a. Fasteners: [**Stainless steel**][**Galvanized steel**]<**Insert finish or grade**>, size and type as determined by manufacturer. Compatible with lighting standards as well as the substrates to which lighting standards are fastened and may not cause galvanic action at contact points.

2.3 LIGHTING STANDARD ACCESSORIES

A. Duplex Receptacle: Ground-fault circuit interrupter type, 120 V(ac), 20 A in a weatherproof assembly.

1. [**Surface mounted**][**Recessed**][**12 inch**]<**Insert dimensions**> above finished grade.

a. UL 50E, [**Type 3R**][**Type 4X**], nonmetallic polycarbonate plastic or reinforced fiberglass, enclosure with cover; color to match pole.

b. Lockable hasp and latch complying with OSHA lockout and tag-out requirements.

B. Minimum 1800 W transformer, protected by replaceable fuses, mounted behind access cover.

C. Base Covers: Manufacturers' standard metal units, finished same as pole, and arranged to cover pole's mounting bolts and nuts.

D. Transformer-Type Base: Same material and color as pole. Coordinate dimensions to suit pole's base flange and to accept [**ballast(s)**][**indicated accessories**]. Include removable flanged access cover secured with bolts or screws.

E. Decorative accessories, supplied by decorative pole manufacturer, include the following:

1. Banner Arms: <**Insert material**>.
2. Flag Holders: <**Insert material**>.
3. Ladder Rests: <**Insert material**>.

F. Lowering System for Luminaires:

1. System Description: Capable of lowering luminaire [**assembly**]to a service position within **36 inch** of finished grade in winds up to **30 mile/h**. Provide manual plug connection to electrical power accessible in lowered position. Assembled system of pole, luminaire, and lowering device must be capable of loads specified in "Performance Requirements" Article.
2. Compatibility of Material: Materials for attachment and connection of luminaire-mounting assembly, lowering device, lowering cable, and portable winch must be compatible to avoid corrosion and electrolysis.
3. Structural and Mechanical Design Safety Factor: 5.0, minimum, for static and dynamic loads of

load-bearing components, including cable.

4. Luminaire-Mounting and Disconnect Arrangement: Multiple [**ring**][**carriage**]-mounted luminaires, arranged for lowering and rising as a group.

    a. Electrical cable for normal operating power to luminaires must manually disconnect inside pole base, using weatherproof multi-pin connector, and must be arranged to move within the pole during lowering and rising of luminaire assembly.
    b. Electrical cable for normal operating power to luminaires must automatically disconnect at weatherproof multi-pin connector within the pole-top lowering head at the beginning of the lowering cycle and reconnect when luminaire or luminaire assembly is raised to the operating position.

5. Lowering Device: Weatherproof, cast-aluminum housing, and multiple mechanical latches. Moving parts of latching assembly must be located in the portion of the unit that is lowered to servicing position. Positive latching in the operating position must be indicated to the operator at the base of the pole by a clear visual signal or by other means acceptable to Owner or authorities having jurisdiction.
6. Lowering Cable: [**Zinc-electroplated-steel**][**or**][**stainless steel**] aircraft cable.
7. Portable Winch: [**Manual**][**120 V electric**] type. [**One**]<**Insert number**> required.

    a. Winch Power Connection: Cord and plug.
    b. Winch Raise-Lower Control: Remote-control station with [**15 ft**]<**Insert dimension**> of cable.

G. Mounting Hardware:

1. Anchor Bolts: Manufactured [**to ASTM F1554, Grade 55,**]with a minimum yield strength of **55,000 psi**.

    a. Galvanizing: [**Hot-dip galvanized in accordance with ASTM A153/A153M, Class C**][**Mechanically deposited galvanization in accordance with ASTM B695, Class 50**].
    b. [**Bent**][**Headed**] rods <**Insert dimension**> in diameter by <**Insert dimension**> in length.
    c. Threading: [**Uniform National Coarse**][**Uniform National 8**], Class 2A.

2. Nuts: ASTM A563/A563M, Grade A, Heavy-Hex.

    a. Galvanizing: [**Hot-dip galvanized in accordance with ASTM A153/A153M, Class C**][**Mechanically deposited galvanization in accordance with ASTM B695, Class 50**].
    b. [**Two**][**Four**]<**Insert number**> nuts provided per anchor bolt[**, shipped with nuts preassembled to the anchor bolts**].

3. Washers: ASTM F436/F436M, Type 1.

    a. Galvanizing: [**Hot-dip galvanized in accordance with ASTM A153/A153M, Class C**][**Mechanically deposited galvanization in accordance with ASTM B695, Class 50**].
    b. [**One**][**Two**]<**Insert number**> washer(s) provided per anchor bolt.

2.4 UTILITY POLES

A. Wood Utility Pole:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Ace Pole Company**]
b. [**Baxter, J. H. & Co**]
c. [**Bell Lumber and Pole Company**]
d. [**Brown Wood Preserving Co., Inc.**]
e. [**Dayton Superior Corporation**]
f. [**Koppers Performance Chemicals**]
g. [**McFarland Cascade**]
h. <**Insert manufacturer's name**>

2. Source Limitations: [**Obtain poles from single manufacturer or producer**][**For poles, obtain each color, grade, finish, type, and variety of pole from single source with resources to provide products of consistent quality in appearance and physical properties**].
3. Standard Features:

a. Comply with ATIS O5.1 and RUS Bulletin 1728F-700, for wood poles pressure treated with [**creosote**][**pentachlorophenol**][**ammoniacal copper arsenate**][**ammoniacal copper zinc arsenate**][**and**][**chromated copper arsenate**].
b. Wood Species: [**Douglas fir**][**Lodgepole pine**][**Western larch**][**Southern yellow pine**]<**Insert wood species selected from ATIS O5.1**>.
c. Pole Marking:

1) Manufacturer's Mark: Comply with ATIS O5.1; locate **10 ft** from the pole butt for poles **50 ft** long or less.
2) Pole Number: Machine-embossed aluminum, alphanumeric characters not less than **2-1/2 inch** high, with aluminum nails.

d. Factory Operations: Machine trim poles by turning smooth, full length. Roof, gain, and bore poles before pressure treatment.

B. Concrete Utility Pole:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Accord Industries**]
b. [**Bayshore Concrete Products Corporation**]
c. [**CPI Concrete Products**]
d. [**StressCrete Group**]
e. [**Valmont Industries, Inc.**]
f. <**Insert manufacturer's name**>

2. Source Limitations: [**Obtain poles from single manufacturer or producer**][**For poles, obtain each color, grade, finish, type, and variety of pole from single source with resources to provide products of consistent quality in appearance and physical properties**].
3. Standard Features:

a. Spun-cast prestressed concrete, complying with requirements of ASTM C1089.

1) Comply with requirements of RUS Bulletin 1724E-216.

b. Design: Base design on calculation of strength required by IEEE C2 or indicated on the Drawings, whichever is greater. Design must be suitable for installation at a location where annual temperature range is between [**minus 4 deg F and plus 100 deg F**]<**Insert design**

temperature range at site location>. Include pole design for embedded attachments matching fittings, brackets, and other items installed in the field.

c. Shaft: Hollow, for poles at overhead-to-underground connections. Provide metric designator 91 (trade size 3-1/2) minimum cable raceway capacity, with [**conduit elbow**][**cable entry port**] at base.

d. Water Absorption: Not more than 3 percent.

e. Surface: Smooth, hard, nonporous, and resistant to [**soil acids**][**road salts**][**frost and freezing damage**].

f. Pole Marking:

1) Manufacturer's Mark: Comply with ATIS O5.1; locate **10 ft** from the pole butt for poles **50 ft** long or less.

2) Pole Number: Machine-embossed aluminum, alphanumeric characters not less than **2-1/2 inch** high.

2.5 UTILITY POLE ACCESSORIES

A. Crossarms:

1. Description: [**Solid-wood distribution type, complying with RUS Bulletin 1728H-701 for specified construction grade**][**Galvanized, steel angles**], and complying with IEEE C2 for required climbing space and wire clearances.
2. Braces: Galvanized, flat, ferrous-metal units; **1/4 inch** thick by **1-1/4 inch** wide, minimum, with length to suit crossarm dimensions.

B. Guys and Anchors:

1. Guy Strand Assemblies: Cable and attachment assemblies must have uniform minimum breaking strength of the cable.

a. Cable: Seven strands. [**Zinc-coated steel, complying with ASTM A475**][**Aluminum-clad steel, complying with ASTM B416**][**Copper-clad steel, complying with ASTM B228**]. Breaking strength must be not less than [**10,000 lb**]<**Insert value**>.

b. Cable Termination:

1) Thimble eye.
2) Hooks and guy strain plates, complying with IEEE C135.1.
3) Preformed galvanized-steel guy grips, matching material, galvanizing, and strength of the guy strand assembly.

2. Anchor and Anchor-Rod Assemblies: Hot-dip galvanized steel.

a. Power-installed, screw-type anchors.

1) **15 inch** screw; with rod **8 ft** long by **1-1/2 inch** in diameter. Rated at **10,000 lb** when installed.
2) Guy anchors must have strength and holding area as required for anchor load and soil conditions at location of that anchor.

b. <**Insert anchor size or type**>.

3. Strain Insulators: Epoxy-bonded fiberglass of length to meet clearance requirements specified in "Installation of Guys and Anchors" Subparagraph in "Installation of Utility Poles" Article.
4. Guy Markers: Round, of vinyl or PVC material, [**white**][**yellow**] color, **8 ft** long. Shatter resistant at temperatures below **0 deg F**.

PART 3 - EXECUTION

3.1 INSTALLATION OF FOUNDATIONS FOR POLES AND LIGHTING STANDARDS

A. Concrete Pole Foundations: Cast in place, with anchor bolts to match pole-base flange. Structural steel complying with ASTM A36/A36M and hot-dip galvanized in accordance with ASTM A123/A123M; and with top-plate and mounting bolts to match pole-base flange and strength required to support pole, luminaire, and accessories. Concrete, reinforcement, and formwork are specified in Section 033000 "Cast-in-Place Concrete."

B. Precast Foundations: Factory fabricated, with structural steel complying with ASTM A36/A36M and hot-dip galvanized in accordance with ASTM A123/A123M; and with top-plate and mounting bolts to match pole-base flange and strength required to support pole, luminaire, and accessories. Concrete, reinforcement, and formwork are specified in Section 033000 "Cast-in-Place Concrete."

C. Power-Installed Screw Foundations: Factory fabricated by pole manufacturer, with structural steel complying with ASTM A36/A36M and hot-dip galvanized in accordance with ASTM A123/A123M; and with top-plate and mounting bolts to match pole-base flange and strength required to support pole, luminaire, and accessories.

1. Baseplate: Stamped with manufacturer's name, date of production, and cable entry.

D. Direct-Buried Foundations: Install to depth indicated on the Drawings, but not less than [**one-sixth of pole height**][**as indicated**]. Add backfill [**in 6 to 9 inch layers, tamping each layer before adding the next**][**as indicated on the Drawings**]<**Insert requirement**>. To ensure a plumb installation, continuously check pole orientation with plumb bob while tamping.

E. Direct-Buried Poles with Concrete Backfill: Set poles in augered holes to depth below finished grade indicated on the Drawings, but not less than [**one-sixth of pole height**][**as indicated**]. To ensure a plumb installation, continuously check pole orientation with plumb bob while tamping.

1. Make holes **6 inch** in diameter larger than pole diameter.
2. Fill augered hole around pole with air-entrained concrete having a minimum compressive strength of **3000 psi** at 28 days and finish in a dome above finished grade.
3. Use a short piece of **1/2 inch** diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.
4. Cure concrete a minimum of 72 hours before performing work on pole.

F. Anchor Bolts: Install plumb using manufacturer-supplied [**steel**][**plywood**] template, uniformly spaced.

3.2 INSTALLATION OF LIGHTING STANDARDS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturers' published instructions, comply with the following:

1. Electrical Construction: NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Hot Work: NFPA 51B.
4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
5. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Alignment: [**Align foundations and lighting standards for optimum directional alignment of luminaires and their mounting provisions on lighting standards**][**Align lighting standards as indicated**].
2. Clearances: Maintain the following minimum horizontal distances of lighting standards from surface and underground features unless otherwise indicated on the Drawings:

    a. Fire Hydrants and Water Piping: [**60 inch**]<**Insert dimension**>.
    b. Water, Gas, Electric, Communications, and Sewer Lines: [**10 ft**]<**Insert dimension**>.
    c. Trees: **15 ft** from tree trunk.
    d. <**Insert features and clearance dimensions**>.

3. Concrete Lighting Standard Foundations: Set anchor bolts in accordance with anchor-bolt templates furnished by manufacturer. Concrete materials, installation, and finishing requirements are specified in Section 033000 "Cast-in-Place Concrete."
4. Foundation-Mounted Lighting Standards: Mount lighting standards with leveling nuts and tighten top nuts to torque level in accordance with manufacturer's published instructions.

    a. Use anchor bolts and nuts selected to resist seismic forces specified for the application and approved by manufacturer.
    b. Grout void between lighting standard base and foundation. Use nonshrink or expanding concrete grout firmly packed to fill space.
    c. Install base covers unless otherwise indicated.
    d. Use a short piece of **1/2 inch** diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of lighting standard.

5. Lighting Standards and Foundations Set in Concrete-Paved Areas: Install lighting standards with a minimum **6 inch** wide, unpaved gap between the lighting standard or foundation and the edge of the adjacent concrete slab. Fill unpaved ring with pea gravel. Insert material to a level **1 inch** below top of concrete slab.
6. Raise and set lighting standard using web fabric slings (not chain or cable) at locations indicated by manufacturer.
7. Corrosion Prevention:

    a. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum using insulating fittings or treatment.
    b. Steel Conduits: Comply with requirements in Section 260533.13 "Conduits for Electrical Systems." In concrete foundations, wrap conduit with **0.010 inch** thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

D. Interfaces with Other Work:

1. Grounding and Bonding: Bond metallic components of lighting standards and support structures as follows:

    a. Provide insulated equipment grounding conductors with supply feeders for bonding luminaires and other pole-mounted electrical or electronic equipment to ground terminals of their supplying power sources in accordance with Article 250 of NFPA 70.
    b. Bond metallic components of luminaires, pole accessories, and foundation to insulated equipment grounding conductor.

2. Identification: Provide labels for lighting standards, components, wiring, cabling, terminals, and associated electrical equipment.

    a. Identify field-installed conductors, interconnecting wiring, and components.

b. Label each enclosure with engraved metal or laminated-plastic nameplate.
c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

3.3 INSTALLATION OF UTILITY POLES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturers' published instructions, comply with the following:

1. Electrical Construction: [**IEEE C2**][**NFPA 70 and NECA NEIS 1**].
2. Electrical Safety: NFPA 70E.
3. Hot Work: NFPA 51B.
4. Grounding and Bonding: [**IEEE C2**][**NECA NEIS 331 and Article 250 of NFPA 70**].
5. Communications Work: BICSI N1.
6. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Engage the services of a licensed surveyor to verify dimensions by field measurement, to identify locations of poles, anchors, and other features, and to verify all clearances. The survey document must also identify locations of connections to new and existing supply lines and to primary and secondary services. Notify Architect of discrepancies and field conditions that are not indicated and that will affect installation.
2. Pole Orientation: Align curve of curved wood poles with straight-line runs of three or more poles. Align gained surfaces perpendicular to runs.
3. Elevation of Line above Grade: Install poles with top at same elevation, unless grade changes dictate elevation change in poles, and in accordance with the following:

   a. On level ground, set poles so tops of consecutive poles vary not more than **60 inch** in elevation.
   b. Shorten wood poles by cutting off the top and make cuts to shed water. Apply preservative to cuts.

4. Set poles in accordance with the following:

   a. Make pole holes vertical, uniform in diameter, and large enough to permit effective use of tamping bars all around. Bore or excavate holes with an average diameter at grade less than twice the diameter of the pole at the same grade.
   b. Use minimum depths indicated, except at locations where hole is partly or entirely in rock and if hole is not vertical or has a diameter at grade more than two times the pole diameter at the same level; in these conditions, increase the depth of the hole by the following increments before setting the pole:

      1) Poles up to 35 ft (10.6 m) Long: **24 inch**.
      2) Poles 36 to 60 ft (11 to 18.3 m) Long: **30 inch**.
      3) Poles 61 to 75 ft (18.6 to 22.9 m) Long: **36 inch**.

   c. For poles on slopes, indicated hole depth is from finished grade at lowest side of hole.
   d. Set poles in alignment and plumb except at dead ends, angles, and points of extra strain; rake poles against conductor strain **1 inch** minimum, **2 inch** maximum, (after conductors are installed at required tension) for each **10 ft** of pole length. Rake poles so they will not lean or bend in direction of strain when loaded.
   e. Backfill holes in **6 inch** maximum lifts, and thoroughly tamp each layer before starting the

next.

f. Place surplus earth around pole in a conical shape, and tamp thoroughly to provide drainage away from pole.
g. Set poles so alternate crossarm gains face in alternate directions, except at terminals and dead ends; place gains on last two poles on side facing terminal or dead end.
h. Poles Set in Concrete Paved Areas: Install poles with minimum of **6 inch** wide, unpaved gap between the pole and the edge of adjacent concrete slab. Fill unpaved ring with [**pea gravel**]<**Insert appropriate material**> to a level **1 inch** below top of concrete slab.

5. Field treat factory-treated poles and crossarms as follows:

   a. Poles Treated More Than One Year before Installation: Treat portion from **24 inch** above ground line to butt.
   b. Field-Bored Holes and Field-Cut Gains and Pole Tops: Treat cut portions.
   c. Unused Holes: Treat and plug with treated-wood-dowel drive pins.
   d. Engage the services of qualified wood pole and crossarm treatment technician to apply treatment. Comply with requirements in AWPA standards that govern original factory treatment for field-applied treatment and application of chemicals.

6. Installation of Crossarms: Set line crossarms at right angle to line for straight runs and for angles 45 degrees and more. Bisect angles less than 45 degrees.

   a. Buck Arms: Install at corners and junction poles unless otherwise indicated.
   b. Double Crossarms: Install at dead ends, corners, angles, and line crossings.
   c. Equipment Arms: Locate below lines and set parallel or at right angles to them, whichever provides best climbing space.
   d. Gains: Install factory-cut or metal-pole gains only. Do not cut gains in field without specific written approval.

7. Installation of Guys and Anchors:

   a. Install guys to resist unbalanced loads, including those developed at angles, corners, and dead ends. Install two or more guys if a single guy will not provide adequate strength. Install separate guys if unbalanced loads are separated by **36 inch** or more. Comply with IEEE C2.

      1) Unless a thimble eye is used, at the pole end, install a minimum of two guy hooks and two guy strain plates.
      2) At the anchor end, attach guy strand assembly with preformed grips.

   b. Protect guy strands from damage. Replace damaged guy strands. Install guy insulators where required to comply with IEEE C2 clearance requirements.
   c. Install guys with a lead-to-height ratio of 1 to 1 unless otherwise indicated. The minimum lead-to-height ratio must be 1/2 to 1. When less than 1 to 1, increase guy strength by the ratio of the sine of the lead angle indicated to the sine of the lead angle provided.
   d. Install screw-type guy anchors aligned in soil with guy. Set with anchor rod pointing at guy attachment on pole and rod projecting **6 to 9 inch** from ground.
   e. Install strain insulators to provide a minimum of **12 inch** of clearance between the nearest energized surface and the strain insulator fitting farthest from the pole. When loaded to the tension indicated, fiberglass strain insulators must be loaded to not more than two-thirds of manufacturer's published rating.

8. Guy Markers: Install at anchor end of guys to visually mark the guy wire at all accessible locations. Clamp to guy strand or anchor at top and bottom of marker.

D. Interfaces with Other Work:

1. Grounding and Bonding:

    a. Comply with [**IEEE C2**][**NFPA 70**] grounding and bonding requirements.
    b. Ground Rods: [**Copper-clad**][**Zinc-coated**][**Stainless**] steel[**, sectional type**]; [**3/4 inch by 10 ft**][**5/8 inch by 8 ft**].

        1) Install [**two**]<**Insert number**> parallel ground rods if resistance to ground by a single, ground-rod electrode exceeds 25 Ω.
        2) Drive ground rods until tops are **12 inch** below finished grade in undisturbed earth.

    c. Grounding (Earthing) Conductors:

        1) 4 AWG minimum, soft-drawn copper.
        2) Conductor Protectors for Wood Poles: Half-round PVC or wood molding; if wood, use pressure-treated fir, cypress, or cedar. Protect grounding conductors running on surface of wood poles with molding extended from grade level up to and through communications service and transformer spaces.
        3) Ground-Rod Connections: Install bolted connectors for underground connections and connections to rods.
        4) Lightning Arrester Grounding Conductors: Separate from other grounding conductors.

    d. Bonding Conductors: Provide equipment grounding conductors with supply feeders for bonding pole-mounted electrical and electronic equipment to ground terminals of their supplying power sources in accordance with Article 250 of NFPA 70.

2. Identification: Provide labels for poles, components, wiring, cabling, terminals, and associated electrical equipment.

    a. Identify field-installed conductors, interconnecting wiring, and components.
    b. Label each enclosure with engraved metal or laminated-plastic nameplate.
    c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.
    d. Locate pole numbers to provide maximum visibility from the road or patrol route.

3.4 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

1. <**Insert requirements**>.

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

D. Tests and Inspections:

1. Inspect poles for nicks, mars, dents, scratches, and other damage.
2. System function tests.
3. Guy Anchors: Test one of each type and capacity installed[**, plus additional units specifically indicated for testing**]. Apply rated pull-out force in the same pull direction applied by the guy at the test location.

    a. Acceptable Test Results: Denoted by movement of less than **3/8 inch** by the holding component of the anchor in the earth or other medium in which it is installed.
    b. Replace or reinstall, at Architect's option, all anchors of same type and capacity as anchor type that fails this test.

4. Pole Ground Resistance: Measure resistance of each separate grounding electrode, including pole grounds. Also measure resistance of separate grounding electrode systems before bonding together.

    a. Perform tests and obtain acceptable results before energizing any portion of overhead electrical distribution system.
    b. Results and Follow-up: If ground resistance for a single ground electrode or pole ground, tested individually, exceeds 25 Ω, add a ground electrode not less than **10 ft** away and interconnect with 2 AWG, minimum, bare conductor buried at least **12 inch** below furnished grade.

5. <**Insert special inspections**>.

E. Nonconforming Work:

1. Unit will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

G. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 53 00 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Labels.
2. Extruded insulating tubing.
3. Bands.
4. Tapes and stencils.
5. Tags.
6. Signs.
7. Cable ties.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 284600 "Fire Detection and Alarm"[**and Section 284614 "Single- and Multiple-Station Alarms"**] specifies fire detection and alarm devices referenced in this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: For each type of label and sign to illustrate composition, size, colors, lettering style, mounting provisions, and graphic features of identification products.

C. Identification Schedule: For each piece of electrical equipment and electrical system components to be index of nomenclature for electrical equipment and system components used in identification signs and labels. Use same designations indicated on Drawings.

PART 2 - PRODUCTS

2.1 LABELS

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
2. Listing Criteria: UL CCN PGDQ2 for components; including UL 969.

B. UL PGDQ2 - Vinyl Wraparound Labels: Preprinted, flexible labels laminated with clear, weather- and chemical-resistant coating and matching wraparound clear adhesive tape for securing label ends.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Champion America**]
c. [**emedco**]
d. [**Grafoplast Wire Markers**]
e. [**HellermannTyton**]
f. [**LEM Products Inc.**]
g. [**Marking Services Inc.**]
h. [**Panduit Corp**]
i. [**Seton Identification Products; a Brady Corporation company**]
j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Champion America**]
c. [**emedco**]
d. [**Grafoplast Wire Markers**]
e. [**HellermannTyton**]
f. [**LEM Products Inc.**]
g. [**Marking Services Inc.**]
h. [**Panduit Corp**]
i. [**Seton Identification Products; a Brady Corporation company**]
j. <**Insert manufacturer's name**>

C. UL PGDQ2 - Self-Adhesive Wraparound Labels: [**Preprinted**][**Write-on**], **3 mil (0.08 mm)** thick, [**polyester**][**vinyl**] flexible label with acrylic pressure-sensitive adhesive.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**A'n D Cable Products**]
b. [**Brady Corporation**]
c. [**Brother International Corporation**]
d. [**emedco**]
e. [**Grafoplast Wire Markers**]
f. [**Ideal Industries, Inc.**]
g. [**LEM Products Inc.**]
h. [**Marking Services Inc.**]
i. [**Panduit Corp**]
j. [**Seton Identification Products; a Brady Corporation company**]
k. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

a. [**A'n D Cable Products**]
b. [**Brady Corporation**]
c. [**Brother International Corporation**]
d. [**emedco**]
e. [**Grafoplast Wire Markers**]
f. [**Ideal Industries, Inc.**]
g. [**LEM Products Inc.**]
h. [**Marking Services Inc.**]
i. [**Panduit Corp**]
j. [**Seton Identification Products; a Brady Corporation company**]
k. <**Insert manufacturer's name**>

3. Self-Lamination: Clear; UV-, weather-, and chemical-resistant; self-laminating, with protective shield over legend. Size labels such that clear shield overlaps entire printed legend.
4. Marker for Labels:

a. Permanent, waterproof, black ink marker recommended by tag manufacturer.
b. Machine-printed, permanent, waterproof, black ink recommended by printer manufacturer.

D. UL PGDQ2 - Self-Adhesive Labels: [**Polyester**][**Vinyl**], thermal, transfer-printed, **3 mil (0.08 mm)** thick, multicolor, weather- and UV-resistant, pressure-sensitive adhesive labels, configured for intended use and location.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**A'n D Cable Products**]
b. [**Brady Corporation**]
c. [**Brother International Corporation**]
d. [**emedco**]
e. [**Grafoplast Wire Markers**]
f. [**HellermannTyton**]
g. [**Ideal Industries, Inc.**]
h. [**LEM Products Inc.**]
i. [**Marking Services Inc.**]
j. [**Panduit Corp**]
k. [**Seton Identification Products; a Brady Corporation company**]
l. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**A'n D Cable Products**]
b. [**Brady Corporation**]
c. [**Brother International Corporation**]
d. [**emedco**]
e. [**Grafoplast Wire Markers**]
f. [**HellermannTyton**]
g. [**Ideal Industries, Inc.**]
h. [**LEM Products Inc.**]

i. [**Marking Services Inc.**]
j. [**Panduit Corp**]
k. [**Seton Identification Products; a Brady Corporation company**]
l. <**Insert manufacturer's name**>

3. Minimum Nominal Size:

a. **1-1/2 by 6 inch (37 by 150 mm)** for raceway and conductors.
b. **3-1/2 by 5 inch (76 by 127 mm)** for equipment.
c. As required by authorities having jurisdiction.

2.2 EXTRUDED INSULATING TUBING

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
2. Listing Criteria: UL CCN YDPU2 for components; including UL 224.

B. UL YDPU2 - Heat-Shrink Preprinted Tubes: Flame-retardant polyolefin tubes with machine-printed identification labels, sized to suit diameter and shrunk to fit firmly. Full shrink recovery occurs at maximum of **200 deg F (93 deg C)**.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Panduit Corp**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Panduit Corp**]
c. <**Insert manufacturer's name**>

2.3 BANDS

A. Snap-Around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeves, with diameters sized to suit diameters and that stay in place by gripping action.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]

b. [**HellermannTyton**]
c. [**Marking Services Inc.**]
d. [**Panduit Corp**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**HellermannTyton**]
c. [**Marking Services Inc.**]
d. [**Panduit Corp**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

B. Snap-Around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeves, **2 inch (50 mm)** long, with diameters sized to suit diameters and that stay in place by gripping action.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**HellermannTyton**]
c. [**Marking Services Inc.**]
d. [**Panduit Corp**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**HellermannTyton**]
c. [**Marking Services Inc.**]
d. [**Panduit Corp**]
e. <**Insert manufacturer's name**>

2.4 TAPES AND STENCILS

A. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**Champion America**]
d. [**HellermannTyton**]

e. [**Ideal Industries, Inc.**]
f. [**Marking Services Inc.**]
g. [**Panduit Corp**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**Champion America**]
d. [**HellermannTyton**]
e. [**Ideal Industries, Inc.**]
f. [**Marking Services Inc.**]
g. [**Panduit Corp**]
h. <**Insert manufacturer's name**>

B. Self-Adhesive Vinyl Tape: Colored, heavy duty, waterproof, fade resistant; not less than **3 mil (0.08 mm)** thick by **1 to 2 inch (25 to 50 mm)** wide; compounded for outdoor use.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**emedco**]
d. [**Marking Services Inc.**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**emedco**]
d. [**Marking Services Inc.**]
e. <**Insert manufacturer's name**>

C. Tape and Stencil: **4 inch (100 mm)** wide black stripes on **10 inch (250 mm)** centers placed diagonally over orange background and are **12 inch (300 mm)** wide. Stop stripes at legends.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**HellermannTyton**]
b. [**LEM Products Inc.**]
c. [**Marking Services Inc.**]
d. [**Pipemarker.com; Brimar Industries, Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]

f. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

a. [**HellermannTyton**]
b. [**LEM Products Inc.**]
c. [**Marking Services Inc.**]
d. [**Pipemarker.com; Brimar Industries, Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. **<Insert manufacturer's name>**

D. Floor Marking Tape: **2 inch (50 mm)** wide, **5 mil (0.125 mm)** pressure-sensitive vinyl tape, with [**black and white**][**yellow and black**] stripes and clear vinyl overlay.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**Seton Identification Products; a Brady Corporation company**]
d. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**Seton Identification Products; a Brady Corporation company**]
d. **<Insert manufacturer's name>**

E. Underground-Line Warning Tape:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Ideal Industries, Inc.**]
c. [**LEM Products Inc.**]
d. [**Marking Services Inc.**]
e. [**Pipemarker.com; Brimar Industries, Inc.**]
f. [**Reef Industries, Inc.**]
g. [**Seton Identification Products; a Brady Corporation company**]
h. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

a. [**Brady Corporation**]

b. [**Ideal Industries, Inc.**]
c. [**LEM Products Inc.**]
d. [**Marking Services Inc.**]
e. [**Pipemarker.com; Brimar Industries, Inc.**]
f. [**Reef Industries, Inc.**]
g. [**Seton Identification Products; a Brady Corporation company**]
h. <**Insert manufacturer's name**>

3. Tape:

a. Recommended by manufacturer for method of installation and suitable to identify and locate underground electrical [**and communications**]utility lines.
b. Printing on tape must be permanent and may not be damaged by burial operations.
c. Tape material and ink must be chemically inert and not be subject to degradation when exposed to acids, alkalis, and other destructive substances commonly found in soils.

4. Color and Printing:

a. Comply with APWA Uniform Color Code using NEMA Z535.1 safety colors.
b. Inscriptions for Red Tapes: [**"CAUTION BURIED ELECTRIC LINE BELOW"**]<**Insert inscription**>.
c. Inscriptions for Orange Tapes: [**"CAUTION BURIED CATV LINE BELOW"**][**"CAUTION BURIED TELEPHONE LINE BELOW"**][**"CAUTION BURIED FIBER OPTIC LINE BELOW"**][**"CAUTION BURIED COMMUNICATION LINE BELOW"**]<**Insert inscription**>.

5. Nonconducting Line-Warning Tape :

a. Pigmented polyolefin, bright colored, [**continuous-printed on one side with inscription of utility,**]compounded for direct-burial service.
b. Width: **3 inch (75 mm)**.
c. Thickness: **4 mil (0.1 mm)**.
d. Weight: **18.5 lb/1000 sq. ft (9.0 kg/100 sq. m)**.
e. Tensile in accordance with ASTM D882: **30 lbf (133.4 N)** and **2500 psi (17.2 MPa)**.

6. Reinforced Nonconducting Line-Warning Tape :

a. Multilayer laminate, consisting of high-density polyethylene scrim coated with pigmented polyolefin; bright colored, [**continuous-printed on one side with inscription of utility,**]compounded for direct-burial service.
b. Width: **3 inch (75 mm)**.
c. Thickness: **12 mil (0.3 mm)**.
d. Weight: **36.1 lb/1000 sq. ft (17.6 kg/100 sq. m)**.
e. Tensile in accordance with ASTM D882: **400 lbf (1780 N)** and **11,500 psi (79.2 MPa)**.

7. Detectable Line-Warning Tape :

a. Detectable three-layer laminate, consisting of printed pigmented polyolefin film, solid aluminum-foil core, and clear protective film that allows inspection of continuity of conductive core; bright colored, [**continuous-printed on one side with inscription of utility,**]compounded for direct-burial service.
b. Width: **3 inch (75 mm)**.
c. Overall Thickness: **5 mil (0.125 mm)**.
d. Foil Core Thickness: **0.35 mil (8.9 m)**.
e. Weight: **28 lb/1000 sq. ft (13.7 kg/100 sq. m)**.
f. Tensile in accordance with ASTM D882: **70 lbf (311.3 N)** and **4600 psi (31.7 MPa)**.

8. Reinforced Detectable Line-Warning Tape :

    a. Reinforced, detectable three-layer laminate, consisting of printed pigmented woven scrim, solid aluminum-foil core, and clear protective film that allows inspection of continuity of conductive core; bright-colored, [**continuous-printed on one side with inscription of utility,**]compounded for direct-burial service.
    b. Width: **3 inch (75 mm)**.
    c. Overall Thickness: **8 mil (0.2 mm)**.
    d. Foil Core Thickness: **0.35 mil (8.9 m)**.
    e. Weight: **34 lb/1000 sq. ft (16.6 kg/100 sq. m)**.
    f. Tensile in accordance with ASTM D882: **300 lbf (1334 N)** and **12,500 psi (86.1 MPa)**.

F. Concrete Cable Route Markers :

1. Description: Concrete markers visually aid tracing the route of electrical cables. Monument markers are typically installed at grade. Protective cover markers are typically installed above the cables at grade or below grade.
2. Product Characteristics:

    a. Material: Precast reinforced concrete.
    b. Marker Type:

        1) Above-Ground Monument Post:

            a) Nominal Dimensions (Height, Width, Depth): **30 inch (760 mm)**, **6 inch (150 mm)**, **3 inch (75 mm)**.

        2) Above-Ground Monument Block:

            a) Nominal Dimensions (Height, Width, Depth): [**12 inch (300 mm)**, **12 inch (300 mm)**, **6 inch (150 mm)**][**24 inch (600 mm)**, **24 inch (600 mm)**, **4 inch (100 mm)**].

        3) In-Ground Protective Cover (Plank or Slab):

            a) Nominal Dimensions (Length, Width, Depth): [**36 inch (914 mm)**, **6 inch (150 mm)**, **2 inch (50 mm)**][**36 inch (914 mm)**, **9 inch (230 mm)**, **2 inch (50 mm)**][**12 inch (305 mm)**, **12 inch (305 mm)**, **2 inch (50 mm)**][**24 inch (610 mm)**, **12 inch (305 mm)**, **2 inch (50 mm)**][**36 inch (914 mm)**, **12 inch (305 mm)**, **2 inch (50 mm)**].

    c. Legend: [**"DANGER - ELECTRICITY"**][**"ELECTRIC CABLES"**][**"ELECTRIC SPLICE"**].
    d. Lettering: Approximately **1/8 inch (3 mm)** deep, not less than [**1 inch (25 mm)**][**1.5 inch (38 mm)**] high, symmetrically spaced; marked on both sides to allow for reversal.

3. Required Product Options:

    a. Color: [**Red**]<**Insert color**> dye added to concrete during batching.
    b. Attach metal medallion or sign stamped with [**feeder number**]<**Insert required information**>.

G. Stenciled Legend: In nonfading, waterproof, [**black**]<**Insert color**> ink or paint. Minimum letter height must be [**1 inch (25 mm)**]<**Insert dimension**>.

2.5 TAGS

A. Metal Tags: Brass or aluminum, **2 by 2 by 0.05 inch (50 by 50 by 1.3 mm)**, with stamped legend, punched for use with self-locking cable tie fastener.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**emedco**]
d. [**Marking Services Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**emedco**]
d. [**Marking Services Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

B. Nonmetallic Preprinted Tags: Polyethylene tags, [**0.015 inch (0.38 mm)**][**0.023 inch (0.58 mm)**] thick, color-coded for phase and voltage level, with factory [**screened**][**printed**] permanent designations; punched for use with self-locking cable tie fastener.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**emedco**]
d. [**Grafoplast Wire Markers**]
e. [**LEM Products Inc.**]
f. [**Marking Services Inc.**]
g. [**Panduit Corp**]
h. [**Seton Identification Products; a Brady Corporation company**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**emedco**]
d. [**Grafoplast Wire Markers**]

e. [**LEM Products Inc.**]
f. [**Marking Services Inc.**]
g. [**Panduit Corp**]
h. [**Seton Identification Products; a Brady Corporation company**]
i. <**Insert manufacturer's name**>

C. Write-on Tags:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**LEM Products Inc.**]
d. [**Pipemarker.com; Brimar Industries, Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**LEM Products Inc.**]
d. [**Pipemarker.com; Brimar Industries, Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

3. Polyester Tags: [**0.010 inch (0.25 mm)**][**0.015 inch (0.38 mm)**]<**Insert dimension**> thick, with corrosion-resistant grommet and cable tie for attachment.
4. Marker for Tags:

a. Permanent, waterproof, black ink marker recommended by tag manufacturer.
b. Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

2.6 SIGNS

A. Baked-Enamel Signs:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**Champion America**]
d. [**emedco**]
e. [**Marking Services Inc.**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Brady Corporation**]
    b. [**Carlton Industries, LP**]
    c. [**Champion America**]
    d. [**emedco**]
    e. [**Marking Services Inc.**]
    f. <**Insert manufacturer's name**>

3. Preprinted aluminum signs, [**high-intensity reflective,**]punched or drilled for fasteners, with colors, legend, and size required for application.
4. **1/4 inch (6.4 mm)** grommets in corners for mounting.
5. Nominal Size: **7 by 10 inch (180 by 250 mm)**.

B. Metal-Backed Butyrate Signs:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Brady Corporation**]
    b. [**Champion America**]
    c. [**emedco**]
    d. [**Marking Services Inc.**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Brady Corporation**]
    b. [**Champion America**]
    c. [**emedco**]
    d. [**Marking Services Inc.**]
    e. <**Insert manufacturer's name**>

3. Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs, with **0.0396 inch (1 mm)** galvanized-steel backing, punched and drilled for fasteners, and with colors, legend, and size required for application.
4. **1/4 inch (6.4 mm)** grommets in corners for mounting.
5. Nominal Size: **10 by 14 inch (250 by 360 mm)**.

C. Laminated Acrylic or Melamine Plastic Signs:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Brady Corporation**]
    b. [**Carlton Industries, LP**]
    c. [**emedco**]

d. [**Marking Services Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**emedco**]
d. [**Marking Services Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

3. Engraved legend.
4. Thickness:

a. For signs up to **20 sq. inch (129 sq. cm)**, minimum **1/16 inch (1.6 mm)** thick.
b. For signs larger than **20 sq. inch (129 sq. cm)**, **1/8 inch (3.2 mm)** thick.
c. Engraved legend with [**black letters on white face**][**white letters on dark gray background**]<**Insert colors**>.
d. [**Punched or drilled for mechanical fasteners with 1/4 inch (6.4 mm) grommets in corners for mounting**][**Self-adhesive**].
e. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

2.7 CABLE TIES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**HellermannTyton**]
2. [**Ideal Industries, Inc.**]
3. [**Marking Services Inc.**]
4. [**Panduit Corp**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**HellermannTyton**]
2. [**Ideal Industries, Inc.**]
3. [**Marking Services Inc.**]
4. [**Panduit Corp**]
5. <**Insert manufacturer's name**>

C. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
2. Listing Criteria: UL CCN ZODZ; including UL 1565 or UL 62275.

D. UL ZODZ - General-Purpose Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking, and

Type 6/6 nylon.

1. Minimum Width: **3/16 inch (5 mm)**.
2. Tensile Strength at **73 deg F (23 deg C)** in accordance with ASTM D638: **12,000 psi (82.7 MPa)**.
3. Temperature Range: **Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C)**.
4. Color: Black, except where used for color-coding.

E. UL ZODZ - UV-Stabilized Cable Ties: Fungus inert, designed for continuous exposure to exterior sunlight, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.

1. Minimum Width: **3/16 inch (5 mm)**.
2. Tensile Strength at **73 deg F (23 deg C)** in accordance with ASTM D638: **12,000 psi (82.7 MPa)**.
3. Temperature Range: **Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C)**.
4. Color: Black.

F. UL ZODZ - Plenum-Rated Cable Ties: Self-extinguishing, UV stabilized, one piece, and self-locking.

1. Minimum Width: **3/16 inch (5 mm)**.
2. Tensile Strength at **73 deg F (23 deg C)** in accordance with ASTM D638: **7000 psi (48.2 MPa)**.
3. UL 94 Flame Rating: 94V-0.
4. Temperature Range: **Minus 50 to plus 284 deg F (Minus 46 to plus 140 deg C)**.
5. Color: Black.

PART 3 - EXECUTION

3.1 PREPARATION

A. Self-Adhesive Identification Products: Before applying electrical identification products, clean substrates of substances that could impair bond, using materials and methods recommended by manufacturer of identification product.

3.2 SELECTION OF COLORS AND IDENTIFICATION MARKINGS

A. Comply with 29 CFR 1910.144 for color identification of hazards, and the following:

1. Fire-protection[**and fire-alarm**] equipment[**, including raceways,**] must be finished, painted, or suitably marked safety red.
2. Ceiling-mounted hangers, supports, cable trays, and raceways must be finished, painted, or suitably marked safety yellow where less than [**7.7 ft (2.3 m)**]<**Insert height**> above finished floor.

B. Pipe and Conduit Labeling: Comply with ASME A13.1[**and IEEE C2**].

C. Color-Coding for Phase- and Voltage-Level Identification, 1000 V or Less: Use colors listed below for ungrounded [**service**][**feeder**][**and**][**branch-circuit**] conductors.

1. Color must be factory applied[**or field applied for sizes larger than 6 AWG when permitted by authorities having jurisdiction**].
2. Colors for 208Y/120 V Circuits:

    a. Phase A: Black.

b. Phase B: Red.
c. Phase C: Blue.

3. Colors for 240 V Circuits:

a. Phase A: Black.
b. Phase B: Red.

4. Colors for 480Y/277 V Circuits:

a. Phase A: Brown.
b. Phase B: Orange.
c. Phase C: Yellow.

5. Color for Neutral (Grounded Conductor): [**White**][**or**][**gray**].
6. Color for Equipment Ground: [**Bare copper**][**Green**][**Green with yellow stripe**].
7. Color for Isolated Ground: Green with two or more yellow stripes.

D. Color-Coding Raceways, Cable Trays, Junction Boxes, and Conductors for Intrinsically-Safe Circuits: Light blue. When used to identify intrinsically-safe circuits, Article 504 of NFPA 70 requires that the color light blue not be used for any other purpose.

E. Color-Coding Instructional Signs: Self-adhesive labels, including color code for grounded and ungrounded conductors.

F. Accessible Fittings for Raceways: Identify cover of junction and pull box of the following systems with wiring system legend and system voltage. System legends must be as follows:

1. "EMERGENCY POWER."
2. "POWER."
3. "UPS."
4. <**Insert name**>.

G. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations of high visibility. Identify by system and circuit designation.

H. Locations of Underground Lines: Underground-line warning tape for power and lighting.

I. Vaults, Manholes, Handholes, and Pull and Junction Boxes, More Than 1000 V: For conductors in vaults, pull and junction boxes, manholes, and handholes, use [**write-on tags**][**nonmetallic preprinted tags colored and marked to indicate phase, and separate tag with circuit designation**].

J. Concealed Raceways, Duct Banks, More Than 1000 V, within Buildings: Tape and stencil. Stencil legend "DANGER - CONCEALED HIGH-VOLTAGE WIRING" with **3 inch (75 mm)** high, black letters on **20 inch (500 mm)** centers.

1. Locate identification at changes in direction, at penetrations of walls and floors, and at [**10 ft (3 m)**][**30 ft (9 m)**] maximum intervals.
2. Identify system voltage[**and system or service type**] with black letters on orange field.
3. Apply floor marking tape to the following finished surfaces:

a. Floor surface directly above conduits running beneath and within **12 inch (300 mm)** of floor that is in contact with earth or is framed above unexcavated space.
b. Wall surfaces directly external to raceways concealed within wall.
c. Accessible surfaces of concrete envelope around raceways in vertical shafts, exposed in building, or concealed above suspended ceilings.

K. Accessible Raceways, Armored and Metal-Clad Cables, More Than 1000 V: [**Vinyl wraparound labels**][**Snap-around labels**][**Self-adhesive labels**][**Snap-around color-coding bands for raceway and cables**].

1. Locate identification at changes in direction, at penetrations of walls and floors, at **50 ft (15 m)** maximum intervals in straight runs, and at **25 ft (7.6 m)** maximum intervals in congested areas.
2. Identify system voltage[**and system or service type**] with black letters on orange field.

L. Vaults, Manholes, Handholes, and Pull and Junction Boxes, 1000 V or Less: For conductors in vaults, pull and junction boxes, manholes, and handholes, use [**vinyl wraparound labels**][**self-adhesive wraparound labels**][**snap-around labels**][**snap-around color-coding bands**][**self-adhesive vinyl tape**] to identify phase.

1. Locate identification at changes in direction, at penetrations of walls and floors, at **50 ft (15 m)** maximum intervals in straight runs, and at **25 ft (7.6 m)** maximum intervals in congested areas.
2. Identify system voltage[**and system or service type**] with [**black letters on orange field**]<**Insert color scheme**>.

M. Accessible Raceways and Metal-Clad Cables, 1000 V or Less, for Service, Feeder, and Branch Circuits, More Than [**30**]<**Insert number**> A and [**120**]<**Insert number**> V to Ground: Identify with self-adhesive [**raceway labels**][**vinyl tape applied in bands**].

1. Locate identification at changes in direction, at penetrations of walls and floors, at **50 ft (15 m)** maximum intervals in straight runs, and at **25 ft (7.6 m)** maximum intervals in congested areas.
2. Identify system voltage[**and system or service type**] with [**black letters on orange field**]<**Insert color scheme**>.

N. Conductors to Be Extended in Future: Attach [**write-on tags**][**marker tape**] to conductors[**and list source**].

O. Cover Plates: Label individual cover plates with self-adhesive labels. Place label at top of cover plate. Label cover plate with the following information, in the order listed:

1. Panelboard designation.
2. Colon or dash.
3. Branch circuit number.

P. Workspace Indication: Apply [**floor marking tape**][**or**][**tape and stencil**] to finished surfaces. Show working clearances in direction of access to live parts. Workspace must comply with NFPA 70 and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.

Q. Equipment Identification Labels:

1. Black letters on white field.
2. Indoor Equipment: [**Self-adhesive label**][**Baked-enamel signs**][**Metal-backed butyrate signs**][**Laminated acrylic or melamine plastic sign**].
3. Outdoor Equipment: [**Laminated acrylic or melamine sign**][**Stenciled legend 4 inch (100 mm) high**].
4. Equipment to Be Labeled:

    a. Racks, Frames, and Enclosures: Identify front and rear of each with self-adhesive labels[**containing equipment designation**].
    b. Panelboards: Typewritten directory of circuits in location provided by panelboard manufacturer. Panelboard identification must be in form of [**self-adhesive,**

engraved,][**engraved,**] laminated acrylic or melamine label.

c. Enclosures and electrical cabinets.
d. Access doors and panels for concealed electrical items.
e. Switchgear.
f. Switchboards.
g. Transformers: Label that includes tag designation indicated on Drawings for transformer, feeder, and panelboards or equipment supplied by secondary.
h. Substations.
i. Emergency system boxes and enclosures.
j. Motor-control centers.
k. Enclosed switches.
l. Enclosed circuit breakers.
m. Enclosed controllers.
n. Variable-speed controllers.
o. Push-button stations.
p. Power-transfer equipment.
q. Contactors.
r. Remote-controlled switches, dimmer modules, and control devices.
s. Uninterruptible power supplies.
t. Battery-inverter units.
u. Battery racks.
v. Power-generating units.
w. Monitoring and control equipment.
x. <**Insert equipment**>.

R. Cable Ties: General purpose, for attaching tags, except as listed below:

1. Outdoors: UV-stabilized nylon.
2. In Spaces Handling Environmental Air: Plenum rated.

3.3 SELECTION OF SIGNS AND HAZARD MARKINGS

A. Comply with 29 CFR 1910.145 for danger, caution, warning, and safety instruction signs.

B. Signs, labels, and tags required for personnel safety must comply with the following standards:

1. Safety Colors: NEMA Z535.1.
2. Facility Safety Signs: NEMA Z535.2.
3. Safety Symbols: NEMA Z535.3.
4. Product Safety Signs and Labels: NEMA Z535.4.
5. Safety Tags and Barricade Tapes for Temporary Hazards: NEMA Z535.5.

C. Electrical Hazard Warnings:

1. Arc-Flash Hazard Warning: Self-adhesive labels. Comply with [**NFPA 70E**][**and**][**Section 260573 "Power System Studies"**] requirements for arc-flash hazard warning labels.
2. Raceways and Cables Carrying Circuits at More Than 1000 V:

a. Black letters on orange field.
b. Legend: "DANGER - CONCEALED HIGH VOLTAGE WIRING."

3. Multiple Power Sources Warning Legend: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
4. OSHA Workspace Clearance Warning Legend: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 3 FEET MINIMUM."

5. <**Insert names and wording of warning signs or labels (for example, multiple services and voltages, and others**>.

D. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: [**Self-adhesive labels**][**Baked-enamel warning signs**][**Metal-backed, butyrate warning signs**].

1. Apply to exterior of door, cover, or other access.
2. For equipment with multiple power or control sources, apply to door or cover of equipment, including, but not limited to, the following:

   a. Power-transfer switches.
   b. Controls with external control power connections.
   c. <**Insert items**>.

E. Operating Instruction Signs: [**Self-adhesive labels**][**Baked-enamel warning signs**][**Metal-backed, butyrate warning signs**][**Laminated acrylic or melamine plastic signs**].

F. Emergency Operating Instruction Signs: [**Self-adhesive labels**][**Baked-enamel warning signs**][**Metal-backed, butyrate warning signs**][**Laminated acrylic or melamine plastic signs**] with white legend on red background with minimum **3/8 inch (10 mm)** high letters for emergency instructions at equipment used for [**power transfer**][**load shedding**]<**Insert emergency operations**>.

3.4 SELECTION OF IDENTIFICATION PRODUCTS FOR COMMUNICATIONS, CONTROL, AUXILIARY, AND LIFE SAFETY SYSTEMS

A. Comply with Section 270528 "Pathways for Communications Systems" and Section 271100 "Communications Equipment Room Fittings."

3.5 INSTALLATION

A. Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment. Install access doors or panels to provide view of identifying devices.

B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes typical for electrical equipment environments specified in Section 018116 "Facility Environmental Requirements" and Section 260010 "Supplemental Requirements for Electrical."

C. Paint: Comply with requirements in painting Sections for paint materials and application requirements. Retain paint system applicable for surface material and location (exterior or interior).

D. Fasteners for Labels and Signs: Self-tapping, stainless steel screws or stainless steel machine screws with nuts and flat and lock washers.

E. Verify and coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and operation and maintenance manual. Use consistent designations throughout Project.

F. Install identifying devices before installing acoustical ceilings and similar concealment.

G. Verify identity of item before installing identification products.

H. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and operation and maintenance manual.

I. Apply identification devices to surfaces that require finish after completing finish work.

J. Install signs with approved legend to facilitate proper identification, operation, and maintenance of electrical systems and connected items.

K. Elevated Components: Increase sizes of labels, signs, and letters to those appropriate for viewing from floor.

L. Vinyl Wraparound Labels:

1. Secure tight to surface of raceway or cable at location with high visibility and accessibility.
2. Attach labels that are not self-adhesive type with clear vinyl tape, with adhesive appropriate to location and substrate.

M. Snap-Around Labels: Secure tight to surface at location with high visibility and accessibility.

N. Self-Adhesive Wraparound Labels: Secure tight to surface at location with high visibility and accessibility.

O. Snap-Around Color-Coding Bands: Secure tight to surface at location with high visibility and accessibility.

P. Heat-Shrink, Preprinted Tubes: Secure tight to surface at location with high visibility and accessibility.

Q. Marker Tapes: Secure tight to surface at location with high visibility and accessibility.

R. Self-Adhesive Vinyl Tape: Secure tight to surface at location with high visibility and accessibility.

1. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for minimum distance of **6 inch (150 mm)** where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding.

S. Tape and Stencil: Comply with requirements in painting Sections for surface preparation and paint application.

T. Floor Marking Tape: Apply stripes to finished surfaces following manufacturer's instructions.

U. Underground Line Warning Tape:

1. During backfilling of trenches, install continuous underground-line warning tape not less than **12 inch (300 mm)** directly above cables or raceways buried **18 inch (450 mm)** or more below grade. Use multiple tapes where width of multiple lines installed in common trench [**or concrete envelope**]exceeds **16 inch (400 mm)** overall.
2. Limit use of underground-line warning tape to direct-buried cables.
3. Install underground-line warning tape for direct-buried cables and cables in raceways.

V. Concrete Cable Route Markers: [**As indicated on Drawings**]<**Insert Project-specific requirements**>.

W. Metal Tags:

1. Place in location with high visibility and accessibility.
2. Secure using [**general-purpose**][**UV-stabilized**][**plenum-rated**] cable ties.

X. Nonmetallic Preprinted Tags:

1. Place in location with high visibility and accessibility.
2. Secure using [**general-purpose**][**UV-stabilized**][**plenum-rated**] cable ties.

Y. Write-on Tags:

1. Place in location with high visibility and accessibility.
2. Secure using [**general-purpose**][**UV-stabilized**][**plenum-rated**] cable ties.

Z. Baked-Enamel Signs: Attach signs that are not self-adhesive type with mechanical fasteners appropriate to location and substrate.

AA. Metal-Backed Butyrate Signs: Attach signs that are not self-adhesive type with mechanical fasteners appropriate to location and substrate.

BB. Laminated Acrylic or Melamine Plastic Signs: Attach signs that are not self-adhesive type with mechanical fasteners appropriate to location and substrate.

END OF SECTION 26 05 53 00

Task	Specification	Specification Description
26 05 53 00	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling
26 05 83 00	26 05 13 00	Medium-Voltage Cables
26 05 83 00	26 05 19 00	Low-Voltage Electrical Power Conductors and Cables

SECTION 31 10 00 00 - SITE CLEARING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Protecting existing vegetation to remain.
2. Removing existing vegetation.
3. Clearing and grubbing.
4. Stripping and stockpiling topsoil.
5. Stripping and stockpiling rock.
6. Removing above- and below-grade site improvements.
7. Disconnecting, capping or sealing, and [**removing site utilities**][**abandoning site utilities in place**].
8. Temporary erosion and sedimentation control.

B. Related Requirements:

1. Section 015000 "Temporary Facilities and Controls" for temporary erosion- and sedimentation-control measures.

1.2 DEFINITIONS

A. Subsoil: Soil beneath the level of subgrade; soil beneath the topsoil layers of a naturally occurring soil profile, typified by less than 1 percent organic matter and few soil organisms.

B. Surface Soil: Soil that is present at the top layer of the existing soil profile. In undisturbed areas, surface soil is typically called "topsoil," but in disturbed areas such as urban environments, the surface soil can be subsoil.

C. Topsoil: Top layer of the soil profile consisting of existing native surface topsoil or existing in-place surface soil; the zone where plant roots grow.

D. Topsoil: Top layer of the soil profile consisting of existing native surface topsoil or existing in-place surface soil; the zone where plant roots grow. Its appearance is generally friable, pervious, and black or a darker shade of brown, gray, or red than underlying subsoil; reasonably free of subsoil, clay lumps, gravel, and other objects larger than **2 inches (50 mm)** in diameter; and free of weeds, roots, toxic materials, or other nonsoil materials.

E. Plant-Protection Zone: Area surrounding individual trees, groups of trees, shrubs, or other vegetation to be protected during construction and indicated on Drawings.

F. Tree-Protection Zone: Area surrounding individual trees or groups of trees to be protected during construction and [**indicated on Drawings**][**indicated according to requirements in Section 015639 "Temporary Tree and Plant Protection."**]<**Insert requirement**>.

G. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1.4 MATERIAL OWNERSHIP

A. Except for materials indicated to be stockpiled or otherwise remain Owner's property, cleared materials shall become Contractor's property and shall be removed from Project site.

1.5 INFORMATIONAL SUBMITTALS

A. Existing Conditions: Documentation of existing trees and plantings, adjoining construction, and site improvements that establishes preconstruction conditions that might be misconstrued as damage caused by site clearing.

1. Use sufficiently detailed photographs or video recordings.
2. Include plans and notations to indicate specific wounds and damage conditions of each tree or other plant designated to remain.

B. Topsoil stripping and stockpiling program.

C. Rock stockpiling program.

D. Record Drawings: Identifying and accurately showing locations of capped utilities and other subsurface structural, electrical, and mechanical conditions.

E. Burning: Documentation of compliance with burning requirements and permitting of authorities having jurisdiction. Identify location(s) and conditions under which burning will be performed.

1.6 QUALITY ASSURANCE

A. Topsoil Stripping and Stockpiling Program: Prepare a written program to systematically demonstrate the ability of personnel to properly follow procedures and handle materials and equipment during the Work. Include dimensioned diagrams for placement and protection of stockpiles.

B. Rock Stockpiling Program: Prepare a written program to systematically demonstrate the ability of personnel to properly follow procedures and handle materials and equipment during the Work. Include dimensioned diagrams for placement and protection of stockpiles.

1.7 FIELD CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during site-clearing operations.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
2. Provide alternate routes around closed or obstructed trafficways if required by Owner or authorities having jurisdiction.

B. Improvements on Adjoining Property: Authority for performing site clearing indicated on property

adjoining Owner's property will be obtained by Owner before award of Contract.

1. Do not proceed with work on adjoining property until directed by Architect.

C. Salvageable Improvements: Carefully remove items indicated to be salvaged and store on Owner's premises[**where indicated**]<**Insert location**>.

D. Utility Locator Service: Notify [**utility locator service**][**Miss Utility**][**Call Before You Dig**][**Dig Safe System**][**One Call**]<**Insert name**> for area where Project is located before site clearing.

E. Do not commence site clearing operations until temporary erosion- and sedimentation-control[**and plant-protection**] measures are in place.

F. Tree- and Plant-Protection Zones: Protect according to requirements in Section 015639 "Temporary Tree and Plant Protection."

G. Soil Stripping, Handling, and Stockpiling: Perform only when the soil is dry or slightly moist.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Satisfactory Soil Material: Requirements for satisfactory soil material are specified in Section 312000 "Earth Moving."

1. Obtain approved borrow soil material off-site when satisfactory soil material is not available on-site.

B. Antirust Coating: Fast-curing, lead- and chromate-free, self-curing, universal modified-alkyd primer complying with [**MPI #23 (surface-tolerant, anticorrosive metal primer)**][**or**][**SSPC-Paint 20 or SSPC-Paint 29 zinc-rich coating**]<**Insert requirement**>.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect and maintain benchmarks and survey control points from disturbance during construction.

B. Verify that trees, shrubs, and other vegetation to remain or to be relocated have been flagged and that protection zones have been identified and enclosed according to requirements in Section 015639 "Temporary Tree and Plant Protection."

C. Protect existing site improvements to remain from damage during construction.

1. Restore damaged improvements to their original condition, as acceptable to Owner.

3.2 TEMPORARY EROSION AND SEDIMENTATION CONTROL

A. Provide temporary erosion- and sedimentation-control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways, according to erosion-

and sedimentation-control Drawings and requirements of authorities having jurisdiction.

B. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross protection zones.

C. Inspect, maintain, and repair erosion- and sedimentation-control measures during construction until permanent vegetation has been established.

D. Remove erosion and sedimentation controls, and restore and stabilize areas disturbed during removal.

3.3 TREE AND PLANT PROTECTION

A. Protect trees and plants remaining on-site according to requirements in Section 015639 "Temporary Tree and Plant Protection."

B. Repair or replace trees, shrubs, and other vegetation indicated to remain or be relocated that are damaged by construction operations according to requirements in Section 015639 "Temporary Tree and Plant Protection."

3.4 EXISTING UTILITIES

A. Owner will arrange for disconnecting and sealing indicated utilities that serve existing structures before site clearing, when requested by Contractor.

1. Verify that utilities have been disconnected and capped before proceeding with site clearing.

B. Locate, identify, disconnect, and seal or cap utilities indicated to be removed[**or abandoned in place**].

1. Arrange with utility companies to shut off indicated utilities.
2. Owner will arrange to shut off indicated utilities when requested by Contractor.

C. Locate, identify, and disconnect utilities indicated to be abandoned in place.

D. Interrupting Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others, unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:

1. Notify Architect not less than [**two**]<**Insert number**> days in advance of proposed utility interruptions.
2. Do not proceed with utility interruptions without Architect's written permission.

E. Excavate for and remove underground utilities indicated to be removed.

F. Removal of underground utilities is included in earthwork sections; in applicable fire suppression, plumbing, HVAC, electrical, communications, electronic safety and security, and utilities sections; and in Section 024116 "Structure Demolition" and Section 024119 "Selective Demolition."

3.5 CLEARING AND GRUBBING

A. Remove obstructions, trees, shrubs, and other vegetation to permit installation of new construction.

1. Do not remove trees, shrubs, and other vegetation indicated to remain or to be relocated.
2. Grind down stumps and remove roots larger than [2 inches (50 mm)][3 inches (75 mm)]<**Insert dimension**> in diameter, obstructions, and debris to a depth of [18 inches (450 mm)]<**Insert dimension**> below exposed subgrade.
3. Use only hand methods or air spade for grubbing within protection zones.
4. Chip removed tree branches and [**stockpile in areas approved by Architect**][**dispose of off-site**]<**Insert requirement**>.

B. Fill depressions caused by clearing and grubbing operations with satisfactory soil material unless further excavation or earthwork is indicated.

1. Place fill material in horizontal layers not exceeding a loose depth of 8 inches (200 mm), and compact each layer to a density equal to adjacent original ground.

3.6 TOPSOIL STRIPPING

A. Remove sod and grass before stripping topsoil.

B. Strip topsoil to depth [**indicated on Drawings**][**of 6 inches (150 mm)**]<**Insert requirement**> in a manner to prevent intermingling with underlying subsoil or other waste materials.

1. Remove subsoil and nonsoil materials from topsoil, including clay lumps, gravel, and other objects larger than 2 inches (50 mm) in diameter; trash, debris, weeds, roots, and other waste materials.

C. Stockpile topsoil away from edge of excavations without intermixing with subsoil or other materials. Grade and shape stockpiles to drain surface water. Cover to prevent windblown dust and erosion by water.

1. Limit height of topsoil stockpiles to [72 inches (1800 mm)]<**Insert dimension**>.
2. Do not stockpile topsoil within protection zones.
3. Dispose of surplus topsoil. Surplus topsoil is that which exceeds quantity indicated to be stockpiled or reused.
4. Stockpile surplus topsoil to allow for respreading deeper topsoil.

3.7 STOCKPILING ROCK

A. Remove from [**area indicated on Drawings**][**construction area**]<**Insert requirement**> naturally formed rocks that measure more than [1 foot (300 mm)]<**Insert dimension**> across in least dimension. Do not include excavated or crushed rock.

1. Separate or wash off non-rock materials from rocks, including soil, clay lumps, gravel, and other objects larger than 2 inches (50 mm) in diameter; trash, debris, weeds, roots, and other waste materials.

B. Stockpile rock [**where indicated on Drawings**][**away from edge of excavations**]<**Insert requirement**> without intermixing with other materials. Cover to prevent windblown debris from accumulating among rocks.

1. Limit height of rock stockpiles to [36 inches (900 mm)]<**Insert dimension**>.
2. Do not stockpile rock within protection zones.
3. Dispose of surplus rock. Surplus rock is that which exceeds quantity indicated to be stockpiled or reused.
4. Stockpile surplus rock to allow later use by the Owner.

3.8 SITE IMPROVEMENTS

A. Remove existing above- and below-grade improvements as indicated and necessary to facilitate new construction.

B. Remove slabs, paving, curbs, gutters, and aggregate base as indicated.

1. Unless existing full-depth joints coincide with line of demolition, neatly saw-cut along line of existing pavement to remain before removing adjacent existing pavement. Saw-cut faces vertically.
2. Paint cut ends of steel reinforcement in concrete to remain with two coats of antirust coating, following coating manufacturer's written instructions. Keep paint off surfaces that will remain exposed.

3.9 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Remove surplus soil material, unsuitable topsoil, obstructions, demolished materials, and waste materials including trash and debris, and legally dispose of them off Owner's property.

B. Burning tree, shrub, and other vegetation waste is permitted according to burning requirements and permitting of authorities having jurisdiction. Control such burning to produce the least smoke or air pollutants and minimum annoyance to surrounding properties. Burning of other waste and debris is prohibited.

C. Separate recyclable materials produced during site clearing from other nonrecyclable materials. Store or stockpile without intermixing with other materials, and transport them to recycling facilities. Do not interfere with other Project work.

SECTION 31 20 00 00 - EARTH MOVING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Soil materials.
2. Geotextiles.
3. Controlled low-strength material.
4. Geofoam.
5. Accessories.

B. Related Requirements:

1. [**Section 013200 "Construction Progress Documentation"**][**Section 013233 "Photographic Documentation"**] for recording preexcavation and earth-moving progress.
2. Section 311000 "Site Clearing" for site stripping, grubbing, stripping [**and stockpiling**] topsoil, and removal of above- and below-grade improvements and utilities.
3. Section 315000 "Excavation Support and Protection" for shoring, bracing, and sheet piling of excavations.
4. Section 316329 "Drilled Concrete Piers and Shafts" for excavation of shafts and disposal of surplus excavated material.
5. Section 329200 "Turf and Grasses" for finish grading in turf and grass areas, including preparing and placing planting soil for turf areas.
6. Section 329300 "Plants" for finish grading in planting areas and tree and shrub pit excavation and planting.

1.2 UNIT PRICES

A. Work of this Section is affected by unit prices for earth moving specified in Section 012200 "Unit Prices."

B. Quantity allowances for earth moving are included in Section 012100 "Allowances."

C. Rock Measurement: Volume of rock actually removed, measured in original position, but not to exceed the following. Unit prices for rock excavation include replacement with approved materials.

1. [**24 inches (600 mm)**]<**Insert dimension**> outside of concrete forms other than at footings.
2. [**12 inches (300 mm)**]<**Insert dimension**> outside of concrete forms at footings.
3. [**6 inches (150 mm)**]<**Insert dimension**> outside of minimum required dimensions of concrete cast against grade.
4. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.
5. [**6 inches (150 mm)**]<**Insert dimension**> beneath bottom of concrete slabs-on-grade.
6. [**6 inches (150 mm)**]<**Insert dimension**> beneath pipe in trenches, and the greater of [**24 inches (600 mm)**]<**Insert dimension**> wider than pipe or [**42 inches (1065 mm)**]<**Insert dimension**> wide.

1.3 DEFINITIONS

A. Backfill: Soil material or controlled low-strength material used to fill an excavation.

1. Initial Backfill: Backfill placed beside and over pipe in a trench, including haunches to support sides of pipe.
2. Final Backfill: Backfill placed over initial backfill to fill a trench.

B. Base Course: Aggregate layer placed between the subbase course and hot-mix asphalt paving.

C. Bedding Course: Aggregate layer placed over the excavated subgrade in a trench before laying pipe.

D. Borrow Soil: Satisfactory soil imported from off-site for use as fill or backfill.

E. Drainage Course: Aggregate layer supporting the slab-on-grade that also minimizes upward capillary flow of pore water.

F. Excavation: Removal of material encountered above subgrade elevations and to lines and dimensions indicated.

1. Authorized Additional Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions as directed by Architect. Authorized additional excavation and replacement material will be paid for in accordance with Contract provisions for [**unit prices**][**changes in the Work**] .
2. Bulk Excavation: Excavation more than [**10 ft. (3 m)**]<**Insert dimension**> in width and more than [**30 ft. (9 m)**]<**Insert dimension**> in length.
3. Unauthorized Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions without direction by Architect. Unauthorized excavation, as well as remedial work directed by Architect, will be without additional compensation.

G. Fill: Soil materials used to raise existing grades.

H. Rock:

1. Rock material in beds, ledges, unstratified masses, conglomerate deposits, and boulders of rock material that exceed [**1 cu. yd. (0.76 cu. m)**]<**Insert volume**> for bulk excavation or [**3/4 cu. yd. (0.57 cu. m)**]<**Insert volume**> for footing, trench, and pit excavation that cannot be removed by rock-excavating equipment equivalent to the following in size and performance ratings, without systematic drilling, ram hammering, ripping, or blasting, when permitted:

a. Equipment for Footing, Trench, and Pit Excavation: Late-model, track-mounted hydraulic excavator; equipped with a **42-inch- (1065-mm-)** maximum-width, short-tip-radius rock bucket; rated at not less than **138-hp (103-kW)** flywheel power with bucket-curling force of not less than **28,700 lbf (128 kN)** and stick-crowd force of not less than **18,400 lbf (82 kN)** with extra-long reach boom.
b. Equipment for Bulk Excavation: Late-model, track-mounted loader; rated at not less than **230-hp (172-kW)** flywheel power and developing a minimum of **47,992-lbf (213.3-kN)** breakout force with a general-purpose bare bucket.

2. Rock material in beds, ledges, unstratified masses, conglomerate deposits, and boulders of rock material [**3/4 cu. yd. (0.57 cu. m)**]<**Insert volume**> or more in volume that exceed a standard penetration resistance of [**100 blows/2 inches (97 blows/50 mm)**]<**Insert value**> when tested by a geotechnical testing agency, in accordance with ASTM D1586/D1586M.

I. Structures: Buildings, footings, foundations, retaining walls, slabs, tanks, curbs, mechanical and

electrical appurtenances, or other fabricated stationary features constructed above or below the ground surface.

J. Subbase Course: Aggregate layer placed between the subgrade and base course for hot-mix asphalt pavement, or aggregate layer placed between the subgrade and a cement concrete pavement or a cement concrete or hot-mix asphalt walk.

K. Subgrade: Uppermost surface of an excavation or the top surface of a fill or backfill immediately below subbase, drainage fill, drainage course, or topsoil materials.

L. Utilities: On-site underground pipes, conduits, ducts, and cables as well as underground services within buildings.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct preexcavation conference [**at Project site**][**by web conference**]<**Insert location**> .

1. Review methods and procedures related to earthmoving, including, but not limited to, the following:

a. Personnel and equipment needed to make progress and avoid delays.
b. Coordination of Work with utility locator service.
c. Coordination of Work and equipment movement with the locations of tree- and plant-protection zones.
d. Extent of trenching by hand or with air spade.
e. Field quality control.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of specified product.

B. Samples for Verification: For the following products, in sizes indicated below:

1. Geotextile: **12 by 12 inches (300 by 300 mm)**.
2. Warning Tape: **12 inches (300 mm)** long; of each color.

1.6 INFORMATIONAL SUBMITTALS

A. Material Test Reports: For each [**on-site**][**and**][**borrow**] soil material proposed for fill and backfill as follows:

1. Classification in accordance with ASTM D2487.
2. Laboratory compaction curve in accordance with [**ASTM D698**][**ASTM D1557**] .

B. Blasting plan [**approved by authorities having jurisdiction**] .

C. Seismic survey report from seismic survey agency.

D. Preexcavation Photographs or Videotape: Show existing conditions of adjoining construction and site improvements, including finish surfaces that might be misconstrued as damage caused by earth-moving operations. Submit before earth moving begins.

E. Qualification Statements: For qualified testing agency.

1.7 QUALITY ASSURANCE

A. Blasting: Comply with applicable requirements in NFPA 495, "Explosive Materials Code," and prepare a blasting plan reporting the following:

1. Types of explosive and sizes of charge to be used in each area of rock removal, types of blasting mats, sequence of blasting operations, and procedures that will prevent damage to site improvements and structures on Project site and adjacent properties.
2. Seismographic monitoring during blasting operations.

B. Seismic Survey Agency: An independent testing agency, acceptable to authorities having jurisdiction, experienced in seismic surveys and blasting procedures to perform the following services:

1. Report types of explosive and sizes of charge to be used in each area of rock removal, types of blasting mats, sequence of blasting operations, and procedures that will prevent damage to site improvements and structures on Project site and adjacent properties.
2. Seismographic monitoring during blasting operations.

C. Geotechnical Testing Agency Qualifications: Qualified in accordance with ASTM E329 and ASTM D3740 for testing indicated.

1.8 FIELD CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during earth-moving operations.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
2. Provide alternate routes around closed or obstructed traffic ways if required by Owner or authorities having jurisdiction.

B. Improvements on Adjoining Property: Authority for performing earth moving indicated on property adjoining Owner's property will be obtained by Owner before award of Contract.

1. Do not proceed with work on adjoining property until directed by Architect.

C. Utility Locator Service: Notify [**utility locator service**][**"Miss Utility"**][**"Call Before You Dig"**][**"Dig Safe System"**][**"One Call"**]<**Insert name**> for area where Project is located before beginning earth-moving operations.

D. Do not commence earth-moving operations until temporary site fencing and erosion- and sedimentation-control measures specified in [**Section 015000 "Temporary Facilities and Controls"**][**and**][**Section 311000 "Site Clearing"**] are in place.

E. Do not commence earth-moving operations until plant-protection measures specified in Section 015639 "Temporary Tree and Plant Protection" are in place.

F. The following practices are prohibited within protection zones:

1. Storage of construction materials, debris, or excavated material.

2. Parking vehicles or equipment.
3. Foot traffic.
4. Erection of sheds or structures.
5. Impoundment of water.
6. Excavation or other digging unless otherwise indicated.
7. Attachment of signs to or wrapping materials around trees or plants unless otherwise indicated.

G. Do not direct vehicle or equipment exhaust towards protection zones.

H. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones.

PART 2 - PRODUCTS

2.1 SOIL MATERIALS

A. General: Provide borrow soil materials when sufficient satisfactory soil materials are not available from excavations.

B. Satisfactory Soils: Soil Classification [**Groups GW, GP, GM, SW, SP, and SM in accordance with ASTM D2487**][**Groups A-1, A-2-4, A-2-5, and A-3 in accordance with AASHTO M 145**] , or a combination of these groups; free of rock or gravel larger than [**3 inches (75 mm)**]<**Insert dimension**> in any dimension, debris, waste, frozen materials, vegetation, and other deleterious matter.

1. Liquid Limit: <**Insert value**> .
2. Plasticity Index: <**Insert value**> .

C. Unsatisfactory Soils: Soil Classification [**Groups GC, SC, CL, ML, OL, CH, MH, OH, and PT in accordance with ASTM D2487**][**Groups A-2-6, A-2-7, A-4, A-5, A-6, and A-7 in accordance with AASHTO M 145**] , or a combination of these groups.

1. Unsatisfactory soils also include satisfactory soils not maintained within 2 percent of optimum moisture content at time of compaction.

D. Subbase Material: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; with at least 90 percent passing a **1-1/2-inch (37.5-mm)** sieve and not more than 12 percent passing a **No. 200 (0.075-mm)** sieve.

E. Base Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; with at least 95 percent passing a **1-1/2-inch (37.5-mm)** sieve and not more than 8 percent passing a **No. 200 (0.075-mm)** sieve.

F. Engineered Fill: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; with at least 90 percent passing a **1-1/2-inch (37.5-mm)** sieve and not more than 12 percent passing a **No. 200 (0.075-mm)** sieve.

G. Bedding Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; except with 100 percent passing a **1-inch (25-mm)** sieve and not more than 8 percent passing a **No. 200 (0.075-mm)** sieve.

H. Drainage Course: Narrowly graded mixture of [**washed**] crushed stone, or crushed or uncrushed gravel; ASTM D448; coarse-aggregate grading Size 57; with 100 percent passing a **1-1/2-inch (37.5-mm)** sieve and zero to 5 percent passing a **No. 8 (2.36-mm)** sieve.

I. Filter Material: Narrowly graded mixture of natural or crushed gravel, or crushed stone and natural sand; ASTM D448; coarse-aggregate grading Size 67; with 100 percent passing a **1-inch (25-mm)** sieve and zero to 5 percent passing a **No. 4 (4.75-mm)** sieve.

J. Sand: ASTM C33/C33M; fine aggregate.

K. Impervious Fill: Clayey gravel and sand mixture capable of compacting to a dense state.

2.2 GEOTEXTILES

A. Subsurface Drainage Geotextile: Nonwoven needle-punched geotextile, manufactured for subsurface drainage applications, made from polyolefins or polyesters; with elongation greater than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:

1. Survivability:

a. Class 2; AASHTO M 288.
b. As follows:

1) Grab Tensile Strength: **157 lbf (700 N)**; ASTM D4632/D4632M.
2) Sewn Seam Strength: **142 lbf (630 N)**; ASTM D4632/D4632M.
3) Tear Strength: **56 lbf (250 N)**; ASTM D4533.
4) Puncture Strength: **56 lbf (250 N)**; ASTM D4833/D4833M.

c. Apparent Opening Size: [**No. 40 (0.425-mm)**][**No. 60 (0.250-mm)**][**No. 70 (0.212-mm)**] sieve, maximum; ASTM D4751.
d. Permittivity: [**0.5**][**0.2**][**0.1**] per second, minimum; ASTM D4491/D4491M.
e. UV Stability: 50 percent after 500 hours' exposure; ASTM D4355.

B. Separation Geotextile: Woven geotextile fabric, manufactured for separation applications, made from polyolefins or polyesters; with elongation less than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:

1. Survivability:

a. Class 2; AASHTO M 288.
b. As follows:

1) Grab Tensile Strength: **247 lbf (1100 N)**; ASTM D4632/D4632M.
2) Sewn Seam Strength: **222 lbf (990 N)**; ASTM D4632/D4632M.
3) Tear Strength: **90 lbf (400 N)**; ASTM D4533/D4533M.
4) Puncture Strength: **90 lbf (400 N)**; ASTM D4833/D4833M.

c. Apparent Opening Size: **No. 60 (0.250-mm)** sieve, maximum; ASTM D4751.
d. Permittivity: 0.02 per second, minimum; ASTM D4491/D4491M.
e. UV Stability: 50 percent after 500 hours' exposure; ASTM D4355.

2.3 CONTROLLED LOW-STRENGTH MATERIAL

A. Controlled Low-Strength Material: Self-compacting [**, cellular, low-density**] , flowable concrete material produced from the following:

1. Portland Cement: ASTM C150/C150M, [**Type I**][**Type II**][**or**][**Type III**] .
2. Fly Ash: ASTM C618, Class C or F.
3. Normal-Weight Aggregate: ASTM C33/C33M, [**3/4-inch (19-mm)**][**3/8-inch (10-mm)**]<**Insert dimension**> nominal maximum aggregate size.
4. Foaming Agent: ASTM C869/C869M.
5. Water: ASTM C94/C94M.
6. Air-Entraining Admixture: ASTM C260/C260M.

B. Produce cellular, low-density, controlled low-strength material with the following physical properties:

1. As-Cast Unit Weight: [**30 to 36 lb/cu. ft. (480 to 576 kg/cu. m)**][**36 to 42 lb/cu. ft. (576 to 675 kg/cu. m)**]<**Insert unit weight range**> at point of placement, when tested in accordance with ASTM C138/C138M.
2. Compressive Strength: [**80 psi (550 kPa)**][**140 psi (965 kPa)**]<**Insert value**> , when tested in accordance with ASTM C495/C495M.

C. Produce conventional-weight, controlled low-strength material with [**80-psi (550-kPa)**][**140-psi (965-kPa)**]<**Insert value**> compressive strength when tested in accordance with ASTM C495/C495M.

2.4 GEOFOAM

A. Extruded-Polystyrene Board Insulation: ASTM C578, [**Type IV, 1.55-lb/cu. ft. (25-kg/cu. m) density, 25-psi (173-kPa) compressive strength**][**Type X, 1.30-lb/cu. ft. (21-kg/cu. m) density, 15-psi (104-kPa) compressive strength**][**Type VI, 1.80-lb/cu. ft. (29-kg/cu. m) density, 40-psi (276-kPa) compressive strength**][**Type VII, 2.20-lb/cu. ft. (35-kg/cu. m) density, 60-psi (414-kPa) compressive strength**][**Type V, 3.00-lb/cu. ft. (48-kg/cu. m) density, 100-psi (690-kPa) compressive strength**] .

B. Molded-Polystyrene Board Insulation: ASTM C578, [**Type I, 0.90-lb/cu. ft. (15-kg/cu. m) density, 10-psi (69-kPa) compressive strength**][**Type VIII, 1.15-lb/cu. ft. (18-kg/cu. m) density, 13-psi (90-kPa) compressive strength**][**Type II, 1.35-lb/cu. ft. (22-kg/cu. m) density, 15-psi (104-kPa) compressive strength**] .

1. Manufacture molded polystyrene with an inorganic mineral registered with the EPA and suitable for application as a termite deterrent.

C. Rigid Cellular Polystyrene Geofoam: ASTM D6817/D6817M, [**Type EPS 19, 1.15-lb/cu. ft. (18.4-kg/cu. m) density, 5.8-psi (40-kPa) compressive strength at 1 percent deformation; 16-psi (110-kPa) compressive strength at 10 percent deformation**][**Type EPS 39, 2.40-lb/cu. ft. (38.4-kg/cu. m) density, 15-psi (103-kPa) compressive strength at 1 percent deformation; 40-psi (276-kPa) compressive strength at 10 percent deformation**]<**Insert requirement**> .

D. Connectors: [**Geofoam manufacturer's multibarbed, galvanized-steel sheet connectors**][**Deformed steel reinforcing bars, 3/4 inch (19 mm) in diameter**]<**Insert requirement**> .

2.5 ACCESSORIES

A. Warning Tape: Acid- and alkali-resistant, polyethylene film warning tape manufactured for marking and identifying underground utilities, **6 inches (150 mm)** wide and **4 mils (0.1 mm)** thick, continuously inscribed with a description of the utility; colored as follows:

1. Red: Electric.
2. Yellow: Gas, oil, steam, and dangerous materials.
3. Orange: Telephone and other communications.

4. Blue: Water systems.
5. Green: Sewer systems.

B. Detectable Warning Tape: Acid- and alkali-resistant, polyethylene film warning tape manufactured for marking and identifying underground utilities, a minimum of **6 inches (150 mm)** wide and **4 mils (0.1 mm)** thick, continuously inscribed with a description of the utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to **30 inches (750 mm)** deep; colored as follows:

1. Red: Electric.
2. Yellow: Gas, oil, steam, and dangerous materials.
3. Orange: Telephone and other communications.
4. Blue: Water systems.
5. Green: Sewer systems.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earth-moving operations.

B. Protect and maintain erosion and sedimentation controls during earth-moving operations.

C. Protect subgrades and foundation soils from freezing temperatures and frost. Remove temporary protection before placing subsequent materials.

3.2 DEWATERING

A. Provide dewatering system of sufficient scope, size, and capacity to control hydrostatic pressures and to lower, control, remove, and dispose of ground water and permit excavation and construction to proceed on dry, stable subgrades.

B. Prevent surface water and ground water from entering excavations, from ponding on prepared subgrades, and from flooding Project site and surrounding area.

C. Protect subgrades from softening, undermining, washout, and damage by rain or water accumulation.

1. Reroute surface water runoff away from excavated areas. Do not allow water to accumulate in excavations. Do not use excavated trenches as temporary drainage ditches.

D. Dispose of water removed by dewatering in a manner that avoids endangering public health, property, and portions of work under construction or completed. Dispose of water and sediment in a manner that avoids inconvenience to others.

3.3 EXPLOSIVES

A. Explosives:

1. Do not use explosives.
2. Obtain written permission from authorities having jurisdiction before bringing explosives to Project site or using explosives on Project site.

    a. Perform blasting without damaging adjacent structures, property, or site improvements.
    b. Perform blasting without weakening the bearing capacity of rock subgrade and with the least-practicable disturbance to rock to remain.

3.4 EXCAVATION, GENERAL

A. Unclassified Excavation: Excavate to subgrade elevations regardless of the character of surface and subsurface conditions encountered. Unclassified excavated materials may include rock, soil materials, and obstructions. No changes in the Contract Sum or the Contract Time will be authorized for rock excavation or removal of obstructions.

1. If excavated materials intended for fill and backfill include unsatisfactory soil materials and rock, replace with satisfactory soil materials.
2. Remove rock to lines and grades indicated to permit installation of permanent construction without exceeding the following dimensions:

    a. [**24 inches (600 mm)**]<**Insert dimension**> outside of concrete forms other than at footings.
    b. [**12 inches (300 mm)**]<**Insert dimension**> outside of concrete forms at footings.
    c. [**6 inches (150 mm)**]<**Insert dimension**> outside of minimum required dimensions of concrete cast against grade.
    d. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.
    e. [**6 inches (150 mm)**]<**Insert dimension**> beneath bottom of concrete slabs-on-grade.
    f. [**6 inches (150 mm)**]<**Insert dimension**> beneath pipe in trenches and the greater of [**24 inches (600 mm)**]<**Insert dimension**> wider than pipe or [**42 inches (1065 mm)**]<**Insert dimension**> wide.

B. Classified Excavation: Excavate to subgrade elevations. Material to be excavated will be classified as earth and rock. Do not excavate rock until it has been classified and cross sectioned by Architect. The Contract Sum will be adjusted for rock excavation in accordance with unit prices included in the Contract Documents. Changes in the Contract Time may be authorized for rock excavation.

1. Earth excavation includes excavating pavements and obstructions visible on surface; underground structures, utilities, and other items indicated to be removed; and soil, boulders, and other materials not classified as rock or unauthorized excavation.

    a. Intermittent drilling; blasting, if permitted; ram hammering; or ripping of material not classified as rock excavation is earth excavation.

2. Rock excavation includes removal and disposal of rock. Remove rock to lines and subgrade elevations indicated to permit installation of permanent construction without exceeding the following dimensions:

    a. [**24 inches (600 mm)**]<**Insert dimension**> outside of concrete forms other than at footings.
    b. [**12 inches (300 mm)**]<**Insert dimension**> outside of concrete forms at footings.
    c. [**6 inches (150 mm)**]<**Insert dimension**> outside of minimum required dimensions of concrete cast against grade.
    d. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.

e. [**6 inches (150 mm)**]<**Insert dimension**> beneath bottom of concrete slabs-on-grade.
f. [**6 inches (150 mm)**]<**Insert dimension**> beneath pipe in trenches and the greater of [**24 inches (600 mm)**]<**Insert dimension**> wider than pipe or [**42 inches (1065 mm)**]<**Insert dimension**> wide.

3.5 EXCAVATION FOR STRUCTURES

A. Excavate to indicated elevations and dimensions within a tolerance of plus or minus **1 inch (25 mm)**. If applicable, extend excavations a sufficient distance from structures for placing and removing concrete formwork, for installing services and other construction, and for inspections.

1. Excavations for Footings and Foundations: Do not disturb bottom of excavation. Excavate by hand to final grade just before placing concrete reinforcement. Trim bottoms to required lines and grades to leave solid base to receive other work.
2. Pile Foundations: Stop excavations **6 to 12 inches (150 to 300 mm)** above bottom of pile cap before piles are placed. After piles have been driven, remove loose and displaced material. Excavate to final grade, leaving solid base to receive concrete pile caps.
3. Excavation for Underground Tanks, Basins, and Mechanical or Electrical Utility Structures: Excavate to elevations and dimensions indicated within a tolerance of plus or minus **1 inch (25 mm)**. Do not disturb bottom of excavations intended as bearing surfaces.

B. Excavations at Edges of Tree- and Plant-Protection Zones:

1. Excavate by hand or with an air spade to indicated lines, cross sections, elevations, and subgrades. If excavating by hand, use narrow-tine spading forks to comb soil and expose roots. Do not break, tear, or chop exposed roots. Do not use mechanical equipment that rips, tears, or pulls roots.
2. Cut and protect roots in accordance with requirements in Section 015639 "Temporary Tree and Plant Protection."

3.6 EXCAVATION FOR WALKS AND PAVEMENTS

A. Excavate surfaces under walks and pavements to indicated lines, cross sections, elevations, and subgrades.

3.7 EXCAVATION FOR UTILITY TRENCHES

A. Excavate trenches to indicated gradients, lines, depths, and elevations.

1. Beyond building perimeter, excavate trenches to allow installation of top of pipe below frost line.

B. Excavate trenches to uniform widths to provide the following clearance on each side of pipe or conduit. Excavate trench walls vertically from trench bottom to **12 inches (300 mm)** higher than top of pipe or conduit unless otherwise indicated.

1. Clearance: [**12 inches (300 mm) each side of pipe or conduit**][**As indicated**] .

C. Trench Bottoms:

1. Excavate and shape trench bottoms to provide uniform bearing and support of pipes and conduit. Shape subgrade to provide continuous support for bells, joints, and barrels of pipes and for joints,

fittings, and bodies of conduits. Remove projecting stones and sharp objects along trench subgrade.

a. For pipes and conduit less than **6 inches (150 mm)** in nominal diameter, hand-excavate trench bottoms and support pipe and conduit on an undisturbed subgrade.
b. For pipes and conduit **6 inches (150 mm)** or larger in nominal diameter, shape bottom of trench to support bottom 90 degrees of pipe or conduit circumference. Fill depressions with tamped sand backfill.
c. For flat-bottomed, multiple-duct conduit units, hand-excavate trench bottoms and support conduit on an undisturbed subgrade.
d. Excavate trenches **6 inches (150 mm)** deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.

2. Excavate trenches **4 inches (100 mm)** deeper than bottom of pipe and conduit elevations to allow for bedding course. Hand-excavate deeper for bells of pipe.

a. Excavate trenches **6 inches (150 mm)** deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.

D. Trenches in Tree- and Plant-Protection Zones:

1. Hand-excavate to indicated lines, cross sections, elevations, and subgrades. Use narrow-tine spading forks to comb soil and expose roots. Do not break, tear, or chop exposed roots. Do not use mechanical equipment that rips, tears, or pulls roots.
2. Do not cut main lateral roots or taproots; cut only smaller roots that interfere with installation of utilities.
3. Cut and protect roots in accordance with requirements in Section 015639 "Temporary Tree and Plant Protection."

3.8 EXCAVATION FOR ELEVATOR CYLINDER

A. Drill well hole plumb in elevator pit to accommodate installation of elevator-cylinder assembly. Coordinate with applicable requirements for diameter and tolerances in [**Section 142400 "Hydraulic Elevators."**][**Section 142413 "Hydraulic Freight Elevators."**]

B. Provide well casing as necessary to retain walls of well hole.

3.9 SUBGRADE INSPECTION

A. Notify Architect when excavations have reached required subgrade.

B. If Architect determines that unsatisfactory soil is present, continue excavation and replace with compacted backfill or fill material as directed.

C. Proof-roll subgrade [**below the building slabs and pavements**]<**Insert locations**> with a pneumatic-tired [**and loaded 10-wheel, tandem-axle dump truck weighing not less than 15 tons (13.6 tonnes)**]<**Insert requirement**> to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.

1. Completely proof-roll subgrade in one direction [**, repeating proof-rolling in direction perpendicular to first direction**] . Limit vehicle speed to **3 mph (5 km/h)**.
2. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Architect, and replace with compacted backfill or fill as directed.

D. Authorized additional excavation and replacement material will be paid for in accordance with Contract provisions for [**unit prices**][**changes in the Work**] .

E. Reconstruct subgrades damaged by freezing temperatures, frost, rain, accumulated water, or construction activities, as directed by Architect, without additional compensation.

3.10 UNAUTHORIZED EXCAVATION

A. Fill unauthorized excavation under foundations or wall footings by extending bottom elevation of concrete foundation or footing to excavation bottom, without altering top elevation. Lean concrete fill, with 28-day compressive strength of **2500 psi (17.2 MPa)**, may be used when approved by Architect.

1. Fill unauthorized excavations under other construction, pipe, or conduit as directed by Architect.

3.11 STORAGE OF SOIL MATERIALS

A. Stockpile borrow soil materials and excavated satisfactory soil materials without intermixing. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.

1. Stockpile soil materials away from edge of excavations. Do not store within drip line of remaining trees.

3.12 BACKFILL

A. Place and compact backfill in excavations promptly, but not before completing the following:

1. Construction below finish grade including, where applicable, subdrainage, dampproofing, waterproofing, and perimeter insulation.
2. Surveying locations of underground utilities for Record Documents.
3. Testing and inspecting underground utilities.
4. Removing concrete formwork.
5. Removing trash and debris.
6. Removing temporary shoring, bracing, and sheeting.
7. Installing permanent or temporary horizontal bracing on horizontally supported walls.

B. Place backfill on subgrades free of mud, frost, snow, or ice.

3.13 UTILITY TRENCH BACKFILL

A. Place backfill on subgrades free of mud, frost, snow, or ice.

B. Place and compact bedding course on trench bottoms and where indicated. Shape bedding course to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits.

C. Trenches under Footings: Backfill trenches excavated under footings and within [**18 inches (450 mm)**]<**Insert dimension**> of bottom of footings with satisfactory soil; fill with concrete to elevation of bottom of footings. Concrete is specified in Section 033000 "Cast-in-Place Concrete."

D. Trenches under Roadways: Provide [**4-inch- (100-mm-)**]<**Insert dimension**> thick, concrete-base slab

support for piping or conduit less than [30 inches (750 mm)]<**Insert dimension**> below surface of roadways. After installing and testing, completely encase piping or conduit in a minimum of [4 inches (100 mm)]<**Insert dimension**> of concrete before backfilling or placing roadway subbase course. Concrete is specified in Section 033000 "Cast-in-Place Concrete."

E. Backfill voids with satisfactory soil while removing shoring and bracing.

F. Initial Backfill:

1. Soil Backfill: Place and compact initial backfill of [**subbase material**][**satisfactory soil**] , free of particles larger than [1 inch (25 mm)]<**Insert dimension**> in any dimension, to a height of 12 inches (300 mm) over the pipe or conduit.

    a. Carefully compact initial backfill under pipe haunches and compact evenly up on both sides and along the full length of piping or conduit to avoid damage or displacement of piping or conduit. Coordinate backfilling with utilities testing.

2. Controlled Low-Strength Material: Place initial backfill of controlled low-strength material to a height of 12 inches (300 mm) over the pipe or conduit. Coordinate backfilling with utilities testing.

G. Final Backfill:

1. Soil Backfill: Place and compact final backfill of satisfactory soil to final subgrade elevation.
2. Controlled Low-Strength Material: Place final backfill of controlled low-strength material to final subgrade elevation.

H. Warning Tape: Install warning tape directly above utilities, 12 inches (300 mm) below finished grade, except 6 inches (150 mm) below subgrade under pavements and slabs.

3.14 SOIL FILL

A. Plow, scarify, bench, or break up sloped surfaces steeper than 1 vertical to 4 horizontal so fill material will bond with existing material.

B. Place and compact fill material in layers to required elevations as follows:

1. Under grass and planted areas, use satisfactory soil material.
2. Under walks and pavements, use satisfactory soil material.
3. Under steps and ramps, use engineered fill.
4. Under building slabs, use engineered fill.
5. Under footings and foundations, use engineered fill.

C. Place soil fill on subgrades free of mud, frost, snow, or ice.

3.15 GEOFOAM FILL

A. Place a leveling course of sand, [2 inches (50 mm)]<**Insert dimension**> thick, over subgrade. Finish leveling course to a tolerance of 1/2 inch (13 mm) when tested with a 10-foot (3-m) straightedge.

1. Place leveling course on subgrades free of mud, frost, snow, or ice.

B. Install geofoam blocks in layers with abutting edges and ends and with the long dimension of each block at right angles to blocks in each subsequent layer. Offset joints of blocks in successive layers.

C. Install geofoam connectors at each layer of geofoam to resist horizontal displacement in accordance with geofoam manufacturer's written instructions.

D. Cover geofoam with [**subdrainage**][**separation**] geotextile before placing overlying soil materials.

3.16 SOIL MOISTURE CONTROL

A. Uniformly moisten or aerate subgrade and each subsequent fill or backfill soil layer before compaction to within 2 percent of optimum moisture content.

1. Do not place backfill or fill soil material on surfaces that are muddy, frozen, or contain frost or ice.
2. Remove and replace, or scarify and air dry, otherwise satisfactory soil material that exceeds optimum moisture content by 2 percent and is too wet to compact to specified dry unit weight.

3.17 COMPACTION OF SOIL BACKFILLS AND FILLS

A. Place backfill and fill soil materials in layers not more than [**8 inches (200 mm)**]<**Insert dimension**> in loose depth for material compacted by heavy compaction equipment and not more than **4 inches (100 mm)** in loose depth for material compacted by hand-operated tampers.

B. Place backfill and fill soil materials evenly on all sides of structures to required elevations and uniformly along the full length of each structure.

C. Compact soil materials to not less than the following percentages of maximum dry unit weight in accordance with [**ASTM D698**][**ASTM D1557**] :

1. Under structures, building slabs, steps, and pavements, scarify and recompact top **12 inches (300 mm)** of existing subgrade and each layer of backfill or fill soil material at [**95**]<**Insert number**> percent.
2. Under walkways, scarify and recompact top **6 inches (150 mm)** below subgrade and compact each layer of backfill or fill soil material at [**92**]<**Insert number**> percent.
3. Under turf or unpaved areas, scarify and recompact top **6 inches (150 mm)** below subgrade and compact each layer of backfill or fill soil material at [**85**]<**Insert number**> percent.
4. For utility trenches, compact each layer of initial and final backfill soil material at [**85**]<**Insert number**> percent.

3.18 GRADING

A. Uniformly grade areas to a smooth surface, free of irregular surface changes. Comply with compaction requirements and grade to cross sections, lines, and elevations indicated.

1. Provide a smooth transition between adjacent existing grades and new grades.
2. Cut out soft spots, fill low spots, and trim high spots to comply with required surface tolerances.

B. Site Rough Grading: Slope grades to direct water away from buildings and to prevent ponding. Finish subgrades to elevations required to achieve indicated finish elevations, within the following subgrade tolerances:

1. Turf or Unpaved Areas: Plus or minus [**1 inch (25 mm)**]<**Insert dimension**> .
2. Walks: Plus or minus [**1 inch (25 mm)**]<**Insert dimension**> .
3. Pavements: Plus or minus [**1/2 inch (13 mm)**]<**Insert dimension**> .

C. Grading inside Building Lines: Finish subgrade to a tolerance of [1/2 inch (13 mm)]<**Insert dimension**> when tested with a 10-foot (3-m) straightedge.

3.19 SUBSURFACE DRAINAGE

A. Subsurface Drain: Place subsurface drainage geotextile around perimeter of subdrainage trench. Place a 6-inch (150-mm) course of filter material on subsurface drainage geotextile to support subdrainage pipe. Encase subdrainage pipe in a minimum of 12 inches (300 mm) of filter material, placed in compacted layers 6 inches (150 mm) thick, and wrap in subsurface drainage geotextile, overlapping sides and ends at least 6 inches (150 mm).

1. Compact each filter material layer [**to 85 percent of maximum dry unit weight in accordance with ASTM D698**][**with a minimum of two passes of a plate-type vibratory compactor**] .

B. Drainage Backfill: Place and compact filter material over subsurface drain, in width indicated, to within 12 inches (300 mm) of final subgrade, in compacted layers 6 inches (150 mm) thick. Overlay drainage backfill with one layer of subsurface drainage geotextile, overlapping sides and ends at least 6 inches (150 mm).

1. Compact each filter material layer [**to 85 percent of maximum dry unit weight in accordance with ASTM D698**][**with a minimum of two passes of a plate-type vibratory compactor**] .
2. Place and compact impervious fill over drainage backfill in 6-inch- (150-mm-) thick compacted layers to final subgrade.

3.20 SUBBASE AND BASE COURSES UNDER PAVEMENTS AND WALKS

A. Place subbase course [**and base course**] on subgrades free of mud, frost, snow, or ice.

B. On prepared subgrade, place subbase course [**and base course**] under pavements and walks as follows:

1. Install separation geotextile on prepared subgrade in accordance with manufacturer's written instructions, overlapping sides and ends.
2. Place base course material over subbase course under hot-mix asphalt pavement.
3. Shape subbase course [**and base course**] to required crown elevations and cross-slope grades.
4. Place subbase course [**and base course**] 6 inches (150 mm) or less in compacted thickness in a single layer.
5. Place subbase course [**and base course**] that exceeds 6 inches (150 mm) in compacted thickness in layers of equal thickness, with no compacted layer more than 6 inches (150 mm) thick or less than 3 inches (75 mm) thick.
6. Compact subbase course [**and base course**] at optimum moisture content to required grades, lines, cross sections, and thickness to not less than [**95**]<**Insert number**> percent of maximum dry unit weight in accordance with [**ASTM D698**][**ASTM D1557**] .

C. Pavement Shoulders: Place shoulders along edges of subbase course [**and base course**] to prevent lateral movement. Construct shoulders, at least 12 inches (300 mm) wide, of satisfactory soil materials and compact simultaneously with each subbase [**and base**] layer to not less than [**95**]<**Insert number**> percent of maximum dry unit weight in accordance with [**ASTM D698**][**ASTM D1557**] .

3.21 DRAINAGE COURSE UNDER CONCRETE SLABS-ON-GRADE

A. Place drainage course on subgrades free of mud, frost, snow, or ice.

B. On prepared subgrade, place and compact drainage course under cast-in-place concrete slabs-on-grade as follows:

1. Install subdrainage geotextile on prepared subgrade in accordance with manufacturer's written instructions, overlapping sides and ends.
2. Place drainage course **6 inches (150 mm)** or less in compacted thickness in a single layer.
3. Place drainage course that exceeds **6 inches (150 mm)** in compacted thickness in layers of equal thickness, with no compacted layer more than **6 inches (150 mm)** thick or less than **3 inches (75 mm)** thick.
4. Compact each layer of drainage course to required cross sections and thicknesses to not less than [**95**]<**Insert number**> percent of maximum dry unit weight in accordance with ASTM D698.

3.22 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Determine prior to placement of fill that site has been prepared in compliance with requirements.
2. Determine that fill material classification and maximum lift thickness comply with requirements.
3. Determine, during placement and compaction, that in-place density of compacted fill complies with requirements.

B. Testing Agency: Owner will engage a qualified geotechnical engineering testing agency to perform tests and inspections.

C. Allow testing agency to inspect and test subgrades and each fill or backfill layer. Proceed with subsequent earth moving only after test results for previously completed work comply with requirements.

D. Footing Subgrade: At footing subgrades, at least one test of each soil stratum will be performed to verify design bearing capacities. Subsequent verification and approval of other footing subgrades may be based on a visual comparison of subgrade with tested subgrade when approved by Architect.

E. Compaction Testing: Testing agency will test compaction of soils in place in accordance with ASTM D1556/D15556M, ASTM D2937, and ASTM D6938, as applicable. Tests will be performed at the following locations and frequencies:

1. Paved and Building Slab Areas: At subgrade and at each compacted fill and backfill layer, at least one test for every [**2000 sq. ft. (186 sq. m)**]<**Insert area**> or less of paved area or building slab but in no case fewer than three tests.
2. Foundation Wall Backfill: At each compacted backfill layer, at least one test for every [**100 ft. (30 m)**]<**Insert dimension**> or less of wall length but no fewer than two tests.
3. Trench Backfill: At each compacted initial and final backfill layer, at least one test for every [**150 ft. (46 m)**]<**Insert dimension**> or less of trench length but no fewer than two tests.

F. When testing agency reports that subgrades, fills, or backfills have not achieved degree of compaction specified, scarify and moisten or aerate, or remove and replace soil materials to depth required; recompact and retest until specified compaction is obtained.

3.23 PROTECTION

A. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.

B. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.

1. Scarify or remove and replace soil material to depth as directed by Architect; reshape and recompact.

C. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.

1. Restore appearance, quality, and condition of finished surfacing to match adjacent work, and eliminate evidence of restoration to greatest extent possible.

3.24 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Remove surplus satisfactory soil and waste materials, including unsatisfactory soil, trash, and debris, and legally dispose of them off Owner's property.

B. Transport surplus satisfactory soil to designated storage areas on Owner's property. Stockpile or spread soil as directed by Architect.

1. Remove waste materials, including unsatisfactory soil, trash, and debris, and legally dispose of them off Owner's property.

SECTION 31 23 16 16 - CHAIN LINK FENCES AND GATES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Chain-link fence framework.
2. Chain-link fence fabric.
3. Chain-link fittings.
4. Chain-link wires and ties.
5. Chain-link swing gates.
6. Chain-link horizontal-slide gates.
7. Gate operators and controls.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for cast-in-place concrete for post footings[**and equipment bases/pads for gate operators and controls**].
2. Section 281500 "Integrated Access Control Hardware Devices" for gate controls.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1. Inspect and discuss [**electrical roughing-in,**] equipment bases, and other preparatory work specified elsewhere.
2. Review sequence of operation for each type of gate operator.
3. Review coordination of interlocked equipment specified in this Section and elsewhere.
4. Review required testing, inspecting, and certifying procedures.
5. <**Insert requirement**>.

1.3 ACTION SUBMITTALS

A. Product Data:

1. For each type of product.

a. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for the following:
b. Fence [**and gate**] posts, rails, and fittings.
c. Chain-link fabric, reinforcements, [**gate types, hardware,**] and attachments.
d. Accessories: [**Privacy slats**][**Barbed wire**][**Barbed tape**]<**Insert item**>.
e. Gates and hardware.
f. Gate operators, including operating instructions and motor characteristics.

B. Shop Drawings: For each type of fence [**and gate**] assembly.

1. Include plans, elevations, sections, ground details, [**mounting,**] post spacing, and attachments to

other work.
2. Include accessories, hardware, gate operation, and operational clearances.
3. Gate Operator: Show locations and details for installing operator components, switches, and controls. Indicate motor size, electrical characteristics, drive arrangement, mounting, and grounding provisions.
4. Wiring Diagrams: For power, signal, and control wiring.

C. Samples for Initial Selection: For each type of factory-applied finish.

D. Samples for Verification: For each type of component with factory-applied finish, prepared on Samples of size indicated below:

1. Polymer-Coated Components: In **6-inch (150-mm)** lengths for components and on full-sized units for accessories.

E. Delegated Design Submittal: For structural performance of chain-link fence and gate frameworks, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For [**professional engineer**][**testing agency**][**factory-authorized service representative**].

B. Product Certificates: For each type of chain-link fence,[**operator,**] and gate.

C. Product Test Reports: For framework strength in accordance with ASTM F1043, for tests performed by [**manufacturer and witnessed by a qualified testing agency**][**or**][**a qualified testing agency**].

D. Field quality-control reports.

E. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For gate operators to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

A. Testing Agency Qualifications: For testing fence grounding; member company of NETA or an NRTL.

1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

B. Emergency Access Requirements: In accordance with requirements of authorities having jurisdiction for gates with automatic gate operators serving as a required means of access.

C. Mockups: Build mockups to set quality standards for fabrication and installation.

1. Build mockup for typical chain-link fence[**and gate**], including accessories.

a. Size: [10 ft. (3 m)]<**Insert dimension**> length of fence.

1.7 FIELD CONDITIONS

A. Field Measurements: Verify layout information for chain-link fences and gates shown on Drawings in relation to property survey and existing structures. Verify dimensions by field measurements.

1.8 WARRANTY

A. Special Warranty: [**Manufacturer agrees**][**Installer agrees**] to repair or replace components of fences[**, gates, operators, and controls**] that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Failure to comply with performance requirements.
b. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
c. Faulty operation of gate operators and controls.
d. <**Insert failure modes**>.

2. Warranty Period: [**Five**][**15**]<**Insert number**> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design chain-link fence and gate frameworks.

B. Structural Performance: Chain-link fence and gate frameworks are to withstand the design wind loads and stresses for fence height(s) and under exposure conditions indicated in accordance with [**ASCE/SEI 7**]<**Insert requirement**>.

1. Design Wind Load: [**As indicated on Drawings**]<**Insert loads**>.

a. Minimum Post Size: Determine in accordance with ASTM F1043 for post spacing not to exceed [10 feet (3 m)]<**Insert dimension**> for Material [**Group IA, ASTM F1043, Schedule 40 steel pipe**][**Group IC, electric-resistance-welded round steel pipe**]<**Insert material group**>.
b. Minimum Post Size and Maximum Spacing: Determine in accordance with CLFMI WLG 2445, based on mesh size and pattern specified.

C. Lightning Protection System: Maximum resistance-to-ground value of 25 ohms at each grounding location along fence under normal dry conditions.

D. Accessibility: Pedestrian gates to comply with the United States Access Board's ADA-ABA Accessibility Guidelines.

2.2 CHAIN-LINK FENCES, GENERAL

A. CLFMI Publications: Comply with the CLFMI Product Manual unless modified by requirements in the

Contract Documents.

B. Chain-Link Fence and Gate Assemblies: Include materials applicable for a complete assembly of application types, consisting of commercial, industrial, and security chain-link fences and gates.

1. Source Limitations: Obtain chain-link fence and gate components from single source or manufacturer.

2.3 CHAIN-LINK FENCE FRAMEWORK

A. Posts and Rails <**Insert drawing designation**>: ASTM F1043 for framework, including rails, braces, and line; terminal; and corner posts. Provide members with minimum dimensions and wall thicknesses in accordance with ASTM F1043[**or ASTM F1083**] based on the following:

1. Fence Height: [**72 inches (1830 mm)**][**96 inches (2440 mm)**][**As indicated on Drawings**]<**Insert dimension**>.
2. Light-Industrial-Strength Material: [**Group IC-L, round steel pipe, electric-resistance-welded pipe**][**Group II-L, roll-formed-steel C-section shapes**][**Group III-L, hot-rolled H-beam shapes**][**Group IV, Alternative Design**].

    a. Line Post: [**1.9 inches (48 mm) in diameter**][**2.375 inches (60 mm) in diameter**][**2.875 inches (73 mm) in diameter**][**2.25 by 1.7 inches (57 by 43 mm)**]<**Insert dimension(s)**>.
    b. End, Corner, and Pull Posts: [**2.375 inches (60 mm)**][**2.875 inches (73 mm)**][**4.0 inches (102 mm)**][**2.25 by 1.7 inches (57 by 43 mm)**]<**Insert dimension(s)**>.

3. Heavy-Industrial-Strength Material: [**Group IA, round steel pipe, Schedule 40**][**Group IC, round steel pipe, electric-resistance-welded pipe**][**Group II, roll-formed-steel C-section shapes**][**Group III, hot-rolled H-beam shapes**][**Group IV, Alternative Design**].

    a. Line Post: [**1.9 inches (48 mm) in diameter**][**2.375 inches (60 mm) in diameter**][**2.875 inches (73 mm) in diameter**][**4.0 inches (102 mm) in diameter**][**6.625 inches (168 mm) in diameter**][**1.875 by 1.63 inches (48 by 41 mm)**][**2.25 by 1.70 inches (57 by 43 mm)**][**3.25 by 2.50 inches (83 by 64 mm)**]<**Insert dimension(s)**>.
    b. End, Corner, and Pull Posts: [**2.375 inches (60 mm) in diameter**][**2.875 inches (73 mm) in diameter**][**4.0 inches (102 mm) in diameter**][**6.625 inches (168 mm) in diameter**][**2.25 by 1.70 inches (57 by 43 mm)**][**3.25 by 2.50 inches (83 by 64 mm)**]<**Insert dimension(s)**>.

4. Horizontal Framework Members: [**Intermediate**][**top**][**and**][**bottom**] rails in accordance with ASTM F1043.

    a. Top Rail: [**1.66 inches (42 mm) in diameter**][**1.25 by 1.63 inches (32 by 41 mm)**]<**Insert dimension(s)**>.

5. Brace Rails: ASTM F1043.
6. Metallic Coating for Steel Framework:

    a. Type A: Not less than minimum **2.0 oz./sq. ft. (0.61 kg/sq. m)** average zinc coating in accordance with ASTM A123/A123M or **4.0 oz./sq. ft. (1.22 kg/sq. m)** zinc coating in accordance with ASTM A653/A653M.
    b. Type B: Zinc with organic overcoat, consisting of a minimum of **0.9 oz./sq. ft. (0.27 kg/sq. m)** of zinc after welding, a chromate conversion coating, and a clear, verifiable

polymer film.

c. External, Type B: Zinc with organic overcoat, consisting of a minimum of **0.9 oz./sq. ft. (0.27 kg/sq. m)** of zinc after welding, a chromate conversion coating, and a clear, verifiable polymer film. Internal, Type D, consisting of 81 percent, not less than **0.3-mil- (0.0076-mm-)** thick, zinc-pigmented coating.

d. Type C: Zn-5-Al-MM alloy, consisting of not less than **1.8 oz./sq. ft. (0.55 kg/sq. m)** coating.

e. Coatings: Any coating above.

7. Polymer coating over metallic coating.

a. Color: [**Match chain-link fabric**][**Dark green**][**Olive green**][**Brown**][**Black**][**As selected by Architect from manufacturer's full range**], in accordance with ASTM F934.

2.4 CHAIN-LINK FENCE FABRIC

A. General: Provide fabric in one-piece heights measured between top and bottom of outer edge of selvage knuckle or twist in accordance with "CLFMI Product Manual" and requirements indicated below:

1. Fabric Height: <**Insert dimension**>[**As indicated on Drawings**].
2. Steel Wire for Fabric: Wire diameter of [**0.192 inch (4.88 mm)**][**0.148 inch (3.76 mm)**][**0.120 inch (3.05 mm)**][**0.113 inch (2.87 mm)**]<**Insert dimension**>.

a. Mesh Size: [**2-1/8 inches (54 mm)**][**2 inches (50 mm)**][**1-3/4 inches (44 mm)**][**1 inch (25 mm)**]<**Insert dimension**>.

b. Aluminum-Coated Fabric: ASTM A491, Type I, [**0.40 oz./sq. ft. (122 g/sq. m)**][**0.35 oz./sq. ft. (107 g/sq. m)**][**0.30 oz./sq. ft. (92 g/sq. m)**].

c. Zinc-Coated Fabric: ASTM A392, Type II, [**Class 1, 1.2 oz./sq. ft. (366 g/sq. m)**][**Class 2, 2.0 oz./sq. ft. (610 g/sq. m)**] with zinc coating applied [**before**][**after**] weaving.

d. Zn-5-Al-MM Aluminum-Mischmetal-Coated Fabric: ASTM F1345, Type III, [**Class 1, 0.60 oz./sq. ft. (183 g/sq. m)**][**Class 2, 1.0 oz./sq. ft. (305 g/sq. m)**].

e. Polymer-Coated Fabric: ASTM F668, [**Class 1**][**Class 2a**][**Class 2b**] over [**aluminum**][**zinc**][**Zn-5-Al-MM-alloy**]-coated steel wire.

1) Color: [**Dark green**][**Olive green**][**Brown**][**Black**][**As selected by Architect from manufacturer's full range**], in accordance with ASTM F934.

f. Coat selvage ends of metallic-coated fabric before the weaving process with manufacturer's standard clear protective coating.

3. Aluminum Wire Fabric: ASTM F1183, with [**mill**][**caustic-cleaned or etched**] finish, and wire diameter of [**0.148 inch (3.76 mm)**][**0.192 inch (4.88 mm)**].

a. Mesh Size: [**2 inches (50 mm)**][**1 inch (25 mm)**].

4. Selvage: [**Knuckled at both selvages**][**Twisted top and knuckled bottom**].

2.5 CHAIN-LINK FITTINGS

A. Provide fittings in accordance with ASTM F626.

B. Post Caps: Provide for each post.

1. Provide line post caps with loop to receive tension wire or top rail.

C. Rail and Brace Ends: For each gate, corner, pull, and end post.

D. Rail Fittings: Provide the following:

1. Top Rail Sleeves: [**Pressed-steel or round-steel tubing**][**Aluminum Alloy 6063**] not less than **6 inches (152 mm)** long.
2. Rail Clamps: Line and corner boulevard clamps for connecting [**intermediate**][**and**][**bottom**] rails to posts.

E. Tension and Brace Bands: [**Pressed steel**][**Aluminum Alloy 6063**].

F. Tension Bars: [**Steel**][**Aluminum**][**Fiberglass**], length not less than **2 inches (50 mm)** shorter than full height of chain-link fabric. Provide one bar for each gate and end post, and two for each corner and pull post, unless fabric is integrally woven into post.

G. Truss Rod Assemblies: [**Steel, hot-dip galvanized after threading**][**Mill-finished aluminum**] rod and turnbuckle or other means of adjustment.

H. Barbed Wire Arms: [**Pressed steel or cast iron**][**Aluminum**], with clips, slots, or other means for attaching strands of barbed wire[**, and means for attaching to posts**][**, integral with post cap**], for each post unless otherwise indicated, and as follows:

1. Provide line posts with arms that accommodate top rail or tension wire.
2. Provide corner arms at fence corner posts unless extended posts are indicated.
3. Single-Arm Type: [**Type I, slanted arm**][**Type II, vertical arm**].
4. Double-Arm Type: [**Type III, V-shaped arm**][**Type IV, A-shaped arm**].

I. Tie Wires, Clips, and Fasteners: In accordance with ASTM F626.

1. Standard Round Wire Ties: For attaching chain-link fabric to posts, rails, and frames, in accordance with the following:

a. Hot-Dip Galvanized Steel: [**0.106-inch- (2.69-mm-)**][**0.148-inch- (3.76-mm-)**] diameter wire[**; galvanized coating thickness matching coating thickness of chain-link fence fabric**].
b. Aluminum: ASTM B211/B211M; Alloy 1350-H19; [**0.148-inch- (3.76-mm-)**][**0.192-inch- (4.88-mm-)**] diameter, mill-finished wire.

J. Finish:

1. Metallic Coating for Pressed Steel or Cast Iron: Not less than **1.2 oz./sq. ft. (366 g/sq. m)** of zinc.

a. Polymer coating over metallic coating.

2. Aluminum: Mill finish.

2.6 CHAIN-LINK WIRE AND TIES

A. Metallic-Coated Steel Wire: **0.177-inch- (4.5-mm-)** diameter, marcelled tension wire in accordance with ASTM A817 or ASTM A824, with the following metallic coating:

1. Type I: Aluminum coated (aluminized).
2. Type II: Zinc coated (galvanized) by [**hot-dip**][**electrolytic**] process, with the following minimum coating weight:

    a. Class 3: Not less than **0.8 oz./sq. ft. (244 g/sq. m)** of uncoated wire surface.
    b. Class 4: Not less than **1.2 oz./sq. ft. (366 g/sq. m)** of uncoated wire surface.
    c. Class 5: Not less than **2 oz./sq. ft. (610 g/sq. m)** of uncoated wire surface.
    d. Matching chain-link fabric coating weight.

3. Type III: Zn-5-Al-MM alloy with the following minimum coating weight:

    a. Class 60: Not less than **0.6 oz./sq. ft. (183 g/sq. m)** of uncoated wire surface.
    b. Class 100: Not less than **1 oz./sq. ft. (305 g/sq. m)** of uncoated wire surface.
    c. Matching chain-link fabric coating weight.

B. Polymer-Coated Steel Wire: [**0.177-inch- (4.5-mm-)**][**0.148-inch- (3.8-mm-)**] diameter, tension wire in accordance with ASTM F1664, [**Class 1**][**Class 2a**][**Class 2b**] over [**aluminum**][**zinc**][**Zn-5-Al-MM-alloy**]-coated steel wire.

1. Color: [**Match chain-link fabric**][**Dark green**][**Olive green**][**Brown**][**Black**][**As selected by Architect from manufacturer's full range**], in accordance with ASTM F934.

C. Aluminum Wire: **0.192-inch- (4.88-mm-)** diameter tension wire, mill finished, in accordance with **ASTM B211 (ASTM B211M)**, Alloy 6061-T94 with **50,000-psi (344-MPa)** minimum tensile strength.

2.7 CHAIN-LINK SWING GATES

A. General: ASTM F900 for gate posts and [**single**][**double**] swing gate types.[**Provide automated vehicular gates in accordance with ASTM F2200.**]

1. Gate Leaf Width: [**36 inches (914 mm)**][**As indicated**]<**Insert width**>.
2. Framework Member Sizes and Strength: Based on gate fabric height [**of 72 inches (1830 mm) or less**][**of more than 72 inches (1830 mm)**][**as indicated**]<**Insert dimension**>.

B. Swing Gate Pipe and Tubing:

1. Swing Gate Posts: [**Round tubular steel**][**Rectangular tubular steel**][**Round tubular aluminum**][**Rectangular tubular aluminum**].
2. Gate Frames and Bracing: [**Round tubular steel**][**Rectangular tubular steel**][**Round tubular aluminum**][**Rectangular tubular aluminum**].
3. Zinc-Coated Steel: ASTM F1043 and ASTM F1083; [**protective coating and finish to match fence framework**][**manufacturer's standard protective coating and finish**]<**Insert finish**>.
4. Aluminum: ASTM B429/B429M; [**mill**][**manufacturer's standard**]<**Insert finish**> finish.

C. Swing Frame Corner Construction: [**Welded**][**or**][**assembled with corner fittings**].

D. Swing Gate Extended Posts and Frame Members: Fabricate gate posts and frame end members to extend [**12 inches (300 mm)**][**as indicated**]<**Insert dimension**> above top of chain-link fabric at both ends of gate frame to attach barbed [**wire**][**tape**] assemblies.

E. Swing Gate Hardware:

1. Hinges: [**180-degree inward**][**180-degree outward**][**360-degree inward and outward**] swing.
2. Latch: Permitting operation from both sides of gate[**with provision for padlocking accessible from both sides of gate**].

3. Lock: [**Manufacturer's standard**]<**Insert requirement**> internal device.
4. Padlock and Chain: <**Insert requirements**>.
5. Closer: [**Manufacturer's standard**]<**Insert requirement**>.
6. <**Insert hardware items and accessories**>.

2.8 CHAIN-LINK HORIZONTAL-SLIDE GATES

A. Chain-Link Horizontal-Slide Gates: ASTM F1184 for gate posts and [**single**][**double**] sliding gate types for [**pedestrian**][**and**][**vehicle**] assembly.[**Provide automated vehicular gates in accordance with ASTM F2200.**]

1. Classification:

a. Type I Overhead Slide:

1) Gate Leaf Width: [**As indicated**]<**Insert width**>.
2) Framework Member Sizes and Strength: Based on gate fabric height [**of 72 inches (1830 mm) or less**][**of more than 72 inches (1830 mm)**][**as indicated**]<**Insert dimension**>.

b. Type II Cantilever Slide, [**Class 1 with external**][**Class 2 with internal**] roller assemblies:

1) Slide Gate Frame Width and Height: [**48 inches (1220 mm) wide or less by 72 inches (1830 mm) high or less**][**More than 48 inches (1220 mm) wide by any height**][**As indicated**]<**Insert dimension**>.

B. Slide Gate Pipe and Tubing Finish:

1. Zinc-Coated Steel: [**Protective coating and finish to match fence framework**][**Manufacturer's standard protective coating and finish**]<**Insert finish**>.
2. Aluminum: ASTM B429/B429M; [**mill**][**manufacturer's standard**]<**Insert finish**> finish.
3. Sliding Gate Posts: ASTM F1184. Provide [**round tubular steel**][**rectangular tubular steel**][**round tubular aluminum**][**rectangular tubular aluminum**] posts.
4. Sliding Gate Frames and Bracing: [**Round tubular steel**][**Rectangular tubular steel**][**Round tubular aluminum**][**Rectangular tubular aluminum**].

C. Slide Gate Frame Corner Construction: [**Welded**][**or**][**assembled with corner fittings**].

D. Slide Extended Gate Posts and Frame Members: Extend gate posts and frame end members above top of chain-link fabric at both ends of gate frame [**12 inches (300 mm)**][**as indicated**]<**Insert dimension**> as required to attach barbed [**wire**][**tape**] assemblies.

E. Overhead Track Assembly: Manufacturer's standard track, with overhead framework supports, bracing, and accessories, engineered to support size, weight, width, operation, and design of gate and roller assemblies.

F. Slide Gate Hardware:

1. Hangers, Roller Assemblies, and Stops: Fabricated from [**galvanized steel**][**galvanized malleable iron**][**mill-finished Grade 319 aluminum-alloy casting with stainless steel fasteners**].
2. Latch: Permitting operation from both sides of gate[**with provision for padlocking accessible from both sides of gate**].
3. Lock: [**Manufacturer's standard**]<**Insert requirement**> internal device.

4. Padlock and Chain: <**Insert requirements**>.
5. <**Insert hardware items and accessories**>.

2.9 ACCESSORIES

A. Privacy Slats:

1. Fiber-Glass-Reinforced Plastic Slats: UV-light-stabilized fiber-glass-reinforced plastic, not less than **0.06 inch (1.5 mm)** thick, sized to fit mesh specified for direction indicated[**, with vandal-resistant fasteners and lock strips**].
2. Tubular Polyethylene Slats: Minimum **0.023-inch (0.58-mm)**-thick tubular polyethylene, manufactured for chain-link fences from virgin polyethylene with UV inhibitor, sized to fit mesh specified for direction indicated, with [**vandal-resistant fasteners and lock strips**][**fins for increased privacy factor**].
3. Aluminum Slats: Minimum **0.01-inch (0.25-mm)**-thick aluminum, sized to fit mesh specified for direction indicated.
4. Redwood Slats: **5/16-inch (7.9-mm)**-thick redwood, sized to fit mesh specified for direction indicated.
5. Hedge-Type Slats: UV-light-stabilized[**, flame-resistant**], PVC "needles" woven into braided, galvanized wire core, sized to fit mesh specified for direction indicated.
6. Color: [**As indicated by manufacturer's designations**][**Match Architect's samples**][**As selected by Architect from manufacturer's full range**][**As indicated on Drawings**]<**Insert color**>.

B. Barbed Wire:

1. Steel Barbed Wire: ASTM A121, two-strand barbed wire, **0.099-inch- (2.51-mm-)** diameter line wire with **0.080-inch- (2.03-mm-)** diameter, four-point round barbs spaced not more than **5 inches (127 mm)** o.c.

    a. Aluminum Coating: Type A.
    b. Zinc Coating: Type Z, Class 3.

2. Polymer-Coated, Galvanized-Steel Barbed Wire: ASTM F1665, two-strand barbed wire, **0.080-inch- (2.03-mm-)** diameter line wire with **0.080-inch- (2.03-mm-)** diameter, four-point, round [**aluminum alloy**][**galvanized-steel**] barbs spaced not more than **5 inches (127 mm)** o.c.

    a. Polymer Coating: [**Class 1**][**Class 2a**][**Class 2b**] over [**aluminum**][**zinc**][**Zn-5-Al-MM-alloy**]-coated steel wire.

        1) Color: [**Match chain-link fabric**][**Dark green**][**Olive green**][**Brown**][**Black**][**As selected by Architect from manufacturer's full range**] in accordance with ASTM F934.

3. Barbed Tape:

    a. Wire-Reinforced Tape: ASTM F1910; continuous coils with four-point, needle-sharp barbs permanently cold clenched around a core wire.
    b. Core Wire: High-tensile-strength, [**zinc-coated steel**][**or**][**stainless steel**].
    c. Configuration: [**Single**][**Double**] coil.
    d. Style: [**Helical**][**Concertina**] pattern.
    e. Coil Diameter(s): [**18-inch (457-mm)**][**24 inches (610 mm)**][**24-inch (610-mm) inner coil and 30-inch (762-mm) outer coil**][**As indicated on Drawings**]<**Insert diameter**>.
    f. Coil Loop Spacing(s): [**12 inches (300 mm)**][**Manufacturer's standard**][**As indicated on Drawings**]<**Insert spacing**>.

g. Barb Length Classification: [**Long, 1.2-inch (30.5-mm)**][**Medium, 0.4-inch (10.2-mm)**][**Short, 0.1875-inch (4.76-mm)**] barb.
h. Barb Spacing: [**4 inches (102 mm)**]<**Insert dimension**> o.c.
i. Barb Set: [**Straight**][**Offset**][**Manufacturer's standard**].

4. Clips: Stainless steel, **0.065 inch (1.7 mm)** thick by **0.375 inch (9.5 mm)** wide, capable of withstanding a minimum **150-lbf (667-N)** pull load to limit extension of coil, resulting in a concertina pattern when deployed.
5. Tie Wires: Stainless steel, **0.065 inch (1.7 mm)** in diameter.

C. Touch-up Paint: Liquid polymer for field coating with polymer coated fencing components as recommended by manufacturer.

2.10 GATE OPERATORS AND CONTROLS

A. Provide factory-assembled automatic operating system designed for [**pedestrian**][**and**][**vehicle**] gate size, type, weight, and operation frequency. Provide operation control system with characteristics suitable for Project conditions, with [**remote-control stations**], safety devices, and weatherproof enclosures; coordinate electrical requirements with building electrical system.

1. Provide operator designed so motor may be removed without disturbing limit-switch adjustment and without affecting auxiliary emergency operator.
2. Provide [**UL 325 listed operators for swing gates**][**BHMA A156.19 listed operators for pedestrian gates**][**ASTM F2200 for automated vehicular gates**].

B. Comply with NFPA 70.

C. Emergency Access Requirements: Comply with requirements of authorities having jurisdiction for automatic gate operators on gates that must provide emergency access.

D. Motor Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, within installed environment, with indicated operating sequence, and without exceeding nameplate rating or considering service factor. Comply with NEMA MG 1 and the following:

1. Voltage: [**110 V**][**220 V**][**24 V dc**][**NEMA standard voltage selected to operate on nominal circuit voltage to which motor is connected**]<**Insert voltage**>.
2. Phase: [**One**][**Polyphase**].
3. Enclosure: [**Open dripproof**][**Totally enclosed**][**Manufacturer's standard**].
4. Duty: Continuous duty at ambient temperature of **105 deg F (40 deg C)** and at altitude of **3300 ft. (1005 m)** above sea level.
5. Service Factor: 1.15 for open dripproof motors; 1.0 for totally enclosed motors.

E. Gate Operators: [**Gate**][**Concrete base**][**Post**][**In-ground**] mounted and as follows:

1. Hydraulic Gate Operators: [**Swing**][**Slide**].

a. Duty: [**Light**][**Medium**][**Heavy**] duty, [**residential**][**commercial/industrial**].
b. Gate Speed: Minimum [**45 feet (13.7 m)**][**60 feet (18.2 m)**] per minute.
c. Maximum Gate Weight: [**800 lb (363 kg)**]<**Insert value**>.
d. Frequency of Use: [**10 cycles per hour**][**25 cycles per hour**][**Continuous duty**].
e. Hydraulic Fluid: Viscosity required for gate operation at ambient temperature range for Project.
f. Locking: Hydraulic in both directions.

2. Mechanical Gate Operators: [**Swing**][**Slide**].

    a. Duty: [**Light**][**Medium**][**Heavy**] duty, [**residential**][**commercial/industrial**].
    b. Gate Speed: Minimum [**45 feet (13.7 m) per minute**][**60 feet (18.2 m) per minute**][**variable speed**]<**Insert speed**>.
    c. Maximum Gate Weight: [**600 lb (272 kg)**][**800 lb (363 kg)**][**3000 lb (1360 kg)**]<**Insert value**>.
    d. Frequency of Use: [**10 cycles per hour**][**25 cycles per hour**][**60 cycles per hour**][**Continuous duty**].
    e. Operating Type: [**Crank arm**][**Wheel-and-rail drive**][**Roller chain**].
    f. <**Insert feature**>.

F. Activation Controls: Electric controls separated from gate and motor and drive mechanism, with [**NEMA ICS 6, Type 1**][**NEMA ICS 6, Type 4**]<**Insert type of enclosure**> enclosure for [**surface**][**recessed or flush**][**concrete base**][**pedestal**]<**Insert mounting**> mounting, and with space for additional optional equipment. Provide the following remote-control device(s):

1. Control Station:

    a. Keyed, [**two**][**three**]-position switch with open[**, stop,**] and close function; located remotely from gate. Provide two keys per station.
    b. Momentary-contact, [**single**][**three**]-button-operated with open[**, stop,**] and close function; located remotely from gate.[**Key switch to lock out open and close buttons.**]
    c. <**Insert other type**>.

2. Card Reader: Functions only when authorized card is presented. Programmable, [**multiple**][**single**]-code system[**, permitting four different access periods**][**; face-lighted unit fully visible at night**].

    a. Reader Type: [**Touch plate**][**Swipe**][**Insertion**][**Proximity**].
    b. Card Reader Features:

        1) Usage Features: [**Timed antipassback**][**Limited-time usage**][**Capable of monitoring and auditing gate activity**].

3. <**Insert other reader type and features**>.
4. Digital Keypad Entry Unit: [**Programmable,**]multiple-code capability of not less than [**five**][**500**][**2500**]<**Insert number**> possible individual codes, consisting of [**1- to 7**][**4**][**5**]-digit codes[**, and permitting four different access periods**].
5. Face-lighted unit with [**metal-keyed**][**keyless-membrane**] keypad fully visible at night.
6. Radio Control: Digital system consisting of code-compatible universal receiver for each gate, located where indicated, with remote antenna with coaxial cable and mounting brackets designed to operate gates. Provide [**one**][**two**]<**Insert number**> programmable transmitter(s) with multiple-code capability permitting validating or voiding of not less than [**1000**][**10,000**]<**Insert number**> codes per channel configured for the following functions:

    a. Transmitters: [**Single**][**Three**]-button operated, with open [**and close**]function.
    b. Channel Settings: [**Two**][**Three**][**Four**]<**Insert number**> independent channel settings controlling separate receivers for operating more than one gate from each transmitter.

7. Telephone Entry System: Hands-free, voice-communication system for connection to building telephone system with digital-entry code activation of gate operator[**and auxiliary keypad entry**].

    a. Residential System: Designed to be wired to same line with telephone.
    b. Multiunit System: Designed to be wired to a dedicated telephone line, with capacity to

access [**20**][**100**]<**Insert number**> telephones[**, and with electronic directory**].
c. <**Insert other system type and features**>.
d. Intercom System: <**Insert requirements**>.

G. Vehicle Sensing System: System includes automatic closing timer with adjustable time delay[**, timer cutoff switch,**] and loop detector designed to [**open and close gate**][**hold gate open until traffic clears**][**reverse gate**]<**Insert functions**>. System includes electronic detector with adjustable detection patterns, adjustable sensitivity and frequency settings, and panel indicator light designed to detect presence or transit of a vehicle over an embedded loop of wire and to emit a signal activating the gate operator. System includes number of loops consisting of multiple strands of wire, number of turns, loop size, and method of placement, as recommended in writing by detection system manufacturer for function indicated, at location indicated on Drawings.

H. Obstruction Detection Devices: Provide each motorized gate with automatic safety sensor(s). Activation of sensor(s) causes operator to immediately function as follows:

1. Action: [**Reverse gate in both opening and closing cycles and hold until clear of obstruction**][**Stop gate in opening cycle and reverse gate in closing cycle and hold until clear of obstruction**].
2. Internal Sensor: Built-in torque or current monitor senses gate is obstructed.
3. Sensor Edge: Contact-pressure-sensitive safety edge, profile, and sensitivity designed for type of gate and component indicated, in locations as recommended by manufacturer.
4. Photoelectric/Infrared Sensor System: Designed to detect an obstruction in gate's path when infrared beam in the zone pattern is interrupted.

I. Emergency Release Mechanism: Quick-disconnect release of operator drive system of the following type, permitting manual operation if operator fails. Design system so control-circuit power is disconnected during manual operation.

1. Type: [**Integral fail-safe release, allowing gate to be pushed open without mechanical devices, keys, cranks, or special knowledge**][**Mechanical device, key, or crank-activated release**].

J. Operating Features:

1. Digital Microprocessor Control: Electronic programmable means for setting, changing, and adjusting control features[**with capability for monitoring and auditing gate activity**]. Provide unit that is isolated from voltage spikes and surges.
2. System Integration: With controlling circuit board capable of accepting any type of input from external devices.
3. Master/Slave Capability: Control stations designed and wired for gate pair operation.
4. Automatic Closing Timer: With adjustable time delay before closing[**and timer cutoff switch**].
5. Open Override Circuit: Designed to override closing commands.
6. Reversal Time Delay: Designed to protect gate system from shock load on reversal in both directions.
7. Maximum Run Timer: Designed to prevent damage to gate system by shutting down system if normal time to open gate is exceeded.
8. Clock Timer: [**24-hour**][**Seven-day**]<**Insert time**> programmable for regular events.

K. Accessories:

1. Warning Module: [**Audio**][**Visual**], [**constant**][**strobe**]-light alarm sounding three to five seconds in advance of gate operation and continuing until gate stops moving; compliant with the United States Access Board's ADA-ABA Accessibility Guidelines.
2. Battery Backup System: Battery-powered drive and access-control system, independent of

primary drive system.

a. Fail-Safe: Gate opens and remains open until power is restored.
b. Fail-Secure: Gate cycles on battery power, then fail-safe when battery is drained.

3. External electric-powered [**solenoid**][**magnetic**] lock with delay timer allowing time for lock to release before gate operates.
4. [**Fire**][**Postal**] box.
5. Fire [**strobe**][**siren**] sensor.
6. Instructional, Safety, and Warning Labels and Signs: [**In accordance with UL 325**][**Manufacturer's standard for components and features specified**][**As indicated on Drawings**]<**Insert requirements**>.
7. Equipment Bases/Pads: Precast concrete, [**depth not less than 12 inches (305 mm)**]<**Insert depth**>, dimensioned and reinforced in accordance with gate operator component manufacturer's written instructions and as indicated on Drawings.

2.11 GROUT AND ANCHORING CEMENT

A. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout, recommended in writing by manufacturer, for exterior applications.

B. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound. Provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating, and that is recommended in writing by manufacturer for exterior applications.

2.12 CONCRETE

A. Concrete Post Footings: Minimum 28-day compressive strength of **2500 psi (17.2 MPa)**.

2.13 GROUNDING MATERIALS

A. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

B. Connectors and Grounding Rods: Listed and labeled for complying with UL 467.

1. Connectors for Below-Grade Use: Exothermic welded type.
2. Grounding Rods: Copper-clad steel, **5/8 by 96 inches (16 by 2440 mm)**.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for[**a certified survey of property lines and legal boundaries,**] site clearing, earthwork, pavement work, and other conditions affecting performance of the Work.

1. Do not begin installation before final grading is completed unless otherwise permitted by

Architect.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Stake locations of fence lines, gates, and terminal posts. Do not exceed intervals of **500 feet (152 m)** or line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.

3.3 INSTALLATION OF CHAIN-LINK FENCES

A. Install chain-link fencing in accordance with ASTM F567 and more stringent requirements specified.

1. Install fencing on established boundary lines inside property line.

B. Post Excavation: Drill or hand-excavate holes for posts to diameters and spacings indicated, in firm, undisturbed soil.

C. Post Setting: Set posts [**in concrete**][**with mechanical anchors**][**by mechanically driving into soil**] at indicated spacing into firm, undisturbed soil.

1. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during setting with concrete or mechanical devices.
2. Concrete Fill: Place concrete around posts to dimensions indicated and vibrate or tamp for consolidation. Protect aboveground portion of posts from concrete splatter.

    a. Exposed Concrete: Extend **2 inches (50 mm)** above grade; shape and smooth to shed water.
    b. Concealed Concrete: Place top of concrete [**2 inches (50 mm)**]<**Insert dimension**> below grade [**as indicated on Drawings**]to allow covering with surface material.
    c. Posts Set into Sleeves in Concrete: Use steel pipe sleeves preset and anchored into concrete for installing posts. After posts are inserted into sleeves, fill annular space between post and sleeve with [**nonshrink, nonmetallic grout**][**or**][**anchoring cement**], mixed and placed in accordance with anchoring material manufacturer's written instructions. Finish anchorage joint to slope away from post to drain water.
    d. Posts Set into Holes in Concrete: Form or core drill holes not less than **5 inches (127 mm)** deep and **3/4 inch (20 mm)** larger than OD of post. Clean holes of loose material, insert posts, and fill annular space between post and concrete with [**nonshrink, nonmetallic grout**][**or**][**anchoring cement**], mixed and placed in accordance with anchoring material manufacturer's written instructions. Finish anchorage joint to slope away from post to drain water.

3. Mechanically Driven Posts: Drive into soil to depth of [**30 inches (762 mm)**][**36 inches (914 mm)**]<**Insert dimension**>. Protect post top to prevent distortion.

D. Terminal Posts: Install terminal end, corner, and gate posts in accordance with ASTM F567 and terminal pull posts at changes in horizontal or vertical alignment of [**15 degrees or more**][**30 degrees or more**][**as indicated on Drawings**]<**Insert requirement**>. For runs exceeding **500 feet (152 m)**, space pull posts an equal distance between corner or end posts.

E. Line Posts: Space line posts uniformly at [**96 inches (2440 mm)**][**10 feet (3 m)**]<**Insert dimension**> o.c.

F. Post Bracing and Intermediate Rails: Install in accordance with ASTM F567, maintaining plumb position and alignment of fence posts. Diagonally brace terminal posts to adjacent line posts with truss rods and turnbuckles. Install braces at end and gate posts and at both sides of corner and pull posts.

1. Locate horizontal braces at midheight of fabric **72 inches (1830 mm)** or higher, on fences with top rail, and at two-third fabric height on fences without top rail. Install so posts are plumb when diagonal rod is under proper tension.

G. Tension Wire: Install in accordance with ASTM F567, maintaining plumb position and alignment of fence posts. Pull wire taut, without sags. Fasten fabric to tension wire with **0.120-inch- (3.05-mm-)** diameter hog rings of same material and finish as fabric wire, spaced a maximum of **24 inches (610 mm)** o.c. Install tension wire in locations indicated before stretching fabric. Provide horizontal tension wire at the following locations:

1. Extended along [**top**][**and**][**bottom**] of fence fabric. Install top tension wire through post cap loops. Install bottom tension wire within **6 inches (152 mm)** of bottom of fabric and tie to each post with not less than same diameter and type of wire.
2. Extended along top of [**barbed wire arms**][**extended posts**] and top of fence fabric to support barbed tape.
3. [**As indicated on Drawings**]<**Insert requirements**>.

H. Top Rail: Install in accordance with ASTM F567, maintaining plumb position and alignment of fence posts. Run rail continuously through line post caps, bending to radius for curved runs and terminating into rail end attached to posts or post caps fabricated to receive rail at terminal posts. Provide expansion couplings as recommended in writing by fencing manufacturer.

I. Intermediate and Bottom Rails: Secure to posts with fittings.

J. Chain-Link Fabric: Apply fabric to [**outside**][**inside**] of enclosing framework. Leave [**1-inch (25-mm)**][**2-inch (50-mm)**] bottom clearance between finish grade or surface and bottom selvage unless otherwise indicated. Pull fabric taut and tie to posts, rails, and tension wires. Anchor to framework so fabric remains under tension after pulling force is released.

K. Tension or Stretcher Bars: Thread through fabric and secure to end, corner, pull, and gate posts, with tension bands spaced not more than **15 inches (380 mm)** o.c.

L. Tie Wires: Use wire of proper length to firmly secure fabric to line posts and rails. Attach wire at one end to chain-link fabric, wrap wire around post a minimum of 180 degrees, and attach other end to chain-link fabric in accordance with ASTM F626. Bend ends of wire to minimize hazard to individuals and clothing.

1. Maximum Spacing: Tie fabric to line posts at **12 inches (300 mm)** o.c. and to braces at **24 inches (610 mm)** o.c.

M. Fasteners: Install nuts for tension bands and carriage bolts on the side of fence opposite the fabric side.[**Peen ends of bolts or score threads to prevent removal of nuts.**]

N. Privacy Slats: Install slats in direction indicated, securely locked in place.

1. [**Vertically**][**Horizontally**][**, for privacy factor of 70 to 75**]<**Insert privacy factor range**>.
2. Diagonally[**for privacy factor of 80 to 85**]<**Insert privacy factor range**>.
3. Direction[**and privacy factor**] as indicated on Drawings.

O. Barbed Wire: Install barbed wire uniformly spaced[**, angled toward security side of fence**][**as indicated on Drawings**]. Pull wire taut, install securely to extension arms, and secure to end post or terminal arms.

P. Barbed Tape: Install in accordance with ASTM F1911. Install barbed tape uniformly in configurations indicated and fasten securely to prevent movement or displacement.

3.4 INSTALLATION OF GATES

A. Install gates in accordance with manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach fabric as for fencing. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation.

3.5 INSTALLATION OF GATE OPERATORS

A. Install gate operators in accordance with manufacturer's written instructions, aligned and true to fence line and grade.

B. Excavation: Hand-excavate holes for posts, pedestals, and equipment bases/pads, in firm, undisturbed soil to dimensions and depths and at locations in accordance with gate-operator component manufacturer's written instructions and as indicated.

C. Vehicle Loop Detector System: [**Cut grooves in pavement, bury, and seal**][**Bury**] wire loop in accordance with manufacturer's written instructions. Connect to equipment operated by detector.

D. Ground electric-powered motors, controls, and other devices in accordance with NFPA 70 and manufacturer's written instructions.

3.6 GROUNDING AND BONDING

A. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

B. Fence and Gate Grounding:

1. Ground for fence and fence posts is to be a separate system from ground for gate and gate posts.
2. Install ground rods and connections at maximum intervals of [**1500 feet (450 m)**]<**Insert dimension**>.
3. Fences within 100 ft. (30 m) of Buildings, Structures, Walkways, and Roadways: Ground at maximum intervals of [**750 ft. (225 m)**]<**Insert dimension**>.
4. Ground fence on each side of gates and other fence openings.

    a. Bond metal gates to gate posts.
    b. Bond across openings, with and without gates, except openings indicated as intentional fence discontinuities. Use No. 2 AWG wire and bury it at least **18 inches (457 mm)** below finished grade.

C. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of crossing and at a ground rod located a maximum distance of **150 feet (45 m)** on each side of crossing.

D. Fences Enclosing Electrical Power Distribution Equipment: Ground in accordance with IEEE C2 unless otherwise indicated.

E. Grounding Method: At each grounding location, drive a grounding rod vertically until the top is **6 inches**

(152 mm) below finished grade. Connect rod to fence with No. 6 AWG conductor. Connect conductor to each fence component at grounding location.

1. Make grounding connections to each barbed wire strand with wire-to-wire connectors designed for this purpose.
2. Make grounding connections to each barbed tape coil with connectors designed for this purpose.

F. Connections:

1. Make connections with clean, bare metal at points of contact.
2. Make aluminum-to-steel connections with stainless steel separators and mechanical clamps.
3. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
4. Make above-grade ground connections with mechanical fasteners.
5. Make below-grade ground connections with exothermic welds.
6. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.

G. Bonding to Lightning Protection System: Ground fence and bond fence grounding conductor to lightning protection down conductor or lightning protection grounding conductor in accordance with NFPA 780.

H. Comply with requirements in Section 264113 "Lightning Protection for Structures."

3.7 FIELD QUALITY CONTROL

A. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests.

B. Grounding Tests: Comply with requirements in Section 264113 "Lightning Protection for Structures."

C. Prepare test reports.

3.8 ADJUSTING

A. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.

B. Automatic Gate Operator: Energize circuits to electrical equipment and devices, start units, and verify proper motor rotation and unit operation.

1. Hydraulic Operator: Purge operating system, adjust pressure and fluid levels, and check for leaks.
2. Test and adjust operators, controls**[, alarms,]** and safety devices. Replace damaged and malfunctioning controls and equipment.
3. Lubricate operator and related components.

C. Lubricate hardware and other moving parts.

3.9 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain chain-link fences and gates.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 23 19 00 - DEWATERING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Construction dewatering.

B. Related Requirements:

1. Section 013233 "Photographic Documentation" for recording preexisting conditions and dewatering system progress.
2. Section 015723 "Temporary Storm Water Pollution Control" for temporary storm water pollution controls mandated under the EPA's National Pollutant Discharge Elimination System.
3. Section 312000 "Earth Moving" for excavating, backfilling, site grading, and controlling surface-water runoff and ponding.

1.2 ALLOWANCES

A. See Section 012100 "Allowances" for description of allowances affecting items specified in this Section.

1. Dewatering observation wells are part of [**dewatering**]<**Insert description**> allowance.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1. Verify availability of Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
2. Review condition of site to be dewatered, including coordination with temporary erosion-control measures and temporary controls and protections.
3. Review geotechnical report.
4. Review proposed site clearing and excavations.
5. Review existing utilities and subsurface conditions.
6. Review observation and monitoring of dewatering system.

1.4 ACTION SUBMITTALS

A. Shop Drawings: For dewatering system, prepared by or under the supervision of a qualified professional engineer.

1. Include plans, elevations, sections, and details.
2. Show arrangement, locations, and details of wells and well points; locations of risers, headers, filters, pumps, power units, and discharge lines; and means of discharge, control of sediment, and disposal of water.
3. Include layouts of piezometers and flow-measuring devices for monitoring performance of dewatering system.

4. Include written plan for dewatering operations, including sequence of well and well-point placement coordinated with excavation shoring and bracings and control procedures to be adopted if dewatering problems arise.

B. Delegated Design Submittals: For dewatering system, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Field Quality-Control Submittals:

1. Field quality-control reports.

B. Qualification Statements: For [**Installer**][**and**][**land surveyor**]<**Insert entity or specialist**>.

C. Delegated design engineer qualifications.

D. Existing Conditions: Using [**photographs**][**or**][**video recordings**], show existing conditions of adjacent construction and site improvements that might be misconstrued as damage caused by dewatering operations. Submit before Work begins.

E. Record Drawings: Identify locations and depths of capped wells and well points and other abandoned-in-place dewatering equipment.

1.6 QUALITY ASSURANCE

A. Qualifications:

1. Installer: An experienced installer that has specialized in [**design of dewatering systems and**]dewatering work.
2. Delegated Design Engineer: A professional engineer who is legally qualified to practice in [**state**]<**Insert jurisdiction**> where Project is located and who is experienced in providing engineering services of the type indicated.
3. Land Surveyor: A professional land surveyor who is legally qualified to practice in [**state**]<**Insert jurisdiction**> where Project is located.

1.7 FIELD CONDITIONS

A. Project-Site Information: A geotechnical report has been prepared for this Project and is available for information only. The opinions expressed in this report are those of a geotechnical engineer and represent interpretations of subsoil conditions, tests, and results of analyses conducted by a geotechnical engineer. Owner is not responsible for interpretations or conclusions drawn from this data.

1. Make additional test borings and conduct other exploratory operations necessary for dewatering in accordance with the performance requirements.
2. The geotechnical report is [**included**][**referenced**] elsewhere in Project Manual.

B. Survey Work: Engage a qualified land surveyor or professional engineer to survey adjacent existing buildings, structures, and site improvements; establish exact elevations at fixed points to act as benchmarks. Clearly identify benchmarks and record existing elevations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design dewatering system.

B. Dewatering Performance: Design, furnish, install, test, operate, monitor, and maintain dewatering system of sufficient scope, size, and capacity to control hydrostatic pressures and to lower, control, remove, and dispose of groundwater and permit excavation and construction to proceed on dry, stable subgrades.

1. Design dewatering system, including comprehensive engineering analysis by a qualified professional engineer.
2. Continuously monitor and maintain dewatering operations to ensure erosion control, stability of excavations and constructed slopes, prevention of flooding in excavation, and prevention of damage to subgrades and permanent structures.
3. Prevent surface water from entering excavations by grading, dikes, or other means.
4. Accomplish dewatering without damaging existing buildings, structures, and site improvements adjacent to excavation.
5. Remove dewatering system when no longer required for construction.

C. Regulatory Requirements: Comply with governing EPA notification regulations before beginning dewatering. Comply with water- and debris-disposal regulations of authorities having jurisdiction.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by dewatering operations.

1. Prevent surface water and subsurface or groundwater from entering excavations, from ponding on prepared subgrades, and from flooding site or surrounding area.
2. Protect subgrades and foundation soils from softening and damage by rain or water accumulation.

B. Install dewatering system to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.

C. Provide temporary grading to facilitate dewatering and control of surface water.

D. Protect and maintain temporary erosion and sedimentation controls, which are specified in [**Section 015000 "Temporary Facilities and Controls,"**][**Section 015723 "Temporary Storm Water Pollution Control"**][**Section 311000 "Site Clearing,"**] during dewatering operations.

3.2 INSTALLATION

A. Install dewatering system utilizing wells, well points, or similar methods complete with pump equipment, standby power and pumps, filter material gradation, valves, appurtenances, water disposal, and surface-water controls.

1. Space well points or wells at intervals required to provide sufficient dewatering.
2. Use filters or other means to prevent pumping of fine sands or silts from the subsurface.

B. Place dewatering system into operation to lower water to specified levels before excavating below groundwater level.

C. Provide sumps, sedimentation tanks, and other flow-control devices as required by authorities having jurisdiction.

D. Provide standby equipment on-site, installed and available for immediate operation, to maintain dewatering on continuous basis if any part of system becomes inadequate or fails.

3.3 OPERATION

A. Operate system continuously until drains, sewers, and structures have been constructed and fill materials have been placed or until dewatering is no longer required.

B. Operate system to lower and control groundwater to permit excavation, construction of structures, and placement of fill materials on dry subgrades. Drain water-bearing strata above and below bottom of foundations, drains, sewers, and other excavations.

1. Do not permit open-sump pumping that leads to loss of fines, soil piping, subgrade softening, and slope instability.
2. Reduce hydrostatic head in water-bearing strata below subgrade elevations of foundations, drains, sewers, and other excavations.
3. Maintain piezometric water level a minimum of [**24 inches (600 mm)**][**60 inches (1500 mm)**]<**Insert dimension**> below bottom of excavation.

C. Dispose of water removed by dewatering in a manner that avoids endangering public health, property, and portions of work under construction or completed. Dispose of water and sediment in a manner that avoids inconvenience to others.

D. Remove dewatering system from Project site on completion of dewatering. Plug or fill well holes with sand or cut off and cap wells a minimum of **36 inches (900 mm)** below overlying construction.

3.4 FIELD QUALITY CONTROL

A. Observation Wells: Provide observation wells or piezometers, take measurements, and maintain at least the minimum number indicated; additional observation wells may be required by authorities having jurisdiction.

1. Observe and record daily elevation of groundwater and piezometric water levels in observation wells.
2. Repair or replace, within 24 hours, observation wells that become inactive, damaged, or destroyed. In areas where observation wells are not functioning properly, suspend construction activities until reliable observations can be made. Add or remove water from observation-well

risers to demonstrate that observation wells are functioning properly.

3. Fill observation wells, remove piezometers, and fill holes when dewatering is completed.

B. Survey-Work Benchmarks: Resurvey benchmarks [**regularly**][**monthly**]<**Insert time period**> during dewatering and maintain an accurate log of surveyed elevations for comparison with original elevations. Promptly notify Architect if changes in elevations occur or if cracks, sags, or other damage is evident in adjacent construction.

C. Provide continual observation to ensure that subsurface soils are not being removed by the dewatering operation.

D. Prepare reports of observations.

3.5 PROTECTION

A. Protect and maintain dewatering system during dewatering operations.

B. Promptly repair damages to adjacent facilities caused by dewatering.

SECTION 31 24 13 00 - LEVEE CLOSURE

1.1 GENERAL

A. Description Of Work
   1. This specification covers the furnishing of labor and materials for providing levee closures.

1.2 PRODUCTS - (Not Used)

1.3 EXECUTION

A. If there is deemed, by the Owner, to be considerable risk of flooding involved with removing drainage structures and gates in the existing Levee System, the Contractor shall perform the work of this contract as follows:
   1. Only one drainage structure/flap gate will be allowed to be disrupted at one time. All proposed work at each drainage structure shall be completed before proceeding to the next structure.
   2. The Contractor shall have all materials required for each structure installation secured on site, before beginning construction on that structure.
   3. The Contractor shall have all necessary materials on site to temporarily plug existing and/or proposed piping through the levee.
   4. Weather and river flow conditions shall be monitored at all times by the Contractor while each drainage structure is open to flow. The Contractor shall construct an adequate closure in a timely fashion to plug the drainage structure preventing flow through the levee.

SECTION 31 31 16 00 - TERMITE CONTROL

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Soil treatment.
2. Wood treatment.
3. Bait-station system.
4. Metal mesh barrier system.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood preservative treatment by pressure process.
2. Section 076200 "Sheet Metal Flashing and Trim" for custom-fabricated, metal termite shields.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components, and profiles for termite control products.
2. Include the EPA-Registered Label for termiticide products.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Product Certificates: For each type of termite control product.

C. Soil Treatment Application Report: After application of termiticide is completed, submit report for Owner's records and include the following:

1. Date and time of application.
2. Moisture content of soil before application.
3. Termiticide brand name and manufacturer.
4. Quantity of undiluted termiticide used.
5. Dilutions, methods, volumes used, and rates of application.
6. Areas of application.
7. Water source for application.

D. Wood Treatment Application Report: After application of termiticide is completed, submit report for Owner's records and include the following:

1. Date and time of application.
2. Termiticide brand name and manufacturer.
3. Quantity of undiluted termiticide used.
4. Dilutions, methods, volumes used, and rates of application.
5. Areas of application.

E. Bait-Station System Installation Report: After installation of bait-station system is completed, submit report for Owner's records and include the following:

1. Location of areas and sites conducive to termite feeding and activity.
2. Plan drawing showing number and locations of bait stations.
3. Dated report for each monitoring and inspection occurrence, indicating level of termite activity, procedure, and treatment applied before time of Substantial Completion.
4. Termiticide brand name and manufacturer.
5. Quantities of [**termiticide**][**and**][**nontoxic termite bait**] used.
6. Schedule of inspections for one year from date of Substantial Completion.

F. Research/Evaluation Reports: For metal mesh barrier system, from <**Insert applicable model code organization**>.

G. Sample Warranties: For special warranties.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: A specialist who is licensed according to regulations of authorities having jurisdiction to apply termite control treatment and products in jurisdiction where Project is located[**and who employs workers trained and approved by manufacturer to install manufacturer's products**][**and who is accredited by manufacturer**].

1.6 FIELD CONDITIONS

A. Soil Treatment:

1. Environmental Limitations: To ensure penetration, do not treat soil that is water saturated or frozen. Do not treat soil while precipitation is occurring. Comply with requirements of the EPA-Registered Label and requirements of authorities having jurisdiction.
2. Related Work: Coordinate soil treatment application with excavating, filling, grading, and concreting operations. Treat soil under footings, grade beams, and ground-supported slabs before construction.

1.7 WARRANTY

A. Soil Treatment Special Warranty: Manufacturer's standard form, signed by Applicator and Contractor, certifying that termite control work consisting of applied soil termiticide treatment will prevent infestation of subterranean termites[**, including Formosan termites (Coptotermes formosanus)**]<**Insert requirement**>. If subterranean termite activity or damage is discovered during warranty period, re-treat soil and repair or replace damage caused by termite infestation.

1. Warranty Period: [**Three**][**Five**]<**Insert number**> years from date of Substantial Completion.

B. Wood Treatment Special Warranty: Manufacturer's standard form, signed by Applicator and Contractor,

certifying that termite control work consisting of applied wood termiticide treatment will prevent infestation of subterranean termites[**, including Formosan termites (Coptotermes formosanus)**]<**Insert requirement**>. If subterranean termite damage is discovered during warranty period, repair or replace damage caused by termite infestation and treat replacement wood.

1. Warranty Period: [**12**]<**Insert number**> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

A. Obtain termite control products from single source[**from single manufacturer**].

2.2 SOIL TREATMENT

A. Termiticide: EPA-Registered termiticide acceptable to authorities having jurisdiction, in an aqueous solution formulated to prevent termite infestation.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Bayer Environmental Science**]
    b. [**Ensystex, Inc**]
    c. [**Syngenta Crop Protection, LLC**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Bayer Environmental Science**]
    b. [**Ensystex, Inc**]
    c. [**Syngenta Crop Protection, LLC**]
    d. <**Insert manufacturer's name**>

3. Service Life of Treatment: Soil treatment termiticide that is effective for not less than [**three**][**five**]<**Insert number**> years against infestation of subterranean termites.

2.3 WOOD TREATMENT

A. Borate: EPA-Registered borate termiticide acceptable to authorities having jurisdiction, in an aqueous solution for spray application and a gel solution for pressure injection, formulated to prevent termite infestation in wood.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Ensystex, Inc**]
b. [**Nisus Corporation**]
c. [**NovaGuard Technologies, Inc**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Ensystex, Inc**]
b. [**Nisus Corporation**]
c. [**NovaGuard Technologies, Inc**]
d. <**Insert manufacturer's name**>

2.4 BAIT-STATION SYSTEM

A. Bait-Station System: EPA-Registered system acceptable to authorities having jurisdiction. Provide bait stations based on the dimensions of building perimeter indicated on Drawings, according to product's EPA-Registered Label and manufacturer's written instructions.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Ensystex, Inc**]
b. [**The Dow Chemical Company**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Ensystex, Inc**]
b. [**The Dow Chemical Company**]
c. <**Insert manufacturer's name**>

2.5 METAL MESH BARRIER SYSTEM

A. Stainless-Steel Mesh Barrier System: **0.025-by-0.018-inch (0.64-by-0.45-mm)** mesh of **0.08-inch- (2.0-mm-)** diameter, stainless-steel wire, Type 316.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Termimesh, LLC**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Termimesh, LLC**]
b. <**Insert manufacturer's name**>

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements for[**moisture content of soil per termiticide label,**] interfaces with earthwork, slab and foundation work, landscaping, utility installation, and other conditions affecting performance of termite control.

B. Proceed with application only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General: Prepare work areas according to the requirements of authorities having jurisdiction and according to manufacturer's written instructions before beginning application and installation of termite control treatment(s). Remove extraneous sources of wood cellulose and other edible materials, such as wood debris, tree stumps and roots, stakes, formwork, and construction waste wood from soil within and around foundations.

B. Soil Treatment Preparation: Remove foreign matter and impermeable soil materials that could decrease treatment effectiveness on areas to be treated. Loosen, rake, and level soil to be treated, except previously compacted areas under slabs and footings. Termiticides may be applied before placing compacted fill under slabs if recommended in writing by termiticide manufacturer.

1. Fit filling hose connected to water source at the site with a backflow preventer, according to requirements of authorities having jurisdiction.

3.3 APPLYING SOIL TREATMENT

A. Application: Mix soil treatment termiticide solution to a uniform consistency. Distribute treatment uniformly. Apply treatment at the product's EPA-Registered Label volume and rate for maximum specified concentration of termiticide to the following so that a continuous horizontal and vertical termiticidal barrier or treated zone is established around and under building construction.

1. Slabs-on-Grade and Basement Slabs: Under ground-supported slab construction, including footings, building slabs, and attached slabs as an overall treatment. Treat soil materials before concrete footings and slabs are placed.
2. Foundations: Soil adjacent to and along the entire inside perimeter of foundation walls; along both sides of interior partition walls; around plumbing pipes and electric conduit penetrating the slab; around interior column footers, piers, and chimney bases; and along the entire outside perimeter, from grade to bottom of footing.
3. Crawlspaces: Soil under and adjacent to foundations. Treat adjacent areas, including around entrance platform, porches, and equipment bases. Apply overall treatment only where attached concrete platform and porches are on fill or ground.
4. Masonry: Treat voids.
5. Penetrations: At expansion joints, control joints, and areas where slabs and below-grade walls will be penetrated.

B. Post warning signs in areas of application.

C. Reapply soil treatment solution to areas disturbed by subsequent excavation, grading, landscaping, or other construction activities following application.

3.4 APPLYING WOOD TREATMENT

A. Wood Treatment: Apply wood treatment after framing, sheathing, and exterior weather protection is completed but before electrical and mechanical systems are installed.

B. Application: Mix borate wood treatment solution to a uniform consistency. Apply treatment at the product's EPA-Registered Label volume and rate for the maximum borate concentration allowed for each specific use so that wood framing, sheathing, siding, and structural members subject to infestation receive treatment.[**Apply treatment to the height of 8 feet (244 mm) above grade**]<**Insert requirement**>.

1. Framing and Sheathing: Apply termiticide solution by spray to bare wood and with complete coverage.
2. Heavy Wood Members: For wood greater than **4 inches (100 mm)** thick, inject termiticide gel solution under pressure into holes of size and spacing required by manufacturer for treatment.
3. Exterior Uncoated Wood Trim and Siding: Apply termiticide solution to bare wood only when forecasted weather conditions indicate no precipitation or fog before application of seal coat. After 48 hours, verify that surface is sufficiently dry for seal coat and apply seal coat of [**paint**]<**Insert coating**> as specified in [**Section 099113 "Exterior Painting."**]<**Insert Section title**>.

3.5 INSTALLING BAIT-STATION SYSTEM

A. Bait-Station System: Install [**during construction to determine areas of termite activity**][**and**][**after construction, including landscaping, is completed**].

B. Place bait stations according to product's EPA-Registered Label and manufacturer's written instructions, in the following locations:

1. Conducive sites and locations indicated on Drawings.
2. In and around infested trees and stumps.
3. In mulch beds.
4. Where wood directly contacts soil.
5. Areas of high soil moisture.
6. Near irrigation sprinkler heads.
7. Each area where roof drainage system, including downspouts and scuppers, drains to soil.
8. Along driplines of roof overhangs without gutters.
9. Where condensate lines from mechanical equipment drip or drain to soil.
10. At plumbing penetrations through ground-supported slabs.
11. Other sites and locations as determined by licensed Installer.

C. Spacing: Place bait stations according to manufacturer's written instructions and at a frequency no less than the following:

1. One bait station per [**8 linear feet (2.4 linear meters)**][**20 linear feet (6.1 linear meters)**]<**Insert value**>.
2. One cluster of bait stations per **20 linear feet (6.1 linear meters)**, with no fewer than three bait stations per cluster.

3.6 INSTALLING METAL MESH BARRIER SYSTEM

A. Install metal mesh barrier system to provide a continuous barrier to entry of subterranean termites, according to manufacturer's written instructions.

1. Fit mesh tightly around pipes and other penetrations and terminate at slab and foundation perimeters.
2. Install mesh under the perimeter of concrete slab edges and joints after vapor retarder and reinforcing steel are in place.

3.7 PROTECTION

A. Avoid disturbance of treated soil after application. Keep off treated areas until completely dry.

B. Protect termiticide solution dispersed in treated soils and fills from being diluted by exposure to water spillage or weather until ground-supported slabs are installed. Use waterproof barrier according to EPA-Registered Label instructions.

3.8 MAINTENANCE SERVICE

A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include [**three**][**six**][**nine**][**12**] months' full maintenance by[**skilled employees of termite-control-treatment Installer**][**manufacturer's authorized service representative**]. Include [**monthly**][**quarterly**][**semiannual**][**annual**] maintenance as required for proper performance according to the product's EPA-Registered Label and manufacturer's written instructions. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

B. Continuing Maintenance Proposal: Provide from termite-control-treatment Installer to Owner, in the form of a standard yearly (or other period) maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1. Include [**annual**]<**Insert time period**> inspection for termite activity and effectiveness of termite treatment according to manufacturer's written instructions.

SECTION 31 32 19 16 - POND AND RESERVOIR LINERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes geomembrane liners[**and floating covers**] for ponds and reservoirs fabricated from the following:

1. Linear low-density polyethylene (LLDPE).
2. High-density polyethylene (HDPE).
3. Polypropylene (PP).
4. Ethylene-propylene-diene monomer (EPDM).
5. Polyvinyl chloride (PVC).
6. Ethylene interpolymer alloy (EIA).
7. Chlorosulfonated polyethylene (CSPE).

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for perimeter concrete.
2. Section 221429 "Sump Pumps" for drainage of floating covers.
3. Section 312000 "Earth Moving" for excavating, compacting, and grading the subgrade; for excavating and backfilling the anchor trench; for protecting the earthwork; for removing ground water from subgrade to the extent required by liner manufacturer; for adding requirements for the earth cover; and for the filter fabric and other geotextiles.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, and accessories for geomembrane liners[**and floating covers**].

B. Shop Drawings: Include panel layout, seams, penetrations, perimeter anchorage, and methods of attachment and sealing to other construction. Differentiate between factory and field seams and joints.

C. Samples: For each exposed product and for each color specified. Include one **12-inch (300-mm)** seam length for factory-bonded sheets and one **12-inch (300-mm)** seam length for field-bonded sheets.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Certificates: For each type of geomembrane liner[**and floating cover**].

C. Product Test Reports: For each geomembrane sheet, for tests performed by a qualified testing agency.

D. Source quality-control reports.

E. Field quality-control reports.

F. Sample Warranty: For manufacturer's special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For geomembrane liner[**and floating cover**] to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: [**Fabricator of products**][**An entity that employs installers and supervisors who are trained and approved by manufacturer**].

1.7 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace geomembrane liner[**and floating cover**] that fail(s) in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Leaks in geomembrane liner[**and floating cover**].
b. Defects in seams.
c. Cracks and holes in floating cover.

2. Warranty Period: [**One**][**Five**][**10**]<**Insert number**> year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

A. Obtain geomembrane liner[**and floating cover**], accessories, and required seaming materials, solvents, and adhesives from single source.

2.2 PERFORMANCE REQUIREMENTS

A. Provide geomembrane liners[**and floating covers**] that prevent the passage of water[**and gas**].

2.3 LLDPE SHEET MATERIALS

A. LLDPE Sheet: Formulated from virgin PE, compounded for use in hydraulic structures, and formed into uniform sheets with material properties complying with [**GRI Test Method GM17, non-reinforced,**][**GRI Test Method GM25, reinforced,**] for thickness indicated.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Agru America, Inc**]
    b. [**In Line Plastics, LC**]
    c. [**Integra Plastics, Inc**]
    d. [**Layfield Environmental Containment; Layfield Group Limited**]
    e. [**Poly-Flex, Inc**]
    f. [**Solmax International Inc.**]
    g. [**Viaflex**]
    h. [**Watersaver Company, Inc**]
    i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Agru America, Inc**]
    b. [**In Line Plastics, LC**]
    c. [**Integra Plastics, Inc**]
    d. [**Layfield Environmental Containment; Layfield Group Limited**]
    e. [**Poly-Flex, Inc**]
    f. [**Solmax International Inc.**]
    g. [**Viaflex**]
    h. [**Watersaver Company, Inc**]
    i. <**Insert manufacturer's name**>

3. Minimum Average Sheet Thickness: [**20 mils (0.50 mm)**][**30 mils (0.75 mm)**][**40 mils (1.00 mm)**][**50 mils (1.25 mm)**][**60 mils (1.50 mm)**][**80 mils (2.00 mm)**][**100 mils (2.50 mm)**][**120 mils (3.00 mm)**]<**Insert dimension**> per ASTM D5199.
4. Nominal Sheet Thickness: [**24 mils (0.61 mm)**][**36 mils (0.91 mm)**][**45 mils (1.10 mm)**]<**Insert dimension**> per ASTM D5199.
5. Sheet Texture: One side smooth; other side [**smooth**][**textured**].

2.4 HDPE SHEET MATERIALS

A. HDPE Sheet: Formulated from virgin PE, compounded for use in hydraulic structures, and formed into uniform sheets with material properties complying with GRI Test Method GM13 for thickness indicated.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Agru America, Inc**]
    b. [**In Line Plastics, LC**]
    c. [**Integra Plastics, Inc**]
    d. [**Layfield Environmental Containment; Layfield Group Limited**]
    e. [**Plastic Fusion Fabricators, Inc**]
    f. [**Poly-Flex, Inc**]
    g. [**Solmax International Inc.**]
    h. [**Viaflex**]
    i. [**Yunker Plastics, Inc.**]

j. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

   a. **[Agru America, Inc]**
   b. **[In Line Plastics, LC]**
   c. **[Integra Plastics, Inc]**
   d. **[Layfield Environmental Containment; Layfield Group Limited]**
   e. **[Plastic Fusion Fabricators, Inc]**
   f. **[Poly-Flex, Inc]**
   g. **[Solmax International Inc.]**
   h. **[Viaflex]**
   i. **[Yunker Plastics, Inc.]**
   j. **<Insert manufacturer's name>**

3. Minimum Average Sheet Thickness: **[30 mils (0.75 mm)][40 mils (1.00 mm)][50 mils (1.25 mm)][60 mils (1.50 mm)][80 mils (2.00 mm)][100 mils (2.50 mm)][120 mils (3.00 mm)]<Insert dimension>** per ASTM D5199.
4. Sheet Texture: One side smooth; other side **[smooth][textured]**.

2.5 PP SHEET MATERIALS

A. PP Sheet: Formulated from virgin PP, compounded for use in hydraulic structures, and formed into uniform, flexible **[non-reinforced][reinforced]** sheets with material properties complying with GRI Test Method GM18 for thickness indicated.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

   a. **[Carlisle Syntec Systems]**
   b. **[Cooley Group]**
   c. **[Elevate; Holcim Building Envelope]**
   d. **[Environmental Protection, Inc]**
   e. **[EVOQUA Water Technologies]**
   f. **[Integra Plastics, Inc]**
   g. **[Layfield Environmental Containment; Layfield Group Limited]**
   h. **[Viaflex]**
   i. **[Watersaver Company, Inc]**
   j. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

   a. **[Carlisle Syntec Systems]**
   b. **[Cooley Group]**
   c. **[Elevate; Holcim Building Envelope]**
   d. **[Environmental Protection, Inc]**
   e. **[EVOQUA Water Technologies]**
   f. **[Integra Plastics, Inc]**

g. [**Layfield Environmental Containment; Layfield Group Limited**]
h. [**Viaflex**]
i. [**Watersaver Company, Inc**]
j. <**Insert manufacturer's name**>

3. Minimum Average Sheet Thickness: [**30 mils (0.75 mm)**][**40 mils (1.00 mm)**][**60 mils (1.50 mm)**][**36 mils (0.91 mm)**][**45 mils (1.10 mm)**]<**Insert dimension**> per ASTM D5199.
4. Reinforcing Scrim: One-ply polyester fabric totally encapsulated between two sheets.

a. Construction: [**9 x 9 - 1000 d**][**10 x 10 - 1000 d**]<**Insert value(s)**>.

5. Sheet Texture: One side smooth; other side [**smooth**][**textured**].

2.6 EPDM SHEET MATERIALS

A. EPDM Sheet: Formulated from EPDM, compounded for use in hydraulic structures and formed into uniform, flexible [**non-reinforced**][**reinforced**] sheets with material properties complying with GRI Test Method GM21 for nominal thickness indicated.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Carlisle Syntec Systems**]
b. [**Elevate; Holcim Building Envelope**]
c. [**Layfield Environmental Containment; Layfield Group Limited**]
d. [**Watersaver Company, Inc**]
e. [**Yunker Plastics, Inc.**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Carlisle Syntec Systems**]
b. [**Elevate; Holcim Building Envelope**]
c. [**Layfield Environmental Containment; Layfield Group Limited**]
d. [**Watersaver Company, Inc**]
e. [**Yunker Plastics, Inc.**]
f. <**Insert manufacturer's name**>

3. Minimum Average Sheet Thickness: [**45 mils (1.10 mm)**][**60 mils (1.50 mm)**]<**Insert dimension**> per ASTM D5199.
4. Reinforcing Scrim: One-ply polyester fabric totally encapsulated between two sheets.

a. Construction: [**9 x 9 - 1000 d**][**10 x 10 - 1000 d**]<**Insert value(s)**>.

2.7 PVC SHEET MATERIALS

A. PVC Sheet: Formulated from virgin PVC with plasticizers and other modifiers, compounded for use in hydraulic structures, and formed into uniform, flexible non-reinforced sheets with material properties complying with [**ASTM D7176**][**PGI 1104, "Specification for PVC Geomembranes,"**] for nominal thickness indicated.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Environmental Protection, Inc**]
    b. [**Solmax International Inc.**]
    c. [**Watersaver Company, Inc**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Environmental Protection, Inc**]
    b. [**Solmax International Inc.**]
    c. [**Watersaver Company, Inc**]
    d. <**Insert manufacturer's name**>

3. Nominal Thickness: [**10 mils (0.25 mm)**][**20 mils (0.51 mm)**][**30 mils (0.76 mm)**][**40 mils (1.02 mm)**][**50 mils (1.3 mm)**][**60 mils (1.5 mm)**].
4. Sheet Texture: One side smooth; other side [**smooth**][**matte**][**faille textured**].

2.8 EIA SHEET MATERIALS

A. EIA Sheet: Formulated from EIA for use in hydraulic structures and formed into uniform, flexible reinforced sheets.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Burke Industries, Inc.**]
    b. [**Cooley Group**]
    c. [**EVOQUA Water Technologies**]
    d. [**Integra Plastics, Inc**]
    e. [**Seaman Corporation**]
    f. [**Watersaver Company, Inc**]
    g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Burke Industries, Inc.**]
    b. [**Cooley Group**]
    c. [**EVOQUA Water Technologies**]
    d. [**Integra Plastics, Inc**]
    e. [**Seaman Corporation**]
    f. [**Watersaver Company, Inc**]
    g. <**Insert manufacturer's name**>

3. Reinforcing Scrim: One-ply polyester fabric totally encapsulated between two sheets.

a. Construction: [**6 x 6 - 1000 d**][**8 x 8 - 500 d**][**10 x 10 - 1000 d**][**10 x 11 - 2520 d x 2000 d**]<**Insert value(s)**>.

4. Nominal Thickness: [**36-mil- (0.91-mm-)**]<**Insert dimension**> thick sheet per ASTM D1593 or ASTM D751, Optical Method.
5. Tensile Strength: Not less than [**400 lbf (1.8 kN)**]<**Insert value**> minimum average per ASTM D751, Procedure A.
6. Tear Strength: Not less than [**35 lbf (0.16 kN)**]<**Insert value**> minimum average per ASTM D5884 or ASTM D751, Procedure B.
7. Puncture Resistance: Not less than [**150 lbf (0.67 kN)**]<**Insert value**> minimum average per ASTM D4833.
8. Hydrostatic Resistance: Not less than [**100-psi (690-kPa)**]<**Insert value**> minimum average resistance per ASTM D751, Procedure A.
9. Dimensional Stability, Reinforced Sheet: Not more than plus or minus 2 percent per ASTM D1204.
10. Low-Temperature Flexibility: Pass, **1/8-inch (3-mm)** mandrel, four hours at **minus 30 deg F (minus 34 deg C)**, and per ASTM D2136.
11. UV-Light Resistance: Pass, 4000 hours at **176 deg F (80 deg C)**, per ASTM G155.
12. Ply Adhesion: Not less than [**7 lbf/in. (1.2 kN/m)**][**10 lbf/in. (1.75 kN/m)**]<**Insert value**> of seam width, or film tearing bond, according to ASTM D413, Machine Method.

2.9 CSPE SHEET MATERIALS

A. CSPE Sheet: Formulated from CSPE for use in hydraulic structures and formed into uniform, flexible reinforced sheets.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Burke Industries, Inc.**]
   b. [**EVOQUA Water Technologies**]
   c. [**Layfield Environmental Containment; Layfield Group Limited**]
   d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Burke Industries, Inc.**]
   b. [**EVOQUA Water Technologies**]
   c. [**Layfield Environmental Containment; Layfield Group Limited**]
   d. <**Insert manufacturer's name**>

3. Reinforcing Scrim: One-ply polyester fabric totally encapsulated between two sheets.

   a. Construction: [**6 x 6 - 1000 d**][**8 x 8 - 250 d**][**10 x 10 - 1000 d**]<**Insert value(s)**>.

4. Water Absorption: Not more than 2 percent at **70 deg F (21 deg C)** and not more than 30 percent at **158 deg F (70 deg C)** for 30 days each per ASTM D471, **30-mil- (0.76-mm-)** thick sheet.
5. Nominal Thickness: [**45-mil- (1.14-mm-)**]<**Insert dimension**> thick sheet per ASTM D5199 or ASTM D751, Optical Method.
6. Nominal Thickness over Scrim: [**11-mil- (0.28-mm-)**]<**Insert dimension**> thick sheet per ASTM D5199 or ASTM D751, Optical Method.

7. Breaking Strength: Not less than [200 lbf (0.89 kN)]<**Insert value**> minimum average per ASTM D751, Procedure A.
8. Tear Strength, Initial: Not less than [70 lbf (0.31 kN)]<**Insert value**> minimum average per ASTM D5884 or ASTM D751, Procedure B.
9. Tear Strength, after Aging: Not less than [35 lbf (0.16 kN)]<**Insert value**> minimum average per ASTM D5884 or ASTM D751, Procedure B.
10. Puncture Resistance: Not less than [200 lbf (0.89 kN)]<**Insert value**> minimum average per ASTM D4833.
11. Hydrostatic Resistance: Not less than [250-psi (1725-kPa)]<**Insert value**> minimum average resistance per ASTM D5514, Procedure A or ASTM D751, Method A, Procedure 1.
12. Dimensional Stability, Reinforced Sheet: Not more than plus or minus 2 percent per ASTM D1204.
13. Low-Temperature Flexibility: Pass, 1/8-inch (3-mm) mandrel, four hours at minus 40 deg F (minus 40 deg C), and per ASTM D2136.
14. UV-Light Resistance: Pass, 4000 hours at 176 deg F (80 deg C), per ASTM G155.
15. Ply Adhesion: Not less than [7 lbf/in. (1.2 kN/m)][10 lbf/in. (1.75 kN/m)]<**Insert value**> of seam width, or film tearing bond, according to ASTM D413, Machine Method.

2.10 FLOATING COVER ACCESSORIES

A. Screened Scupper Hoses: Manufacturer's standard.

B. Flotation Blocks: Closed-cell PE foam blocks approximately 4 by 12 inches (102 by 300 mm), 2.2 lb/cu. ft. (35.2 kg/cu. m).

C. Access Hatch: Manufacturer's standard, in size indicated.

2.11 MISCELLANEOUS MATERIALS

A. Adhesives: Provide types of adhesive primers, compounds, solvents, and tapes recommended in writing by geomembrane liner manufacturer for bonding to structures (if required), for sealing of seams in geomembrane liner, and for sealing penetrations through geomembrane liner.

B. Penetration Assemblies: Provide manufacturer's standard factory-fabricated assemblies for sealing penetrations. Include joint sealant recommended in writing by geomembrane liner manufacturer and compatible with geomembrane liner, containment conditions, and materials.

C. Battens: Long-length strips of material indicated, size as indicated on Drawings. Fabricate battens with sharp projections removed and edges eased and then predrilled or punched for anchors. Provide anchors, or other type of attachment, of type and spacing recommended in writing by geomembrane liner manufacturer for attaching geomembrane liner system to substrate and as indicated.

1. Batten Material:

   a. Liner manufacturer's standard system.
   b. Aluminum; with stainless steel anchors, complete with gasket and sealant compatible with geomembrane liner, containment conditions, and materials.
   c. Stainless steel; with stainless steel anchors, complete with gasket and sealant compatible with geomembrane liner, containment conditions, and materials.
   d. Plastic compatible with geomembrane liner, cast in place or fastened with stainless-steel anchors, designed to continuously seal geomembrane liner to batten.

D. Sand: ASTM C33/C33M; fine aggregate, natural or manufactured sand.

2.12 FABRICATION

A. Fabricate geomembrane liner[**and floating cover**] panels from sheets in sizes as large as possible with factory-sealed seams, consistent with limitations of weight and installation procedures. Minimize field seaming.

B. Fabricate flotation blocks, wrap in geomembrane sheet, and attach to underside of floating cover according to manufacturer's written instructions.

C. Fabricate ballast tubes of sand-filled geomembrane sheet and attach to top surface of floating cover according to manufacturer's written instructions.

D. Install built-in accessories, hatches, access panels, vents, and walkways on geomembrane floating cover.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for soil compaction and grading; for subgrade free from angular rocks, rubble, roots, vegetation, debris, voids, protrusions, and ground water; and for other conditions affecting performance of geomembrane liner.

B. Examine anchor [**trench excavation**][**concrete perimeter**], where geomembrane liner[**and floating cover**] will be secured, for substrate conditions indicated above and for correct location and configuration.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary ballast, until edges are permanently secured, that does not damage geomembrane liner or substrate, to prevent uplift of geomembrane liner in areas with prevailing winds.

B. Prepare surfaces of construction penetrating through geomembrane liner according to geomembrane liner manufacturer's written instructions.

C. Remove curing compounds and coatings from concrete surfaces to be sealed to geomembrane liner.

3.3 INSTALLATION

A. General: Place geomembrane liner over prepared surfaces to ensure minimum handling. Install according to Shop Drawings and in compliance with geomembrane liner manufacturer's written instructions. Begin placing geomembrane liner at Project's upwind direction and proceed downwind. Install geomembrane liner in a relaxed condition, free from stress and with minimum wrinkles, and in full contact with subgrade. Do not bridge over voids or low areas in the subgrade. Fit closely and seal around inlets, outlets, and other projections through geomembrane liner. Permanently secure edges.

B. Field Seams: Comply with geomembrane liner[**and floating cover**] manufacturer's written instructions. Form seams by lapping edges of panels **2 to 4 inches (50 to 102 mm)**, unless instructions require a larger overlap. Wipe contact surfaces clean and free of dirt, dust, moisture, and other foreign materials.

Use solvent-cleaning methods and grind geomembrane seam surfaces if recommended by geomembrane liner manufacturer. Proceed with seaming at required temperatures for materials and ambient conditions. Continuously bond sheet to sheet to construct single or double seams of width recommended for method of seaming used. Seal or fuse free seam edges. Inspect seams and reseal voids.

1. Adhesive Bonding: Apply bonding cement to both contact surfaces in seam area and press together immediately, or use other seaming methods as instructed by geomembrane liner manufacturer. Roll to press surfaces together, to distribute adhesive to leading edges of panels, and to remove wrinkles and fishmouths. Remove excess adhesive.
2. Thermal Bonding: Use thermal-welding technique recommended by geomembrane liner manufacturer. Apply pressure to smoothly bond surfaces together. Examine for and patch wrinkles and fishmouths.

C. Installation in Anchor Trench: Install geomembrane liner[**and floating cover**] in trench according to manufacturer's written instructions. Backfill and compact to lock liner into trench.

D. Attachment to Concrete: Use manufacturer's standard system to suit Project conditions. Support adhesive and geomembrane on minimum **8-inch- (200-mm-)** wide concrete substrate unless otherwise indicated.

1. Install batten strips over geomembrane liner[**and floating cover**] as indicated on Drawings.
2. Install antichafing strips of geomembrane sheet between geomembrane liner and floating cover according to manufacturer's written instructions.
3. Install floating cover with perimeter fold.

E. Floating Cover Flotation Control: Connect drainage hoses in perimeter fold, sumps, or scuppers to pump or gravity drain system.

F. Liner Repairs: Repair tears, punctures, and other imperfections in geomembrane liner field and seams using patches of geomembrane liner material, liner-to-liner bonding materials, and bonding methods according to geomembrane liner manufacturer's written instructions. Apply bonding solvent or weld to contact surfaces of both patch and geomembrane liner, and press together immediately. Roll to remove wrinkles.

3.4 FIELD QUALITY CONTROL

A. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

B. Nondestructive Testing: Visually inspect seams and patches. Comply with ASTM D4437 for Air Lance Test, Vacuum Box Testing, or Ultrasonic (High Frequency) Pulse Echo Testing or with GRI Test Method GM6, as applicable to geomembrane liner[**and floating cover**] and seam construction. Record locations of failed seams and patches. Individually number and date occurrences and details of leak and remedial action. Repair leaking seams and patches.

C. Destructive Testing: Comply with GRI Test Method GM19, as applicable to geomembrane liner[**and floating cover**] and seam construction. Record locations of sample locations and failed seams. Individually number and date occurrences and details of leak and remedial action. Repair leaking seams and patches, and test sample locations.

D. Prepare test and inspection reports.

3.5 DISINFECTION

A. Disinfect the complete installation according to procedures in AWWA C652.

3.6 PROTECTION

A. Protect installed geomembrane liner[**and floating cover**] according to manufacturer's written instructions. Repair or replace areas of geomembrane liner damaged by scuffing, punctures, traffic, rough subgrade, or other unacceptable conditions.

B. Before initial filling of pond or placement of earth cover, inspect seams and patched areas to ensure tight, continuously bonded installation. Repair damaged geomembrane liner and seams and reinspect repaired work.

END OF SECTION 31 32 19 16

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 50 00 00 - EXCAVATION SUPPORT AND PROTECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes temporary excavation support and protection systems.

B. Related Requirements:

1. Section 013233 "Photographic Documentation" for recording preexisting conditions and excavation support and protection system progress.
2. Section 312000 "Earth Moving" for excavating and backfilling, for controlling surface-water runoff and ponding, and for dewatering excavations.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1. Review geotechnical report.
2. Review existing utilities and subsurface conditions.
3. Review coordination for interruption, shutoff, capping, and continuation of utility services.
4. Review proposed excavations.
5. Review proposed equipment.
6. Review monitoring of excavation support and protection system.
7. Review coordination with waterproofing.
8. Review abandonment or removal of excavation support and protection system.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, performance properties, and dimensions of individual components and profiles, and calculations for excavation support and protection system.

B. Shop Drawings: For excavation support and protection system, prepared by or under the supervision of a qualified professional engineer.

1. Include plans, elevations, sections, and details.
2. Show arrangement, locations, and details of soldier piles, piling, lagging, tiebacks, bracing, and other components of excavation support and protection system according to engineering design.
3. Indicate type and location of waterproofing.
4. Include a written plan for excavation support and protection, including sequence of construction of support and protection coordinated with progress of excavation.

C. Delegated-Design Submittal: For excavation support and protection systems, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For the following:

1. Land surveyor.
2. Professional Engineer: Experience with providing delegated-design engineering services of the type indicated, including documentation that engineer is licensed in the [**jurisdiction**][**state**] in which Project is located.

B. Contractor Calculations: For excavation support and protection system. Include analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

C. Existing Conditions: Using [**photographs**][**or**][**video recordings**], show existing conditions of adjacent construction and site improvements that might be misconstrued as damage caused by inadequate performance of excavation support and protection systems. Submit before Work begins.

1.5 CLOSEOUT SUBMITTALS

A. Record Drawings: Identify locations and depths of capped utilities, abandoned-in-place support and protection systems, and other subsurface structural, electrical, or mechanical conditions.

1.6 FIELD CONDITIONS

A. Interruption of Existing Utilities: Do not interrupt any utility-serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility according to requirements indicated:

1. Notify [**Architect**][**Construction Manager**][**Owner**] no fewer than [**two**]<**Insert number**> days in advance of proposed interruption of utility.
2. Do not proceed with interruption of utility without [**Architect's**][**Construction Manager's**][**Owner's**] written permission.

B. Survey Work: Engage a qualified land surveyor or professional engineer to survey adjacent existing buildings, structures, and site improvements; establish exact elevations at fixed points to act as benchmarks. Clearly identify benchmarks, and record existing elevations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design excavation support and protection systems to resist all lateral loading and surcharge, including but not limited to, retained soil, groundwater pressure, adjacent building loads, adjacent traffic loads, construction traffic loads, material stockpile loads, and seismic loads, based on the following:

1. Compliance with OSHA Standards and interpretations, 29 CFR 1926, Subpart P.
2. Compliance with AASHTO Standard Specification for Highway Bridges or AASHTO LRFD Bridge Design Specification, Customary U.S. Units.
3. Compliance with requirements of authorities having jurisdiction.

4. Compliance with utility company requirements.
5. Compliance with railroad requirements.

2.2 MATERIALS

A. Provide materials that are either new or in serviceable condition.

B. Structural Steel: ASTM A36/A36M, ASTM A690/A690M, or ASTM A992/A992M.

C. Steel Sheet Piling: ASTM A328/A328M, ASTM A572/A572M, or ASTM A690/A690M; with continuous interlocks.

1. Corners: [**Site-fabricated mechanical interlock**][**Roll-formed corner shape with continuous interlock**].

D. Wood Lagging: Lumber, mixed hardwood, nominal rough thickness of [**size and strength required for application**][**3 inches (75 mm)**][**4 inches (100 mm)**]<**Insert dimension**>.

E. Shotcrete: Comply with Section 033713 "Shotcrete" for shotcrete materials and mixes, reinforcement, and shotcrete application.

F. Cast-in-Place Concrete: ACI 301, of compressive strength required for application.

G. Reinforcing Bars: ASTM A615/A615M, **Grade 60 (Grade 420)**, deformed.

H. Tiebacks: Steel bars, ASTM A722/A722M.

I. Tiebacks: Steel strand, ASTM A416/A416M.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards that could develop during excavation support and protection system operations.

1. Shore, support, and protect utilities encountered.

3.2 INSTALLATION - GENERAL

A. Locate excavation support and protection systems clear of permanent construction, so that construction and finishing of other work is not impeded.

B. Install excavation support and protection systems to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
2. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.

C. Install excavation support and protection systems without damaging existing buildings, structures, and site improvements adjacent to excavation.

3.3 SOLDIER PILES AND LAGGING

A. Install steel soldier piles before starting excavation.

1. Extend soldier piles below excavation grade level to depths adequate to prevent lateral movement.
2. Space soldier piles at regular intervals not to exceed allowable flexural strength of wood lagging.
3. Accurately align exposed faces of flanges to vary not more than [**2 inches (50 mm) from a horizontal line and not more than 1:120 out of vertical alignment**]<**Insert tolerances**>.

B. Install wood lagging within flanges of soldier piles as excavation proceeds.

1. Trim excavation as required to install lagging.
2. Fill voids behind lagging with soil, and compact.

C. Install wales horizontally at locations indicated on Drawings and secure to soldier piles.

3.4 SHEET PILING

A. Before starting excavation, install one-piece sheet piling lengths and tightly interlock vertical edges to form a continuous barrier.

B. Accurately place the piling using templates and guide frames unless otherwise recommended in writing by the sheet piling manufacturer.

1. Limit vertical offset of adjacent sheet piling to **60 inches (1500 mm)**.
2. Accurately align exposed faces of sheet piling to vary not more than [**2 inches (50 mm) from a horizontal line and not more than 1:120 out of vertical alignment**]<**Insert tolerances**>.

C. Cut tops of sheet piling to uniform elevation at top of excavation.

3.5 TIEBACKS

A. Drill, install, grout, and tension tiebacks.

B. Test load-carrying capacity of each tieback, and replace and retest deficient tiebacks.

1. Have test loading observed by a qualified professional engineer responsible for design of excavation support and protection system.

C. Maintain tiebacks in place until permanent construction is able to withstand lateral earth and hydrostatic pressures.

3.6 BRACING

A. Locate bracing to clear columns, floor framing construction, and other permanent work. If necessary to move brace, install new bracing before removing original brace.

1. Do not place bracing where it will be cast into or included in permanent concrete work unless otherwise approved by Architect.
2. Install internal bracing if required to prevent spreading or distortion of braced frames.
3. Maintain bracing until structural elements are supported by other bracing or until permanent construction is able to withstand lateral earth and hydrostatic pressures.

3.7 MAINTENANCE

A. Monitor and maintain excavation support and protection system.

B. Prevent surface water from entering excavations by grading, dikes, or other means.

C. Continuously monitor vibrations, settlements, and movements to ensure stability of excavations and constructed slopes and to ensure that damage to permanent structures is prevented.

3.8 FIELD QUALITY CONTROL

A. Survey-Work Benchmarks: Resurvey benchmarks [**regularly**][**daily**][**weekly**]<**Insert time period**> during installation of excavation support and protection systems, excavation progress, and for as long as excavation remains open.

1. Maintain an accurate log of surveyed elevations and positions for comparison with original elevations and positions.
2. Promptly notify Architect if changes in elevations or positions occur or if cracks, sags, or other damage is evident in adjacent construction.

B. Promptly correct detected bulges, breakage, or other evidence of movement to ensure that excavation support and protection system remains stable.

C. Promptly repair damages to adjacent facilities caused by installation or faulty performance of excavation support and protection systems.

3.9 REMOVAL AND REPAIRS

A. Remove excavation support and protection systems when construction has progressed sufficiently to support excavation and earth and hydrostatic pressures.

1. Remove in stages to avoid disturbing underlying soils and rock or damaging structures, pavements, facilities, and utilities.
2. Remove excavation support and protection systems to a minimum depth of [**48 (1200)**]<**Insert dimension**> **inches (mm)** below overlying construction, and abandon remainder.
3. Fill voids immediately with approved backfill compacted to density specified in Section 312000 "Earth Moving."
4. Repair or replace, as approved by Architect, adjacent work damaged or displaced by removing excavation support and protection systems.

B. Leave excavation support and protection systems permanently in place.

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
31 52 00 00	31 50 00 00	Excavation Support and Protection
31 52 21 00	31 50 00 00	Excavation Support and Protection

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 62 13 00 - CONCRETE PILES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes [**hollow**][**solid**], precast, prestressed concrete piles.

1.2 UNIT PRICES

A. Contract Sum: Base Contract Sum on number and dimensions of piles indicated from tip to cutoff, plus not less than **12 inches (305 mm)** of overlength for cutting piles at cutoff elevations.

B. Work of this Section is affected as follows:

1. Additional payment for pile lengths in excess of that indicated, and credit for pile lengths less than that indicated, is calculated at unit prices stated in the Contract, based on net addition or deduction to total pile length as determined by Architect and measured to nearest **12 inches (305 mm)**.

    a. Additional payment for splices required to extend pile lengths in excess of that indicated is calculated at unit prices stated in the Contract.

2. Additional payment for number of piles in excess of that indicated, and credit for number of piles less than that indicated, is calculated at unit prices stated in the Contract.
3. Unit prices include labor, materials, tools, equipment, and incidentals for furnishing, driving, cutting off, capping, and disposing of cutoffs.
4. Test piles that become part of permanent foundation system are considered as an integral part of the Work.
5. No payment is made for rejected piles, including piles driven out of tolerance, defective piles, or piles damaged during handling or driving.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For concrete piles. Prepared by or under the supervision of a qualified professional engineer detailing fabrication and lifting devices necessary for handling and driving piles.

1. Indicate pile dimensions, cross sections, locations, and sizes. Show details of pile splices and shoes.
2. Indicate types of reinforcement, including prestressing strand, and detail fabricating, bending, and placing.
3. Indicate layout and dimensions, and identify each pile. Indicate welded connections by AWS standard symbols. Detail cast-in hardware.

4. Indicate transportation, storage, and lifting points.
5. Include arrangement of static pile reaction frame, test and anchor piles, equipment, and instrumentation. Submit structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

C. Delegated Design Submittal: For concrete piles.

1. Indicate compliance with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For [**Installer**][**manufacturer**][**professional engineer**][**and**][**testing agency**].

B. Welding certificates.

C. Design Mixes: For each concrete mix.

D. Material Certificates: For [**steel reinforcements**][**prestressing strand**][**and**][**concrete admixtures**].

E. Material Test Reports: For concrete materials.

F. Pile-Driving Equipment Data: Include type, make, and rated energy range; weight of striking part of hammer; weight of drive cap; and, type, size, and properties of hammer cushion.

G. Static Pile Test Reports: Submit within three days of completing each test.

H. Pile-Driving Records: Submit within three days of driving each pile.

I. Certified Piles Survey: Submit within [**seven**]<**Insert number**> days of pile driving completion.

J. Field quality-control reports.

K. Preconstruction Photographs: Photographs or video of existing conditions of adjacent construction. Submit before the Work begins.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications:

1. Engineering Responsibility: Assumes engineering responsibility to comply with requirements in "Performance Requirements" Article by engaging a qualified professional engineer to prepare design calculations, Shop Drawings, and other structural data for piles.
2. PCI Plant Certification Program: Participates in PCI's Plant Certification Program and is designated a PCI-Certified Plant for [**B2**][**and**][**C2**] product group and category, or better.

B. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

1. Installer's responsibility includes engaging a qualified professional engineer to prepare pile-driving records.

C. Testing Agency Qualifications: Qualified according to ASTM C1077 and ASTM E329 for testing

indicated[**and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025**].

D. Design Practices: Comply with **ACI 318 (ACI 318M)** and the recommendations in PCI Committee Report: "Recommended Practice for Design, Manufacture and Installation of Prestressed Concrete Piling."

E. Quality-Control Standard: For manufacturing procedures and testing requirements, quality-control recommendations, and dimensional tolerances for piles, comply with applicable requirements in PCI MNL-116, "Manual for Quality Control for Plants and Production of Structural Precast Concrete Products."

F. Comply with requirements in ACI 301, "Specifications for Structural Concrete."

G. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.4/D1.4M, "Structural Welding Code - Reinforcing Steel."

1.7 PRECONSTRUCTION TESTING

A. General: Static pile tests are used to verify driving criteria and pile lengths and to confirm allowable load of piles.

1. Furnish test piles [**60 inches (1524 mm)**]<**Insert dimension**> longer than production piles.
2. Determination of actual length of piles is based on results of static pile tests.

B. Pile Tests: Arrange and perform the following pile tests:

1. Axial Compressive Static Load Test: ASTM D1143/D1143M. Procedure A, Quick Test[**and the following Procedures:**][**.**]

   a. Procedure B, Maintained Test.
   b. Procedure C, Loading in Excess of Maintained Test.
   c. Procedure G, Cyclic Loading Test.

2. Axial Tension Static Load Test: ASTM D3689.
3. Lateral Load Test: ASTM D3966.

C. Equip each test pile with two telltale rods, according to ASTM D1143/D1143M, for measuring deformation during load test.

D. Provide pile reaction frame, anchor piles, equipment, and instrumentation with enough reaction capacity to perform tests. Notify Architect at least 48 hours in advance of performing tests. On completion of testing, remove testing structure, anchor piles, equipment, and instrumentation.

1. Allow a minimum of [**seven**]<**Insert number**> days to elapse after driving test piles before starting pile testing.
2. Number of Test Piles: [**One pile**][**As indicated**]<**Insert number**>.

E. Drive test piles at locations indicated to the minimum penetration or driving resistance indicated. Use test piles identical to those required for Project, and drive with appropriate pile-driving equipment operating at rated driving energy to be used in driving permanent piles.

1. Pile Design Load: [**As indicated**]<**Insert load**>.

F. Approval Criteria: Allowable load is to be the load acting on the test pile when[**the lesser of**] the following criteria are met, divided by a factor of safety of [**2**]<**Insert value**>:

1. Net settlement, after deducting rebound, of not more than **0.01 inch/ton (0.25 mm/907 kg)** of test load.
2. Total settlement exceeds the pile elastic compression by **0.15 inch (4 mm)**, plus 1.0 percent of the tip diagonal dimension.
3. A plunging failure or sharp break in the load settlement curve.

G. Test Pile-Driving Records: Prepare driving records for each test pile[**, compiled and attested to by a qualified professional engineer**]. Include same data as required for driving records of permanent piles.

H. Test piles that comply with requirements, including location tolerances, may be used on Project.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver piles to Project site in such quantities and at such times to ensure continuity of installation. Handle and store piles at Project site to prevent cracking, distorting, warping, or other physical damage, and so markings are visible.

B. Lift and support piles only at designated lifting or supporting points as shown on Shop Drawings.

1.9 FIELD CONDITIONS

A. Protect structures, underground utilities, and other construction from damage caused by pile driving.

B. Site Information: A geotechnical report has been prepared for this Project and is [**included**][**referenced**] elsewhere in the Project Manual for information only.

C. Preconstruction Photographs: Inventory and record the condition of adjacent structures, underground utilities, and other construction. Document conditions that might be misconstrued as damage caused by pile driving.[**Comply with Section 013233 "Photographic Documentation."**]

PART 2 - PRODUCTS

2.1 CONCRETE PILES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. <**Insert manufacturer's name**>

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality

Requirements," to design piles, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Structural Performance: Piles withstand transportation, erection, and driving stresses and design loads within limits indicated and under conditions existing at Project site.

1. Design Loads: <**Insert loads**>.

2.3 MOLD MATERIALS

A. Molds: Provide molds of metal, plastic, wood, or another material that is nonreactive with concrete and that produces required finish surfaces.

2.4 STEEL REINFORCEMENT

A. Reinforcing Bars: ASTM A615/A615M, **Grade 60 (Grade 420)**; deformed.

B. Low-Alloy-Steel Reinforcing Bars: ASTM A706/A706M.

C. Galvanized Reinforcing Bars: ASTM A767/A767M, Class II zinc coated, hot-dip galvanized after fabrication and bending, as follows:

1. Steel Reinforcement: [**ASTM A615/A615M, Grade 60 (Grade 420)**][**ASTM A706/A706M**], deformed.

D. Epoxy-Coated Reinforcing Bars: ASTM A775/A775M or ASTM A934/A934M, as follows:

1. Steel Reinforcement: [**ASTM A615/A615M, Grade 60 (Grade 420)**][**ASTM A706/A706M**], deformed.

E. Plain and Deformed Steel Wire: ASTM A1064/A1064M, [**as drawn**][**galvanized**].

F. Epoxy-Coated-Steel Wire: ASTM A884/A884M, Class A coated, [**plain**][**deformed**].

2.5 PRESTRESSING TENDONS

A. Prestressing Strand: ASTM A416/A416M, **Grade 250 or 270 (Grade 1725 or 1860)**; uncoated, seven-wire, low-relaxation strand.

2.6 CONCRETE MATERIALS

A. General: Limit water-soluble chloride ions in concrete to the maximum percentage by mass of cementitious material permitted by **ACI 318 (ACI 318M)**, but not more than 0.06 percent.

B. Portland Cement: ASTM C150/C150M, [**Type I or Type III**][**Type II**], of same type, brand, and source.

1. Fly Ash: ASTM C618, Class C or F.
2. Silica Fume: ASTM C1240, amorphous silica.

C. Normal-Weight Aggregates: Except as modified by PCI MNL-116, ASTM C33/C33M, with coarse aggregates complying with [**Class 4S**][**Class 4M**][**Class 1N**]<**Insert class**>. Provide aggregates from

single source.

1. Nominal Maximum Size of Aggregate: [1 inch (25 mm)][3/4 inch (19 mm)].

D. Water: Potable, free of deleterious material that may affect color stability, setting, or strength of concrete, and complying with chemical limits of PCI MNL-116.

E. Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures.

1. Air-Entraining Admixture: ASTM C260/C260M.
2. Water-Reducing Admixture: ASTM C494/C494M, Type A.
3. Retarding Admixture: ASTM C494/C494M, Type B.
4. Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type D.
5. Water-Reducing and Accelerating Admixture: ASTM C494/C494M, Type E.
6. High-Range, Water-Reducing Admixture: ASTM C494/C494M, Type F.
7. High-Range, Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type G.
8. Plasticizing and Retarding Admixture: ASTM C1017/C1017M, Type II.

2.7 PILE ACCESSORIES

A. Pile Shoes: 1-inch- (25-mm-) thick minimum, carbon-steel plate fabricated to match shape of pile tip.

B. Pile Splices: Manufactured from carbon-steel plates or castings and capable of developing strength of continuous pile at splice location.

2.8 CONCRETE MIXES

A. Prepare design mixes for each type of concrete required.

1. Limit use of fly ash and silica fume to not exceed, in total, [**25**]<**Insert number**> percent of portland cement by weight.

B. Design mixes may be prepared by a qualified independent testing agency or by qualified personnel at precast manufacturing plant at precast manufacturer's option.

C. Proportion mixes by either laboratory trial batch or field-test data methods according to ACI 211.1, with materials to be used on Project, to provide normal-weight concrete with the following properties:

1. Compressive Strength (28 Days): [8000 psi (55.2 MPa)][7000 psi (48.3 MPa)][6000 psi (41.4 MPa)][5000 psi (34.5 MPa)]<**Insert value**>.
2. Maximum Water-Cementitious Material Ratio: 0.40.

D. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content of [**6.0 percent, plus or minus 1.5**][**2.5 to 4.5**] percent.

2.9 FABRICATION

A. Molds: Accurately construct molds, mortar tight, of sufficient strength to withstand pressures due to concrete placement and temperature changes and for pretensioning and detensioning operations. Maintain molds to provide completed piles of shapes, lines, and dimensions indicated, within fabrication tolerances specified in PCI MNL-116 and PCI MNL-135.

1. Unless molds are stripped before detensioning, design molds so stresses are not induced in piles due to deformation of concrete under prestress or movement during detensioning.
2. Chamfer edges and corners of square piles.

B. Reinforcement: Comply with recommendations in CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy bond with concrete.

1. Accurately position, support, and secure reinforcement against displacement by molds, construction, or concrete placement. Locate and support reinforcement by metal chairs, runners, bolsters, spacers, and hangers, as required.
2. Place reinforcement to obtain at least the minimum coverages for concrete protection. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Set wire ties so ends are directed into concrete, not toward exposed concrete surfaces.

C. Prestress tendons for piles by either pretensioning or post-tensioning methods. Comply with PCI MNL-116.

D. Pile Shoes: Accurately position and secure pile shoes at pile tips so as to not affect pile alignment during driving. Weld pile shoes to longitudinal reinforcements.

E. Pile Splices: Accurately position and secure pile-splice segments requiring embedding in tips of piles.

F. Mix concrete according to PCI MNL-116 and requirements in this Section. After initial concrete batching, no additional water may be added.

G. Place concrete in a continuous operation to prevent seams or planes of weakness from forming in piles. Comply with requirements in PCI MNL-116 for measuring, mixing, transporting, and placing concrete.

1. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items. Use equipment and procedures complying with PCI MNL-116.
2. Comply with ACI 306.1 procedures for cold-weather concrete placement.
3. Comply with ACI 305R recommendations for hot-weather concrete placement.

H. Identify pickup points of piles with permanent markings that correspond with markings indicated on Shop Drawings. Imprint casting date on each pile.

I. Cure concrete, according to requirements in PCI MNL-116, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture.

J. Delay detensioning piles until concrete has attained at least [**70**]<**Insert number**> percent of its compressive strength as established by test cylinders cured under the same conditions as concrete.

1. If concrete has been heat cured, detension while concrete is still warm and moist to avoid dimensional changes that may cause cracking or undesirable stresses.
2. Detension pretensioned tendons either by gradually releasing tensioning jacks or by heat-cutting tendons, using a sequence and pattern to prevent shock or unbalanced loading.

K. Where ends of strands are not enclosed or covered, cut flush and cover with a high-strength mortar bonded to unit with an epoxy-resin bonding agent.

L. Fabricate precast, prestressed concrete piles straight and true to size and shape with exposed edges and corners precise and true so each finished unit complies with PCI MNL-116 and PCI MNL-135 product tolerances.

M. Finish: Fabricate concrete piles with normal plant-run finish produced in forms that impart a smooth finish to concrete. Small surface holes caused by air bubbles, normal color variations, form joint marks, and minor chips and spalls are tolerated. Major or unsightly imperfections, honeycombs, or structural defects are not permitted.

1. Finish unformed surfaces by trowel unless otherwise indicated. Consolidate concrete, bring to proper level with straightedge, float, and trowel to a smooth, uniform finish.

N. Pile-Length Markings: Mark each pile with horizontal lines at **12-inch (305-mm)** intervals; label the distance from pile tip at **60-inch (1524-mm)** intervals. Maintain markings on piles until driven.

2.10 SOURCE QUALITY CONTROL

A. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to evaluate pile manufacturer's quality-control and testing methods.

1. Allow Owner's testing agency access to material storage areas, concrete production equipment, concrete placement, and curing facilities. Cooperate with Owner's testing agency, and provide samples of materials and concrete mixes as may be requested for additional testing and evaluation.

B. Testing: Test and inspect piles according to PCI MNL-116.

1. Strength of piles will be considered deficient if units fail to comply with requirements.

C. If there is evidence that strength of piles may be deficient or may not comply with PCI MNL-116 requirements, Owner will employ an independent testing agency to obtain, prepare, and test cores drilled from hardened concrete to determine compressive strength according to ASTM C42/C42M.

1. A minimum of three representative cores are to be taken from piles of suspect strength, from locations directed by Architect.
2. Cores are to be tested, following immersion in water, in a wet condition in accordance with ACI 301 if piles are wet under service conditions.
3. Cores are to be tested in an air-dry condition in accordance with ACI 301 if piles are dry under service conditions.
4. Strength of concrete for each series of three cores is considered satisfactory if average compressive strength is at least 85 percent of the 28-day design compressive strength and no core compressive strength is less than 75 percent of the 28-day design compressive strength.
5. Test results are to be reported in writing on same day that tests are performed, with copies to Architect, Contractor, and pile manufacturer. Test reports are to include the following:

    a. Project identification name and number.
    b. Date when tests were performed.
    c. Name of precast concrete manufacturer.
    d. Name of concrete testing agency.
    e. Identification letter, name, and type of pile represented by core tests; design compressive strength; type of break; compressive strength at break, corrected for length-diameter ratio; and direction of applied load to core in relation to horizontal plane of concrete as placed.

D. Patching: If core test results are satisfactory and piles comply with requirements, solidly fill core holes with patching mortar and finish to match adjacent pile surfaces.

E. Piles will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Site Conditions: Do not start pile-driving operations until earthwork fills have been completed or excavations have reached an elevation of **6 to 12 inches (152 to 305 mm)** above bottom of footing or pile cap.

3.2 DRIVING EQUIPMENT

A. Pile Hammer: Air-, steam-, hydraulic-, or diesel-powered type capable of consistently delivering adequate peak-force duration and magnitude to develop the ultimate capacity required for type and size of pile driven and character of subsurface material anticipated.

1. Use pile hammer capable of adjustment to deliver reduced impact to maintain tensile stress within 70 percent of yield strength of pile reinforcement.

B. Hammer Cushions and Driving Caps: Between hammer and top of pile, provide hammer cushion and steel driving cap as recommended by hammer manufacturer and as required to drive pile without damage.

C. Leads: Use fixed, semifixed, or hanging-type pile-driver leads that hold the full length of pile firmly in position and in axial alignment with hammer.

3.3 DRIVING PILES

A. General: Continuously drive piles to elevations or penetration resistance indicated[**or established by static load testing of piles**]. Establish and maintain axial alignment of leads and piles before and during driving.

B. Predrilling: Provide pre-excavated holes where indicated, to depths indicated. Drill holes with a diameter less than the largest cross-section dimension of pile.

1. Firmly seat pile in predrilled hole by driving with reduced energy before starting final driving.

C. Heaved Piles: Redrive heaved piles to tip elevation at least as deep as original tip elevation with a driving resistance at least as great as original driving resistance.

D. Pile Splices: Splice piles during installation, and align pile segments concentrically.

E. Driving Tolerances: Drive piles without exceeding the following tolerances, measured at pile heads:

1. Location: **4 inches (102 mm)** from location indicated after initial driving, and **6 inches (152 mm)** after pile driving is completed.
2. Plumb: Maintain **1 inch (25 mm)** in **48 inches (1219 mm)** from vertical, or a maximum of **4 inches (102 mm)**, measured when pile is aboveground in leads.
3. Batter Angle: Maximum **1 inch (25 mm)** in **48 inches (1219 mm)** from required angle, measured when pile is aboveground in leads.

F. Withdraw damaged or defective piles and piles that exceed driving tolerances, and install new piles within driving tolerances.

1. Fill holes left by withdrawn piles using cohesionless soil material such as gravel, broken stone, and gravel-sand mixtures. Place and compact in lifts not exceeding **72 inches (1830 mm)**.
2. Fill holes left by withdrawn piles as directed by Architect.

G. Abandon and cut off rejected piles as directed by Architect. Leave rejected piles in place, and install new piles in locations as directed by Architect.

H. Cut off tops of driven piles square with pile axis and at elevations indicated.

I. Buildups: Construct buildups to elevations indicated of cast-in-place reinforced concrete with compressive strength not less than [**5000 psi (34.5 MPa)**]<**Insert value**> at 28 days.

J. Pile-Driving Records: Maintain accurate driving records for each pile[**, compiled and attested to by a qualified professional engineer**]. Include the following data:

1. Project name and number.
2. Name of Contractor.
3. Type of pile and date of casting.
4. Pile location in pile group and designation of pile group.
5. Sequence of driving in pile group.
6. Pile dimensions.
7. Ground elevation.
8. Elevation of tips after driving.
9. Final tip and cutoff elevations of piles after driving pile group.
10. Records of redriving.
11. Elevation of splices.
12. Type, make, model, and rated energy of hammer.
13. Weight and stroke of hammer.
14. Type of pile-driving cap used.
15. Cushion material and thickness.
16. Actual stroke and blow rate of hammer.
17. Pile-driving start and finish times, and total driving time.
18. Time, pile-tip elevation, and reason for interruptions.
19. Number of blows for every **12 inches (305 mm)** of penetration, and number of blows per **1 inch (25 mm)** for the last **6 inches (152 mm)** of driving.
20. Pile deviations from location and plumb.
21. Preboring, jetting, or special procedures used.
22. Unusual occurrences during pile driving.

K. Certified Piles Survey: Engage a [**land surveyor**][**professional engineer**] to prepare a piles survey showing final location of piles in relation to the property survey and existing benchmarks.

1. Notify Architect when deviations from locations exceed allowable tolerances.

3.4 FIELD QUALITY CONTROL

A. Special Inspections: [**Owner will engage**][**Engage**] a qualified special inspector to perform the following special inspections:

1. Pile foundations.
2. <**Insert special inspections**>.

B. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

C. Tests and Inspections:

1. Dynamic Pile Testing: High-strain dynamic monitoring is to be performed and reported according to ASTM D4945 during initial driving and during restriking on [**five single**][**3 percent of**]<**Insert number or percent of**> piles.
2. Low-strain integrity measurement is to be performed and reported for each pile.

D. Piles will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.5 DISPOSAL

A. Remove withdrawn piles and cutoff sections of piles from site and legally dispose of them off Owner's property.

SECTION 31 62 16 00 - STEEL PILES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Steel H piles.

1.2 UNIT PRICES

A. Contract Sum: Base Contract Sum on number and dimensions of piles indicated from tip to cutoff, plus not less than **12 inches (305 mm)** of overlength for cutting piles at cutoff elevations.

B. Work of this Section is affected as follows:

1. Additional payment for pile lengths in excess of that indicated, and credit for pile lengths less than that indicated, is calculated at unit prices stated in the Contract, based on net addition or deduction to total pile length as determined by Architect and measured to nearest **12 inches (305 mm)**.

a. Additional payment for splices required to extend pile lengths in excess of that indicated is calculated at unit prices stated in the Contract.

2. Additional payment for number of piles in excess of that indicated, and credit for number of piles less than that indicated, is calculated at unit prices stated in the Contract.
3. Unit prices include labor, materials, tools, equipment, and incidentals for furnishing, driving, cutting off, capping, and disposing of cutoffs.
4. Test piles that become part of permanent foundation system are considered as an integral part of the Work.
5. No payment is made for rejected piles, including piles driven out of tolerance, defective piles, or piles damaged during handling or driving.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For steel H piles. Show fabrication and installation details for piles, including details of driving points, splices, and pile caps.

1. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld.
2. Include arrangement of static pile reaction frame, test and anchor piles, equipment, and instrumentation. Submit structural analysis data signed and sealed by the qualified professional

engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For [**Installer**][**professional engineer**][**and**][**testing agency**].

B. Welding certificates.

C. Mill Test Reports: For [**steel H piles**][**steel castings**][**and**][**steel plate**], signed by manufacturer.

D. Pile-Driving Equipment Data: Include type, make, and rated energy range; weight of striking part of hammer; weight of drive cap; and, type, size, and properties of hammer cushion.

E. Static Pile Test Reports: Submit within three days of completing each test.

F. Pile-Driving Records: Submit within three days of driving each pile.

G. Certified Piles Survey: Submit within [**seven**]<**Insert number**> days of pile driving completion.

H. Field quality-control reports.

I. Preconstruction Photographs: Photographs or video of existing conditions of adjacent construction. Submit before the Work begins.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

1. Installer's responsibility includes engaging a qualified professional engineer to prepare pile-driving records.

B. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated[**and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025**].

C. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.7 PRECONSTRUCTION TESTING

A. General: Static pile tests are used to verify driving criteria and pile lengths and to confirm allowable load of piles.

1. Furnish test piles [**60 inches (1524 mm)**]<**Insert dimension**> longer than production piles.
2. Determination of actual length of piles is based on results of static pile tests.

B. Pile Tests: Arrange and perform the following pile tests:

1. Axial Compressive Static Load Test: ASTM D1143/D1143M. Procedure A, Quick Test[**and the following Procedures:**][**.**]

a. Procedure B, Maintained Test.

b. Procedure C, Loading in Excess of Maintained Test.
c. Procedure G, Cyclic Loading Test.

2. Axial Tension Static Load Test: ASTM D3689.
3. Lateral Load Test: ASTM D3966.

C. Equip each test pile with two telltale rods, according to ASTM D1143/D1143M, for measuring deformation during load test.

D. Provide pile reaction frame, anchor piles, equipment, and instrumentation with enough reaction capacity to perform tests. Notify Architect at least 48 hours in advance of performing tests. On completion of testing, remove testing structure, anchor piles, equipment, and instrumentation.

1. Allow a minimum of [**seven**]<**Insert number**> days to elapse after driving test piles before starting pile testing.
2. Number of Test Piles: [**One pile**][**As indicated**]<**Insert number**>.

E. Drive test piles at locations indicated to the minimum penetration or driving resistance indicated. Use test piles identical to those required for Project, and drive with appropriate pile-driving equipment operating at rated driving energy to be used in driving permanent piles.

1. Pile Design Load: [**As indicated**]<**Insert load**>.

F. Approval Criteria: Allowable load shall be the load acting on the test pile when[**the lesser of**] the following criteria are met, divided by a factor of safety of [**2**]<**Insert value**>:

1. Net settlement, after deducting rebound, of not more than **0.01 inch/ton (0.25 mm/907 kg)** of test load.
2. Total settlement exceeds the pile elastic compression by **0.15 inch (4 mm)**, plus 1.0 percent of the tip diagonal dimension.
3. A plunging failure or sharp break in the load settlement curve.

G. Test Pile-Driving Records: Prepare driving records for each test pile[**, compiled and attested to by a qualified professional engineer**]. Include same data as required for driving records of permanent piles.

H. Test piles that comply with requirements, including location tolerances, may be used on Project.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver piles to Project site in such quantities and at such times to ensure continuity of installation. Handle and store piles at Project site to prevent buckling or physical damage.

1. Painted Piles: Protect finish and touch up paint damage before driving piles.

1.9 FIELD CONDITIONS

A. Protect structures, underground utilities, and other construction from damage caused by pile driving.

B. Site Information: A geotechnical report has been prepared for this Project and is [**included**][**referenced**] elsewhere in the Project Manual for information only.

C. Preconstruction Photographs: Inventory and record the condition of adjacent structures, underground

utilities, and other construction. Document conditions that might be misconstrued as damage caused by pile driving. Comply with Section 013233 "Photographic Documentation."

PART 2 - PRODUCTS

2.1 STEEL H PILES

A. High-Strength, Low-Alloy, Columbium-Vanadium Structural Steel: ASTM A572/A572M, [**Grade 50 (Grade 345)**][**Grade 60 (Grade 415)**]<**Insert grade**>.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. <**Insert, in separate subparagraphs, manufacturer's name**>.

B. High-Strength, Low-Alloy, Nickel, Copper, Phosphorous Steel H Piles: ASTM A690/A690M.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. <**Insert, in separate subparagraphs, manufacturer's name**>.

C. High-Strength, Low-Alloy, Structural Steel: ASTM A588/A588M.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. <**Insert, in separate subparagraphs, manufacturer's name**>.

2.2 PILE ACCESSORIES

A. Driving Points: Manufacturer's standard one-piece driving point, fabricated from steel castings as follows to provide full bearing of web and flange of pile tip:

1. Carbon-Steel Castings: ASTM A27/A27M, [**Grade 65-35 (Grade 450-240), heat treated**][**or**][**Grade N1**].
2. High-Strength Steel Castings: ASTM A148/A148M, [**Grade 80-40 (Grade 550-275)**][**or**][**Grade 90-60 (Grade 620-415)**].

B. Splice Unit: Manufacturer's standard splice unit, fabricated from two connected steel plates, of same material as steel H pile or material of equal strength, shaped to encase web and part of each flange.

2.3 PAINT

A. Paint: SSPC-Paint 16; self-priming, two-component, coal-tar epoxy polyamide, [**black**][**red**][**manufacturer's standard color**].

2.4 FABRICATION

A. Fabricate and assemble piles in shop to greatest extent possible.

B. Pile-Length Markings: Mark each pile with horizontal lines at **12-inch (305-mm)** intervals; label the distance from pile tip at **60-inch (1524-mm)** intervals. Maintain markings on piles until driven.

C. Fabricate full-length piles to eliminate splicing during driving, with ends square.

D. Fabricate full-length piles by splicing lengths of steel H pile together. Accurately mill meeting ends of piles and bevel for welding. Maintain axial alignment of pile lengths. Maintain structural properties of pile across splice.

1. Splice Units: Notch web of pile, fit splice unit into position, and weld according to manufacturer's written instructions and AWS D1.1/D1.1M for procedures, appearance and quality of welds, and methods used in correcting welding work.
2. Continuously Welded Splices: Splice piles by continuously welding according to AWS D1.1/D1.1M for procedures, appearance and quality of welds, and methods used in correcting welding work.
3. Splice piles during fabrication[**or field installation**].

E. Fit and weld driving points to tip of pile according to manufacturer's written instructions and AWS D1.1/D1.1M for procedures, appearance and quality of welds, and methods used in correcting welding work.

2.5 SHOP PAINTING

A. General: Shop paint steel pile surfaces, except for surfaces to be encased in concrete, as follows:

1. Extend painting to a depth of **60 inches (1524 mm)** below [**finished grade**][**low-tide level**] to top of exposed pile.

B. Surface Preparation: Clean surfaces to be painted. Remove loose rust and loose mill scale, spatter, slag, and flux deposits. Prepare surfaces according to SSPC-SP 10/NACE No. 2, "Near-White Blast Cleaning."

C. Painting: Immediately after surface preparation, apply coat of paint according to manufacturer's written instructions to provide a dry film thickness of not less than **8 mils (0.2 mm)**.

1. Apply second coat to provide a dry film thickness of not less than **8 mils (0.2 mm)**, resulting in a two-coat paint system thickness of not less than **16 mils (0.4 mm)**.
2. Apply second and third coats with each coat having a dry film thickness of not less than **8 mils (0.2 mm)**, resulting in a three-coat paint system thickness of not less than **24 mils (0.6 mm)**.
3. Mark pile lengths after shop painting.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Site Conditions: Do not start pile-driving operations until earthwork fills have been completed or excavations have reached an elevation of **6 to 12 inches (152 to 305 mm)** above bottom of footing or pile cap.

3.2 DRIVING EQUIPMENT

A. Pile Hammer: Air-, steam-, hydraulic-, or diesel-powered type capable of consistently delivering adequate peak-force duration and magnitude to develop the ultimate capacity required for type and size of pile driven and character of subsurface material anticipated.

B. Hammer Cushions and Driving Caps: Between hammer and top of pile, provide hammer cushion and steel driving cap as recommended by hammer manufacturer and as required to drive pile without damage.

C. Leads: Use fixed, semifixed, or hanging-type pile-driver leads that hold the full length of pile firmly in position and in axial alignment with hammer.

3.3 DRIVING PILES

A. General: Continuously drive piles to elevations or penetration resistance indicated[**or established by static load testing of piles**]. Establish and maintain axial alignment of leads and piles before and during driving.

B. Predrilling: Provide pre-excavated holes where indicated, to depths indicated. Drill holes with a diameter less than the largest cross-section dimension of pile.

1. Firmly seat pile in predrilled hole by driving with reduced energy before starting final driving.

C. Heaved Piles: Redrive heaved piles to tip elevation at least as deep as original tip elevation with a driving resistance at least as great as original driving resistance.

D. Driving Tolerances: Drive piles without exceeding the following tolerances, measured at pile heads:

1. Location: **4 inches (102 mm)** from location indicated after initial driving, and **6 inches (152 mm)** after pile driving is completed.
2. Plumb: Maintain **1 inch (25 mm)** in **48 inches (1219 mm)** from vertical, or a maximum of **4 inches (102 mm)**, measured when pile is aboveground in leads.
3. Batter Angle: Maximum **1 inch (25 mm)** in **48 inches (1219 mm)** from required angle, measured when pile is aboveground in leads.

E. Withdraw damaged or defective piles and piles that exceed driving tolerances, and install new piles within driving tolerances.

1. Fill holes left by withdrawn piles using cohesionless soil material such as gravel, broken stone, and gravel-sand mixtures. Place and compact in lifts not exceeding **72 inches (1830 mm)**.
2. Fill holes left by withdrawn piles as directed by Architect.

F. Abandon and cut off rejected piles as directed by Architect. Leave rejected piles in place, and install new piles in locations as directed by Architect.

G. Cut off tops of driven piles square with pile axis and at elevations indicated.

H. Pile-Driving Records: Maintain accurate driving records for each pile[**, compiled and attested to by a qualified professional engineer**]. Include the following data:

1. Project name and number.
2. Name of Contractor.
3. Pile location in pile group and designation of pile group.
4. Sequence of driving in pile group.
5. Pile dimensions.
6. Ground elevation.
7. Elevation of tips after driving.
8. Final tip and cutoff elevations of piles after driving pile group.
9. Records of redriving.
10. Elevation of splices.
11. Type, make, model, and rated energy of hammer.
12. Weight and stroke of hammer.
13. Type of pile-driving cap used.
14. Cushion material and thickness.
15. Actual stroke and blow rate of hammer.
16. Pile-driving start and finish times, and total driving time.
17. Time, pile-tip elevation, and reason for interruptions.
18. Number of blows for every **12 inches (305 mm)** of penetration, and number of blows per **1 inch (25 mm)** for the last **6 inches (152 mm)** of driving.
19. Pile deviations from location and plumb.
20. Preboring, jetting, or special procedures used.
21. Unusual occurrences during pile driving.

I. Certified Piles Survey: Engage a [**land surveyor**][**professional engineer**] to prepare a piles survey showing final location of piles in relation to the property survey and existing benchmarks.

1. Notify Architect when deviations from locations exceed allowable tolerances.

3.4 FIELD QUALITY CONTROL

A. Special Inspections: [**Owner will engage**][**Engage**] a qualified special inspector to perform the following special inspections:

1. Pile foundations.
2. <**Insert special inspections**>.

B. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

C. Tests and Inspections:

1. Dynamic Pile Testing: High-strain dynamic monitoring shall be performed and reported according to ASTM D4945 during initial driving and during restriking on [**five single**][**3 percent of**]<**Insert number or percent of**> piles.
2. Weld Testing: In addition to visual inspection, welds shall be tested and inspected according to AWS D1.1/D1.1M and inspection procedures listed below, at testing agency's option. Correct deficiencies in Work that test reports and inspections indicate do not comply with the Contract

Documents.

a. Liquid Penetrant Inspection: ASTM E165.
b. Magnetic Particle Inspection: ASTM E709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
c. Radiographic Inspection: ASTM E94, minimum quality level "2-2T."
d. Ultrasonic Inspection: ASTM E164.

D. Steel H piles will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.5 TOUCHUP PAINTING

A. Clean field welds, splices, and abraded painted areas and field-apply paint according to SSPC-PA 1. Use same paint and apply same number of coats as specified for shop painting.

1. Apply touchup paint before driving piles to surfaces that are immersed or inaccessible after driving.

3.6 DISPOSAL

A. Remove withdrawn piles and cutoff sections of piles from site, and legally dispose of them off Owner's property.

END OF SECTION 31 62 16 00

SECTION 31 62 19 00 - TIMBER PILES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes round timber piles.

1.2 UNIT PRICES

A. Contract Sum: Base Contract Sum on number and dimensions of piles indicated from tip to cutoff, plus not less than **12 inches (305 mm)** of overlength for cutting piles at cutoff elevations.

B. Work of this Section is affected as follows:

1. Additional payment for pile lengths in excess of that indicated, and credit for pile lengths less than that indicated, is calculated at unit prices stated in the Contract, based on net addition or deduction to total pile length as determined by Architect and measured to nearest **12 inches (305 mm)**.

    a. Additional payment for splices required to extend pile lengths in excess of that indicated is calculated at unit prices stated in the Contract.

2. Additional payment for number of piles in excess of that indicated, and credit for number of piles less than that indicated, is calculated at unit prices stated in the Contract.
3. Unit prices include labor, materials, tools, equipment, and incidentals for furnishing, driving, cutting off, capping, and disposing of cutoffs.
4. Test piles that become part of permanent foundation system are considered as an integral part of the Work.
5. No payment is made for rejected piles, including piles driven out of tolerance, defective piles, or piles damaged during handling or driving.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For timber piles. Show fabrication and installation details for piles, including details of driving shoes, tips or boots, and pile butt protection.

1. Include arrangement of static pile reaction frame, test and anchor piles, equipment, and instrumentation. Submit structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For [**Installer**][**professional engineer**][**and**][**testing agency**].

B. Round timber pile treatment data as follows, including chemical treatment manufacturer's written instructions for handling, storing, installing, and finishing treated material:

1. For each type of preservative-treated timber product, include certification by treating plant stating type of preservative solution and pressure process used, net amount of preservative retained, and compliance with applicable standards.
2. For waterborne-treated products, include statement that moisture content of treated materials was reduced to levels indicated before shipment to Project site.

C. Pile-Driving Equipment Data: Include type, make, and rated energy range; weight of striking part of hammer; weight of drive cap; and, type, size, and properties of hammer cushion.

D. Static Pile Test Reports: Submit within three days of completing each test.

E. Pile-Driving Records: Submit within three days of driving each pile.

F. Certified Piles Survey: Submit within [**seven**]<**Insert number**> days of pile driving completion.

G. Field quality-control reports.

H. Material Certificates: For preservative-treated piles. Indicate type of preservative used and net amount of preservative retained.

I. Preconstruction Photographs: Photographs or video of existing conditions of adjacent construction. Submit before the Work begins.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

1. Installer's responsibility includes engaging a qualified professional engineer to prepare pile-driving records.

B. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated[**and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025**].

1.7 PRECONSTRUCTION TESTING

A. General: Static pile tests are used to verify driving criteria and pile lengths and to confirm allowable load of piles.

1. Furnish test piles [**60 inches (1524 mm)**]<**Insert dimension**> longer than production piles.
2. Determination of actual length of piles is based on results of static pile tests.

B. Pile Tests: Arrange and perform the following pile tests:

1. Axial Compressive Static Load Test: ASTM D1143/D1143M. Procedure A, Quick Test[**and the following Procedures:**][.]

a. Procedure B, Maintained Test.
b. Procedure C, Loading in Excess of Maintained Test.
c. Procedure G, Cyclic Loading Test.

2. Axial Tension Static Load Test: ASTM D3689.
3. Lateral Load Test: ASTM D3966.

C. Equip each test pile with two telltale rods, according to ASTM D1143/D1143M, for measuring deformation during load test.

D. Provide pile reaction frame, anchor piles, equipment, and instrumentation with enough reaction capacity to perform tests. Notify Architect at least 48 hours in advance of performing tests. On completion of testing, remove testing structure, anchor piles, equipment, and instrumentation.

1. Allow a minimum of [**seven**]<**Insert number**> days to elapse after driving test piles before starting pile testing.
2. Number of Test Piles: [**One pile**][**As indicated**]<**Insert number**>.

E. Drive test piles at locations indicated to the minimum penetration or driving resistance indicated. Use test piles identical to those required for Project, and drive with appropriate pile-driving equipment operating at rated driving energy to be used in driving permanent piles.

1. Pile Design Load: [**As indicated**]<**Insert load**>.

F. Approval Criteria: Allowable load shall be the load acting on the test pile when[**the lesser of**] the following criteria are met, divided by a factor of safety of [**2**]<**Insert value**>:

1. Net settlement, after deducting rebound, of not more than **0.01 inch/ton (0.25 mm/907 kg)** of test load.
2. Total settlement exceeds the pile elastic compression by **0.15 inch (4 mm)**, plus 1.0 percent of the tip diagonal dimension.
3. A plunging failure or sharp break in the load settlement curve.

G. Test Pile-Driving Records: Prepare driving records for each test pile[**, compiled and attested to by a qualified professional engineer**]. Include same data as required for driving records of permanent piles.

H. Test piles that comply with requirements, including location tolerances, may be used on Project.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver piles to Project site in such quantities and at such times to ensure continuity of installation. Handle and store piles at Project site to prevent breaks, cuts, abrasions, or other physical damage and as required by AWPA M4.

1. Do not drill holes or drive spikes or nails into pile below cutoff elevation.

1.9 FIELD CONDITIONS

A. Protect structures, underground utilities, and other construction from damage caused by pile driving.

B. Site Information: A geotechnical report has been prepared for this Project and is [**included**][**referenced**] elsewhere in the Project Manual for information only.

C. Preconstruction Photographs: Inventory and record the condition of adjacent structures, underground utilities, and other construction. Document conditions that might be misconstrued as damage caused by pile driving. Comply with Section 013233 "Photographic Documentation."

PART 2 - PRODUCTS

2.1 TIMBER PILES

A. Round Timber Piles: ASTM D25, unused, clean peeled, one piece from butt to tip; of the following species and size basis:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. <**Insert manufacturer's name**>

2. Species: [**Coastal Douglas fir**][**Southern yellow pine**]<**Insert species**>.
3. Size Basis: [**Butt circumference**][**Class A**][**Class B**][**Tip circumference**][**8-inch (203-mm) tip and natural taper**].

B. Pressure-treat round timber piles according to AWPA U1 as follows:

1. Service Condition: [**UC4C Ground Contact, Extreme Duty**][**UC5A Marine Use Northern Waters**][**UC5B Marine Use Central Waters**][**UC5C Marine Use Southern Waters**]
2. Treatment: [**Waterborne preservative**][**Creosote or creosote solution**][**Oil-borne preservative**][**Waterborne preservative, creosote or creosote solution, or oil-borne preservative**][**Waterborne preservative, severe marine borer hazard**][**Dual treatment consisting of waterborne preservative, followed by creosote or creosote solution**]<**Insert treatment**>.

2.2 PILE ACCESSORIES

A. Driving Shoes: Fabricate from ASTM A1011/A1011M, hot-rolled carbon-steel strip to suit pile-tip diameter, of the following type and thickness, and secure to pile tip so as to not affect pile alignment during driving:

1. Type: [**Flat boot**][**Arrow point**].
2. Thickness: [**3/16 inch (4.8 mm)**][**1/4 inch (6 mm)**].

2.3 FABRICATION

A. Pile Tips: Cut and shape pile tips to accept driving shoes. Fit and fasten driving shoes to pile tips according to manufacturer's written instructions.

B. Pile Butt: Trim pile butt and cut perpendicular to longitudinal axis of pile. Chamfer and shape butt to fit tightly to driving cap of hammer.

C. Field-Applied Wood Preservative: Treat field cuts, holes, and other penetrations according to AWPA M4.

1. Coal-tar roofing cement for treating drilled holes or sealing cutoffs shall be free of asbestos.

D. Pile Splices: Splices are not permitted.

E. Pile-Length Markings: Mark each pile with horizontal lines at **12-inch (305-mm)** intervals; label the distance from pile tip at **60-inch (1524-mm)** intervals. Maintain markings on piles until driven.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Site Conditions: Do not start pile-driving operations until earthwork fills have been completed or excavations have reached an elevation of **6 to 12 inches (152 to 305 mm)** above bottom of footing or pile cap.

3.2 DRIVING EQUIPMENT

A. Pile Hammer: Air-, steam-, hydraulic-, or diesel-powered type capable of consistently delivering adequate peak-force duration and magnitude to develop the ultimate capacity required for type and size of pile driven and character of subsurface material anticipated.

B. Hammer Cushions and Driving Caps: Between hammer and top of pile, provide hammer cushion and steel driving cap as recommended by hammer manufacturer and as required to drive pile without damage.

C. Leads: Use fixed, semifixed, or hanging-type pile-driver leads that hold the full length of pile firmly in position and in axial alignment with hammer.

3.3 DRIVING PILES

A. General: Continuously drive piles to elevations or penetration resistance indicated[**or established by static load testing of piles**]. Establish and maintain axial alignment of leads and piles before and during driving.

B. Spudding: Drive spud piles through overlying highly resistant strata or obstructions and withdraw for reuse.

C. Predrilling: Provide pre-excavated holes where indicated, to depths indicated. Drill holes with a diameter less than the largest cross-section dimension of pile.

1. Firmly seat pile in predrilled hole by driving with reduced energy before starting final driving.

D. Heaved Piles: Redrive heaved piles to tip elevation at least as deep as original tip elevation with a driving resistance at least as great as original driving resistance.

E. Driving Tolerances: Drive piles without exceeding the following tolerances, measured at pile heads:

1. Location: **4 inches (102 mm)** from location indicated after initial driving, and **6 inches (152 mm)** after pile driving is completed.
2. Plumb: Maintain **1 inch (25 mm)** in **48 inches (1219 mm)** from vertical, or a maximum of **4 inches (102 mm)**, measured when pile is aboveground in leads.

3. Batter Angle: Maximum 1 inch (25 mm) in 48 inches (1219 mm) from required angle, measured when pile is aboveground in leads.

F. Withdraw damaged or defective piles and piles that exceed driving tolerances, and install new piles within driving tolerances.

1. Fill holes left by withdrawn piles using cohesionless soil material such as gravel, broken stone, and gravel-sand mixtures. Place and compact in lifts not exceeding 72 inches (1830 mm).
2. Fill holes left by withdrawn piles as directed by Architect.

G. Abandon and cut off rejected piles as directed by Architect. Leave rejected piles in place and install new piles in locations as directed by Architect.

H. Cut off butts of driven piles square with pile axis and at elevations indicated.

1. Cover cut-off piling surfaces with [**caps overlapping pile end by minimum 2 inches (51 mm)**][**minimum three coats of preservative treatment**] according to AWPA M4.

I. Pile-Driving Records: Maintain accurate driving records for each pile[**, compiled and attested to by a qualified professional engineer**]. Include the following data:

1. Project name and number.
2. Name of Contractor.
3. Pile species.
4. Pile location in pile group and designation of pile group.
5. Sequence of driving in pile group.
6. Pile dimensions.
7. Ground elevation.
8. Elevation of tips after driving.
9. Final tip and cutoff elevations of piles after driving pile group.
10. Records of redriving.
11. Elevation of splices.
12. Type, make, model, and rated energy of hammer.
13. Weight and stroke of hammer.
14. Type of pile-driving cap used.
15. Cushion material and thickness.
16. Actual stroke and blow rate of hammer.
17. Pile-driving start and finish times, and total driving time.
18. Time, pile-tip elevation, and reason for interruptions.
19. Number of blows for every 12 inches (305 mm) of penetration, and number of blows per 1 inch (25 mm) for the last 6 inches (152 mm) of driving.
20. Pile deviations from location and plumb.
21. Preboring, jetting, or special procedures used.
22. Unusual occurrences during pile driving.

J. Certified Piles Survey: Engage a [**land surveyor**][**professional engineer**] to prepare a piles survey showing final location of piles in relation to the property survey and existing benchmarks.

1. Notify Architect when deviations from locations exceed allowable tolerances.

3.4 FIELD QUALITY CONTROL

A. Special Inspections: [**Owner will engage**][**Engage**] a qualified special inspector to perform the following special inspections:

1. Pile foundations.
2. <**Insert special inspections**>.

B. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

C. Tests and Inspections:

1. Dynamic Pile Testing: High-strain dynamic monitoring shall be performed and reported according to ASTM D4945 during initial driving and during restriking on [**five single**][**3 percent of**]<**Insert number or percent of**> piles.

3.5 DISPOSAL

A. Remove withdrawn piles and cutoff sections of piles from site and legally dispose of them off Owner's property.

END OF SECTION 31 62 19 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 62 23 00 - COMPOSITE PILES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes concrete-filled [**steel-shell**][**steel pipe**] piles.

1.2 UNIT PRICES

A. Contract Sum: Base Contract Sum on number and dimensions of piles indicated from tip to cutoff, plus not less than **12 inches (305 mm)** of overlength for cutting piles at cutoff elevations.

B. Work of this Section is affected as follows:

1. Additional payment for pile lengths in excess of that indicated, and credit for pile lengths less than that indicated, is calculated at unit prices stated in the Contract, based on net addition or deduction to total pile length as determined by Architect and measured to nearest **12 inches (305 mm)**.

    a. Additional payment for splices required to extend pile lengths in excess of that indicated is calculated at unit prices stated in the Contract.

2. Additional payment for number of piles in excess of that indicated, and credit for number of piles less than that indicated, is calculated at unit prices stated in the Contract.
3. Unit prices include labor, materials, tools, equipment, and incidentals for furnishing, driving, cutting off, capping, and disposing of cutoffs.
4. Test piles that become part of permanent foundation system are considered as an integral part of the Work.
5. No payment is made for rejected piles, including piles driven out of tolerance, defective piles, or piles damaged during handling or driving.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For composite piles. Show fabrication and installation details for piles, including splices and tip details.

1. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld.
2. Indicate locations, sizes, type, and arrangement of reinforcement.
3. Include arrangement of static pile reaction frame, test and anchor piles, equipment, and instrumentation. Submit structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For [**Installer**][**professional engineer**][**and**][**testing agency**].

B. Welding certificates.

C. Design Mixes: For each concrete mix. Include revised mix proportions when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

D. Material Certificates: For [**steel-shell piles and accessories**][**steel pipe piles and accessories**][**steel reinforcement**][**and**][**concrete admixtures**].

E. Material Test Reports: For concrete materials.

F. Pile-Driving Equipment Data: Include type, make, and rated energy range; weight of striking part of hammer; weight of drive cap; and, type, size, and properties of hammer cushion.

1. Include mandrel type and details.

G. Static Pile Test Reports: Submit within three days of completing each test.

H. Pile-Driving Records: Submit within three days of driving each pile.

I. Certified Piles Survey: Submit within [**seven**]<**Insert number**> days of pile-driving completion.

J. Field quality-control reports.

K. Preconstruction Photographs: Photographs or video of existing conditions of adjacent construction. Submit before the Work begins.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

1. Installer's responsibility includes engaging a qualified professional engineer to prepare pile-driving records.

B. Testing Agency Qualifications: Qualified according to ASTM C1077 and ASTM E329 for testing indicated[**and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025**].

C. Comply with requirements in ACI 301, "Specifications for Structural Concrete."

D. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
3. AWS D1.4/D1.4M, "Structural Welding Code - Reinforcing Steel."

1.7 PRECONSTRUCTION TESTING

A. General: Static pile tests are used to verify driving criteria and pile lengths and to confirm allowable load

of piles.

1. Furnish test piles [60 inches (1524 mm)]<**Insert dimension**> longer than production piles.
2. Determination of actual length of piles is based on results of static pile tests.

B. Pile Tests: Arrange and perform the following pile tests:

1. Axial Compressive Static Load Test: ASTM D1143/D1143M. Procedure A, Quick Test[**and the following Procedures:**][**.**]

   a. Procedure B, Maintained Test.
   b. Procedure C, Loading in Excess of Maintained Test.
   c. Procedure G, Cyclic Loading Test.

2. Axial Tension Static Load Test: ASTM D3689.
3. Lateral Load Test: ASTM D3966.

C. Equip each test pile with two telltale rods, according to ASTM D1143/D1143M, for measuring deformation during load test.

D. Provide pile reaction frame, anchor piles, equipment, and instrumentation with enough reaction capacity to perform tests. Notify Architect at least 48 hours in advance of performing tests. On completion of testing, remove testing structure, anchor piles, equipment, and instrumentation.

1. Allow a minimum of [**seven**]<**Insert number**> days to elapse after driving test piles before starting pile testing.
2. Number of Test Piles: [**One pile**][**As indicated**]<**Insert number**>.

E. Drive test piles at locations indicated to the minimum penetration or driving resistance indicated. Use test piles identical to those required for Project and drive with appropriate pile-driving equipment operating at rated driving energy to be used in driving permanent piles.

1. Pile Design Load: [**As indicated**]<**Insert load**>.

F. Approval Criteria: Allowable load is to be the load acting on the test pile when[**the lesser of**] the following criteria are met, divided by a factor of safety of [**2**]<**Insert value**>:

1. Net settlement, after deducting rebound, of not more than **0.01 inch/ton (0.25 mm/907 kg)** of test load.
2. Total settlement exceeds the pile elastic compression by **0.15 inch (4 mm)**, plus 1.0 percent of the tip diagonal dimension.
3. A plunging failure or sharp break in the load settlement curve.

G. Test Pile-Driving Records: Prepare driving records for each test pile[**, compiled and attested to by a qualified professional engineer**]. Include same data as required for driving records of permanent piles.

H. Test piles that comply with requirements, including location tolerances, may be used on Project.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver piles to Project site in such quantities and at such times to ensure continuity of installation. Handle and store piles at Project site to prevent physical damage.

1. Painted Piles: Protect finish and touch up damage before driving piles.

1.9 FIELD CONDITIONS

A. Protect structures, underground utilities, and other construction from damage caused by pile driving.

B. Site Information: A geotechnical report has been prepared for this Project and is [**included**][**referenced**] elsewhere in the Project Manual for information only.

C. Preconstruction Photographs: Inventory and record the condition of adjacent structures, underground utilities, and other construction. Document conditions that might be misconstrued as damage caused by pile driving. Comply with Section 013233 "Photographic Documentation."

PART 2 - PRODUCTS

2.1 STEEL-SHELL PILES

A. Fluted Pile Shells: Manufacturer's standard, vertically fluted, pile shells; cold formed from steel sheet; **50,000-psi (345-MPa)** minimum yield strength after forming. Fabricate watertight, uniformly tapered sections with forged-steel conical nose welded to tip.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Monotube Pile Corporation**]
   b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Monotube Pile Corporation**]
   b. <**Insert manufacturer's name**>

3. Constant Diameter Extensions: Fabricate with splice overlap capable of telescoping into tapered section.
4. Taper: [**0.14 inch in 12 inches (1:86)**][**0.25 inch in 12 inches (1:48)**][**0.40 inch in 12 inches (1:30)**].
5. Thickness: [**0.150 inch (3.80 mm)**][**0.179 inch (4.55 mm)**][**0.209 inch (5.31 mm)**][**0.239 inch (6.07 mm)**].

B. Helically Corrugated Pile Shells: Manufacturer's standard, helically corrugated, uniform-diameter, steel sheet shell piles; of enough strength and thickness to remain watertight and resist distortion and buckling due to soil pressure, internal mandrel operation, or redriving. Fabricate in one-piece lengths with minimum **3/16-inch- (4.76-mm-)** thick steel-plate boot continuously welded to tip and as follows:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

a. [**Contech Engineered Solutions LLC**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Contech Engineered Solutions LLC**]
b. <**Insert manufacturer's name**>

3. Nominal Diameter: [**8-5/8 inches (219 mm)**][**10-5/8 inches (270 mm)**][**11-1/8 inches (283 mm)**][**12-1/4 inches (311 mm)**][**14 inches (350 mm)**][**16-1/8 inches (410 mm)**].
4. Thickness: [**0.048 inch (1.21 mm)**, **minimum**][**0.060 inch (1.52 mm)**, **minimum**][**0.075 inch (1.90 mm)**, **minimum**][**0.105 inch (2.66 mm)**]<**Insert dimension**>.

2.2 STEEL PIPE PILES

A. Steel Pipe: ASTM A252, [**Grade 2**][**Grade 3**]; seamless or welded.

2.3 STEEL REINFORCEMENT

A. Reinforcing Bars: ASTM A615/A615M, **Grade 60 (Grade 420)**; deformed.

B. Low-Alloy-Steel Reinforcing Bars: ASTM A706/A706M.

C. Galvanized Reinforcing Bars: ASTM A767/A767M, Class II zinc coated, hot-dip galvanized after fabrication and bending, as follows:

1. Steel Reinforcement: [**ASTM A615/A615M, Grade 60 (Grade 420)**][**ASTM A706/A706M**]; deformed.

D. Epoxy-Coated Reinforcing Bars: ASTM A775/A775M or ASTM A934/A934M, as follows:

1. Steel Reinforcement: [**ASTM A615/A615M, Grade 60 (Grade 420)**][**ASTM A706/A706M**]; deformed.

E. Plain and Deformed Steel Wire: ASTM A1064/A1064M, [**as drawn**][**galvanized**].

F. Epoxy-Coated-Steel Wire: ASTM A884/A884M, Class A coated, [**plain**][**deformed**].

2.4 CONCRETE MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I or II.

1. Fly Ash: ASTM C618, Class C or F.
2. Ground Granulated Blast-Furnace Slag: ASTM C989, Grade 100 or 120.

B. Blended Hydraulic Cement: ASTM C595/C595M, [**Type IS, portland blast-furnace slag**][**Type IP, portland-pozzolan**][**Type I (PM), pozzolan-modified portland**][**Type I (SM), slag-modified portland**] cement.

C. Normal-Weight Aggregates: ASTM C33/C33M, [**Class 4S**][**Class 4M**][**Class 1N**]<**Insert class**>, uniformly graded, **3/4-inch (19-mm)** maximum aggregate size. Provide aggregates from a single source.

D. Water: Potable, complying with ASTM C94/C94M requirements.

E. Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and to contain no more than 0.1 percent chloride ions by mass of cementitious material.

1. Air-Entraining Admixture: ASTM C260/C260M.
2. Water-Reducing Admixture: ASTM C494/C494M, Type A.
3. Retarding Admixture: ASTM C494/C494M, Type B.
4. Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type D.
5. High-Range, Water-Reducing Admixture: ASTM C494/C494M, Type F.
6. High-Range, Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type G.
7. Plasticizing and Retarding Admixture: ASTM C1017/C1017M, Type II.

2.5 PILE ACCESSORIES

A. Driving Points: Manufacturer's standard 60-degree conical driving point, with integral reinforcing ribs, to provide full bearing of pipe pile tip. Fabricate from steel castings as follows:

B. Inside Cutting Shoes: Manufacturer's standard, inside-flanged, open-ended cutting shoe, to provide full bearing of pipe pile tip. Fabricate from steel castings as follows:

C. Outside Cutting Shoes: Manufacturer's standard, outside-flanged, open-ended cutting shoe, to provide full bearing of pipe pile tip. Fabricate from steel castings as follows:

1. Carbon-Steel Castings: ASTM A27/A27M, [**Grade 65-35 (Grade 450-240), heat treated**][**or**][**Grade N1**].
2. High-Strength Steel Castings: ASTM A148/A148M, [**Grade 80-40 (Grade 550-275)**][**or**][**Grade 90-60 (Grade 620-415)**].

D. Splice Coupling: Manufacturer's standard splice coupling, rolled from ASTM A36/A36M, carbon-steel bar or cast from heat-treated carbon steel, ASTM A27/A27M, **Grade 65-35 (Grade 450-240)**, with interior stop and internally tapered for friction fit driving.

2.6 PAINT

A. Paint: SSPC-Paint 16; self-priming, two-component, coal-tar epoxy polyamide, [**black**][**red**][**manufacturer's standard color**].

2.7 CONCRETE MIXES

A. Prepare concrete design mixes according to ACI 301, determined by either laboratory trial batch or field test data basis.

1. Use a qualified testing agency for preparing and reporting proposed mix designs determined by laboratory trial batch.

B. Proportion mixes according to ACI 301 to provide normal-weight concrete suitable for piles with the

following properties:

1. Compressive Strength (28 Days): [**5000 psi (34.5 MPa)**][**4000 psi (27.6 MPa)**][**3000 psi (20.7 MPa)**]<**Insert value**>.
2. Maximum Water-Cementitious Material Ratio at Point of Placement: [**0.45**][**0.50**]<**Insert ratio**>.
3. Slump Limit: [**5 inches (127 mm)**][**8 inches (203 mm)**]<**Insert dimension**>, plus or minus **1 inch (25 mm)**.

C. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content of [**6.0 percent, plus or minus 1.5**][**2.5 to 4.5**] percent.

D. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than portland cement according to ACI 301 limits as if concrete were exposed to deicing chemicals.

E. Limit water-soluble, chloride-ion content in hardened concrete to [**0.15**][**0.30**] percent by weight of cement.

F. Concrete-mix design adjustments may be considered if characteristics of materials, Project conditions, weather, test results, or other circumstances warrant. Resubmit and obtain approval from Architect of proposed changes to concrete-mix proportions.

2.8 FABRICATION

A. Fabricate and assemble piles in shop to greatest extent possible.

B. Fabricate full-length piles to eliminate splicing during driving.

C. Fabricate full-length piles by splicing pile lengths together. Maintain axial alignment of pile lengths. Maintain structural properties of pile across splice.

1. Splice Coupling: Fit splice coupling into position and weld to adjoining steel pipe pile sections according to manufacturer's written instructions and AWS D1.1/D1.1M for procedures, appearance and quality of welds, and methods used in correcting welding work.
2. Welded Splices, Steel Pipe Piles: Accurately mill meeting ends of steel pipe piles, and bevel for welding. Continuously weld pile according to AWS D1.1/D1.1M for procedures, appearance and quality of welds, and methods used in correcting welding work.
3. Welded Splices, Steel-Shell Piles: Continuously weld steel-shell pile according to manufacturer's written instructions and AWS D1.1/D1.1M[**and AWS D1.3/D1.3M**] for procedures, appearance and quality of welds, and methods used in correcting welding work.
4. Splice piles during fabrication or field installation.

D. Fit and weld driving points to tip of pile according to manufacturer's written instructions and AWS D1.1/D1.1M for procedures, appearance and quality of welds, and methods used in correcting welding work.

E. Fit and weld cutting shoes to tip of pile according to manufacturer's written instructions and AWS D1.1/D1.1M for procedures, appearance and quality of welds, and methods used in correcting welding work.

F. Pile-Length Markings: Mark each pile with horizontal lines at **12-inch (305-mm)** intervals; label the distance from pile tip at **60-inch (1524-mm)** intervals. Maintain markings on piles until driven.

2.9 SHOP PAINTING

A. General: Shop paint steel pile surfaces, except for surfaces to be encased in concrete, as follows:

1. Extend painting to a depth of **60 inches (1524 mm)** below [**finished grade**][**low-tide level**] to top of exposed pile.

B. Surface Preparation: Clean surfaces to be painted. Remove loose rust and loose mill scale, and remove spatter, slag, or flux deposits. Prepare surfaces according to SSPC-SP 10/NACE No. 2, "Near-White Blast Cleaning."

C. Painting: Immediately after surface preparation, apply coat of paint according to manufacturer's written instructions to provide a dry film thickness of not less than **8 mils (0.2 mm)**.

1. Apply second coat to provide a dry film thickness of not less than **8 mils (0.2 mm)**, resulting in a two-coat paint system thickness of not less than **16 mils (0.4 mm)**.
2. Apply second and third coats with each coat having a dry film thickness of not less than **8 mils (0.2 mm)**, resulting in a three-coat paint system thickness of not less than **24 mils (0.6 mm)**.
3. Mark pile lengths after shop painting.

2.10 CONCRETE MIXING

A. Ready-Mixed Concrete: Comply with ASTM C94/C94M.

1. Do not add water to concrete mix after mixing.
2. Maintain concrete temperature to not exceed **90 deg F (32 deg C)**.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Site Conditions: Do not start pile-driving operations until earthwork fills have been completed or excavations have reached an elevation of **6 to 12 inches (152 to 305 mm)** above bottom of footing or pile cap.

3.2 DRIVING EQUIPMENT

A. Pile Hammer: Air-, steam-, hydraulic-, or diesel-powered type capable of consistently delivering adequate peak-force duration and magnitude to develop the ultimate capacity required for type and size of pile driven and character of subsurface material anticipated.

B. Hammer Cushions and Driving Caps: Between hammer and top of pile, provide hammer cushion and steel driving cap as recommended by hammer manufacturer and as required to drive pile without damage.

C. Leads: Use fixed, semifixed, or hanging-type pile-driver leads that hold the full length of pile firmly in position and in axial alignment with hammer.

D. Mandrel: Expandable mandrel, capable of distributing driving energy throughout length of steel-shell pile.

3.3 INSTALLATION OF STEEL REINFORCEMENT

A. Comply with recommendations in CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

B. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy bond with concrete.

C. Fabricate and install reinforcement cages symmetrically about axis of pile [**shell**][**pipe**] in a single unit.

D. Accurately position, support, and secure reinforcement against displacement during concreting. Maintain minimum cover on reinforcement.

E. Protect exposed ends of extended reinforcement, dowels, or anchor bolts from mechanical damage and exposure to weather.

3.4 CONCRETE PLACEMENT

A. Do not place concrete until other piles within a radius of [**20 feet (6 m)**]<**Insert value**> have been driven and approved.

B. Inspection: Before placing concrete, allow testing and inspecting agency to visually inspect and verify that each pile [**shell**][**pipe**] is clean, watertight, plumb, and free of distortion or other defects.

C. Place concrete in a continuous operation and without segregation immediately after cleaning out pile [**shell**][**pipe**].

D. Place concrete by means of bottom discharge bucket, flexible drop chute, or steep-sided funnel hopper or tremie or pump concrete into place.

E. Place concrete in a dry pile [**shell**][**pipe**] unless placement underwater is approved by Architect.

1. Place concrete underwater by tremie method or pumping. Control placement operations to ensure tremie is embedded no less than **60 inches (1524 mm)** into concrete, and flow of tremied concrete is continuous from bottom to top of pile [**shell**][**pipe**].
2. Other methods of depositing concrete may be used if approved by Architect.

F. Consolidate final **10 feet (3 m)** of concrete during placement to ensure that concrete is thoroughly worked around steel reinforcement and into corners.

G. Screed concrete level at cutoff elevation and apply a scoured, rough finish.

3.5 DRIVING PILES

A. General: Continuously drive piles to elevations or penetration resistance indicated[**or established by static load testing of piles**]. Establish and maintain axial alignment of leads and piles before and during driving.

B. Predrilling: Provide pre-excavated holes where indicated, to depths indicated. Drill holes with a diameter less than the largest cross-section dimension of pile.

1. Firmly seat pile in predrilled hole by driving with reduced energy before starting final driving.

C. Heaved Piles: Redrive heaved piles to tip elevation at least as deep as original tip elevation with a driving resistance at least as great as original driving resistance.

D. Pile Splices: Splice piles during installation and align pile segments concentrically.

E. Driving Tolerances: Drive piles without exceeding the following tolerances, measured at pile heads:

1. Location: **4 inches (102 mm)** from location indicated after initial driving, and **6 inches (152 mm)** after pile driving is completed.
2. Plumb: Maintain **1 inch (25 mm)** in **48 inches (1219 mm)** from vertical, or a maximum of **4 inches (102 mm)**, measured when pile is aboveground in leads.
3. Batter Angle: Maximum **1 inch (25 mm)** in **48 inches (1219 mm)** from required angle, measured when pile is aboveground in leads.

F. Excavation: Clean out steel pipe pile by removing soil and debris from inside pile before placing steel reinforcement or concrete.

G. Withdraw damaged or defective piles and piles that exceed driving tolerances, and install new piles within driving tolerances.

1. Fill holes left by withdrawn piles using cohesionless soil material such as gravel, broken stone, and gravel-sand mixtures. Place and compact in lifts not exceeding **72 inches (1830 mm)**.
2. Fill holes left by withdrawn piles as directed by Architect.

H. Abandon and cut off rejected piles as directed by Architect. Leave rejected piles in place, and install new piles in locations as directed by Architect.

I. Cut off tops of driven piles square with pile axis and at elevations indicated.

J. Pile-Driving Records: Maintain accurate driving records for each pile[**, compiled and attested to by a qualified professional engineer**]. Include the following data:

1. Project name and number.
2. Name of Contractor.
3. Pile location in pile group and designation of pile group.
4. Sequence of driving in pile group.
5. Pile dimensions.
6. Ground elevation.
7. Elevation of tips after driving.
8. Final tip and cutoff elevations of piles after driving pile group.
9. Records of redriving.
10. Elevation of splices.
11. Type, make, model, and rated energy of hammer.
12. Weight and stroke of hammer.
13. Type of pile-driving cap used.
14. Cushion material and thickness.
15. Actual stroke and blow rate of hammer.
16. Pile-driving start and finish times, and total driving time.
17. Time, pile-tip elevation, and reason for interruptions.
18. Number of blows for every **12 inches (305 mm)** of penetration, and number of blows per **1 inch (25 mm)** for the last **6 inches (152 mm)** of driving.
19. Pile deviations from location and plumb.
20. Preboring, jetting, or special procedures used.
21. Unusual occurrences during pile driving.

K. Certified Piles Survey: Engage a [**land surveyor**][**professional engineer**] to prepare a piles survey showing final location of piles in relation to the property survey and existing benchmarks.

1. Notify Architect when deviations from locations exceed allowable tolerances.

3.6 FIELD QUALITY CONTROL

A. Special Inspections: [**Owner will engage**][**Engage**] a qualified special inspector to perform the following special inspections:

1. Pile foundations.
2. <**Insert special inspections**>.

B. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

C. Tests and Inspections:

1. Dynamic Pile Testing: High-strain dynamic monitoring is to be performed and reported according to ASTM D4945 during initial driving and during restriking on [**five single**][**3 percent of**]<**Insert number or percent of**> piles.
2. Low-strain integrity measurement is to be performed and reported for each pile.
3. Weld Testing: In addition to visual inspection, welds are to be tested and inspected according to AWS D1.1/D1.1M and the inspection procedures listed in subparagraphs below, at testing agency's option. Correct deficiencies in Work that test reports and inspections indicate does not comply with the Contract Documents.

    a. Liquid Penetrant Inspection: ASTM E165.
    b. Magnetic Particle Inspection: ASTM E709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
    c. Radiographic Inspection: ASTM E94; minimum quality level "2-2T."
    d. Ultrasonic Inspection: ASTM E164.

4. Concrete: Sampling and testing of concrete for quality control is to include the following:

    a. Sampling Fresh Concrete: ASTM C172/C172M, except modified for slump to comply with ASTM C94/C94M.

        1) Slump: ASTM C143/C143M; one test at point of placement for each compressive-strength test, but no fewer than one test for each concrete load.
        2) Concrete Temperature: ASTM C1064/C1064M; one test hourly when air temperature is **40 deg F (5 deg C)** and below or when **80 deg F (27 deg C)** and above, and one test for each set of compressive-strength specimens.
        3) Compression Test Specimens: ASTM C31/C31M; one set of [**four**]<**Insert number**> standard cylinders for each compressive-strength test unless otherwise indicated. Mold and store cylinders for laboratory-cured test specimens unless field-cured test specimens are required.
        4) Compressive-Strength Tests: ASTM C39/C39M; one set for each truck load. One specimen is to be tested at seven days, two specimens are to be tested at 28 days, and one specimen is to be retained in reserve for later testing if required.

    b. When frequency of testing provides fewer than five strength tests for a given class of concrete, testing is to be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
    c. When strength of field-cured cylinders is less than 85 percent of companion laboratory-

cured cylinders, evaluate current operations and provide corrective procedures for protecting and curing in-place concrete.

d. Strength level of concrete is considered satisfactory if averages of sets of three consecutive strength test results equal or exceed specified compressive strength and no individual strength test result falls below specified compressive strength by more than **500 psi (3.45 MPa)**.

e. Test results are to be reported in writing to Architect, concrete manufacturer, and Contractor within 24 hours of testing. Reports of compressive-strength tests are to contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, concrete type and class, location of concrete batch in piles, design compressive strength at 28 days, concrete-mix proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.

f. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted but is not to be used as sole basis for acceptance or rejection.

g. Additional Tests: Testing and inspecting agency is to make additional tests of concrete when test results indicate concrete strengths or other requirements have not been met.

D. Concrete-filled steel piles will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.7 TOUCHUP PAINTING

A. Clean field welds, splices, and abraded painted areas and field-apply paint according to SSPC-PA 1. Use same paint and apply same number of coats as specified for shop painting.

1. Apply touchup paint before driving piles to surfaces that are immersed or inaccessible after driving.

3.8 DISPOSAL

A. Remove withdrawn piles and cutoff sections of piles from site, and legally dispose of them off Owner's property.

SECTION 32 12 16 00 - ASPHALT PAVING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Hot-mix asphalt paving.
2. Hot-mix asphalt overlay.
3. Cold milling of existing asphalt pavement.
4. Hot-mix asphalt patching.
5. Asphalt curbs.
6. Asphalt traffic-calming devices.
7. Asphalt surface treatments.

B. Related Requirements:

1. [**Section 024116 "Structure Demolition"**][**and**][**Section 024119 "Selective Demolition"**] for demolition and removal of existing asphalt pavement.
2. Section 312000 "Earth Moving" for subgrade preparation, fill material, separation geotextiles, unbound-aggregate subbase and base courses, and aggregate pavement shoulders.
3. Section 321313 "Concrete Paving" for concrete pavement and for separate concrete curbs, gutters, and driveway aprons.
4. Section 321373 "Concrete Paving Joint Sealants" for joint sealants and fillers at pavement terminations.
5. Section 321400 "Unit Paving" for bituminous setting bed for pavers and for stone and precast concrete curbs.

1.2 UNIT PRICES

A. Work of this Section is affected by <**Insert name of unit price**>.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1. Review methods and procedures related to hot-mix asphalt paving including, but not limited to, the following:

a. Review proposed sources of paving materials, including capabilities and location of plant that will manufacture hot-mix asphalt.
b. Review requirements for protecting paving work, including restriction of traffic during installation period and for remainder of construction period.

1.4 ACTION SUBMITTALS

A. Product Data: Include technical data and tested physical and performance properties.

1. Herbicide.
2. Paving geotextile.
3. Joint sealant.

B. Hot-Mix Asphalt Designs:

1. Certification, by authorities having jurisdiction, of approval of each hot-mix asphalt design proposed for the Work.
2. For each hot-mix asphalt design proposed for the Work.

C. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

D. Samples for Verification: For the following product, in manufacturer's standard sizes unless otherwise indicated:

1. Paving Geotextile: **12 by 12 inches (300 by 300 mm)** minimum.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For [**paving-mix manufacturer**][**and**][**testing agency**].

B. Material Certificates:[**Include statement that mixes containing recycled materials will perform equal to mixes produced from all new materials.**]

1. Aggregates.
2. Asphalt binder.
3. Asphalt cement.
4. Cutback prime coat.
5. Emulsified asphalt prime coat.
6. Tack coat.
7. Fog seal.
8. Undersealing asphalt.

C. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: [**A paving-mix manufacturer registered with and approved by authorities having jurisdiction or the DOT of state in which Project is located**]<**Insert requirement**>.

B. Testing Agency Qualifications: Qualified in accordance with ASTM D3666 for testing indicated.

C. Regulatory Requirements: Comply with materials, workmanship, and other applicable requirements of <**Insert applicable standards**> of <**Insert name of state or local DOT**> for asphalt paving work.

1. Measurement and payment provisions and safety program submittals included in standard specifications do not apply to this Section.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Do not apply asphalt materials if subgrade is wet or excessively damp, if rain is imminent or expected before time required for adequate cure, or if the following conditions are not met:

1. Prime Coat: Minimum surface temperature of **60 deg F (15.6 deg C)**.
2. Tack Coat: Minimum surface temperature of **60 deg F (15.6 deg C)**.
3. Slurry Coat: Comply with weather limitations in ASTM D3910.
4. Asphalt Base Course[**and Binder Course**]: Minimum surface temperature of **40 deg F (4.4 deg C)** and rising at time of placement.
5. Asphalt Surface Course: Minimum surface temperature of **60 deg F (15.6 deg C)** at time of placement.

PART 2 - PRODUCTS

2.1 AGGREGATES

A. General: Use materials and gradations that have performed satisfactorily in previous installations.

B. Coarse Aggregate: ASTM D692/D692M, sound; angular crushed stone, crushed gravel, or cured, crushed blast-furnace slag.

C. Fine Aggregate: [**ASTM D1073**][**or**][**AASHTO M 29**], sharp-edged natural sand or sand prepared from stone, gravel, cured blast-furnace slag, or combinations thereof.

1. For hot-mix asphalt, limit natural sand to a maximum of 20 percent by weight of the total aggregate mass.

D. Mineral Filler: [**ASTM D242/D242M**][**or**][**AASHTO M 17**], rock or slag dust, hydraulic cement, or other inert material.

2.2 ASPHALT MATERIALS

A. Asphalt Binder: [**ASTM D6373**][**or**][**AASHTO M 320**] binder designation [**PG 58-28**][**PG 64-22**][**PG 70-22**]<**Insert performance grade**>.

B. Asphalt Cement: [**ASTM D3381/D3381M for viscosity-graded material**][**ASTM D946/D946M for penetration-graded material**].

C. Cutback Prime Coat: ASTM D2027/D2027M, medium-curing cutback asphalt, [**MC-30 or MC-70**][**MC-250**].

D. Emulsified Asphalt Prime Coat: [**ASTM D977**][**or**][**AASHTO M 140**] emulsified asphalt, or [**ASTM D2397/D2397M**][**or**][**AASHTO M 208**] cationic emulsified asphalt, slow setting, diluted in water, of suitable grade and consistency for application.

E. Tack Coat: [**ASTM D977**][**or**][**AASHTO M 140**] emulsified asphalt, or [**ASTM D2397/D2397M**][**or**][**AASHTO M 208**] cationic emulsified asphalt, slow setting, diluted in water, of suitable grade and consistency for application.

F. Fog Seal: [**ASTM D977**][**or**][**AASHTO M 140**] emulsified asphalt, or [**ASTM**

D2397/D2397M][**or**][**AASHTO M 208**] cationic emulsified asphalt, slow setting, factory diluted in water, of suitable grade and consistency for application.

G. Water: Potable.

H. Undersealing Asphalt: ASTM D3141/D3141M; pumping consistency.

2.3 AUXILIARY MATERIALS

A. Recycled Materials for Hot-Mix Asphalt Mixes: Reclaimed asphalt pavement; reclaimed, unbound-aggregate base material; and recycled [**tires**][**asphalt shingles**][**or**][**glass**] from sources and gradations that have performed satisfactorily in previous installations, equal to performance of required hot-mix asphalt paving produced from all new materials.

B. Herbicide: Commercial chemical for weed control, registered by the EPA, and not classified as "restricted use" for locations and conditions of application. Provide in granular, liquid, or wettable powder form.

C. Sand: [**ASTM D1073**][**or**][**AASHTO M 29**], Grade No. 2 or No. 3.

D. Paving Geotextile: AASHTO M 288 paving fabric; nonwoven polypropylene; resistant to chemical attack, rot, and mildew; and specifically designed for paving applications.

E. Joint Sealant: ASTM D6690, [**Type I**][**Type II or III**][**Type IV**], hot-applied, single-component, polymer-modified bituminous sealant.

2.4 MIXES

A. Recycled Content of Hot-Mix Asphalt: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [**10**][**20**][**40**]<**Insert value**> percent or more than [**15**][**25**][**50**]<**Insert value**> percent by weight.

1. Surface Course Limit: Recycled content no more than [**10**]<**Insert number**> percent by weight.

B. Hot-Mix Asphalt: Dense-graded, hot-laid, hot-mix asphalt plant mixes [**approved by authorities having jurisdiction**][**; designed in accordance with procedures in AI MS-2, "Asphalt Mix Design Methods";**] and complying with the following requirements:

1. Provide mixes with a history of satisfactory performance in geographical area where Project is located.
2. Base Course: <**Insert mix designation**>.
3. Binder Course: <**Insert mix designation**>.
4. Surface Course: <**Insert mix designation**>.

C. Emulsified-Asphalt Slurry: ASTM D3910, [**Type 1**][**Type 2**][**Type 3**].

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that subgrade is dry and in suitable condition to begin paving.

B. Proceed with paving only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Protection: Provide protective materials, procedures, and worker training to prevent asphalt materials from spilling, coating, or building up on curbs, driveway aprons, manholes, and other surfaces adjacent to the Work.

B. Proof-roll subgrade below pavements with heavy pneumatic-tired equipment to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.

1. Completely proof-roll subgrade in one direction[**, repeating proof-rolling in direction perpendicular to first direction**]. Limit vehicle speed to **3 mph (5 km/h)**.
2. Proof-roll with a loaded 10-wheel, tandem-axle dump truck weighing not less than **15 tons (13.6 tonnes)**.
3. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Architect, and replace with compacted backfill or fill as directed.

3.3 COLD MILLING

A. Clean existing pavement surface of loose and deleterious material immediately before cold milling. Remove existing asphalt pavement by cold milling to grades and cross sections indicated.

1. Mill to a depth of [**1-1/2 inches (38 mm)**][**2 inches (50 mm)**][**3 inches (75 mm)**]<**Insert dimension**>.
2. Mill to a uniform finished surface free of excessive gouges, grooves, and ridges.
3. Control rate of milling to prevent tearing of existing asphalt course.
4. Repair or replace curbs, driveway aprons, manholes, and other construction damaged during cold milling.
5. Excavate and trim unbound-aggregate base course, if encountered, and keep material separate from milled hot-mix asphalt.
6. Patch surface depressions deeper than **1 inch (25 mm)** after milling, before wearing course is laid.
7. Handle milled asphalt material in accordance with approved waste management plan required in Section 017419 "Construction Waste Management and Disposal."
8. Keep milled pavement surface free of loose material and dust.
9. Do not allow milled materials to accumulate on-site.

3.4 PATCHING

A. Asphalt Pavement: Saw cut perimeter of patch and excavate existing pavement section to sound base. Excavate rectangular or trapezoidal patches, extending **12 inches (300 mm)** into perimeter of adjacent sound pavement, unless otherwise indicated. Cut excavation faces vertically. Remove excavated material. Recompact existing unbound-aggregate base course to form new subgrade.

B. Portland Cement Concrete Pavement: Break cracked slabs and roll as required to reseat concrete pieces firmly.

1. Undersealing: Pump hot undersealing asphalt under rocking slab until slab is stabilized or, if necessary, crack slab into pieces and roll to reseat pieces firmly.
2. Remove disintegrated or badly cracked pavement. Excavate rectangular or trapezoidal patches, extending into perimeter of adjacent sound pavement, unless otherwise indicated. Cut excavation faces vertically. Recompact existing unbound-aggregate base course to form new subgrade.

C. Tack Coat: Before placing patch material, apply tack coat uniformly to vertical asphalt surfaces abutting the patch. Apply at a rate of **0.05 to 0.15 gal./sq. yd. (0.2 to 0.7 L/sq. m)**.

1. Allow tack coat to cure undisturbed before applying hot-mix asphalt paving.
2. Avoid smearing or staining adjoining surfaces, appurtenances, and surroundings. Remove spillages and clean affected surfaces.

D. Placing Single-Course Patch Material: Fill excavated pavement areas with hot-mix asphalt base mix for full thickness of patch and, while still hot, compact flush with adjacent surface.

E. Placing Two-Course Patch Material: Partially fill excavated pavements with hot-mix asphalt base course mix and, while still hot, compact. Cover asphalt base course with compacted layer of hot-mix asphalt surface course, finished flush with adjacent surfaces.

3.5 REPAIRS

A. Leveling Course: Install and compact leveling course consisting of hot-mix asphalt surface course to level sags and fill depressions deeper than **1 inch (25 mm)** in existing pavements.

1. Install leveling wedges in compacted lifts not exceeding **3 inches (75 mm)** thick.

B. Crack and Joint Filling: Remove existing joint filler material from cracks or joints to a depth of [**1/4 inch (6 mm)**]<**Insert dimension**>.

1. Clean cracks and joints in existing hot-mix asphalt pavement.
2. Use emulsified-asphalt slurry to seal cracks and joints less than **1/4 inch (6 mm)** wide. Fill flush with surface of existing pavement and remove excess.
3. Use hot-applied joint sealant to seal cracks and joints more than **1/4 inch (6 mm)** wide. Fill flush with surface of existing pavement and remove excess.

3.6 SURFACE PREPARATION

A. Ensure that prepared subgrade has been proof-rolled and is ready to receive paving. Immediately before placing asphalt materials, remove loose and deleterious material from substrate surfaces.

B. Herbicide Treatment: Apply herbicide in accordance with manufacturer's recommended rates and written application instructions. Apply to dry, prepared subgrade or surface of compacted-aggregate base before applying paving materials.

1. Mix herbicide with prime coat if formulated by manufacturer for that purpose.

C. Cutback Prime Coat: Apply uniformly over surface of compacted unbound-aggregate base course at a rate of **0.15 to 0.50 gal./sq. yd. (0.7 to 2.3 L/sq. m)**. Apply enough material to penetrate and seal, but

not flood, surface. Allow prime coat to cure.

1. If prime coat is not entirely absorbed within 24 hours after application, spread sand over surface to blot excess asphalt. Use enough sand to prevent pickup under traffic. Remove loose sand by sweeping before pavement is placed and after volatiles have evaporated.
2. Protect primed substrate from damage until ready to receive paving.

D. Emulsified Asphalt Prime Coat: Apply uniformly over surface of compacted unbound-aggregate base course at a rate of **0.10 to 0.30 gal./sq. yd. per inch depth (0.5 to 1.40 L/sq. m per 25 mm depth)**. Apply enough material to penetrate and seal, but not flood, surface. Allow prime coat to cure.

1. If prime coat is not entirely absorbed within 24 hours after application, spread sand over surface to blot excess asphalt. Use enough sand to prevent pickup under traffic. Remove loose sand by sweeping before pavement is placed and after volatiles have evaporated.
2. Protect primed substrate from damage until ready to receive paving.

E. Tack Coat: Apply uniformly to surfaces of existing pavement at a rate of **0.05 to 0.15 gal./sq. yd. (0.2 to 0.7 L/sq. m)**.

1. Allow tack coat to cure undisturbed before applying hot-mix asphalt paving.
2. Avoid smearing or staining adjoining surfaces, appurtenances, and surroundings. Remove spillages and clean affected surfaces.

3.7 INSTALLATION OF PAVING GEOTEXTILE

A. Apply [**tack coat**][**asphalt binder**][**asphalt cement**] uniformly to existing pavement surfaces at a rate of **0.20 to 0.30 gal./sq. yd. (0.8 to 1.2 L/sq. m)**.

B. Place paving geotextile promptly in accordance with manufacturer's written instructions. Broom or roll geotextile smooth and free of wrinkles and folds. Overlap longitudinal joints **4 inches (100 mm)** and transverse joints **6 inches (150 mm)**.

C. Protect paving geotextile from traffic and other damage, and place hot-mix asphalt overlay the same day.

3.8 HOT-MIX ASPHALT PLACEMENT

A. Machine place hot-mix asphalt on prepared surface, spread uniformly, and strike off. Place asphalt mix by hand in areas inaccessible to equipment in a manner that prevents segregation of mix. Place each course to required grade, cross section, and thickness when compacted.

1. Place hot-mix asphalt base course[**and binder course**] in number of lifts and thicknesses indicated.
2. Place hot-mix asphalt surface course in single lift.
3. Spread mix at a minimum temperature of **250 deg F (121 deg C)**.
4. Begin applying mix along centerline of crown for crowned sections and on high side of one-way slopes unless otherwise indicated.
5. Regulate paver machine speed to obtain smooth, continuous surface free of pulls and tears in asphalt-paving mat.

B. Place paving in consecutive strips not less than **10 feet (3 m)** wide unless infill edge strips of a lesser width are required.

1. After first strip has been placed and rolled, place succeeding strips and extend rolling to overlap

previous strips. Overlap mix placement about **1 to 1-1/2 inches (25 to 38 mm)** from strip to strip to ensure proper compaction of mix along longitudinal joints.

2. Complete a section of asphalt base course[**and binder course**] before placing asphalt surface course.

C. Promptly correct surface irregularities in paving course behind paver. Use suitable hand tools to remove excess material forming high spots. Fill depressions with hot-mix asphalt to prevent segregation of mix; use suitable hand tools to smooth surface.

3.9 JOINTS

A. Construct joints to ensure a continuous bond between adjoining paving sections. Construct joints free of depressions, with same texture and smoothness as other sections of hot-mix asphalt course.

1. Clean contact surfaces and apply tack coat to joints.
2. Offset longitudinal joints, in successive courses, a minimum of **6 inches (150 mm)**.
3. Offset transverse joints, in successive courses, a minimum of **24 inches (600 mm)**.
4. Construct transverse joints at each point where paver ends a day's work and resumes work at a subsequent time. Construct these joints [**using either "bulkhead" or "papered" method in accordance with AI MS-22, for both "Ending a Lane" and "Resumption of Paving Operations."**][**as indicated on Drawings.**]<**Insert joint requirement.**>
5. Compact joints as soon as hot-mix asphalt will bear roller weight without excessive displacement.
6. Compact asphalt at joints to a density within 2 percent of specified course density.

3.10 COMPACTION

A. General: Begin compaction as soon as placed hot-mix paving will bear roller weight without excessive displacement. Compact hot-mix paving with hot hand tampers or with vibratory-plate compactors in areas inaccessible to rollers.

1. Complete compaction before mix temperature cools to **185 deg F (85 deg C)**.

B. Breakdown Rolling: Complete breakdown or initial rolling immediately after rolling joints and outside edge. Examine surface immediately after breakdown rolling for indicated crown, grade, and smoothness. Correct laydown and rolling operations to comply with requirements.

C. Intermediate Rolling: Begin intermediate rolling immediately after breakdown rolling while hot-mix asphalt is still hot enough to achieve specified density. Continue rolling until hot-mix asphalt course has been uniformly compacted to the following density:

1. Average Density, Marshall Test Method: 96 percent of reference laboratory density in accordance with [**ASTM D6927**][**or**][**AASHTO T 245**], but not less than 94 percent or greater than 100 percent.
2. Average Density, Rice Test Method: 92 percent of reference maximum theoretical density in accordance with ASTM D2041/D2041M, but not less than 90 percent or greater than 96 percent.

D. Finish Rolling: Finish roll paved surfaces to remove roller marks while hot-mix asphalt is still warm.

E. Edge Shaping: While surface is being compacted and finished, trim edges of pavement to proper alignment. Bevel edges while asphalt is still hot; compact thoroughly.

F. Repairs: Remove paved areas that are defective or contaminated with foreign materials and replace with fresh, hot-mix asphalt. Compact by rolling to specified density and surface smoothness.

G. Protection: After final rolling, do not permit vehicular traffic on pavement until it has cooled and hardened.

H. Erect barricades to protect paving from traffic until mixture has cooled enough not to become marked.

3.11 ASPHALT CURBS

A. Construct hot-mix asphalt curbs over compacted pavement surfaces. Apply a light tack coat unless pavement surface is still tacky and free from dust. Spread hot-mix asphalt at a minimum temperature of **250 deg F (121 deg C)**.

1. Hot-Mix Asphalt: Same as pavement surface-course mix.

B. Place hot-mix asphalt to curb cross section indicated or, if not indicated, to local standard shapes, by machine or by hand in wood or metal forms. Tamp hand-placed materials and screed to smooth finish. Remove forms after hot-mix asphalt has cooled.

3.12 ASPHALT TRAFFIC-CALMING DEVICES

A. Construct hot-mix asphalt speed [**bumps**][**humps**][**cushions**][**and**][**tables**] over compacted pavement surfaces. Apply a tack coat unless pavement surface is still tacky and free from dust. Spread hot-mix asphalt at a minimum temperature of **250 deg F (121 deg C)**.

1. Tack Coat Application: Apply uniformly to surfaces of existing pavement at a rate of **0.05 to 0.15 gal./sq. yd. (0.2 to 0.7 L/sq. m)**.
2. Hot-Mix Asphalt: Same as pavement surface-course mix.
3. Before installation, mill pavement that will be in contact with bottom of traffic-calming device. Mill to a depth of **1 inch (25 mm)** from top of pavement to a clean, rough profile.

B. Place and compact hot-mix asphalt to cross section indicated, by machine or by hand in wood or metal forms. Tamp hand-placed materials and screed to smooth finish. Remove forms after hot-mix asphalt has cooled.

3.13 INSTALLATION TOLERANCES

A. Pavement Thickness: Compact each course to produce thickness indicated within the following tolerances:

1. Base Course[**and Binder Course**]: Plus or minus **1/2 inch (13 mm)**.
2. Surface Course: Plus **1/4 inch (6 mm)**, no minus.

B. Pavement Surface Smoothness: Compact each course to produce surface smoothness within the following tolerances as determined by using a **10-foot (3-m)** straightedge applied transversely or longitudinally to paved areas:

1. Base Course[**and Binder Course**]: [**1/4 inch (6 mm)**]<**Insert dimension**>.
2. Surface Course: [**1/8 inch (3 mm)**]<**Insert dimension**>.
3. Crowned Surfaces: Test with crowned template centered and at right angle to crown. Maximum allowable variance from template is **1/4 inch (6 mm)**.

C. Asphalt Traffic-Calming Devices: Compact and form asphalt to the shapes indicated and within a tolerance of plus or minus **1/8 inch (3 mm)** of height indicated above pavement surface.

3.14 SURFACE TREATMENTS

A. Fog Seals: Apply fog seal at a rate of **0.10 to 0.15 gal./sq. yd. (0.45 to 0.7 L/sq. m)** to existing asphalt pavement and allow to cure. With fine sand, lightly dust areas receiving excess fog seal.

B. Slurry Seals: Apply slurry coat in a uniform thickness in accordance with ASTM D3910 and allow to cure.

1. Roll slurry seal to remove ridges and provide a uniform, smooth surface.

3.15 FIELD QUALITY CONTROL

A. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

B. Thickness: In-place compacted thickness of hot-mix asphalt courses will be determined in accordance with ASTM D3549/D3549M.

C. Surface Smoothness: Finished surface of each hot-mix asphalt course will be tested for compliance with smoothness tolerances.

D. Asphalt Traffic-Calming Devices: Finished height of traffic-calming devices above pavement will be measured for compliance with tolerances.

E. In-Place Density: Testing agency will take samples of uncompacted paving mixtures and compacted pavement in accordance with [**ASTM D979/D979M**][**or**][**AASHTO T 168**].

1. Reference maximum theoretical density will be determined by averaging results from four samples of hot-mix asphalt-paving mixture delivered daily to site, prepared in accordance with ASTM D2041/D2041M, and compacted in accordance with job-mix specifications.
2. In-place density of compacted pavement will be determined by testing core samples in accordance with ASTM D1188 or ASTM D2726/D2726M.

a. One core sample will be taken for every **1000 sq. yd. (836 sq. m)** or less of installed pavement, with no fewer than three cores taken.
b. Field density of in-place compacted pavement may also be determined by nuclear method in accordance with ASTM D2950/D2950M and coordinated with ASTM D1188 or ASTM D2726/D2726M.

F. Replace and compact hot-mix asphalt where core tests were taken.

G. Remove and replace or install additional hot-mix asphalt where test results or measurements indicate that it does not comply with specified requirements.

3.16 WASTE HANDLING

A. General: Handle asphalt-paving waste in accordance with approved waste management plan required in Section 017419 "Construction Waste Management and Disposal."

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 13 13 00 - CONCRETE PAVING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes concrete paving[**.**][**including the following:**]

1. Driveways.
2. Roadways.
3. Parking lots.
4. Curbs and gutters.
5. Walks.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for general building applications of concrete.
2. Section 321316 "Decorative Concrete Paving" for stamped concrete other than stamped detectable warnings.
3. Section 321373 "Concrete Paving Joint Sealants" for joint sealants in expansion and contraction joints within concrete paving and in joints between concrete paving and asphalt paving or adjacent construction.
4. Section 321713 "Parking Bumpers."
5. Section 321716 "Manufactured Traffic-Calming Devices."
6. Section 321723 "Pavement Markings."
7. Section 321726 "Tactile Warning Surfacing" for detectable warning [**tiles**][**mats**][**and**][**pavers**].

1.2 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash, slag cement, and other pozzolans.

B. W/C Ratio: The ratio by weight of water to cementitious materials.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1. Review methods and procedures related to concrete paving, including but not limited to, the following:

a. Concrete mixture design.
b. Quality control of concrete materials and concrete paving construction practices.
c. <**Insert agenda item**>.

2. Require representatives of each entity directly concerned with concrete paving to attend, including the following:

a. Contractor's superintendent.
b. Independent testing agency responsible for concrete design mixtures.

c. Ready-mix concrete manufacturer.
d. Concrete paving Subcontractor.
e. Manufacturer's representative of stamped concrete paving system used for stamped detectable warnings.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
3. Environmental Product Declaration (EPD): For each product.
4. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
5. Environmental Product Declaration: For each product.
6. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
7. Environmental Product Declaration: For each product.
8. Environmental Product Declaration: For each product.
9. Third-Party Certifications: For each product.
10. Third-Party Certified Life Cycle Assessment: For each product.
11. Laboratory Test Reports: For concrete paving mixtures, documentation indicating that cured concrete complies with Solar Reflectance Index requirements.
12. Laboratory Test Reports: For concrete paving mixtures, documentation indicating that cured concrete complies with Solar Reflectance Index requirements.

C. Samples for Initial Selection: For each type of product, ingredient, or admixture requiring color selection.

D. Samples for Verification: For each type of product or exposed finish, prepared as Samples of size indicated below:

1. Exposed Aggregate: [**10-lb (4.5-kg)**]<**Insert weight**> Sample of each mix.

E. Design Mixtures: For each concrete paving mixture. Include alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified [**Installer of stamped detectable warnings**][**ready-mix concrete manufacturer**][**and**][**testing agency**].

B. Material Certificates: For the following, from manufacturer:

1. Cementitious materials.
2. Steel reinforcement and reinforcement accessories.

3. Fiber reinforcement.
4. Admixtures.
5. Curing compounds.
6. Applied finish materials.
7. Bonding agent or epoxy adhesive.
8. Joint fillers.

C. Material Test Reports: For each of the following:

1. Aggregates:[**Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.**]

D. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Stamped Detectable Warning Installer Qualifications: An employer of workers trained and approved by manufacturer of stamped concrete paving systems.

B. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94/C94M requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities" (Quality Control Manual - Section 3, "Plant Certification Checklist").

C. Testing Agency Qualifications: Qualified according to ASTM C1077 and ASTM E329 for testing indicated.

1. Personnel conducting field tests must be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.

D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockups of full-thickness sections of concrete paving to demonstrate typical joints; surface finish, texture, and color; curing; and standard of workmanship.
2. Build mockups of concrete paving in the location and of the size indicated or, if not indicated, build mockups where directed by Architect and not less than [**96 inches (2400 mm) by 96 inches (2400 mm)**]<**Insert dimensions**>.[**Include full-size detectable warning.**]
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified independent testing agency to perform preconstruction testing on concrete paving mixtures.

1.8 FIELD CONDITIONS

A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

B. Cold-Weather Concrete Placement: Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:

1. When air temperature has fallen to or is expected to fall below **40 deg F (4.4 deg C)**, uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than **50 deg F (10 deg C)** and not more than **80 deg F (27 deg C)** at point of placement.
2. Do not use frozen materials or materials containing ice or snow.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.

C. Hot-Weather Concrete Placement: Comply with **ACI 301 (ACI 301M)** and as follows when hot-weather conditions exist:

1. Cool ingredients before mixing to maintain concrete temperature below **90 deg F (32 deg C)** at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Cover steel reinforcement with water-soaked burlap, so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
3. Fog-spray forms[**, steel reinforcement,**] and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with **ACI 301 (ACI 301M)** unless otherwise indicated.

2.2 FORMS

A. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, and smooth exposed surfaces.

1. Use flexible or uniformly curved forms for curves with a radius of **100 feet (30.5 m)** or less.[**Do not use notched and bent forms.**]

B. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and that will not impair subsequent treatments of concrete surfaces.

2.3 STEEL REINFORCEMENT

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [**25**][**60**]<**Insert value**> percent.

B. Plain-Steel Welded-Wire Reinforcement: ASTM A1064/A1064M, fabricated from [**as-**

drawn][**galvanized-**]steel wire into flat sheets.

C. Deformed-Steel Welded-Wire Reinforcement: ASTM A1064/A1064M, flat sheet.

D. Epoxy-Coated Welded-Wire Reinforcement: ASTM A884/A884M, Class A, plain steel.

E. Reinforcing Bars: ASTM A615/A615M, **Grade 60 (Grade 420)**; deformed.

F. Galvanized Reinforcing Bars: ASTM A767/A767M, Class II zinc coated, hot-dip galvanized after fabrication and bending; with ASTM A615/A615M, **Grade 60 (Grade 420)** deformed bars.

G. Epoxy-Coated Reinforcing Bars: ASTM A775/A775M or ASTM A934/A934M; with ASTM A615/A615M, **Grade 60 (Grade 420)** deformed bars.

H. Steel Bar Mats: ASTM A184/A184M; with ASTM A615/A615M, **Grade 60 (Grade 420)** deformed bars; assembled with clips.

I. Plain-Steel Wire: ASTM A1064/A1064M, [**as drawn**][**galvanized**].

J. Deformed-Steel Wire: ASTM A1064/A1064M.

K. Epoxy-Coated-Steel Wire: ASTM A884/A884M, Class A; coated, [**plain**][**deformed**].

L. Joint Dowel Bars: ASTM A615/A615M, **Grade 60 (Grade 420)** plain-steel bars[**; zinc coated (galvanized) after fabrication according to ASTM A767/A767M, Class I coating**]. Cut bars true to length with ends square and free of burrs.

M. Epoxy-Coated, Joint Dowel Bars: ASTM A775/A775M; with ASTM A615/A615M, **Grade 60 (Grade 420)** plain-steel bars.

N. Tie Bars: ASTM A615/A615M, **Grade 60 (Grade 420)**; deformed.

O. Hook Bolts: **ASTM A307, Grade A (ASTM F568M, Property Class 4.6)**, internally and externally threaded. Design hook-bolt joint assembly to hold coupling against paving form and in position during concreting operations, and to permit removal without damage to concrete or hook bolt.

P. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded-wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from steel wire, plastic, or precast concrete of greater compressive strength than concrete specified, and as follows:

1. Equip wire bar supports with sand plates or horizontal runners where base material will not support chair legs.
2. For epoxy-coated reinforcement, use epoxy-coated or other dielectric-polymer-coated wire bar supports.

Q. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating, compatible with epoxy coating on reinforcement.

R. Zinc Repair Material: ASTM A780/A780M.

2.4 CONCRETE MATERIALS

A. Regional Materials: Concrete shall be manufactured within **500 miles (800 km)** of Project site from

aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.

B. Regional Materials: Concrete shall be manufactured within **500 miles (800 km)** of Project site.

C. Regional Materials: Concrete shall be manufactured within **100 miles (160 km)** of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.

D. Indigenous Materials: Concrete shall be manufactured within **500 miles (800 km)** of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

E. Regional Materials: Concrete shall be manufactured within **500 miles (800 km)** of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

F. Cementitious Materials: Use the following cementitious materials, of same type, brand, and source throughout Project:

1. Portland Cement: ASTM C150/C150M, [**gray**][**white**] portland cement [**Type I**][**Type II**][**Type I/II**][**Type III**][**Type V**].
2. Fly Ash: ASTM C618, [**Class C**][**or**][**Class F**].
3. Slag Cement: ASTM C989/C989M, Grade 100 or 120.
4. Blended Hydraulic Cement: ASTM C595/C595M, [**Type IS, portland blast-furnace slag**][**Type IP, portland-pozzolan**][**Type IL, Portland-limestone**][**Type IT, ternary blended**] cement.

G. Normal-Weight Aggregates: ASTM C33/C33M, [**Class 4S**][**Class 4M**][**Class 1N**]<**Insert class**>, uniformly graded. Provide aggregates from a single source[**with documented service-record data of at least 10 years' satisfactory service in similar paving applications and service conditions using similar aggregates and cementitious materials**].

1. Maximum Coarse-Aggregate Size: [**1-1/2 inches (38 mm)**][**1 inch (25 mm)**][**3/4 inch (19 mm)**] nominal.
2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

H. Exposed Aggregate: Selected, hard, and durable; washed; free of materials with deleterious reactivity to cement or that cause staining; from a single source, with gap-graded coarse aggregate as follows:

1. Aggregate Sizes: [**3/4 to 1 inch (19 to 25 mm)**][**1/2 to 3/4 inch (13 to 19 mm)**][**3/8 to 5/8 inch (10 to 16 mm)**]<**Insert dimensions**> nominal.
2. Aggregate Source, Shape, and Color: <**Insert requirements**>.

I. Air-Entraining Admixture: ASTM C260/C260M.

J. Chemical Admixtures: Admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.

1. Water-Reducing Admixture: ASTM C494/C494M, Type A.
2. Retarding Admixture: ASTM C494/C494M, Type B.
3. Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type D.
4. High-Range, Water-Reducing Admixture: ASTM C494/C494M, Type F.
5. High-Range, Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type G.

6. Plasticizing and Retarding Admixture: ASTM C1017/C1017M, Type II.

K. Color Pigment: ASTM C979/C979M, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable,[**free of carbon black,**] nonfading, and resistant to lime and other alkalis.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Alabama Pigments Company, LLC**]
b. [**Bon Tool Co.**]
c. [**Brickform; a division of Solomon Colors**]
d. [**Butterfield Color, Inc.**]
e. [**Dynamic Color Solutions, Inc**]
f. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
g. [**Hoover Color Corporation**]
h. [**Lambert Corporation**]
i. [**Lanxess Corporation**]
j. [**Matcrete Inc.**]
k. [**NewLook International, Inc.**]
l. [**Proline Concrete Tools, Inc.**]
m. [**QC Construction Products**]
n. [**Scofield, a Business Unit of Sika Corporation**]
o. [**Solomon Colors Inc.**]
p. [**Stampcrete International, Ltd**]
q. [**SureCrete Design Products, a Fenix Group SPC Company**]
r. [**Venator Materials PLC**]
s. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Alabama Pigments Company, LLC**]
b. [**Bon Tool Co.**]
c. [**Brickform; a division of Solomon Colors**]
d. [**Butterfield Color, Inc.**]
e. [**Dynamic Color Solutions, Inc**]
f. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
g. [**Hoover Color Corporation**]
h. [**Lambert Corporation**]
i. [**Lanxess Corporation**]
j. [**Matcrete Inc.**]
k. [**NewLook International, Inc.**]
l. [**Proline Concrete Tools, Inc.**]
m. [**QC Construction Products**]
n. [**Scofield, a Business Unit of Sika Corporation**]
o. [**Solomon Colors Inc.**]
p. [**Stampcrete International, Ltd**]
q. [**SureCrete Design Products, a Fenix Group SPC Company**]
r. [**Venator Materials PLC**]
s. <**Insert manufacturer's name**>

3. Color: [**As indicated by manufacturer's designation**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<**Insert color**>.

L. Water: Potable and complying with ASTM C94/C94M.

2.5 FIBER REINFORCEMENT

A. Synthetic Fiber, Monofilament Fibers: Monofilament polypropylene fibers engineered and designed for use in decorative concrete paving, complying with ASTM C1116/C1116M, Type III, [**1/2 to 1-1/2 inches (13 to 38 mm)**]<**Insert dimensions**> long.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
b. [**FORTA Corporation**]
c. [**FullForce by ABC Polymer Industries, LLC**]
d. [**GCP Applied Technologies Inc.**]
e. [**Nycon Corporation**]
f. [**Propex Operating Company, LLC**]
g. [**Sika Corporation**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
b. [**FORTA Corporation**]
c. [**FullForce by ABC Polymer Industries, LLC**]
d. [**GCP Applied Technologies Inc.**]
e. [**Nycon Corporation**]
f. [**Propex Operating Company, LLC**]
g. [**Sika Corporation**]
h. <**Insert manufacturer's name**>

B. Synthetic Fiber, Fibrillated Fibers: Fibrillated polypropylene fibers engineered and designed for use in decorative concrete paving, complying with ASTM C1116/C1116M, Type III, [**1/2 to 1-1/2 inches (13 to 38 mm)**]<**Insert dimensions**> long.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
b. [**FORTA Corporation**]
c. [**FullForce by ABC Polymer Industries, LLC**]
d. [**GCP Applied Technologies Inc.**]
e. [**Nycon Corporation**]
f. [**Propex Operating Company, LLC**]
g. [**Sika Corporation**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

a. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
b. [**FORTA Corporation**]
c. [**FullForce by ABC Polymer Industries, LLC**]
d. [**GCP Applied Technologies Inc.**]
e. [**Nycon Corporation**]
f. [**Propex Operating Company, LLC**]
g. [**Sika Corporation**]
h. <**Insert manufacturer's name**>

2.6 CURING MATERIALS

A. Absorptive Cover: AASHTO M 182, [**Class 3, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. (305 g/sq. m) dry**][**or**][**cotton mats**].

B. Moisture-Retaining Cover: ASTM C171, polyethylene film or white burlap-polyethylene sheet.

C. Water: Potable.

D. Evaporation Retarder: Waterborne, monomolecular, film forming, manufactured for application to fresh concrete.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Bon Tool Co.**]
b. [**Brickform; a division of Solomon Colors**]
c. [**ChemMasters, Inc**]
d. [**Dayton Superior Corporation**]
e. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
f. [**Kaufman Products, Inc**]
g. [**Lambert Corporation**]
h. [**Laticrete International, Inc.**]
i. [**Master Builders Solutions**]
j. [**Metalcrete Industries**]
k. [**Nox-Crete Products Group**]
l. [**Sika Corporation**]
m. [**SpecChem, LLC**]
n. [**TK Products Construction Coatings, a Fenix Group SPC Company**]
o. [**Vexcon Chemicals Inc.**]
p. [**W. R. Meadows, Inc**]
q. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Bon Tool Co.**]
b. [**Brickform; a division of Solomon Colors**]
c. [**ChemMasters, Inc**]
d. [**Dayton Superior Corporation**]

e. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
f. [**Kaufman Products, Inc**]
g. [**Lambert Corporation**]
h. [**Laticrete International, Inc.**]
i. [**Master Builders Solutions**]
j. [**Metalcrete Industries**]
k. [**Nox-Crete Products Group**]
l. [**Sika Corporation**]
m. [**SpecChem, LLC**]
n. [**TK Products Construction Coatings, a Fenix Group SPC Company**]
o. [**Vexcon Chemicals Inc.**]
p. [**W. R. Meadows, Inc**]
q. <**Insert manufacturer's name**>

E. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C309, Type 1, Class B, dissipating.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Anti-Hydro International, Inc**]
b. [**ChemMasters, Inc**]
c. [**Dayton Superior Corporation**]
d. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
e. [**Kaufman Products, Inc**]
f. [**Lambert Corporation**]
g. [**Laticrete International, Inc.**]
h. [**Nox-Crete Products Group**]
i. [**Right Pointe**]
j. [**SpecChem, LLC**]
k. [**TK Products Construction Coatings, a Fenix Group SPC Company**]
l. [**Unitex; a Brand of Dayton Superior Corporation**]
m. [**Vexcon Chemicals Inc.**]
n. [**W. R. Meadows, Inc**]
o. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Anti-Hydro International, Inc**]
b. [**ChemMasters, Inc**]
c. [**Dayton Superior Corporation**]
d. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
e. [**Kaufman Products, Inc**]
f. [**Lambert Corporation**]
g. [**Laticrete International, Inc.**]

2.7 RELATED MATERIALS

A. Joint Fillers: [**ASTM D1751, asphalt-saturated cellulosic fiber**][**ASTM D1752, cork or self-expanding cork**][**or**][**ASTM D8139, semirigid, closed-cell polypropylene foam**] in preformed strips.

B. Slip-Resistive Aggregate Finish: Factory-graded, packaged, rustproof, nonglazing, abrasive aggregate of fused aluminum-oxide granules or crushed emery aggregate containing not less than 50 percent aluminum oxide and not less than 20 percent ferric oxide; unaffected by freezing, moisture, and cleaning materials.

C. Bonding Agent: ASTM C1059/C1059M, Type II, non-redispersible, acrylic emulsion or styrene butadiene.

D. Epoxy-Bonding Adhesive: ASTM C881/C881M, two-component epoxy resin capable of humid curing and bonding to damp surfaces; of class suitable for application temperature, of grade complying with requirements, and of the following types:

1. [**Types I and II, nonload bearing**][**Types IV and V, load bearing**], for bonding hardened or

freshly mixed concrete to hardened concrete.

E. Chemical Surface Retarder: Water-soluble, liquid, set retarder with color dye, for horizontal concrete surface application, capable of temporarily delaying final hardening of concrete to a depth of **1/8 to 1/4 inch (3 to 6 mm)**.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ChemMasters, Inc**]
   b. [**Dayton Superior Corporation**]
   c. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
   d. [**Kaufman Products, Inc**]
   e. [**Nox-Crete Products Group**]

u. <**Insert manufacturer's name**>

3. Color: [**As indicated by manufacturer's designation**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<**Insert color**>.

G. Rock Salt: Sodium chloride crystals, kiln dried, coarse gradation with 100 percent passing **3/8-inch (9.5-mm)** sieve and 85 percent retained on a **No. 8 (2.36-mm)** sieve.

2.8 STAMPED DETECTABLE WARNING MATERIALS

A. Detectable Warning Stamp: Semirigid polyurethane mats with formed underside capable of imprinting detectable warning pattern on plastic concrete; perforated with a vent hole at each dome.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Advanced Surfaces Inc.**]
    b. [**Butterfield Color, Inc.**]
    c. [**Stampcrete International, Ltd**]
    d. [**Transpo Industries, Inc.**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Advanced Surfaces Inc.**]
    b. [**Butterfield Color, Inc.**]
    c. [**Stampcrete International, Ltd**]
    d. [**Transpo Industries, Inc.**]
    e. <**Insert manufacturer's name**>

3. Size of Stamp: One piece, [**matching detectable warning area shown on Drawings**][**24 by 24 inches (610 by 610 mm)**][**24 by 36 inches (610 by 914 mm)**][**24 by 48 inches (610 by 1220 mm)**][**26 by 26 inches (660 by 660 mm)**][**26 by 36 inches (660 by 914 mm)**]<**Insert dimensions**>.

B. Liquid Release Agent: Manufacturer's standard, clear, evaporating formulation designed to facilitate release of stamp mats.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Advanced Surfaces Inc.**]
    b. [**Artcrete, Inc**]
    c. [**Bon Tool Co.**]
    d. [**Brickform; a division of Solomon Colors**]
    e. [**Butterfield Color, Inc.**]
    f. [**Decosup Inc.**]
    g. [**Matcrete Inc.**]
    h. [**Proline Concrete Tools, Inc.**]
    i. [**QC Construction Products**]
    j. [**Scofield, a Business Unit of Sika Corporation**]
    k. [**Specialty Concrete Products, Inc**]
    l. [**Stampcrete International, Ltd**]
    m. [**Super Stone, Inc.**]
    n. [**Venator Materials PLC**]
    o. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Advanced Surfaces Inc.**]

b. [**Artcrete, Inc**]
c. [**Bon Tool Co.**]
d. [**Brickform; a division of Solomon Colors**]
e. [**Butterfield Color, Inc.**]
f. [**Decosup Inc.**]
g. [**Matcrete Inc.**]
h. [**Proline Concrete Tools, Inc.**]
i. [**QC Construction Products**]
j. [**Scofield, a Business Unit of Sika Corporation**]
k. [**Specialty Concrete Products, Inc**]
l. [**Stampcrete International, Ltd**]
m. [**Super Stone, Inc.**]
n. [**Venator Materials PLC**]
o. <**Insert manufacturer's name**>

2.9 CONCRETE MIXTURES

A. Prepare design mixtures, proportioned according to **ACI 301 (ACI 301M)**, for each type and strength of normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.

1. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method.
2. When automatic machine placement is used, determine design mixtures and obtain laboratory test results that comply with or exceed requirements.

B. Cementitious Materials:[**Use fly ash, pozzolan, slag cement, and silica fume as needed to reduce the total amount of portland cement, which would otherwise be used, by not less than 40 percent.**][**Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:**]

1. Fly Ash or Pozzolan: 25 percent.
2. Slag Cement: 50 percent.
3. Combined Fly Ash or Pozzolan, and Slag Cement: 50 percent, with fly ash or pozzolan not exceeding 25 percent.

C. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content as follows:

1. Air Content, **1-1/2-inch (38-mm)** Nominal Maximum Aggregate Size: [**5-1/2**][**4-1/2**][**2-1/2**] percent plus or minus 1-1/2 percent.
2. Air Content, **1-inch (25-mm)** Nominal Maximum Aggregate Size: [**6**][**4-1/2**][**3**] percent plus or minus 1-1/2 percent.
3. Air Content, **3/4-inch (19-mm)** Nominal Maximum Aggregate Size: [**6**][**5**][**3-1/2**] percent plus or minus 1-1/2 percent.

D. Limit water-soluble, chloride-ion content in hardened concrete to [**0.15**][**0.30**] percent by weight of cement.

E. Chemical Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use [**water-reducing admixture**][**high-range, water-reducing admixture**][**high-range, water-reducing and retarding admixture**][**plasticizing and retarding admixture**] in concrete as required for placement and workability.
2. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.

F. Synthetic Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than [**1.0 lb/cu. yd. (0.60 kg/cu. m)**][**1.5 lb/cu. yd. (0.90 kg/cu. m)**]<**Insert requirement**>.

G. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

H. Concrete Mixtures: Normal-weight concrete.

1. Compressive Strength (28 Days): [**4500 psi (31 MPa)**][**4000 psi (27.6 MPa)**][**3500 psi (24.1 MPa)**][**3000 psi (20.7 MPa)**]<**Insert strength**>.
2. Maximum W/C Ratio at Point of Placement: [**0.45**][**0.50**]<**Insert ratio**>.
3. Slump Limit: [**4 inches (100 mm)**][**5 inches (125 mm)**][**8 inches (200 mm)**]<**Insert dimension**>, plus or minus **1 inch (25 mm)**.
4. Solar Reflectance Index: Not less than 29.
5. Solar Reflectance (SR): Three-year-aged SR value of at least 0.28 or initial SR of at least 0.33.
6. Solar Reflectance (SR): At least 0.30.
7. Solar Reflectance Index: At least 25.

2.10 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C94/C94M[**and ASTM C1116/C1116M**]. Furnish batch certificates for each batch discharged and used in the Work.

1. When air temperature is between **85 and 90 deg F (30 and 32 deg C)**, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above **90 deg F (32 deg C)**, reduce mixing and delivery time to 60 minutes.

B. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C94/C94M. Mix concrete materials in appropriate drum-type batch machine mixer.

1. For concrete batches of **1 cu. yd. (0.76 cu. m)** or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
2. For concrete batches larger than **1 cu. yd. (0.76 cu. m)**, increase mixing time by 15 seconds for each additional **1 cu. yd. (0.76 cu. m)**.
3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixing time, quantity, and amount of water added.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.

B. Proof-roll prepared subbase surface below [**concrete paving**]<**Insert locations**> to identify soft pockets and areas of excess yielding.

1. Completely proof-roll subbase in one direction[**and repeat in perpendicular direction**]. Limit vehicle speed to **3 mph (5 km/h)**.

2. Proof-roll with a pneumatic-tired and loaded, 10-wheel, tandem-axle dump truck weighing not less than **15 tons (13.6 tonnes)**.
3. Correct subbase with soft spots and areas of pumping or rutting exceeding depth of [**1/2 inch (13 mm)**]<**Insert dimension**> according to requirements in Section 312000 "Earth Moving."

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove loose material from compacted subbase surface immediately before placing concrete.

3.3 EDGE FORMS AND SCREED CONSTRUCTION

A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.

B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

3.4 INSTALLATION OF STEEL REINFORCEMENT

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.

C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.

D. Install welded-wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh, and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.

E. Zinc-Coated Reinforcement: Use galvanized-steel wire ties to fasten zinc-coated reinforcement. Repair cut and damaged zinc coatings with zinc repair material.

F. Epoxy-Coated Reinforcement: Use epoxy-coated steel wire ties to fasten epoxy-coated reinforcement. Repair cut and damaged epoxy coatings with epoxy repair coating according to ASTM D3963/D3963M.

G. Install fabricated bar mats in lengths as long as practicable. Handle units to keep them flat and free of distortions. Straighten bends, kinks, and other irregularities, or replace units as required before placement. Set mats for a minimum **2-inch (50-mm)** overlap of adjacent mats.

3.5 JOINTS

A. General: Form construction, isolation, and contraction joints and tool edges true to line, with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline unless otherwise indicated.

1. When joining existing paving, place transverse joints to align with previously placed joints unless

otherwise indicated.

B. Construction Joints: Set construction joints at side and end terminations of paving and at locations where paving operations are stopped for more than one-half hour unless paving terminates at isolation joints.

1. Continue steel reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of paving strips unless otherwise indicated.
2. Provide tie bars at sides of paving strips where indicated.
3. Butt Joints: Use [**bonding agent**][**epoxy-bonding adhesive**] at joint locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
4. Keyed Joints: Provide preformed keyway-section forms or bulkhead forms with keys unless otherwise indicated. Embed keys at least **1-1/2 inches (38 mm)** into concrete.
5. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, other fixed objects, and where indicated.

1. Locate expansion joints at intervals of [**50 feet (15.25 m)**]<**Insert dimension**> unless otherwise indicated.
2. Extend joint fillers full width and depth of joint.
3. Terminate joint filler not less than **1/2 inch (13 mm)** or more than **1 inch (25 mm)** below finished surface if joint sealant is indicated.
4. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
5. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
6. During concrete placement, protect top edge of joint filler with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.

D. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness, as follows[**, to match jointing of existing adjacent concrete paving**]:

1. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint with grooving tool to a [**1/4-inch (6-mm)**][**3/8-inch (10-mm)**] radius. Repeat grooving of contraction joints after applying surface finishes.[**Eliminate grooving-tool marks on concrete surfaces.**]

   a. Tolerance: Ensure that grooved joints are within [**3 inches (75 mm)**]<**Insert dimension**> either way from centers of dowels.

2. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut **1/8-inch- (3-mm-)** wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.

   a. Tolerance: Ensure that sawed joints are within [**3 inches (75 mm)**]<**Insert dimension**> either way from centers of dowels.

3. Doweled Contraction Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

E. Edging: After initial floating, tool edges of paving, gutters, curbs, and joints in concrete with an edging tool to a [**1/4-inch (6-mm)**][**3/8-inch (10-mm)**] radius. Repeat tooling of edges after applying surface

finishes.[**Eliminate edging-tool marks on concrete surfaces.**]

3.6 CONCRETE PLACEMENT

A. Before placing concrete, inspect and complete formwork installation[**, steel reinforcement,**] and items to be embedded or cast-in.

B. Remove snow, ice, or frost from subbase surface[**and steel reinforcement**] before placing concrete. Do not place concrete on frozen surfaces.

C. Moisten subbase to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.

D. Comply with **ACI 301 (ACI 301M)** requirements for measuring, mixing, transporting, and placing concrete.

E. Do not add water to concrete during delivery or at Project site. Do not add water to fresh concrete after testing.

F. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.

G. Consolidate concrete according to **ACI 301 (ACI 301M)** by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.

1. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies[**, reinforcement,**] or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating [**reinforcement**][**dowels**][**and**] joint devices.

H. Screed paving surface with a straightedge and strike off.

I. Commence initial floating using bull floats or darbies to impart an open-textured and uniform surface plane before excess moisture or bleedwater appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.

J. Curbs and Gutters: Use design mixture for automatic machine placement. Produce curbs and gutters to required cross section, lines, grades, finish, and jointing.

K. Slip-Form Paving: Use design mixture for automatic machine placement. Produce paving to required thickness, lines, grades, finish, and jointing.

1. Compact subbase and prepare subgrade of sufficient width to prevent displacement of slip-form paving machine during operations.

3.7 FLOAT FINISHING

A. General: Do not add water to concrete surfaces during finishing operations.

B. Float Finish: Begin the second floating operation when bleedwater sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.

1. Burlap Finish: Drag a seamless strip of damp burlap across float-finished concrete, perpendicular to line of traffic, to provide a uniform, gritty texture.
2. Medium-to-Fine-Textured Broom Finish: Draw a soft-bristle broom across float-finished concrete surface, perpendicular to line of traffic, to provide a uniform, fine-line texture.
3. Medium-to-Coarse-Textured Broom Finish: Provide a coarse finish by striating float-finished concrete surface **1/16 to 1/8 inch (1.6 to 3 mm)** deep with a stiff-bristled broom, perpendicular to line of traffic.

3.8 SPECIAL FINISHES

A. Monolithic Exposed-Aggregate Finish: Expose coarse aggregate in paving surface as follows:

1. Immediately after float finishing, spray-apply chemical surface retarder to paving according to manufacturer's written instructions.
2. Cover paving surface with plastic sheeting, sealing laps with tape, and remove when ready to continue finishing operations.
3. Without dislodging aggregate, remove mortar concealing the aggregate by lightly brushing surface with a stiff, nylon-bristle broom. Do not expose more than one-third of the average diameter of the aggregate and not more than one-half of the diameter of the smallest aggregate.
4. Fine-spray surface with water and brush. Repeat cycle of water flushing and brushing until cement film is removed from aggregate surfaces to depth required.

B. Seeded Exposed-Aggregate Finish: Immediately after initial floating, spread a single layer of aggregate uniformly on paving surface. Tamp aggregate into plastic concrete and float finish to entirely embed aggregate with mortar cover of **1/16 inch (1.6 mm)**.

1. Spray-apply chemical surface retarder to paving according to manufacturer's written instructions.
2. Cover paving surface with plastic sheeting, sealing laps with tape, and remove sheeting when ready to continue finishing operations.
3. Without dislodging aggregate, remove mortar concealing the aggregate by lightly brushing surface with a stiff, nylon-bristle broom. Do not expose more than one-third of the average diameter of the aggregate and not more than one-half of the diameter of the smallest aggregate.
4. Fine-spray surface with water and brush. Repeat cycle of water flushing and brushing until cement film is removed from aggregate surfaces to depth required.

C. Slip-Resistive Aggregate Finish: Before final floating, spread slip-resistive aggregate finish on paving surface according to manufacturer's written instructions and as follows:

1. Uniformly spread [**25 lb/100 sq. ft. (12 kg/10 sq. m)**][**40 lb/100 sq. ft. (19.5 kg/10 sq. m)**][**60 lb/100 sq. ft. (29 kg/10 sq. m)**]<**Insert rate of application**> of dampened, slip-resistive aggregate over paving surface in two applications. Tamp aggregate flush with surface using a steel trowel, but do not force below surface.
2. Uniformly distribute approximately two-thirds of slip-resistive aggregate over paving surface with mechanical spreader, allow to absorb moisture, and embed by power floating. Follow power floating with a second slip-resistive aggregate application, uniformly distributing remainder of material at right angles to first application to ensure uniform coverage, and embed by power floating.
3. Cure concrete with curing compound recommended by slip-resistive aggregate manufacturer. Apply curing compound immediately after final finishing.
4. After curing, lightly work surface with a steel-wire brush or abrasive stone and water to expose nonslip aggregate.

D. Rock-Salt Finish: After initial [**floating**][**troweling**][**brooming**], uniformly spread rock salt over paving surface at the rate of **5 lb/100 sq. ft. (0.2 kg/10 sq. m)**.

1. Embed rock salt into plastic concrete with [**roller**][**or**][**magnesium float**]<**Insert tool**>.
2. Cover paving surface with **1-mil- (0.025-mm-)** thick polyethylene sheet and remove sheet when concrete has hardened and seven-day curing period has elapsed.
3. After seven-day curing period, saturate concrete with water and broom-sweep surface to dissolve remaining rock salt, thereby leaving pits and holes.

E. Pigmented Mineral Dry-Shake Hardener Finish: After initial floating, apply dry-shake materials to paving surface according to manufacturer's written instructions and as follows:

1. Uniformly spread dry-shake hardener at a rate of [**100 lb/100 sq. ft. (49 kg/10 sq. m)**]<**Insert rate of application**> unless greater amount is recommended by manufacturer to match paving color required.
2. Uniformly distribute approximately two-thirds of dry-shake hardener over the concrete surface with mechanical spreader; allow hardener to absorb moisture and embed it by power floating. Follow power floating with a second application of pigmented mineral dry-shake hardener, uniformly distributing remainder of material at right angles to first application to ensure uniform color, and embed hardener by final power floating.
3. After final power floating, apply a hand-troweled finish followed by a broom finish.
4. Cure concrete with curing compound recommended by dry-shake hardener manufacturer. Apply curing compound immediately after final finishing.

3.9 INSTALLATION OF DETECTABLE WARNINGS

A. Blockouts: Form blockouts in concrete for installation of detectable paving units specified in Section 321726 "Tactile Warning Surfacing."

1. Tolerance for Opening Size: [**Plus 1/4 inch (6 mm), no minus**]<**Insert requirement**>.

B. Cast-in-Place Detectable Warning Tiles: Form blockouts in concrete for installation of tiles specified in Section 321726 "Tactile Warning Surfacing." Screed surface of concrete where tiles are to be installed to elevation, so that edges of installed tiles will be flush with surrounding concrete paving. Embed tiles in fresh concrete to comply with Section 321726 "Tactile Warning Surfacing" immediately after screeding concrete surface.

C. Stamped Detectable Warnings: Install stamped detectable warnings as part of a continuous concrete paving placement and according to stamp-mat manufacturer's written instructions.

1. Before using stamp mats, verify that the vent holes are unobstructed.
2. Apply liquid release agent to the concrete surface and the stamp mat.
3. Stamping: [**While initially finished concrete is plastic**][**After application and final floating of pigmented mineral dry-shake hardener**], accurately align and place stamp mats in sequence. Uniformly load, gently vibrate, and press mats into concrete to produce imprint pattern on concrete surface. Load and tamp mats directly perpendicular to the stamp-mat surface to prevent distortion in shape of domes. Press and tamp until mortar begins to come through all of the vent holes. Gently remove stamp mats.
4. Trimming: After [**24**]<**Insert number**> hours, cut off the tips of mortar formed by the vent holes.
5. Remove residual release agent according to manufacturer's written instructions, but no fewer than three days after stamping concrete. High-pressure-wash surface and joint patterns, taking care not to damage stamped concrete. Control, collect, and legally dispose of runoff.

3.10 CONCRETE PROTECTION AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.

B. Comply with ACI 306.1 for cold-weather protection.

C. Evaporation Retarder: Apply evaporation retarder to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching **0.2 lb/sq. ft. x h (1 kg/sq. m x h)** before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete but before float finishing.

D. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.

E. Curing Methods: Cure concrete by [**moisture curing**][**moisture-retaining-cover curing**][**curing compound**][**or**][**a combination of these**] as follows:

1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:

   a. Water.
   b. Continuous water-fog spray.
   c. Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with **12-inch (300-mm)** lap over adjacent absorptive covers.

2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover, placed in widest practicable width, with sides and ends lapped at least **12 inches (300 mm)**, and sealed by waterproof tape or adhesive. Immediately repair any holes or tears occurring during installation or curing period, using cover material and waterproof tape.
3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating, and repair damage during curing period.

3.11 PAVING TOLERANCES

A. Comply with tolerances in **ACI 117 (ACI 117M)** and as follows:

1. Elevation: **3/4 inch (19 mm)**.
2. Thickness: Plus **3/8 inch (10 mm)**, minus **1/4 inch (6 mm)**.
3. Surface: Gap below **10-feet- (3-m-)** long; unleveled straightedge not to exceed **1/2 inch (13 mm)**.
4. Alignment of Tie-Bar End Relative to Line Perpendicular to Paving Edge: **1/2 inch per 12 inches (13 mm per 300 mm)** of tie bar.
5. Lateral Alignment and Spacing of Dowels: **1 inch (25 mm)**.
6. Vertical Alignment of Dowels: **1/4 inch (6 mm)**.
7. Alignment of Dowel-Bar End Relative to Line Perpendicular to Paving Edge: **1/4 inch per 12 inches (6 mm per 300 mm)** of dowel.
8. Joint Spacing: **3 inches (75 mm)**.
9. Contraction Joint Depth: Plus **1/4 inch (6 mm)**, no minus.
10. Joint Width: Plus **1/8 inch (3 mm)**, no minus.

3.12 FIELD QUALITY CONTROL

A. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

B. Testing Services: Testing and inspecting of composite samples of fresh concrete obtained according to ASTM C172/C172M will be performed according to the following requirements:

1. Testing Frequency: Obtain at least one composite sample for each [100 cu. yd. (76 cu. m)][5000 sq. ft. (465 sq. m)] or fraction thereof of each concrete mixture placed each day.

    a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing to be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

2. Slump: ASTM C143/C143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C231/C231M, pressure method; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
4. Concrete Temperature: ASTM C1064/C1064M; one test hourly when air temperature is 40 deg F (4.4 deg C) and below and when it is 80 deg F (27 deg C) and above, and one test for each composite sample.
5. Compression Test Specimens: ASTM C31/C31M; cast and laboratory cure one set of three standard cylinder specimens for each composite sample.
6. Compressive-Strength Tests: ASTM C39/C39M; test one specimen at seven days and two specimens at 28 days.

    a. A compressive-strength test to be the average compressive strength from two specimens obtained from same composite sample and tested at 28 days.

C. Strength of each concrete mixture will be satisfactory if average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi (3.4 MPa).

D. Test results to be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests to contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.

E. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.

F. Additional Tests: Testing and inspecting agency will make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect.

G. Concrete paving will be considered defective if it does not pass tests and inspections.

H. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

I. Prepare test and inspection reports.

3.13 REPAIR AND PROTECTION

A. Remove and replace concrete paving that is broken, damaged, or defective or that does not comply with requirements in this Section. Remove work in complete sections from joint to joint unless otherwise approved by Architect.

B. Drill test cores, where directed by Architect, when necessary to determine magnitude of cracks or defective areas. Fill drilled core holes in satisfactory paving areas with portland cement concrete

bonded to paving with epoxy adhesive.

C. Protect concrete paving from damage. Exclude traffic from paving for at least 14 days after placement. When construction traffic is permitted, maintain paving as clean as possible by removing surface stains and spillage of materials as they occur.

D. Maintain concrete paving free of stains, discoloration, dirt, and other foreign material. Sweep paving not more than two days before date scheduled for Substantial Completion inspections.

SECTION 32 13 16 00 - DECORATIVE CONCRETE PAVING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Colored concrete paving.
2. Stamped concrete paving.
3. Stenciled concrete paving.
4. Stained concrete paving.

B. Related Requirements:

1. [**Section 033000 "Cast-in-Place Concrete"**][**Section 033053 "Miscellaneous Cast-in-Place Concrete"**] for general building applications of concrete.
2. Section 321313 "Concrete Paving" for cast-in-place concrete paving with other finishes, curbs and gutters, and stamped detectable warnings.
3. Section 321373 "Concrete Paving Joint Sealants" for joint sealants in expansion and contraction joints within decorative concrete paving and in joints between decorative concrete paving and other paving or adjacent construction.

1.2 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash, slag cement, and other pozzolans.

B. W/C Ratio: The ratio by weight of water to cementitious materials.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1. Review methods and procedures related to decorative concrete paving, including but not limited to, the following:

a. Concrete mixture design.
b. Quality control of concrete materials and decorative concrete paving construction practices.
c. <**Insert agenda item**>.

2. Require representatives of each entity directly concerned with decorative concrete paving to attend, including the following:

a. Contractor's superintendent.
b. Independent testing agency responsible for concrete design mixtures.
c. Ready-mix concrete manufacturer.
d. Decorative concrete paving Installer.
e. Manufacturer's representative of decorative concrete paving system.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
3. Environmental Product Declaration (EPD): For each product.
4. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
5. Environmental Product Declaration: For each product.
6. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
7. Environmental Product Declaration: For each product.
8. Environmental Product Declaration: For each product.
9. Third-Party Certifications: For each product.
10. Third-Party Certified Life Cycle Assessment: For each product.

C. Samples for Initial Selection: For each type of product, ingredient, or admixture requiring color, pattern, or texture selection.

D. Samples for Verification: For each type of exposed color, pattern, or texture indicated.

E. Design Mixtures: For each decorative concrete paving mixture. Include alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified [**Installer**][**ready-mix concrete manufacturer**][**and**][**testing agency**].

B. Material Certificates: For the following, from manufacturer:

1. Cementitious materials.
2. Steel reinforcement and reinforcement accessories.
3. Fiber reinforcement.
4. Admixtures.
5. Curing compounds.
6. Applied finish materials.
7. Bonding agent or epoxy adhesive.
8. Joint fillers.

C. Material Test Reports: For each of the following:

1. Aggregates.[**Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.**]

D. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers trained and approved by manufacturer of decorative concrete paving systems.

B. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94/C94M requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities" (Quality Control Manual - Section 3, "Plant Certification Checklist").

C. Testing Agency Qualifications: Qualified according to ASTM C1077 and ASTM E329 for testing indicated.

1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.

D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockups of full-thickness sections of decorative concrete paving to demonstrate typical joints; surface color, pattern, and texture; curing; and standard of workmanship.
2. Build mockups of decorative concrete paving in the location and of the size indicated or, if not indicated, build mockups where directed by Architect and not less than [**96 inches (2400 mm) by 96 inches (2400 mm)**]<**Insert dimensions**>.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified independent testing agency to perform preconstruction testing on decorative concrete paving mixtures.

1.8 FIELD CONDITIONS

A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

B. Cold-Weather Concrete Placement: Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:

1. When air temperature has fallen to or is expected to fall below **40 deg F (4.4 deg C)**, uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than **50 deg F (10 deg C)** and not more than **80 deg F (27 deg C)** at point of placement.
2. Do not use frozen materials or materials containing ice or snow.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.

C. Hot-Weather Concrete Placement: Comply with **ACI 301 (ACI 301M)** and as follows when hot-weather conditions exist:

1. Cool ingredients before mixing to maintain concrete temperature below **90 deg F (32 deg C)** at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Cover steel reinforcement with water-soaked burlap, so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
3. Fog-spray forms[**, steel reinforcement,**] and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with **ACI 301 (ACI 301M)** unless otherwise indicated.

2.2 FORMS

A. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, and smooth exposed surfaces.

1. Use flexible or uniformly curved forms for curves of a radius of **100 feet (30.5 m)** or less. [**Do not use notched and bent forms.**]

B. Forms for Textured Finish Concrete: Units of face design, size, arrangement, and configuration indicated. Provide solid backing and form supports to ensure stability of textured form liners.

C. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and that will not impair subsequent treatments of concrete surfaces.

2.3 STEEL REINFORCEMENT

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [**25**][**60**]<**Insert value**> percent.

B. Plain-Steel Welded-Wire Reinforcement: ASTM A1064/A1064M, fabricated from as-drawn steel wire into flat sheets.

C. Reinforcing Bars: ASTM A615/A615M, **Grade 60 (Grade 420)**; deformed.

D. Steel Bar Mats: ASTM A184/A184M; with ASTM A615/A615M, **Grade 60 (Grade 420)** deformed bars; assembled with clips.

E. Plain-Steel Wire: ASTM A1064/A1064M, as drawn.

F. Joint Dowel Bars: ASTM A615/A615M, **Grade 60 (Grade 420)** plain-steel bars. Cut bars true to length with ends square and free of burrs.

G. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded-wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from steel wire, plastic, or precast concrete of greater

compressive strength than concrete specified, and as follows:

1. Equip wire bar supports with sand plates or horizontal runners where base material will not support chair legs.

2.4 CONCRETE MATERIALS

A. Regional Materials: Concrete shall be manufactured within **500 miles (800 km)** of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.

B. Regional Materials: Concrete shall be manufactured within **500 miles (800 km)** of Project site.

C. Regional Materials: Concrete shall be manufactured within **100 miles (160 km)** of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.

D. Indigenous Materials: Concrete shall be manufactured within **500 miles (800 km)** of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

E. Regional Materials: Concrete shall be manufactured within **500 miles (800 km)** of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

F. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.

G. Cementitious Materials:

1. Portland Cement: ASTM C150/C150M, [**gray**][**white**] portland cement [**Type I**][**Type II**][**Type I/II**][**Type III**][**Type V**].
2. Fly Ash: ASTM C618, Class C or F.
3. Slag Cement: ASTM C989/C989M, Grade 100 or 120.
4. Blended Hydraulic Cement: ASTM C595/C595M, [**Type IS, portland blast-furnace slag**][**Type IP, portland-pozzolan**][**Type IL, Portland-limestone**][**Type IT, ternary blended**] cement.

H. Normal-Weight Aggregates: ASTM C33/C33M, [**Class 4S**][**Class 4M**][**Class 1N**]<**Insert class**>, uniformly graded. Provide aggregates from a single source[**with documented service-record data of at least 10 years' satisfactory service in similar paving applications and service conditions using similar aggregates and cementitious materials**].

1. Maximum Coarse-Aggregate Size: [**1-1/2 inches (38 mm)**][**1 inch (25 mm)**][**3/4 inch (19 mm)**]<**Insert dimension**> nominal.
2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

I. Air-Entraining Admixture: ASTM C260/C260M.

J. Chemical Admixtures: Admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.

1. Water-Reducing Admixture: ASTM C494/C494M, Type A[**, colored**].

2. Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type D[**, colored**].
3. Water-Reducing and Accelerating Admixture: ASTM C494/C494M, Type E.

K. Color Pigment: ASTM C979/C979M, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable,[**free of carbon black,**] nonfading, and resistant to lime and other alkalis.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Alabama Pigments Company, LLC**]
    b. [**Bon Tool Co.**]
    c. [**Brickform; a division of Solomon Colors**]
    d. [**Butterfield Color, Inc.**]
    e. [**Dynamic Color Solutions, Inc**]
    f. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
    g. [**Hoover Color Corporation**]
    h. [**Lambert Corporation**]
    i. [**Lanxess Corporation**]
    j. [**Matcrete Inc.**]
    k. [**NewLook International, Inc.**]
    l. [**Proline Concrete Tools, Inc.**]
    m. [**QC Construction Products**]
    n. [**Scofield, a Business Unit of Sika Corporation**]
    o. [**Solomon Colors Inc.**]
    p. [**Stampcrete International, Ltd**]
    q. [**SureCrete Design Products, a Fenix Group SPC Company**]
    r. [**Venator Materials PLC**]
    s. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Alabama Pigments Company, LLC**]
    b. [**Bon Tool Co.**]
    c. [**Brickform; a division of Solomon Colors**]
    d. [**Butterfield Color, Inc.**]
    e. [**Dynamic Color Solutions, Inc**]
    f. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
    g. [**Hoover Color Corporation**]
    h. [**Lambert Corporation**]
    i. [**Lanxess Corporation**]
    j. [**Matcrete Inc.**]
    k. [**NewLook International, Inc.**]
    l. [**Proline Concrete Tools, Inc.**]
    m. [**QC Construction Products**]
    n. [**Scofield, a Business Unit of Sika Corporation**]
    o. [**Solomon Colors Inc.**]
    p. [**Stampcrete International, Ltd**]
    q. [**SureCrete Design Products, a Fenix Group SPC Company**]
    r. [**Venator Materials PLC**]
    s. <**Insert manufacturer's name**>

L. Water: Potable and complying with ASTM C94/C94M.

2.5 FIBER REINFORCEMENT

A. Synthetic Fiber, Monofilament Fibers: Monofilament polypropylene fibers engineered and designed for use in decorative concrete paving, complying with ASTM C1116/C1116M, Type III, [**1/2 to 1-1/2 inches (13 to 38 mm)**]<**Insert dimensions**> long.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
b. [**FORTA Corporation**]
c. [**FullForce by ABC Polymer Industries, LLC**]
d. [**GCP Applied Technologies Inc.**]
e. [**Nycon Corporation**]
f. [**Propex Operating Company, LLC**]
g. [**Sika Corporation**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
b. [**FORTA Corporation**]
c. [**FullForce by ABC Polymer Industries, LLC**]
d. [**GCP Applied Technologies Inc.**]
e. [**Nycon Corporation**]
f. [**Propex Operating Company, LLC**]
g. [**Sika Corporation**]
h. <**Insert manufacturer's name**>

B. Synthetic Fiber, Fibrillated Fibers: Fibrillated polypropylene fibers engineered and designed for use in decorative concrete paving, complying with ASTM C1116/C1116M, Type III, [**1/2 to 1-1/2 inches (13 to 38 mm)**]<**Insert dimensions**> long.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
b. [**FORTA Corporation**]
c. [**FullForce by ABC Polymer Industries, LLC**]
d. [**GCP Applied Technologies Inc.**]
e. [**Nycon Corporation**]
f. [**Propex Operating Company, LLC**]
g. [**Sika Corporation**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the

following:

a. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
b. [**FORTA Corporation**]
c. [**FullForce by ABC Polymer Industries, LLC**]
d. [**GCP Applied Technologies Inc.**]
e. [**Nycon Corporation**]
f. [**Propex Operating Company, LLC**]
g. [**Sika Corporation**]
h. <**Insert manufacturer's name**>

2.6 SURFACE COLORING MATERIALS

A. Pigmented Mineral Dry-Shake Hardener: Factory-packaged, dry combination of portland cement, graded quartz aggregate, color pigments, and plasticizing admixture. Use color pigments that are finely ground, nonfading mineral oxides interground with cement.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Anti-Hydro International, Inc**]
b. [**Artcrete, Inc**]
c. [**Bomanite Co**]
d. [**Bon Tool Co.**]
e. [**Brickform; a division of Solomon Colors**]
f. [**Butterfield Color, Inc.**]
g. [**Decosup Inc.**]
h. [**Dynamic Color Solutions, Inc**]
i. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
j. [**H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.**]
k. [**Kaufman Products, Inc**]
l. [**Lambert Corporation**]
m. [**Laticrete International, Inc.**]
n. [**Metalcrete Industries**]
o. [**Proline Concrete Tools, Inc.**]
p. [**QC Construction Products**]
q. [**Scofield, a Business Unit of Sika Corporation**]
r. [**Specialty Concrete Products, Inc**]
s. [**Stampcrete International, Ltd**]
t. [**Super Stone, Inc.**]
u. [**SureCrete Design Products, a Fenix Group SPC Company**]
v. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Anti-Hydro International, Inc**]
b. [**Artcrete, Inc**]
c. [**Bomanite Co**]
d. [**Bon Tool Co.**]
e. [**Brickform; a division of Solomon Colors**]

f. [**Butterfield Color, Inc.**]
g. [**Decosup Inc.**]
h. [**Dynamic Color Solutions, Inc**]
i. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
j. [**H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.**]
k. [**Kaufman Products, Inc**]
l. [**Lambert Corporation**]
m. [**Laticrete International, Inc.**]
n. [**Metalcrete Industries**]
o. [**Proline Concrete Tools, Inc.**]
p. [**QC Construction Products**]
q. [**Scofield, a Business Unit of Sika Corporation**]
r. [**Specialty Concrete Products, Inc**]
s. [**Stampcrete International, Ltd**]
t. [**Super Stone, Inc.**]
u. [**SureCrete Design Products, a Fenix Group SPC Company**]
v. <**Insert manufacturer's name**>

B. Pigmented Powder Release Agent: Factory-packaged, dry combination of surface-conditioning and dispersing agents interground with color pigments that facilitates release of stamp mats. Use color pigments that are finely ground, nonfading mineral oxides interground with cement.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Advanced Surfaces Inc.**]
b. [**Artcrete, Inc**]
c. [**Bomanite Co**]
d. [**Bon Tool Co.**]
e. [**Brickform; a division of Solomon Colors**]
f. [**Butterfield Color, Inc.**]
g. [**Decosup Inc.**]
h. [**Dynamic Color Solutions, Inc**]
i. [**H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.**]
j. [**Proline Concrete Tools, Inc.**]
k. [**QC Construction Products**]
l. [**Scofield, a Business Unit of Sika Corporation**]
m. [**Specialty Concrete Products, Inc**]
n. [**Stampcrete International, Ltd**]
o. [**Super Stone, Inc.**]
p. [**SureCrete Design Products, a Fenix Group SPC Company**]
q. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Advanced Surfaces Inc.**]
b. [**Artcrete, Inc**]
c. [**Bomanite Co**]
d. [**Bon Tool Co.**]
e. [**Brickform; a division of Solomon Colors**]
f. [**Butterfield Color, Inc.**]
g. [**Decosup Inc.**]

h. [**Dynamic Color Solutions, Inc**]
i. [**H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.**]
j. [**Proline Concrete Tools, Inc.**]
k. [**QC Construction Products**]
l. [**Scofield, a Business Unit of Sika Corporation**]
m. [**Specialty Concrete Products, Inc**]
n. [**Stampcrete International, Ltd**]
o. [**Super Stone, Inc.**]
p. [**SureCrete Design Products, a Fenix Group SPC Company**]
q. <**Insert manufacturer's name**>

C. Liquid Release Agent: Manufacturer's standard, clear, evaporating formulation that facilitates release of stamp mats and texture rollers.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Advanced Surfaces Inc.**]
b. [**Artcrete, Inc**]
c. [**Bon Tool Co.**]
d. [**Brickform; a division of Solomon Colors**]
e. [**Butterfield Color, Inc.**]
f. [**Decosup Inc.**]
g. [**Matcrete Inc.**]
h. [**Proline Concrete Tools, Inc.**]
i. [**QC Construction Products**]
j. [**Scofield, a Business Unit of Sika Corporation**]
k. [**Specialty Concrete Products, Inc**]
l. [**Stampcrete International, Ltd**]
m. [**Super Stone, Inc.**]
n. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Advanced Surfaces Inc.**]
b. [**Artcrete, Inc**]
c. [**Bon Tool Co.**]
d. [**Brickform; a division of Solomon Colors**]
e. [**Butterfield Color, Inc.**]
f. [**Decosup Inc.**]
g. [**Matcrete Inc.**]
h. [**Proline Concrete Tools, Inc.**]
i. [**QC Construction Products**]
j. [**Scofield, a Business Unit of Sika Corporation**]
k. [**Specialty Concrete Products, Inc**]
l. [**Stampcrete International, Ltd**]
m. [**Super Stone, Inc.**]
n. <**Insert manufacturer's name**>

2.7 STAMPING DEVICES

A. Stamp Mats: Semirigid polyurethane mats with projecting textured and ridged underside capable of imprinting texture and joint patterns on plastic concrete.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Advanced Surfaces Inc.**]
b. [**Bomanite Co**]
c. [**Bon Tool Co.**]
d. [**Brickform; a division of Solomon Colors**]
e. [**Butterfield Color, Inc.**]
f. [**Matcrete Inc.**]
g. [**Proline Concrete Tools, Inc.**]
h. [**Scofield, a Business Unit of Sika Corporation**]
i. [**Specialty Concrete Products, Inc**]
j. [**Stampcrete International, Ltd**]
k. [**Super Stone, Inc.**]
l. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Advanced Surfaces Inc.**]
b. [**Bomanite Co**]
c. [**Bon Tool Co.**]
d. [**Brickform; a division of Solomon Colors**]
e. [**Butterfield Color, Inc.**]
f. [**Matcrete Inc.**]
g. [**Proline Concrete Tools, Inc.**]
h. [**Scofield, a Business Unit of Sika Corporation**]
i. [**Specialty Concrete Products, Inc**]
j. [**Stampcrete International, Ltd**]
k. [**Super Stone, Inc.**]
l. <**Insert manufacturer's name**>

B. Stamp Tools: Open-grid, aluminum or rigid-plastic stamp tool capable of imprinting joint patterns on plastic concrete.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Matcrete Inc.**]
b. [**Scofield, a Business Unit of Sika Corporation**]
c. [**Super Stone, Inc.**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Matcrete Inc.**]
b. [**Scofield, a Business Unit of Sika Corporation**]
c. [**Super Stone, Inc.**]
d. <**Insert manufacturer's name**>

C. Rollers: Manually controlled, water-filled aluminum rollers with projecting ridges on drum capable of imprinting texture and joint patterns on plastic concrete.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Bon Tool Co.**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Bon Tool Co.**]
b. <**Insert manufacturer's name**>

D. Texture Rollers: Manually controlled, abrasion-resistant polyurethane rollers capable of imprinting texture on plastic concrete.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Artcrete, Inc**]
b. [**Bon Tool Co.**]
c. [**Butterfield Color, Inc.**]
d. [**Proline Concrete Tools, Inc.**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Artcrete, Inc**]
b. [**Bon Tool Co.**]
c. [**Butterfield Color, Inc.**]
d. [**Proline Concrete Tools, Inc.**]
e. <**Insert manufacturer's name**>

2.8 STENCIL MATERIALS

A. Stencils: Manufacturer's standard, moisture-resistant paper or reusable plastic stencils, designed for use on plastic concrete.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following]:

a. [**Artcrete, Inc**]
b. [**Bon Tool Co.**]
c. [**Brickform; a division of Solomon Colors**]
d. [**Butterfield Color, Inc.**]
e. [**Specialty Concrete Products, Inc**]
f. [**SureCrete Design Products, a Fenix Group SPC Company**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Artcrete, Inc**]
b. [**Bon Tool Co.**]
c. [**Brickform; a division of Solomon Colors**]
d. [**Butterfield Color, Inc.**]
e. [**Specialty Concrete Products, Inc**]
f. [**SureCrete Design Products, a Fenix Group SPC Company**]
g. <**Insert manufacturer's name**>

2.9 STAIN MATERIALS

A. Reactive Stain: Acidic-based stain with wetting agents and high-grade, UV-stable metallic salts that react with calcium hydroxide in cured concrete to produce permanent, variegated, or translucent color effects.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Americrete, Inc.**]
b. [**Artcrete, Inc**]
c. [**Bomanite Co**]
d. [**Bon Tool Co.**]
e. [**Brickform; a division of Solomon Colors**]
f. [**Butterfield Color, Inc.**]
g. [**Decosup Inc.**]
h. [**EPMAR Corporation; a Quaker Houghton company**]
i. [**H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.**]
j. [**QC Construction Products**]
k. [**Scofield, a Business Unit of Sika Corporation**]
l. [**Specialty Concrete Products, Inc**]
m. [**Stampcrete International, Ltd**]
n. [**Super Stone, Inc.**]
o. [**SureCrete Design Products, a Fenix Group SPC Company**]
p. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Americrete, Inc.**]
b. [**Artcrete, Inc**]
c. [**Bomanite Co**]
d. [**Bon Tool Co.**]
e. [**Brickform; a division of Solomon Colors**]
f. [**Butterfield Color, Inc.**]
g. [**Decosup Inc.**]
h. [**EPMAR Corporation; a Quaker Houghton company**]
i. [**H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.**]
j. [**QC Construction Products**]
k. [**Scofield, a Business Unit of Sika Corporation**]
l. [**Specialty Concrete Products, Inc**]
m. [**Stampcrete International, Ltd**]
n. [**Super Stone, Inc.**]
o. [**SureCrete Design Products, a Fenix Group SPC Company**]
p. <**Insert manufacturer's name**>

B. Penetrating Stain: Water-based, acrylic latex, penetrating stain with colorfast pigments.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Americrete, Inc.**]
b. [**AmeriPolish**]
c. [**Bomanite Co**]
d. [**Bon Tool Co.**]
e. [**Brickform; a division of Solomon Colors**]
f. [**Butterfield Color, Inc.**]
g. [**Duckback Products**]
h. [**H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.**]
i. [**Scofield, a Business Unit of Sika Corporation**]
j. [**Super Stone, Inc.**]
k. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Americrete, Inc.**]
b. [**AmeriPolish**]
c. [**Bomanite Co**]
d. [**Bon Tool Co.**]
e. [**Brickform; a division of Solomon Colors**]
f. [**Butterfield Color, Inc.**]
g. [**Duckback Products**]
h. [**H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.**]
i. [**Scofield, a Business Unit of Sika Corporation**]
j. [**Super Stone, Inc.**]
k. <**Insert manufacturer's name**>

2.10 CURING AND SEALING MATERIALS

A. Curing Paper: Nonstaining, waterproof paper, consisting of two layers of kraft paper cemented together and reinforced with fiber, and complying with ASTM C171.

B. Evaporation Retarder: Waterborne, monomolecular, film forming, manufactured for application to fresh concrete.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Bon Tool Co.**]
b. [**Brickform; a division of Solomon Colors**]
c. [**ChemMasters, Inc**]
d. [**Dayton Superior Corporation**]
e. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
f. [**Kaufman Products, Inc**]
g. [**Lambert Corporation**]
h. [**Laticrete International, Inc.**]
i. [**Metalcrete Industries**]
j. [**Nox-Crete Products Group**]
k. [**Sika Corporation**]
l. [**SpecChem, LLC**]
m. [**TK Products Construction Coatings, a Fenix Group SPC Company**]
n. [**Vexcon Chemicals Inc.**]
o. [**W. R. Meadows, Inc**]
p. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Bon Tool Co.**]
b. [**Brickform; a division of Solomon Colors**]
c. [**ChemMasters, Inc**]
d. [**Dayton Superior Corporation**]
e. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
f. [**Kaufman Products, Inc**]
g. [**Lambert Corporation**]
h. [**Laticrete International, Inc.**]
i. [**Metalcrete Industries**]
j. [**Nox-Crete Products Group**]
k. [**Sika Corporation**]
l. [**SpecChem, LLC**]
m. [**TK Products Construction Coatings, a Fenix Group SPC Company**]
n. [**Vexcon Chemicals Inc.**]
o. [**W. R. Meadows, Inc**]
p. <**Insert manufacturer's name**>

C. Waterborne, Membrane-Forming, Curing Compound: ASTM C309, Type 1, Class B, nondissipating, non-yellowing, manufactured for use with colored concrete.

1. Curing compound shall be pigmented type matching color of integrally colored concrete and shall be approved by coloring admixture manufacturer.

2. For concrete indicated to be sealed, curing compound shall be compatible with sealer.
3. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Anti-Hydro International, Inc**]
    b. [**ChemMasters, Inc**]
    c. [**Dayton Superior Corporation**]
    d. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
    e. [**Kaufman Products, Inc**]
    f. [**Lambert Corporation**]
    g. [**Laticrete International, Inc.**]
    h. [**Metalcrete Industries**]
    i. [**Nox-Crete Products Group**]
    j. [**SpecChem, LLC**]
    k. [**TK Products Construction Coatings, a Fenix Group SPC Company**]
    l. [**Vexcon Chemicals Inc.**]
    m. [**W. R. Meadows, Inc**]
    n. <**Insert manufacturer's name**>

4. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Anti-Hydro International, Inc**]
    b. [**ChemMasters, Inc**]
    c. [**Dayton Superior Corporation**]
    d. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
    e. [**Kaufman Products, Inc**]
    f. [**Lambert Corporation**]
    g. [**Laticrete International, Inc.**]
    h. [**Metalcrete Industries**]
    i. [**Nox-Crete Products Group**]
    j. [**SpecChem, LLC**]
    k. [**TK Products Construction Coatings, a Fenix Group SPC Company**]
    l. [**Vexcon Chemicals Inc.**]
    m. [**W. R. Meadows, Inc**]
    n. <**Insert manufacturer's name**>

D. High-Solids, Waterborne, Membrane-Forming, Curing Compound: ASTM C309, Type 1, Class B, 18 to 25 percent solids, nondissipating, non-yellowing, manufactured for use with colored concrete.

1. Curing compound shall be pigmented type matching color of integrally colored concrete and shall be approved by coloring admixture manufacturer.
2. For concrete indicated to be sealed, curing compound shall be compatible with sealer.
3. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ChemMasters, Inc**]
    b. [**Dayton Superior Corporation**]
    c. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
    d. [**Kaufman Products, Inc**]

e. [**Lambert Corporation**]
f. [**Laticrete International, Inc.**]
g. [**Metalcrete Industries**]
h. [**Nox-Crete Products Group**]
i. [**SpecChem, LLC**]
j. [**V-Seal Concrete Sealers & Specialty Coatings**]
k. [**Vexcon Chemicals Inc.**]
l. [**W. R. Meadows, Inc**]
m. <**Insert manufacturer's name**>

4. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ChemMasters, Inc**]
b. [**Dayton Superior Corporation**]
c. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
d. [**Kaufman Products, Inc**]
e. [**Lambert Corporation**]
f. [**Laticrete International, Inc.**]
g. [**Metalcrete Industries**]
h. [**Nox-Crete Products Group**]
i. [**SpecChem, LLC**]
j. [**V-Seal Concrete Sealers & Specialty Coatings**]
k. [**Vexcon Chemicals Inc.**]
l. [**W. R. Meadows, Inc**]
m. <**Insert manufacturer's name**>

E. Clear, Solvent-Borne, Membrane-Forming, Curing and Sealing Compound: ASTM C1315, Type 1, Class A, manufactured for use with colored concrete.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ChemMasters, Inc**]
b. [**Concrete Sealers USA**]
c. [**Dayton Superior Corporation**]
d. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
e. [**Kaufman Products, Inc**]
f. [**Lambert Corporation**]
g. [**Laticrete International, Inc.**]
h. [**Metalcrete Industries**]
i. [**Nox-Crete Products Group**]
j. [**Right Pointe**]
k. [**SpecChem, LLC**]
l. [**TK Products Construction Coatings, a Fenix Group SPC Company**]
m. [**Vexcon Chemicals Inc.**]
n. [**W. R. Meadows, Inc**]
o. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ChemMasters, Inc**]
b. [**Concrete Sealers USA**]
c. [**Dayton Superior Corporation**]
d. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
e. [**Kaufman Products, Inc**]
f. [**Lambert Corporation**]
g. [**Laticrete International, Inc.**]
h. [**Metalcrete Industries**]
i. [**Nox-Crete Products Group**]
j. [**Right Pointe**]
k. [**SpecChem, LLC**]
l. [**TK Products Construction Coatings, a Fenix Group SPC Company**]
m. [**Vexcon Chemicals Inc.**]
n. [**W. R. Meadows, Inc**]
o. <**Insert manufacturer's name**>

3. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
4. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
5. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 16.5 mcg/cu. m or 13.5 ppb, whichever is less.
6. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
7. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

F. Clear, Waterborne, Membrane-Forming, Curing and Sealing Compound: ASTM C1315, Type 1, Class A, manufactured for use with colored concrete.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ChemMasters, Inc**]
b. [**Concrete Sealers USA**]
c. [**Dayton Superior Corporation**]
d. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
e. [**Kaufman Products, Inc**]
f. [**Lambert Corporation**]
g. [**Laticrete International, Inc.**]
h. [**Metalcrete Industries**]
i. [**Nox-Crete Products Group**]
j. [**Right Pointe**]
k. [**SpecChem, LLC**]
l. [**TK Products Construction Coatings, a Fenix Group SPC Company**]
m. [**Vexcon Chemicals Inc.**]
n. [**W. R. Meadows, Inc**]

o. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ChemMasters, Inc**]
b. [**Concrete Sealers USA**]
c. [**Dayton Superior Corporation**]
d. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
e. [**Kaufman Products, Inc**]
f. [**Lambert Corporation**]
g. [**Laticrete International, Inc.**]
h. [**Metalcrete Industries**]
i. [**Nox-Crete Products Group**]
j. [**Right Pointe**]
k. [**SpecChem, LLC**]
l. [**TK Products Construction Coatings, a Fenix Group SPC Company**]
m. [**Vexcon Chemicals Inc.**]
n. [**W. R. Meadows, Inc**]
o. <**Insert manufacturer's name**>

3. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
4. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
5. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 16.5 mcg/cu. m or 13.5 ppb, whichever is less.
6. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
7. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

G. Clear Acrylic Sealer, Low-to-Medium Gloss: Manufacturer's standard, waterborne, non-yellowing and UV-resistant, membrane-forming, acrylic copolymer emulsion or epoxy-modified acrylic emulsion, manufactured for colored concrete, containing not less than 15 percent solids by volume.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Advanced Surfaces Inc.**]
b. [**Bomanite Co**]
c. [**Concrete Sealers USA**]
d. [**Duckback Products**]
e. [**EPMAR Corporation; a Quaker Houghton company**]
f. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
g. [**H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.**]
h. [**QC Construction Products**]

i. [**Scofield, a Business Unit of Sika Corporation**]
j. [**United Gilsonite Laboratories (UGL)**]
k. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Advanced Surfaces Inc.**]
b. [**Bomanite Co**]
c. [**Concrete Sealers USA**]
d. [**Duckback Products**]
e. [**EPMAR Corporation; a Quaker Houghton company**]
f. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
g. [**H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.**]
h. [**QC Construction Products**]
i. [**Scofield, a Business Unit of Sika Corporation**]
j. [**United Gilsonite Laboratories (UGL)**]
k. <**Insert manufacturer's name**>

H. Clear Acrylic Sealer, High Gloss: Manufacturer's standard, waterborne, non-yellowing and UV-resistant, membrane-forming, high-gloss, acrylic copolymer emulsion solution, manufactured for colored concrete, containing not less than 25 percent solids by volume.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Advanced Surfaces Inc.**]
b. [**Bomanite Co**]
c. [**Concrete Sealers USA**]
d. [**Duckback Products**]
e. [**EPMAR Corporation; a Quaker Houghton company**]
f. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
g. [**H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.**]
h. [**Scofield, a Business Unit of Sika Corporation**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Advanced Surfaces Inc.**]
b. [**Bomanite Co**]
c. [**Concrete Sealers USA**]
d. [**Duckback Products**]
e. [**EPMAR Corporation; a Quaker Houghton company**]
f. [**Euclid Chemical Company (The); a subsidiary of RPM International, Inc.**]
g. [**H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.**]
h. [**Scofield, a Business Unit of Sika Corporation**]
i. <**Insert manufacturer's name**>

I. Slip-Resistance-Enhancing Additive: Manufacturer's standard finely graded aggregate or polymer additive, designed to be added to clear acrylic sealer to enhance slip resistance of sealed paving

surface.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Advanced Surfaces Inc.**]
    b. [**Bomanite Co**]
    c. [**Bon Tool Co.**]
    d. [**Dayton Superior Corporation**]
    e. [**H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.**]
    f. [**QC Construction Products**]
    g. [**Vexcon Chemicals Inc.**]
    h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Advanced Surfaces Inc.**]
    b. [**Bomanite Co**]
    c. [**Bon Tool Co.**]
    d. [**Dayton Superior Corporation**]
    e. [**H&C Decorative Concrete Products; a brand of Sherwin-Williams Co.**]
    f. [**QC Construction Products**]
    g. [**Vexcon Chemicals Inc.**]
    h. <**Insert manufacturer's name**>

2.11 RELATED MATERIALS

A. Joint Fillers: [**ASTM D1751, asphalt-saturated cellulosic fiber**][**ASTM D1752, cork or self-expanding cork**][**or**][**ASTM D8139, semirigid, closed-cell polypropylene foam**] in preformed strips.

B. Bonding Agent: ASTM C1059/C1059M, Type II, non-redispersible, acrylic emulsion or styrene butadiene.

C. Epoxy-Bonding Adhesive: ASTM C881/C881M, two-component epoxy resin capable of humid curing and bonding to damp surfaces; of class suitable for application temperature, of grade complying with requirements, and of the following types:

    1. [**Types I and II, nonload bearing**][**Types IV and V, load bearing**], for bonding hardened or freshly mixed concrete to hardened concrete.

D. Polyethylene Film: ASTM D4397, **1 mil (0.025 mm)** thick, clear.

2.12 CONCRETE MIXTURES

A. Obtain each color, size, type, and variety of concrete mixture from single manufacturer with resources to provide concrete of consistent quality in appearance and physical properties.

B. Prepare design mixtures, proportioned according to **ACI 301 (ACI 301M)**, for each type and strength of normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.

1. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method.

C. Cementitious Materials:[**Use fly ash, pozzolan, slag cement, and silica fume as needed to reduce the total amount of portland cement, which would otherwise be used, by not less than 40 percent.**][**Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:**]

1. Fly Ash or Pozzolan: 25 percent.
2. Slag Cement: 50 percent.
3. Combined Fly Ash or Pozzolan, and Slag Cement: 50 percent, with fly ash or pozzolan not exceeding 25 percent.

D. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content as follows:

1. Air Content:

a. [**5-1/2**][**4-1/2**][**2-1/2**] percent plus or minus 1.5 percent for **1-1/2-inch (38-mm)** nominal maximum aggregate size.
b. [**6**][**4-1/2**][**3**] percent plus or minus 1.5 percent for **1-inch (25-mm)** nominal maximum aggregate size.
c. [**6**][**5**][**3-1/2**] percent plus or minus 1.5 percent for **3/4-inch (19-mm)** nominal maximum aggregate size.

E. Limit water-soluble, chloride-ion content in hardened concrete to [**0.15**][**0.30**] percent by weight of cement.

F. Chemical Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use [**water-reducing admixture**][**water-reducing and retarding admixture**][**water-reducing and accelerating admixture**] in concrete as required for placement and workability.
2. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.

G. Synthetic Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than [**1.0 lb/cu. yd. (0.60 kg/cu. m)**]<**Insert requirement**>.

H. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

I. Concrete Mixtures: Normal-weight concrete.

1. Compressive Strength (28 Days): [**4500 psi (31 MPa)**][**4000 psi (27.6 MPa)**][**3500 psi (24.1 MPa)**][**3000 psi (20.7 MPa)**]<**Insert strength**>.
2. Maximum W/C Ratio at Point of Placement: [**0.45**][**0.50**]<**Insert ratio**>.
3. Slump Limit: [**4 inches (100 mm)**][**5 inches (125 mm)**]<**Insert dimension**>, plus or minus **1 inch (25 mm)**.

2.13 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C94/C94M[**and ASTM C1116/C1116M**]. Furnish batch certificates for each batch discharged and used in the Work.

1. When air temperature is between **85 and 90 deg F (30 and 32 deg C)**, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above **90 deg F (32 deg C)**, reduce mixing and delivery time to 60 minutes.

B. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C94/C94M. Mix concrete materials in appropriate drum-type batch machine mixer.

1. For concrete batches of **1 cu. yd. (0.76 cu. m)** or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
2. For concrete batches larger than **1 cu. yd. (0.76 cu. m)**, increase mixing time by 15 seconds for each additional **1 cu. yd. (0.76 cu. m)**.
3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixing time, quantity, and amount of water added.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.

B. Proof-roll prepared subbase surface below [**decorative concrete paving**]<**Insert locations**> to identify soft pockets and areas of excess yielding.

1. Completely proof-roll subbase in one direction[**and repeat in perpendicular direction**]. Limit vehicle speed to **3 mph (5 km/h)**.
2. Proof-roll with a pneumatic-tired and loaded, 10-wheel, tandem-axle dump truck weighing not less than **15 tons (13.6 tonnes)**.
3. Correct subbase with soft spots and areas of pumping or rutting exceeding depth of [**1/2 inch (13 mm)**]<**Insert dimension**> according to requirements in Section 312000 "Earth Moving."

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove loose material from compacted subbase surface immediately before placing concrete.

B. Protect adjacent construction from discoloration and spillage during application of color hardeners, release agents, stains, curing compounds, and sealers.

3.3 EDGE FORMS AND SCREED CONSTRUCTION

A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.

B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

3.4 INSTALLATION OF STEEL REINFORCEMENT

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.

C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.

D. Install welded-wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh, and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.

E. Install fabricated bar mats in lengths as long as practicable. Handle units to keep them flat and free of distortions. Straighten bends, kinks, and other irregularities, or replace units as required before placement. Set mats for a minimum **2-inch (50-mm)** overlap to adjacent mats.

3.5 JOINTS

A. General: Form construction, isolation, and contraction joints and tool edges true to line, with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline unless otherwise indicated.

1. When joining existing paving, place transverse joints to align with previously placed joints unless otherwise indicated.

B. Construction Joints: Set construction joints at side and end terminations of paving and at locations where paving operations are stopped for more than one-half hour unless paving terminates at isolation joints.

1. Continue steel reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of paving strips unless otherwise indicated.
2. Butt Joints: Use [**bonding agent**][**epoxy-bonding adhesive**] at joint locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
3. Keyed Joints: Provide preformed keyway-section forms or bulkhead forms with keys unless otherwise indicated. Embed keys at least **1-1/2 inches (38 mm)** into concrete.
4. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, walks, other fixed objects, and where indicated.

1. Locate expansion joints at intervals of [**50 feet (15.25 m)**]<**Insert dimension**> unless otherwise indicated.
2. Extend joint fillers full width and depth of joint.
3. Terminate joint filler not less than **1/2 inch (13 mm)** or more than **1 inch (25 mm)** below finished surface if joint sealant is indicated.
4. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
5. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
6. During concrete placement, protect top edge of joint filler with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.

D. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness, as follows[**, to match jointing of existing adjacent decorative concrete paving**]:

1. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint with grooving tool to a [**1/4-inch (6-mm)**][**3/8-inch (10-mm)**] radius. Repeat grooving of contraction joints after applying surface finishes. Eliminate grooving-tool marks on concrete surfaces.

   a. Tolerance: Ensure that grooved joints are within [**3 inches (75 mm)**]<**Insert dimension**> either way from centers of dowels.

2. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut **1/8-inch- (3-mm-)** wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.

   a. Tolerance: Ensure that sawed joints are within [**3 inches (75 mm)**]<**Insert dimension**> in both directions from centers of dowels.

3. Doweled Contraction Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

E. Edging: After initial floating, tool edges of paving, gutters, curbs, and joints in concrete with an edging tool to a [**1/4-inch (6-mm)**][**3/8-inch (10-mm)**] radius. Repeat tooling of edges after applying surface finishes. Eliminate edging-tool marks on concrete surfaces.

3.6 CONCRETE PLACEMENT

A. Before placing concrete, inspect and complete formwork installation[**, steel reinforcement,**] and items to be embedded or cast-in.

B. Remove snow, ice, or frost from subbase surface[**and steel reinforcement**] before placing concrete. Do not place concrete on frozen surfaces.

C. Moisten subbase to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.

D. Comply with **ACI 301 (ACI 301M)** requirements for measuring, mixing, transporting, and placing concrete.

E. Do not add water to concrete during delivery or at Project site. Do not add water to fresh concrete after testing.

F. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.

G. Consolidate concrete according to **ACI 301 (ACI 301M)** by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.

1. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies[**, reinforcement,**] or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating [**reinforcement**][**dowels**][**and**] joint devices.

H. Screed paving surface with a straightedge and strike off.

I. Commence initial floating using bull floats or darbies to impart an open-textured and uniform surface plane before excess moisture or bleedwater appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.

3.7 FLOAT FINISHING

A. General: Do not add water to concrete surfaces during finishing operations.

B. Float Finish: Begin the second floating operation when bleedwater sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.

3.8 INTEGRALLY COLORED CONCRETE FINISH

A. Integrally Colored Concrete Finish: After final floating, apply the following finish:

1. Burlap Finish: Drag a seamless strip of damp burlap across float-finished concrete, perpendicular to line of traffic, to provide a uniform, gritty texture.
2. Medium-to-Fine-Textured Broom Finish: Draw a soft-bristle broom across float-finished concrete surface, perpendicular to line of traffic, to provide a uniform, fine-line texture.
3. Medium-to-Coarse-Textured Broom Finish: Provide a coarse finish by striating float-finished concrete surface **1/16 to 1/8 inch (1.6 to 3 mm)** deep with a stiff-bristled broom, perpendicular to line of traffic.

3.9 STENCILING

A. Cut stencils to slab width and lay on wet concrete. Overlap "mortar joint" on trailing edge of each section of stencil onto leading "mortar joint" of previous section.

B. Trim stencils to fit slab and adjacent patterns.

C. Slightly embed stencil into concrete by rolling with stencil roller.

D. Apply pigmented mineral dry-shake hardener materials to concrete surfaces according to manufacturer's written instructions.

E. Stencil Rolling:

1. Apply [**pigmented powder release agent**][**liquid release agent**] according to manufacturer's written instructions prior to applying texture roller to surface of concrete.
2. Perform rolling operation to produce required texture on concrete surface.

F. Remove stencils when concrete has sufficiently cured to bear weight. Do not leave stencils in concrete overnight.

G. Remove debris with mechanical blower prior to application of curing compound. If release agent is applied, delay removal of debris for 24 hours, then flood area with low-pressure water hose, wetting release agent, and follow by cleaning surface with pressure washer.

3.10 PIGMENTED MINERAL DRY-SHAKE HARDENER APPLICATION

A. Pigmented Mineral Dry-Shake Hardener Finish: After initial floating, apply dry-shake materials to paving surfaces according to manufacturer's written instructions and as follows:

1. Uniformly apply dry-shake hardener at a rate of [**100 lb/100 sq. ft. (49 kg/10 sq. m)**]<**Insert rate of application**> unless greater amount is recommended by manufacturer to match paving color required.
2. Uniformly distribute approximately two-thirds of dry-shake hardener over the concrete surface with mechanical spreader; allow hardener to absorb moisture and embed it by power floating. Follow power floating with a second application of pigmented mineral dry-shake hardener, uniformly distributing remainder of material at right angles to first application to ensure uniform color, and embed hardener by final power floating.
3. After final power floating, apply the following finish:

a. Burlap Finish: Drag a seamless strip of damp burlap across float-finished concrete, perpendicular to line of traffic, to provide a uniform, gritty texture.
b. Medium-to-Fine-Textured Broom Finish: Draw a soft-bristle broom across float-finished concrete surface, perpendicular to line of traffic, to provide a uniform, fine-line texture.
c. Medium-to-Coarse-Textured Broom Finish: Provide a coarse finish by striating float-finished concrete surface **1/16 to 1/8 inch (1.6 to 3 mm)** deep with a stiff-bristled broom, perpendicular to line of traffic.

B. Pigmented Powder Release Agent: Uniformly distribute onto dry-shake-hardened and still-plastic concrete at a rate of **3 to 4 lb/100 sq. ft. (1.5 to 2 kg/10 sq. m)**.

C. Liquid Release Agent: Uniformly mist surface of dry-shake-hardened and still-plastic concrete at a rate of **5 gal/1000 sq. ft. (0.2 L/sq. m)**.

3.11 STAMPING

A. Mat Stamping: After floating and while concrete is plastic, apply mat-stamped finish.

1. Pigmented Powder Release Agent: Uniformly distribute onto concrete at a rate of **3 to 4 lb/100 sq. ft. (1.5 to 2 kg/10 sq. m)**.
2. Liquid Release Agent: Apply liquid release agent to the concrete surface and the stamp mat. Uniformly mist surface of concrete at a rate of **5 gal/1000 sq. ft. (0.2 L/sq. m)**.
3. After application of release agent, accurately align and place stamp mats in sequence.
4. Uniformly load mats and press into concrete to produce required imprint pattern and depth of imprint on concrete surface. Gently remove stamp mats. Hand stamp edges and surfaces unable to be imprinted by stamp mats.
5. Remove residual release agent according to manufacturer's written instructions, but no fewer than three days after stamping concrete. High-pressure-wash surface and joint patterns, taking care not to damage stamped concrete. Control, collect, and legally dispose of runoff.

B. Tool Stamping: After floating and while concrete is plastic, apply tool-stamped finish.

1. Cover surface with polyethylene film, stretch taut to remove wrinkles, lap sides and ends **3 inches (75 mm)**, and secure to edge forms. Lightly broom surface to remove air bubbles.
2. Accurately align and place stamp tools in sequence and tamp into concrete to produce required imprint pattern and depth of imprint on concrete surface. Gently remove stamp tools. Hand stamp edges and surfaces unable to be imprinted by stamp tools.
3. Carefully remove polyethylene film immediately after tool stamping.

C. Roller Stamping: After floating and while concrete is plastic, apply roller-stamped finish.

1. Cover surface with polyethylene film, stretch taut to remove wrinkles, lap sides and ends **3 inches (75 mm)**, and secure to edge forms. Lightly broom surface to remove air bubbles.
2. Accurately align roller and perform rolling operation to produce required imprint pattern and depth of imprint on concrete surface. Hand stamp surfaces inaccessible to roller.
3. Carefully remove polyethylene film immediately after roller stamping.

3.12 CONCRETE PROTECTION AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.

B. Comply with ACI 306.1 for cold-weather protection.

C. Evaporation Retarder: Apply evaporation retarder to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching **0.2 lb/sq. ft. x h (1 kg/sq. m x h)** before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete but before float finishing.

D. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.

E. Curing Compound: Apply immediately after final finishing. Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating, and repair damage during curing period.

1. Cure integrally colored concrete with a[**pigmented**] curing compound.
2. Cure concrete finished with pigmented mineral dry-shake hardener with a[**pigmented**] curing compound.

F. Curing and Sealing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating, and repair damage during curing period.

G. Curing Paper: Cure with unwrinkled curing paper in pieces large enough to cover the entire width and edges of slab. Do not lap sheets. Fold curing paper down over paving edges and secure with continuous banks of earth to prevent displacement or billowing due to wind. Immediately repair holes or tears in paper.

3.13 STAINING

A. Newly placed concrete paving shall be at least [**14**][**30**]<**Insert number**> days old before staining.

B. Prepare surfaces according to manufacturer's written instructions and as follows:

1. Clean concrete thoroughly by scraping, applying solvents or stripping agents, sweeping and pressure washing, or scrubbing with a rotary floor machine and detergents recommended by stain manufacturer. Rinse until water is clear and allow surface to dry.

    a. Do not use acidic solutions to clean surfaces.

2. Test surfaces with droplets of water. If water beads and does not penetrate surface, or penetrates only in some areas, profile surfaces by [**acid etching**][**grinding, sanding, or abrasive blasting**].

Retest and continue profiling surface until water droplets immediately darken and uniformly penetrate concrete surfaces.

3. Apply acidic solution to dampened concrete surfaces, scrubbing with uncolored, acid-resistant nylon-bristle brushes until bubbling stops and concrete surface has texture of 120-grit sandpaper. Do not allow solution to dry on concrete surfaces. Rinse until water is clear. Control, collect, and legally dispose of runoff.
4. Neutralize concrete surfaces and rinse until water is clear. Test surface for residue with clean white cloth. Test surface according to ASTM F710 to ensure pH is between [**7 and 8**]<**Insert values**>.

C. Scoring: Score decorative jointing in paving surfaces **1/16 inch (1.6 mm)** deep with diamond blades to match pattern indicated. Rinse until water is clear. Score [**after**][**before**] staining.

1. Joint Width: [**3/8 inch (10 mm)**]<**Insert dimension**>.

D. Allow paving surface to dry before applying stain. Verify readiness of paving to receive stain according to ASTM D4263 by tightly taping **18-by-18-inch (450-by-450-mm)**, **4-mil- (0.1-mm-)** thick polyethylene sheet to a representative area of paving surface. Apply stain only if no evidence of moisture has accumulated under sheet after 16 hours.

E. Reactive Stain: Apply reactive stain to paving surfaces according to manufacturer's written instructions and as follows:

1. Apply stain by uncolored bristle brush, roller, or high-volume, low-pressure sprayer and immediately scrub into concrete surface with uncolored, acid-resistant nylon-bristle brushes in continuous, circular motion. Do not spread stain after fizzing stops. Allow to dry four hours and repeat application of stain in sufficient quantity to obtain color consistent with approved mockup.
2. Remove stain residue after four hours by wet scrubbing with commercial-grade detergent recommended by stain manufacturer. Rinse until water is clear. Control, collect, and legally dispose of runoff.

F. Penetrating Stain: Apply to paving surfaces according to manufacturer's written instructions and as follows:

1. Apply first coat of stain to dry, clean surfaces by airless sprayer or by high-volume, low-pressure sprayer.
2. Allow to dry four hours and repeat application of stain in sufficient quantity to obtain color consistent with approved mockup.
3. Rinse until water is clear. Control, collect, and legally dispose of runoff.

3.14 SEALER APPLICATION

A. Clear Acrylic Sealer: Apply uniformly in two coats in continuous operations according to manufacturer's written instructions. Allow first coat to dry before applying second coat, at 90 degrees to the direction of the first coat, using same application methods and rates.

1. Begin sealing dry surface no sooner than [**14**]<**Insert number**> days after concrete placement.
2. Allow stained concrete surfaces to dry before applying sealer.
3. Thoroughly mix slip-resistance-enhancing additive into sealer before applying sealer according to manufacturer's written instructions. Stir sealer occasionally during application to maintain even distribution of additive.

3.15 PAVING TOLERANCES

A. Comply with tolerances in **ACI 117 (ACI 117M)** and as follows:

1. Elevation: **3/4 inch (19 mm)**.
2. Thickness: Plus **3/8 inch (10 mm)**, minus **1/4 inch (6 mm)**.
3. Surface: Gap below **10-foot- (3-m-)** long, unleveled straightedge not to exceed **1/2 inch (13 mm)**.
4. Lateral Alignment and Spacing of Dowels: **1 inch (25 mm)**.
5. Vertical Alignment of Dowels: **1/4 inch (6 mm)**.
6. Alignment of Dowel-Bar End Relative to Line Perpendicular to Paving Edge: **1/4 inch per 12 inches (6 mm per 300 mm)** of dowel.
7. Joint Spacing: **3 inches (75 mm)**.
8. Contraction Joint Depth: Plus **1/4 inch (6 mm)**, no minus.
9. Joint Width: Plus **1/8 inch (3 mm)**, no minus.

3.16 FIELD QUALITY CONTROL

A. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

B. Testing Services: Testing of composite samples of fresh concrete obtained according to ASTM C172/C172M shall be performed according to the following requirements:

1. Testing Frequency: Obtain at least one composite sample for each [**100 cu. yd. (76 cu. m)**][**5000 sq. ft. (465 sq. m)**] or fraction thereof of each concrete mixture placed each day.

    a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

2. Slump: ASTM C143/C143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C231/C231M, pressure method; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
4. Concrete Temperature: ASTM C1064/C1064M; one test hourly when air temperature is **40 deg F (4.4 deg C)** and below and when it is **80 deg F (27 deg C)** and above, and one test for each composite sample.
5. Compression Test Specimens: ASTM C31/C31M; cast and laboratory cure one set of three standard cylinder specimens for each composite sample.
6. Compressive-Strength Tests: ASTM C39/C39M; test one specimen at seven days and two specimens at 28 days.

    a. A compressive-strength test shall be the average compressive strength from two specimens obtained from same composite sample and tested at 28 days.

C. Strength of each concrete mixture will be satisfactory if average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than **500 psi (3.4 MPa)**.

D. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of

concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.

E. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.

F. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect.

G. Decorative concrete paving will be considered defective if it does not pass tests and inspections.

H. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

I. Prepare test and inspection reports.

3.17 REPAIR AND PROTECTION

A. Remove and replace decorative concrete paving that is broken or damaged or does not comply with requirements in this Section. Remove work in complete sections from joint to joint unless otherwise approved by Architect.

B. Detailing: Grind concrete "squeeze" left from tool placement. Color ground areas with slurry of color hardener mixed with water and bonding agent. Remove excess release agent with high-velocity blower.

C. Protect decorative concrete paving from damage. Exclude traffic from paving for at least 14 days after placement. When construction traffic is permitted, maintain paving as clean as possible by removing surface stains and spillage of materials as they occur.

D. Maintain decorative concrete paving free of stains, discoloration, dirt, and other foreign material. Sweep paving not more than two days before date scheduled for Substantial Completion inspections.

3.18 DECORATIVE CONCRETE PAVING SCHEDULE

A. Patterned Decorative Concrete Paving :

1. Locations: Install at [**drives**][**parking lots**][**walks**][**patios**][**and**][**swimming pool decks**]<**Insert location**>.
2. Coloring Method: [**Integrally colored**][**Pigmented mineral dry-shake hardener**].
    a. Color: [**As indicated by manufacturer's designation**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<**Insert color**>.
3. Field Patterning Method: [**Stamped**][**Stenciled**].
    a. Texture and Pattern: [**Keystone installed at 45-degrees diagonal to main lines of building**]<**Insert requirement**>.
    b. Pigmented Mineral Dry-Shake Hardener: <**Insert color**>.
    c. Release Agent: [**Match pigmented mineral dry-shake hardener**]<**Insert color**>.
4. Border and Accent Strip Patterning Method: [**Stamped**][**Stenciled**].

a. Texture and Pattern: <**Insert requirement**>.
b. Pigmented Mineral Dry-Shake Hardener: <**Insert color**>.
c. Release Agent: [**Match pigmented mineral dry-shake hardener**]<**Insert color**>.

B. Stained Decorative Concrete Paving :

1. Locations: Install at [**drives**][**parking lots**][**walks**][**patios**][**and**][**swimming pool decks**]<**Insert location**>.
2. Staining Method: [**Reactive**][**Penetrating**] stain.
3. Color: [**As indicated by manufacturer's designation**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<**Insert color**>.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 13 73 00 - CONCRETE PAVING JOINT SEALANTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cold-applied joint sealants.
2. Hot-applied joint sealants.
3. Cold-applied, fuel-resistant joint sealants.
4. Hot-applied, fuel-resistant joint sealants.
5. Joint-sealant backer materials.
6. Primers.

B. Related Requirements:

1. Section 079200 "Joint Sealants" for sealing nontraffic and traffic joints in locations not specified in this Section.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Concrete pavement joint sealants.
2. Joint-sealant backer materials.

B. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of joint sealant.

C. Samples for Verification: Actual sample of finished products for each kind and color of joint sealant required.

1. Size: Joint sealants in **1/2-inch- (13-mm-)** wide joints formed between two **6-inch- (150-mm-)** long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

D. Paving-Joint-Sealant Schedule: Include the following information:

1. Joint-sealant application, joint location, and designation.
2. Joint-sealant manufacturer and product name.
3. Joint-sealant formulation.
4. Joint-sealant color.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Statements: For [**Installer**][**testing agency**].

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Installers: Entity that employs installers and supervisors who are trained and approved by manufacturer.

1.6 PRECONSTRUCTION TESTING

A. Preconstruction Testing: Performed by a qualified testing agency.

1.7 FIELD CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer[**or are below 40 deg F (5 deg C)**].
2. When joint substrates are wet.
3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

A. Obtain joint sealants from single manufacturer[**for each sealant type**].

2.2 JOINT SEALANTS, GENERAL

A. Compatibility: Provide joint sealants, backer materials, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

2.3 COLD-APPLIED JOINT SEALANTS

A. Single-Component, Nonsag, Silicone Joint Sealant: ASTM D5893/D5893M, Type NS.

1. Products: Subject to compliance with requirements, [**provide the following**][**provide one of the following**][**available products that may be incorporated into the Work include, but are not limited to, the following**]:

a. Crafco Inc.; RoadSaver Silicone.
b. Pecora Corporation; 301 NS.
c. The Dow Chemical Company; Dow Corning 888 Silicone Joint Sealant.
d. <**Insert manufacturer's name; product name or designation**>.

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Crafco Inc**]
b. [**Pecora Corporation**]
c. [**The Dow Chemical Company**]
d. <**Insert manufacturer's name**>

B. Single-Component, Self-Leveling, Silicone Joint Sealant: ASTM D5893/D5893M, Type SL.

1. Products: Subject to compliance with requirements, [**provide the following**][**provide one of the following**][**available products that may be incorporated into the Work include, but are not limited to, the following**]:

a. Crafco Inc.; RoadSaver Silicone SL.
b. Pecora Corporation; [**300 SL**][**322FC**].
c. The Dow Chemical Company; Dow Corning 890-SL Silicone Joint Sealant.
d. <**Insert manufacturer's name; product name or designation**>.

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Crafco Inc**]
b. [**Pecora Corporation**]
c. [**The Dow Chemical Company**]
d. <**Insert manufacturer's name**>

C. Multicomponent, Nonsag, Urethane, Elastomeric Joint Sealant: ASTM C920, Type M, Grade NS, Class 25, for Use T.

1. Products: Subject to compliance with requirements, [**provide the following**][**provide one of the following**][**available products that may be incorporated into the Work include, but are not limited to, the following**]:

a. W.R. Meadows, Inc; Pourthane NS.
b. <**Insert manufacturer's name; product name or designation**>.

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**W. R. Meadows, Inc**]
b. <**Insert manufacturer's name**>

D. Single Component, Pourable, Urethane, Elastomeric Joint Sealant: ASTM C920, Type S, Grade P, Class 25, for Use T.

1. Products: Subject to compliance with requirements, [**provide the following**][**provide one of the following**][**available products that may be incorporated into the Work include, but are not**

limited to, the following]:

a. W.R. Meadows, Inc; Pourthane SL.
b. <**Insert manufacturer's name; product name or designation**>.

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**W. R. Meadows, Inc**]
b. <**Insert manufacturer's name**>

E. Multicomponent, Pourable, Urethane, Elastomeric Joint Sealant: ASTM C920, Type M, Grade P, Class 25, for Use T.

1. Products: Subject to compliance with requirements, [**provide the following**][**provide one of the following**][**available products that may be incorporated into the Work include, but are not limited to, the following**]:

a. Pecora Corporation; [**Dynatred**][**Dynatrol II-SG**][**Urexpan NR-200**].
b. <**Insert manufacturer's name; product name or designation**>.

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Pecora Corporation**]
b. <**Insert manufacturer's name**>

2.4 HOT-APPLIED JOINT SEALANTS

A. Hot-Applied, Single-Component Joint Sealant, Type I: ASTM D6690.

1. Products: Subject to compliance with requirements, [**provide the following**][**provide one of the following**][**available products that may be incorporated into the Work include, but are not limited to, the following**]:

a. Crafco Inc.; [**Asphalt Rubber Plus**][**Asphalt Rubber Plus Type 2**][**RoadSaver 203**][**RoadSaver 211**][**RoadSaver 515**].
b. Right Pointe; JTS Asphalt Rubber Modified 043.
c. W.R. Meadows, Inc; [**Sealtight 1190**][**Sealtight 164**].
d. <**Insert manufacturer's name; product name or designation**>.

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Crafco Inc**]
b. [**Right Pointe**]
c. [**W. R. Meadows, Inc**]
d. <**Insert manufacturer's name**>

B. Hot-Applied, Single-Component Joint Sealant, Type I or Type II: ASTM D6690.

1. Products: Subject to compliance with requirements, [**provide the following**][**provide one of the following**][**available products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. Crafco Inc.; [**RoadSaver 201**][**RoadSaver 220**][**RoadSaver 221**][**RoadSaver 534**].
    b. Right Pointe; [**JTS 3405 Parking Lot Sealant 007**][**JTS 3405 Rubber 009**].
    c. <**Insert manufacturer's name; product name or designation**>.

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Crafco Inc**]
    b. [**Right Pointe**]
    c. <**Insert manufacturer's name**>

C. Hot-Applied, Single-Component Joint Sealant, Type I, II, or III: ASTM D6690.

1. Products: Subject to compliance with requirements, [**provide the following**][**provide one of the following**][**available products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. Crafco Inc.; RoadSaver 222.
    b. Right Pointe; [**JTS 3405 Regular 003**][**JTS 3405 Rubber 009**].
    c. W.R. Meadows, Inc; Sealtight 3405.
    d. <**Insert manufacturer's name; product name or designation**>.

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Crafco Inc**]
    b. [**Right Pointe**]
    c. [**W. R. Meadows, Inc**]
    d. <**Insert manufacturer's name**>

D. Hot-Applied, Single-Component Joint Sealant, Type IV: ASTM D6690.

1. Products: Subject to compliance with requirements, [**provide the following**][**provide one of the following**][**available products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. Crafco Inc.; RoadSaver 231.
    b. W.R. Meadows, Inc; Sealtight 3405M.
    c. <**Insert manufacturer's name; product name or designation**>.

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Crafco Inc**]
    b. [**W. R. Meadows, Inc**]
    c. <**Insert manufacturer's name**>

2.5 COLD-APPLIED, FUEL-RESISTANT JOINT SEALANTS

A. Fuel-Resistant, Single-Component, Pourable, Modified-Urethane, Elastomeric Joint Sealant: ASTM C920, Type S, Grade P, Class 25, for Use T.

1. Products: Subject to compliance with requirements, [**provide the following**][**provide one of the following**][**available products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. BASF Corporation; MasterSeal CR 125 (Pre-2014: Sonomeric 1).
   b. <**Insert manufacturer's name; product name or designation**>.

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. <**Insert manufacturer's name**>

B. Fuel-Resistant, Multicomponent, Pourable, Modified-Urethane, Elastomeric Joint Sealant: ASTM C920, Type M, Grade P, Class 12-1/2 or 25, for Use T.

1. Products: Subject to compliance with requirements, [**provide the following**][**provide one of the following**][**available products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. Pecora Corporation; <**Insert product name or designation**>.
   b. W.R. Meadows, Inc; <**Insert product name or designation**>.
   c. <**Insert manufacturer's name; product name or designation**>.

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Pecora Corporation**]
   b. [**W. R. Meadows, Inc**]
   c. <**Insert manufacturer's name**>

2.6 HOT-APPLIED, FUEL-RESISTANT JOINT SEALANTS

A. Hot-Applied, Fuel-Resistant, Single-Component Joint Sealants, Type I or Type II: ASTM D7116.

1. Products: Subject to compliance with requirements, [**provide the following**][**provide one of the following**][**available products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. Crafco Inc.; [**Superseal 1614A**][**Superseal 444/777**].
   b. <**Insert manufacturer's name; product name or designation**>.

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Crafco Inc**]

b. <**Insert manufacturer's name**>

B. Hot-Applied, Fuel-Resistant, Single-Component Joint Sealants, Type III: ASTM D7116.

1. Products: Subject to compliance with requirements, [**provide the following**][**provide one of the following**][**available products that may be incorporated into the Work include, but are not limited to, the following**]:

a. Crafco Inc.; Superseal Low-Mod.
b. <**Insert manufacturer's name; product name or designation**>.

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Crafco Inc**]
b. <**Insert manufacturer's name**>

2.7 JOINT-SEALANT BACKER MATERIALS

A. Joint-Sealant Backer Materials: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by joint-sealant manufacturer, based on field experience and laboratory testing.

B. Round Backer Rods for Cold- and Hot-Applied Joint Sealants: ASTM D5249, Type 1, of diameter and density required to control sealant depth and prevent bottom-side adhesion of sealant.

C. Round Backer Rods for Cold-Applied Joint Sealants: ASTM D5249, Type 3, of diameter and density required to control joint-sealant depth and prevent bottom-side adhesion of sealant.

D. Backer Strips for Cold- and Hot-Applied Joint Sealants: ASTM D5249; Type 2; of thickness and width required to control joint-sealant depth, prevent bottom-side adhesion of sealant, and fill remainder of joint opening under sealant.

2.8 PRIMERS

A. Primers: Product recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Before installing joint sealants, clean out joints immediately to comply with joint-sealant manufacturer's written instructions.

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.

B. Joint Priming: Prime joint substrates where indicated or where recommended in writing by joint-sealant manufacturer, based on preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

3.3 INSTALLATION OF JOINT SEALANTS

A. Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated unless more stringent requirements apply.

B. Joint-Sealant Installation Standard: Comply with recommendations in ASTM C1193 for use of joint sealants as applicable to materials, applications, and conditions.

C. Install joint-sealant backers to support joint sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

1. Do not leave gaps between ends of joint-sealant backer materials.
2. Do not stretch, twist, puncture, or tear joint-sealant backer materials.
3. Remove absorbent joint-sealant backer materials that have become wet before sealant application and replace them with dry materials.

D. Install joint sealants immediately following backer material installation, using proven techniques that comply with the following:

1. Place joint sealants so they fully contact joint substrates.
2. Completely fill recesses in each joint configuration.
3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

E. Tooling of Nonsag Joint Sealants: Immediately after joint-sealant application and before skinning or curing begins, tool sealants in accordance with the following requirements to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint:

1. Remove excess joint sealant from surfaces adjacent to joints.
2. Use tooling agents that are approved in writing by joint-sealant manufacturer and that do not discolor sealants or adjacent surfaces.

F. Provide joint configuration to comply with joint-sealant manufacturer's written instructions unless otherwise indicated.

3.4 CLEANING AND PROTECTION

A. Clean off excess joint sealant as the Work progresses, by methods and with cleaning materials approved in writing by joint-sealant manufacturers.

B. Protect joint sealants, during and after curing period, from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately and replace with joint sealant so installations in repaired areas are indistinguishable from the original work.

3.5 PAVING-JOINT-SEALANT SCHEDULE

A. Joints within concrete paving[**PJS-#**]:

1. Joint Location:

   a. Expansion and isolation joints in concrete paving.
   b. Contraction joints in concrete paving.
   c. Other joints as indicated.

2. Joint Sealant: [**Single-component, nonsag, silicone joint sealant**][**Single-component, self-leveling, silicone joint sealant**][**Multicomponent, nonsag, urethane, elastomeric joint sealant**][**Single component, pourable, urethane, elastomeric joint sealant**][**Multicomponent, pourable, urethane, elastomeric joint sealant**][**Hot-applied, single-component joint sealant**]<**Insert joint sealant**>.
3. Joint-Sealant Color: [**Manufacturer's standard**]<**Insert color**>.

B. Joints within concrete paving and between concrete and asphalt paving[**PJS-#**]:

1. Joint Location:

   a. Joints between concrete and asphalt paving.
   b. Joints between concrete curbs and asphalt paving.
   c. Other joints as indicated.

2. Joint Sealant: [**Hot-applied, single-component joint sealant**]<**Insert joint sealant**>.
3. Joint-Sealant Color: [**Manufacturer's standard**]<**Insert color**>.

C. Fuel-resistant joints within concrete paving[**PJS-#**]:

1. Joint Location:

   a. Expansion and isolation joints in concrete paving.
   b. Contraction joints in concrete paving.
   c. Other joints as indicated.

2. Joint Sealant: [**Fuel-resistant, single-component, pourable, modified-urethane, elastomeric joint sealant**][**Fuel-resistant, multicomponent, pourable, modified-urethane, elastomeric joint sealant**][**Hot-applied, fuel-resistant, single-component joint sealant**]<**Insert joint sealant**>.
3. Joint-Sealant Color: [**Manufacturer's standard**]<**Insert color**>.

END OF SECTION 32 13 73 00

Task	Specification	Specification Description

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 14 00 00 - UNIT PAVING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Brick pavers.
2. Concrete pavers.
3. Asphalt-block pavers.
4. Stone pavers.
5. Curbs and edge restraints.

B. Related Requirements:

1. [**Section 075113 "Built-up Asphalt Roofing"**][**Section 075116 "Built-up Coal Tar Roofing"**][**Section 075213 "Atactic-Polypropylene (APP) Modified Bituminous Membrane Roofing"**][**Section 075216 "Styrene-Butadiene-Styrene (SBS) Modified Bituminous Membrane Roofing"**][**Section 075316 "Chlorosulfonate-Polyethylene (CSPE) Roofing"**][**Section 075323 "Ethylene-Propylene-Diene-Monomer (EPDM) Roofing"**][**Section 075416 "Ketone Ethylene Ester (KEE) Roofing"**][**Section 075419 "Polyvinyl-Chloride (PVC) Roofing"**][**Section 075423 "Thermoplastic Polyolefin (TPO) Roofing"**][**Section 075552.13 "Atactic-Polypropylene (APP) Modified Bituminous Protected Membrane Roofing"**][**Section 075552.16 "Styrene-Butadiene-Styrene (SBS) Modified Bituminous Protected Membrane Roofing"**][**Section 075556 "Fluid-Applied Protected Membrane Roofing"**] for roof pavers.
2. Section 096313 "Brick Flooring" for brick flooring for interior applications.
3. Section 096340 "Stone Flooring" for dimension stone paving.
4. Section 321216 "Asphalt Paving" for asphalt base under unit pavers.
5. Section 321313 "Concrete Paving" [**for concrete base under unit pavers**][**and**][**for cast-in-place concrete curbs and gutters serving as edge restraints for unit pavers**].
6. Section 321443 "Porous Unit Paving" for unit paving using grid pavers or pavers with openings between them.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1.3 ACTION SUBMITTALS

A. Product Data:

1. For materials other than water and aggregates.
2. For the following:

a. Pavers.
b. Bituminous setting materials.
c. Mortar and grout materials.
d. Edge restraints.
e. Precast concrete curbs.

f. Granite curbs.

B. Sustainable Design Submittals:

1. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
2. Environmental Product Declaration (EPD): For each product.
3. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
4. Environmental Product Declaration: For each product.
5. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
6. Environmental Product Declaration: For each product.
7. Environmental Product Declaration: For each product.
8. Third-Party Certifications: For each product.
9. Third-Party Certified Life Cycle Assessment: For each product.

C. Sieve Analyses: For aggregate setting-bed materials, according to ASTM C136.

D. Samples for Initial Selection: For each type of unit paver indicated[**.**][**and the following:**]

1. Joint materials involving color selection.
2. Exposed edge restraints involving color selection.
3. Precast concrete curbs.
4. Granite curbs.

E. Samples for Verification: For full-size units of each type of unit paver indicated.[**Assemble no fewer than five Samples of each type of unit on suitable backing and grout joints.**][**Include Samples of the following:**]

1. Joint materials.
2. Exposed edge restraints.
3. Precast concrete curbs.
4. Granite curbs.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Adhesion and Compatibility Test Reports: From latex-additive manufacturer for mortar and grout containing latex additives.

C. Material Certificates: For unit pavers. Include statements of material properties indicating compliance with requirements, including compliance with standards. Provide for each type and size of unit.

D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for unit pavers, indicating compliance with requirements.

1. For solid interlocking paving units, include test data for freezing and thawing according to ASTM C67.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: A qualified unit paving installer. Installer's [**field supervisor**][**personnel assigned to the Work**] must have Concrete Paver Installer Certification from the Interlocking Concrete Pavement Institute (ICPI) with [**one of**][**both of**] the following designations:

1. Residential Paver Technician Designation.
2. Commercial Paver Technician Designation.

B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 PRECONSTRUCTION TESTING

A. Preconstruction Adhesion and Compatibility Testing: Submit to latex-additive manufacturer, for testing as indicated below, Samples of flooring materials that will contact or affect mortar and grout that contain latex additives.

1. Use manufacturer's standard test methods to determine whether mortar and grout materials will obtain optimal adhesion with, and will be nonstaining to, installed brick and other materials constituting brick flooring installation.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store pavers on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied.

B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

D. Store liquids in tightly closed containers protected from freezing.

E. Store asphalt cement and other bituminous materials in tightly closed containers.

1.8 FIELD CONDITIONS

A. Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace unit paver work damaged by frost or freezing.

B. Weather Limitations for Bituminous Setting Bed:

1. Install bituminous setting bed only when ambient temperature is above **40 deg F (4 deg C)** and when base is dry.
2. Apply asphalt adhesive only when ambient temperature is above **50 deg F (10 deg C)** and when temperature has not been below **35 deg F (2 deg C)** for 12 hours immediately before application.

Do not apply when setting bed is wet or contains excess moisture.

C. Weather Limitations for Mortar and Grout:

1. Cold-Weather Requirements: Comply with cold-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.
2. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6. Provide artificial shade and windbreaks and use cooled materials as required. Do not apply mortar to substrates with temperatures of **100 deg F (38 deg C)** and higher.

a. When ambient temperature exceeds **100 deg F (38 deg C)**, or when wind velocity exceeds **8 mph (13 km/h)** and ambient temperature exceeds **90 deg F (32 deg C)**, set pavers within 1 minute of spreading setting-bed mortar.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

A. Obtain each type of unit paver, joint material, and setting material from single source with resources to provide materials and products of consistent quality in appearance and physical properties.

2.2 BRICK PAVERS

A. Regional Materials: Brick shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.

B. Regional Materials: Brick shall be manufactured within **500 miles (800 km)** of Project site.

C. Regional Materials: Brick shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.

D. Indigenous Materials: Brick shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

E. Regional Materials: Brick shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

F. Brick Pavers, Light-Traffic Paving Brick: ASTM C902, Class SX[**or Class MX**], [**Type I**][**Type II**][**Type III**], Application [**PS**][**PX**][**PA**]. Provide brick without frogs or cores in surfaces exposed to view in the completed Work.

1. Thickness: [**1-1/4 inches (32 mm)**][**1-1/2 inches (38 mm)**][**1-5/8 inches (41 mm)**][**2-1/4 inches (57 mm)**][**2-5/8 inches (67 mm)**][**As indicated**]<**Insert dimension**>.
2. Face Size: [**3-3/4 by 7-1/2 inches (95 by 190 mm)**][**3-5/8 by 7-5/8 inches (92 by 194 mm)**][**3-5/8**

by 11-5/8 inches (92 by 295 mm)][7-5/8 by 7-5/8 inches (194 by 194 mm)][4 by 8 inches (102 by 203 mm)][4 by 12 inches (102 by 305 mm)][8 by 8 inches (203 by 203 mm)][**As indicated**]<**Insert dimensions**>.

3. Color: [**Dark red**][**Medium red**][**Full-range red**][**Dark brown**][**Medium brown**][**Full-range brown**][**Tan**][**Buff**][**Cream**][**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<**Insert color**>.

G. Brick Pavers, Heavy Vehicular Paving Brick: ASTM C1272, [**Type F, Application PX**][**Type R, Application PS**][**Type R, Application PX**][**Type R, Application PA**]. Provide brick without frogs or cores in surfaces exposed to view in the completed Work.

1. Thickness: [2-1/4 inches (57 mm)][2-5/8 inches (67 mm)][**As indicated**]<**Insert dimension**>.
2. Face Size: [3-3/4 by 7-1/2 inches (95 by 190 mm)][3-5/8 by 7-5/8 inches (92 by 194 mm)][3-5/8 by 11-5/8 inches (92 by 295 mm)][7-5/8 by 7-5/8 inches (194 by 194 mm)][4 by 8 inches (102 by 203 mm)][4 by 12 inches (102 by 305 mm)][8 by 8 inches (203 by 203 mm)][**As indicated**]<**Insert dimensions**>.
3. Color: [**Dark red**][**Medium red**][**Full-range red**][**Dark brown**][**Medium brown**][**Full-range brown**][**Tan**][**Buff**][**Cream**][**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<**Insert color**>.

H. Efflorescence: Brick to be rated "not effloresced" when tested according to ASTM C67.

I. Temporary Protective Coating: Precoat exposed surfaces of brick pavers with a continuous film of a temporary protective coating that is compatible with brick, mortar, and grout products and can be removed without damaging grout or brick. Do not coat unexposed brick surfaces; handle brick to prevent coated surfaces from contacting backs or edges of other units. If, despite these precautions, coating does contact bonding surfaces of brick, remove coating from bonding surfaces before setting brick.

2.3 CONCRETE PAVERS

A. Regional Materials: Concrete pavers shall be manufactured within 500 miles (800 km) of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles (800 km) of Project site.

B. Regional Materials: Concrete pavers shall be manufactured within 500 miles (800 km) of Project site.

C. Regional Materials: Concrete pavers shall be manufactured within 100 miles (160 km) of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

D. Indigenous Materials: Concrete pavers shall be manufactured within 500 miles (800 km) of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles (800 km) of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

E. Regional Materials: Concrete pavers shall be manufactured within 500 miles (800 km) of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles (800 km) of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

F. Concrete Pavers, Solid Interlocking Paving Units: Complying with ASTM C936/C936M[**and resistant to freezing and thawing when tested according to ASTM C67**], made from normal-weight aggregates.

1. Thickness: [**2-3/8 inches (60 mm)**][**3-1/8 inches (80 mm)**]<**Insert dimension**>.
2. Face Size and Shape:

    a. [**3-7/8 inches (98 mm)**][**4-7/16 inches (113 mm)**][**8-7/8 inches (225 mm)**][**9 inches (229 mm)**] square.
    b. [**3-7/8-by-7-7/8-inch (98-by-200-mm)**][**4-by-8-inch (102-by-203-mm)**][**4-7/16-by-8-7/8-inch (113-by-225-mm)**] rectangle.
    c. [**5-1/2-inch (140-mm) octagon with attached 3-1/2-inch (89-mm) square**][**4-1/2-by-9-inch (114-by-229-mm) rectangle with saw-tooth edges**][**4-3/4-inch (121-mm) rectangular and trapezoidal units arranged in semicircular courses to produce fan-shaped pattern**][**As indicated**]<**Insert dimensions and shape**>.

3. Color: [**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<**Insert color**>.

G. Concrete Pavers, Solid Paving Units, Normal-Weight Concrete: Solid paving units made from normal-weight concrete with a compressive strength not less than [**5000 psi (34 MPa)**][**6000 psi (41 MPa)**]<**Insert value**>, water absorption not more than 5 percent according to ASTM C140, and no breakage and not more than 1 percent mass loss when tested for freeze-thaw resistance according to ASTM C67.

1. Thickness: [**1-5/8 inches (41 mm)**][**1-3/4 inches (45 mm)**][**2 inches (51 mm)**][**2-3/8 inches (60 mm)**]<**Insert dimension**>.
2. Face Size and Shape:

    a. [**8-7/8 inches (225 mm)**][**9 inches (229 mm)**][**12 inches (305 mm)**][**18 inches (457 mm)**][**24 inches (610 mm)**] square.
    b. [**9-by-18-inch (229-by-457-mm)**][**12-by-24-inch (305-by-610-mm)**] rectangle.
    c. [**As indicated**]<**Insert dimensions and shape**>.

3. Color: [**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<**Insert color**>.

H. Concrete Pavers, Solid Paving Units, Lightweight Concrete: Solid paving units complying with ASTM C1491, made from lightweight concrete.

1. Thickness: [**1-5/8 inches (41 mm)**][**1-3/4 inches (45 mm)**][**2 inches (51 mm)**]<**Insert dimension**>.
2. Face Size and Shape: [**9 inches (229 mm) square**][**12 inches (305 mm) square**][**18 inches (457 mm) square**][**As indicated**]<**Insert dimensions and shape**>.
3. Color: [**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<**Insert color**>.

2.4 ASPHALT-BLOCK PAVERS

A. Asphalt-Block Pavers: Solid units made from asphalt cement complying with ASTM D312, Type III; inorganic stone dust or cement filler; and coarse aggregate, consisting of clean, hard, unweathered stone crushed into angular particles varying in size up to **3/8 inch (9.5 mm)**.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Hanover Architectural Products**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Hanover Architectural Products**]
b. <**Insert manufacturer's name**>

3. Thickness: [**1-1/4 inches (32 mm)**][**2 inches (51 mm)**][**3 inches (76 mm)**]<**Insert dimension**>.
4. Face Size: [**4 by 6 inches (102 by 152 mm)**][**6 by 6 inches (152 by 152 mm)**][**8 by 8 inches (203 by 203 mm)**][**5 by 12 inches (127 by 305 mm)**][**6 by 12 inches (152 by 305 mm)**][**8-inch-(203-mm-) wide hexagon**]<**Insert dimensions**>.
5. Dimensional Tolerances: Plus or minus **1/16 inch (1.6 mm)**.
6. Finish: [**Natural, smooth**][**Ground**][**Ground and sandblasted**].
7. Color: [**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<**Insert color**>.

2.5 STONE PAVERS

A. Regional Materials: Stone shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.

B. Regional Materials: Stone shall be fabricated within **500 miles (800 km)** of Project site.

C. Regional Materials: Stone shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.

D. Indigenous Materials: Stone shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

E. Regional Materials: Stone shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

F. Granite Pavers: Rectangular paving slabs made from granite complying with ASTM C615/C615M.

1. Color and Grain: [**Light gray**][**Dark gray**][**Buff**][**White**][**Black**][**Pink**]<**Insert color**> with [**medium**][**fine**] grain.
2. Finish: [**Honed**][**Thermal**][**As indicated**][**Match Architect's sample**]<**Insert finish**>.
3. Match Architect's samples for color, finish, and other stone characteristics relating to aesthetic effects.
4. Thickness: Not less than [**3/4 inch (20 mm)**][**30 mm**][**1-1/4 inches (32 mm)**][**1-5/8 inches (40 mm)**] unless otherwise indicated.
5. Face Size: [**9 inches (229 mm) square**][**12 inches (305 mm) square**][**18 inches (457 mm) square**][**9 by 18 inches (229 by 457 mm)**][**As indicated**]<**Insert dimensions**>.

G. Limestone Pavers: Rectangular paving slabs made from limestone complying with ASTM C568/C568M.

1. Classification: [**II Medium-Density**][**III High-Density**].
2. Stone Abrasion Resistance: Minimum value of [**10**]<**Insert value**>, based on testing according to

ASTM C241/C241M or ASTM C1353.

3. Indiana Oolitic Limestone Grade and Color: [**Select, buff**][**Select, gray**][**Standard, buff**][**Standard, gray**][**Rustic, buff**][**Rustic, gray**][**Variegated**], according to grade and color classification established by ILI.
4. Finish: [**Smooth**][**Chat sawed**][**Shot sawed**][**As indicated**]<**Insert finish**>.
5. Match Architect's samples for color, finish, and other stone characteristics relating to aesthetic effects.
6. Thickness: Not less than [**1 inch (25 mm)**][**1-1/4 inches (32 mm)**][**1-5/8 inches (40 mm)**][**2 inches (50 mm)**] unless otherwise indicated.
7. Face Size: [**9 inches (229 mm) square**][**12 inches (305 mm) square**][**18 inches (457 mm) square**][**9 by 18 inches (229 by 457 mm)**][**As indicated**]<**Insert dimensions**>.

H. Marble Pavers: Rectangular paving slabs made from marble complying with ASTM C503/C503M.

1. Stone Abrasion Resistance: Minimum value of [**10**]<**Insert value**>, based on testing according to ASTM C241/C241M or ASTM C1353.
2. Description: Uniform, fine- to medium-grained, [**white**]<**Insert color**> stone with only slight veining.
3. Finish: [**Honed**][**As indicated**][**Match Architect's sample**]<**Insert finish**>.
4. Match Architect's samples for color, finish, and other stone characteristics relating to aesthetic effects.
5. Thickness: Not less than [**3/4 inch (20 mm)**][**30 mm**][**1-1/4 inches (32 mm)**] unless otherwise indicated.
6. Face Size: [**9 inches (229 mm) square**][**12 inches (305 mm) square**][**18 inches (457 mm) square**][**9 by 18 inches (229 by 457 mm)**][**As indicated**]<**Insert dimensions**>.

I. Quartz-Based Stone Pavers: [**Rectangular paving slabs**][**Random polygonal flagstones**] made from quartz-based stone complying with ASTM C616/C616M, Classification [**I Sandstone**][**II Quartzitic Sandstone**][**III Quartzite**].

1. Stone Abrasion Resistance: Minimum value of [**10**]<**Insert value**>, based on testing according to ASTM C241/C241M or ASTM C1353.
2. Finish: [**Sand rubbed**][**Natural cleft**][**Thermal**][**As indicated**][**Match Architect's sample**]<**Insert finish**>.
3. Match Architect's samples for color, finish, and other stone characteristics relating to aesthetic effects.
4. Thickness: Not less than [**1 inch (25 mm)**][**1-1/4 inches (32 mm)**][**1-1/2 inches (38 mm)**][**1-5/8 inches (40 mm)**][**2 inches (50 mm)**] unless otherwise indicated.
5. Face Size: [**9 inches (229 mm) square**][**12 inches (305 mm) square**][**18 inches (457 mm) square**][**9 by 18 inches (229 by 457 mm)**][**As indicated**][**Random**]<**Insert dimensions**>.

J. Slate Pavers: [**Rectangular paving slabs**][**Random polygonal flagstones**] made from slate complying with ASTM C629/C629M, Classification I Exterior, with a fine, even grain[**and unfading color,**] from clear, sound stock.

1. Color: [**Black**][**Blue-black**][**Gray**][**Blue-gray**][**Green**][**Purple**][**Mottled purple and green**][**Red**].
2. Stone Abrasion Resistance: Minimum value of [**8**]<**Insert value**>, based on testing according to ASTM C241/C241M or ASTM C1353.
3. Finish: [**Honed**][**Sand rubbed**][**Natural cleft**][**As indicated**][**Match Architect's sample**]<**Insert finish**>.
4. Match Architect's samples for color, finish, and other stone characteristics relating to aesthetic effects.
5. Thickness: Not less than [**1/2 inch (13 mm)**][**3/4 inch (20 mm)**][**1 inch (25 mm)**] unless otherwise indicated.
6. Face Size: [**9 inches (229 mm) square**][**12 inches (305 mm) square**][**18 inches (457 mm)**

square][**9 by 18 inches (229 by 457 mm)**][**As indicated**][**Random**]<**Insert dimensions**>.

K. Travertine Pavers: Rectangular paving slabs made from travertine complying with ASTM C1527/C1527M, Classification I Exterior.

1. Stone Abrasion Resistance: Minimum value of [**10**]<**Insert value**>, based on testing according to ASTM C241/C241M or ASTM C1353.
2. Cut: Vein cut.
3. Filling: Fill pores on faces of stone with cementitious filler of color [**selected by Architect**][**matching Architect's sample**].
4. Finish: [**Honed**][**As indicated**][**Match Architect's sample**]<**Insert finish**>.
5. Match Architect's samples for color, finish, and other stone characteristics relating to aesthetic effects.
6. Thickness: Not less than [**3/4 inch (20 mm)**][**30 mm**][**1-1/4 inches (32 mm)**] unless otherwise indicated.
7. Face Size: [**9 inches (229 mm) square**][**12 inches (305 mm) square**][**18 inches (457 mm) square**][**9 by 18 inches (229 by 457 mm)**][**As indicated**]<**Insert dimensions**>.

L. Rough Granite Pavers: Rectangular[**tumbled**] paving stones, with split[**or thermal-finished**] faces and edges, made from granite complying with ASTM C615/C615M.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Buechel Stone Corp**]
    b. [**Cold Spring Granite Company**]
    c. [**Fletcher Granite Company**]
    d. [**Granicor**]
    e. [**Milestone Imports, Inc.**]
    f. [**North Carolina Granite Corporation**]
    g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Buechel Stone Corp**]
    b. [**Cold Spring Granite Company**]
    c. [**Fletcher Granite Company**]
    d. [**Granicor**]
    e. [**Milestone Imports, Inc.**]
    f. [**North Carolina Granite Corporation**]
    g. <**Insert manufacturer's name**>

3. Color and Grain: [**Light gray**][**Dark gray**][**Buff**][**White**][**Black**][**Pink**]<**Insert color**> with [**medium**][**fine**] grain.
4. Thickness: [**1-1/4 inches (32 mm)**][**2 inches (51 mm)**][**3 inches (76 mm)**][**4 inches (102 mm)**][**4 inches (102 mm), plus or minus 1/2 inch (13 mm)**]<**Insert dimension**>.
5. Face Size: [**4 by 4 inches (100 by 100 mm), plus or minus 1/2 inch (13 mm)**][**3 to 5 inches (75 to 125 mm) by 8 to 12 inches (200 to 300 mm)**][**As indicated**]<**Insert dimensions**>.

2.6 CURBS AND EDGE RESTRAINTS

A. Plastic Edge Restraints: Manufacturer's standard triangular PVC extrusions [**1-3/4 inches (45 mm) high by 3-1/2 inches (89 mm) wide**][**3-1/8 inches (79 mm) high by 9-1/2 inches (241 mm) wide**] designed to serve as edge restraints for unit pavers; rigid type for straight edges and flexible type for curved edges; with pipe connectors and **3/8-inch (9.5-mm)** diameter by **12-inch- (300-mm-)** long steel spikes.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Brickstop Corporation**]
    b. [**Dimex LLC**]
    c. [**Oly-Ola Edgings, Inc.**]
    d. [**Pave Tech; Probst, Inc.**]
    e. [**Sure-loc Edging Corporation.**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Brickstop Corporation**]
    b. [**Dimex LLC**]
    c. [**Oly-Ola Edgings, Inc.**]
    d. [**Pave Tech; Probst, Inc.**]
    e. [**Sure-loc Edging Corporation.**]
    f. <**Insert manufacturer's name**>

B. Steel Edge Restraints: Manufacturer's standard painted steel edging [**3/16 inch (4.8 mm) thick by 4 inches (100 mm) high**][**1/4 inch (6.4 mm) thick by 5 inches (125 mm) high**] with loops pressed from or welded to face to receive stakes at **36 inches (900 mm)** o.c. and steel stakes **15 inches (380 mm)** long for each loop.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Border Concepts, Inc**]
    b. [**COLMET**]
    c. [**J. D. Russell Company (The)**]
    d. [**Sure-loc Edging Corporation.**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Border Concepts, Inc**]
    b. [**COLMET**]
    c. [**J. D. Russell Company (The)**]
    d. [**Sure-loc Edging Corporation.**]
    e. <**Insert manufacturer's name**>

3. Color: [**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<**Insert color**>.

C. Aluminum Edge Restraints: Manufacturer's standard [**straight, 1/8-inch- (3.2-mm-) thick by 4-inch- (100-mm-) high**][**straight, 3/16-inch- (4.8-mm-) thick by 4-inch- (100-mm-) high**][**L-shaped, 1/8-inch- (3.2-mm-) thick by 1-3/8-inch- (35-mm-) high**][**L-shaped, 3/16-inch- (4.8-mm-) thick by 2-1/4-inch- (57-mm-) high**] extruded-aluminum edging with loops pressed from face to receive stakes at **12 inches (300 mm)** o.c. and aluminum stakes **12 inches (300 mm)** long for each loop.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Brickstop Corporation**]
   b. [**Curv-Rite, Inc**]
   c. [**Permaloc Corporation**]
   d. [**Sure-loc Edging Corporation.**]
   e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Brickstop Corporation**]
   b. [**Curv-Rite, Inc**]
   c. [**Permaloc Corporation**]
   d. [**Sure-loc Edging Corporation.**]
   e. <**Insert manufacturer's name**>

D. Job-Built Concrete Edge Restraints: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mixed concrete with minimum 28-day compressive strength of **3000 psi (20 MPa)**.

E. Precast Concrete Curbs: Made from normal-weight concrete with a compressive strength not less than [**5000 psi (34 MPa)**][**6000 psi (41 MPa)**]<**Insert value**> and water absorption not more than 5 percent, in shapes and sizes indicated.

1. Regional Materials: Concrete curbs shall be manufactured within **500 miles (800 km)** of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.
2. Regional Materials: Concrete curbs shall be manufactured within **500 miles (800 km)** of Project site.
3. Regional Materials: Concrete curbs shall be manufactured within **100 miles (160 km)** of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.
4. Indigenous Materials: Concrete curbs shall be manufactured within **500 miles (800 km)** of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
5. Regional Materials: Concrete curbs shall be manufactured within **500 miles (800 km)** of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

6. Color and Texture: [**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<**Insert color and texture**>.

F. Granite Curbs: Granite curbing, with face battered **1 inch per foot (1:12)**, produced in random lengths not less than **36 inches (900 mm)** from granite complying with ASTM C615/C615M.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Cold Spring Granite Company**]
    b. [**Fletcher Granite Company**]
    c. [**Granicor**]
    d. [**New England Stone, Inc.**]
    e. [**North Carolina Granite Corporation**]
    f. [**Polycor Inc.**]
    g. [**Swenson Granite Works; a Polycor Inc. company**]
    h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Cold Spring Granite Company**]
    b. [**Fletcher Granite Company**]
    c. [**Granicor**]
    d. [**New England Stone, Inc.**]
    e. [**North Carolina Granite Corporation**]
    f. [**Polycor Inc.**]
    g. [**Swenson Granite Works; a Polycor Inc. company**]
    h. <**Insert manufacturer's name**>

3. Regional Materials: Stone shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site.
4. Regional Materials: Stone shall be fabricated within **500 miles (800 km)** of Project site.
5. Regional Materials: Stone shall be fabricated within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered within **100 miles (160 km)** of Project site.
6. Indigenous Materials: Stone shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
7. Regional Materials: Stone shall be fabricated within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.
8. Granite Color and Grain: [**Light gray**][**Dark gray**][**Buff**][**White**][**Black**][**Pink**]<**Insert color**> with [**fine**][**medium**][**coarse**] grain.
9. Top Width: [**4 inches (102 mm)**][**5 inches (127 mm)**][**6 inches (152 mm)**]<**Insert dimension**>.
10. Face Height: [**4 inches (102 mm)**][**6 inches (152 mm)**][**8 inches (203 mm)**]<**Insert dimension**>.
11. Total Height: [**12 inches (305 mm)**][**16 inches (406 mm)**][**18 inches (457 mm)**]<**Insert dimension**>.
12. Top Finish: [**Sawed**][**Thermal**][**Bush hammered**].

13. Face Finish: [**Split**][**Sawed**][**Thermal**][**Bush hammered**].

G. <**Insert requirements**>.

2.7 ACCESSORIES

A. Cork Joint Filler: Preformed strips complying with ASTM D1752, Type II.

B. Compressible Foam Filler: Preformed strips complying with ASTM D1056, Grade 2A1.

2.8 AGGREGATE SETTING-BED MATERIALS

A. Graded Aggregate for Subbase: Sound, crushed stone or gravel complying with [**ASTM D448 for Size No. 57**][**ASTM D2940/D2940M, subbase material**][**requirements in Section 312000 "Earth Moving" for subbase material**].

B. Graded Aggregate for Base: Sound, crushed stone or gravel complying with [**ASTM D448 for Size No. 8**][**ASTM D2940/D2940M, base material**][**requirements in Section 312000 "Earth Moving" for base course**].

C. Sand for Leveling Course: Sound, sharp, washed, natural sand or crushed stone complying with gradation requirements in ASTM C33/C33M for fine aggregate.

D. Stone Screenings for Leveling Course: Sound stone screenings complying with ASTM D448 for Size No. 10.

E. Sand for Joints: Fine, sharp, washed, natural sand or crushed stone with 100 percent passing **No. 16 (1.18-mm)** sieve and no more than 10 percent passing **No. 200 (0.075-mm)** sieve.

1. Provide sand of color needed to produce required joint color.

F. Separation Geotextile: Woven geotextile fabric, manufactured for separation applications; made from polyolefins or polyesters, with elongation less than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:

1. Survivability: Class 2, AASHTO M 288.
2. Apparent Opening Size: **No. 60 (0.250-mm)** sieve, maximum; ASTM D4751.
3. Permittivity: 0.02 per second, minimum; ASTM D4491.
4. UV Stability: 50 percent after 500 hours' exposure, ASTM D4355.

G. Drainage Geotextile: Nonwoven needle-punched geotextile fabric, manufactured for subsurface drainage applications, made from polyolefins or polyesters; with elongation greater than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:

1. Survivability: Class 2, AASHTO M 288.
2. Apparent Opening Size: **No. 40 (0.425-mm)** sieve, maximum; ASTM D4751.
3. Permittivity: 0.5 per second, minimum; ASTM D4491.
4. UV Stability: 50 percent after 500 hours' exposure, ASTM D4355.

H. Herbicide: Commercial chemical for weed control, registered with the EPA. Provide in granular, liquid, or wettable powder form.

2.9 BITUMINOUS SETTING-BED MATERIALS

A. Primer for Base: ASTM D2028/D2028M, cutback asphalt, grade as recommended by unit paver manufacturer.

B. Fine Aggregate for Setting Bed: ASTM D1073, No. 2 or No. 3.

C. Asphalt Cement: ASTM D3381/D3381M, Viscosity Grade AC-10 or Grade AC-20.

D. Neoprene-Modified Asphalt Adhesive: Paving manufacturer's standard adhesive consisting of oxidized asphalt combined with 2 percent neoprene and 10 percent long-fibered mineral fibers containing no asbestos.

E. Sand for Joints: Fine, sharp, washed, natural sand or crushed stone with 100 percent passing **No. 16 (1.18-mm)** sieve and no more than 10 percent passing **No. 200 (0.075-mm)** sieve.

1. Provide sand of color needed to produce required joint color.

2.10 MORTAR SETTING-BED MATERIALS

A. Regional Materials: Aggregate for mortar and grout[**, cement, and lime**] shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.

B. Regional Materials: Aggregate for mortar and grout[**, cement, and lime**] shall be manufactured within **500 miles (800 km)** of Project site.

C. Regional Materials: Aggregate for mortar and grout[**, cement, and lime**] shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.

D. Indigenous Materials: Aggregate for mortar and grout[**, cement, and lime**] shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

E. Regional Materials: Aggregate for mortar and grout[**, cement, and lime**] shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

F. Portland Cement: ASTM C150/C150M, Type I or Type II.

G. Hydrated Lime: ASTM C207, Type S.

H. Sand: ASTM C144.

I. Latex Additive: [**Manufacturer's standard**][**acrylic resin**][**or**][**styrene-butadiene-rubber**] water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement and aggregate mortar bed, and not containing a retarder.

J. Thin-Set Mortar for Bond Coat: Latex-portland cement mortar complying with ANSI A118.4.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ARDEX Americas**]
   b. [**Boiardi Products Corporation; a QEP company**]
   c. [**Bostik; Arkema**]
   d. [**C-Cure**]
   e. [**Custom Building Products**]
   f. [**H.B. Fuller Construction Products Inc. / TEC**]
   g. [**Jamo Inc**]
   h. [**Laticrete International, Inc.**]
   i. [**MAPEI Corporation**]
   j. [**Parex, a Sika brand**]
   k. [**ProSpec; H.B. Fuller Construction Products Inc.**]
   l. [**Sakrete; CRH Americas, Oldcastle APG**]
   m. [**Southern Grouts & Mortars, Inc**]
   n. [**Summitville Tiles, Inc.**]
   o. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ARDEX Americas**]
   b. [**Boiardi Products Corporation; a QEP company**]
   c. [**Bostik; Arkema**]
   d. [**C-Cure**]
   e. [**Custom Building Products**]
   f. [**H.B. Fuller Construction Products Inc. / TEC**]
   g. [**Jamo Inc**]
   h. [**Laticrete International, Inc.**]
   i. [**MAPEI Corporation**]
   j. [**Parex, a Sika brand**]
   k. [**ProSpec; H.B. Fuller Construction Products Inc.**]
   l. [**Sakrete; CRH Americas, Oldcastle APG**]
   m. [**Southern Grouts & Mortars, Inc**]
   n. [**Summitville Tiles, Inc.**]
   o. <**Insert manufacturer's name**>

3. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
4. Provide prepackaged, dry-mortar mix combined with [**acrylic resin**][**or**][**styrene-butadiene-rubber**] liquid-latex additive at Project site.
5. Provide product that is approved by manufacturer for application thickness of [**5/8 inch (16 mm)**]<**Insert value**>.

K. Water: Potable.

L. Reinforcing Wire Fabric: Galvanized, welded wire fabric, **2 by 2 inches (50.8 by 50.8 mm)** by **0.062 inch (1.57 mm)** in diameter; comply with ASTM A1064/A1064M except for minimum wire size.

2.11 GROUT MATERIALS

A. Regional Materials: Aggregate for mortar and grout[**, cement, and lime**] shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.

B. Regional Materials: Aggregate for mortar and grout[**, cement, and lime**] shall be manufactured within **500 miles (800 km)** of Project site.

C. Regional Materials: Aggregate for mortar and grout[**, cement, and lime**] shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.

D. Indigenous Materials: Aggregate for mortar and grout[**, cement, and lime**] shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

E. Regional Materials: Aggregate for mortar and grout[**, cement, and lime**] shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

F. Sand-Portland Cement Grout: ANSI A108.10, made of white or gray cement and white or colored aggregate as required to produce color indicated.

1. Colored Mortar Pigments for Grout: Natural and synthetic iron and chromium oxides, compounded for use in mortar and grout mixes. Use only pigments that have proved, through testing and experience, to be satisfactory for use in portland cement grout.

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1) [**Davis Colors**]
2) [**Lanxess Corporation**]
3) [**Solomon Colors Inc.**]
4) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**Davis Colors**]
2) [**Lanxess Corporation**]
3) [**Solomon Colors Inc.**]
4) <**Insert manufacturer's name**>

G. Standard Cement Grout: ANSI A118.6, sanded.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following]:

a. [**Boiardi Products Corporation; a QEP company**]
b. [**Bostik; Arkema**]
c. [**C-Cure**]
d. [**Custom Building Products**]
e. [**H.B. Fuller Construction Products Inc. / TEC**]
f. [**Jamo Inc**]
g. [**Laticrete International, Inc.**]
h. [**MAPEI Corporation**]
i. [**Parex, a Sika brand**]
j. [**ProSpec; H.B. Fuller Construction Products Inc.**]
k. [**Sakrete; CRH Americas, Oldcastle APG**]
l. [**Southern Grouts & Mortars, Inc**]
m. [**Summitville Tiles, Inc.**]
n. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Boiardi Products Corporation; a QEP company**]
b. [**Bostik; Arkema**]
c. [**C-Cure**]
d. [**Custom Building Products**]
e. [**H.B. Fuller Construction Products Inc. / TEC**]
f. [**Jamo Inc**]
g. [**Laticrete International, Inc.**]
h. [**MAPEI Corporation**]
i. [**Parex, a Sika brand**]
j. [**ProSpec; H.B. Fuller Construction Products Inc.**]
k. [**Sakrete; CRH Americas, Oldcastle APG**]
l. [**Southern Grouts & Mortars, Inc**]
m. [**Summitville Tiles, Inc.**]
n. <**Insert manufacturer's name**>

H. High-Performance Cement Grout: ANSI A118.7, sanded.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ARDEX Americas**]
b. [**Boiardi Products Corporation; a QEP company**]
c. [**Bostik; Arkema**]
d. [**C-Cure**]
e. [**Custom Building Products**]
f. [**H.B. Fuller Construction Products Inc. / TEC**]
g. [**Jamo Inc**]
h. [**Laticrete International, Inc.**]
i. [**MAPEI Corporation**]
j. [**Sakrete; CRH Americas, Oldcastle APG**]
k. [**Southern Grouts & Mortars, Inc**]
l. [**Summitville Tiles, Inc.**]

m. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ARDEX Americas**]
b. [**Boiardi Products Corporation; a QEP company**]
c. [**Bostik; Arkema**]
d. [**C-Cure**]
e. [**Custom Building Products**]
f. [**H.B. Fuller Construction Products Inc. / TEC**]
g. [**Jamo Inc**]
h. [**Laticrete International, Inc.**]
i. [**MAPEI Corporation**]
j. [**Sakrete; CRH Americas, Oldcastle APG**]
k. [**Southern Grouts & Mortars, Inc**]
l. [**Summitville Tiles, Inc.**]
m. <**Insert manufacturer's name**>

3. Polymer Type:

a. Ethylene vinyl acetate or acrylic additive, in dry, redispersible form, prepackaged with other dry ingredients.
b. [**Acrylic resin**][**or**][**styrene-butadiene rubber**] in liquid-latex form for addition to prepackaged dry-grout mix.

I. Grout Colors: [**As indicated by manufacturer's designations**][**Match Architect's samples**][**As selected by Architect from manufacturer's full range**]<**Insert color**>.

J. Water: Potable.

2.12 BITUMINOUS SETTING-BED MIX

A. Mix bituminous setting-bed materials at an asphalt plant in approximate proportion, by weight, of 7 percent asphalt cement to 93 percent fine aggregate unless otherwise indicated. Heat mixture to **300 deg F (149 deg C)**.

2.13 MORTAR AND GROUT MIXES

A. General: Comply with referenced standards and with manufacturers' written instructions for mix proportions, mixing equipment, mixer speeds, mixing containers, mixing times, and other procedures needed to produce setting-bed and joint materials of uniform quality and with optimal performance characteristics. Discard mortars and grout if they have reached their initial set before being used.

B. Mortar-Bed Bond Coat: Mix neat cement and [**latex additive**][**water**] to a creamy consistency.

C. Portland Cement-Lime Setting-Bed Mortar: Type M complying with ASTM C270, Proportion Specification.

D. Latex-Modified, Portland Cement Setting-Bed Mortar: Proportion and mix portland cement, sand, and latex additive for setting bed to comply with written instructions of latex-additive manufacturer and as necessary to produce stiff mixture with a moist surface when bed is ready to receive pavers.

E. Latex-Modified, Portland Cement Bond Coat: Proportion and mix portland cement, aggregate, and liquid latex for bond coat to comply with written instructions of liquid-latex manufacturer.

F. Thinset Mortar Bond Coat: Proportion and mix according to manufacturer's written instructions.

G. Job-Mixed Portland Cement Grout: Proportion and mix job-mixed portland cement and aggregate grout to match setting-bed mortar except omit hydrated lime and use enough water to produce a pourable mixture.

1. Pigmented Grout: Select and proportion pigments with other ingredients to produce color required. Do not exceed pigment-to-cement ratio of 1 to 10, by weight.
2. Colored-Aggregate Grout: Produce color required by combining colored aggregates with portland cement of selected color.

H. Packaged Grout: Proportion and mix according to grout manufacturer's written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces indicated to receive unit paving, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Where unit paving is to be installed over waterproofing, examine waterproofing installation, with waterproofing Installer present, for protection from paving operations, including areas where waterproofing system is turned up or flashed against vertical surfaces.

C. Proceed with installation only after unsatisfactory conditions have been corrected[**and waterproofing protection is in place**].

3.2 PREPARATION

A. Remove substances from concrete substrates that could impair mortar bond, including curing and sealing compounds, form oil, and laitance.

B. Sweep concrete substrates to remove dirt, dust, debris, and loose particles.

C. Proof-roll prepared subgrade according to requirements in Section 312000 "Earth Moving" to identify soft pockets and areas of excess yielding. Proceed with unit paver installation only after deficient subgrades have been corrected and are ready to receive [**subbase**][**and**][**base**] course for unit pavers.

3.3 INSTALLATION, GENERAL

A. Do not use unit pavers with chips, cracks, voids, discolorations, or other defects that might be visible or cause staining in finished work.

B. Mix pavers from several pallets or cubes, as they are placed, to produce uniform blend of colors and textures.

C. Cut unit pavers with motor-driven masonry saw equipment to provide clean, sharp, unchipped edges. Cut units to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where

possible. Hammer cutting is not acceptable.

1. For concrete pavers, a block splitter may be used.

D. Handle protective-coated brick pavers to prevent coated surfaces from contacting backs or edges of other units. If, despite these precautions, coating does contact bonding surfaces of brick, remove coating from bonding surfaces before setting brick.

E. Joint Pattern: [**Running bond**][**Herringbone**][**Basket weave**][**Grid**][**As indicated**][**Match and continue existing unit paver joint pattern**].

F. Pavers over Waterproofing: Exercise care in placing pavers and setting materials over waterproofing so protection materials are not displaced and waterproofing is not punctured or otherwise damaged. Carefully replace protection materials that become displaced and arrange for repair of damaged waterproofing before covering with paving.

1. Provide joint filler at waterproofing that is turned up on vertical surfaces[**unless otherwise indicated; where unfilled joints are indicated, provide temporary filler or protection until paver installation is complete**].

G. Tolerances:

1. Do not exceed **1/32-inch (0.8-mm)** unit-to-unit offset from flush (lippage) or **1/8 inch in 10 feet (3 mm in 3 m)** from level, or indicated slope, for finished surface of paving.
2. Do not exceed[**1/16-inch (1.6-mm) unit-to-unit offset from flush (lippage) nor 1/8 inch in 24 inches (3 mm in 600 mm) and**] **1/4 inch in 10 feet (6 mm in 3 m)** from level, or indicated slope, for finished surface of paving.

H. Expansion and Control Joints:

1. Provide for sealant-filled joints at locations and of widths indicated. Provide compressible foam filler as backing for sealant-filled joints[**unless otherwise indicated; where unfilled joints are indicated, provide temporary filler until paver installation is complete**]. Install joint filler before setting pavers. Sealant materials and installation are specified in Section 079200 "Joint Sealants."
2. Provide cork joint filler at locations and of widths indicated. Install joint filler before setting pavers. Make top of joint filler flush with top of pavers.

I. Provide edge restraints as indicated. Install edge restraints before placing unit pavers.

1. Install edge restraints to comply with manufacturer's written instructions. Install stakes at intervals required to hold edge restraints in place during and after unit paver installation.
2. For metal edge restraints with top edge exposed, drive stakes at least **1 inch (25 mm)** below top edge.
3. Install job-built concrete edge restraints to comply with requirements in Section 033000 "Cast-in-Place Concrete."
4. Where pavers set in mortar bed are indicated as edge restraints for pavers set in aggregate setting bed, install pavers set in mortar and allow mortar to cure before placing aggregate setting bed and remainder of pavers. Cut off mortar bed at a steep angle so it will not interfere with aggregate setting bed.
5. Where pavers embedded in concrete are indicated as edge restraints for pavers set in aggregate setting bed, install pavers embedded in concrete and allow concrete to cure before placing aggregate setting bed and remainder of pavers. Hold top of concrete below aggregate setting bed.

J. Provide steps made of pavers as indicated. Install paver steps before installing adjacent pavers.

1. Where pavers set in mortar bed are indicated for steps constructed adjacent to pavers set in aggregate setting bed, install steps and allow mortar to cure before placing aggregate setting bed and remainder of pavers. Cut off mortar bed at a steep angle so it will not interfere with aggregate setting bed.

3.4 AGGREGATE SETTING-BED APPLICATIONS

A. Compact soil subgrade uniformly to at least [**95**]<**Insert number**> percent of [**ASTM D698**][**ASTM D1557**] laboratory density.

B. Proof-roll prepared subgrade to identify soft pockets and areas of excess yielding. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Architect, and replace with compacted backfill or fill as directed.

C. Place separation geotextile over prepared subgrade, overlapping ends and edges at least **12 inches (300 mm)**.

D. Place aggregate[**subbase and**] base, compact by tamping with plate vibrator, and screed to depth indicated.

E. Place aggregate[**subbase and**] base, compact to 100 percent of ASTM D1557 maximum laboratory density, and screed to depth indicated.

F. Place drainage geotextile over compacted base course, overlapping ends and edges at least **12 inches (300 mm)**.

G. Place leveling course and screed to a thickness of **1 to 1-1/2 inches (25 to 38 mm)**, taking care that moisture content remains constant and density is loose and uniform until pavers are set and compacted.

H. Treat leveling course with herbicide to inhibit growth of grass and weeds.

I. Set pavers with a minimum joint width of **1/16 inch (1.5 mm)** and a maximum of **1/8 inch (3 mm)**, being careful not to disturb leveling base. If pavers have spacer bars, place pavers hand tight against spacer bars. Use string lines to keep straight lines. Fill gaps between units that exceed [**3/8 inch (10 mm)**]<**Insert dimension**> with pieces cut to fit from full-size unit pavers.

1. When installation is performed with mechanical equipment, use only unit pavers with spacer bars on sides of each unit.

J. Vibrate pavers into leveling course with a low-amplitude plate vibrator capable of a **3500- to 5000-lbf (16- to 22-kN)** compaction force at 80 to 90 Hz. Use vibrator with neoprene mat on face of plate or other means as needed to prevent cracking and chipping of pavers. Perform at least three passes across paving with vibrator.

1. Compact pavers when there is sufficient surface to accommodate operation of vibrator, leaving at least **36 inches (900 mm)** of uncompacted pavers adjacent to temporary edges.
2. Before ending each day's work, compact installed concrete pavers except for **36-inch (900-mm)** width of uncompacted pavers adjacent to temporary edges (laying faces).
3. As work progresses to perimeter of installation, compact installed pavers that are adjacent to permanent edges unless they are within **36 inches (90 mm)** of laying face.
4. Before ending each day's work and when rain interrupts work, cover pavers that have not been compacted and cover leveling course on which pavers have not been placed with nonstaining plastic sheets to protect them from rain.

K. Spread dry sand and fill joints immediately after vibrating pavers into leveling course. Vibrate pavers and add sand until joints are completely filled, then remove excess sand. Leave a slight surplus of sand on the surface for joint filling.

L. Do not allow traffic on installed pavers until sand has been vibrated into joints.

M. Repeat joint-filling process 30 days later.

3.5 BITUMINOUS SETTING-BED APPLICATIONS

A. Apply primer to concrete slab or binder course immediately before placing setting bed.

B. Prepare for setting-bed placement by locating **3/4-inch- (19-mm-)** deep control bars approximately **11 feet (3.3 m)** apart and parallel to one another, to serve as guides for striking board. Adjust bars to subgrades required for accurate setting of paving units to finished grades indicated.

C. Place bituminous setting bed where indicated, in panels, by spreading bituminous material between control bars. Spread mix at a minimum temperature of **250 deg F (121 deg C)**. Strike setting bed smooth, firm, even, and not less than **3/4 inch (19 mm)** thick. Add fresh bituminous material to low, porous spots after each pass of striking board. After each panel is completed, advance first control bar to next position in readiness for striking adjacent panels. Carefully fill depressions that remain after removing depth-control bars.

1. Roll setting bed with power roller to a nominal depth of **3/4 inch (19 mm)**. Adjust thickness as necessary to allow accurate setting of unit pavers to finished grades indicated. Complete rolling before mix temperature cools to **185 deg F (85 deg C)**.

D. Apply neoprene-modified asphalt adhesive to cold setting bed by squeegeeing or troweling to a uniform thickness of **1/16 inch (1.6 mm)**. Proceed with setting of paving units only after adhesive is tacky and surface is dry to touch.

E. Place pavers carefully by hand in straight courses, maintaining accurate alignment and uniform top surface. Protect newly laid pavers with plywood panels on which workers can stand. Advance protective panels as work progresses, but maintain protection in areas subject to continued movement of materials and equipment to avoid creating depressions or disrupting alignment of pavers. If additional leveling of paving is required, and before treating joints, roll paving with power roller after sufficient heat has built up in the surface from several days of hot weather.

F. Joint Treatment: Place unit pavers with hand-tight joints. Fill joints by sweeping sand over paved surface until joints are filled. Remove excess sand after joints are filled.

3.6 MORTAR SETTING-BED APPLICATIONS

A. Saturate concrete subbase with clean water several hours before placing setting bed. Remove surface water about one hour before placing setting bed.

B. Apply mortar-bed bond coat over surface of concrete subbase about 15 minutes before placing mortar bed. Do not exceed **1/16-inch (1.6-mm)** thickness for bond coat. Limit area of bond coat to avoid its drying out before placing setting bed.

C. Apply mortar bed over bond coat; spread and screed mortar bed to uniform thickness at subgrade elevations required for accurate setting of pavers to finished grades indicated.

D. Place reinforcing wire over concrete subbase, lapped at joints by at least one full mesh and supported so mesh becomes embedded in the middle of mortar bed. Hold edges back from vertical surfaces approximately **1/2 inch (13 mm)**.

E. Place mortar bed with reinforcing wire fully embedded in middle of mortar bed. Spread and screed mortar bed to uniform thickness at subgrade elevations required for accurate setting of pavers to finished grades indicated.

F. Mix and place only that amount of mortar bed that can be covered with pavers before initial set. Before placing pavers, cut back, bevel edge, and remove and discard setting-bed material that has reached initial set.

G. Wet brick pavers before laying if the initial rate of absorption exceeds **30 g/30 sq. in. (30 g/194 sq. cm)** per minute when tested according to ASTM C67. Allow units to absorb water so they are damp but not wet at time of laying.

H. Place pavers before initial set of cement occurs. Immediately before placing pavers on mortar bed, apply uniform **1/16-inch- (1.5-mm-)** thick bond coat to mortar bed or to back of each paver with a flat trowel.

I. Tamp or beat pavers with a wooden block or rubber mallet to obtain full contact with setting bed and to bring finished surfaces within indicated tolerances. Set each paver in a single operation before initial set of mortar; do not return to areas already set or disturb pavers for purposes of realigning finished surfaces or adjusting joints.

J. Spaced Joint Widths: Provide [**3/8-inch (10-mm)**][**1/2-inch (13-mm)**][**3/4-inch (19-mm)**] nominal joint width with variations not exceeding plus or minus [**1/16 inch (1.5 mm)**][**1/8 inch (3 mm)**][**3/16 inch (4.5 mm)**].

K. Grouted Joints: Grout paver joints complying with ANSI A108.10.

L. Grout joints as soon as possible after initial set of setting bed.

1. Force grout into joints, taking care not to smear grout on adjoining surfaces.
2. Clean pavers as grouting progresses by dry brushing or rubbing with dry burlap to remove smears before tooling joints.
3. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.
4. If tooling squeezes grout from joints, remove excess grout and smears by dry brushing or rubbing with dry burlap and tool joints again to produce a uniform appearance.

M. Cure grout by maintaining in a damp condition for seven days unless otherwise recommended by grout or liquid-latex manufacturer.

3.7 REPAIRING, POINTING, AND CLEANING

A. Remove and replace unit pavers that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Provide new units to match adjoining units and install in same manner as original units, with same joint treatment and with no evidence of replacement.

B. Pointing: During tooling of joints, enlarge voids or holes and completely fill with grout. Point joints at sealant joints to provide a neat, uniform appearance, properly prepared for sealant application.

C. Cleaning: Remove excess grout from exposed paver surfaces; wash and scrub clean.

1. Remove temporary protective coating as recommended by coating manufacturer and as acceptable to paver and grout manufacturers.
2. Do not allow protective coating to enter floor drains. Trap, collect, and remove coating material.

END OF SECTION 32 14 00 00

SECTION 32 14 09 00 - PLANTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Plant materials.
2. Fertilizers.
3. Weed-control barriers.
4. Mulches.
5. Herbicides and pesticides.
6. Tree-stabilization materials.
7. Landscape edgings.
8. Tree grates.
9. Tree-watering devices.

B. Related Requirements:

1. Section 015639 "Temporary Tree and Plant Protection" for protecting, trimming, pruning, repairing, and replacing existing trees to remain that interfere with, or are affected by, execution of the Work.
2. Section 129200 "Interior Planters and Artificial Plants" for planters for live and artificial interior plants.
3. Section 328400 "Planting Irrigation" for complete irrigation systems.
4. Section 329200 "Turf and Grasses" for turf (lawn) and meadow planting, hydroseeding, and erosion-control materials.
5. Section 329600 "Transplanting" for transplanting non-nursery-grown trees.

1.2 ALLOWANCES

A. See Section 012100 "Allowances" for description of allowances affecting items specified in this Section.

1.3 UNIT PRICES

A. See Section 012200 "Unit Prices" for description of unit prices affecting items specified in this Section.

1.4 COORDINATION

A. Coordination with Turf Areas (Lawns): Plant trees, shrubs, and other plants after finish grades are established and before planting turf areas unless otherwise indicated.

1. When planting trees, shrubs, and other plants after planting turf areas, protect turf areas, and promptly repair damage caused by planting operations.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1.6 ACTION SUBMITTALS

A. Product Data:

1. Plant materials.
2. Fertilizers.
3. Weed-control barriers.
4. Mulches.
5. Herbicides and pesticides.
6. Tree-stabilization materials.
7. Landscape edgings.
8. Tree grates.
9. Tree-watering devices.

B. Product Data Submittals: For each product.

1. Plant Materials: Include quantities, sizes, quality, and verified sources for plant materials.

C. Samples for Verification: Actual sample of finished products for each of the following:

1. Organic Mulch: [**1-pint (0.5-L)**][**1-quart (1-L)**]<**Insert value**> volume of each organic mulch required; typical of the lot of material to be furnished, in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch. Provide an accurate representation of color, texture, and organic makeup.
2. Mineral Mulch: [**2 lb (1.0 kg)**][**5 lb (2.5 kg)**]<**Insert value**> of each mineral mulch required; typical of the lot of material to be furnished, in sealed plastic bags labeled with source of mulch. Provide accurate indication of color, texture, and makeup.
3. Weed-Control Barrier: **12 by 12 inches (300 by 300 mm)**.
4. Proprietary Root-Ball-Stabilization Device: One unit.
5. Slow-Release, Tree-Watering Device: One unit of each size required.
6. Edging Materials and Accessories: Manufacturer's standard size, to verify color selected.
7. Root Barrier: Width of panel by **12 inches (300 mm)**.

1.7 INFORMATIONAL SUBMITTALS

A. Field Quality-Control Reports: Percolation tests for tree pits. Include the following:

1. Tree identification number matching the plans.
2. Date of test.
3. Time when water was added to tree pit to start percolation test.
4. Time with photo documentation showing increments of testing with water level in tree pit.
5. Identification of tester.

B. Qualification Statements: For landscape Installer. Include list of similar projects completed by Installer demonstrating Installer's capabilities and experience. Include project names, addresses, and year completed, and include names and addresses of owners' contact persons.

C. Product Certificates: For each type of manufactured product, from manufacturer, and complying with manufacturer's certified analysis of standard products.

D. Pesticides and Herbicides: Product label and manufacturer's written application instructions specific to Project.

E. Sample Warranty: For special warranty.

1.8 CLOSEOUT SUBMITTALS

A. Maintenance Data: Recommended procedures to be established by Owner for maintenance of plants during a calendar year. Submit before expiration of required maintenance periods.

1.9 QUALITY ASSURANCE

A. Installer Qualifications: A qualified landscape installer whose work has resulted in successful establishment of plants.

1. Professional Membership: Member in good standing of either the National Association of Landscape Professionals or AmericanHort.
2. Experience: [**Three**][**Five**]<**Insert number**> years' experience in landscape installation in addition to requirements in Section 014000 "Quality Requirements."
3. Installer's Field Supervision: Maintain an experienced full-time supervisor on Project site when work is in progress.
4. Personnel Certification: Installer's [**field supervisor**][**personnel assigned to the Work**] certified in [**one**][**all**] of the following categories from the National Association of Landscape Professionals:

    a. Landscape Industry Certified Technician - Exterior.
    b. Landscape Industry Certified Interior.
    c. Landscape Industry Certified Horticultural Technician.

5. Pesticide Applicator: State licensed, commercial.

B. Provide quality, size, genus, species, and variety of plants indicated, complying with applicable requirements in ANSI Z60.1.

1. Selection of plants purchased under allowances is made by Architect, who tags plants at their place of growth before they are prepared for transplanting.

C. Measurements: Measure in accordance with ANSI Z60.1. Do not prune to obtain required sizes.

1. Trees and Shrubs: Measure with branches and trunks or canes in their normal position. Take height measurements from or near the top of the root flare for field-grown stock and container-grown stock. Measure main body of tree or shrub for height and spread; do not measure branches or roots tip to tip. Take caliper measurements **6 inches (150 mm)** above the root flare for trees up to **4-inch (100-mm)** caliper size, and **12 inches (300 mm)** above the root flare for larger sizes.
2. Other Plants: Measure with stems, petioles, and foliage in their normal position.

D. Plant Material Observation: Architect may observe plant material either at place of growth or at site before planting for compliance with requirements for genus, species, variety, cultivar, size, and quality. Architect may also observe trees and shrubs further for size and condition of balls and root systems, pests, disease symptoms, injuries, and latent defects and may reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.

1. Notify Architect of sources of planting materials [**seven**]<**Insert number**> days in advance of delivery to site.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws if applicable.

B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, or walkways and pavements; or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Accompany each delivery of bulk materials with appropriate certificates.

C. Deliver bare-root stock plants within [**24 hours**][**36 hours**]<**Insert time**> of digging. Immediately after digging up bare-root stock, pack root system in wet straw, hay, or other suitable material to keep root system moist until planting. Transport in covered, temperature-controlled vehicles, and keep plants cool and protected from sun and wind at all times.

D. Do not prune trees and shrubs before delivery. Protect bark, branches, and root systems from sun scald, drying, wind burn, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of plants during shipping and delivery. Do not drop plants during delivery and handling.

E. Handle planting stock by root ball.

F. Store bulbs, corms, and tubers in a dry place at **60 to 65 deg F (16 to 18 deg C)** until planting.

G. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.

1. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.

H. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.

I. Deliver plants after preparations for planting have been completed, and install immediately. If planting is delayed more than six hours after delivery, set plants and trees in their appropriate aspect (sun, filtered sun, or shade), protect from weather and mechanical damage, and keep roots moist.

1. Heel-in bare-root stock. Soak roots that are in less than moist condition in water for two hours. Reject plants with dry roots.
2. Set balled stock on ground and cover ball with soil, peat moss, sawdust, or other acceptable material.
3. Do not remove container-grown stock from containers before time of planting.
4. Water root systems of plants stored on-site deeply and thoroughly with a fine-mist spray. Water as often as necessary to maintain root systems in a moist, but not overly wet condition.

1.11 FIELD CONDITIONS

A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system

components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.

B. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with maintenance periods to provide required maintenance from date of Substantial Completion.

1. Spring Planting: <**Insert dates**>.
2. Fall Planting: <**Insert dates**>.

C. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions in accordance with manufacturer's written instructions and warranty requirements.

1.12 WARRANTY

A. Special Warranty: Installer agrees to repair or replace plantings and accessories that fail in materials, workmanship, or growth within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Death and unsatisfactory growth, except for defects resulting from abuse, lack of adequate maintenance, or neglect by Owner.
b. Structural failures, including plantings falling or blowing over.
c. Faulty performance of [**tree stabilization**][**edgings**][**and**][**tree grates**]<**Insert item**>.
d. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

2. Warranty Periods: From date of [**planting completion**][**Substantial Completion**]<**Insert starting time**>.

a. Trees, Shrubs, Vines, and Ornamental Grasses: [**12**]<**Insert number**> months.
b. Ground Covers, Biennials, Perennials, and Other Plants: [**12**][**Nine**][**Six**][**Three**]<**Insert number**> months.
c. Annuals: [**Three**][**Two**]<**Insert number**> months.

3. Include the following remedial actions as a minimum:

a. Immediately remove dead plants and replace unless required to plant in the succeeding planting season.
b. Replace plants that are more than 25 percent dead or in an unhealthy condition at end of warranty period.
c. A limit of one replacement of each plant is required except for losses or replacements due to failure to comply with requirements.
d. Provide extended warranty for period equal to original warranty period, for replaced plant material.

PART 2 - PRODUCTS

2.1 PLANT MATERIALS

A. General: Furnish nursery-grown plants true to genus, species, variety, cultivar, stem form, shearing, and other features indicated in Plant List, Plant Schedule, or Plant Legend indicated on Drawings and

complying with ANSI Z60.1; and with healthy root systems developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock, densely foliated when in leaf and free of disease, pests, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.

1. Trees with damaged, crooked, or multiple leaders; with tight vertical branches where bark is squeezed between two branches or between branch and trunk ("included bark"); with crossing trunks; with cut-off limbs more than **3/4 inch (19 mm)** in diameter; or with stem girdling roots are unacceptable.
2. Collected Stock: Do not use plants harvested from the wild, from native stands, from an established landscape planting, or not grown in a nursery unless otherwise indicated.

B. Provide plants of sizes, grades, and ball or container sizes complying with ANSI Z60.1 for types and form of plants required. Plants of a larger size may be used if acceptable to Architect, with a proportionate increase in size of roots or balls.

C. Root-Ball Depth: Furnish trees and shrubs with root balls measured from top of root ball, which begins at root flare in accordance with ANSI Z60.1.

D. Labeling: Label [**each**][**at least one**] plant of each variety, size, and caliper with a securely attached, waterproof tag bearing legible designation of common name and full scientific name, including genus and species. Include nomenclature for hybrid, variety, or cultivar, if applicable for plant.

E. If formal arrangements or consecutive order of plants is indicated on Drawings, select stock for uniform height and spread, and number the labels to ensure symmetry in planting.

F. Annuals and Biennials: Provide healthy, disease-free plants of species and variety shown or listed, with well-established root systems reaching to sides of the container to maintain a firm ball, but not with excessive root growth encircling the container. Provide only plants that are acclimated to outdoor conditions before delivery[**and that are in bud but are not yet in bloom**].

G. <**Insert requirements**>.

2.2 FERTILIZERS

A. Granular Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:

1. Composition:

a. [**0.75 lb/1000 sq. ft. (0.34 kg/92.9 sq. m),**)]3 percent of actual nitrogen, 4 percent phosphorous, and 3 percent potassium, by weight.
b. Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing laboratory.

B. Mycorrhizal Fungi: Dry, granular inoculant containing at least 5300 spores per **lb (0.45 kg)** of vesicular-arbuscular mycorrhizal fungi and 95 million spores per **lb (0.45 kg)** of ectomycorrhizal fungi, 33 percent hydrogel, and maximum of 5.5 percent inert material.

2.3 WEED-CONTROL BARRIERS

A. Nonwoven Geotextile Filter Fabric: Polypropylene or polyester fabric, **3 oz./sq. yd. (101 g/sq. m)** minimum, composed of fibers inert to biological degradation and naturally resistant to chemicals, alkalis, and acids, formed into a stable network so that fibers retain their relative position.

B. Composite Fabric: Woven, needle-punched polypropylene substrate bonded to a nonwoven polypropylene fabric, **4.8 oz./sq. yd. (162 g/sq. m)**.

2.4 MULCHES

A. Organic Mulch: Free from deleterious materials and suitable as a top dressing of trees and shrubs, consisting of one of the following:

1. Type: [**Shredded hardwood**][**Ground or shredded bark**][**Wood and bark chips**][**Pine straw**][**Salt hay or threshed straw**][**Pine needles**][**Peanut, pecan, and cocoa-bean shells**]<**Insert type**>.
2. Size Range: [**3 inches (76 mm) maximum, 1/2 inch (13 mm) minimum**]<**Insert dimensions**>.
3. Color: Natural.

B. Compost Mulch: Well-composted, stable, and weed-free organic matter, pH of 5.5 to 8; moisture content 35 to 55 percent by weight; 100 percent passing through a **1-inch (25-mm)** sieve; soluble-salt content of [**2 to 5**]<**Insert range or value**> dS/m; not exceeding 0.5 percent inert contaminants and free of substances toxic to plantings; and as follows:

1. Organic Matter Content: [**50 to 60**]<**Insert number range**> percent of dry weight.
2. Feedstock: Agricultural, food, or industrial residuals; biosolids; yard trimmings; or source-separated or compostable mixed solid waste.

C. Mineral Mulch: Hard, durable stone, washed free of loam, sand, clay, and other foreign substances, of the following type, size range, and color:

1. Type: [**Rounded riverbed gravel or smooth-faced stone**][**Crushed stone or gravel**][**Marble chips**][**Granite chips**]<**Insert type**>.
2. Size Range: [**1-1/2 inches (38 mm) maximum, 3/4 inch (19 mm) minimum**][**3/4 inch (19 mm) maximum, 1/4 inch (6.4 mm) minimum**]<**Insert dimensions**>.
3. Color: [**Uniform tan-beige color range acceptable to Architect**][**Readily available natural gravel color range**]<**Insert color**>.

2.5 HERBICIDES AND PESTICIDES

A. Pre-Emergent Herbicide (Selective and Nonselective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.

B. Post-Emergent Herbicide (Selective and Nonselective): Effective for controlling weed growth that has already germinated.

C. Pesticides: Registered and approved by the EPA, acceptable to authorities having jurisdiction, and of type recommended in writing by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.

2.6 TREE-STABILIZATION MATERIALS

A. Trunk-Stabilization Materials:

1. Upright and Guy Stakes: Rough-sawn, sound, new [**hardwood**][**softwood with specified wood pressure-preservative treatment**], free of knots, holes, cross grain, and other defects, **2-by-2-inch nominal (38-by-38-mm actual)** by length indicated, pointed at one end.
2. Wood Deadmen: Timbers measuring **8 inches (200 mm)** in diameter and **48 inches (1200 mm)** long, treated with specified wood pressure-preservative treatment.
3. Flexible Ties: Wide rubber or elastic bands or straps of length required to reach stakes or [**turnbuckles**][**compression springs**].
4. Guys and Tie Wires: ASTM A641/A641M, Class 1, galvanized-steel wire, two-strand, twisted, **0.106 inch (2.7 mm)** in diameter.
5. Tree-Tie Webbing: UV-resistant polypropylene or nylon webbing with brass grommets.
6. Guy Cables: Five-strand, **3/16-inch- (4.8-mm-)** diameter, galvanized-steel cable, with zinc-coated [**turnbuckles**][**compression springs**], a minimum of **3 inches (75 mm)** long, with two **3/8-inch (10-mm)** galvanized eyebolts.
7. Flags: Standard surveyor's plastic flagging tape, white, **6 inches (150 mm)** long.
8. Proprietary Staking-and-Guying Devices: Proprietary stake or anchor and adjustable tie systems to secure each new planting by plant stem; sized as indicated and in accordance with manufacturer's written instructions.

    a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

        1) [**Arborbrace**]
        2) [**Better Bilt Products, Inc.**]
        3) [**DeepRoot Green Infrastructure, LLC**]
        4) [**J. R. Partners**]
        5) [**MacLean Power Systems**]
        6) [**Villa Root Barrier; Villa Landscape Products**]
        7) <**Insert manufacturer's name**>

    b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

        1) [**Arborbrace**]
        2) [**Better Bilt Products, Inc.**]
        3) [**DeepRoot Green Infrastructure, LLC**]
        4) [**J. R. Partners**]
        5) [**MacLean Power Systems**]
        6) [**Villa Root Barrier; Villa Landscape Products**]
        7) <**Insert manufacturer's name**>

B. Root-Ball Stabilization Materials:

1. Upright Stakes and Horizontal Hold-Down: Rough-sawn, sound, new hardwood or softwood, free of knots, holes, cross grain, and other defects, **2-by-2-inch nominal (38-by-38-mm actual)** by length indicated; stakes pointed at one end.
2. Wood Screws: ASME B18.6.1.
3. Proprietary Root-Ball Stabilization Devices: Proprietary at- or below-grade stabilization systems to secure each new planting by root ball and that do not encircle the trunk; sized in accordance with

manufacturer's written instructions unless otherwise indicated.

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1) [**Border Concepts, Inc**]
2) [**MacLean Power Systems**]
3) [**Tree Staple, Inc.**]
4) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**Border Concepts, Inc**]
2) [**MacLean Power Systems**]
3) [**Tree Staple, Inc.**]
4) <**Insert manufacturer's name**>

C. Palm Bracing: Battens or blocks, struts, straps, and protective padding.

1. Battens or Blocks and Struts: Rough-sawn, sound, new hardwood or softwood, free of knots, holes, cross grain, and other defects, **2-by-4-inch nominal (38-by-89-mm actual)** by lengths indicated.
2. Straps: Adjustable steel or plastic package banding.
3. Padding: Burlap.
4. Proprietary Palm-Bracing Devices: Proprietary systems to secure each new planting by trunk; sized in accordance with manufacturer's written instructions unless otherwise indicated.

a. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1) [**Arborbrace**]
2) [**Better Bilt Products, Inc.**]
3) [**Horticultural Consultants, Inc.**]
4) [**Villa Root Barrier; Villa Landscape Products**]
5) <**Insert manufacturer's name**>

b. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1) [**Arborbrace**]
2) [**Better Bilt Products, Inc.**]
3) [**Horticultural Consultants, Inc.**]
4) [**Villa Root Barrier; Villa Landscape Products**]
5) <**Insert manufacturer's name**>

2.7 LANDSCAPE EDGINGS

A. Wood Edging: Of sizes indicated on Drawings, and wood stakes as follows:

1. Species: [**Western red cedar, all heart**][**Southern pine with specified wood pressure-preservative treatment**].
2. Stakes: Same species as edging, **1-by-2-inch nominal (19-by-38-mm actual)** by **18 inches (450 mm)** long, with galvanized nails for anchoring edging.

B. Steel Edging: Standard commercial-steel edging, fabricated in sections of standard lengths, with loops stamped from or welded to face of sections to receive stakes.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Border Concepts, Inc**]
    b. [**COLMET**]
    c. [**J. D. Russell Company (The)**]
    d. [**Sure-loc Edging Corporation.**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Border Concepts, Inc**]
    b. [**COLMET**]
    c. [**J. D. Russell Company (The)**]
    d. [**Sure-loc Edging Corporation.**]
    e. <**Insert manufacturer's name**>

3. Edging Size: [**3/16 inch (4.8 mm) thick by 4 inches (100 mm) deep**][**1/4 inch (6.4 mm) thick by 5 inches (125 mm) deep**][**1/4 inch (6.4 mm) thick by 4 inches (100 mm) deep**][**1/8 inch (3.2 mm) thick by 4 inches (100 mm) deep**][**1/8 inch (3.2 mm) thick by 6 inches (150 mm) deep**][**0.1 inch (2.5 mm) thick by 4 inches (100 mm) deep**]<**Insert dimensions**>.
4. Stakes: Tapered steel, a minimum of [**12 inches (300 mm)**][**15 inches (380 mm)**]<**Insert dimension**> long.
5. Accessories: Standard tapered ends, corners, and splicers.
6. Finish: [**Manufacturer's standard paint**][**Zinc coated**][**Unfinished**].

    a. Paint Color: [**Black**][**Green**][**Brown**].

C. Aluminum Edging: Standard-profile extruded-aluminum edging, **ASTM B221 (ASTM B221M)**, Alloy 6063-T6, fabricated in standard lengths with interlocking sections with loops stamped from face of sections to receive stakes.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Curv-Rite, Inc**]
    b. [**J. D. Russell Company (The)**]
    c. [**Permaloc Corporation**]
    d. [**Sure-loc Edging Corporation.**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Curv-Rite, Inc**]
    b. [**J. D. Russell Company (The)**]
    c. [**Permaloc Corporation**]
    d. [**Sure-loc Edging Corporation.**]
    e. <**Insert manufacturer's name**>

3. Edging Size: [**3/16 inch (4.8 mm) thick by 5-1/2 inches (140 mm) deep**][**3/16 inch (4.8 mm) thick by 4 inches (100 mm) deep**][**1/8 inch (3.2 mm) thick by 5-1/2 inches (140 mm) deep**][**1/8 inch (3.2 mm) thick by 4 inches (100 mm) deep**]<**Insert dimensions**>.
4. Stakes: Aluminum, **ASTM B221 (ASTM B221M)**, Alloy 6061-T6, approximately **1-1/2 inches (38 mm)** wide by **12 inches (300 mm)** long.
5. Finish: [**Manufacturer's standard paint**][**Powder-coat paint**][**Mill (natural aluminum)**][**Black anodized**].

    a. Paint Color: [**Black**][**Green**][**Brown**].

D. Plastic Edging: Standard black polyethylene or vinyl edging, [**V-lipped bottom**][**horizontally grooved**]<**Insert configuration**>, extruded in standard lengths, with **9-inch (225-mm)** [**steel angle**][**plastic**] stakes.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Oly-Ola Edgings, Inc.**]
    b. [**Permaloc Corporation**]
    c. [**Sure-loc Edging Corporation.**]
    d. [**Valley View Industries**]
    e. [**Villa Root Barrier; Villa Landscape Products**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Oly-Ola Edgings, Inc.**]
    b. [**Permaloc Corporation**]
    c. [**Sure-loc Edging Corporation.**]
    d. [**Valley View Industries**]
    e. [**Villa Root Barrier; Villa Landscape Products**]
    f. <**Insert manufacturer's name**>

3. Edging Size: [**0.1 inch (2.5 mm) thick by 5 inches (125 mm) deep**][**0.07 inch (1.8 mm) thick by 5 inches (125 mm) deep**]<**Insert dimensions**>.
4. Top Profile: [**Straight, with top 2 inches (50 mm) being 1/4 inch (6.4 mm) thick**][**Round top, 1/2 inch (13 mm) in diameter**][**Round top, 1 inch (25 mm) in diameter**].
5. Accessories: Manufacturer's standard alignment clips or plugs.

2.8 TREE GRATES

A. Tree Grates: Manufacturer's [**standard**][**custom designed**] tree grates[**and frames**].

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Barry Pattern & Foundry Co., Inc**]
b. [**EJ Group, Inc.**]
c. [**Ironsmith Inc.**]
d. [**Neenah Foundry Company**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Barry Pattern & Foundry Co., Inc**]
b. [**EJ Group, Inc.**]
c. [**Ironsmith Inc.**]
d. [**Neenah Foundry Company**]
e. <**Insert manufacturer's name**>

3. Grates: ASTM A48/A48M, **Class 35 (Class 250)** or better, gray-iron castings.
4. Frames: [**ASTM A48/A48M, Class 35 (Class 250) or better, gray-iron castings**][**or**][**ASTM A36/A36M steel-angle, hot-dip galvanized,**] of shape, pattern, and size indicated.

B. Shape and Size: [**As indicated on Drawings**][**Round, 36 inches (914 mm) in diameter**][**Round, 72 inches (1828 mm) in diameter**][**48 inches (1219 mm) square**][**60 inches (1524 mm) square**][**Rectangular, 36 by 60 inches (914 by 1524 mm)**][**Rectangular, 48 by 72 inches (1219 by 1828 mm)**]<**Insert shape and dimensions**>.

C. Finish: [**As fabricated**][**Powder-coat finish**]<**Insert finish**>.

1. Color: Low-gloss [**black**][**dark brown**][**dark green**][**dark gray**]<**Insert color**>.

2.9 TREE-WATERING DEVICES

A. Watering Pipe: PVC pipe **4 inches (100 mm)** in diameter, site-cut to length as required, and with snug-fitting removable cap.

B. Slow-Release Watering Device: Standard product manufactured for drip irrigation of plants and emptying its water contents over [**an extended time period**][**two to nine hours**][**two to three weeks**]<**Insert number or range**>; manufactured from UV-light-stabilized nylon-reinforced polyethylene sheet, PVC, or HDPE plastic.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**BIO-PLEX**]

b. [**Engineered Watering Solutions; PQ Partners, LLC**]
c. [**Spectrum Products, Inc.**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**BIO-PLEX**]
b. [**Engineered Watering Solutions; PQ Partners, LLC**]
c. [**Spectrum Products, Inc.**]
d. <**Insert manufacturer's name**>

3. Color: [**As selected by Architect from manufacturer's full range**][**black**][**dark chocolate**][**green**][**or**][**tan**]<**Insert color**>.

2.10 MISCELLANEOUS PRODUCTS

A. Root Barrier: Black, molded, modular panels [**18 inches (457 mm)**][**24 inches (610 mm)**]<**Insert dimension**> high (deep), **85 mils (2.2 mm)** thick, and with vertical root deflecting ribs protruding **3/4 inch (19 mm)** out from panel surface; manufactured with minimum 50 percent recycled polyethylene plastic with UV inhibitors.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**DeepRoot Green Infrastructure, LLC**]
b. [**NDS Inc**]
c. [**Villa Root Barrier; Villa Landscape Products**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**DeepRoot Green Infrastructure, LLC**]
b. [**NDS Inc**]
c. [**Villa Root Barrier; Villa Landscape Products**]
d. <**Insert manufacturer's name**>

B. Antidesiccant: Water-insoluble emulsion, permeable moisture retarder, film forming, for trees and shrubs. Deliver in original, sealed, and fully labeled containers and mix in accordance with manufacturer's written instructions.

C. Planter Drainage Gravel: Washed, sound crushed stone or gravel complying with [**ASTM D448 for Size No. 8**]<**Insert requirements**>.

D. Planter Filter Fabric: [**Woven**][**Nonwoven**] geotextile manufactured for separation applications and made of polypropylene, polyolefin, or polyester fibers or combination of them.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to receive plants, with Installer present, for compliance with requirements and conditions affecting installation and performance of the Work.

1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
2. Verify that plants and vehicles loaded with plants can travel to planting locations with adequate overhead clearance.
3. Suspend planting operations during periods of excessive soil moisture until moisture content reaches acceptable levels to attain required results.
4. Uniformly moisten excessively dry soil that is not workable or which is dusty.

B. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove soil and contamination as directed by Architect and replace with new planting soil.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities and turf areas and existing plants from damage caused by planting operations.

B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

C. Lay out individual tree and shrub locations and areas for multiple plantings. Stake locations, outline areas, adjust locations when requested, and obtain Architect's acceptance of layout before excavating or planting. Make minor adjustments as required.

D. Lay out plants at locations directed by Architect. Stake locations of individual trees and shrubs and outline areas for multiple plantings.

3.3 PLANTING AREA ESTABLISHMENT

A. General: Prepare planting area for soil placement and mix planting soil in accordance with [**Section 329113 "Soil Preparation."**][**Section 329115 "Soil Preparation (Performance Specification)."**]

B. Placing Planting Soil: [**Place and mix planting soil in-place over exposed subgrade**][**Place manufactured planting soil over exposed subgrade**][**Blend planting soil in place**]<**Insert requirement**>.

C. Before planting, obtain Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

D. Application of Mycorrhizal Fungi: At time directed by Architect, broadcast dry product uniformly over prepared soil at application rate [**indicated on Drawings**][**in accordance with manufacturer's written instructions**]<**Insert application rate**>.

3.4 EXCAVATION FOR TREES AND SHRUBS

A. Planting Pits and Trenches: Excavate circular planting pits.

1. Excavate planting pits with sides sloping inward at a 45-degree angle. Excavations with vertical sides are unacceptable. Trim perimeter of bottom leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Do not further disturb base. Ensure that root ball will sit on undisturbed base soil to prevent settling. Scarify sides of planting pit smeared or smoothed during excavation.
2. Excavate approximately three times as wide as ball diameter for [**balled and burlapped**][**balled and potted**][**container-grown**][**fabric bag-grown**] stock.
3. Excavate at least **12 inches (300 mm)** wider than root spread and deep enough to accommodate vertical roots for bare-root stock.
4. Do not excavate deeper than depth of root ball, measured from the root flare to the bottom of root ball.
5. If area under the plant was initially dug too deep, add soil to raise it to correct level and thoroughly tamp the added soil to prevent settling.
6. Maintain angles of repose of adjacent materials to ensure stability. Do not excavate subgrades of adjacent paving, structures, hardscapes, or other new or existing improvements.
7. Maintain supervision of excavations during working hours.
8. Keep excavations covered or otherwise protected [**overnight**][**after working hours**][**when unattended by Installer's personnel**].
9. If drain tile is indicated on Drawings or required under planting areas, excavate to top of porous backfill over tile.

B. Backfill Soil: Subsoil and topsoil removed from excavations may[**not**] be used as backfill soil unless otherwise indicated.

C. Obstructions: Notify Architect if unexpected rock or obstructions detrimental to trees or shrubs are encountered in excavations.

1. Hardpan Layer: Drill **6-inch- (150-mm-)** diameter holes, **24 inches (600 mm)** apart, into free-draining strata or to depth of **10 ft. (3 m)**, whichever is less, and backfill with free-draining material.

D. Drainage: Notify Architect if subsoil conditions evidence unexpected water seepage or retention in tree or shrub planting pits.

E. Fill excavations with water and allow to percolate away before positioning trees and shrubs.

3.5 TREE, SHRUB, AND VINE PLANTING

A. Inspection: At time of planting, verify that root flare is visible at top of root ball in accordance with ANSI Z60.1. If root flare is not visible, remove soil in a level manner from root ball to where the top-most root emerges from the trunk. After soil removal to expose root flare, verify that root ball still meets size requirements.

B. Roots: Remove stem girdling roots and kinked roots. Remove injured roots by cutting cleanly; do not break.

C. Balled and Burlapped Stock: Set each plant plumb and in center of planting pit or trench with root flare [**1 inch (25 mm) above**][**2 inches (50 mm) above**]<**Insert requirement**> adjacent finish grades.

1. Backfill: Planting soil .[**For trees, use excavated soil for backfill.**]
2. After placing some backfill around root ball to stabilize plant, carefully cut and remove burlap,

rope, and wire baskets from tops of root balls and from sides, but do not remove from under root balls. Remove pallets, if any, before setting. Do not use planting stock if root ball is cracked or broken before or during planting operation.

3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
4. Distribute granular fertilizer around each planting pit when pit is approximately one-half filled. Do not place in bottom of the hole.

    a. Quantity: [**As indicated on Drawings**][**Two per plant**][**Three for each caliper inch of plant**]<**Insert requirement**>.

5. Continue backfilling process. Water again after placing and tamping final layer of soil.

D. [**Balled and Potted**][**and**][**Container-Grown**] Stock: Set each plant plumb and in center of planting pit or trench with root flare [**1 inch (25 mm) above**][**2 inches (50 mm) above**]<**Insert requirement**> adjacent finish grades.

1. Backfill: Planting soil .[**For trees, use excavated soil for backfill.**]
2. Carefully remove root ball from container without damaging root ball or plant.
3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
4. Distribute granular fertilizer around each planting pit when pit is approximately one-half filled. Do not place in bottom of the hole.
5. Continue backfilling process. Water again after placing and tamping final layer of soil.

E. Fabric Bag-Grown Stock: Set each plant plumb and in center of planting pit or trench with root flare [**1 inch (25 mm) above**][**2 inches (50 mm) above**]<**Insert requirement**> adjacent finish grades.

1. Backfill: Planting soil .[**For trees, use excavated soil for backfill.**]
2. Carefully remove root ball from fabric bag without damaging root ball or plant. Do not use planting stock if root ball is cracked or broken before or during planting operation.
3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
4. Distribute granular fertilizer around each planting pit when pit is approximately one-half filled. Do not place in bottom of the hole.
5. Continue backfilling process. Water again after placing and tamping final layer of soil.

F. Bare-Root Stock: Set and support each plant in center of planting pit or trench with root flare [**1 inch (25 mm) above**][**2 inches (50 mm) above**]<**Insert requirement**> adjacent finish grade.

1. Backfill: Planting soil .[**For trees, use excavated soil for backfill.**]
2. Spread roots without tangling or turning toward surface. Plumb before backfilling, and maintain plumb while working.
3. Carefully work backfill in layers around roots by hand. Bring roots into close contact with the soil.
4. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
5. Distribute granular fertilizer around each planting pit when pit is approximately one-half filled. Do not place in bottom of the hole or touching the roots.
6. Continue backfilling process. Water again after placing and tamping final layer of soil.

G. Watering Pipe: During backfilling, install watering pipe **4 ft. (1.25 m)** deep into the planting pit outside the root ball [**as indicated on Drawings**][**and**][**with top of pipe 1 inch (25 mm) above the mulched**

surface].

H. Slopes: When planting on slopes, set the plant so the root flare on the uphill side is flush with the surrounding soil on the slope; the edge of root ball on the downhill side will be above the surrounding soil. Apply enough soil to cover the downhill side of root ball.

3.6 MECHANIZED TREE-SPADE PLANTING

A. Plant trees with approved mechanized tree spade at designated locations. Do not use tree spade to move trees larger than maximum size allowed for similar field-grown, balled-and-burlapped, root-ball diameter in accordance with ANSI Z60.1, or trees larger than manufacturer's maximum size recommendation for tree spade being used, whichever is smaller.

B. Use same tree spade to excavate the planting hole as will be used to extract and transport the tree.

C. When extracting tree, center the trunk within the tree spade and move tree with solid ball of earth.

D. Cut exposed roots cleanly during transplanting operations.

E. Plant trees following procedures in "Tree, Shrub, and Vine Planting" Article.

F. Where possible, orient the tree in same direction as in its original location.

3.7 TREE, SHRUB, AND VINE PRUNING

A. Remove only dead, dying, or broken branches. Do not prune for shape.

B. Prune, thin, and shape trees, shrubs, and vines as directed by Architect.

C. Prune, thin, and shape trees, shrubs, and vines in accordance with standard professional horticultural and arboricultural practices. Unless otherwise indicated by Architect, do not cut tree leaders; remove only injured, dying, or dead branches from trees and shrubs; and prune to retain natural character.

D. Do not apply pruning paint to wounds.

3.8 INSTALLATION OF TREE-STABILIZATION MATERIALS

A. Trunk Stabilization by Upright Staking and Tying: Install trunk stabilization as follows unless otherwise indicated:

1. Upright Staking and Tying:

a. Stake trees of **2- through 5-inch (50- through 125-mm)** caliper. Stake trees of less than **2-inch (50-mm)** caliper only as required to prevent wind tip out. Use a minimum of two stakes of length required to penetrate at least **18 inches (450 mm)** below bottom of backfilled excavation and to extend [**to the dimension indicated on Drawings**][**at least 72 inches (1830 mm)**][**one-third of trunk height**]<**Insert dimension or requirement**> above grade. Set vertical stakes and space to avoid penetrating root balls or root masses.

b. Stake trees with two stakes for trees up to **12 ft. (3.6 m)** high and **2-1/2 inches (63 mm)** or less in caliper; three stakes for trees less than **14 ft. (4.2 m)** high and up to **4 inches (100 mm)** in caliper. Space stakes equally around trees.

2. Support trees with bands of flexible ties at contact points with tree trunk. Allow enough slack to avoid rigid restraint of tree.
3. Support trees with two strands of tie wire, connected to the brass grommets of tree-tie webbing at contact points with tree trunk. Allow enough slack to avoid rigid restraint of tree.

B. Trunk Stabilization by Staking and Guying: Install trunk stabilization as follows unless otherwise indicated on Drawings. Stake and guy trees more than **14 ft. (4.2 m)** in height and more than **3 inches (75 mm)** in caliper unless otherwise indicated.

1. Site-Fabricated, Staking-and-Guying Method: Install no fewer than three guys spaced equally around tree.

    a. Securely attach guys to stakes **30 inches (760 mm)** long, driven to grade. Adjust spacing to avoid penetrating root balls or root masses. Provide [**turnbuckle**][**compression spring**] for each guy wire and tighten securely.
    b. For trees more than [**6 inches (150 mm) in caliper**]<**Insert size**>, anchor guys to wood deadmen buried at least **36 inches (900 mm)** below grade. Provide [**turnbuckle**][**compression spring**] for each guy wire and tighten securely.
    c. Support trees with bands of flexible ties at contact points with tree trunk and reaching to [**turnbuckle**][**compression spring**]. Allow enough slack to avoid rigid restraint of tree.
    d. Support trees with [**guy cable**][**or**][**multiple strands of tie wire**], connected to brass grommets of tree-tie webbing at contact points with tree trunk and reaching to [**turnbuckle**][**compression spring**]. Allow enough slack to avoid rigid restraint of tree.
    e. Attach flags to each guy wire, **30 inches (760 mm)** above finish grade.
    f. Paint [**turnbuckles**][**compression springs**] with luminescent white paint.

2. Proprietary Staking and Guying Device: Install staking and guying system sized and positioned as recommended by manufacturer unless otherwise indicated and in accordance with manufacturer's written instructions.

C. Root-Ball Stabilization: Install at- or below-grade stabilization system to secure each new planting by root ball unless otherwise indicated.

1. Wood Hold-Down Method: Place vertical stakes against side of root ball and drive them into subsoil; place horizontal wood hold-down stake across top of root ball and screw at each end to one of vertical stakes.

    a. Install stakes of length required to penetrate at least [**to dimension indicated on Drawings**][**18 inches (450 mm)**]<**Insert dimension**> below bottom of backfilled excavation. Saw stakes off at horizontal stake.
    b. Install screws through horizontal hold-down and penetrating at least **1 inch (25 mm)** into stakes. Predrill holes if necessary to prevent splitting wood.
    c. Install second set of stakes on other side of root trunk for larger trees.

2. Proprietary Root-Ball Stabilization Device: Install root-ball stabilization system sized and positioned as recommended by manufacturer unless otherwise indicated and in accordance with manufacturer's written instructions.

D. Palm Bracing: Install bracing system at three or more places equally spaced around perimeter of trunk to secure each palm until established unless otherwise indicated.

1. Site-Fabricated Palm-Bracing Method:

    a. Place battens over padding and secure battens in place around trunk perimeter with at least two straps, tightened to prevent displacement. Ensure that straps do not contact

trunk.

b. Place diagonal braces and cut to length. Secure upper ends of diagonal braces with galvanized nails into battens or into nail-attached blocks on battens. Do not drive nails, screws, or other securing devices into palm trunk; do not penetrate palm trunk in any fashion. Secure lower ends of diagonal braces with stakes driven into ground to prevent outward slippage of braces.

2. Proprietary Palm-Bracing Device: Install palm-bracing system sized and positioned as recommended by manufacturer unless otherwise indicated and in accordance with manufacturer's written instructions.

3.9 INSTALLATION OF ROOT BARRIER

A. Install root barrier where trees are planted within [**60 inches (1500 mm)**][**48 inches (1200 mm)**]<**Insert dimension**> of paving or other hardscape elements, such as walls, curbs, and walkways, unless otherwise indicated on Drawings.

B. Align root barrier [**vertically**][**with bottom edge angled at 20 degrees away from the paving or other hardscape element**], and run it linearly along and adjacent to paving or other hardscape elements to be protected from invasive roots.

C. Install root barrier continuously for distance of [**60 inches (1500 mm)**]<**Insert dimension**> in each direction from tree trunk, for total distance of [**10 ft. (3 m)**]<**Insert dimension**> per tree. If trees are spaced closer, use single continuous piece of root barrier.

1. Position top of root barrier [**flush with finish grade**][**1/2 inch (13 mm) above finish grade**][**in accordance with manufacturer's written instructions**].
2. Overlap root barrier minimum of **12 inches (300 mm)** at joints.
3. Do not distort or bend root barrier during construction activities.
4. Do not install root barrier surrounding the root ball of tree.

3.10 PLACING SOIL IN PLANTERS

A. Place a layer of drainage gravel at least **4 inches (100 mm)** thick in bottom of planter. Cover bottom with filter fabric and wrap filter fabric [**4 inches (100 mm)**][**6 inches (150 mm)**]<**Insert dimension**> up on all sides. Duct tape along the entire top edge of filter fabric, to secure filter fabric against the sides during soil-filling process.

B. Fill planter with planting soil . Place soil in lightly compacted layers to elevation of **1-1/2 inches (38 mm)** below top of planter, allowing natural settlement.

3.11 GROUND COVER AND PLANT PLANTING

A. Set out and space ground cover and plants other than trees, shrubs, and vines [**9 inches (225 mm) apart**][**12 inches (300 mm) apart**][**18 inches (450 mm) apart**][**24 inches (600 mm) apart**][**as indicated on Drawings**] in even rows with triangular spacing.

B. Use planting soil for backfill.

C. Dig holes large enough to allow spreading of roots.

D. For rooted cutting plants supplied in flats, plant each in a manner that minimally disturbs the root system

but to depth not less than two nodes.

E. Work soil around roots to eliminate air pockets and leave slight saucer indentation around plants to hold water.

F. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.

G. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.12 INSTALLATION OF MULCHES

A. Install weed-control barriers before mulching in accordance with manufacturer's written instructions. Completely cover area to be mulched, overlapping edges minimum of [**6 inches (150 mm)**][**12 inches (300 mm)**], and secure seams with galvanized pins.

B. Mulch backfilled surfaces of planting areas and other areas indicated.

1. Trees and Treelike Shrubs in Turf Areas: Apply [**organic**][**mineral**] mulch ring of [**2-inch (50-mm)**][**3-inch (75-mm)**]<**Insert dimension**> average thickness, with [**12-inch (300-mm)**][**24-inch (600-mm)**][**36-inch (900-mm)**]<**Insert dimension**> radius around trunks or stems. Do not create a mulch cone or place mulch within [**3 inches (75 mm)**][**6 inches (150 mm)**]<**Insert distance**> of trunks or stems.
2. Organic Mulch in Planting Areas: Apply [**2-inch (50-mm)**][**3-inch (75-mm)**]<**Insert dimension**> average thickness of organic mulch [**extending 12 inches (300 mm) beyond edge of individual planting pit or trench**][**and**][**over whole surface of planting area**], and finish level with adjacent finish grades. Do not place mulch within [**3 inches (75 mm)**][**6 inches (150 mm)**]<**Insert distance**> of trunks or stems.
3. Mineral Mulch in Planting Areas: Apply [**2-inch (50-mm)**][**3-inch (75-mm)**]<**Insert dimension**> average thickness of mineral mulch [**extending 12 inches (300 mm) beyond edge of individual planting pit or trench**][**and**][**over whole surface of planting area**], and finish level with adjacent finish grades. Do not place mulch within [**3 inches (75 mm)**][**6 inches (150 mm)**]<**Insert distance**> of trunks or stems.

3.13 INSTALLATION OF LANDSCAPE EDGINGS

A. Wood Edging: Install wood edging where indicated.[**Mitre cut joints and connections at a 45-degree angle.**] Fasten each cut joint or connection with two galvanized nails. Anchor with wood stakes spaced up to **36 inches (900 mm)** apart, driven at least **1 inch (25 mm)** below top elevation of edging. Use two galvanized nails per stake to fasten edging, of length as needed to penetrate both edging and stake and provide **1/2-inch (13-mm)** clinch at point. Predrill stakes if needed to avoid splitting. Replace stakes that crack or split during installation process.

B. Steel Edging: Install steel edging where indicated in accordance with manufacturer's written instructions. Anchor with steel stakes spaced approximately **30 inches (760 mm)** apart, driven below top elevation of edging.

C. Aluminum Edging: Install aluminum edging where indicated in accordance with manufacturer's written instructions. Anchor with aluminum stakes spaced approximately [**36 inches (900 mm)**][**48 inches (1200 mm)**] apart, driven below top elevation of edging.

D. Plastic Edging: Install plastic edging where indicated in accordance with manufacturer's written instructions. Anchor with steel stakes spaced approximately [**36 inches (900 mm)**][**48 inches (1200**

mm)] apart, driven through upper base grooves or V-lip of edging.

E. Shovel-Cut Edging: Separate mulched areas from turf areas[**, curbs, and paving**] with 45-degree, **4- to 6-inch- (100- to 150-mm-)** deep, shovel-cut edge[**as indicated on Drawings**].

F. Mow-Strip Installation:

1. Excavate for mow strip[**as indicated on Drawings**].
2. Compact subgrade uniformly beneath mow strip.
3. Apply nonselective, pre-emergent herbicide that inhibits growth of grass and weeds.
4. Install [**wood**][**steel**][**aluminum**][**plastic**] edging, delineating the edge of mow strip.
5. Install weed-control barrier before mulching, covering area of mow strip, and overlapping and pinning edges of barrier at least **6 inches (150 mm)** and in accordance with manufacturer's written instructions.
6. Place indicated thickness of [**organic**][**mineral**] mulch, fully covering weed barrier.
7. Rake mulch to uniform surface level with adjacent finish grades.

3.14 INSTALLATION OF TREE GRATES

A. Tree Grates: Install in accordance with manufacturer's written instructions. Set grate segments flush with adjoining surfaces. Shim from supporting substrate with soil-resistant plastic. Maintain **3-inch- (75-mm-)** minimum growth radius around base of tree; break away portions of casting, if necessary, in accordance with manufacturer's written instructions.

3.15 INSTALLATION OF TREE-WATERING DEVICES

A. Provide one device for each tree.

B. Place device on top of the mulch at base of tree stem and fill with water in accordance with manufacturer's written instructions.

3.16 APPLICATION OF HERBICIDES AND PESTICIDES

A. Pre-Emergent Herbicides (Selective and Nonselective): Apply to tree, shrub, and ground-cover areas in accordance with manufacturer's written instructions. Do not apply to seeded areas.

B. Post-Emergent Herbicides (Selective and Nonselective): Apply only as necessary to treat already-germinated weeds and in accordance with manufacturer's written instructions.

C. Apply pesticides and other chemical products and biological control agents according to authorities having jurisdiction and in accordance with manufacturer's written instructions. Coordinate applications with Owner's operations and others in proximity to the Work. Notify Owner before each application is performed.

3.17 PLANT MAINTENANCE

A. Maintain plantings by pruning, cultivating, watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing tree-stabilization devices, resetting to proper grades or vertical position, and performing other operations as required to establish healthy, viable plantings.

B. Fill in, as necessary, soil subsidence that may occur because of settling or other processes. Replace

mulch materials damaged or lost in areas of subsidence.

C. Apply treatments as required to keep plant materials, planted areas, and soils free of pests and pathogens or disease. Use integrated pest management practices when possible to minimize use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.

3.18 FIELD QUALITY CONTROL

A. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

B. Tests and Inspections:

1. Perform tree pit percolation tests.
2. Tree pit construction will be considered defective if it does not pass percolation tests and inspections.
3. Do not proceed with planting in tree pits until satisfactory percolation is demonstrated.

C. Prepare test and inspection reports.

3.19 REPAIR AND REPLACEMENT

A. Repair or replace existing or new trees and other plants that are damaged by construction operations, in a manner approved by Architect.

1. Submit details of proposed pruning and repairs.
2. Perform repairs of damaged trunks, branches, and roots within 24 hours, if approved.
3. Replace trees and other plants that cannot be repaired and restored to full-growth status, as determined by Architect.

B. Remove and replace trees that are more than [**25**]<**Insert number**> percent dead or in unhealthy condition[**before end of corrections period**] or are damaged during construction operations that Architect determines are incapable of restoring to normal growth pattern.

1. Provide new trees of same size as those being replaced for each tree of [**6 inches (150 mm)**][**4 inches (100 mm)**]<**Insert dimension**> or smaller in caliper size.
2. Provide [**one**][**two**]<**Insert number**> new tree(s) of [**6-inch (150-mm)**][**4-inch (100-mm)**]<**Insert dimension**> caliper size for each tree being replaced that measures more than [**6 inches (150 mm)**][**4 inches (100 mm)**] in caliper size.
3. Species of Replacement Trees: [**Same species being replaced**][**Species selected by Architect**]<**Insert species**>.

3.20 CLEANING AND PROTECTION

A. During planting, keep adjacent paving and construction clean and work area in an orderly condition. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.

B. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.

C. Protect plants from damage due to landscape operations and operations of other contractors and trades. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged plantings.

D. After installation and before [**Substantial Completion**]<**Insert time**>, remove nursery tags, nursery stakes, tie tape, labels, wire, burlap, and other debris from plant material, planting areas, and Project site.

E. At time of Substantial Completion, verify that tree-watering devices are in good working order and leave them in place. Replace improperly functioning devices.

SECTION 32 14 16 00 - VITRIFIED BRICK PAVEMENT REPLACEMENT

1.1 GENERAL

A. General
1. Limits of Brick Pavement Replacement shall be as per the detail entitled “Payment Limits for Surface Restoration” shown in the plans, plus one foot on each side. Alternate individual bricks may have to be removed in order to maintain staggered joint pattern along the edge of the undisturbed brick pavement.

1.2 PRODUCT

A. Preparation
1. Base shall be provided and shaped to match level, kind and thickness (4” min.) of adjoining base. The base material shall be compacted to meet the density standards. 4” 2500 PSI concrete base may be used for irregular patches and where compaction is otherwise impractical. Concrete shall be properly placed, consolidated and cured. One inch of sand, or good grade dirt, free from clay, loam or other foreign matter shall be used for cushion to hold the bricks in place. The sand shall be shaped to a true surface parallel to required finished pavement surface.

B. Materials
1. Existing bricks shall be cleaned, stored, and secured by the Contractor.

1.3 EXECUTION

A. Reinstallation of Bricks
1. The bricks shall be installed in rows, better face upward, sorted by size with joints staggered, then rolled daily with a static tandem wheel roller. Additional bricks, if required, will be supplied by the Owner. City Personnel shall inspect work daily. After inspection, the bricks shall be sprayed with a solution of lime and water, using 26 lbs. of lime to 55 gallons of water. Asphalt steep 7330 or equal shall be used for joint filler. The steep shall be heated until fluid and poured over bricks and removed when cool with square pointed shovels dipped in lime water. Removed asphalt may be reused. If adjoining bricks are grouted, new filler shall be grout (8:1, builders sand: cement).

B. Acceptance
1. Upon completion of the work, and before acceptance and final payment, the Contractor shall remove all false work, equipment, rubbish, surplus, and discarded materials. The Contractor shall restore in an acceptable manner all property, both public and private, damaged during the prosecution of the work. The Contractor shall leave the roadway in a neat and presentable condition each day.

SECTION 32 17 13 00 - PARKING BUMPERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Precast concrete wheel stops.
2. Resilient wheel stops.
3. Resilient-shell, concrete-filled wheel stops.

1.2 ACTION SUBMITTALS

A. Product Data:

1. Precast concrete wheel stops.
2. Resilient wheel stops.
3. Resilient-shell, concrete-filled wheel stops

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

C. Samples for Initial Selection: For each type of exposed finish requiring color selection.

D. Samples for Verification: For wheel stops, [**6 inches (150 mm) long**]<**Insert dimension**>, showing color and cross section; with mounting hardware.

PART 2 - PRODUCTS

2.1 PARKING BUMPERS

A. Precast Concrete Wheel Stops: Precast, steel-reinforced, air-entrained concrete; [**4000-psi (27.6-MPa)**]<**Insert value**> minimum compressive strength; [**manufacturer's standard height and width**][**4-1/2 inches (115 mm) high by 9 inches (225 mm) wide**]<**Insert dimensions**> by [**72 inches (1800 mm)**]<**Insert dimension**> long. Provide chamfered corners[**, transverse drainage slots on underside,**] and a minimum of [**two**][**three**] factory-formed or -drilled vertical holes through wheel stop for anchoring to substrate.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**American Eagle Precast, LLC**]
b. [**American Precast Concrete Inc.**]
c. [**Bush Concrete Products, Inc.**]

d. [**Cast-Crete USA, Inc.**]
e. [**Dura-Crete, Inc.**]
f. [**Granite Precasting and Concrete, Inc.**]
g. [**Oldcastle Infrastructure Inc.; CRH Americas**]
h. [**Steps Plus, Inc.**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**American Eagle Precast, LLC**]
b. [**American Precast Concrete Inc.**]
c. [**Bush Concrete Products, Inc.**]
d. [**Cast-Crete USA, Inc.**]
e. [**Dura-Crete, Inc.**]
f. [**Granite Precasting and Concrete, Inc.**]
g. [**Oldcastle Infrastructure Inc.; CRH Americas**]
h. [**Steps Plus, Inc.**]
i. <**Insert manufacturer's name**>

3. Source Limitations: Obtain wheel stops from single source from single manufacturer.
4. Surface Appearance: Smooth, free of pockets, sand streaks, honeycombs, and other obvious defects. Corners shall be uniform, straight, and sharp.
5. Surface Sealer: [**Manufacturer's standard salt-resistant, clear sealer**]<**Insert requirement**>, applied at precasting location.
6. Mounting Hardware: Galvanized-steel [**spike or dowel, 1/2-inch (13-mm) diameter, 14-inch (350-mm) minimum length**][**lag screw, shield, and washers; 1/2-inch (13-mm) diameter, 8-inch (203-mm) minimum length**][**hardware as standard with wheel-stop manufacturer**].

B. Resilient Wheel Stops: Solid, integrally colored [**rubber**][**or**][**plastic**]; UV stabilized; [**manufacturer's standard height and width**][**4 inches (100 mm) high by 6 inches (150 mm) wide**]<**Insert dimensions**> by [**72 inches (1800 mm)**]<**Insert dimension**> long. Provide chamfered corners and a minimum of [**two**][**three**][**four**] factory-formed or -drilled vertical holes through wheel stop for anchoring to substrate.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Checkers; Justrite Safety Group**]
b. [**GNR Technologies Inc.**]
c. [**Plastic Safety Systems, Inc.**]
d. [**Plasticade**]
e. [**RoadKare; a RubberForm company**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Checkers; Justrite Safety Group**]
b. [**GNR Technologies Inc.**]
c. [**Plastic Safety Systems, Inc.**]

d. [**Plasticade**]
e. [**RoadKare; a RubberForm company**]
f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain wheel stops from single source from single manufacturer.
4. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [**95**]<**Insert value**> percent.
5. Color: [**Black**][**Yellow**][**Gray**][**Green**][**Blue**]<**Insert color**>.
6. Embedded Markings: Molded-in, [**blue**][**white**][**yellow**] reflective markings, permanently inset in exposed surface.
7. Mounting Hardware: Galvanized-steel [**spike or dowel, 1/2-inch (13-mm) minimum diameter, 14-inch (350-mm) minimum length**][**lag screw, shield, and washers; 1/2-inch (13-mm) diameter, 8-inch (203-mm) minimum length**][**hardware as standard with wheel-stop manufacturer**].
8. Adhesive: Polyurethane or epoxy, as recommended in writing by wheel-stop manufacturer for adhesion to substrate.

C. Resilient-Shell, Concrete-Filled Wheel Stops: Integrally colored HDPE polymer; UV-stabilized resilient shell; filled with precast, steel-reinforced concrete; [**4000-psi (27.6-MPa)**]<**Insert value**> minimum compressive strength; [**manufacturer's standard height and width**][**5 inches (125 mm) high by 6 inches (150 mm) wide**]<**Insert dimensions**> by [**72 inches (1800 mm)**]<**Insert dimension**> long. Provide chamfered corners and a minimum of [**two**][**three**] factory-formed or -drilled vertical holes through wheel stop for anchoring to substrate.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Century Group Inc.**]
   b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Century Group Inc.**]
   b. <**Insert manufacturer's name**>

3. Source Limitations: Obtain wheel stops from single source from single manufacturer.
4. Color: [**Yellow**][**Blue**]<**Insert color**>.
5. Surface Appearance: Smooth and uniform, with straight and sharp corners.
6. Mounting Hardware: Galvanized-steel [**spike or dowel, 1/2-inch (13-mm) minimum diameter, 14-inch (350-mm) minimum length**][**hardware as standard with wheel-stop manufacturer**].

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that pavement is in suitable condition to begin installation in accordance with manufacturer's written instructions.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install wheel stops in accordance with manufacturer's written instructions unless otherwise indicated.

B. Install wheel stops in bed of adhesive before anchoring to substrate.

C. Securely anchor wheel stops to substrate with hardware in each preformed vertical hole in wheel stop as recommended in writing by manufacturer. Recess head of hardware beneath top of wheel stop.

SECTION 32 17 16 00 - MANUFACTURED TRAFFIC-CALMING DEVICES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Speed bumps.
2. Speed humps.
3. Speed cushions.

1.2 ACTION SUBMITTALS

A. Product Data:

1. Speed bumps.
2. Speed humps.
3. Speed cushions.

B. Sustainable Design Submittals:

C. Samples for Initial Selection: For each type of exposed finish requiring color selection.

D. Samples for Verification: Manufactured traffic-calming devices, [**6 inches long**]<**Insert dimension**>, showing color and cross section; with fasteners.

PART 2 - PRODUCTS

2.1 SPEED BUMPS

A. Speed Bumps: Solid, integrally colored, preformed [**recycled rubber**][**or**][**polyurethane**]; UV stabilized. Provide factory-formed or -drilled vertical holes for anchoring to substrate.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Barco Products Company**]
b. [**Checkers; Justrite Safety Group**]
c. [**Pawling Corporation**]
d. [**Plasticade**]
e. [**RoadKare; a RubberForm company**]
f. [**RubberForm Recycled Products, LLC**]
g. [**Traffic Logix**]
h. <**Insert manufacturer's name**>

2. Source Limitations: Obtain speed bumps from single source from single manufacturer.

3. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [**95**]<**Insert value**> percent.
4. Size: [**2 inches high by 10 inches wide by 72 inches long**]<**Insert dimensions**>; with tapered, square, or rounded ends.
5. Color: [**Black**][**Yellow**]<**Insert color**>.
6. Embedded Markings: Molded-in, [**blue**][**white**][**yellow**] reflective markings, permanently inset in exposed surface.
7. Mounting Hardware: Galvanized-steel [**spike or dowel, 1/2-inch diameter, 10-inch minimum length**][**lag screw, shield, and washers; 1/2-inch diameter, 8-inch minimum length**][**hardware as standard with speed bump manufacturer**].
8. Adhesive: [**As recommended in writing by speed bump manufacturer**]<**Insert requirement**> to permanently adhere speed bump to substrate.

2.2 SPEED HUMPS

A. Speed Humps: Solid, integrally colored, preformed recycled rubber; UV stabilized. Provide factory-formed or -drilled vertical holes for anchoring to substrate.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Barco Products Company**]
    b. [**Checkers; Justrite Safety Group**]
    c. [**Plasticade**]
    d. [**RoadKare; a RubberForm company**]
    e. [**RubberForm Recycled Products, LLC**]
    f. [**Traffic Logix**]
    g. <**Insert manufacturer's name**>

2. Source Limitations: Obtain speed humps from single source from single manufacturer.
3. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [**95**]<**Insert value**> percent.
4. Size: Modular assembly [**3 inches high by 12 feet in overall width**][**4 inches high by 14 feet in overall width**]<**Insert dimensions**>, with overall length as dimensioned on Drawings; and with tapered, square, or rounded ends.
5. Surface Profile: [**Circular**][**Sinusoidal**][**Trapezoidal**].
6. Color: [**Black**][**Yellow**]<**Insert color**>.
7. Embedded Markings: Molded-in, [**blue**][**white**][**yellow**] reflective markings, permanently inset in exposed surface.
8. Mounting Hardware: Galvanized-steel [**spike or dowel, 1/2-inch diameter, 10-inch minimum length**][**lag screw, shield, and washers; 1/2-inch diameter, 8-inch minimum length**][**hardware as standard with speed hump manufacturer**].
9. Adhesive: [**As recommended in writing by speed hump manufacturer**]<**Insert requirement**> to permanently adhere speed hump to substrate.

2.3 SPEED CUSHIONS

A. Speed Cushions: Solid, integrally colored, preformed recycled rubber; UV stabilized. Provide factory-formed or -drilled vertical holes for anchoring to substrate.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the**

following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

a. [**Barco Products Company**]
b. [**RoadKare; a RubberForm company**]
c. [**RubberForm Recycled Products, LLC**]
d. [**Traffic Logix**]
e. <**Insert manufacturer's name**>

2. Source Limitations: Obtain speed cushions from single source from single manufacturer.
3. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [**95**]<**Insert value**> percent.
4. Size: Modular assembly [**3 inches high by 12 feet in overall width**][**4 inches high by 14 feet in overall width**]<**Insert dimensions**>, with overall length as dimensioned on Drawings; and with tapered, square, or rounded ends.
5. Color: [**Black**][**Yellow**]<**Insert color**>.
6. Embedded Markings: Molded-in, [**blue**][**white**][**yellow**] reflective markings, permanently inset in exposed surface.
7. Mounting Hardware: Galvanized-steel [**spike or dowel, 1/2-inch diameter, 10-inch minimum length**][**lag screw, shield, and washers; 1/2-inch diameter, 8-inch minimum length**][**hardware as standard with speed cushion manufacturer**].
8. Adhesive: [**As recommended in writing by speed cushion manufacturer**]<**Insert requirement**> to permanently adhere speed cushions to substrate.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install manufactured traffic-calming devices according to manufacturer's written instructions unless otherwise indicated.

B. Install devices in bed of adhesive before anchoring.

C. Securely anchor devices to substrate with hardware spaced as recommended in writing by manufacturer for heavy traffic. Recess head of hardware beneath top surface of device.

32 17 16 00	32 12 16 00	Asphalt Paving

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 17 23 00 - PAVEMENT MARKINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Painted markings applied to asphalt paving.
2. Painted markings applied to concrete surfaces.

B. Related Requirements:

1. Section 071800 "Traffic Coatings" for painting whole areas of building floors and pavements with coatings having an integral wearing surface.
2. Section 099113 "Exterior Painting" for painting exterior concrete surfaces other than pavement markings.
3. Section 099123 "Interior Painting" for painting interior concrete surfaces other than pavement markings.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1. Review methods and procedures related to marking asphalt paving or concrete surfaces including, but not limited to, the following:

a. Asphalt-paving or concrete-surface aging period before application of pavement markings.
b. Review requirements for protecting pavement markings, including restriction of traffic during installation period.

1.3 ACTION SUBMITTALS

A. Product Data: Include technical data and tested physical and performance properties.

1. Pavement-marking paint, alkyd.
2. Pavement-marking paint, solvent-borne.
3. Pavement-marking paint, acrylic.
4. Pavement-marking paint, latex.
5. Glass beads.

B. Shop Drawings:

1. Indicate pavement markings, colors, lane separations, defined parking spaces, and dimensions to adjacent work.
2. Indicate, with international symbol of accessibility, spaces allocated for people with disabilities.

C. Samples: For each exposed product and for each color and texture specified; on rigid backing, **8 inches (200 mm)** square.

1.4 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with materials, workmanship, and other applicable requirements of <**Insert applicable standards**> of <**Insert name of state or local DOT**> for pavement-marking work.

1. Measurement and payment provisions and safety program submittals included in standard specifications do not apply to this Section.

1.5 FIELD CONDITIONS

A. Environmental Limitations: Proceed with pavement marking only on clean, dry surfaces and at a minimum ambient or surface temperature of [**40 deg F (4.4 deg C) for alkyd materials**][**55 deg F (12.8 deg C) for water-based materials**], and not exceeding **95 deg F (35 deg C)**.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Accessibility Standard: Comply with applicable provisions in [**the USDOJ's "2010 ADA Standards for Accessible Design"**][**the ABA standards of the Federal agency having jurisdiction**][**and**][**ICC A117.1**]<**Insert requirement**>.

2.2 PAVEMENT-MARKING PAINT

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Aexcel Corporation**]
2. [**Colorado Paint Company II, LLC; SWARCO America, Inc.**]
3. [**Columbia Paint & Coatings, Inc.; a subsidiary of Sherwin-Williams Company (The)**]
4. [**Conco Paints**]
5. [**Diamond Vogel Paint Company**]
6. [**Dunn-Edwards Corporation (a Nippon Paint Holdings Co. Ltd. company)**]
7. [**Ennis-Flint, Inc.**]
8. [**Farrell-Calhoun**]
9. [**Florida Paints**]
10. [**General Paint**]
11. [**Insl-X Products; Benjamin Moore & Co.**]
12. [**McCormick Paints**]
13. [**PPG Paints; PPG Industries, Inc.**]
14. [**Rodda Paint Co.**]
15. [**Rust-Oleum Corporation; a subsidiary of RPM International, Inc.**]
16. [**Sherwin-Williams Company (The)**]
17. [**The Dow Chemical Company**]
18. [**Transpo Industries, Inc.**]
19. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Aexcel Corporation**]
2. [**Colorado Paint Company II, LLC; SWARCO America, Inc.**]
3. [**Columbia Paint & Coatings, Inc.; a subsidiary of Sherwin-Williams Company (The)**]
4. [**Conco Paints**]
5. [**Diamond Vogel Paint Company**]
6. [**Dunn-Edwards Corporation (a Nippon Paint Holdings Co. Ltd. company)**]
7. [**Ennis-Flint, Inc.**]
8. [**Farrell-Calhoun**]
9. [**Florida Paints**]
10. [**General Paint**]
11. [**Insl-X Products; Benjamin Moore & Co.**]
12. [**McCormick Paints**]
13. [**PPG Paints; PPG Industries, Inc.**]
14. [**Rodda Paint Co.**]
15. [**Rust-Oleum Corporation; a subsidiary of RPM International, Inc.**]
16. [**Sherwin-Williams Company (The)**]
17. [**The Dow Chemical Company**]
18. [**Transpo Industries, Inc.**]
19. <**Insert manufacturer's name**>

C. Source Limitations: Obtain pavement-marking paints from single source from single manufacturer.

D. Pavement-Marking Paint, Alkyd: Alkyd-resin type, lead and chromate free, ready mixed, complying with AASHTO M 248, [**Type N**][**Type F**][**Type S**]; colors complying with FS TT-P-1952F.

1. Color: [**White**][**Yellow**][**Blue**][**As indicated**]<**Insert color**>.

E. Pavement-Marking Paint, Solvent-Borne: MPI #32, solvent-borne traffic-marking paint.

1. Color: [**White**][**Yellow**][**Blue**][**As indicated**]<**Insert color**>.

F. Pavement-Marking Paint, Acrylic: Acrylic, waterborne emulsion, lead and chromate free, ready mixed, complying with FS TT-P-1952F, Type II, with drying time of less than [**three**][**45**] minutes.

1. Color: [**White**][**Yellow**][**Blue**][**As indicated**]<**Insert color**>.

G. Pavement-Marking Paint, Latex: MPI #97, latex traffic-marking paint.

1. Color: [**White**][**Yellow**][**Blue**][**As indicated**]<**Insert color**>.

H. Glass Beads: AASHTO M 247, Type 1 or FS TT-B-1325D, Type 1[**, made of 100 percent recycled glass**].

1. Roundness: Minimum [**75**][**80**] percent true spheres by weight.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that pavement-marking substrate is dry and in suitable condition to begin pavement marking in accordance with manufacturer's written instructions.

B. Proceed with pavement marking only after unsatisfactory conditions have been corrected.

3.2 PAVEMENT MARKING

A. Do not apply pavement-marking paint until layout, colors, and placement have been verified with Architect.

B. Allow asphalt paving or concrete surfaces to age for a minimum of [**30**][**90**]<**Insert number**> days before starting pavement marking.

C. Sweep and clean surface to eliminate loose material and dust.

D. Apply paint with mechanical equipment to produce pavement markings, of dimensions indicated, with uniform, straight edges. Apply at manufacturer's recommended rates to provide a minimum wet film thickness of [**15 mils (0.4 mm)**]<**Insert dimension**>.

1. Apply graphic symbols and lettering with paint-resistant, die-cut stencils, firmly secured to asphalt paving or concrete surface. Mask an extended area beyond edges of each stencil to prevent paint application beyond stencil. Apply paint so that it cannot run beneath stencil.
2. Broadcast glass beads uniformly into wet markings at a rate of **6 lb/gal. (0.72 kg/L)**.

3.3 PROTECTING AND CLEANING

A. Protect pavement markings from damage and wear during remainder of construction period.

B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 17 26 00 - TACTILE WARNING SURFACING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cast-in-place detectable warning tiles.
2. Surface-applied detectable warning tiles.
3. Detectable warning mats.
4. Cast-in-place detectable warning metal tiles.
5. Surface-applied detectable warning metal tiles.
6. Detectable warning unit pavers.

B. Related Requirements:

1. Section 321313 "Concrete Paving" for concrete walkways serving as substrates for tactile warning surfacing.
2. Section 321400 "Unit Paving" for unit paving installations incorporating detectable warning unit pavers specified in this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
3. Environmental Product Declaration (EPD): For each product.
4. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
5. Environmental Product Declaration: For each product.
6. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
7. Environmental Product Declaration: For each product.
8. Environmental Product Declaration: For each product.
9. Third-Party Certifications: For each product.
10. Third-Party Certified Life Cycle Assessment: For each product.

C. Samples for Initial Selection: For each type of exposed finish requiring color selection.

D. Samples for Verification: For each type of tactile warning surface, in manufacturer's standard sizes unless otherwise indicated, showing edge condition, truncated-dome pattern, texture, color, and cross section; with fasteners and anchors.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance Data: For tactile warning surfacing, to include in maintenance manuals.

1.4 QUALITY ASSURANCE

A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1.6 PROJECT CONDITIONS

A. Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace unit paver work damaged by frost or freezing.

B. Weather Limitations for Adhesive Application:

1. Apply adhesive only when ambient temperature is above **50 deg F (10 deg C)** and when temperature has not been below **35 deg F (2 deg C)** for 12 hours immediately before application. Do not apply when substrate is wet or contains excess moisture.

C. Weather Limitations for Mortar and Grout:

1. Cold-Weather Requirements: Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.
2. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602. Provide artificial shade and windbreaks, and use cooled materials as required. Do not apply mortar to substrates with temperatures of **100 deg F (38 deg C)** and higher.

a. When ambient temperature exceeds **100 deg F (38 deg C)**, or when wind velocity exceeds **8 mph (13 km/h)** and ambient temperature exceeds **90 deg F (32 deg C)**, set unit pavers within 1 minute of spreading setting-bed mortar.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of tactile warning surfaces that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Deterioration of finishes beyond normal weathering and wear.
b. Separation or delamination of materials and components.

2. Warranty Period: [**Five**]<**Insert number**> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 TACTILE WARNING SURFACING, GENERAL

A. Accessibility Requirements: Comply with applicable provisions in [**the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities**][**and**][**ICC A117.1**] for tactile warning surfaces.

1. For tactile warning surfaces composed of multiple units, provide units that when installed provide consistent side-to-side and end-to-end dome spacing that complies with requirements.

B. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <**Insert value**> percent.

C. Regional Materials: Products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.

D. Regional Materials: Products shall be manufactured within **500 miles (800 km)** of Project site.

E. Regional Materials: Products shall be manufactured within **100 miles (160 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.

F. Indigenous Materials: Products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

G. Regional Materials: Products shall be manufactured within **500 miles (800 km)** of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

H. Source Limitations: Obtain each type of tactile warning surfacing[**, joint material**][**, setting material**][**, anchor**][**, and**][**fastener**] from single source with resources to provide materials and products of consistent quality in appearance and physical properties.

2.2 DETECTABLE WARNING TILES

A. Cast-in-Place Detectable Warning Tiles: Accessible truncated-dome detectable warning tiles[**with replaceable surface**] configured for setting flush in new concrete walkway surfaces, with slip-resistant surface treatment on domes and field of tile.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ACO Polymer Products, Inc.**]

b. [**ADA Solutions, a division of SureWerx USA**]
c. [**Arcis Corp.**]
d. [**Armor-Tile**]
e. [**Armorcast Products Company; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
f. [**Detectable Warning Systems, Inc.**]
g. [**Detectile Corp.**]
h. [**Ecoglo, Inc.**]
i. [**Mingo Products, Inc.**]
j. [**StrongGo Industries, LLC**]
k. [**Transpo Industries, Inc.**]
l. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ACO Polymer Products, Inc.**]
b. [**ADA Solutions, a division of SureWerx USA**]
c. [**Arcis Corp.**]
d. [**Armor-Tile**]
e. [**Armorcast Products Company; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
f. [**Detectable Warning Systems, Inc.**]
g. [**Detectile Corp.**]
h. [**Ecoglo, Inc.**]
i. [**Mingo Products, Inc.**]
j. [**StrongGo Industries, LLC**]
k. [**Transpo Industries, Inc.**]
l. <**Insert manufacturer's name**>

3. Material: [**Cast-fiber-reinforced polymer concrete tile**][**Molded glass- and carbon-fiber-reinforced polyester**].
4. Color: [**Safety yellow**][**Red brick**][**Black**][**Gray**][**As selected by Architect from manufacturer's full line**].
5. Shapes and Sizes:

a. Rectangular panel, [**12 by 12 inches (305 by 305 mm)**][**24 by 24 inches (610 by 610 mm)**][**24 by 36 inches (610 by 914 mm)**][**24 by 48 inches (610 by 1219 mm)**][**24 by 60 inches (610 by 1524 mm)**][**36 by 48 inches (914 by 1219 mm)**][**36 by 60 inches (914 by 1524 mm)**]<**Insert dimensions**>.
b. Radius panel, nominal **24 inches (610 mm)** deep by [**6-foot (1829-mm)**][**8-foot (2438-mm)**][**10-foot (3048-mm)**][**12-foot (3658-mm)**][**15-foot (4572-mm)**]<**Insert dimension**> outside radius.

6. Dome Spacing and Configuration: [**1.67-inch (42.4-mm) spacing**][**2.35-inch (59.7-mm) spacing**][**Manufacturer's standard compliant spacing**]<**Insert spacing**>, in [**square**][**diamond**][**manufacturer's standard**] pattern.
7. Mounting:

a. Permanently embedded detectable warning tile wet-set into freshly poured concrete.
b. Detectable warning tile set into formed recess in concrete and adhered with [**mortar**][**adhesive**].
c. Replaceable detectable warning tile wet-set into freshly poured concrete and surface-fastened to permanently embedded anchors.

B. Surface-Applied Detectable Warning Tiles: Accessible truncated-dome detectable warning concrete tiles configured for surface application on existing concrete walkway surfaces, with slip-resistant surface treatment on domes, field of tile, and beveled outside edges.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ADA Solutions, a division of SureWerx USA**]
   b. [**Arcis Corp.**]
   c. [**Armor-Tile**]
   d. [**Armorcast Products Company; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
   e. [**Detectable Warning Systems, Inc.**]
   f. [**Ecoglo, Inc.**]
   g. [**Transpo Industries, Inc.**]
   h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ADA Solutions, a division of SureWerx USA**]
   b. [**Arcis Corp.**]
   c. [**Armor-Tile**]
   d. [**Armorcast Products Company; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
   e. [**Detectable Warning Systems, Inc.**]
   f. [**Ecoglo, Inc.**]
   g. [**Transpo Industries, Inc.**]
   h. <**Insert manufacturer's name**>

3. Material: [**Cast-fiber-reinforced polymer concrete tile**][**Molded glass- and carbon-fiber-reinforced polyester**].
4. Color: [**Safety yellow**][**Red brick**][**Black**][**Gray**][**As selected by Architect from manufacturer's full line**].
5. Shapes and Sizes:

   a. Rectangular panel, [**12 by 12 inches (305 by 305 mm)**][**24 by 24 inches (610 by 610 mm)**][**24 by 36 inches (610 by 914 mm)**][**24 by 48 inches (610 by 1219 mm)**][**24 by 60 inches (610 by 1524 mm)**][**36 by 48 inches (914 by 1219 mm)**][**36 by 60 inches (914 by 1524 mm)**]<**Insert dimensions**>.
   b. Radius panel, nominal **24 inches (610 mm)** deep by [**6-foot (1829-mm)**][**8-foot (2438-mm)**][**10-foot (3048-mm)**][**12-foot (3658-mm)**][**15-foot (4572-mm)**]<**Insert dimension**> outside radius.

6. Dome Spacing and Configuration: [**1.67-inch (42.4-mm) spacing**][**2.35-inch (59.7-mm) spacing**][**Manufacturer's standard compliant spacing**]<**Insert spacing**>, in [**square**][**diamond**][**manufacturer's standard**] pattern.
7. Mounting: Adhered[**and fastened**] to existing concrete walkway.

C. Cast-in-Place Detectable Warning Metal Tiles: Accessible truncated-dome detectable warning metal tiles[**with replaceable surface**] configured for setting flush in new concrete walkway surfaces, with slip-resistant surface treatment on domes and field of tile.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ADA Solutions, a division of SureWerx USA**]
    b. [**Advantage Tactile Systems**]
    c. [**EJ Group, Inc.**]
    d. [**Neenah Foundry Company**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ADA Solutions, a division of SureWerx USA**]
    b. [**Advantage Tactile Systems**]
    c. [**EJ Group, Inc.**]
    d. [**Neenah Foundry Company**]
    e. <**Insert manufacturer's name**>

3. Material:

    a. Stainless-Steel Plate and Sheet: ASTM A240/A240M or ASTM A666, [**Type 304**][**Type 316L**].

        1) Finish and Color:

            a) Manufacturer's standard powder coat, [**safety yellow**][**red brick**][**black**][**gray**][**color as selected by Architect from manufacturer's full line**].
            b) Mill finish.

    b. Cast Iron: Gray iron, ASTM A48/A48M, CL 35.

4. Shapes and Sizes:

    a. Rectangular panel, [**12 by 12 inches (305 by 305 mm)**][**18 by 24 inches (457 by 610 mm)**][**24 by 24 inches (610 by 610 mm)**][**24 by 36 inches (610 by 914 mm)**][**24 by 48 inches (610 by 1219 mm)**][**24 by 60 inches (610 by 1524 mm)**][**36 by 48 inches (914 by 1219 mm)**][**36 by 60 inches (914 by 1524 mm)**]<**Insert dimensions**>.
    b. Radius panel, nominal **24 inches (610 mm)** deep by [**6-foot (1829-mm)outside radius**][**8-foot (2438-mm)outside radius**][**10-foot (3048-mm)outside radius**][**12-foot (3658-mm)outside radius**][**15-foot (4572-mm) outside radius**][**17.5-foot (5334-mm)outside radius**][**outside radius indicated on Drawings**]<**Insert dimension**>.

5. Dome Spacing and Configuration: [**1.67-inch (42.4-mm) spacing**][**2.35-inch (59.7-mm) spacing**][**Manufacturer's standard compliant spacing**]<**Insert spacing**>, in [**square**][**diamond**][**manufacturer's standard**] pattern.
6. Mounting:

    a. Permanently embedded detectable warning tile wet-set into freshly poured concrete.
    b. Permanently embedded detectable warning tile set into formed recess in concrete and adhered with [**mortar**][**adhesive**].
    c. Replaceable embedded detectable warning tile fastened to permanently installed anchors.

D. Surface-Applied Detectable Warning Metal Tiles: Accessible truncated-dome detectable warning metal tiles or plates configured for fastening to surface of existing concrete walkway surfaces, with slip-resistant surface treatment on domes, field of tile, and beveled outside edges.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Advantage Tactile Systems**]
   b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Advantage Tactile Systems**]
   b. <**Insert manufacturer's name**>

3. Material: Stainless-Steel Plate and Sheet: ASTM A240/A240M or ASTM A666, [**Type 304**][**Type 316L**].
4. Finish and Color:

   a. Manufacturer's standard powder coat, [**safety yellow**][**red brick**][**black**][**gray**][**color as selected by Architect from manufacturer's full line**].
   b. Mill finish.

5. Shapes and Sizes:

   a. Rectangular panel, [**24 by 24 inches (610 by 610 mm)**][**24 by 36 inches (610 by 914 mm)**][**24 by 48 inches (610 by 1219 mm)**][**24 by 60 inches (610 by 1524 mm)**]<**Insert dimensions**>.

6. Dome Spacing and Configuration: [**1.67-inch (42.4-mm) spacing**][**2.35-inch (59.7-mm) spacing**][**Manufacturer's standard compliant spacing**]<**Insert spacing**>, in [**square**][**diamond**][**manufacturer's standard**] pattern.
7. Mounting:

   a. Replaceable surface-applied detectable warning tile fastened with permanently installed anchors to existing concrete walkway.
   b. Permanently fixed detectable warning tile adhered[**and fastened**] to existing concrete walkway.

2.3 DETECTABLE WARNING MATS

A. Surface-Applied Detectable Warning Mats: Accessible truncated-dome detectable warning resilient mats, UV resistant, manufactured for adhering to existing concrete walkway surfaces, with slip-resistant surface treatment on domes, field of mat, and beveled outside edges.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Detectable Warning Systems, Inc.**]

b. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

   a. **[Detectable Warning Systems, Inc.]**
   b. **<Insert manufacturer's name>**

3. Material: Modified rubber compound, UV resistant.
4. Color: [**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<**Insert color**>.
5. Shapes and Sizes:

   a. Rectangular panel, [**24 by 36 inches (610 by 914 mm)**][**24 by 48 inches (610 by 1219 mm)**][**24 by 60 inches (610 by 1524 mm)**]<**Insert dimensions**>.

6. Dome Spacing and Configuration: [**1.67-inch (42.4-mm) spacing**][**2.35-inch (59.7-mm) spacing**][**Manufacturer's standard compliant spacing**]<**Insert spacing**>, in [**square**][**diamond**][**manufacturer's standard**] pattern.
7. Mounting: Adhered to pavement surface with adhesive[**and fastened with fasteners**].

2.4 DETECTABLE WARNING UNIT PAVERS

A. Detectable Warning Concrete Unit Pavers: Solid paving units, made from normal-weight concrete with a compressive strength of not less than **5000 psi (34 MPa)** **<Insert value>**, water absorption of not more than 5 percent according to ASTM C140, and no breakage and not more than 1 percent mass loss when tested for freeze-thaw resistance according to ASTM C67, with accessible detectable warning truncated domes on exposed surface of units.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. **[Advanced Surfaces Inc.]**
   b. **[Armor-Tile]**
   c. **[ECG, Inc.; a division of Elizabeth City Glass Co.]**
   d. **[Hanover Architectural Products]**
   e. **[Tile Tech Pavers]**
   f. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

   a. **[Advanced Surfaces Inc.]**
   b. **[Armor-Tile]**
   c. **[ECG, Inc.; a division of Elizabeth City Glass Co.]**
   d. **[Hanover Architectural Products]**
   e. **[Tile Tech Pavers]**
   f. **<Insert manufacturer's name>**

3. Shapes and Sizes:

a. Thickness: [2 inches (51 mm)][2-1/2 inches (63 mm)]<**Insert dimension**> at field of tile.
b. Face Size: Nominal [12 by 12 inches (305 by 305 mm)][24 by 24 inches (610 by 610 mm)]<**Insert dimensions**>.

4. Dome Spacing and Configuration: [**1.67-inch (42.4-mm) spacing**][**2.35-inch (59.7-mm) spacing**][**Manufacturer's standard compliant spacing**]<**Insert spacing**>, in [**square**][**diamond**][**manufacturer's standard**] pattern.
5. Color: [**As indicated by manufacturer's designations**][**Match Architect's sample**][**As selected by Architect from manufacturer's full range**]<**Insert color**>.

B. Setting Bed: Comply with requirements in Section 321400 "Unit Paving."

C. Aggregate Setting Bed:

1. Graded Aggregate for Base: Sound, crushed stone or gravel complying with ASTM D448 for Size No. 8.
2. Sand for Leveling Course: Sound, sharp, washed, natural sand or crushed stone complying with gradation requirements in ASTM C33/C33M for fine aggregate.
3. Sand for Joints: Fine, sharp, washed, natural sand or crushed stone with 100 percent passing **No. 16 (1.18-mm)** sieve and no more than 10 percent passing **No. 200 (0.075-mm)** sieve.

D. Mortar Setting Bed:

1. Portland Cement: ASTM C150/C150M, Type I or Type II.
2. Sand: ASTM C33/C33M.
3. Latex Additive: Manufacturer's standard water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement and aggregate mortar bed, and not containing a retarder.
4. Thinset Mortar: Latex-modified portland cement mortar complying with ANSI A118.4.
5. Water: Potable.

2.5 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of tactile warning surfaces, noncorrosive and compatible with each material joined, and complying with the following:

1. Furnish [**Type 304**][**Type 316**] stainless-steel fasteners for exterior use.
2. Fastener Heads: For nonstructural connections, use flathead or oval countersunk screws and bolts with tamper-resistant heads, colored to match tile.

B. Adhesive: As recommended by manufacturer for adhering tactile warning surfacing unit to pavement.

C. Sealant: As recommended by manufacturer for sealing perimeter of tactile warning surfacing unit.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that pavement is in suitable condition to begin installation according to manufacturer's written instructions. Verify that installation of tactile warning surfacing will comply with accessibility requirements upon completion.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF TACTILE WARNING SURFACING

A. General: Prepare substrate and install tactile warning surfacing according to manufacturer's written instructions unless otherwise indicated.

B. Place tactile warning surfacing units in dimensions and orientation indicated. Comply with location requirements of AASHTO MP 12.

3.3 INSTALLATION OF DETECTABLE WARNING TILES

A. Cast-in-Place Detectable Warning Tiles:

1. Concrete Paving Installation: Comply with installation requirements in Section 321313 "Concrete Paving." Mix, place, and finish concrete to conditions complying with detectable warning tile manufacturer's written requirements for satisfactory embedment of tile.
2. Set each detectable warning tile accurately and firmly in place and completely seat tile back and embedments in wet concrete by tamping or vibrating. If necessary, temporarily apply weight to tiles to ensure full contact with concrete.
3. Set surface of tile flush with surrounding concrete and adjacent tiles, with variations between tiles and between concrete and tiles not exceeding plus or minus **1/8 inch (3 mm)** from flush.
4. Protect exposed surfaces of installed tiles from contact with wet concrete. Complete finishing of concrete paving surrounding tiles. Remove concrete from tile surfaces.
5. Clean tiles using methods recommended in writing by manufacturer.

B. Removable Cast-in-Place Detectable Warning Tiles:

1. Concrete Paving Installation: Comply with installation requirements in Section 321313 "Concrete Paving." Mix, place, and finish concrete to conditions complying with detectable warning tile manufacturer's written requirements for satisfactory embedment of removable tile.
2. Set each detectable warning tile accurately and firmly in place with embedding anchors and fasteners attached, and firmly seat tile back in wet concrete by tamping or vibrating. If necessary, temporarily apply weight to tiles to ensure full contact with concrete.
3. Set surface of tile flush with surrounding concrete and adjacent tiles, with variations between tiles and between concrete and tiles not exceeding plus or minus **1/8 inch (3 mm)** from flush.
4. Protect exposed surfaces of installed tiles from contact with wet concrete. Complete finishing of concrete paving surrounding tiles. Remove concrete from tile surfaces.
5. Clean tiles using methods recommended in writing by manufacturer.

C. Surface-Applied Detectable Warning Tiles:

1. Lay out detectable warning tiles as indicated and mark concrete pavement.
2. Prepare existing paving surface by grinding and cleaning as recommended by manufacturer.

    a. Cut perimeter kerf in existing concrete pavement to receive metal tile flange.

3. Apply adhesive to back of tiles in amounts and pattern recommended by manufacturer, and set tiles in place. Firmly seat tiles in adhesive bed, eliminating air pockets and establishing full adhesion to pavement. If necessary, temporarily apply weight to tiles to ensure full contact with concrete.
4. Install anchor devices through face of tiles and into pavement using anchors located as recommended by manufacturer. Set heads of anchors flush with top surface of mat.

5. Mask perimeter of tiles and adjacent concrete, and apply sealant in continuous bead around perimeter of tile installation.
6. Remove masking, adhesive, excess sealant, and soil from exposed surfaces of detectable warning tiles and surrounding concrete pavement using cleaning agents recommended in writing by manufacturer.
7. Protect installed tiles from traffic until adhesive has set.

3.4 INSTALLATION OF DETECTABLE WARNING MATS

A. Lay out detectable warning mats as indicated and mark concrete pavement at edges of mats.

B. Prepare existing paving surface by grinding and cleaning as recommended by manufacturer.

C. Apply adhesive to back of mat in amounts and pattern recommended by manufacturer, and set mat in place. Firmly seat mat in adhesive bed, eliminating air pockets and establishing full adhesion to pavement. If necessary, temporarily apply weight to mat to ensure full contact with adhesive.

D. Install anchor devices through face of mat and into pavement using anchors located as recommended by manufacturer. Set heads of anchors flush with mat surface.

E. Mask mat perimeter and adjacent concrete, and apply sealant in continuous bead around perimeter of mat.

F. Remove masking, adhesive, excess sealant, and soil from exposed surfaces of detectable warning mat and surrounding concrete pavement using cleaning agents recommended in writing by manufacturer.

G. Protect installed mat from traffic until adhesive has set.

3.5 INSTALLATION OF DETECTABLE WARNING UNIT PAVERS

A. Unit Paver Installation, General:

1. Setting-Bed and Unit Paver Installation: Comply with installation requirements in Section 321400 "Unit Paving."
2. Mix unit pavers from several pallets or cubes, as they are placed, to produce uniform blend of colors and textures.
3. Cut unit pavers with motor-driven masonry saw equipment to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible.
4. Tolerances: Do not exceed **1/4 inch in 10 feet (6 mm in 3 m)** from level, or indicated slope, for finished surface of paving.

B. Aggregate Setting-Bed Applications:

1. Place aggregate base, compact by tamping with plate vibrator, and screed to depth indicated.
2. Place leveling course and screed to a thickness of **1 to 1-1/2 inches (25 to 38 mm)**, taking care that moisture content remains constant and density is loose and uniform until unit pavers are set and compacted.
3. Treat leveling course with herbicide to inhibit growth of grass and weeds.
4. Set unit pavers with a minimum joint width of **1/16 inch (1.5 mm)** and a maximum of **1/8 inch (3 mm)**, being careful not to disturb leveling base. If pavers have spacer bars, place pavers hand tight against spacer bars. Use string lines to keep straight lines.
5. Vibrate pavers into leveling course with a low-amplitude plate vibrator capable of a **3500- to 5000-lbf (16- to 22-kN)** compaction force at 80 to 90 Hz.
6. Spread dry sand and fill joints immediately after vibrating pavers into leveling course. Vibrate

pavers and add sand until joints are completely filled, then remove excess sand. Leave a slight surplus of sand on the surface for joint filling.

C. Mortar Setting-Bed Applications:

1. Saturate concrete subbase with clean water several hours before placing setting bed. Remove surface water about one hour before placing setting bed.
2. Apply mortar-bed bond coat over surface of concrete subbase about 15 minutes before placing mortar bed. Limit area of bond coat to avoid its drying out before placing setting bed. Do not exceed **1/16-inch (1.6-mm)** thickness for bond coat.
3. Apply mortar bed over bond coat; spread and screed mortar bed to uniform thickness at subgrade elevations required for accurate setting of pavers to finished grades indicated.
4. Mix and place only that amount of mortar bed that can be covered with pavers before initial set. Before placing pavers, cut back, bevel edge, and remove and discard setting-bed material that has reached initial set.
5. Place pavers before initial set of cement occurs. Immediately before placing pavers on mortar bed, apply uniform **1/16-inch- (1.5-mm-)** thick bond coat to mortar bed or to back of each paver with a flat trowel.
6. Tamp or beat pavers with a wooden block or rubber mallet to obtain full contact with setting bed and to bring finished surfaces within indicated tolerances. Set each paver in a single operation before initial set of mortar; do not return to areas already set or disturb pavers for purposes of realigning finished surfaces or adjusting joints.
7. Spaced Joint Widths: Provide [**3/8-inch (10-mm)**][**1/2-inch (13-mm)**] nominal joint width with variations not exceeding plus or minus [**1/16 inch (1.5 mm)**][**1/8 inch (3 mm)**].
8. Grouted Joints: Grout paver joints complying with ANSI A108.10. Grout joints as soon as possible after initial set of setting bed.

    a. Force grout into joints, taking care not to smear grout on adjoining surfaces.
    b. Tool exposed joints slightly concave when thumbprint hard.
    c. Cure grout by maintaining in a damp condition for seven days unless otherwise recommended by grout or liquid-latex manufacturer.

9. Remove excess grout from exposed paver surfaces; wash and scrub clean.
10. Protect installation from traffic until grout has set.

3.6 CLEANING AND PROTECTION

A. Remove and replace tactile warning surfacing that is broken or damaged or does not comply with requirements in this Section. Remove in complete sections from joint to joint unless otherwise approved by Architect. Replace using tactile warning surfacing installation methods acceptable to Architect.

B. Protect tactile warning surfacing from damage and maintain free of stains, discoloration, dirt, and other foreign material.

END OF SECTION 32 17 26 00

Task	Specification	Specification Description
32 32 16 00	03 41 00 00	Precast Structural Concrete

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 32 23 00 - SEGMENTAL RETAINING WALLS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Segmental retaining walls.

B. Related Requirements:

1. Section 312000 "Earth Moving" for excavation for segmental retaining walls, base material, soil fill, fill placement and compaction, and field in-place density testing.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Show sizes, profiles, coursing, and locations of retaining wall units; including backfill and leveling base materials.
2. Show types, sizes, locations of soil reinforcing materials.
3. <**Insert requirements**>.
4. Signed and sealed by the qualified professional engineer responsible for their preparation.

C. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors and textures for segmental retaining wall units.

D. Samples for Verification: Actual sample of finished products for each type of exposed finish of segmental retaining wall units.

1. Size: [**Manufacturers' standard size**][**full-size units**][**sections of units not less than 3 inches (75 mm) square**]<**Insert size**>.

E. Delegated Design Submittals: For segmental retaining walls, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

F. Sustainable Design Submittals:

1. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.
2. Environmental Product Declaration (EPD): For each product.
3. Product Certificates: For indigenous materials, indicating location of material manufacturer and

point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.
4. Environmental Product Declaration: For each product.
5. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.
6. Environmental Product Declaration: For each product.
7. Environmental Product Declaration: For each product.
8. Third-Party Certifications: For each product.
9. Third-Party Certified Life Cycle Assessment: For each product.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Product Certificates: For each type of segmental retaining wall unit[**and soil reinforcement**] from manufacturer.

1. Include test data for shear strength between segmental retaining wall units in accordance with ASTM D6916.
2. Include test data for connection strength between segmental retaining wall units and soil reinforcement in accordance with ASTM D6638.

C. Test and Evaluation Reports:

1. Product Test Reports: For each type of segmental retaining wall unit[**and soil reinforcement**], for tests performed by [**qualified testing agency**][**manufacturer and witnessed by a qualified testing agency**].

a. Include test data for shear strength between segmental retaining wall units in accordance with ASTM D6916.
b. Include test data for connection strength between segmental retaining wall units and soil reinforcement in accordance with ASTM D6638.

2. Research Reports: For segmental retaining wall system, from [**an agency acceptable to authorities having jurisdiction**][**ICC-ES**]<**Insert evaluation agency**> showing compliance with [**building code requirements**]<**Insert requirement**>.
3. Preconstruction Test Reports: For segmental retaining wall units[**and soil reinforcement**].

D. Source Quality-Control Submittals:

1. Source quality-control reports.

E. Field Quality-Control Submittals:

1. Field quality-control reports.

F. Qualification Statements: For [**testing agency**]<**Insert entity or specialist**>.

G. Delegated design engineer qualifications.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Installers: Entity that employs installers certified under the National Concrete Masonry Association (NCMA) Certified Segmental Retaining Wall Installer program at the [**Basic**][**Advanced Commercial**] certification level.
2. Delegated Design Engineer: A professional engineer who is legally qualified to practice in [**state**]<**Insert jurisdiction**> where Project is located and who is experienced in providing engineering services of the type indicated.
3. Testing Agency: Qualified in accordance with ASTM E329 for testing indicated.

1.6 MOCKUPS

A. Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects.

1. Build mockup of segmental retaining wall [**as indicated on Drawings**][**approximately 72 inches (1800 mm) long by not less than 36 inches (900 mm) high above finished grade at front of wall**].

a. Include typical soil reinforcement.
b. Include typical base and cap or finished top construction.
c. Include backfill to typical finished grades at both sides of wall.
d. Include typical end construction at one end of mockup.
e. Include **36-inch (900-mm)** return at one end of mockup, with typical corner construction.

2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified testing agency to perform the following preconstruction testing:

1. Test soil reinforcement and backfill materials for pullout resistance in accordance with ASTM D6706.
2. Test soil reinforcement and backfill materials for coefficient of friction in accordance with ASTM D5321/D5321M.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store and handle concrete units and accessories to prevent deterioration or damage due to contaminants, breaking, chipping, or other causes.

B. Store geosynthetics in manufacturer's original packaging with labels intact. Store and handle geosynthetics to prevent deterioration or damage due to sunlight, chemicals, flames, temperatures above **160 deg F (71 deg C)** or below **32 deg F (0 deg C)**, and other conditions that might damage them. Verify identification of geosynthetics before use, and examine them for defects as material is placed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design segmental retaining walls.

B. Compliance Review: Qualified professional engineer responsible for segmental retaining wall design shall review and approve submittals and source and field quality-control reports for compliance of materials and construction with design.

C. Structural Performance: Engineering design shall be based on the following loads and be in accordance with [**NCMA's "Design Manual for Segmental Retaining Walls."**]<**Insert applicable requirement.**>

1. Gravity loads due to soil pressures resulting from grades[**and sloped backfill**] indicated.
2. Superimposed loads (surcharge) indicated on Drawings.
3. Horizontal Peak Ground Acceleration (A) for Project: <**Insert value**>.

2.2 SEGMENTAL RETAINING WALL UNITS

A. Concrete Units: ASTM C1372, Normal Weight, except that[**maximum water absorption shall not exceed 7 percent by weight and**] units shall not differ in height more than plus or minus **1/16 inch (1.6 mm)** from specified dimension.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Allan Block Corporation**]
b. [**Anchor Wall Systems, Inc**]
c. [**CornerStone Wall Solutions Inc.**]
d. [**GeoStone Retaining Wall Systems, Inc.**]
e. [**Keystone Retaining Wall Systems LLC**]
f. [**Nicolock**]
g. [**Risi Stone Inc.**]
h. [**Rockwood Retaining Walls, Inc.**]
i. [**Select ICD; Innovative Concrete Design Corporation**]
j. [**Stone Strong Systems**]
k. [**Tensar International Corporation**]
l. [**Versa-Lok Retaining Wall Systems**]
m. [**WestBlock Systems**]
n. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Allan Block Corporation**]
b. [**Anchor Wall Systems, Inc**]
c. [**CornerStone Wall Solutions Inc.**]
d. [**GeoStone Retaining Wall Systems, Inc.**]
e. [**Keystone Retaining Wall Systems LLC**]

f. [**Nicolock**]
g. [**Risi Stone Inc.**]
h. [**Rockwood Retaining Walls, Inc.**]
i. [**Select ICD; Innovative Concrete Design Corporation**]
j. [**Stone Strong Systems**]
k. [**Tensar International Corporation**]
l. [**Versa-Lok Retaining Wall Systems**]
m. [**WestBlock Systems**]
n. <**Insert manufacturer's name**>

3. Provide units that comply with requirements in ASTM C1372 for freeze-thaw durability[**as determined by testing**].
4. Provide units that interlock with courses above and below by means of [**integral lugs, lips, or tongues and grooves**][**pins**][**clips**][**splines**][**or**][**and**][**hollow cores filled with drainage fill**].

B. Regional Materials: Units shall be manufactured within **500 miles (800 km)** of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site.

C. Regional Materials: Units shall be manufactured within **100 miles (160 km)** of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **100 miles (160 km)** of Project site.

D. Indigenous Materials: Units shall be manufactured within **500 miles (800 km)** of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

E. Regional Materials: Units shall be manufactured within **500 miles (800 km)** of Project site from aggregates[**and cementitious materials**] that have been extracted, harvested, or recovered, as well as manufactured, within **500 miles (800 km)** of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

F. Color: [**As indicated by manufacturer's designations**][**Match Architect's samples**][**As selected by Architect from manufacturer's full range**].

G. Shape and Texture:

1. Provide units with [**machine-split textured**][**smooth**], [**flat exposed face**][**shaped exposed face with deeply beveled vertical edges**].

a. Face Dimensions:

1) [**4 inches (100 mm)**][**6 inches (150 mm)**][**8 inches (200 mm)**]<**Insert dimension**> high by [**12 inches (300 mm)**][**16 inches (400 mm)**][**18 inches (460 mm)**]<**Insert dimension**> long.
2) Mix of sizes providing appearance of random range ashlar stone masonry.
3) As indicated.

2. Provide units matching basic shape, dimensions, and face texture of basis-of-design product.
3. Provide units of any basic shape and dimensions that produce segmental retaining walls of dimensions and profiles indicated without interfering with other elements of the Work and with [**machine-split textured**][**smooth**], [**flat exposed face**][**shaped exposed face with deeply beveled vertical edges**].

H. Batter: Provide units that offset from course below to provide [**at least**][**1:24**][**1:16**][**1:14**][**1:8**][**1:5**] batter.

I. Cap Units: Provide cap units of [**shape indicated**][**same shape as other units**] with smooth, as-cast top surfaces without holes or lugs.

J. Special Units: Provide corner units, end units, and other shapes as needed to produce segmental retaining walls of dimensions and profiles indicated and to provide texture on exposed surfaces [**matching face**][**as indicated**].

2.3 INSTALLATION MATERIALS

A. Pins: Product supplied by segmental retaining wall unit manufacturer for use with units provided, made from nondegrading polymer reinforced with glass fibers.

B. Clips: Product supplied by segmental retaining wall unit manufacturer for use with units provided, made from nondegrading polymer reinforced with glass fibers.

C. Cap Adhesive: Product supplied or recommended by segmental retaining wall unit manufacturer for adhering cap units to units below.

D. Leveling Base: Comply with requirements in Section 312000 "Earth Moving" for [**base**][**drainage**] course.

1. Leveling Course: Lean concrete with a compressive strength of not more than **500 psi (3.4 MPa)**.

E. Drainage Fill: Comply with requirements in Section 312000 "Earth Moving" for drainage course.

F. Reinforced Soil Fill:

1. Comply with requirements in Section 312000 "Earth Moving" for satisfactory soils.
2. ASTM D2487; GW, GP, SW, SP, and SM soil classification groups or a combination of these groups; free of debris, waste, frozen materials, vegetation, and other deleterious matter; complying with the following gradation in accordance with ASTM C136/C136M: 20 to 100 percent passing **No. 4 (4.75 mm)** sieve, zero to 60 percent passing **No. 40 (0.425 mm)** sieve, zero to 35 percent passing **No. 200 (0.075 mm)** sieve, and with fine fraction having a plasticity index of less than 20.

G. Nonreinforced-Soil Fill: Comply with requirements in Section 312000 "Earth Moving" for satisfactory soils.

H. Impervious Fill: Clayey gravel and sand mixture capable of compacting to a dense state.

I. Drainage Geotextile: Nonwoven needle-punched geotextile, manufactured for subsurface drainage applications, made from polyolefins or polyesters; with elongation of greater than 50 percent.

1. Apparent Opening Size: **No. 70 to 100 (0.212 to 0.150 mm)** sieve, maximum; ASTM D4751.
2. Minimum Grab Tensile Strength: **110 lb (49.9 kg)**; ASTM D4632/D4632M.
3. Minimum Weight: **4 oz./sq. yd. (132 g/sq. m)**.

J. Soil Reinforcement: Product specifically manufactured for use as soil reinforcement and as follows:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Hanes Geo Components; Leggett & Platt Incorporated**]
b. [**Huesker International**]
c. [**Low & Bonar PLC**]
d. [**Luckenhaus Technical Textiles, Inc.**]
e. [**Propex Operating Company, LLC**]
f. [**Strata Systems, Inc**]
g. [**Synteen Technical Fabrics, Inc.**]
h. [**Tenax Corporation**]
i. [**TenCate Geosynthetics**]
j. [**Tensar International Corporation**]
k. [**Versa-Lok Retaining Wall Systems**]
l. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Hanes Geo Components; Leggett & Platt Incorporated**]
b. [**Huesker International**]
c. [**Low & Bonar PLC**]
d. [**Luckenhaus Technical Textiles, Inc.**]
e. [**Propex Operating Company, LLC**]
f. [**Strata Systems, Inc**]
g. [**Synteen Technical Fabrics, Inc.**]
h. [**Tenax Corporation**]
i. [**TenCate Geosynthetics**]
j. [**Tensar International Corporation**]
k. [**Versa-Lok Retaining Wall Systems**]
l. <**Insert manufacturer's name**>

3. Product Type: [**Knitted or woven geogrid made from polyester yarns with a protective coating**][**Molded geogrid made from high-density polyethylene**][**Woven geotextile made from polyamides, polyesters, or polyolefins**].

2.4 SOURCE QUALITY CONTROL

A. Factory test and inspect each roll of soil reinforcement for minimum average roll values for geosynthetic index property tests, including the following:

1. Weight.
2. Grab or single-rib strength.
3. Aperture opening.
4. Rib or yarn size.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for excavation tolerances, condition of subgrades, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF RETAINING WALLS

A. General: Place units in accordance with NCMA's "Segmental Retaining Wall Installation Guide" and segmental retaining wall unit manufacturer's written instructions.

1. Lay units in [**running bond**][**bond pattern indicated**].
2. Form corners and ends by [**using special units**][**cutting units with motor-driven saw**][**or**][**splitting units with mason's hammer and chisel**].

B. Do not use units with chips, cracks, or other defects that are visible at a distance of **20 feet (6 m)** where such defects are exposed in the completed Work.

C. Leveling Base: Place and compact base material to thickness indicated and with not less than 95 percent maximum dry unit weight in accordance with ASTM D698.

1. Leveling Course: [**At Contractor's option, unreinforced lean concrete may be substituted for upper 1 to 2 inches (25 to 50 mm) of base**][**Place unreinforced lean concrete over leveling base 1 to 2 inches (25 to 50 mm) thick**]. Compact and screed concrete to a smooth, level surface.

D. First Course: Place first course of segmental retaining wall units for full length of wall. Place units in firm contact with each other, properly aligned and level.

1. Tamp units into leveling base as necessary to bring tops of units into a level plane.

E. Subsequent Courses: Remove excess fill and debris from tops of units in course below. Place units in firm contact, properly aligned, and directly on course below.

1. For units with lugs designed to fit into holes in adjacent units, lay units so lugs are accurately aligned with holes, and bedding surfaces are firmly seated on beds of units below.
2. For units with lips at front of units, slide units as far forward as possible for firm contact with lips of units below.
3. For units with lips at bottom rear of units, slide units as far forward as possible for firm contact of lips with units below.
4. For units with pins, install pins and align units.
5. For units with clips, install clips and align units.

F. Cap Units: Place cap units and secure with cap adhesive.

3.3 FILL PLACEMENT

A. General: Comply with requirements in Section 312000 "Earth Moving," with NCMA's "Segmental Retaining Wall Installation Guide" and segmental retaining wall unit manufacturer's written instructions.

B. Fill voids between and within units with drainage fill. Place fill as each course of units is laid.

C. Place, spread, and compact drainage fill and soil fill in uniform lifts for full width and length of embankment as wall is laid. Place and compact fills without disturbing alignment of units. Where both sides of wall are indicated to be filled, place fills on both sides at same time. Begin at wall, and place and spread fills toward embankment.

1. Use only hand-operated compaction equipment within **48 inches (1200 mm)** of wall or one-half of height above bottom of wall, whichever is greater.

2. Compact reinforced-soil fill to not less than 95 percent maximum dry unit weight in accordance with ASTM D698.

    a. In areas where only hand-operated compaction equipment is allowed, compact fills to not less than 90 percent maximum dry unit weight in accordance with ASTM D698.
    b. In areas where fill height exceeds **15 feet (4.5 m),)** compact reinforced-soil fill that will be more than **15 feet (4.5 m)** below finished grade to not less than 98 percent maximum dry unit weight in accordance with ASTM D698.
    c. In areas where fill height exceeds **30 feet (9 m),)** compact reinforced-soil fill that will be more than **30 feet (9 m)** below finished grade to not less than 100 percent maximum dry unit weight in accordance with ASTM D698.

3. Compact nonreinforced-soil fill to comply with Section 312000 "Earth Moving."

D. Place drainage geotextile against back of wall, and place layer of drainage fill at least [**12 inches (300 mm)**][**6 inches (150 mm)**] wide behind drainage geotextile to within **12 inches (300 mm)** of finished grade. Place another layer of drainage geotextile between drainage fill and soil fill.

E. Place a layer of drainage fill at least [**12 inches (300 mm)**][**6 inches (150 mm)**] wide behind wall to within **12 inches (300 mm)** of finished grade. Place a layer of drainage geotextile between drainage fill and soil fill.

F. Wrap subdrainage pipe with filter fabric and place in drainage fill as indicated[**, sloped not less than 0.5 percent to drain**].

G. Place impervious fill over top edge of drainage fill layer.

H. Slope grade at top of wall away from wall unless otherwise indicated. Slope grade at wall base away from wall. Provide uniform slopes that prevent ponding.

I. Place soil reinforcement in horizontal joints of retaining wall where indicated and in accordance with soil-reinforcement manufacturer's written instructions. Embed reinforcement a minimum of **8 inches (200 mm)** into retaining wall and stretch tight over compacted backfill. Anchor soil reinforcement before placing fill.

1. Place additional soil reinforcement at corners and curved walls to provide continuous reinforcement.
2. Place geosynthetics with seams, if any, oriented perpendicularly to segmental retaining walls.
3. Do not dump fill material directly from trucks onto geosynthetics.
4. Place at least **6 inches (150 mm)** of fill over reinforcement before compacting with tracked vehicles or **4 inches (100 mm)** before compacting with rubber-tired vehicles.
5. Do not turn vehicles on fill until first layer of fill is compacted and second layer is placed over each soil-reinforcement layer.

3.4 CONSTRUCTION TOLERANCES

A. Variation from Level: For bed-joint lines along walls, do not exceed **1-1/4 inches in 10 feet (32 mm in 3 m)**, **3 inches (75 mm)** maximum.

B. Variation from Indicated Batter: For slope of wall face, do not vary from indicated slope by more than **1-1/4 inches in 10 feet (32 mm in 3 m)**.

C. Variation from Indicated Wall Line: For walls indicated as straight, do not vary from straight line by more than **1-1/4 inches in 10 feet (32 mm in 3 m)**.

D. Maximum Gap between Units: **1/8 inch (3 mm)**.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

B. Comply with requirements in Section 312000 "Earth Moving" for field quality control.

C. Tests and Inspections:

1. In each compacted backfill layer, perform at least one field in-place compaction test for each [**150 feet (45 m)**]<**Insert dimension**> or less of segmental retaining wall length.
2. In each compacted backfill layer, perform at least one field in-place compaction test for each [**24 inches (600 mm)**]<**Insert dimension**> of fill depth and each [**50 feet (15 m)**]<**Insert dimension**> or less of segmental retaining wall length.
3. Segmental retaining wall system will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.6 ADJUSTING

A. Remove and replace segmental retaining wall construction of the following descriptions:

1. Broken, chipped, stained, or otherwise damaged units. Units may be repaired if Architect approves methods and results.
2. Segmental retaining walls that do not match approved Samples[**and mockups**].
3. Segmental retaining walls that do not comply with other requirements indicated.

B. Replace units so segmental retaining wall matches approved Samples and mockups, complies with other requirements, and shows no evidence of replacement.

END OF SECTION 32 32 23 00

Task	Specification	Specification Description

SECTION 33 01 30 41 - CLEANING OF SEWERS

1.1 GENERAL

A. Description Of Work
   1. This specification covers sewer line cleaning. Cleaning procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals: Submit product data and manufacturer's instruction.

1.2 PRODUCTS

A. All materials shall be clean, free of defects, corrosion, and damage. All items shall be of proper type, size, design, and characteristics for the use intended. Unless otherwise specified, all items shall be factory-made.

B. Portable Cleaning Equipment: Equipment used in the cleaning of sewer lines shall be as required to complete the work for the size, length, and conditions of the sewer. Portable and mobile equipment shall comply with Water Pollution Control Federation Manual No. 7.

C. Chemicals shall be of the strength required to perform the work. The chemicals shall not be damaging to pipe materials, manholes, pumping equipment, nor treatment process and shall not be contaminated by foreign substances.

1.3 EXECUTION

A. Preparation
   1. Protection required to prevent damage to adjacent materials, equipment, fixtures, and finishes shall be provided. Necessary protective clothing and accessories for personnel working with chemicals shall be provided.
   2. Ventilation of Sewers: Contractor shall provide proper ventilation for personnel working in the sewer.
   3. Alternate Sewage Discharge: Contractor shall provide an alternate routing of sewage discharge to a downstream manhole.
   4. Traffic: Contractor shall provide all traffic signs required to safely direct traffic at and around work areas.

B. Installation
   1. Direction of Work: Sewer line cleaning work, with the exception of hydraulic scouring, shall proceed in the downstream direction. Cleaning by hydraulic scouring shall proceed in the upstream direction.
   2. Testing: Upon completion of cleaning operation, test sewer lines for proper operation and observe for a period of 24 hours. Clean out all stoppages and the retest the line for proper operation.

SECTION 33 05 00 00 - COMMON WORK RESULTS FOR UTILITIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Piping joining materials.
2. Transition fittings.
3. Dielectric fittings.
4. Sleeves.
5. Identification devices.
6. Grout.
7. Flowable fill.
8. Piped utility demolition.
9. Piping system common requirements.
10. Equipment installation common requirements.
11. Painting.
12. Concrete bases.
13. Metal supports and anchorages.

1.2 DEFINITIONS

A. Exposed Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions.

B. Concealed Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

C. ABS: Acrylonitrile-butadiene-styrene plastic.

D. CPVC: Chlorinated polyvinyl chloride plastic.

E. PE: Polyethylene plastic.

F. PVC: Polyvinyl chloride plastic.

1.3 ACTION SUBMITTALS

A. Product Data: For the following:

1. Dielectric fittings.
2. Identification devices.

1.4 INFORMATIONAL SUBMITTALS

A. Welding certificates.

1.5 QUALITY ASSURANCE

A. Steel Support Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Steel Piping Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

C. Comply with ASME A13.1 for lettering size, length of color field, colors, and viewing angles of identification devices.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.7 COORDINATION

A. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

B. Coordinate installation of identifying devices after completing covering and painting if devices are applied to surfaces.

C. Coordinate size and location of concrete bases. Formwork, reinforcement, and concrete requirements are specified in Section 033000 "Cast-in-Place Concrete."

PART 2 - PRODUCTS

2.1 PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos free, **1/8-inch (3.2-mm)** maximum thickness, unless otherwise indicated.

a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

2. AWWA C110, rubber, flat face, **1/8 inch (3.2 mm)** thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.

B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.

D. Solder Filler Metals: ASTM B32, lead-free alloys. Include water-flushable flux according to ASTM B813.

E. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.

F. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

G. Solvent Cements for Joining Plastic Piping:

1. ABS Piping: ASTM D2235.
2. CPVC Piping: ASTM F493.
3. PVC Piping: ASTM D2564. Include primer according to ASTM F656.
4. PVC to ABS Piping Transition: ASTM D3138.

H. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.

2.2 TRANSITION FITTINGS

A. Transition Fittings, General: Same size as, and with pressure rating at least equal to and with ends compatible with, piping to be joined.

B. Transition Couplings NPS 1-1/2 (DN 40) and Smaller:

1. Underground Piping: Manufactured piping coupling or specified piping system fitting.
2. Aboveground Piping: Specified piping system fitting.

C. AWWA Transition Couplings NPS 2 (DN 50) and Larger:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Cascade Waterworks Mfg. Co.**]
b. [**Dresser Utility Solutions**]
c. [**Ford Meter Box Company, Inc. (The)**]
d. [**JCM Industries, Inc**]
e. [**Smith-Blair, a Xylem brand.**]
f. [**Viking Johnson**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Cascade Waterworks Mfg. Co.**]
b. [**Dresser Utility Solutions**]
c. [**Ford Meter Box Company, Inc. (The)**]
d. [**JCM Industries, Inc**]
e. [**Smith-Blair, a Xylem brand.**]

f. [**Viking Johnson**]
g. <**Insert manufacturer's name**>

3. Description: AWWA C219, metal sleeve-type coupling for underground pressure piping.

D. Plastic-to-Metal Transition Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Spears Manufacturing Company**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Spears Manufacturing Company**]
b. <**Insert manufacturer's name**>

3. Description: [**CPVC**][**CPVC and PVC**][**PVC**] one-piece fitting with manufacturer's Schedule 80 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint[**or threaded**] end.

E. Plastic-to-Metal Transition Unions:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Colonial Engineering, Inc.**]
b. [**NIBCO INC.**]
c. [**Spears Manufacturing Company**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Colonial Engineering, Inc.**]
b. [**NIBCO INC.**]
c. [**Spears Manufacturing Company**]
d. <**Insert manufacturer's name**>

3. Description: MSS SP-107, [**CPVC**][**CPVC and PVC**][**PVC**] four-part union. Include brass[**or stainless steel**] threaded end, solvent-cement-joint[**or threaded**] plastic end, rubber O-ring, and union nut.

F. Flexible Transition Couplings for Underground Nonpressure Drainage Piping:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following]:

a. [**Cascade Waterworks Mfg. Co.**]
b. [**Fernco Inc**]
c. [**Mission Rubber Company, LLC**]
d. [**Plastic Oddities**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Cascade Waterworks Mfg. Co.**]
b. [**Fernco Inc**]
c. [**Mission Rubber Company, LLC**]
d. [**Plastic Oddities**]
e. <**Insert manufacturer's name**>

3. Description: ASTM C1173 with elastomeric sleeve, ends same size as piping to be joined, and corrosion-resistant metal band on each end.

2.3 DIELECTRIC FITTINGS

A. Dielectric Fittings, General: Assembly of copper alloy and ferrous materials or ferrous material body with separating nonconductive insulating material suitable for system fluid, pressure, and temperature.

B. Dielectric Unions:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Capitol Manufacturing Company**]
b. [**Epco Sales, Inc**]
c. [**GF Piping Systems: Georg Fischer LLC**]
d. [**HART Industrial Unions, LLC**]
e. [**WATTS; A Watts Water Technologies Company**]
f. [**Zurn Industries, LLC**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Capitol Manufacturing Company**]
b. [**Epco Sales, Inc**]
c. [**GF Piping Systems: Georg Fischer LLC**]
d. [**HART Industrial Unions, LLC**]
e. [**WATTS; A Watts Water Technologies Company**]
f. [**Zurn Industries, LLC**]
g. <**Insert manufacturer's name**>

3. Description: Factory fabricated, union, **NPS 2 (DN 50)** and smaller.

a. Pressure Rating: [150 psig (1035 kPa) **minimum**][250 psig (1725 kPa)] at 180 deg F (82 deg C).
b. End Connections: Solder-joint copper alloy and threaded ferrous; threaded ferrous.

C. Dielectric Flanges:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Capitol Manufacturing Company**]
b. [**Epco Sales, Inc**]
c. [**GF Piping Systems: Georg Fischer LLC**]
d. [**WATTS; A Watts Water Technologies Company**]
e. [**Zurn Industries, LLC**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Capitol Manufacturing Company**]
b. [**Epco Sales, Inc**]
c. [**GF Piping Systems: Georg Fischer LLC**]
d. [**WATTS; A Watts Water Technologies Company**]
e. [**Zurn Industries, LLC**]
f. <**Insert manufacturer's name**>

3. Description: Factory-fabricated, bolted, companion-flange assembly, NPS 2-1/2 to NPS 4 (DN 65 to DN 100) and larger.

a. Pressure Rating: [150 psig (1035 kPa) **minimum**][175 psig (1200 kPa) **minimum**][300 psig (2070 kPa)].
b. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

D. Dielectric-Flange Kits:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Advance Products & Systems, LLC**]
b. [**CALPICO, Inc.**]
c. [**GF Piping Systems: Georg Fischer LLC**]
d. [**GPT; a division of EnPRO Industries**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Advance Products & Systems, LLC**]

b. [**CALPICO, Inc.**]
c. [**GF Piping Systems: Georg Fischer LLC**]
d. [**GPT; a division of EnPRO Industries**]
e. <**Insert manufacturer's name**>

3. Description: Nonconducting materials for field assembly of companion flanges, **NPS 2-1/2 (DN 65)** and larger.

a. Pressure Rating: [**150 psig (1035 kPa) minimum**]<**Insert pressure**>.
b. Gasket: Neoprene or phenolic.
c. Bolt Sleeves: Phenolic or polyethylene.
d. Washers: Phenolic with steel backing washers.

E. Dielectric Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**CALPICO, Inc.**]
b. [**Lochinvar, LLC**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**CALPICO, Inc.**]
b. [**Lochinvar, LLC**]
c. <**Insert manufacturer's name**>

3. Description: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining, **NPS 3 (DN 80)** and smaller.

a. Pressure Rating: **300 psig (2070 kPa)** at **225 deg F (107 deg C)**.
b. End Connections: Threaded.

F. Dielectric Nipples:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Elster Perfection; Honeywell**]
b. [**Precision Plumbing Products**]
c. [**Victaulic Company**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Elster Perfection; Honeywell**]
b. [**Precision Plumbing Products**]

c. [**Victaulic Company**]
d. <**Insert manufacturer's name**>

3. Description: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining.

a. Pressure Rating: [**300 psig (2070 kPa) at 225 deg F (107 deg C)**]<**Insert pressure and temperature**>.
b. End Connections: Threaded or grooved.

2.4 SLEEVES

A. Mechanical sleeve seals for pipe penetrations are specified in Section 220500 "Common Work Results for Plumbing."

B. Galvanized-Steel Sheet Sleeves: **0.0239-inch (0.6-mm)** minimum thickness; round tube closed with welded longitudinal joint.

C. Steel Pipe Sleeves: ASTM A53/A53M, Type E, Grade B, Schedule 40, galvanized, plain ends.

D. Cast-Iron Sleeves: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

E. Molded PVC Sleeves: Permanent, with nailing flange for attaching to wooden forms.

F. PVC Pipe Sleeves: ASTM D1785, Schedule 40.

G. Molded PE Sleeves: Reusable, PE, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

2.5 IDENTIFICATION DEVICES

A. General: Products specified are for applications referenced in other utilities Sections. If more than single type is specified for listed applications, selection is Installer's option.

B. Equipment Nameplates: Metal permanently fastened to equipment with data engraved or stamped.

1. Data: Manufacturer, product name, model number, serial number, capacity, operating and power characteristics, labels of tested compliances, and essential data.
2. Location: Accessible and visible.

C. Stencils: Standard stencils prepared with letter sizes complying with recommendations in ASME A13.1. Minimum letter height is **1-1/4 inches (30 mm)** for ducts, and **3/4 inch (20 mm)** for access door signs and similar operational instructions.

1. Material: [**Fiberboard**][**Brass**].
2. Stencil Paint: Exterior, oil-based, alkyd-gloss black enamel, unless otherwise indicated. Paint may be in pressurized spray-can form.
3. Identification Paint: Exterior, oil-based, alkyd enamel in colors according to ASME A13.1, unless otherwise indicated.

D. Snap-on Plastic Pipe Markers: Manufacturer's standard preprinted, semirigid, snap-on type. Include color-coding according to ASME A13.1, unless otherwise indicated.

E. Pressure-Sensitive Pipe Markers: Manufacturer's standard preprinted, color-coded, pressure-sensitive-vinyl type with permanent adhesive.

F. Pipes with OD, Including Insulation, Less Than **6 Inches (150 mm)**: Full-band pipe markers, extending 360 degrees around pipe at each location.

G. Pipes with OD, Including Insulation, **6 Inches (150 mm)** and Larger: Either full-band or strip-type pipe markers, at least three times letter height and of length required for label.

H. Lettering:

1. Manufacturer's standard preprinted captions as selected by Architect.
2. Use piping system terms indicated and abbreviate only as necessary for each application length.

    a. Arrows: Either integrally with piping system service lettering to accommodate both directions of flow, or as separate unit on each pipe marker to indicate direction of flow.

I. Plastic Tape: Manufacturer's standard color-coded, pressure-sensitive, self-adhesive vinyl tape, at least **3 mils (0.08 mm)** thick.

1. Width: **1-1/2 inches (40 mm)** on pipes with OD, including insulation, less than **6 inches (150 mm)**; **2-1/2 inches (65 mm)** for larger pipes.
2. Color: Comply with ASME A13.1, unless otherwise indicated.

J. Valve Tags: Stamped or engraved with **1/4-inch (6.4-mm)** letters for piping system abbreviation and **1/2-inch (13-mm)** sequenced numbers. Include **5/32-inch (4-mm)** hole for fastener.

1. Material:

    a. **0.032-inch- (0.8-mm-)** thick, [**polished brass**][**or**][**aluminum**].
    b. **0.0375-inch- (1-mm-)** thick stainless steel.
    c. **3/32-inch- (2.4-mm-)** thick plastic laminate with 2 black surfaces and a white inner layer.
    d. Valve manufacturer's standard solid plastic.

2. Size: **1-1/2 inches (40 mm)** in diameter, unless otherwise indicated.
3. Shape: As indicated for each piping system.

K. Valve Tag Fasteners: Brass, wire-link or beaded chain; or brass S-hooks.

L. Engraved Plastic-Laminate Signs: ASTM D709, Type I, cellulose, paper-base, phenolic-resin-laminate engraving stock; Grade ES-2, black surface, black phenolic core, with white melamine subcore, unless otherwise indicated. Fabricate in sizes required for message. Provide holes for mechanical fastening.

1. Engraving: Engraver's standard letter style, of sizes and with terms to match equipment identification.
2. Thickness:

    a. [**1/16 inch (1.6 mm)**][**1/8 inch (3 mm)**], unless otherwise indicated.
    b. **1/16 inch (1.6 mm)**, for units up to **20 sq. in. (130 sq. cm)** or **8 inches (200 mm)** in length, and **1/8 inch (3 mm)** for larger units.

3. Fasteners: Self-tapping, stainless steel screws or contact-type permanent adhesive.

M. Plastic Equipment Markers: Manufacturer's standard laminated plastic, in the following color codes:

1. Green: Cooling equipment and components.
2. Yellow: Heating equipment and components.
3. Brown: Energy reclamation equipment and components.
4. Blue: Equipment and components that do not meet criteria above.
5. Hazardous Equipment: Use colors and designs recommended by ASME A13.1.
6. Terminology: Match schedules as closely as possible. Include the following:

    a. Name and plan number.
    b. Equipment service.
    c. Design capacity.
    d. Other design parameters such as pressure drop, entering and leaving conditions, and speed.

7. Size: **2-1/2 by 4 inches (65 by 100 mm)** for control devices, dampers, and valves; **4-1/2 by 6 inches (115 by 150 mm)** for equipment.

N. Plasticized Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with mat finish suitable for writing.

1. Size: **3-1/4 by 5-5/8 inches (83 by 143 mm)**.
2. Fasteners: Brass grommets and wire.
3. Nomenclature: Large-size primary caption such as DANGER, CAUTION, or DO NOT OPERATE.

O. Lettering and Graphics: Coordinate names, abbreviations, and other designations used in piped utility identification with corresponding designations indicated. Use numbers, letters, and terms indicated for proper identification, operation, and maintenance of piped utility systems and equipment.

1. Multiple Systems: Identify individual system number and service if multiple systems of same name are indicated.

2.6 GROUT

A. Description: ASTM C1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.

1. Characteristics: Post hardening, volume adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: **5000-psi (34.5-MPa)**, 28-day compressive strength.
3. Packaging: Premixed and factory packaged.

2.7 FLOWABLE FILL

A. Description: Low-strength-concrete, flowable-slurry mix.

1. Cement: ASTM C150, Type I, portland.
2. Density: [**115- to 145-lb/cu. ft. (1840- to 2325-kg/cu. m)**]<**Insert value**>.
3. Aggregates:

    a. ASTM C33, natural sand, fine and crushed gravel or stone, coarse.
    b. ASTM C33, natural sand, fine.

4. Admixture: ASTM C618, fly-ash mineral.
5. Water: Comply with ASTM C94/C94M.

6. Strength: [**100 to 200 psig (690 to 1380 kPa)**]<**Insert value**> at 28 days.

PART 3 - EXECUTION

3.1 PIPED UTILITY DEMOLITION

A. Refer to Section 024119 "Selective Demolition" for general demolition requirements and procedures.

B. Disconnect, demolish, and remove piped utility systems, equipment, and components indicated to be removed.

1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
2. Piping to Be Abandoned in Place: Drain piping. Fill abandoned piping with flowable fill, and cap or plug piping with same or compatible piping material.
3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make operational.
5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.

C. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.2 DIELECTRIC FITTING APPLICATIONS

A. Dry Piping Systems: Connect piping of dissimilar metals with the following:

1. NPS 2 (DN 50) and Smaller: Dielectric unions.
2. NPS 2-1/2 to NPS 12 (DN 65 to DN 300): Dielectric flanges[**or dielectric flange kits**].

B. Wet Piping Systems: Connect piping of dissimilar metals with the following:

1. NPS 2 (DN 50) and Smaller: Dielectric [**couplings**][**couplings or dielectric nipples**][**nipples**].
2. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Dielectric nipples.
3. NPS 2-1/2 to NPS 8 (DN 65 to DN 200): Dielectric nipples[**or dielectric flange kits**].
4. NPS 10 and NPS 12 (DN 250 and DN 300): Dielectric flange kits.

3.3 INSTALLATION OF PIPING

A. Install piping according to the following requirements and utilities Sections specifying piping systems.

B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on the Coordination Drawings.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping to permit valve servicing.

E. Install piping at indicated slopes.

F. Install piping free of sags and bends.

G. Install fittings for changes in direction and branch connections.

H. Select system components with pressure rating equal to or greater than system operating pressure.

I. Sleeves are not required for core-drilled holes.

J. Permanent sleeves are not required for holes formed by removable PE sleeves.

K. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs.

1. Cut sleeves to length for mounting flush with both surfaces.

a. Exception: Extend sleeves installed in floors of equipment areas or other wet areas [**2 inches (50 mm)**]<**Insert dimension**> above finished floor level.

2. Install sleeves in new walls and slabs as new walls and slabs are constructed.

a. Pipe Sleeves: [**PVC**][**Steel**]. For pipes smaller than **NPS 6 (DN 150)**.
b. Steel Sheet Sleeves: For pipes **NPS 6 (DN 150)** and larger, penetrating gypsum-board partitions.

L. Verify final equipment locations for roughing-in.

M. Refer to equipment specifications in other Sections for roughing-in requirements.

3.4 PIPING JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and utilities Sections specifying piping systems.

B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

D. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

E. Welded Joints: Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.

F. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

G. Grooved Joints: Assemble joints with grooved-end pipe coupling with coupling housing, gasket, lubricant, and bolts according to coupling and fitting manufacturer's written instructions.

H. Soldered Joints: Apply ASTM B813 water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B828 or CDA's "Copper Tube Handbook," using lead-free solder alloy (0.20 percent maximum lead content) complying with ASTM B32.

I. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.

J. Pressure-Sealed Joints: Assemble joints for plain-end copper tube and mechanical pressure seal fitting with proprietary crimping tool to according to fitting manufacturer's written instructions.

K. Plastic Piping Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:

1. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements.
2. ABS Piping: Join according to ASTM D2235 and ASTM D2661 appendixes.
3. CPVC Piping: Join according to ASTM D2846/D2846M Appendix.
4. PVC Pressure Piping: Join schedule number ASTM D1785, PVC pipe and PVC socket fittings according to ASTM D2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D2855.
5. PVC Nonpressure Piping: Join according to ASTM D2855.
6. PVC to ABS Nonpressure Transition Fittings: Join according to ASTM D3138Appendix.

L. Plastic Pressure Piping Gasketed Joints: Join according to ASTM D3139.

M. Plastic Nonpressure Piping Gasketed Joints: Join according to ASTM D3212.

N. Plastic Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D2657.

1. Plain-End PE Pipe and Fittings: Use butt fusion.
2. Plain-End PE Pipe and Socket Fittings: Use socket fusion.

O. Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

3.5 PIPING CONNECTIONS

A. Make connections according to the following, unless otherwise indicated:

1. Install unions, in piping **NPS 2 (DN 50)** and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping **NPS 2-1/2 (DN 65)** and larger, adjacent to flanged valves and at final connection to each piece of equipment.
3. Install dielectric fittings at connections of dissimilar metal pipes.

3.6 INSTALLATION OF EQUIPMENT

A. Install equipment level and plumb, unless otherwise indicated.

B. Install equipment to facilitate service, maintenance, and repair or replacement of components. Connect

equipment for ease of disconnecting, with minimum interference with other installations. Extend grease fittings to an accessible location.

C. Install equipment to allow right of way to piping systems installed at required slope.

3.7 PAINTING

A. Painting of piped utility systems, equipment, and components is specified in Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."

B. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.8 IDENTIFICATION

A. Piping Systems: Install pipe markers on each system. Include arrows showing normal direction of flow.

1. Stenciled Markers: According to ASME A13.1.
2. Plastic markers, with application systems. Install on insulation segment if required for hot noninsulated piping.
3. Locate pipe markers on exposed piping according to the following:

    a. Near each valve and control device.
    b. Near each branch, excluding short takeoffs for equipment and terminal units. Mark each pipe at branch if flow pattern is not obvious.
    c. Near locations where pipes pass through walls or floors or enter inaccessible enclosures.
    d. At manholes and similar access points that permit view of concealed piping.
    e. Near major equipment items and other points of origination and termination.

B. Equipment: Install engraved plastic-laminate sign or equipment marker on or near each major item of equipment.

1. Lettering Size: Minimum **1/4 inch (6.4 mm)** high for name of unit if viewing distance is less than **24 inches (610 mm)**, **1/2 inch (13 mm)** high for distances up to **72 inches (1800 mm)**, and proportionately larger lettering for greater distances. Provide secondary lettering two-thirds to three-fourths of size of principal lettering.
2. Text of Signs: Provide name of identified unit. Include text to distinguish among multiple units, inform user of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations.

C. Adjusting: Relocate identifying devices that become visually blocked by work of this or other Divisions.

3.9 CONCRETE BASES

A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.

1. Construct concrete bases of dimensions indicated, but not less than **4 inches (100 mm)** larger in both directions than supported unit.
2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on **18-inch (450-mm)** centers around the full perimeter of base.

3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Install anchor bolts to elevations required for proper attachment to supported equipment.
6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
7. Use [**3000-psi (20.7-MPa)**]<**Insert strength**>, 28-day compressive-strength concrete and reinforcement as specified in Section 033000 "Cast-in-Place Concrete."

3.10 ERECTION OF METAL SUPPORTS AND ANCHORAGES

A. Refer to Section 055000 "Metal Fabrications" for structural steel.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor piped utility materials and equipment.

C. Field Welding: Comply with AWS D1.1/D1.1M.

3.11 GROUTING

A. Mix and install grout for equipment base bearing surfaces, pump and other equipment base plates, and anchors.

B. Clean surfaces that will come into contact with grout.

C. Provide forms as required for placement of grout.

D. Avoid air entrapment during placement of grout.

E. Place grout, completely filling equipment bases.

F. Place grout on concrete bases and provide smooth bearing surface for equipment.

G. Place grout around anchors.

H. Cure placed grout.

SECTION 33 11 13 00 - REHABILITATION OF WATER SUPPLY WELLS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for repair and maintenance of water wells. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals
1. Product Data: For each type of product indicated.

1.2 PRODUCTS

A. Repair and Replacement Parts shall be clean, free of rust and scale, and of proper size and design for the specific well repair to be made.

1.3 EXECUTION

A. Cement Grout may be hand mixed at the site.

B. Level and Re-Sod Area, after heavy equipment has been used or if chemicals have been spilled.

C. Abandoned Wells shall be sealed in accordance with AWWA A100.

D. Disinfect well, after repair, in accordance with AWWA A100.

END OF SECTION 33 11 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 33 11 13 00A - POTABLE WATER SUPPLY WELLS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Well casings.
2. Grout.
3. Water well screens.
4. Pack materials.
5. Jet well pumps.
6. Line-shaft well pumps.
7. Submersible well pumps.

1.2 ALLOWANCES

A. Allowance amounts and quantities are specified in Section 012100 "Allowances."

1. Water Supply Well Depth Allowance: Install complete and functional well to depth indicated in Section 012100 "Allowances." If water supply well depths vary from quantities in the allowance, the Contract Sum will be adjusted according to unit prices listed in "Unit Prices" Article. Include the following in the Contract Amount:

   a. Labor for water supply well installation.
   b. Furnishing and installing casing materials, grout, well screen, and packing materials in required diameter to comply with minimum performance requirements specified in the Section Text.
   c. Furnishing and installing well pump.

B. Water supply wells and well pumps are covered by cash allowance.[**Allowance includes labor and materials.**]

C. Well pumps are covered by cash allowance.[**Allowance includes labor and materials.**]

1.3 UNIT PRICES

A. Unit-Price Amounts: As stipulated in the Form of Agreement.

B. Measurement and Payment Procedures: Specified in Section 012200 "Unit Prices."

C. Measurement Units for Water Supply Wells, Casings, and Grout: Per linear **foot** **(meter)** of well depth.

1.4 DEFINITIONS

A. ABS: Acrylonitrile-butadiene-styrene plastic.

B. PA: Polyamide (nylon) plastic.

C. PE: Polyethylene plastic.

D. PP: Polypropylene plastic.

1.5 ACTION SUBMITTALS

A. Product Data: Submit certified performance curves and rated capacities of selected well pumps and furnished specialties and accessories for each type and size of well pump indicated.

B. Shop Drawings: For well pumps. Show layout and connections.

1. Include diagrams for power, signal, and control wiring.
2. Setting Drawings: Include templates and directions for installing foundation bolts, anchor bolts, and other anchorages.

1.6 INFORMATIONAL SUBMITTALS

A. Field Quality-Control Reports:

1. For each well pump, include the following:

a. Substrata formations.
b. Water-bearing formations.
c. Water levels.
d. Laboratory water analysis.
e. Well-screen analysis.
f. Performance test data.

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each well pump to include in emergency, operation, and maintenance manuals.

1. Project Record Documents: Record the following data for each water supply well:

a. Casings: Material, diameter, thickness, weight per **foot** **(meter)** of length, and depth below grade.
b. Screen: Material, construction, diameter, and opening size.
c. Pumping Test: Static water level, maximum safe yield, and drawdown at maximum yield.
d. Log: Formation log indicating strata encountered.
e. Alignment: Certification that well is aligned and plumb within specified tolerances.

1.8 QUALITY ASSURANCE

A. Well Driller Qualifications: An experienced water supply well driller licensed in the jurisdiction where Project is located.

B. Testing Agency Qualifications: Certified by the EPA or State to analyze drinking water for compliance monitoring.

1.9 FIELD CONDITIONS

A. Interruption of Existing Water Service: Do not interrupt water service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water service according to requirements indicated:

1. Notify [**Architect**][**Construction Manager**][**Owner**] no fewer than [**seven**]<**Insert number**> days in advance of proposed interruption of water service.
2. Do not proceed with interruption of water service without [**Architect's**][**Construction Manager's**][**Owner's**] written permission.

B. Well Drilling Water: [**Owner will provide**][**Provide**] temporary water and piping for drilling purposes. Provide necessary piping for water supply.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with AWWA A100 for water supply wells.

2.2 PERFORMANCE REQUIREMENTS

A. Minimum Tested Water Supply Well Performance Capacity: <**Insert capacity in gpm (L/s)**>.

2.3 WELL CASINGS

A. Steel Casing: AWWA C200, single ply, steel pipe with threaded ends and threaded couplings for threaded joints.

B. ABS Casing: ASTM F480, ABS, Schedule [**40**][**80**] bell-and-spigot pipe and couplings for solvent-cemented joints.

C. PVC Casing: ASTM F480[**and NSF 14,**] PVC, Schedule [**40**][**80**] bell-and-spigot pipe and couplings for solvent-cemented joints.[**Include NSF listing mark "NSF wc."**]

D. Pitless Adapter: Fitting, of shape required to fit onto casing, with waterproof seals.

E. Pitless Unit: Factory-assembled equipment that includes pitless adapter.

F. Well Seals: Casing cap, with holes for piping and cables, that fits into top of casing and is removable, waterproof, and vermin proof.

2.4 GROUT

A. Cement: ASTM C150/C150M, Type II.

B. Aggregates: ASTM C33/C33M, fine and coarse grades.

C. Water: Potable.

2.5 WATER WELL SCREENS

A. Screen Material: Fabricated of ASTM A666, Type 304 stainless steel[**, welded; with continuous-slot, V-shaped openings that widen inwardly**][**tube; with slotted or perforated surface and designed for well-screen applications**].

1. Screen Couplings: Butt-type, stainless steel coupling rings.
2. Screen Fittings: Screen, with necessary fittings, closes bottom and makes tight seal between top of screen and well casing.
3. Maximum Entering Velocity: **0.1 fps (0.03 m/s)**.

2.6 PACK MATERIALS

A. Coarse, uniformly graded filter sand, maximum **1/8 inch (3 mm)** in diameter.

B. Fine gravel, maximum **1/4 inch (6 mm)** in diameter.

2.7 JET WELL PUMPS

A. Description: [**Shallow**][**Deep**]-well-design, jet well pump; self-priming; centrifugal pump capable of continuous operation.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**A.Y. McDonald Mfg. Co.**]
2. [**Goulds Pumps; a brand of Xylem, Inc.**]
3. [**Jacuzzi Inc.**]
4. [**Myers, F.E.; Pentair Ltd**]
5. [**Pentair Pump Group; Layne/Verti-Line**]
6. [**Sta-Rite Industries, Inc.; Pentair Ltd.**]
7. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**A.Y. McDonald Mfg. Co.**]
2. [**Goulds Pumps; a brand of Xylem, Inc.**]
3. [**Jacuzzi Inc.**]
4. [**Myers, F.E.; Pentair Ltd**]
5. [**Pentair Pump Group; Layne/Verti-Line**]
6. [**Sta-Rite Industries, Inc.; Pentair Ltd.**]
7. <**Insert manufacturer's name**>

D. Housing: Cast iron.

E. Impeller: [**Single stage**][**Multistage**], centrifugal; fabricated of corrosion-resistant materials.

F. Seals: Mechanical.

G. Shaft: Stainless steel.

H. Motor: Manufacturer's standard, NEMA MG 1 motor, panel, and accessories.

I. Motor Controls: Electronic; variable speed.

J. Check valve, ejector, and pressure-control valve.

K. Pump Capacities and Characteristics:

1. Capacity: <**Insert gpm (L/s)**>.
2. Discharge Head: <**Insert psig (kPa)**>.
3. Discharge Size: <**Insert NPS (DN)**>.
4. Speed: <**Insert rpm**>.
5. Motor Horsepower: <**Insert value**>.
6. Lift: <**Insert feet (m)**>.
7. Pressure Rating: <**Insert psig (kPa)**>.
8. Volts: <**Insert value**>.
9. Phases: <**Insert value**>.
10. Hertz: <**Insert value**>.
11. Full-Load Amperes: <**Insert value**>.
12. Minimum Circuit Ampacity: <**Insert value**>.
13. Maximum Overcurrent Protection: <**Insert amperage**>.
14. Compression Tank Capacity: <**Insert gal. (L)**>.

L. Pump Accessories:

1. Compression Tanks:

a. Comply with requirements in Section 221223 "Facility Indoor Potable-Water Storage Tanks."
b. Precharged butyl rubber diaphragm, steel shell, fused polymeric lining, and **100-psig (690-kPa)** working pressure.

2. Pressure Switches: For pump control; for installation in piping.
3. Water Piping:

a. ASTM A53/A53M, Schedule 40, galvanized-steel pipe with threaded ends.

1) Cast-Iron Fittings: ASME B16.4, threaded, galvanized.

b. ASTM D2239, SIDR Numbers 5.3, 7, or 9 PE pipe; made with PE compound number required to give pressure rating not less than [**160 psig (1100 kPa)**][**200 psig (1380 kPa)**]. Include NSF listing mark "NSF pw."

1) Fittings for PE Pipe: ASTM D2609, made of PA, PP, or PVC with serrated, male insert ends matching inside of pipe. Include bands or crimp rings.

2.8 LINE-SHAFT WELL PUMPS

A. Description: Line-shaft, [**water**][**oil**]-lubricated, vertical-turbine well pump.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**American Turbine Pump Co**]
2. [**Crane Pumps & Systems**]
3. [**Fairbanks Morse**]
4. [**Flowserve Corporation**]
5. [**Goulds Pumps; a brand of Xylem, Inc.**]
6. [**Peerless Pump Company**]
7. [**Pentair Pump Group; Layne/Verti-Line**]
8. [**Sulzer Pumps Inc.**]
9. [**WDM Pumps**]
10. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**American Turbine Pump Co**]
2. [**Crane Pumps & Systems**]
3. [**Fairbanks Morse**]
4. [**Flowserve Corporation**]
5. [**Goulds Pumps; a brand of Xylem, Inc.**]
6. [**Peerless Pump Company**]
7. [**Pentair Pump Group; Layne/Verti-Line**]
8. [**Sulzer Pumps Inc.**]
9. [**WDM Pumps**]
10. <**Insert manufacturer's name**>

D. Standards: HI 2.1-2.2 and HI 2.3.

E. Impeller Material: [**Stainless steel**][**Carbon steel**][**Bronze**].

F. Pump Base: Cast iron or fabricated steel.

G. Column Pipe: ASTM A53/A53M, Schedule 40, galvanized-steel pipe with threaded ends and cast-iron or steel threaded couplings.

H. Capacities and Characteristics:

1. Capacity: <**Insert gpm (L/s)**>.
2. Discharge Head: <**Insert psig (kPa)**>.
3. Discharge Size: <**Insert NPS (DN)**>.
4. Speed: <**Insert rpm**>.
5. Motor Horsepower: <**Insert value**>.
6. Lift: <**Insert feet (m)**>.
7. Pressure Rating: <**Insert psig (kPa)**>.
8. Volts: <**Insert value**>.
9. Phases: <**Insert value**>.
10. Hertz: <**Insert value**>.
11. Full-Load Amperes: <**Insert value**>.
12. Minimum Circuit Ampacity: <**Insert value**>.
13. Maximum Overcurrent Protection: <**Insert amperage**>.

2.9 SUBMERSIBLE WELL PUMPS

A. Description: Submersible, vertical-turbine well pump.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**A.Y. McDonald Mfg. Co.**]
2. [**Aermotor**]
3. [**American Turbine Pump Co**]
4. [**Crane Pumps & Systems**]
5. [**Goulds Pumps; a brand of Xylem, Inc.**]
6. [**GRUNDFOS CBS Inc.**]
7. [**Jacuzzi Inc.**]
8. [**Myers, F.E.; Pentair Ltd**]
9. [**Peerless Pump Company**]
10. [**Pentair Pump Group; Layne/Verti-Line**]
11. [**Reda Productions Services; Schlumberger Limited**]
12. [**Sta-Rite Industries, Inc.; Pentair Ltd.**]
13. [**Sulzer Pumps Inc.**]
14. [**Weber Industries, Inc**]
15. [**Wilo USA LLC**]
16. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**A.Y. McDonald Mfg. Co.**]
2. [**Aermotor**]
3. [**American Turbine Pump Co**]
4. [**Crane Pumps & Systems**]
5. [**Goulds Pumps; a brand of Xylem, Inc.**]
6. [**GRUNDFOS CBS Inc.**]
7. [**Jacuzzi Inc.**]
8. [**Myers, F.E.; Pentair Ltd**]
9. [**Peerless Pump Company**]
10. [**Pentair Pump Group; Layne/Verti-Line**]
11. [**Reda Productions Services; Schlumberger Limited**]
12. [**Sta-Rite Industries, Inc.; Pentair Ltd.**]
13. [**Sulzer Pumps Inc.**]
14. [**Weber Industries, Inc**]
15. [**Wilo USA LLC**]
16. <**Insert manufacturer's name**>

D. Standards: HI 2.1-2.2 and HI 2.3.

E. Impeller Material: [**Stainless steel**][**Silicon bronze**].

F. Motor: Capable of continuous operation under water, with protected submersible power cable.

G. Column Pipe: ASTM A53/A53M, Schedule 40, galvanized-steel pipe with threaded ends and cast-iron or steel threaded couplings.

H. Discharge Piping: ASTM D2239, SIDR Numbers 5.3, 7, or 9 PE pipe; made with PE compound number required to give pressure rating not less than [**160 psig (1100 kPa)**][**200 psig (1380 kPa)**]. Include NSF

listing mark "NSF pw."

1. Insert Fittings for PE Pipe: ASTM D2609, made of PA, PP, or PVC with serrated, male insert ends matching inside of pipe. Include bands or crimp rings.

I. Capacities and Characteristics:

1. Capacity: <**Insert gpm (L/s)**>.
2. Discharge Head: <**Insert psig (kPa)**>.
3. Discharge Size: <**Insert NPS (DN)**>.
4. Speed: <**Insert rpm**>.
5. Motor Horsepower: <**Insert value**>.
6. Lift: <**Insert feet (m)**>.
7. Pressure Rating: <**Insert psig (kPa)**>.
8. Volts: <**Insert value**>.
9. Phases: <**Insert value**>.
10. Hertz: <**Insert value**>.
11. Full-Load Amperes: <**Insert value**>.
12. Minimum Circuit Ampacity: <**Insert value**>.
13. Maximum Overcurrent Protection: <**Insert amperage**>.

2.10 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 220500 "Common Work Results for Plumbing."

1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
2. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in electrical Sections.

PART 3 - EXECUTION

3.1 PREPARATION

A. Pilot-Hole Data: Review pilot-hole test analysis furnished by Owner.

B. Neighborhood Well Data: Review operating and test analyses.

3.2 INSTALLATION OF WELLS

A. Construct well using [**cable-tool**][**rotary drilling**][**reverse-rotary drilling**][**driven**] method.

B. Take samples of substrata formation at **10-foot (3-m)** intervals and at changes in formation throughout entire depth of each water supply well. Carefully preserve samples on-site in glass jars properly labeled for identification.

C. Excavate for mud pit or provide aboveground structure, acceptable to authorities having jurisdiction, to allow settlement of cuttings and circulation of drill fluids back to well without discharging to on-site waterways.

D. Enlarge pilot hole and install permanent casing, screen, and grout. Install first section of casing with hardened steel driving shoe of an OD slightly larger than casing couplings if threaded couplings are used.

E. Set casing and liners round, plumb, and true to line.

F. Join casing pipe as follows:

1. Ream ends of pipe and remove burrs.
2. Remove scale, slag, dirt, and debris from inside and outside casing before installation.
3. Cut bevel in ends of casing pipe and make threaded joints.
4. Clean and make solvent-cemented joints.

G. Mix grout in proportions of **1 cu. ft. (0.03 cu. m)** or a **94-lb (42.6-kg)** sack of cement with **5 to 6 gal. (19 to 23 L)** of water. Bentonite clay may be added in amounts of **3 to 5 lb/cu. ft. (1.4 to 2.3 kg/0.03 cu. m)** for a **94-lb (42.6-kg)** sack of cement. If bentonite clay is added, water may be increased to **6.5 gal./cu. ft. (25 L/0.03 cu. m)** of cement.

H. Place grout continuously, from bottom to top surface, to ensure filling of annular space in one operation. Do not perform other operations in well within 72 hours after grouting of casing. When quick-setting cement is used, this period may be reduced to 24 hours.

I. Provide permanent casing with temporary well cap. Install with top of casing **36 inches (910 mm)** above finished grade.

J. Develop wells to maximum yield per **foot (meter)** of drawdown.

1. Extract maximum practical quantity of sand, drill fluid, and other fine materials from water-bearing formation.
2. Avoid settlement and disturbance of strata above water-bearing formation.
3. Do not disturb sealing around well casings.
4. Continue developing wells until water contains no more than 2 ppm of sand by weight when pumped at maximum testing rate.

K. Install jet well pumps with ejector in or attached to pump housing. Place check valve on suction line to prevent drainage of compression tank.

L. Install jet well pumps and pressure and suction lines. Install ejector where pressure and suction lines connect above well screen. Install check valve in suction line, or install foot valve below ejector, to prevent drainage of compression tank.

M. Install [**line-shaft**][**submersible**] well pumps according to HI 2.4 and provide access for periodic maintenance.

1. Before lowering permanent pump into well, lower a dummy pump that is slightly longer and wider than permanent pump to determine that permanent pump can be installed. Correct alignment problems.
2. Before lowering permanent pump into well, start pump to verify correct rotation.
3. Securely tighten discharge piping joints.
4. Locate line-shaft well pump near well bottom; locate motor above grade. Install driver plate to correctly align motor and pump.
5. Connect motor to submersible pump and locate near well bottom.

    a. Connect power cable while connection points are dry and undamaged.
    b. Do not damage power cable during installation; use cable clamps that do not have sharp edges.

c. Install water-sealed surface plate that will support pump and piping.

3.3 CONNECTIONS

A. Piping installation requirements are specified in Section 331415 "Site Water Distribution Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

1. Connect piping between well pump and water piping.
2. Connect water distribution system in trench to well pipe at pitless [**adapter**][**unit**].
3. Connect building water distribution to well pipe inside well house.

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 WELL ABANDONMENT

A. Comply with AWWA A100 when abandoning water supply wells. Fill and seal holes and casings, and restore ground surface to finished grade.

B. Follow well-abandonment procedures of authorities having jurisdiction. Restore ground surface to finished grade.

3.5 FIELD QUALITY CONTROL

A. Test Preparation: Clean water supply wells of foreign substances. Swab casings using alkalis, if necessary, to remove foreign substances.

B. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

D. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:

1. Plumbness and Alignment Testing: Comply with AWWA A100.
2. Furnish samples of water-bearing formation to testing laboratory and well-screen manufacturer for mechanical sieve analysis.
3. Prepare reports on static level of ground water, level of water for various pumping rates, and depth to water-bearing strata.
4. Performance Test Preparation: Start well pump and adjust controls and pressure setting. Replace damaged and malfunctioning controls and equipment.
5. Performance Testing: Conduct final pumping tests after wells have been constructed, cleaned, and tested for plumbness and alignment.

a. Arrange to conduct tests, with seven days' advance notice, after test pump and auxiliary equipment have been installed. Note water-level elevations referred to for each assigned datum in wells.
b. Provide discharge piping to conduct water to locations where disposal will not create a

nuisance or endanger adjacent property. Comply with requirements of authorities having jurisdiction.

c. Provide and maintain equipment of adequate size and type for measuring flow of water, such as weir box, orifice, or water meter.
d. Measure elevation to water level in wells.
e. Perform two bailer or air-ejection tests to determine expected yield. Test at depths with sufficient quantity of water to satisfy desired yields.
f. Test Pump: Variable capacity test pump with capacity equal to maximum expected yields at pressure equal to drawdown in wells, plus losses in pump columns and discharge pipes.
g. Start and adjust test pumps and equipment to required pumping rates.
h. Record readings of water levels in wells and pumping rates at [**30**]<**Insert number**>-minute maximum intervals throughout 24-hour minimum period.
i. Record maximum yields when drawdown is [**60 inches (1500 mm)**]<**Insert dimension**> above top of suction screens after designated times.
j. Operate pumping units continuously for [**eight**]<**Insert number**> hours after maximum drawdown is reached.
k. Record returning water levels in wells and plot curves of well recovery rates.
l. Remove sand, stones, and other foreign materials that may become deposited in wells after completing final tests.

E. Water supply well will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

G. Water Analysis Testing:

1. [**Owner will engage**][**Engage**] a qualified testing agency to make bacteriological, physical, and chemical analyses of water from each finished well and report the results. Make analyses according to requirements of authorities having jurisdiction.
2. Analyze water sample from each finished well for bacteriological, physical, and chemical quality and report the results. Make analyses according to requirements of authorities having jurisdiction.

3.6 CLEANING

A. Disinfect water supply wells according to AWWA A100 and AWWA C654 before testing well pumps.

B. Follow water supply well disinfection procedures required by authorities having jurisdiction before testing well pumps.

3.7 PROTECTION

A. Water Quality Protection: Prevent well contamination, including undesirable physical and chemical characteristics.

B. Ensure that mud pit will not leak or overflow into streams or wetlands. When well is accepted, remove mud and solids in mud pit from Project site and restore site to finished grade.

C. Provide casings, seals, sterilizing agents, and other materials to eliminate contamination; shut off contaminated water.

D. Exercise care to prevent breakdown or collapse of strata overlaying that from which water is to be drawn.

E. Protect water supply wells to prevent tampering and introducing foreign matter. Retain temporary well

cap until installation is complete.

END OF SECTION 33 11 13 00A

SECTION 33 14 00 00 - SITE WATER DISTRIBUTION PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Copper tube and fittings.
2. Ductile-iron pipe and fittings.
3. PE pipe and fittings.
4. PVC pipe and fittings.
5. Fiberglass pipe and fittings.
6. Special pipe fittings.
7. Piping joining materials.
8. Piping specialties.
9. Encasement for piping.
10. Gate valves.
11. Gate valve accessories and specialties.
12. Check valves.
13. Detector check valves.
14. Butterfly valves.
15. Corporation valves, curb valves, and meter valves.
16. Water meters.
17. Water meter boxes.
18. Pressure-reducing valves.
19. Relief valves.
20. Vacuum breakers.
21. Backflow preventers.
22. Concrete vaults.
23. Protective enclosures.
24. Fire hydrants.
25. Flushing hydrants.
26. Sampling stations.
27. Fire department connections.
28. Alarm devices.

B. Related Requirements:

1. Section 031000 "Concrete Forming and Accessories."
2. Section 032000 "Concrete Reinforcing."
3. Section 211000 "Water-Based Fire-Suppression Systems."
4. Section 221216 "Facility Elevated, Potable-Water Storage Tanks."
5. Section 221219 "Facility Ground-Mounted, Potable-Water Storage Tanks."
6. Section 221223.11 "Facility Indoor Potable-Water Storage Tanks."
7. Section 315000 "Excavation Support and Protection."

1.2 DEFINITIONS

A. CDA: Copper Development Association.

B. EPDM: Ethylene-propylene-diene terpolymer rubber.

C. PA: Polyamide (nylon) plastic.

D. PE: Polyethylene plastic.

E. PP: Polypropylene plastic.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Detail precast concrete vault assemblies and indicate dimensions, method of field assembly, and components.
2. Include diagrams for power, signal, and control wiring for alarms.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: For piping and specialties including relation to other services in same area, drawn to scale. Show piping and specialty sizes and valves, meter and specialty locations, and elevations.

B. Field Quality-Control Submittals:

1. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each type of product indicated.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Preparation for Transport: Prepare piping, valves, meters, backflow prevention devices, and fire hydrants according to the following:

1. Ensure that piping, valves, meters, backflow prevention devices, and fire hydrants are dry and internally protected against rust and corrosion.
2. Protect threaded ends and flange faces against damage.
3. Set piping, valves, meters, backflow prevention devices, and fire hydrants in best position for handling and to prevent rattling.

B. During Storage: Use precautions for piping, valves, meters, backflow prevention devices, and fire hydrants according to the following:

1. Do not remove end protectors unless necessary for inspection; then reinstall for storage.
2. Protect from weather. Store indoors and maintain temperature higher than ambient dew point temperature. Support off the ground or pavement in watertight enclosures when outdoor storage is necessary.

C. Handling: Use sling to handle products if size requires handling by crane or lift. Rig products to avoid

damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

D. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.

E. Protect stored piping from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor when storing inside.

F. Protect flanges, fittings, and specialties from moisture and dirt.

G. Store plastic piping protected from direct sunlight. Support to prevent sagging and bending.

1.7 PROJECT CONDITIONS

A. Interruption of Existing Water-Distribution Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water-distribution service in accordance with requirements indicated:

1. Notify [**Architect**][**Construction Manager**][**Owner**] no fewer than [**two**]<**Insert number**> days in advance of proposed interruption of service.
2. Do not proceed with interruption of water-distribution service without [**Architect's**][**Construction Manager's**][**Owner's**] written permission.

1.8 COORDINATION

A. Coordinate connection to water main with utility company.

B. Content includes water-distribution piping and related components outside the building for [**domestic water service**][**fire-suppression water service**][**combined domestic water service and fire-suppression water service**][**and terminated 5 ft. (1.5 m) from building**][**and service entrance piping to a point 1 ft. (0.3 m) above finished floor**][**and service entrance piping to a point 1 ft. (0.3 m) inside finished wall**]. Terminate water-service piping with appropriate fitting for extension by [**Division 21**][**Division 22**][**Divisions 21 and 22**].

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Comply with requirements of utility company supplying water. Include tapping of water mains and backflow prevention.

B. Comply with standards of authorities having jurisdiction for domestic water-service piping, including materials, installation, testing, and disinfection.

C. Comply with standards of authorities having jurisdiction for fire-suppression water-service piping, including materials, hose threads, installation, and testing.

D. Piping materials to bear label, stamp, or other markings of specified testing agency.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended location and

application.

F. Comply with ASTM F645 for selection, design, and installation of thermoplastic water piping.

G. Comply with FM Approvals' "Approval Guide" and/or UL's "Fire Protection Equipment Directory" for fire-suppression water-service products.

H. Comply with NFPA 24 for materials, installations, tests, flushing, and valve and hydrant supervision for fire-suppression water-service piping.

I. All piping and appurtenances intended to convey or dispense water for human consumption are to comply with the U.S. Safe Drinking Water Act (SDWA), with requirements of the Authority Having Jurisdiction (AHJ), and with NSF 61/NSF 372 or are certified in compliance with NSF 61/NSF 372 by an ANSI-accredited third-party certification body, that the weighted average lead content at wetted surfaces is less than or equal to 0.25 percent.

2.2 PIPING MATERIALS

A. Comply with requirements in "Piping Applications" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and service sizes.

B. Potable-water piping and components comply with NSF 14, NSF 61, and NSF 372.[**Include marking "NSF-pw" on piping.**]

2.3 COPPER TUBE AND FITTINGS

A. Drawn-Temper Copper Tube: [**ASTM B88, Type K (ASTM B88M, Type A)**][**and**][**ASTM B88, Type L (ASTM B88M, Type B)**].

B. Annealed-Temper Copper Tube: [**ASTM B88, Type K (ASTM B88M, Type A)**][**and**][**ASTM B88, Type L (ASTM B88M, Type B)**].

C. Cast-Copper, Solder-Joint Fittings: ASME B16.18, pressure fittings.

D. Wrought-Copper, Solder-Joint Fittings: ASME B16.22, pressure fittings.

E. Copper Tube, Pressure-Seal-Joint Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
    b. [**Elkhart Products Corporation; a part of Aalberts Integrated Piping Systems**]
    c. [**Mueller Co. LLC; Mueller Water Products, Inc.**]
    d. [**Mueller Streamline Co.; a company of Mueller Industries**]
    e. [**NIBCO INC.**]
    f. [**Viega LLC**]
    g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

a. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
b. [**Elkhart Products Corporation; a part of Aalberts Integrated Piping Systems**]
c. [**Mueller Co. LLC; Mueller Water Products, Inc.**]
d. [**Mueller Streamline Co.; a company of Mueller Industries**]
e. [**NIBCO INC.**]
f. [**Viega LLC**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain copper tube, pressure-seal-joint fittings from single manufacturer.
4. Standard: UL 213.
5. Fittings: Cast brass, cast bronze, or wrought copper with EPDM O-ring seal in each end. **NPS 2-1/2 (DN 65)** and larger with stainless steel grip ring and EPDM O-ring seal.
6. Minimum **200 psig (1379 kPa)** working-pressure rating at **250 deg F (121 deg C)**.

F. Bronze Flanges: ASME B16.24, Class 150, with solder-joint end. Furnish Class 300 flanges if required to match piping.

G. Cast-Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock-body, ball-and-socket, metal-to-metal seating surfaces; and solder-joint or threaded ends.

H. Wrought-Copper Unions: ASME B16.22.

2.4 DUCTILE-IRON PIPE AND FITTINGS

A. Mechanical-Joint, Ductile-Iron Pipe:

1. AWWA C151/A21.51, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.
2. AWWA C104/A21.4 cement mortar-lined.

B. Mechanical-Joint, Ductile-Iron Fittings:

1. AWWA C110, ductile- or gray-iron standard pattern or AWWA C153/A21.53, ductile-iron compact pattern.
2. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.
3. AWWA C104/A21.4 cement mortar-lined.

C. Push-on-Joint, Ductile-Iron Pipe:

1. AWWA C151/A21.51, with push-on-joint bell and plain spigot end unless grooved or flanged ends are indicated.
2. AWWA C104/A21.4 cement mortar-lined.

D. Push-on-Joint, Ductile-Iron Fittings:

1. AWWA C110, ductile- or gray-iron standard pattern or AWWA C153/A21.53, ductile-iron compact pattern.
2. Gaskets: AWWA C111/A21.11, rubber.
3. AWWA C104/A21.4 cement mortar-lined.

E. Grooved-End, Ductile-Iron Pipe:

1. AWWA C151/A21.51, with cut, rounded-grooved ends.
2. AWWA C104/A21.4 cement mortar-lined.

F. Grooved-End, Ductile-Iron Pipe Appurtenances:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Anvil; an ASC Engineered Solution**]
   b. [**GroovJoint**]
   c. [**Shurjoint; a part of Aalberts Integrated Piping Systems**]
   d. [**Smith-Cooper International**]
   e. [**Star Pipe Products**]
   f. [**Victaulic Company**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Anvil; an ASC Engineered Solution**]
   b. [**GroovJoint**]
   c. [**Shurjoint; a part of Aalberts Integrated Piping Systems**]
   d. [**Smith-Cooper International**]
   e. [**Star Pipe Products**]
   f. [**Victaulic Company**]
   g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain grooved-end, ductile-iron pipe appurtenances from single manufacturer.
4. Grooved-End, Ductile-Iron Fittings:

   a. ASTM A536, ductile-iron castings with dimensions matching pipe.
   b. AWWA C104/A21.4 cement mortar-lined.

5. Grooved-End, Ductile-Iron-Piping Mechanical Couplings:

   a. AWWA C606, for ductile-iron-pipe dimensions. Include ferrous housing sections, gasket suitable for water, and bolts and nuts.

G. Flanges: ASME 16.1, Class 125, cast iron.

2.5 PE PIPE AND FITTINGS

A. PE, ASTM Pipe: ASTM D2239, SIDR No. 5.3, 7, or 9; with PE compound number required to give pressure rating not less than [**160 psig (1100 kPa)**][**200 psig (1380 kPa)**].

1. Insert Fittings for PE Pipe: ASTM D2609, made of PA, PP, or PVC with serrated male insert ends matching inside of pipe. Include bands or crimp rings.
2. Molded PE Fittings: ASTM D3350, PE resin, socket- or butt-fusion type, made to match PE pipe dimensions and class.

B. PE, AWWA Pipe: AWWA C906, DR No. 7.3, 9, or 9.3; with PE compound number required to give pressure rating not less than [160 psig (1100 kPa)][200 psig (1380 kPa)].

1. PE, AWWA Fittings: AWWA C906, socket- or butt-fusion type, with DR number matching pipe and PE compound number required to give pressure rating not less than [160 psig (1100 kPa)][200 psig (1380 kPa)].

C. PE, Fire-Service Pipe: ASTM F714, AWWA C906, or equivalent for PE water pipe; FM Global approved, with minimum thickness equivalent to FM Global [**Class 150**][**and**][**Class 200**].

1. Molded PE Fittings: ASTM D3350, PE resin, socket- or butt-fusion type, and made to match PE pipe dimensions and class.

2.6 PVC PIPE AND FITTINGS

A. PVC, Schedule 40 Pipe: ASTM D1785.

1. PVC, Schedule 40 Socket Fittings: ASTM D2466.

B. PVC, Schedule 80 Pipe: ASTM D1785.

1. PVC, Schedule 80 Socket Fittings: ASTM D2467.
2. PVC, Schedule 80 Threaded Fittings: ASTM D2464.

C. PVC Pipe: [**AWWA C900**][**UL 1285**], [**Class 150**][**and**][**Class 200**], with bell end with gasket, and with spigot end.

1. Comply with UL 1285 for fire-suppression water service.
2. PVC Fabricated Fittings: AWWA C900, [**Class 150**][**and**][**Class 200**], with bell-and-spigot or double-bell ends. Include elastomeric gasket in each bell.
3. PVC Molded Fittings: AWWA C907, Class 150, with bell-and-spigot or double-bell ends. Include elastomeric gasket in each bell.

2.7 FIBERGLASS PIPE AND FITTINGS

A. RTRP Pipe: AWWA C950, [**Class 150**][**Class 200**][**and**][**Class 250**], Type I[**or II**], [**Grade 1, epoxy**][**or**][**Grade 2, polyester**], with bell-and-spigot ends [**for bonded**][**with gasket or seal for gasketed**] joints. Liner is optional unless otherwise indicated.[**Include FM Global approval if used for fire-service mains.**]

B. Fittings, RTRF, AWWA C950: Similar to pipe in material, pressure class, and joining method.

C. Fittings: Compatible with pipe size, pressure class, and joining method.

2.8 SPECIAL PIPE FITTINGS

A. Ductile-Iron Rigid Expansion Joints: Three-piece, ductile-iron assembly consisting of telescoping sleeve with gaskets and restrained-type, ductile-iron, end sections.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

a. [**EBAA Iron Sales, Inc.**]
b. [**U.S. Pipe**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**EBAA Iron Sales, Inc.**]
b. [**U.S. Pipe**]
c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain ductile-iron rigid expansion joints from single manufacturer.
4. Standards: AWWA C110 or AWWA C153/A21.53; AWWA C111/A21.11.
5. Pressure Rating: **250 psig (1725 kPa)** minimum.

B. Ductile-Iron Flexible Expansion Joints: Compound, ductile-iron fitting with combination of flanged and mechanical-joint ends. Include two gasketed ball-joint sections and one or more gasketed sleeve sections.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**EBAA Iron Sales, Inc.**]
b. [**Star Pipe Products**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**EBAA Iron Sales, Inc.**]
b. [**Star Pipe Products**]
c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain ductile-iron flexible expansion joints from single manufacturer.
4. Standards: AWWA C110 or AWWA C153/A21.53; AWWA C111/A21.11.
5. Pressure Rating: **250 psig (1725 kPa)** minimum.
6. Offset: <**Insert inches (mm)**>.
7. Expansion Required: <**Insert inches (mm)**>.

C. Ductile-Iron Deflection Fittings, Lead Free: Compound, ductile-iron coupling fitting with sleeve and one or two flexing sections for up to 15-degree deflection, gaskets, and restrained-joint ends.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**EBAA Iron Sales, Inc.**]
b. [**U.S. Pipe**]

c. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

   a. **[EBAA Iron Sales, Inc.]**
   b. **[U.S. Pipe]**
   c. **<Insert manufacturer's name>**

3. Source Limitations: Obtain ductile-iron deflection fittings from single manufacturer.
4. Standards: AWWA C110 or AWWA C153/A21.53; AWWA C111/A21.11.
5. Pressure Rating: **250 psig (1725 kPa)** minimum.

2.9 PIPING JOINING MATERIALS

A. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series.

B. Bonding Adhesive for Fiberglass Piping: As recommended by fiberglass piping manufacturer.

C. Gaskets for Ferrous Piping and Copper-Alloy Tubing: ASME B16.21, asbestos free.

D. Plastic Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer unless otherwise indicated.

2.10 PIPING SPECIALTIES

A. Transition Fittings: Manufactured fitting or coupling same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.

B. Tubular-Sleeve Pipe Couplings: Metal, bolted, sleeve-type, reducing or transition coupling, with center sleeve, gaskets, end rings, and bolt fasteners and with ends of same sizes as piping to be joined.

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:

   a. **[Cascade Waterworks Mfg. Co.]**
   b. **[Ford Meter Box Company, Inc. (The)]**
   c. **[JCM Industries, Inc]**
   d. **[Smith-Blair, a Xylem brand.]**
   e. **[United Water Products]**
   f. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

   a. **[Cascade Waterworks Mfg. Co.]**
   b. **[Ford Meter Box Company, Inc. (The)]**
   c. **[JCM Industries, Inc]**
   d. **[Smith-Blair, a Xylem brand.]**

e. [**United Water Products**]
f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain tubular-sleeve pipe couplings from single manufacturer.
4. Standard: AWWA C219.
5. Center-Sleeve Material: [**Manufacturer's standard**][**Carbon steel**][**Stainless steel**][**Ductile iron**][**Malleable iron**].
6. Gasket Material: Natural or synthetic rubber.
7. Pressure Rating: [**150 psig (1035 kPa)**][**200 psig (1380 kPa)**]<**Insert pressure**> minimum.
8. Metal Component Finish: Corrosion-resistant coating or material.

C. Split-Sleeve Pipe Couplings: Metal, bolted, split-sleeve-type, reducing or transition coupling with sealing pad and closure plates, O-ring gaskets, and bolt fasteners.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Victaulic Company**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Victaulic Company**]
b. <**Insert manufacturer's name**>

3. Source Limitations: Obtain split-sleeve pipe couplings from single manufacturer.
4. Standard: AWWA C227.
5. Sleeve Material: [**Manufacturer's standard**][**Carbon steel**][**Stainless steel**].
6. Sleeve Dimensions: Of thickness and width required to provide pressure rating.
7. Gasket Material: O-rings made of EPDM rubber unless otherwise indicated.
8. Pressure Rating: [**150 psig (1035 kPa)**][**200 psig (1380 kPa)**]<**Insert pressure**> minimum.
9. Metal Component Finish: Corrosion-resistant coating or material.

D. Flexible Connectors:

1. Nonferrous-Metal Piping: Bronze hose covered with bronze wire braid; with copper-tube, pressure-type, solder-joint ends or bronze flanged ends brazed to hose.
2. Ferrous-Metal Piping: Stainless steel hose covered with stainless steel wire braid; with ASME B1.20.1, threaded steel pipe nipples or ASME B16.5, steel pipe flanges welded to hose.

E. Dielectric Fittings: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.

1. Dielectric Unions:

a. Standard: ASSE 1079.
b. Pressure Rating: [**125 psig (860 kPa) minimum at 180 deg F (82 deg C)**][**150 psig (1035 kPa)**][**250 psig (1725 kPa)**]<**Insert pressure rating and temperature**>.
c. End Connections: Solder-joint copper alloy and threaded ferrous.

2. Dielectric Flanges:

a. Standard: ASSE 1079.
b. Factory-fabricated, bolted, companion-flange assembly.
c. Pressure Rating: [**125 psig (860 kPa) minimum at 180 deg F (82 deg C)**][**150 psig (1035 kPa)**][**175 psig (1200 kPa)**][**300 psig (2070 kPa)**]<**Insert pressure rating and temperature**>.
d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

3. Dielectric-Flange Insulating Kits: Nonconducting materials for field assembly of companion flanges.

a. Pressure Rating: [**150 psig (1035 kPa)**]<**Insert pressure rating**>.
b. Gasket: Neoprene or phenolic.
c. Bolt Sleeves: Phenolic or PE.
d. Washers: Phenolic with steel backing washers.

4. Dielectric Nipples:

a. Standard: IAPMO PS 66.
b. Electroplated steel nipple complying with ASTM F1545.
c. Pressure Rating: [**300 psig (2070 kPa) at 225 deg F (107 deg C)**]<**Insert pressure rating and temperature**>.
d. End Connections: Male threaded or grooved.
e. Lining: Inert and noncorrosive, PP.

2.11 ENCASEMENT FOR PIPING

A. Standards: ASTM A674 or AWWA C105/A21.5.

B. Form: [**Sheet**][**or**][**tube**].

C. Material: [**Linear low-density PE film of 0.008-inch (0.20-mm) minimum thickness**][**or**][**high-density, cross-laminated PE film of 0.004-inch (0.10-mm) minimum thickness**].

D. Color: [**Black**][**or**][**natural**]<**Insert color**>.

2.12 GATE VALVES

A. Gate Valves - AWWA, Cast Iron:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**American AVK Co.**]
b. [**American Cast Iron Pipe Company**]
c. [**Clow Valve Company; a subsidiary of McWane, Inc.**]
d. [**EJ Group, Inc.**]
e. [**Flomatic Valves; Flomatic Corporation**]
f. [**M & H Valve Company; a division of McWane, Inc.**]
g. [**Mueller Co. LLC; Mueller Water Products, Inc.**]
h. [**NIBCO INC.**]
i. [**Zurn Industries, LLC**]

j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**American AVK Co.**]
b. [**American Cast Iron Pipe Company**]
c. [**Clow Valve Company; a subsidiary of McWane, Inc.**]
d. [**EJ Group, Inc.**]
e. [**Flomatic Valves; Flomatic Corporation**]
f. [**M & H Valve Company; a division of McWane, Inc.**]
g. [**Mueller Co. LLC; Mueller Water Products, Inc.**]
h. [**NIBCO INC.**]
i. [**Zurn Industries, LLC**]
j. <**Insert manufacturer's name**>

3. Source Limitations: Obtain gate valves - AWWA, cast iron, from single manufacturer.
4. Gate Valves - Nonrising Stem, Resilient Seated: Cast- or ductile-iron body and bonnet, with bronze or cast- or ductile-iron gate, resilient seats, bronze stem, and stem nut.

a. Standards: AWWA C509 or AWWA C515.
b. Minimum Pressure Rating: **200 psig (1380 kPa)**.
c. End Connections: Mechanical joint, flanged, threaded, or push on.
d. Interior Coating: Complying with AWWA C550.

5. Gate Valves - OS&Y, Rising Stem, Resilient Seated: Cast- or ductile-iron body and bonnet, with bronze or cast- or ductile-iron gate, resilient seats, and bronze stem.

a. Standard: AWWA C509 or AWWA C515.
b. Minimum Pressure Rating: **200 psig (1380 kPa)**.
c. End Connections: Mechanical joint, flanged, threaded, or push on.

B. Gate Valves - UL/FM Global, Cast Iron:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**American AVK Co.**]
b. [**American Cast Iron Pipe Company**]
c. [**Clow Valve Company; a subsidiary of McWane, Inc.**]
d. [**Kennedy Valve Company; a division of McWane, Inc.**]
e. [**M & H Valve Company; a division of McWane, Inc.**]
f. [**Mueller Co. LLC; Mueller Water Products, Inc.**]
g. [**NIBCO INC.**]
h. [**Zurn Industries, LLC**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**American AVK Co.**]

b. [**American Cast Iron Pipe Company**]
c. [**Clow Valve Company; a subsidiary of McWane, Inc.**]
d. [**Kennedy Valve Company; a division of McWane, Inc.**]
e. [**M & H Valve Company; a division of McWane, Inc.**]
f. [**Mueller Co. LLC; Mueller Water Products, Inc.**]
g. [**NIBCO INC.**]
h. [**Zurn Industries, LLC**]
i. <**Insert manufacturer's name**>

3. Source Limitations: Obtain gate valves - UL/FM Global, cast iron, from single manufacturer.
4. Gate Valves - UL/FM Global, Nonrising Stem, Resilient Seated: Cast- or ductile-iron body and bonnet, with flange for indicator post, bronze seating material, and inside screw.

a. Standards: AWWA C509 or AWWA C515, UL listed and FM Global approved.
b. Minimum Pressure Rating: **175 psig (1207 kPa)**.
c. End Connections: Mechanical joint or flanged.
d. Interior Coating: Complying with AWWA C550.

5. Gate Valves - OS&Y, Rising Stem, Resilient Seated: Cast- or ductile-iron body and bonnet and bronze seating material.

a. Standards: AWWA C509 or AWWA C515, UL listed and FM Global approved.
b. Minimum Pressure Rating: **175 psig (1207 kPa)**.
c. End Connections: Mechanical joint or flanged.
d. Interior Coating: Complying with AWWA C550.

C. Gate Valves - Bronze:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Crane Fluid Systems; Crane Co.**]
b. [**Hammond Valve**]
c. [**Jenkins Valves; a Crane Co. brand**]
d. [**Milwaukee Valve Company**]
e. [**NIBCO INC.**]
f. [**Red-White Valve Corp.**]
g. [**Stockham; a Crane Co. brand**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Crane Fluid Systems; Crane Co.**]
b. [**Hammond Valve**]
c. [**Jenkins Valves; a Crane Co. brand**]
d. [**Milwaukee Valve Company**]
e. [**NIBCO INC.**]
f. [**Red-White Valve Corp.**]
g. [**Stockham; a Crane Co. brand**]
h. <**Insert manufacturer's name**>

3. Source Limitations: Obtain gate valves - bronze, from single manufacturer.

4. Gate Valves - OS&Y, Rising Stem: Bronze body and bonnet and bronze stem.

   a. Standards: UL listed and FM Global approved.
   b. Minimum Pressure Rating: **175 psig (1207 kPa)**.
   c. End Connections: Threaded.

5. Gate Valves - Nonrising Stem: Class 125, bronze with solid wedge.

   a. Standard: MSS SP-80.
   b. End Connections: Threaded or solder.
   c. Handwheel: Malleable iron.

2.13 GATE VALVE ACCESSORIES AND SPECIALTIES

A. Tapping-Sleeve Assemblies: Sleeve and valve compatible with drilling machine.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**American Cast Iron Pipe Company**]
   b. [**Kennedy Valve Company; a division of McWane, Inc.**]
   c. [**U.S. Pipe**]
   d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**American Cast Iron Pipe Company**]
   b. [**Kennedy Valve Company; a division of McWane, Inc.**]
   c. [**U.S. Pipe**]
   d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain tapping-sleeve assemblies from single manufacturer.
4. Standard: MSS SP-60.
5. Tapping Sleeve: Cast- or ductile-iron or stainless steel, two-piece bolted sleeve with flanged outlet for new branch connection. Include sleeve matching size and type of pipe material being tapped and with recessed flange for branch valve.
6. Valve: AWWA, cast-iron, nonrising-stem, [**metal**][**resilient**]-seated gate valve with one raised face flange mating tapping-sleeve flange.

B. Valve Boxes: Comply with AWWA M44 for cast-iron valve boxes. Include top section, adjustable extension of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over valve and with a barrel approximately **5 inches (125 mm)** in diameter.

1. Operating Wrenches: Steel, tee-handle with one pointed end, stem of length to operate deepest buried valve, and socket matching valve operating nut.

C. Indicator Posts: UL 789, FM Global approved, vertical-type, cast-iron body with operating wrench, extension rod, and adjustable cast-iron barrel of length required for depth of burial of valve.

2.14 CHECK VALVES

A. Check Valves - AWWA: Swing-check type with resilient seat with ends to match piping.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**American AVK Co.**]
b. [**American Cast Iron Pipe Company**]
c. [**Clow Valve Company; a subsidiary of McWane, Inc.**]
d. [**DeZURIK**]
e. [**Flomatic Valves; Flomatic Corporation**]
f. [**M & H Valve Company; a division of McWane, Inc.**]
g. [**Mueller Co. LLC; Mueller Water Products, Inc.**]
h. [**NIBCO INC.**]
i. [**Stockham; a Crane Co. brand**]
j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**American AVK Co.**]
b. [**American Cast Iron Pipe Company**]
c. [**Clow Valve Company; a subsidiary of McWane, Inc.**]
d. [**DeZURIK**]
e. [**Flomatic Valves; Flomatic Corporation**]
f. [**M & H Valve Company; a division of McWane, Inc.**]
g. [**Mueller Co. LLC; Mueller Water Products, Inc.**]
h. [**NIBCO INC.**]
i. [**Stockham; a Crane Co. brand**]
j. <**Insert manufacturer's name**>

3. Source Limitations: Obtain check valves, AWWA, from single manufacturer.
4. Standards:

a. AWWA C508.
b. Interior coating in accordance with AWWA C550.

5. Pressure Rating: **175 psig (1207 kPa)**.

B. Check Valves - UL/FM Global: Swing-check type with pressure rating, rubber-face checks unless otherwise indicated, and ends matching piping.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**American Cast Iron Pipe Company**]
b. [**Matco-Norca**]
c. [**Mueller Co. LLC; Mueller Water Products, Inc.**]
d. [**NIBCO INC.**]
e. [**Reliable Automatic Sprinkler Co., Inc. (The)**]

f. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

   a. [**American Cast Iron Pipe Company**]
   b. [**Matco-Norca**]
   c. [**Mueller Co. LLC; Mueller Water Products, Inc.**]
   d. [**NIBCO INC.**]
   e. [**Reliable Automatic Sprinkler Co., Inc. (The)**]
   f. **<Insert manufacturer's name>**

3. Source Limitations: Obtain check valves - UL/FM Global, from single manufacturer.
4. Standards: UL listed and FM Global approved.
5. Pressure Rating: [**175 psig (1207 kPa)**][**250 psig (1725 kPa)**].

2.15 DETECTOR CHECK VALVES

A. Detector Check Valves:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Ames Fire & Waterworks; A Watts Water Technologies Company**]
   b. [**FEBCO; A WATTS Brand**]
   c. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

   a. [**Ames Fire & Waterworks; A Watts Water Technologies Company**]
   b. [**FEBCO; A WATTS Brand**]
   c. **<Insert manufacturer's name>**

3. Source Limitations: Obtain detector check valves from single manufacturer.

B. Description: Include threaded bypass taps in inlet and outlet for bypass meter connection. Set valve to allow minimal water flow through bypass meter when major water flow is required.

1. Standards: UL listed and FM Global approved.
2. Pressure Rating: **175 psig (1207 kPa)**.

C. Water Meter: AWWA C700, disc type, at least one-fourth size of detector check valve. Include meter, bypass piping, gate valves, check valve, and connections to detector check valve.

2.16 BUTTERFLY VALVES

A. Butterfly Valves - AWWA:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**DeZURIK**]
    b. [**Flomatic Valves; Flomatic Corporation**]
    c. [**Henry Pratt Company; a Mueller brand**]
    d. [**Homestead Valve: a division of Olson Technologies, Inc.**]
    e. [**Milliken Valve Company; a Mueller brand.**]
    f. [**Mueller Co. LLC; Mueller Water Products, Inc.**]
    g. [**Val-Matic Valve & Manufacturing Corp.**]
    h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**DeZURIK**]
    b. [**Flomatic Valves; Flomatic Corporation**]
    c. [**Henry Pratt Company; a Mueller brand**]
    d. [**Homestead Valve: a division of Olson Technologies, Inc.**]
    e. [**Milliken Valve Company; a Mueller brand.**]
    f. [**Mueller Co. LLC; Mueller Water Products, Inc.**]
    g. [**Val-Matic Valve & Manufacturing Corp.**]
    h. <**Insert manufacturer's name**>

3. Source Limitations: Obtain butterfly valves - AWWA, from single manufacturer.
4. Standard: AWWA C504.
5. Body: Cast or ductile iron.
6. Body Type: [**Wafer**][**or**][**flanged**]<**Insert type**>.
7. Seat: Rubber.
8. Pressure Rating: **150 psig (1035 kPa)**.

B. Butterfly Valves - UL:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Henry Pratt Company; a Mueller brand**]
    b. [**NIBCO INC.**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Henry Pratt Company; a Mueller brand**]
    b. [**NIBCO INC.**]
    c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain butterfly valves - UL, from single manufacturer.
4. Standards: UL 1091 and FM Global approved.
5. Body: Cast or ductile iron.

6. Body Type: [**Wafer**][**or**][**flanged**]<**Insert type**>.
7. Seat: Metal or resilient material.
8. Pressure Rating: **175 psig (1207 kPa)**.

2.17 CORPORATION VALVES, CURB VALVES, AND METER VALVES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**A.Y. McDonald Mfg. Co.**]
2. [**Ford Meter Box Company, Inc. (The)**]
3. [**James Jones Company, LLC; a Mueller brand**]
4. [**Red Hed Manufacturing Company; a division of Everett J. Prescott, Inc.**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**A.Y. McDonald Mfg. Co.**]
2. [**Ford Meter Box Company, Inc. (The)**]
3. [**James Jones Company, LLC; a Mueller brand**]
4. [**Red Hed Manufacturing Company; a division of Everett J. Prescott, Inc.**]
5. <**Insert manufacturer's name**>

C. Source Limitations: Obtain corporation valves, curb valves, and meter valves from single manufacturer.

D. Corporation Valves: Comply with AWWA C800. Include saddle and valve compatible with tapping machine.

1. Service Saddle: Copper alloy with seal and AWWA C800, threaded outlet for corporation valve.
2. Corporation Valve: Bronze body, ground-key plug or ball, with AWWA C800, threaded inlet and outlet matching service piping material.
3. Manifold: Copper fitting with two to four inlets as required, with ends matching corporation valves and outlet matching service piping material.

E. Curb Valves: Comply with AWWA C800. Include bronze body, ground-key plug or ball, and wide tee head, with inlet and outlet matching service piping material.

1. Service Boxes for Curb Valves: ASTM A48/A48M, Class 25 cast-iron valve boxes. Include cast-iron telescoping top section of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over curb valve and with a barrel approximately **3 inches (75 mm)** in diameter.

a. Shutoff Rods: Steel, tee-handle with one pointed end, stem of length to operate deepest buried valve, and slotted end matching curb valve.

F. Meter Valves: Comply with AWWA C800 for high-pressure, service-line valves. Include angle or straight-through-pattern bronze body, ground-key plug or ball, wide tee head, with inlet and outlet matching service piping material.

2.18 WATER METERS

A. Water Meter - Utility Company Furnished:

1. Utility Company: <**Insert name**>.

B. Water Meters - Displacement Type:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Badger Meter, Inc.**]
b. [**Carlon Meter**]
c. [**Master Meter, Inc**]
d. [**Mueller Systems, LLC; a subsidiary of Mueller Water Products, Inc.**]
e. [**Neptune Technology Group Inc.**]
f. [**Niagara Meters**]
g. [**Sensus; a Xylem brand**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Badger Meter, Inc.**]
b. [**Carlon Meter**]
c. [**Master Meter, Inc**]
d. [**Mueller Systems, LLC; a subsidiary of Mueller Water Products, Inc.**]
e. [**Neptune Technology Group Inc.**]
f. [**Niagara Meters**]
g. [**Sensus; a Xylem brand**]
h. <**Insert manufacturer's name**>

3. Source Limitations: Obtain water meters - displacement type, from single manufacturer.
4. Standard: AWWA C700.
5. Pressure Rating: **150 psig (1035 kPa)** working pressure.
6. Body Design: Nutating disc; totalization meter.
7. Registration: Flow in [**gal. (L)**][**cu. ft. (cu. m)**] as required by utility company.
8. Case: [**Bronze**][**Stainless steel**].
9. End Connections: Threaded or flanged <**Insert connection**>.

C. Water Meters - Turbine Type:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Badger Meter, Inc.**]
b. [**Carlon Meter**]
c. [**Mueller Systems, LLC; a subsidiary of Mueller Water Products, Inc.**]
d. [**Neptune Technology Group Inc.**]
e. [**Niagara Meters**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Badger Meter, Inc.**]
    b. [**Carlon Meter**]
    c. [**Mueller Systems, LLC; a subsidiary of Mueller Water Products, Inc.**]
    d. [**Neptune Technology Group Inc.**]
    e. [**Niagara Meters**]
    f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain water meters - turbine type, from single manufacturer.
4. Standard: AWWA C701.
5. Pressure Rating: **150 psig (1035 kPa)** working pressure.
6. Body Design: Turbine; totalization meter.
7. Registration: Flow in [**gal. (L)**][**cu. ft. (cu. m)**] as required by utility company.
8. Case: [**Bronze**][**Epoxy-coated cast iron**].
9. End Connections: Threaded or flanged <**Insert connection**>.

D. Water Meters - Compound Type:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Badger Meter, Inc.**]
    b. [**Mueller Systems, LLC; a subsidiary of Mueller Water Products, Inc.**]
    c. [**Neptune Technology Group Inc.**]
    d. [**Sensus; a Xylem brand**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Badger Meter, Inc.**]
    b. [**Mueller Systems, LLC; a subsidiary of Mueller Water Products, Inc.**]
    c. [**Neptune Technology Group Inc.**]
    d. [**Sensus; a Xylem brand**]
    e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain water meters - compound type, from single manufacturer.
4. Standard: AWWA C702.
5. Pressure Rating: **150 psig (1035 kPa)** working pressure.
6. Body Design: With integral mainline and bypass meters; totalization meter.
7. Registration: Flow in [**gal. (L)**][**cu. ft. (cu. m)**] as required by utility company.
8. Case: [**Bronze**][**Coated ductile iron**].
9. End connections: Flanged <**Insert connection**>.

E. Water Meters - Ultrasonic Type:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

a. [**Badger Meter, Inc.**]
b. [**Master Meter, Inc**]
c. [**Neptune Technology Group Inc.**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Badger Meter, Inc.**]
b. [**Master Meter, Inc**]
c. [**Neptune Technology Group Inc.**]
d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain water meters - ultrasonic type, from single manufacturer.
4. Standard: AWWA C715.
5. Pressure Rating: **150 psig (1035 kPa)** working pressure.
6. Body Design: Ultrasonic open flow tube; totalization meter.
7. Registration: Flow in [**gal. (L)**][**cu. ft. (cu. m)**] as required by utility company.
8. Case: [**Bronze**][**Stainless steel**][**Engineered polymer**][**Epoxy-coated ductile iron**]<**Insert type**>.
9. End Connections: Threaded or flanged <**Insert connection**>.

F. Ultrasonic Type Water Meter, Remote Registration System, Direct-Reading Type: Utility company standard. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.

1. Registration: Flow in [**gal. (L)**][**cu. ft. (cu. m)**].

G. Ultrasonic Type Water Meter, Remote Registration System, Encoder Type: Utility company standard. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.

1. Standard: AWWA C707.
2. Registration: Flow in [**gal. (L)**][**cu. ft. (cu. m)**].
3. Data-Acquisition Units: Comply with utility company requirements for type and quantity.
4. Visible Display Units: Comply with utility company requirements for type and quantity.

H. Water Meters - Detector Type:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Badger Meter, Inc.**]
b. [**Mueller Systems, LLC; a subsidiary of Mueller Water Products, Inc.**]
c. [**Neptune Technology Group Inc.**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Badger Meter, Inc.**]
b. [**Mueller Systems, LLC; a subsidiary of Mueller Water Products, Inc.**]
c. [**Neptune Technology Group Inc.**]
d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain water meters - detector type, from single manufacturer.
4. Standards: AWWA C703, and UL listed or FM Global approved.
5. Pressure Rating: **175 psig (1207 kPa)**.
6. Registration: Flow in [**gal. (L)**][**cu. ft. (cu. m)**].
7. Bypass Meter: [**AWWA C700, disc**][**AWWA C701, turbine**][**AWWA C702, compound**]-type, bronze case.

I. Detector Type Water Meter, Remote Registration System, Direct-Reading Type: Utility company standard. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.

1. Registration: Flow in [**gal. (L)**][**cu. ft. (cu. m)**].

J. Detector Type Water Meter, Remote Registration System, Encoder Type: Utility company standard. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.

1. Standard: AWWA C707.
2. Registration: Flow in [**gal. (L)**][**cu. ft. (cu. m)**].
3. Data-Acquisition Units: Comply with utility company requirements for type and quantity.
4. Visible Display Units: Comply with utility company requirements for type and quantity.

2.19 WATER METER BOXES

A. Water Meter Boxes:

1. Cast-iron body and cover for disc-type water meter, with lettering "WATER METER" in cover; and with slotted, open-bottom base section of length to fit over service piping.

a. Option: Base section may be cast-iron, PVC, clay, or other pipe.

2. Cast-iron body and double cover for disc-type water meter, with lettering "WATER METER" in top cover; and with separate inner cover; air space between covers; and slotted, open-bottom base section of length to fit over service piping.
3. Water Meter Boxes: Polymer-concrete body and cover for disc-type water meter, with lettering "WATER METER" in cover; and with slotted, open-bottom base section of length to fit over service piping. Include vertical and lateral design loadings of **15,000 lb minimum over 10 by 10 inches (6800 kg minimum over 254 by 254 mm)** square.

2.20 PRESSURE-REDUCING VALVES

A. Pressure-Reducing Valves - Direct Acting:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
b. [**Cash Acme Plumbing Products; an RWC brand**]
c. [**Flomatic Valves; Flomatic Corporation**]
d. [**WATTS; A Watts Water Technologies Company**]
e. [**Zurn Industries, LLC**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
b. [**Cash Acme Plumbing Products; an RWC brand**]
c. [**Flomatic Valves; Flomatic Corporation**]
d. [**WATTS; A Watts Water Technologies Company**]
e. [**Zurn Industries, LLC**]
f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain pressure-reducing valves - direct acting, from single manufacturer.
4. Standard: ASSE 1003.
5. Pressure Rating: Initial pressure of **150 psig (1035 kPa)**.
6. Size: <**Insert NPS (DN)**>.
7. Design Flow Rate: <**Insert gpm (L/s)**>.
8. Design Inlet Pressure: <**Insert psig (kPa)**>.
9. Design Outlet Pressure Setting: <**Insert psig (kPa)**>.
10. Body: Bronze[**with chrome-plated finish**].
11. End Connections: Threaded for **NPS 2 (DN 50)** and smaller; flanged for **NPS 2-1/2 and NPS 3 (DN 65 and DN 80)**.

B. Pressure-Reducing Valves - Pilot Operated: Pilot-operation, diaphragm-type, single-seated main water control valve with interior epoxy coating. Include small pilot control valve, restrictor device, specialty fittings, and sensor piping.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
b. [**CLA-VAL**]
c. [**Dorot Control Valves Inc.**]
d. [**Flomatic Valves; Flomatic Corporation**]
e. [**OCV Control Valves**]
f. [**Zurn Industries, LLC**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
b. [**CLA-VAL**]
c. [**Dorot Control Valves Inc.**]
d. [**Flomatic Valves; Flomatic Corporation**]
e. [**OCV Control Valves**]
f. [**Zurn Industries, LLC**]

g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain pressure-reducing valves - pilot operated, from single manufacturer.
4. Pressure Rating: Initial pressure of **150 psig (1035 kPa)** minimum.
5. Main Valve Body: Cast- or ductile-iron, or stainless steel body.
6. Size: <**Insert NPS (DN)**>.
7. Pattern: [**Angle**][**Globe**]-valve design.
8. Design Flow Rate: <**Insert gpm (L/s)**>.
9. Design Inlet Pressure: <**Insert psig (kPa)**>.
10. Design Outlet Pressure Setting: <**Insert psig (kPa)**>.
11. End Connections: [**Threaded**][**or**][**grooved**][**or**][**flanged**].

2.21 RELIEF VALVES

A. Air-Release Valves:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Crispin Valve**]
b. [**Flomatic Valves; Flomatic Corporation**]
c. [**GA Industries, Inc**]
d. [**Val-Matic Valve & Manufacturing Corp.**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Crispin Valve**]
b. [**Flomatic Valves; Flomatic Corporation**]
c. [**GA Industries, Inc**]
d. [**Val-Matic Valve & Manufacturing Corp.**]
e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain air-release valves from single manufacturer.
4. Standard: AWWA C512.
5. Pressure Rating: [**300 psig (2070 kPa)**]<**Insert pressure**>.
6. Body Material: [**Cast iron**]<**Insert material**>.
7. Trim Material: Stainless steel[**, brass, or bronze**].
8. Water Inlet Size: <**Insert NPS (DN)**>.
9. Air Outlet Size: <**Insert NPS (DN)**>.
10. Orifice Size: <**Insert inches (mm)**>.
11. Design Air-Release Capacity: <**Insert cfm (L/s)**> at <**Insert psig (kPa)**> pipeline pressure.

B. Air/Vacuum Valves: Direct-acting, float-operated, hydromechanical device with large orifice to automatically release accumulated air or to admit air during filling of piping.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Crispin Valve**]
b. [**Flomatic Valves; Flomatic Corporation**]
c. [**GA Industries, Inc**]
d. [**Val-Matic Valve & Manufacturing Corp.**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Crispin Valve**]
b. [**Flomatic Valves; Flomatic Corporation**]
c. [**GA Industries, Inc**]
d. [**Val-Matic Valve & Manufacturing Corp.**]
e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain air/vacuum valves from single manufacturer.
4. Standard: AWWA C512.
5. Pressure Rating: [**300 psig (2070 kPa)**]<**Insert pressure**>.
6. Body Material: [**Cast iron**]<**Insert material**>.
7. Trim Material: Stainless steel[**, brass, or bronze**].
8. Inlet and Outlet Size: <**Insert NPS (DN)**>.
9. Orifice Size: <**Insert inches (mm)**>.
10. Design Air Capacity: <**Insert cfm (L/s)**> at <**Insert psig (kPa)**> differential pressure.

C. Combination Air Valves: Float-operated, hydromechanical device to automatically release accumulated air or to admit air.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Crispin Valve**]
b. [**Flomatic Valves; Flomatic Corporation**]
c. [**GA Industries, Inc**]
d. [**Val-Matic Valve & Manufacturing Corp.**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Crispin Valve**]
b. [**Flomatic Valves; Flomatic Corporation**]
c. [**GA Industries, Inc**]
d. [**Val-Matic Valve & Manufacturing Corp.**]
e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain combination air valves from single manufacturer.
4. Standard: AWWA C512.
5. Pressure Rating: [**300 psig (2070 kPa)**]<**Insert pressure**>.
6. Body Material: [**Cast iron**]<**Insert material**>.
7. Trim Material: Stainless steel[**, brass, or bronze**].
8. Inlet and Outlet Size: <**Insert NPS (DN)**>.
9. Orifice Size: <**Insert inches (mm)**>.

10. Design Air Capacity: <**Insert cfm (L/s)**> at <**Insert psig (kPa)**> differential pressure.

2.22 VACUUM BREAKERS

A. Pressure Vacuum Breaker Assembly:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
    b. [**FEBCO; A WATTS Brand**]
    c. [**WATTS; A Watts Water Technologies Company**]
    d. [**Zurn Industries, LLC**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
    b. [**FEBCO; A WATTS Brand**]
    c. [**WATTS; A Watts Water Technologies Company**]
    d. [**Zurn Industries, LLC**]
    e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain pressure vacuum breaker assembly from single manufacturer.
4. Standard: ASSE 1020.
5. Operation: Continuous-pressure applications.
6. Pressure Loss: [**5 psig (35 kPa)**]<**Insert pressure**> maximum, through middle one-third of flow range.
7. Size: <**Insert NPS (DN)**>.
8. Design Flow Rate: <**Insert gpm (L/s)**>.
9. Selected Unit Flow Range Limits: <**Insert gpm (L/s)**>.
10. Pressure Loss at Design Flow Rate: <**Insert psig (kPa)**>.
11. Accessories: Ball valves on inlet and outlet.

2.23 BACKFLOW PREVENTERS

A. Backflow Preventers - Reduced-Pressure Principle:
