1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Ames Fire & Waterworks; A Watts Water Technologies Company**]
    b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
    c. [**FEBCO; A WATTS Brand**]
    d. [**WATTS; A Watts Water Technologies Company**]
    e. [**Zurn Industries, LLC**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Ames Fire & Waterworks; A Watts Water Technologies Company**]
    b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
    c. [**FEBCO; A WATTS Brand**]
    d. [**WATTS; A Watts Water Technologies Company**]
    e. [**Zurn Industries, LLC**]
    f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain backflow preventers - reduced-pressure principle, from single manufacturer.
4. Standard: [**ASSE 1013**][**or**][**AWWA C511**].
5. Operation: Continuous-pressure applications.
6. Pressure Loss: [**12 psig (83 kPa)**]<**Insert pressure**> maximum, through middle one-third of flow range.
7. Size: <**Insert NPS (DN)**>.
8. Design Flow Rate: <**Insert gpm (L/s)**>.
9. Selected Unit Flow Range Limits: <**Insert gpm (L/s)**>.
10. Pressure Loss at Design Flow Rate: <**Insert psig (kPa)**> for **NPS 2 (DN 50)** and smaller; <**Insert psig (kPa)**> for **NPS 2-1/2 (DN 65)** and larger.
11. Body: Bronze for **NPS 2 (DN 50)** and smaller; [**cast iron with interior lining complying with AWWA C550 or that is FDA approved**][**steel with interior lining complying with AWWA C550 or that is FDA approved**][**stainless steel**] for **NPS 2-1/2 (DN 65)** and larger.
12. End Connections: Threaded for **NPS 2 (DN 50)** and smaller; [**flanged**]<**Insert type**> for **NPS 2-1/2 (DN 65)** and larger.
13. Configuration: Designed for [**horizontal, straight through**][**vertical inlet, horizontal center section, and vertical outlet**][**vertical**]<**Insert configuration**> flow.
14. Accessories:

    a. Valves: Ball type with threaded ends on inlet and outlet of **NPS 2 (DN 50)** and smaller; OS&Y gate type with flanged ends on inlet and outlet of **NPS 2-1/2 (DN 65)** and larger.
    b. Air-Gap Fitting: ASME A112.1.2, matching backflow preventer connection.

B. Backflow Preventers - Double-Check Assembly:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Ames Fire & Waterworks; A Watts Water Technologies Company**]
    b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
    c. [**FEBCO; A WATTS Brand**]
    d. [**WATTS; A Watts Water Technologies Company**]
    e. [**Zurn Industries, LLC**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Ames Fire & Waterworks; A Watts Water Technologies Company**]
    b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
    c. [**FEBCO; A WATTS Brand**]

d. [**WATTS; A Watts Water Technologies Company**]
e. [**Zurn Industries, LLC**]
f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain backflow preventers - double-check assembly, from single manufacturer.
4. Standard: [**ASSE 1015**][**or**][**AWWA C510**].
5. Operation: Continuous-pressure applications unless otherwise indicated.
6. Pressure Loss: [**5 psig (35 kPa)**]<**Insert pressure**> maximum, through middle one-third of flow range.
7. Size: <**Insert NPS (DN)**>.
8. Design Flow Rate: <**Insert gpm (L/s)**>.
9. Selected Unit Flow Range Limits: <**Insert gpm (L/s)**>.
10. Pressure Loss at Design Flow Rate: <**Insert psig (kPa)**> for **NPS 2 (DN 50)** and smaller; <**Insert psig (kPa)**> for **NPS 2-1/2 (DN 65)** and larger.
11. Body: Bronze for **NPS 2 (DN 50)** and smaller; [**cast iron with interior lining complying with AWWA C550 or that is FDA approved**][**steel with interior lining complying with AWWA C550 or that is FDA approved**][**stainless steel**] for **NPS 2-1/2 (DN 65)** and larger.
12. End Connections: Threaded for **NPS 2 (DN 50)** and smaller; [**flanged**]<**Insert type**> for **NPS 2-1/2 (DN 65)** and larger.
13. Configuration: Designed for [**horizontal, straight through**]<**Insert configuration**> flow.
14. Accessories: Ball valves with threaded ends on inlet and outlet of **NPS 2 (DN 50)** and smaller; OS&Y gate valves with flanged ends on inlet and outlet of **NPS 2-1/2 (DN 65)** and larger.

C. Backflow Preventers - Reduced-Pressure-Detector, Fire-Protection Assembly:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Ames Fire & Waterworks; A Watts Water Technologies Company**]
   b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
   c. [**FEBCO; A WATTS Brand**]
   d. [**WATTS; A Watts Water Technologies Company**]
   e. [**Zurn Industries, LLC**]
   f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Ames Fire & Waterworks; A Watts Water Technologies Company**]
   b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
   c. [**FEBCO; A WATTS Brand**]
   d. [**WATTS; A Watts Water Technologies Company**]
   e. [**Zurn Industries, LLC**]
   f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain backflow preventers - reduced-pressure-detector, fire-protection assembly, from single manufacturer.
4. Standards: ASSE 1047, and UL listed or FM Global approved.
5. Operation: Continuous-pressure applications.
6. Pressure Loss: [**12 psig (83 kPa)**]<**Insert pressure**> maximum, through middle one-third of flow range.

7. Size: <**Insert NPS (DN)**>.
8. Design Flow Rate: <**Insert gpm (L/s)**>.
9. Selected Unit Flow Range Limits: <**Insert gpm (L/s)**>.
10. Pressure Loss at Design Flow Rate: <**Insert psig (kPa)**>.
11. Body: [**Cast iron with interior lining complying with AWWA C550 or that is FDA approved**][**Steel with interior lining complying with AWWA C550 or that is FDA approved**][**Stainless steel**].
12. End Connections: Flanged.
13. Configuration: Designed for [**horizontal, straight through**][**vertical inlet, horizontal center section, and vertical outlet**][**vertical**]<**Insert configuration**> flow.
14. Accessories:

    a. Valves: UL 262, FM Global approved, OS&Y gate type with flanged ends on inlet and outlet.
    b. Air-Gap Fitting: ASME A112.1.2, matching backflow preventer connection.
    c. Bypass: With displacement-type water meter, shutoff valves, and reduced-pressure backflow preventer.

D. Backflow Preventers - Double-Check, Detector Assembly:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Ames Fire & Waterworks; A Watts Water Technologies Company**]
    b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
    c. [**FEBCO; A WATTS Brand**]
    d. [**WATTS; A Watts Water Technologies Company**]
    e. [**Zurn Industries, LLC**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Ames Fire & Waterworks; A Watts Water Technologies Company**]
    b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
    c. [**FEBCO; A WATTS Brand**]
    d. [**WATTS; A Watts Water Technologies Company**]
    e. [**Zurn Industries, LLC**]
    f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain backflow preventers - double-check, detector-assembly, from single manufacturer.
4. Standards: ASSE 1048, and UL listed or FM Global approved.
5. Operation: Continuous-pressure applications.
6. Pressure Loss: [**5 psig (35 kPa)**]<**Insert pressure**> maximum, through middle one-third of flow range.
7. Size: <**Insert NPS (DN)**>.
8. Design Flow Rate: <**Insert gpm (L/s)**>.
9. Selected Unit Flow Range Limits: <**Insert gpm (L/s)**>.
10. Pressure Loss at Design Flow Rate: <**Insert psig (kPa)**>.
11. Body: [**Cast iron with interior lining complying with AWWA C550 or that is FDA approved**][**Steel with interior lining complying with AWWA C550 or that is FDA approved**][**Stainless steel**].

12. End Connections: Flanged.
13. Configuration: Designed for [**horizontal, straight through**][**vertical inlet, horizontal center section, and vertical outlet**][**vertical**]<**Insert configuration**> flow.
14. Accessories:

    a. Valves: UL 262, FM Global approved, OS&Y gate type with flanged ends on inlet and outlet.
    b. Bypass: With displacement-type water meter, shutoff valves, and reduced-pressure backflow preventer.

E. Backflow Preventer Test Kits: Factory calibrated, with gages, fittings, hoses, and carrying case with test-procedure instructions.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Ames Fire & Waterworks; A Watts Water Technologies Company**]
    b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
    c. [**FEBCO; A WATTS Brand**]
    d. [**WATTS; A Watts Water Technologies Company**]
    e. [**Zurn Industries, LLC**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Ames Fire & Waterworks; A Watts Water Technologies Company**]
    b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
    c. [**FEBCO; A WATTS Brand**]
    d. [**WATTS; A Watts Water Technologies Company**]
    e. [**Zurn Industries, LLC**]
    f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain backflow preventer test kits from single manufacturer.

2.24 CONCRETE VAULTS

A. Concrete Vault - Precast, Reinforced Concrete: Designed for A-16 load designation in accordance with ASTM C857 and made in accordance with ASTM C858.

1. Ladder: ASTM A36/A36M, steel or PE-encased steel steps.
2. Manhole:

    a. ASTM A48/A48M Class No. 35A minimum tensile strength, gray-iron traffic frame and cover; **24-inch (610-mm)** minimum diameter unless otherwise indicated.
    b. ASTM A536, Grade 60-40-18, ductile-iron traffic frame and cover: **24-inch (610-mm)** minimum diameter unless otherwise indicated.

3. Drain: ASME A112.6.3, cast-iron floor drain with outlet of size indicated. Include body anchor flange, light-duty cast-iron grate, bottom outlet, and integral or field-installed bronze ball or clapper-type backwater valve.

2.25 PROTECTIVE ENCLOSURES

A. Freeze-Protection Enclosures: Insulated enclosure designed to protect aboveground water piping, equipment, or specialties from freezing and damage, with heat source to maintain minimum internal temperature of **40 deg F (4 deg C)** when external temperatures reach as low as **minus 30 deg F (minus 34 deg C)**.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
    b. [**AquaSHIELD**]
    c. [**BF Products Inc.**]
    d. [**DekoRRa Products LLC**]
    e. [**G&C Enclosures**]
    f. [**Hot Box; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
    g. [**HydroCowl, Inc**]
    h. [**WATTS; A Watts Water Technologies Company**]
    i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
    b. [**AquaSHIELD**]
    c. [**BF Products Inc.**]
    d. [**DekoRRa Products LLC**]
    e. [**G&C Enclosures**]
    f. [**Hot Box; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
    g. [**HydroCowl, Inc**]
    h. [**WATTS; A Watts Water Technologies Company**]
    i. <**Insert manufacturer's name**>

3. Source Limitations: Obtain freeze-protection enclosures from single manufacturer.
4. Standard: ASSE 1060.
5. Class I: For equipment or devices other than pressure or atmospheric vacuum breakers.
6. Class I-V: For pressure or atmospheric vacuum breaker equipment or devices. Include drain opening in housing.
7. Housing: Reinforced[**-aluminum**][**or**][**-fiberglass**]<**Insert housing**> construction.

    a. Size: Of dimensions indicated, but not less than those required for access and service of protected unit.
    b. Drain opening for units with drain connection.
    c. Access doors with locking devices.
    d. Insulation inside housing.
    e. Anchoring devices for attaching housing to concrete base.

8. Electric heating cable or heater with self-limiting temperature control.

B. Freeze-Retardant Enclosures: Insulated enclosure designed to protect aboveground water piping, equipment, or specialties from weather and damage with minimum external temperatures of **33 deg F (0.5 deg C)**.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**AquaSHIELD**]
    b. [**BF Products Inc.**]
    c. [**DekoRRa Products LLC**]
    d. [**G&C Enclosures**]
    e. [**Hot Box; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
    f. [**HydroCowl, Inc**]
    g. [**WATTS; A Watts Water Technologies Company**]
    h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**AquaSHIELD**]
    b. [**BF Products Inc.**]
    c. [**DekoRRa Products LLC**]
    d. [**G&C Enclosures**]
    e. [**Hot Box; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
    f. [**HydroCowl, Inc**]
    g. [**WATTS; A Watts Water Technologies Company**]
    h. <**Insert manufacturer's name**>

3. Source Limitations: Obtain freeze-retardant enclosures from single manufacturer.
4. Standard: ASSE 1060.
5. Class II: For equipment or devices other than pressure or atmospheric vacuum breakers.
6. Class II-V: For pressure or atmospheric vacuum breaker equipment or devices. Include drain opening in housing.
7. Housing: Reinforced[**-aluminum**][**or**][**-fiberglass**]<**Insert housing**> construction.

    a. Size: Of dimensions indicated, but not less than those required for access and service of protected unit.
    b. Drain opening for units with drain connection.
    c. Access doors with locking devices.
    d. Anchoring devices for attaching housing to concrete base.

C. Non-Freeze Protection Enclosures: Uninsulated enclosure designed to protect aboveground water piping, equipment, or specialties from weather and damage.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**AquaSHIELD**]
    b. [**BF Products Inc.**]
    c. [**DekoRRa Products LLC**]
    d. [**G&C Enclosures**]
    e. [**Hot Box; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
    f. [**HydroCowl, Inc**]
    g. [**WATTS; A Watts Water Technologies Company**]

h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**AquaSHIELD**]
b. [**BF Products Inc.**]
c. [**DekoRRa Products LLC**]
d. [**G&C Enclosures**]
e. [**Hot Box; brand of Hubbell Utility Solutions; Hubbell Incorporated**]
f. [**HydroCowl, Inc**]
g. [**WATTS; A Watts Water Technologies Company**]
h. <**Insert manufacturer's name**>

3. Source Limitations: Obtain non-freeze protection enclosures from single manufacturer.
4. Standard: ASSE 1060.
5. Class III: For equipment or devices other than pressure or atmospheric vacuum breakers.
6. Class III-V: For pressure or atmospheric vacuum breaker equipment or devices. Include drain opening in housing.
7. Housing: Reinforced[**-aluminum**][**or**][**-fiberglass**]<**Insert housing**> construction.

a. Size: Of dimensions indicated, but not less than those required for access and service of protected unit.
b. Drain opening for units with drain connection.
c. Access doors with locking devices.
d. Anchoring devices for attaching housing to concrete base.

D. Expanded-Metal Enclosures: Enclosure designed to protect aboveground water piping, equipment, or specialties from damage.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Cross Brothers Inc.**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Cross Brothers Inc.**]
b. <**Insert manufacturer's name**>

3. Source Limitations: Obtain expanded-metal enclosures from single manufacturer.
4. Standard: ASTM F1267.
5. Material: Expanded metal side and top panels, of weight and with reinforcement of same metal at edges as required for rigidity.
6. Type: [**I, expanded**][**II, expanded and flattened**].
7. Class: [**1, uncoated carbon steel**][**2, hot-dip, zinc-coated carbon steel**][**3, corrosion-resistant steel**].
8. Finish: Manufacturer's enamel paint.
9. Size: Of dimensions indicated, but not less than those required for access and service of protected unit.

10. Locking device.
11. Lugs or devices for securing enclosure to base.

E. Enclosure Bases: [4-inch- (100-mm-)][6-inch- (150-mm-)] minimum thickness precast concrete, of dimensions required to extend at least 6 inches (150 mm) beyond edges of enclosure housings. Include openings for piping.

2.26 FIRE HYDRANTS

A. Fire Hydrants - Dry Barrel:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**American AVK Co.**]
    b. [**American Cast Iron Pipe Company**]
    c. [**Clow Valve Company; a subsidiary of McWane, Inc.**]
    d. [**EJ Group, Inc.**]
    e. [**M & H Valve Company; a division of McWane, Inc.**]
    f. [**Mueller Co. LLC; Mueller Water Products, Inc.**]
    g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**American AVK Co.**]
    b. [**American Cast Iron Pipe Company**]
    c. [**Clow Valve Company; a subsidiary of McWane, Inc.**]
    d. [**EJ Group, Inc.**]
    e. [**M & H Valve Company; a division of McWane, Inc.**]
    f. [**Mueller Co. LLC; Mueller Water Products, Inc.**]
    g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain fire hydrants - dry barrel, from single manufacturer.
4. Pressure Rating: [150 psig (1035 kPa) **minimum**][250 psig (1725 kPa)].
5. Standard: AWWA C502.
6. Freestanding configuration, with one NPS 4-1/2 (DN 115) and two NPS 2-1/2 (DN 65) outlets, 5-1/4-inch (133-mm) main valve, drain valve, and NPS 6 (DN 150) mechanical-joint inlet. Include interior coating in accordance with AWWA C550. Hydrant to have cast-iron body, compression-type valve opening against pressure and closing with pressure.
7. Standards: UL 246, and FM Global approved.
8. Freestanding configuration, with one NPS 4-1/2 (DN 115) and two NPS 2-1/2 (DN 65) outlets, 5-1/4-inch (133-mm) main valve, drain valve, and NPS 6 (DN 150) mechanical-joint inlet. Hydrant to have cast-iron body, compression-type valve opening against pressure and closing with pressure.

    a. Outlet Threads: NFPA 1963, with external hose thread used by local fire department. Include cast-iron caps with steel chains.
    b. Operating and Cap Nuts: Pentagon, 1-1/2 inches (38 mm) point to flat.
    c. Direction of Opening: Open hydrant valve by turning operating nut to left or counterclockwise.

d. Exterior Finish: Red alkyd-gloss enamel paint unless otherwise indicated.

B. Fire Hydrants - Wet Barrel:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**American AVK Co.**]
   b. [**Clow Valve Company; a subsidiary of McWane, Inc.**]
   c. [**James Jones Company, LLC; a Mueller brand**]
   d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**American AVK Co.**]
   b. [**Clow Valve Company; a subsidiary of McWane, Inc.**]
   c. [**James Jones Company, LLC; a Mueller brand**]
   d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain fire hydrants - wet barrel, from single manufacturer.
4. Pressure Rating: **150 psig (1035 kPa)** minimum.
5. Standard: AWWA C503.
6. Freestanding configuration, with one **NPS 4-1/2 (DN 115)** and two **NPS 2-1/2 (DN 65)** outlets, **NPS 6 (DN 150)** threaded or flanged inlet, and base section with **NPS 6 (DN 150)** mechanical-joint inlet. Include interior coating in accordance with AWWA C550.
7. Standards: UL 246, and FM Global approved.
8. Freestanding configuration, with one **NPS 4-1/2 (DN 115)** and two **NPS 2-1/2 (DN 65)** outlets, **NPS 6 (DN 150)** threaded or flanged inlet, and base section with **NPS 6 (DN 150)** mechanical-joint inlet.

   a. Outlet Threads: NFPA 1963, with external hose thread used by local fire department. Include cast-iron caps with steel chains.
   b. Operating and Cap Nuts: Pentagon, **1-1/2 inches (38 mm)** point to flat.
   c. Direction of Opening: Open hydrant valves by turning operating nut to left or counterclockwise.
   d. Exterior Finish: Red alkyd-gloss enamel paint unless otherwise indicated.

2.27 FLUSHING HYDRANTS

A. Flushing Hydrants - Post Type: Nonfreeze and drainable, of length required for shutoff valve installation below frost line.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**GIL Industries, Inc**]
   b. [**Kupferle Foundry Co. (The)**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**GIL Industries, Inc**]
    b. [**Kupferle Foundry Co. (The)**]
    c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain flushing hydrants - post type, from single manufacturer.
4. Pressure Rating: **150 psig (1035 kPa)** minimum.
5. Outlet: One, with horizontal discharge.
6. Hose Thread: **NPS 2-1/2 (DN 65)**, with NFPA 1963 external hose thread for use by local fire department, and with cast-iron cap with brass chain.
7. Barrel: Cast-iron or steel pipe with breakaway feature.
8. Valve: Bronze body with bronze-ball or plunger closure, and automatic draining.
9. Security: Locking device for padlock.
10. Exterior Finish: Red alkyd-gloss enamel paint unless otherwise indicated.
11. Inlet: **NPS 2 (DN 50)** minimum.
12. Operating Wrench: One for each unit.

B. Flushing Hydrants - Ground Type: Nonfreeze and drainable, of length required for shutoff valve installation below frost line.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**GIL Industries, Inc**]
    b. [**Kupferle Foundry Co. (The)**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**GIL Industries, Inc**]
    b. [**Kupferle Foundry Co. (The)**]
    c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain flushing hydrants - ground type, from single manufacturer.
4. Pressure Rating: **150 psig (1035 kPa)** minimum.
5. Outlet: One, with [**vertical**][**angle**] discharge.
6. Hose Thread: **NPS 2-1/2 (DN 65)**, with NFPA 1963 external hose thread for use by local fire department, and with cast-iron cap with brass chain.
7. Barrel: Cast-iron or steel pipe.
8. Valve: Bronze body with bronze-ball or plunger closure, and automatic draining.
9. Inlet: **NPS 2 (DN 50)** minimum.
10. Hydrant Box: Cast iron with cover, for ground mounting.
11. Operating Wrench: One for each unit.

2.28 SAMPLING STATIONS

A. Sampling Station - Post Type: Nonfreeze and drainable, of length required for shutoff valve installation

below frost line.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**GIL Industries, Inc**]
    b. [**Kupferle Foundry Co. (The)**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**GIL Industries, Inc**]
    b. [**Kupferle Foundry Co. (The)**]
    c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain sampling stations - post type, from single manufacturer.
4. Pressure Rating: **100 psig (690 kPa)** minimum.
5. Sampling Outlet: One unthreaded nozzle with handle.
6. Valve: Bronze body with bronze-ball or plunger closure. Include operating handle.
7. Drain: Tubing with separate manual vacuum pump.
8. Inlet: **NPS 3/4 (DN 20)** minimum.
9. Housing: Weatherproof material with locking device. Include anchor device.
10. Operating Wrench: One for each unit.

2.29 FIRE DEPARTMENT CONNECTIONS

A. Fire Department Connections:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Croker; a Division of Morris Group International**]
    b. [**Elkhart Brass Mfg. Co., Inc**]
    c. [**Guardian Fire Equipment, Inc**]
    d. [**Kidde; Carrier Global Corporation**]
    e. [**Potter Roemer LLC; a Division of Morris Group International**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Croker; a Division of Morris Group International**]
    b. [**Elkhart Brass Mfg. Co., Inc**]
    c. [**Guardian Fire Equipment, Inc**]
    d. [**Kidde; Carrier Global Corporation**]
    e. [**Potter Roemer LLC; a Division of Morris Group International**]
    f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain fire department connections from single manufacturer.
4. Standard: UL 405.
5. Configuration: Freestanding, with cast-bronze body, thread inlets in accordance with NFPA 1963 and matching local fire department hose threads, and threaded bottom outlet. Include lugged caps, gaskets, and chains; lugged swivel connection and drop clapper for each hose-connection inlet; **18-inch- (460-mm-)** high, brass sleeve; and round escutcheon plate.
6. Connections:

    a. [**Two**][**Three**] **NPS 2-1/2 (DN 65)** inlets and one [**NPS 4 (DN 100)**][**NPS 6 (DN 150)**] outlet.
    b. Two **NPS 3 (DN 80)** inlets and one [**NPS 4 (DN 100)**][**NPS 6 (DN 150)**] outlet.
    c. [**Three**][**Four**] **NPS 2-1/2 (DN 65)** inlets and one **NPS 6 (DN 150)** outlet.
    d. Six **NPS 2-1/2 (DN 65)** inlets and one [**NPS 6 (DN 150)**][**NPS 8 (DN 200)**] outlet.

7. Inlet Alignment: [**Inline, horizontal**][**Square**].
8. Finish Including Sleeve: [**Polished chrome-plated**][**Rough chrome-plated**][**Polished bronze**].
9. Escutcheon Plate Marking: "[**AUTO SPKR**][**&**][**STANDPIPE**]."

2.30 ALARM DEVICES

A. Alarm Devices: UL 753 and FM Global approved, of types and sizes to mate and match piping and equipment.

B. Water-Flow Indicators: Vane-type water-flow detector, rated for **250 psig (1725 kPa)** working pressure; designed for horizontal or vertical installation; with 2 SPDT circuit switches to provide isolated alarm and auxiliary contacts, 7 A, 125 V ac and 0.25 A, 24 V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal when cover is removed.

C. Supervisory Switches: SPDT; designed to signal valve in other than fully open position.

D. Pressure Switches: SPDT; designed to signal increase in pressure.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Comply with excavating, trenching, and backfilling requirements in Section 312000 "Earth Moving."

3.2 PIPING APPLICATIONS

A. Transition couplings and special fittings with pressure ratings at least equal to piping pressure rating may be used unless otherwise indicated.

B. Do not use flanges or unions for underground piping.

C. Flanges, unions, grooved-end-pipe couplings, and special fittings may be used, instead of joints indicated, on aboveground piping and piping in vaults.

D. Underground water-service piping [**NPS 3/4 to NPS 3 (DN 20 to DN 80)**]<**Insert pipe size range**> to be[**any of**] the following:

1. Soft copper tube, [**ASTM B88, Type K (ASTM B88M, Type A)**][**ASTM B88, Type L (ASTM B88M, Type B)**]; [**wrought-copper, solder-joint fittings; and brazed**][**copper, pressure-seal fittings; and pressure-sealed**] joints.
2. PE, ASTM pipe; [**insert fittings for PE pipe; and clamped**][**molded PE fittings; and heat-fusion**] joints.
3. PVC, Schedule [**40 pipe; PVC, Schedule 40**][**80 pipe; PVC, Schedule 80**] socket fittings; and solvent-cemented joints.
4. **NPS 1 to NPS 3 (DN 25 to DN 80)** fiberglass, RTRP, AWWA pipe, [**Class 150**][**Class 200**][**Class 250**]; RTRF, AWWA pipe; and bonded joints.
5. Fiberglass, RTRP, AWWA pipe [**Class 150**][**Class 200**][**Class 250**]; RTRF; and bonded joints.

E. Underground water-service piping [**NPS 4 to NPS 8 (DN 100 to DN 200)**]<**Insert pipe size range**> to be[**any of**] the following:

1. Soft copper tube, [**ASTM B88, Type K (ASTM B88M, Type A)**][**ASTM B88, Type L (ASTM B88M, Type B)**]; wrought-copper, solder-joint fittings; and brazed joints.
2. Ductile-iron, [**push-on-joint pipe; ductile-iron, push-on-joint fittings; and gasketed**][**mechanical-joint pipe; ductile-iron, mechanical-joint fittings; and mechanical**][**grooved-end pipe; ductile-iron-pipe appurtenances; and grooved**] joints.
3. PE, AWWA pipe; PE, AWWA fittings; and heat-fusion joints.
4. PVC, Schedule [**40 pipe; PVC, Schedule 40**][**80 pipe; PVC, Schedule 80**] socket fittings; and solvent-cemented joints.
5. NPS 4 and NPS 6 (DN 100 and DN 150): **NPS 6 (DN 150)** PVC, AWWA Class 150 pipe; PVC, AWWA Class 150 [**fabricated**][**or**][**molded**] fittings; and gasketed joints.
6. NPS 8 (DN 200): PVC, AWWA Class 200 pipe; [**PVC, AWWA Class 200 fabricated**][**push-on-joint, ductile-iron**][**mechanical-joint, ductile-iron**] fittings; and gasketed joints.
7. Fiberglass, RTRP, AWWA pipe [**Class 150**][**Class 200**][**Class 250**]; RTRF, AWWA pipe; and bonded joints.

F. Water Meter Box Water-Service Piping: [**NPS 3/4 to NPS 2 (DN 20 to DN 50)**]<**Insert pipe size range**> to be same as underground water-service piping.

G. Aboveground[**and vault**] water-service piping [**NPS 3/4 to NPS 3 (DN 20 to DN 80)**]<**Insert pipe size range**> to be[**any of**] the following:

1. Hard copper tube, [**ASTM B88, Type K (ASTM B88M, Type A)**][**ASTM B88, Type L (ASTM B88M, Type B)**]; [**wrought-copper, solder-joint fittings; and brazed**][**copper, pressure-seal fittings; and pressure-sealed**] joints.
2. PVC, Schedule 80 pipe; PVC, Schedule 80 [**socket fittings; and solvent-cemented**][**threaded fittings; and threaded**] joints.
3. **NPS 1 to NPS 2 (DN 25 to DN 50)** fiberglass, RTRP, AWWA pipe [**Class 150**][**Class 200**][**Class 250**]; RTRF, AWWA pipe; and bonded joints.

H. Aboveground [**and vault**]water-service piping [**NPS 4 to NPS 8 (DN 100 to DN 200)**]<**Insert pipe size range**> to be[**any of**] the following:

1. Hard copper tube, [**ASTM B88, Type K (ASTM B88M, Type A)**][**ASTM B88, Type L (ASTM B88M, Type B)**]; wrought-copper, solder-joint fittings; and brazed joints.
2. Ductile-iron, grooved-end pipe; ductile-iron, grooved-end appurtenances; and grooved joints.
3. PVC, Schedule 80 pipe; PVC, Schedule 80 [**socket fittings; and solvent-cemented**][**threaded fittings; and threaded**] joints.
4. Fiberglass, RTRP, AWWA pipe [**Class 150**][**Class 200**][**Class 250**]; RTRF, AWWA pipe; and bonded joints.

I. Underground fire-service-main piping [**NPS 4 to NPS 12 (DN 100 to DN 300)**]<**Insert pipe size range**> to be[**any of**] the following:

1. Ductile-iron, [**push-on-joint pipe; ductile-iron, push-on-joint fittings; and gasketed**][**mechanical-joint pipe; ductile-iron, mechanical-joint fittings; and mechanical**][**grooved-end pipe; ductile-iron-pipe appurtenances; and grooved**] joints.
2. PE, [**Class 150**][**Class 200**], fire-service pipe; molded PE fittings; and heat-fusion joints.
3. PVC, AWWA Class 150 pipe listed for fire-protection service; PVC Class 150 fabricated or molded fittings; and gasketed joints.
4. PVC, AWWA Class 200 pipe listed for fire-protection service; PVC Class 200 fabricated fittings; and gasketed joints.
5. Fiberglass, AWWA, FM Global approved RTRP, [**Class 150**][**Class 200**]; RTRF; and gasketed joints.

J. Aboveground[**and vault**] fire-service-main piping [**NPS 4 to NPS 12 (DN 100 to DN 300)**]<**Insert pipe size range**> to be ductile-iron, grooved-end pipe; ductile-iron-pipe appurtenances; and grooved joints.

K. Underground Combined Water-Service and Fire-Service-Main Piping [**NPS 6 to NPS 12 (DN 150 to DN 300)**]<**Insert pipe size range**> to be[**any of**] the following:

1. Ductile-iron, [**push-on-joint pipe; ductile-iron, push-on-joint fittings; and gasketed**][**mechanical-joint pipe; ductile-iron, mechanical-joint fittings; and mechanical**][**grooved-end pipe; ductile-iron-pipe appurtenances; and grooved**] joints.
2. PVC, AWWA [**Class 150**][**Class 200**] pipe listed for fire-protection service; PVC fabricated or molded fittings of same class as pipe; and gasketed joints.
3. Fiberglass, AWWA, FM Global approved RTRP, [**Class 150**][**Class 200**]; RTRF; and gasketed joints.

L. Aboveground[**and vault**] combined water service and fire-service-main piping [**NPS 6 to NPS 12 (DN 150 to DN 300)**]<**Insert pipe size range**> to be ductile-iron, grooved-end pipe; ductile-iron-pipe appurtenances; and grooved joints.

3.3 VALVE APPLICATIONS

A. General Application: Use mechanical-joint-end valves for **NPS 3 (DN 80)** and larger underground installation. Use threaded- or flanged-end valves for installation in vaults. Use UL/FM Global, nonrising-stem gate valves for installation with indicator posts. Use corporation valves and curb valves with ends compatible with piping, for **NPS 2 (DN 50)** and smaller installation.

B. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:

1. Underground Valves, NPS 3 (DN 80) and Larger: AWWA, cast-iron, nonrising-stem, [**metal**][**resilient**][**high-pressure, resilient**]-seated gate valves with valve box.
2. Underground Valves, NPS 4 (DN 100) and Larger, for Indicator Posts: UL/FM Global, cast-iron, nonrising-stem gate valves with indicator post.
3. Use the following for valves in vaults and aboveground:

    a. Gate Valves, NPS 2 (DN 50) and Smaller: Bronze, [**nonrising**][**rising**] stem.
    b. Gate Valves, NPS 3 (DN 80) and Larger: [**AWWA, cast iron, OS&Y rising stem, metal seated**][**AWWA, cast iron, OS&Y rising stem, resilient seated**][**UL/FM Global, cast iron, OS&Y rising stem**].
    c. Check Valves: [**AWWA C508**][**UL/FM Global**], swing type.

4. Pressure-Reducing Valves: Use for water-service piping in vaults and aboveground to control water pressure.
5. Relief Valves: Use for water-service piping in vaults and aboveground.

a. Air-Release Valves: To release accumulated air.
b. Air/Vacuum Valves: To release or admit large volume of air during filling of piping.
c. Combination Air Valves: To release or admit air.

6. Detector Check Valves: Use for water-service piping in vaults and aboveground to detect unauthorized use of water.

3.4 PIPING SYSTEMS - COMMON REQUIREMENTS

A. Comply with Section 330500 "Common Work Results for Utilities" for piping-system common requirements.

B. Provide a continuous bare copper or aluminum tracer wire not less than **0.10 inch (2.5 mm)** in diameter in sufficient length over each separate run of nonmetallic pipe.

3.5 INSTALLATION OF PIPING

A. Water-Main Connection:

1. Arrange with utility company for tap of size and in location indicated in water main.
2. Tap water main in accordance with requirements of water utility company and of size and in location indicated.

B. Make connections larger than **NPS 2 (DN 50)** with tapping machine according to the following:

1. Install tapping sleeve and tapping valve in accordance with MSS SP-60.
2. Install tapping sleeve on pipe to be tapped. Position flanged outlet for gate valve.
3. Use tapping machine compatible with valve and tapping sleeve; cut hole in main. Remove tapping machine and connect water-service piping.
4. Install gate valve onto tapping sleeve. Comply with MSS SP-60. Install valve with stem pointing up and with valve box.

C. Make connections **NPS 2 (DN 50)** and smaller with drilling machine according to the following:

1. Install service-saddle assemblies and corporation valves in size, quantity, and arrangement required by utility company standards.
2. Install service-saddle assemblies on water-service pipe to be tapped. Position outlets for corporation valves.
3. Use drilling machine compatible with service-saddle assemblies and corporation valves. Drill hole in main. Remove drilling machine and connect water-service piping.
4. Install corporation valves into service-saddle assemblies.
5. Install manifold for multiple taps in water main.
6. Install curb valve in water-service piping with head pointing up and with service box.

D. Comply with NFPA 24 for fire-service-main piping materials and installation.

1. Install PE corrosion-protection encasement in accordance with ASTM A674 or AWWA C105/A21.5.
2. Install copper tube and fittings in accordance with CDA's "Copper Tube Handbook."

E. Install ductile-iron, water-service piping in accordance with AWWA C600 and AWWA M41.

1. Install PE corrosion-protection encasement in accordance with ASTM A674 or AWWA

C105/A21.5.

F. Install PE pipe in accordance with ASTM D2774 and ASTM F645.

G. Install PVC, AWWA pipe in accordance with ASTM F645 and AWWA M23.

H. Install fiberglass AWWA pipe in accordance with AWWA M45.

I. Bury piping with depth of cover over top at least [**30 inches (750 mm)**]<**Insert dimension**>, with top at least [**12 inches (300 mm)**]<**Insert dimension**> below level of maximum frost penetration, and according to the following:

1. Under Driveways: With at least [**36 inches (910 mm)**]<**Insert dimension**> of cover over top.
2. Under Railroad Tracks: With at least [**48 inches (1220 mm)**]<**Insert dimension**> of cover over top.
3. In Loose Gravelly Soil and Rock: With at least [**12 inches (300 mm)**]<**Insert dimension**> of additional cover.

J. Install piping by tunneling or jacking, or combination of both, under streets and other obstructions that cannot be disturbed.

K. Extend [**water-service**][**and**][**fire-suppression water-service**] piping and connect to water-supply source and building [**water-piping**][**and**][**fire-suppression piping**] systems at outside face of building wall in locations and pipe sizes indicated.

1. Terminate [**water-service**][**and**][**fire-suppression water-service**] piping at building wall until building [**water-piping**][**and**][**fire-suppression piping**] systems are installed. Terminate piping with caps, plugs, or flanges as required for piping material. Make connections to building [**water-piping**][**and**][**fire-suppression piping**] systems when those systems are installed.

L. Sleeves are specified in [**Section 210500 "Common Work Results for Fire Suppression"**][**and**][**Section 220500 "Common Work Results for Plumbing."**]

M. Mechanical sleeve seals are specified in [**Section 210500 "Common Work Results for Fire Suppression"**][**and**][**Section 220500 "Common Work Results for Plumbing."**]

N. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in [**Section 210500 "Common Work Results for Fire Suppression"**][**and**][**Section 220500 "Common Work Results for Plumbing."**]

O. Install underground piping with restrained joints at horizontal and vertical changes in direction. Use restrained-joint piping, thrust blocks, anchors, tie-rods and clamps, and other supports.

P. Comply with Section 211000 "Water-Based Fire-Suppression Systems" for fire-suppression-water piping inside the building.

Q. Comply with Section 221116 "Domestic Water Piping" for potable-water piping inside the building.

3.6 INSTALLATION OF HANGERS AND SUPPORTS

A. Comply with requirements for seismic-restraint devices specified in [**Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment"**][**and**][**Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."**]

B. Comply with requirements for hangers, supports, and anchor devices specified in [**Section 210529 "Hangers and Supports for Fire-Suppression Piping and Equipment"**][**and**][**Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."**]

C. Install the following pipe attachments:

1. Adjustable steel clevis hangers for individual horizontal piping less than **20 ft. (6 m)** long.
2. Adjustable roller hangers and spring hangers for individual horizontal piping **20 ft. (6 m)** or longer.
3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping **20 ft. (6 m)** or longer, supported on a trapeze.
4. Spring hangers to support vertical runs.
5. Provide copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
6. On [**PVC**][**and**][**fiberglass**] piping, install pads or cushions on bearing surfaces to prevent hanger from scratching pipe.

D. Install hangers for copper tubing with maximum spacing and minimum rod diameters to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

E. Install hangers for PVC piping with maximum horizontal spacing and minimum rod diameters to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

F. Install hangers for fiberglass piping with maximum horizontal spacing and minimum rod diameters to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

G. Support horizontal piping within [**12 inches (300 mm)**]<**Insert dimension**> of each fitting and coupling.

H. Support vertical runs of copper tubing to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

I. Support vertical runs of [**PVC**][**fiberglass**] piping to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

3.7 JOINT CONSTRUCTION

A. Comply with Section 330500 "Common Work Results for Utilities" for basic piping joint construction.

B. Make pipe joints according to the following:

1. Copper-Tubing, Pressure-Sealed Joints: Join copper tube and pressure-seal fittings with tools and procedures recommended by pressure-seal-fitting manufacturer. Leave insertion marks on pipe after assembly.
2. Ductile-Iron Piping, Gasketed Joints for Water-Service Piping: AWWA C600 and AWWA M41.
3. Ductile-Iron Piping, Gasketed Joints for Fire-Service-Main Piping: UL 194.
4. Ductile-Iron Piping, Grooved Joints: Cut-groove pipe. Assemble joints with grooved-end, ductile-iron-piping couplings, gaskets, lubricant, and bolts in accordance with coupling manufacturer's written instructions.
5. PE Piping Insert-Fitting Joints: Use plastic insert fittings and fasteners in accordance with fitting manufacturer's written instructions.
6. PVC Piping Gasketed Joints: Use joining materials in accordance with AWWA C900. Construct joints with elastomeric seals and lubricant in accordance with ASTM D2774 or ASTM D3139 and pipe manufacturer's written instructions.

7. Fiberglass Piping Bonded Joints: Use adhesive and procedure recommended by piping manufacturer.
8. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.

    a. Dielectric Fittings:

        1) Dielectric [**nipples**][**unions**] for [**NPS 2 (DN 50)**]<**Insert pipe size**> and smaller.
        2) Dielectric [**flanges**][**flange kits**][**nipples**] for [**NPS 2-1/2 to NPS 4 (DN 65 to DN 100)**]<**Insert pipe size range**>.
        3) Dielectric flange kits for [**NPS 5 (DN 125)**]<**Insert pipe size**> and Larger.

3.8 INSTALLATION OF ANCHORAGE

A. Anchorage: Install water-distribution piping with restrained joints. Anchorages and restrained-joint types that may be used include the following:

1. Concrete thrust blocks.
2. Locking mechanical joints.
3. Set-screw mechanical retainer glands.
4. Bolted flanged joints.
5. Heat-fused joints.
6. Pipe clamps and tie rods.
7. <**Insert devices**>.

B. Install anchorages for tees, plugs and caps, bends, crosses, valves, and hydrant branches. Include anchorages for the following piping systems:

1. Gasketed-Joint, Ductile-Iron, Water-Service Piping: In accordance with AWWA C600.
2. Gasketed-Joint, PVC Water-Service Piping: In accordance with AWWA M23.
3. Bonded-Joint Fiberglass, Water-Service Piping: In accordance with AWWA M45.
4. Fire-Service-Main Piping: In accordance with NFPA 24.

C. Apply full coat of asphalt or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices.

3.9 INSTALLATION OF VALVES

A. AWWA Gate Valves: Comply with AWWA C600 and AWWA M44. Install each underground valve with stem pointing up and with valve box.

B. AWWA Valves Other Than Gate Valves: Comply with AWWA C600 and AWWA M44.

C. UL-Listed or FM Global-Approved Gate Valves: Comply with NFPA 24. Install each underground valve and valves in vaults with stem pointing up and with vertical cast-iron indicator post.

D. UL-Listed or FM Global-Approved Valves Other Than Gate Valves: Comply with NFPA 24.

E. MSS Valves: Install as component of connected piping system.

F. Corporation Valves and Curb Valves: Install each underground curb valve with head pointed up and with service box.

G. Pressure-Reducing Valves: Install in vault or aboveground between shutoff valves.[**Install full-size valved bypass.**]

H. Relief Valves: Comply with AWWA C512. Install aboveground with shutoff valve on inlet.

I. Comply with requirements for concrete piers in Section 033000 "Cast-in-Place Concrete" for support of valves and piping not direct buried.

3.10 INSTALLATION OF DETECTOR-CHECK VALVES

A. Install in vault or aboveground.

B. Install for proper direction of flow. Install bypass with water meter, gate valves on each side of meter, and check valve downstream from meter.

C. Support detector check valves, meters, shutoff valves, and piping on brick or concrete piers. Comply with requirements of concrete piers in Section 033000 "Cast-in-Place Concrete."

3.11 INSTALLATION OF WATER METERS

A. Install water meters, piping, and specialties in accordance with utility company's written instructions.

B. Water Meters:

1. Install [**displacement**][**turbine**]-type water meters, **NPS 2 (DN 50)** and smaller, in meter boxes with shutoff valves on water meter inlets. Include valves on water meter outlets and valved bypass around meters unless prohibited by authorities having jurisdiction.
2. Install [**compound**][**turbine**]-type water meters, **NPS 3 (DN 80)** and larger, in meter vaults. Include shutoff valves on water meter inlets and outlets and valved bypass around meters. Support meters, valves, and piping on brick or concrete piers.
3. Install detector-type water meters in meter vault in accordance with AWWA M6. Include shutoff valves on water meter inlets and outlets and full-size valved bypass around meters. Support meters, valves, and piping on brick or concrete piers.

C. Support water meters and piping **NPS 3 (DN 80)** and larger on concrete piers. Comply with requirements for concrete piers in Section 033000 "Cast-in-Place Concrete."

3.12 ROUGHING-IN FOR WATER METERS

A. Rough-in piping and specialties for water meter installation in accordance with utility company's written instructions.

3.13 INSTALLATION OF VACUUM BREAKER ASSEMBLIES

A. Install pressure vacuum breaker assemblies of type, size, and capacity indicated. Include valves and test cocks. Install in accordance with requirements of plumbing and health department and authorities having jurisdiction.

B. Do not install pressure vacuum breaker assemblies in vault or other space subject to flooding.

3.14 INSTALLATION OF BACKFLOW PREVENTERS

A. Install backflow preventers of type, size, and capacity indicated. Include valves and test cocks. Install in accordance with requirements of plumbing and health department and authorities having jurisdiction.

B. Do not install backflow preventers that have relief drain in vault or in other spaces subject to flooding.

C. Do not install bypass piping around backflow preventers.

D. Support **NPS 2-1/2 (DN 65)** and larger backflow preventers, valves, and piping near floor and on brick or concrete piers.

3.15 INSTALLATION OF WATER METER BOXES

A. Install water meter boxes in paved areas flush with surface.

B. Install water meter boxes in grass or earth areas with top [**2 inches (50 mm)**]<**Insert dimension**> above surface.

3.16 INSTALLATION OF CONCRETE VAULTS

A. Install precast concrete vaults in accordance with ASTM C891.

3.17 INSTALLATION OF PROTECTIVE ENCLOSURES

A. Install concrete base level and with top approximately [**2 inches (50 mm)**]<**Insert measurement**> above grade.

B. Install protective enclosure over valves and equipment.

C. Anchor protective enclosure to concrete base.

3.18 INSTALLATION OF FIRE HYDRANTS

A. Install each fire hydrant with separate gate valve in supply pipe, anchor with restrained joints or thrust blocks, and support in upright position.

B. Wet-Barrel Fire Hydrants: Install with valve below frost line. Provide for drainage.

C. AWWA Fire Hydrants: Comply with AWWA M17.

D. UL/FM Global Fire Hydrants: Comply with NFPA 24.

3.19 INSTALLATION OF FLUSHING HYDRANTS

A. Install post-type flushing hydrants with valve below frost line and provide for drainage. Support in upright position. Include separate gate valve or curb valve and restrained joints in supply piping.

B. Install ground-type flushing hydrants with valve below frost line and provide for drainage. Install hydrant

box flush with grade. Include separate gate valve or curb valve and restrained joints in supply piping.

C. Install sampling stations with valve below frost line and provide for drainage. Attach weather-resistant housing and support in upright position. Include separate curb valve in supply piping.

3.20 INSTALLATION OF FIRE DEPARTMENT CONNECTIONS

A. Install ball drip valves at each check valve for fire department connection to mains.

B. Install protective pipe bollards [**on two sides of**][**on three sides of**]<**Insert arrangement**> each fire department connection. Pipe bollards are specified in Section 055000 "Metal Fabrications."

3.21 INSTALLATION OF ALARM DEVICES

A. Comply with NFPA 24 for devices and methods of valve supervision. Underground valves with valve box do not require supervision.

B. Supervisory Switches: Supervise valves in open position.

1. Valves: Grind away portion of exposed valve stem. Bolt switch, with plunger in stem depression, to OS&Y gate-valve yoke.
2. Indicator Posts: Drill and thread hole in upper-barrel section at target plate. Install switch, with toggle against target plate, on barrel of indicator post.

C. Locking and Sealing: Secure unsupervised valves as follows:

1. Valves: Install chain and padlock on open OS&Y gate valve.
2. Post Indicators: Install padlock on wrench on indicator post.

D. Pressure Switches: Drill and thread hole in exposed barrel of fire hydrant. Install switch.

E. Water-Flow Indicators: Install in water-service piping in vault. Select indicator with saddle and vane matching pipe size. Drill hole in pipe, insert vane, and bolt saddle to pipe.

F. Connect alarm devices to building fire-alarm system. Wiring and fire-alarm devices are specified in [**Section 284600 "Fire Detection and Alarm."**][**Section 284614 "Single- and Multiple-Station Alarms."**][**Section 284600 "Fire Detection and Alarm" and Section 284614 "Single- and Multiple-Station Alarms."**]

3.22 CONNECTIONS

A. See Section 330500 "Common Work Results for Utilities" for piping connections to valves and equipment.

B. Connect water-distribution piping to [**utility water main**][**existing water main**]<**Insert piping system**>. Use [**tapping sleeve and tapping valve**][**service clamp and corporation valve**]<**Insert method**>.

C. Connect water-distribution piping to interior [**domestic water**][**and**][**fire-suppression**] piping.

D. Connect waste piping from concrete vault drains to [**sanitary sewerage system. See Section 333115 "Site Sanitary Sewerage Piping" for connection to sanitary-sewer**][**storm-drainage system. See Section 334400 "Storm Utility Drainage Piping" for connection to storm-sewer**] piping.

E. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

F. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.23 FIELD QUALITY CONTROL

A. Piping Tests: Conduct piping tests before joints are covered and after concrete thrust blocks have hardened sufficiently. Fill pipeline 24 hours before testing and apply test pressure to stabilize system. Use only potable water.

B. Hydrostatic Tests: Test at not less than one-and-one-half times working pressure for two hours.

1. Increase pressure in **50 psig (350 kPa)** increments and inspect each joint between increments. Hold at test pressure for one hour; decrease to **0 psig (0 kPa)**. Slowly increase again to test pressure and hold for one more hour. Maximum allowable leakage is **2 quarts (1.89 L)** per hour per 100 joints. Remake leaking joints with new materials and repeat test until leakage is within allowed limits.

C. Prepare reports of testing activities.

3.24 IDENTIFICATION

A. Install continuous underground[**detectable**] warning tape during backfilling of trench for underground water-distribution piping. Locate below finished grade, directly over piping. Underground warning tapes are specified in Section 312000 "Earth Moving."

B. Permanently attach equipment nameplate or marker indicating plastic water-service piping, on main electrical meter panel. See Section 330500 "Common Work Results for Utilities" for identifying devices.

3.25 CLEANING

A. Clean and disinfect water-distribution piping as follows:

1. Purge new water-distribution piping systems and parts of existing systems that have been altered, extended, or repaired before use.
2. Use purging and disinfecting procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in NFPA 24 for flushing of piping. Flush piping system with clean, potable water until dirty water does not appear at points of outlet.
3. Use purging and disinfecting procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in AWWA C651 or do as follows:

a. Fill system or part of system with water/chlorine solution containing at least 50 ppm of chlorine; isolate and allow to stand for 24 hours.
b. Drain system or part of system of previous solution and refill with water/chlorine solution containing at least 200 ppm of chlorine; isolate and allow to stand for three hours.
c. After standing time, flush system with clean, potable water until no chlorine remains in water coming from system.
d. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedure

if biological examination shows evidence of contamination.

B. Prepare reports of purging and disinfecting activities.

SECTION 33 31 00 00 - SITE SANITARY SEWERAGE PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cast-iron soil pipe and fittings - hub and spigot.
2. Cast-iron soil pipe and fittings - hubless.
3. Ductile-iron, pressure pipe and fittings.
4. ABS pipe and fittings.
5. PVC pipe and fittings.
6. Fiberglass sewer pipe and fittings.
7. Concrete pipe and fittings.
8. Nonpressure-type transition couplings.
9. Pressure-type pipe couplings.
10. Expansion joints and deflection fittings.
11. Encasement for piping.
12. Manholes.
13. Concrete.

1.2 DEFINITIONS

A. FRP: Fiberglass-reinforced plastic.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For manholes. Include plans, elevations, sections, details, and frames and covers.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings:

1. Plans and elevations, or Building Information Model (BIM), drawn to scale, showing items described in this Section and coordinated with all building trades. Show other piping in same trench and clearances from sewer system piping. Indicate interface and spatial relationship between manholes, piping, and proximate structures.
2. Show system piping in profile. Draw profiles to horizontal scale of not less than **1 inch equals 50 ft. (1:50)** and to vertical scale of not less than **1 inch equals 5 ft. (1:50)**. Indicate manholes and piping. Show types, sizes, materials, and elevations of other utilities crossing system piping.

B. Product Certificates: For each type of pipe and fitting.

C. Field quality-control reports.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Do not store plastic manholes, pipe, and fittings in direct sunlight.

B. Protect pipe, pipe fittings, and seals from dirt and damage.

C. Handle manholes in accordance with manufacturer's written rigging instructions.

1.6 QUALITY ASSURANCE

A. Provide materials bearing label, stamp, or other markings of specified testing agency.

1.7 FIELD CONDITIONS

A. Interruption of Existing Sanitary Sewerage Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service in accordance with requirements indicated:

1. Notify [**Architect**][**Construction Manager**][**Owner**] no fewer than [**two**]<**Insert number**> days in advance of proposed interruption of service.
2. Do not proceed with interruption of service without [**Architect's**][**Construction Manager's**][**Owner's**] written permission.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Components and installation are to be capable of withstanding the following minimum working pressure unless otherwise indicated:

1. Sanitary Sewage Piping: [**10-ft. head of water (30 kPa)**]<**Insert pressure**>.
2. Sanitary Sewage Piping, Force-Main: [**50 psig (345 kPa)**][**100 psig (690 kPa)**][**150 psig (1035 kPa)**]<**Insert pressure**>.

2.2 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AB & I Foundry; a part of the McWane family of companies**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AB & I Foundry; a part of the McWane family of companies**]

2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain cast-iron, hub-and-spigot pipe and fittings from single manufacturer.

D. Pipe and Fittings:

1. Class:[**Service (SV)**][**and**][**Extra-Heavy (XH)**]; ASTM A74.

E. Gaskets: ASTM C564, rubber.

F. Caulking Materials: ASTM B29, pure lead and oakum or hemp fiber.

2.3 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AB & I Foundry; a part of the McWane family of companies**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AB & I Foundry; a part of the McWane family of companies**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain cast-iron, hubless pipe and fittings from single manufacturer.

D. Pipe and Fittings:

1. Marked with CISPI collective trademark and NSF certification mark.
2. Standards: ASTM A888 or CISPI 301.

E. Shielded Couplings, CISPI-Trademark:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ANACO-Husky; a part of the McWane family of companies**]
b. [**Charlotte Pipe and Foundry Company**]
c. [**Dallas Specialty & Mfg. Co.**]
d. [**Fernco Inc**]
e. [**Mission Rubber Company, LLC**]
f. [**Tyler Pipe; a part of the McWane family of companies**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ANACO-Husky; a part of the McWane family of companies**]
    b. [**Charlotte Pipe and Foundry Company**]
    c. [**Dallas Specialty & Mfg. Co.**]
    d. [**Fernco Inc**]
    e. [**Mission Rubber Company, LLC**]
    f. [**Tyler Pipe; a part of the McWane family of companies**]
    g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain CISPI-trademark, shielded couplings from single manufacturer.
4. Marked with CISPI collective trademark and NSF certification mark.
5. Standards: ASTM C1277 and CISPI 310.
6. Description: Stainless steel corrugated shield; stainless steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.

F. Shielded Couplings, Heavy-Duty:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ANACO-Husky; a part of the McWane family of companies**]
    b. [**Charlotte Pipe and Foundry Company**]
    c. [**Dallas Specialty & Mfg. Co.**]
    d. [**Fernco Inc**]
    e. [**Mission Rubber Company, LLC**]
    f. [**Tyler Pipe; a part of the McWane family of companies**]
    g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ANACO-Husky; a part of the McWane family of companies**]
    b. [**Charlotte Pipe and Foundry Company**]
    c. [**Dallas Specialty & Mfg. Co.**]
    d. [**Fernco Inc**]
    e. [**Mission Rubber Company, LLC**]
    f. [**Tyler Pipe; a part of the McWane family of companies**]
    g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain heavy-duty, shielded couplings from single manufacturer.
4. Standard: ASTM C1540.
5. Description: Stainless steel shield; stainless steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.

G. Shielded Couplings, Cast-Iron:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

a. [**MG Coupling**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**MG Coupling**]
b. <**Insert manufacturer's name**>

3. Source Limitations: Obtain cast-iron, shielded couplings from single manufacturer.
4. Standard: ASTM A1056.
5. Description: Two-piece, ASTM A48/A48M, cast-iron housing; stainless steel bolts and nuts; and ASTM C564, rubber sleeve with integral, center pipe stop.

H. Unshielded Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ANACO-Husky; a part of the McWane family of companies**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ANACO-Husky; a part of the McWane family of companies**]
b. <**Insert manufacturer's name**>

3. Source Limitations: Obtain unshielded couplings from single manufacturer.
4. Standard: ASTM C1461.
5. Description: Rigid, sleeve-type, reducing- or transition-type mechanical coupling, with integral, center pipe stop, molded from ASTM C1440, thermoplastic elastomer (TPE) material; with corrosion-resistant-metal tension band and tightening mechanism on each end.

2.4 DUCTILE-IRON, PRESSURE PIPE AND FITTINGS - SANITARY SEWERAGE

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**American Cast Iron Pipe Company**]
2. [**McWane Ductile; a part of the McWane family of companies**]
3. [**U.S. Pipe**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**American Cast Iron Pipe Company**]

2. [**McWane Ductile; a part of the McWane family of companies**]
3. [**U.S. Pipe**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain ductile-iron, pressure pipe and fittings from single manufacturer.

D. Piping materials to bear label, stamp, or other markings of specified testing agency.

E. Push-on-Joint Piping:

1. Pipe: AWWA C151/A21.51.
2. Standard Fittings: AWWA C110/A21.10, ductile or gray iron.
3. Compact Fittings: AWWA C153/A21.53.
4. Gaskets: AWWA C111/A21.11, rubber, of shape matching pipe and fittings.

F. Mechanical-Joint Piping:

1. Pipe: AWWA C151/A21.51, with bolt holes in bell.
2. Standard Fittings: AWWA C110/A21.10, ductile or gray iron, with bolt holes in bell.
3. Compact Fittings: AWWA C153/A21.53, with bolt holes in bells.
4. Glands: Cast or ductile iron; with bolt holes and high-strength, cast-iron or high-strength, low-alloy steel bolts and nuts.
5. Gaskets: AWWA C111/A21.11, rubber, of shape matching pipe, fittings, and glands.

G. Pipe Outer Coating:

1. Type: Asphaltic.
2. Minimum Uniform Thickness: [**1 mil (0.025 mm)**]<**Insert thickness**>.
3. Comply with AWWA C151/A21.51.

H. Cement Mortar Lining: AWWA C104/A21.4.

I. Seal Coating-Applied Lining:

1. Nominal Pipe Sizes 6 through 12 Inches (150 through 300 mm): **1/8 inch (3 mm)**.
2. Nominal Pipe Sizes 14 through 24 Inches (250 through 600 mm): <**Insert inches (mm)**>.

J. Asphaltic Sealcoat Lining:

1. Minimum Uniform Lining: [**1 mil (0.025 mm)**]<**Insert thickness**>.
2. Comply with AWWA C104/A21.4.

K. PE Encasement: Comply with AWWA C105/A21.5.

L. Coating:

1. Coat pipe and fittings exposed inside of structures with two coats of <**Insert paint type and paint code**> bituminous paint to achieve minimum dry film of thickness of <**Insert mils (mm)**> per coat.

2.5 ABS PIPE AND FITTINGS

A. Source Limitations: Obtain ABS pipe and fittings from single manufacturer.

B. Piping materials to bear label, stamp, or other markings of specified testing agency.

C. ABS Solid-Wall Pipe: ASTM D2661, Schedule 40.

1. Fittings: ASTM D2661, made to ASTM D3311, drain, waste, and vent patterns.
2. Joints: ASTM D2235, solvent weld.

D. ABS Cellular-Core Pipe: ASTM F628, Schedule 40.

1. Fittings: ASTM D2661, made to ASTM D3311, drain, waste, and vent patterns.
2. Joints: ASTM D2235, solvent weld.

E. ABS Pipe and Fittings: SDR [**23.5**][**35**][**42**] with bell-and-spigot-style, solvent-sealed ends.

1. Joints: ASTM D2235, solvent weld.

F. Solvent Cement: ASTM D2235.

2.6 PVC PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Atkore**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**JM Eagle**]
4. [**National Pipe and Plastic, Inc. (Oldcastle)**]
5. [**Silver-line Plastics**]
6. [**Westlake Pipe & Fittings**]
7. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Atkore**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**JM Eagle**]
4. [**National Pipe and Plastic, Inc. (Oldcastle)**]
5. [**Silver-line Plastics**]
6. [**Westlake Pipe & Fittings**]
7. <**Insert manufacturer's name**>

C. Source Limitations: Obtain PVC pipe and fittings from single manufacturer.

D. Piping materials to bear label, stamp, or other markings of specified testing agency.

E. PVC Type PSM Gravity Sewer Piping:

1. Pipe: ASTM D3034, [**SDR 35**]<**Insert SDR**>, PVC Type PSM sewer pipe with bell-and-spigot ends for gasketed joints.
2. Fittings: ASTM D3034, PVC with bell ends.
3. Gaskets: ASTM F477, elastomeric seals.

F. PVC Pressure Piping:

1. Pipe: AWWA C900, [**Class 100**][**Class 150**][**and**][**Class 200**] PVC pipe with bell-and-spigot ends for gasketed joints.
2. Fittings: AWWA C900, [**Class 100**][**Class 150**][**and**][**Class 200**] PVC pipe with bell ends.
3. Gaskets: ASTM F477, elastomeric seals.

G. PVC Type DWV Piping:

1. Pipe: ASTM D1785 or ASTM D2665, [**Schedule 40**][**and**][**Schedule 80**] PVC, with plain ends for solvent-cemented joints.
2. Fittings: [**ASTM D2466, Schedule 40**][**and**][**ASTM D2467, Schedule 80**] PVC, socket type.
3. Adhesive Primer: ASTM F656.
4. Solvent Cement: ASTM D2564.

2.7 FIBERGLASS SEWER PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Augusta Fiberglass**]
2. [**Industrial Fiberglass Specialties, Inc.**]
3. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Augusta Fiberglass**]
2. [**Industrial Fiberglass Specialties, Inc.**]
3. <**Insert manufacturer's name**>

C. Source Limitations: Obtain fiberglass sewer pipe and fittings from single manufacturer.

D. Piping materials to bear label, stamp, or other markings of specified testing agency.

E. Fiberglass Sewer Pipe: ASTM D3262, RTRP, for gasketed joints fabricated with [**Type 2, polyester**][**or**][**Type 4, epoxy**] resin.

1. Liner: [**Reinforced thermoset**][**Nonreinforced thermoset**][**Thermoplastic**][**No liner**].
2. Grade: [**Reinforced, surface layer matching pipe resin**][**Nonreinforced, surface layer matching pipe resin**][**No surface layer**]<**Insert grade**>.
3. Stiffness: [**9 psig (62 kPa)**][**18 psig (124 kPa)**][**36 psig (248 kPa)**][**72 psig (496 kPa)**]

F. Fiberglass Nonpressure Fittings: ASTM D3840, RTRF, for gasketed joints.

1. Laminating Resin: [**Type 1, polyester**][**or**][**Type 2, epoxy**] resin.
2. Reinforcement: Grade with finish compatible with resin.

G. Gaskets: ASTM F477, elastomeric seals.

2.8 CONCRETE PIPE AND FITTINGS - SANITARY SEWERAGE

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Northern Concrete Pipe, Inc.**]
2. [**Rinker Materials Corporation, Concrete Pipe Division**]
3. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Northern Concrete Pipe, Inc.**]
2. [**Rinker Materials Corporation, Concrete Pipe Division**]
3. <**Insert manufacturer's name**>

C. Source Limitations: Obtain concrete pipe and fittings from single manufacturer.

D. Piping materials to bear label, stamp, or other markings of specified testing agency.

E. Nonreinforced-Concrete Sewer Pipe and Fittings: **ASTM C14 (ASTM C14M)**, [**Class 1**][**Class 2**][**Class 3**], with [**bell-and-spigot**][**or**][**tongue-and-groove**] ends for gasketed joints with **ASTM C443 (ASTM C443M)**, rubber gaskets.

F. Reinforced-Concrete Sewer Pipe and Fittings: **ASTM C76 (ASTM C76M)**.

1. [**Bell-and-spigot**][**or**][**tongue-and-groove**] ends for gasketed joints, with **ASTM C443 (ASTM C443M)**, rubber gaskets.
2. Class II, [**Wall A**][**Wall B**][**Wall C**].
3. Class III, [**Wall A**][**Wall B**][**Wall C**].
4. Class IV, [**Wall A**][**Wall B**][**Wall C**].
5. Class V, [**Wall A**][**Wall B**].

2.9 NONPRESSURE-TYPE TRANSITION COUPLINGS

A. Comply with ASTM C1173, elastomeric, sleeve-type, reducing or transition coupling; for joining underground nonpressure piping. Include ends of same sizes as piping to be joined and include corrosion-resistant-metal tension band and tightening mechanism on each end.

B. Sleeve Materials:

1. For Cast-Iron Soil Pipes: ASTM C564, rubber.
2. For Concrete Pipes: **ASTM C443 (ASTM C443M)**, rubber.
3. For Fiberglass Pipes: ASTM F477, elastomeric seal or ASTM D5926, PVC.
4. For Plastic Pipes: ASTM F477, elastomeric seal or ASTM D5926, PVC.
5. For Dissimilar Pipes: ASTM D5926, PVC or other material compatible with pipe materials being joined.

C. Unshielded, Flexible Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Dallas Specialty & Mfg. Co.**]
b. [**Fernco Inc**]
c. [**Mission Rubber Company, LLC**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Dallas Specialty & Mfg. Co.**]
b. [**Fernco Inc**]
c. [**Mission Rubber Company, LLC**]
d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain unshielded, flexible couplings from single manufacturer.
4. Description: Elastomeric sleeve with[**stainless steel shear ring and**] corrosion-resistant-metal tension band and tightening mechanism on each end.

D. Shielded, Flexible Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Dallas Specialty & Mfg. Co.**]
b. [**Mission Rubber Company, LLC**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Dallas Specialty & Mfg. Co.**]
b. [**Mission Rubber Company, LLC**]
c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain shielded, flexible couplings from single manufacturer.
4. Description: ASTM C1460, elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.

E. Ring-Type, Flexible Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Fernco Inc**]
b. [**Mission Rubber Company, LLC**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Fernco Inc**]
b. [**Mission Rubber Company, LLC**]
c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain ring-type, flexible couplings from single manufacturer.
4. Description: Elastomeric compression seal with dimensions to fit inside bell of larger pipe and for spigot of smaller pipe to fit inside ring.

F. Nonpressure-Type, Rigid Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ANACO-Husky; a part of the McWane family of companies**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ANACO-Husky; a part of the McWane family of companies**]
b. <**Insert manufacturer's name**>

3. Source Limitations: Obtain nonpressure-type, rigid couplings from single manufacturer.
4. Description: ASTM C1461, sleeve-type, reducing- or transition-type mechanical coupling; molded from ASTM C1440, TPE material; with corrosion-resistant-metal tension band and tightening mechanism on each end.

2.10 PRESSURE-TYPE PIPE COUPLINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Cascade Waterworks Mfg. Co.**]
2. [**Dresser Utility Solutions**]
3. [**Ford Meter Box Company, Inc. (The)**]
4. [**JCM Industries, Inc**]
5. [**Romac Industries, Inc.**]
6. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Cascade Waterworks Mfg. Co.**]
2. [**Dresser Utility Solutions**]
3. [**Ford Meter Box Company, Inc. (The)**]
4. [**JCM Industries, Inc**]
5. [**Romac Industries, Inc.**]
6. <**Insert manufacturer's name**>

C. Source Limitations: Obtain pressure-type pipe couplings from single manufacturer.

D. Standard: AWWA C219.

E. Description: Tubular-sleeve coupling with center sleeve, gaskets, end rings, and bolt fasteners.

F. Metal, bolted, sleeve-type, reducing or transition coupling; for joining underground pressure piping. Include [**150 psig (1035 kPa)**][**200 psig (1380 kPa)**]<**Insert value**> minimum pressure rating and ends of same sizes as piping to be joined.

G. Center-Sleeve Material: [**Manufacturer's standard**][**Carbon steel**][**Stainless steel**][**Ductile iron**][**Malleable iron**].

H. Gasket Material: Natural or synthetic rubber.

I. Metal Component Finish: Corrosion-resistant coating or material.

2.11 EXPANSION JOINTS AND DEFLECTION FITTINGS

A. Ductile-Iron, Flexible Expansion Joints:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**EBAA Iron Sales, Inc.**]
    b. [**Romac Industries, Inc.**]
    c. [**Star Pipe Products**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**EBAA Iron Sales, Inc.**]
    b. [**Romac Industries, Inc.**]
    c. [**Star Pipe Products**]
    d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain ductile-iron, flexible expansion joints from single manufacturer.
4. Standards:

    a. AWWA C110/A21.10.
    b. AWWA C153/A21.53.

5. Description: Compound fitting with combination of flanged and mechanical-joint ends. Include two gasketed ball-joint sections and one or more gasketed sleeve sections, rated for **250 psig (1725 kPa)** minimum working pressure and for offset and expansion indicated.

B. Ductile-Iron Deflection Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

a. [**EBAA Iron Sales, Inc.**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**EBAA Iron Sales, Inc.**]
b. <**Insert manufacturer's name**>

3. Source Limitations: Obtain ductile-iron deflection fittings from single manufacturer.
4. Standards:

a. AWWA C110/A21.10.
b. AWWA C153/A21.53.

5. Description: Compound coupling fitting with ball joint, flexing section, gaskets, and restrained-joint ends. Include rating for **250 psig (1725 kPa)** minimum working pressure and for up to 15 degrees of deflection.

2.12 ENCASEMENT FOR PIPING

A. Standards: ASTM A674 or AWWA C105/A21.5.

B. Material: [**Linear low-density polyethylene film of 0.008-inch (0.20-mm)**][**or**][**high-density, cross-laminated polyethylene film of 0.004-inch (0.10-mm)**] minimum thickness.

C. Form: [**Sheet**][**or**][**tube**].

D. Color: [**Black**][**or**][**natural**]<**Insert color**>.

2.13 MANHOLES

A. Standard Precast Concrete Manholes:

1. Standard: ASTM C478/C478M.
2. Description: Precast, reinforced concrete, of depth indicated, with provision for sealant joints.
3. Diameter: **48 inches (1200 mm)** minimum unless otherwise indicated.
4. Ballast: Increase thickness of precast concrete sections or add concrete to base section, as required to prevent flotation.
5. Base Section: **6-inch (150-mm)** minimum thickness for floor slab and **4-inch (100-mm)** minimum thickness for walls and base riser section; with separate base slab or base section with integral floor.
6. Riser Sections: **4-inch (100-mm)** minimum thickness, of length to provide depth indicated.
7. Top Section: Eccentric-cone type unless concentric-cone or flat-slab-top type is indicated; with top of cone of size that matches grade rings.
8. Joint Sealant: **ASTM C990 (ASTM C990M)**, bitumen or butyl rubber.
9. Resilient Pipe Connectors: ASTM C923/C923M, cast or fitted into manhole walls, for each pipe connection.
10. Steps: [**Individual FRP steps or FRP ladder**][**Individual FRP steps, FRP ladder, or ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**][**ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in**

ASTM D4101, PP]<**Insert material**>; wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at **12- to 16-inch (300- to 400-mm)** intervals. Omit steps if total depth from floor of manhole to finished grade is less than [**60 inches (1500 mm)**]<**Insert dimension**>.

11. Adjusting Rings: Interlocking HDPE rings, with level or sloped edge in thickness and diameter matching manhole frame and cover, and with height as required to adjust manhole frame and cover to indicated elevation and slope. Include sealant recommended in writing by ring manufacturer.
12. Grade Rings: Reinforced-concrete rings, **6- to 9-inch (150- to 225-mm)** total thickness, with diameter matching manhole frame and cover, and with height as required to adjust manhole frame and cover to indicated elevation and slope.

B. Designed Precast Concrete Manholes:

1. Standards: ASTM C913 and ASTM C890.
2. Description: Designed in accordance with ASTM C890 for A-16 designation, heavy-traffic, structural loading; of depth, shape, and dimensions indicated, with provision for sealant joints.
3. Ballast: Increase thickness of one or more precast concrete sections or add concrete to manhole as required to prevent flotation.
4. Joint Sealant: **ASTM C990 (ASTM 990M)**, bitumen or butyl rubber.
5. Resilient Pipe Connectors: ASTM C923/C923M, cast or fitted into manhole walls, for each pipe connection.
6. Steps: [**Individual FRP steps or FRP ladder**][**Individual FRP steps, FRP ladder, or ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**][**ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**]<**Insert material**>; wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at **12- to 16-inch (300- to 400-mm)** intervals. Omit steps if total depth from floor of manhole to finished grade is less than [**60 inches (1500 mm)**]<**Insert dimension**>.
7. Adjusting Rings: Interlocking HDPE rings, with level or sloped edge in thickness and diameter matching manhole frame and cover, and with height as required to adjust manhole frame and cover to indicated elevation and slope. Include sealant recommended in writing by ring manufacturer.
8. Grade Rings: Reinforced-concrete rings, **6- to 9-inch (150- to 225-mm)** total thickness, with diameter matching manhole frame and cover, and with height as required to adjust manhole frame and cover to indicated elevation and slope.

C. Fiberglass Manholes:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Associated Fiberglass Enterprises**]
    b. [**Containment Solutions, Inc**]
    c. [**L. F. Manufacturing, Inc**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Associated Fiberglass Enterprises**]
    b. [**Containment Solutions, Inc**]

c. [**L. F. Manufacturing, Inc**]
d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain FRP manholes from single manufacturer.
4. Standard: ASTM D3753.
5. Diameter: **48 inches (1200 mm)** minimum unless otherwise indicated.
6. Ballast: Increase thickness of concrete base as required to prevent flotation.
7. Base Section: Concrete, **6-inch (150-mm)** minimum thickness.
8. Resilient Pipe Connectors: ASTM C923/C923M, cast or fitted into manhole walls, for each pipe connection.
9. Steps: Individual FRP steps or FRP ladder, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at **12- to 16-inch (300- to 400-mm)** intervals. Omit steps if total depth from floor of manhole to finished grade is less than [**60 inches (1500 mm)**]<**Insert dimension**>.
10. Adjusting Rings: Interlocking HDPE rings, with level or sloped edge in thickness and diameter matching manhole frame and cover, and with height as required to adjust manhole frame and cover to indicated elevation and slope. Include sealant recommended in writing by ring manufacturer.
11. Grade Rings: Reinforced-concrete rings, **6- to 9-inch (150- to 225-mm)** total thickness, with diameter matching manhole frame and cover, and with height as required to adjust manhole frame and cover to indicated elevation and slope.

D. Manhole Frames and Covers:

1. Description: Ferrous; **24-inch (610-mm)** ID by **7- to 9-inch (175- to 225-mm)** riser, with **4-inch- (100-mm-)** minimum-width flange and **26-inch- (660-mm-)** diameter cover. Include indented top design with lettering cast into cover, using wording equivalent to "SANITARY SEWER."
2. Material: [**ASTM A536, Grade 60-40-18 ductile**][**ASTM A48/A48M, Class 35 gray**] iron unless otherwise indicated.

E. Manhole-Cover Inserts:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**L. F. Manufacturing, Inc**]
   b. [**Vortex Companies**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**L. F. Manufacturing, Inc**]
   b. [**Vortex Companies**]
   c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain manhole-cover inserts from single manufacturer.
4. Description; Manufactured, plastic form, of size to fit between manhole frame and cover and designed to prevent stormwater inflow. Include handle for removal and gasket for gastight sealing.
5. Type: [**Solid**][**Drainage with vent holes**][**Valve**].

2.14 CONCRETE

A. Description: Cast-in-place concrete complying with ACI 318, **ACI 350 (ACI 350M)**, and the following:

1. Cement: ASTM C150/C150M, Type II.
2. Fine Aggregate: ASTM C33/C33M, sand.
3. Coarse Aggregate: ASTM C33/C33M, crushed gravel.
4. Water: Potable.

B. Portland Cement Design Mix: **4000 psi (27.6 MPa)** minimum, with 0.45 maximum water/cementitious materials ratio.

1. Reinforcing Fabric: ASTM A1064/A1064M, steel, welded wire fabric, plain.
2. Reinforcing Bars: ASTM A615/A615M, **Grade 60 (420-MPa)** deformed steel.

C. Manhole Channels and Benches: Factory or field formed from concrete. Portland cement design mix, **4000 psi (27.6 MPa)** minimum, with 0.45 maximum water/cementitious materials ratio. Include channels and benches in manholes.

1. Channels: Concrete invert, formed to same width as connected piping, with height of vertical sides to three-fourths of pipe diameter. Form curved channels with smooth, uniform radius and slope.

a. Invert Slope: [**1**][**2**] percent through manhole.

2. Benches: Concrete, sloped to drain into channel.

a. Slope: [**4**][**8**] percent.

D. Ballast and Pipe Supports: Portland cement design mix, **3000 psi (20.7 MPa)** minimum, with 0.58 maximum water/cementitious materials ratio.

1. Reinforcing Fabric: ASTM A1064/A1064M, steel, welded wire fabric, plain.
2. Reinforcing Bars: ASTM A615/A615M, **Grade 60 (420 MPa)** deformed steel.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Excavating, trenching, and backfilling are specified in Section 312000 "Earth Moving."

3.2 INSTALLATION OF PIPING

A. General Locations and Arrangements: Drawing plans and details to indicate general location and arrangement of underground sanitary sewer piping. Location and arrangement of piping layout take into account design considerations. Install piping as indicated, to extent practical. Where specific installation is not indicated, follow piping manufacturer's written instructions.

B. Install piping beginning at low point, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install gaskets, seals, sleeves, and couplings in accordance with manufacturer's written instructions for using lubricants, cements, and other installation

requirements.

C. Install manholes for changes in direction unless fittings are indicated. Use fittings for branch connections unless direct tap into existing sewer is indicated.

D. Install proper size increasers, reducers, and couplings where different sizes or materials of pipes and fittings are connected. Reducing size of piping in direction of flow is prohibited.

E. When installing pipe under streets or other obstructions that cannot be disturbed, use pipe-jacking process of microtunneling.

F. Install gravity-flow, nonpressure, drainage piping in accordance with the following:

1. Install piping pitched down in direction of flow, at minimum slope of [**1**][**2**]<**Insert number**> percent unless otherwise indicated.
2. Install piping [**NPS 6 (DN 150)**]<**Insert pipe size**> and larger with restrained joints at tee fittings and at changes in direction. Use corrosion-resistant rods, pipe or fitting manufacturer's proprietary restraint system, or cast-in-place-concrete supports or anchors.
3. Install piping with [**36-inch (915-mm)**][**48-inch (1220-mm)**][**60-inch (1520-mm)**][**72-inch (1830-mm)**]<**Insert dimension**> minimum cover.
4. Install hub-and-spigot, cast-iron soil piping in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook."
5. Install hubless cast-iron soil piping in accordance with CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook."
6. Install ABS sewer piping in accordance with ASTM D2321 and ASTM F1668.
7. Install PVC Type PSM sewer piping in accordance with ASTM D2321 and ASTM F1668.
8. Install PVC Type DWV gravity sewer piping in accordance with ASTM D2321 and ASTM F1668.
9. Install fiberglass sewer piping in accordance with ASTM D3839 and ASTM F1668.
10. Install nonreinforced-concrete sewer piping in accordance with ASTM C1479/C1479M and ACPA's "Concrete Pipe & Box Culvert Installation Manual."
11. Install reinforced-concrete sewer piping in accordance with ASTM C1479/C1479M and ACPA's "Concrete Pipe & Box Culvert Installation Manual."

G. Install force-main, pressure piping in accordance with the following:

1. Install piping with restrained joints at tee fittings and at horizontal and vertical changes in direction. Use corrosion-resistant rods, pipe or fitting manufacturer's proprietary restraint system, or cast-in-place-concrete supports or anchors.
2. Install piping with [**36-inch (915-mm)**][**48-inch (1220-mm)**][**60-inch (1520-mm)**][**72-inch (1830-mm)**]<**Insert dimension**> minimum cover.
3. Install ductile-iron pressure piping in accordance with AWWA C600 or AWWA M41.
4. Install ductile-iron special fittings in accordance with AWWA C600.
5. Install PVC pressure piping in accordance with AWWA M23 or to ASTM D2774 and ASTM F1668.

H. Install corrosion-protection piping encasement over the following underground metal piping in accordance with ASTM A674 or AWWA C105/A21.5:

1. Hub-and-spigot, cast-iron soil pipe.
2. Hubless cast-iron soil pipe and fittings.
3. Ductile-iron pipe and fittings.
4. Expansion joints and deflection fittings.

I. Clear interior of piping and manholes of dirt and superfluous material as work progresses. Maintain swab or drag in piping, and pull past each joint as it is completed. Place plug in end of incomplete piping at end of day and when work stops.

3.3 PIPE JOINT CONSTRUCTION

A. Join gravity-flow, nonpressure, drainage piping in accordance with the following:

1. Join hub-and-spigot, cast-iron soil piping with gasket joints in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.
2. Join hub-and-spigot, cast-iron soil piping with caulked joints in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for lead and oakum caulked joints.
3. Join hubless cast-iron soil piping in accordance with CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-coupling joints.
4. Join ABS sewer piping in accordance with ASTM D2321 for elastomeric-seal joints.
5. Join PVC Type PSM sewer piping in accordance with ASTM D2321 and ASTM D3034 for elastomeric-seal joints or ASTM D3034 for elastomeric-gasket joints.
6. Join fiberglass sewer piping in accordance with ASTM D4161 for elastomeric-seal joints.
7. Join nonreinforced-concrete sewer piping in accordance with **ASTM C14 (ASTM C14M)** and ACPA's "Concrete Pipe & Box Culvert Installation Manual" for rubber-gasket joints.
8. Join reinforced-concrete sewer piping in accordance with ACPA's "Concrete Pipe & Box Culvert Installation Manual" for rubber-gasket joints.
9. Join dissimilar pipe materials with nonpressure-type, flexible[**or rigid**] couplings.

B. Join force-main, pressure piping in accordance with the following:

1. Join ductile-iron pressure piping in accordance with AWWA C600 or AWWA M41 for push-on joints.
2. Join ductile-iron special fittings in accordance with AWWA C600 or AWWA M41 for push-on joints.
3. Join PVC pressure piping in accordance with AWWA M23 for gasketed joints.
4. Join dissimilar pipe materials with pressure-type couplings.

C. Pipe couplings, expansion joints, and deflection fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.

1. Use nonpressure flexible couplings where required to join gravity-flow, nonpressure sewer piping unless otherwise indicated.

    a. [**Unshielded**][**Shielded**] flexible[**or rigid**]couplings for pipes of same or slightly different OD.
    b. Unshielded, increaser/reducer-pattern, flexible[**or rigid**]couplings for pipes with different OD.
    c. Ring-type flexible couplings for piping of different sizes where annular space between smaller piping's OD and larger piping's ID permits installation.

2. Use pressure pipe couplings for force-main joints.

3.4 INSTALLATION OF MANHOLES

A. General: Install manholes complete with appurtenances and accessories indicated.

B. Install precast concrete manhole sections with sealants in accordance with ASTM C891.

C. Install FRP manholes in accordance with manufacturer's written instructions.

D. Form continuous concrete channels and benches between inlets and outlet.

E. Set tops of frames and covers flush with finished surface of manholes that occur in pavements. Set tops [3 inches (76 mm)]<**Insert dimension**> above finished surface elsewhere unless otherwise indicated.

F. Install manhole-cover inserts in frame and immediately below cover.

3.5 CONCRETE PLACEMENT

A. Place cast-in-place concrete in accordance with ACI 318.

3.6 CONNECTIONS

A. Connect nonpressure, gravity-flow drainage piping to building's sanitary building drains specified in Section 221316 "Sanitary Waste and Vent Piping."

B. Connect force-main piping to building's sanitary force mains specified in Section 221316 "Sanitary Waste and Vent Piping." Terminate piping where indicated.

C. Make connections to existing piping and underground manholes.

1. Use commercially manufactured wye fittings for piping branch connections. Remove section of existing pipe, install wye fitting into existing piping, and encase entire wye fitting plus 6-inch (150-mm) overlap with not less than 6 inches (150 mm) of concrete with 28-day compressive strength of 3000 psi (20.7 MPa).
2. Make branch connections from side into existing piping, NPS 4 to NPS 20 (DN 100 to DN 500). Remove section of existing pipe, install wye fitting into existing piping, and encase entire wye with not less than 6 inches (150 mm) of concrete with 28-day compressive strength of 3000 psi (20.7 MPa).
3. Make branch connections from side into existing piping, NPS 21 (DN 525) or larger, or to underground manholes by cutting opening into existing unit large enough to allow 3 inches (76 mm) of concrete to be packed around entering connection. Cut end of connection pipe passing through pipe or structure wall to conform to shape of, and be flush with, inside wall unless otherwise indicated. On outside of pipe or manhole wall, encase entering connection in 6 inches (150 mm) of concrete for minimum length of 12 inches (300 mm) to provide additional support of collar from connection to undisturbed ground.

    a. Use concrete that will attain a minimum 28-day compressive strength of 3000 psi (20.7 MPa) unless otherwise indicated.
    b. Use epoxy-bonding compound as interface between new and existing concrete and piping materials.

4. Protect existing piping and manholes to prevent concrete or debris from entering while making tap connections. Remove debris or other extraneous material that may accumulate.

D. Connect to [**grease**][**oil**][**and**][**sand**] interceptors specified in Section 221323 "Sanitary Waste Interceptors."

3.7 CLOSING ABANDONED SANITARY SEWER SYSTEMS

A. Abandoned Piping: Close open ends of abandoned underground piping indicated to remain in place. Include closures strong enough to withstand hydrostatic and earth pressures that may result after ends of abandoned piping have been closed. Use either procedure below:

1. Close open ends of piping with at least [**8-inch- (203-mm-)**]<**Insert dimension**> thick, brick masonry bulkheads.
2. Close open ends of piping with threaded metal caps, plastic plugs, or other acceptable methods suitable for size and type of material being closed. Do not use wood plugs.

B. Abandoned Manholes: Excavate around manhole as required and use either procedure below:

1. Remove manhole and close open ends of remaining piping.
2. Remove top of manhole down to at least [**36 inches (915 mm)**]<**Insert dimension**> below final grade. Fill to within [**12 inches (300 mm)**]<**Insert dimension**> of top with stone, rubble, gravel, or compacted dirt. Fill to top with concrete.

C. Backfill to grade in accordance with Section 312000 "Earth Moving."

3.8 IDENTIFICATION

A. Comply with requirements in Section 312000 "Earth Moving" for underground utility identification devices. Arrange for installation of green warning tapes directly over piping and at outside edges of underground manholes.

1. Use[**warning tape or**] detectable warning tape over ferrous piping.
2. Use detectable warning tape over nonferrous piping and over edges of underground manholes.

3.9 FIELD QUALITY CONTROL

A. Inspect interior of piping to determine whether line displacement or other damage has occurred. Inspect after approximately **24 inches (600 mm)** of backfill is in place, and again at completion of Project.

1. Submit separate report for each system inspection.
2. Defects requiring correction include the following:

    a. Alignment: Less than full diameter of inside of pipe is visible between structures.
    b. Deflection: Flexible piping with deflection that prevents passage of ball or cylinder of size not less than 92.5 percent of piping diameter.
    c. Damage: Crushed, broken, cracked, or otherwise damaged piping.
    d. Infiltration: Water leakage into piping.
    e. Exfiltration: Water leakage from or around piping.

3. Replace defective piping using new materials, and repeat inspections until defects are within allowances specified.
4. Reinspect and repeat procedure until results are satisfactory.

B. Test new piping systems, and parts of existing systems that have been altered, extended, or repaired, for leaks and defects.

1. Do not enclose, cover, or put into service before inspection and approval.
2. Test completed piping systems in accordance with requirements of authorities having jurisdiction.
3. Schedule tests and inspections by authorities having jurisdiction with at least 24 hours' advance notice.
4. Submit separate report for each test.
5. Hydrostatic Tests: Test sanitary sewerage in accordance with requirements of authorities having jurisdiction and the following:

a. Fill sewer piping with water. Test with pressure of at least **10-ft. (3-m)** head of water, and maintain such pressure without leakage for at least 15 minutes.
b. Close openings in system and fill with water.
c. Purge air and refill with water.
d. Disconnect water supply.
e. Test and inspect joints for leaks.

6. Air Tests: Test sanitary sewerage in accordance with requirements of authorities having jurisdiction, UNI-B-6, and the following:

a. Test plastic gravity sewer piping in accordance with ASTM F1417.
b. Test concrete gravity sewer piping in accordance with ASTM C1628.

7. Force Main: Perform hydrostatic test after thrust blocks, supports, and anchors have hardened. Test at pressure not less than one and one-half times the maximum system operating pressure, but not less than [**150 psig (1035 kPa)**]<**Insert value**>.

a. Ductile-Iron Piping: Test in accordance with AWWA C600, "Hydraulic Testing" Section.
b. PVC Piping: Test in accordance with AWWA M23, "Testing and Maintenance" Chapter.

8. Manholes: Perform hydraulic test in accordance with **ASTM C969 (ASTM C969M)**.

C. Leaks and loss in test pressure constitute defects that must be repaired.

D. Replace leaking piping using new materials, and repeat testing until leakage is within allowances specified.

3.10 CLEANING

A. Clean dirt and superfluous material from interior of piping.[**Flush with potable water.**]

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 33 32 00 00 - SITE PACKAGED SEWAGE PUMPING STATIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Packaged sewage pumping stations - dry well.
2. Packaged sewage pumping stations - wet well.

B. Related Requirements:

1. Section 018123 "Facility Seismic and Wind Criteria" for seismic-load, wind-load, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment" for vibration and seismic controls.

1.2 PERFORMANCE REQUIREMENTS

A. Pressure Rating of Sewage Pumps and Discharge Piping Components: At least equal to sewage pump discharge pressure, but not less than **125 psig (860 kPa)**.

B. Pressure Rating of Other Piping Components: At least equal to system operating pressure.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings: Show fabrication and installation details for each packaged sewage pumping station.

1. Indicate layout at minimum scale of **1/2 inch per foot (1:25)**.
2. Detail pumping station assemblies and indicate dimensions.
3. Indicate size, materials, and components.
4. Indicate shipping, installed, and operating weights; loads; required clearances; method of field assembly; components.
5. Indicate basin size, inlet and discharge locations, cover dimensions, vent location, check valve and isolation valve locations.
6. Indicate electrical characteristics and junction box locations.
7. Indicate power, signal, and control wiring diagrams.
8. Signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of sewage pump, signed by product manufacturer.

B. Source quality-control test reports.

C. Field quality-control reports.

D. Qualification Statements: For [**Installer**][**testing agency**].

E. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For equipment.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.

D. Comply with HI 14.1-14.2, HI 14.3, and HI 14.4.

E. Comply with UL 778.

1.7 PROJECT CONDITIONS

A. Interruption of Existing Sanitary Sewer Service: Do not interrupt sanitary sewer service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary sanitary sewer service in accordance with requirements indicated:

1. Notify [**Architect**][**Construction Manager**][**Owner**] no fewer than [**two**]<**Insert number**> days in advance of proposed interruption of sanitary sewer service.
2. Do not proceed with interruption of sanitary sewer service without [**Architect's**][**Construction Manager's**][**Owner's**] written permission.

1.8 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Section 033000 "Cast-in-Place Concrete."

1.9 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of packaged sewage pumping stations that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures, including shell.
b. Faulty operation of sewage pumps, controls, or accessories.
c. Deterioration of metals, metal finishes, and other materials beyond normal use.

2. Warranty Period for Shells: <**Insert number**> years from date of Substantial Completion.
3. Warranty Period for Sewage Pumps and Controls: <**Insert number**> years from date of Substantial Completion.
4. Warranty Period for Accessories: <**Insert number**> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PACKAGED SEWAGE PUMPING STATIONS - DRY WELL

A. Packaged Sewage Pumping Stations - Dry Well with Dry-Well Sewage Pumps:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Dakota Pump Incorporated**]
   b. [**PumpTech, LLC**]
   c. [**Smith & Loveless**]
   d. [**USEMCO**]
   e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Dakota Pump Incorporated**]
   b. [**PumpTech, LLC**]
   c. [**Smith & Loveless**]
   d. [**USEMCO**]
   e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain dry well with dry-well sewage pump, packaged sewage pumping stations from single manufacturer.
4. Description: Factory fabricated, assembled, and tested with wet well for [**comminutor and**]collection of sanitary sewage and with dry equipment chamber for sewage pumps, controls, and accessories.

   a. Orientation: Shell underground with dry equipment chamber [**underground with top flush with grade**][**partially recessed underground**][**above grade**][**underground with entrance tube to grade**]<**Insert orientation**>.
   b. Shell:

      1) Fabricate shell from structural-steel plate with continuous welds to make watertight and gastight construction.

         a) Walls: **1/4-inch (6.4-mm)** minimum thickness.
         b) Top and Bottom Heads: **3/8-inch (9.5-mm)** minimum thickness. Weld reinforcing steel to top and bottom heads.
         c) Entrance Tube: From dry compartment to entrance at grade, and of size

required to replace largest piece of equipment, but not smaller than [36 inches (914 mm)]<**Insert dimension**> in diameter. Entrance tube walls are to be 1/4-inch (6.4-mm) minimum thickness.

d) Weld steel access ladder and air vent to shell[**and entrance tube**].
e) Apply three coats of epoxy resin to interior and exterior surfaces.
f) Include [**at least two**][**four**]<**Insert number**> exterior magnesium anode(s) for cathodic protection.

2) Fabricate shell from fiberglass with structural-steel reinforcement.

a) Attach structural-steel reinforcement to top and bottom heads.
b) Fabricate shell with continuous joints to make watertight and gastight construction.
c) Attach air vent to pump chamber[**and entrance tube**].
d) Ladder: [**Steel**][**Fiberglass**].

3) Install sump, 18 inches (450 mm) in diameter by 10 inches (254 mm) deep in dry-chamber floor. Slope floor toward sump and fasten rubber mat to floor walkway with cement.
4) Entrance tube may be furnished separately for field installation.
5) Entrance Cover: Waterproof and corrosion resistant, with lock. Include way to open cover from inside tube if cover is locked.
6) Air Vent: Duct fabricated from corrosion-resistant material, extended to above grade, outlet turned down, and with insect screen in outlet.
7) Factory fabricate piping between unit components.

a) Use galvanized-steel pipe and cast-iron fittings or ductile-iron pipe and fittings.
b) Use fittings for changes in direction and branch connections.
c) Flanged and union joints may be used instead of joints specified.
d) Use dielectric fittings for connections between ferrous- and copper-alloy piping.

8) Piping Connections: Unless otherwise indicated, make the following piping connections:

a) Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment having NPS 2 (DN 50) or smaller threaded pipe connection.
b) Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment having flanged pipe connection.

9) Valves: Ferrous alloy.

a) Sewage Pump Piping: Include gate valve on each pump inlet and gate and check valves on each discharge pipe.
b) Sump Pump Piping: Include ball or gate and check valves on discharge pipe.
c) Compressed-Air Piping: Include ball and check valves on discharge pipe from each air compressor.
d) Vacuum Piping: Include ball and check valves on inlet pipe to each vacuum pump.

10) Wiring: Tin-coated copper.

c. Comminutor: Full size of sewage inlet pipe.

1) Description: Motor-operated, single- or twin-shaft, cutter- or grinder-design unit with controls; for pipeline installation.
2) Body: Stainless steel or ductile iron with flanged ends and access plate.
3) Cutting Elements: Motor-driven rotor and stationary cutters or grinders of hardened stainless or heat-treated steel.
4) Motor: Explosion proof, directly connected to body.
5) Control Panel: [**NEMA 250, Type 12**]<**Insert designation**> enclosure for installation in dry equipment chamber.
6) <**Insert special control features**>.

d. Sewage Pumps: [**Two**][**Three**]<**Insert number**> dry-well-type, nonclog sewage pumps with controls and piping. Include ASTM A48/A48M, Class 25, nonclog, cast-iron impeller capable of passing solids of **3-inch (76-mm)** minimum diameter; mechanical or stuffing-box seals; and pedestal-mounted motor.

e. Controls:

1) Control Sequence of Operation: Cycle each sewage pump on and off automatically to maintain wet-well sewage level. Automatic control operates both pumps in parallel if wet-well level rises above starting point of low-level pump, until shutoff level is reached. Automatic alternator, with manual disconnect switch, changes sequence of lead-lag sewage pumps at completion of each pumping cycle.
2) Self-Purging, Air-Bubbler System: Senses variations of sewage level in wet well. Include duplex-arrangement oilless air compressors to furnish bubbler air; filters; air-storage reservoir; piping; airflow meter with needle valve adjustment for airflow regulation; sewage depth gauge; air-bubbler piping to wet well; and pressure-sensing, dustproof mercury switches.
3) System: [**Electrode**][**Float switch**][**Pressure switch**][**Ultrasonic**]. Senses variations of sewage level in wet well. Include high and low adjustments capable of operating on **6-inch (150-mm)** minimum differential of liquid level.
4) Motor Controllers: Magnetic, full voltage, nonreversing. Include undervoltage release, thermal-overload heaters in each phase, manual reset buttons, and hand-automatic selector switches. Include circuit breakers to provide branch-circuit protection for each controller.
5) 120 V accessory controls with 15 A, single-phase circuit breakers or fuses for each item.
6) Control Panel: Enclosure complying with UL 508A with separate compartments and covers for controllers, circuit breakers, transformers, alternators, and single-phase controls. Include 20 A duplex receptacle in NEMA WD 1, Configuration 5-20R mounted on exterior of control panel.

a) Mounting: [**Inside, on dry-chamber wall**][**Outside, on pedestal, at grade**]<**Insert building description and room number**>.
b) Enclosure: NEMA 250, [**Type 1**][**Type 4**][**Type 4X**]<**Insert type**>.

7) Install labels on panel face to identify switches and controls.
8) Wiring: Tin-copper wiring.
9) Connection for Portable Generator: Nonautomatic (manual) transfer switch with receptacle matching generator electrical power requirements. Nonautomatic transfer switches are specified in Section 263600 "Transfer Switches" and receptacles are specified in Section 262726 "Wiring Devices."

f. Submersible Sump Pump:

1) Discharge Size: **NPS 1-1/4 (DN 32)** minimum.

2) Pump End Bell and Motor Shell: Cast iron.
3) Motor: 1/3 hp, 1750 rpm, hermetically sealed, capacitor-start, with built-in overload protection.
4) Impeller: ASTM B584, cast bronze or ASTM B36/B36M, brass.
5) Shaft: Stainless steel.
6) Bearings: Grease-lubricated, factory-sealed ball bearings.
7) Seals: Mechanical.
8) Accessories: Inlet strainer.
9) Controls: Float switch.

g. Accessories:

1) Lighting: Minimum of two, UL 1598, heavy-duty, cast-metal, wet-location-type fixtures with 100 W bulbs and guards in service area. Locate switches, with pilot lights, at chamber entrance.
2) Dehumidifier: Electric refrigeration system, adjustable humidistat, reverse-acting thermostat for low-temperature cutoff controls, and condensate pump with drain piping to sump.

a) Dehumidification system capacity adequate to remove at least **15 pints (7 L)** of water per day from service area air that is **80 deg F (27 deg C)** with a relative humidity of 60 percent.

3) Ventilation: Electrically powered ventilation system. Include centrifugal blower with **4-inch- (100-mm-)** round exhaust vent designed to keep out rain, insects, and other foreign matter; limit switch to start blower if entrance door or lid is opened; 0- to 15-minute timer; and separate manual switch.

a) Ventilating system capacity to change air in dry equipment chamber every two minutes.

4) Heater: Electric, 1.5 kW minimum, with fan and thermostat control.
5) High-Water Audio Alarm: Horn for audio indication of station high-water level, energized by separate level-detecting device. Include alarm silencer switch and relay in station.
6) Remote Alarm Circuit: Include contacts for connection to remote alarm panel.

5. Capacities and Characteristics:

a. Diameter or Dimensions of Shell: <**Insert inches (mm) or other dimensions**>.
b. Height of Shell Base Section: <**Insert inches (mm)**>.
c. Pumping Station, Inlet Pipe Size: <**Insert NPS (DN)**>.
d. Pumping Station, Discharge Pipe Size: <**Insert NPS (DN)**>.
e. Comminutor:

1) Capacity: <**Insert gpm (L/s)**>.
2) Pipe Size: <**Insert NPS (DN)**>.
3) Motor Size: <**Insert value**>.
4) Electrical Characteristics:

a) Volts: [**240**][**277**][**480**]<**Insert value**> V.
b) Phases: [**Single**][**Three**].
c) Hertz: 60.

f. Sewage Pumps: [**Two**][**Three**]<**Insert number**> required.

g. Each Sewage Pump:

1) Capacity: <**Insert gpm (L/s)**>.
2) Total Dynamic Head: <**Insert feet (kPa)**>.
3) Speed: <**Insert rpm**>.
4) Impeller:

a) Type: <**Insert type**>.
b) Diameter: <**Insert inches (mm)**>.
c) Solids Size Design: <**Insert inches (mm)**>.

5) Inlet Size: <**Insert NPS (DN)**>.
6) Discharge Size: <**Insert NPS (DN)**>.
7) Motor Size: <**Insert value**> hp.
8) Electrical Characteristics:

a) Volts: [**240**][**277**][**480**]<**Insert value**> V.
b) Phases: [**Single**][**Three**].
c) Hertz: 60.

9) Motors:

a) General requirements for motors are specified in Section 330500 "Common Work Results for Utilities."

h. Sump Pump:

1) Capacity: <**Insert gpm (L/s)**>.
2) Total Dynamic Head: <**Insert feet (kPa)**>.
3) Speed: <**Insert rpm**>.
4) Discharge Size: <**Insert NPS (DN)**>.
5) Motor Size: <**Insert value**> hp.
6) Electrical Characteristics:

a) Volts: [**120**][**240**][**277**][**480**]<**Insert value**> V.
b) Phases: [**Single**][**Three**].
c) Hertz: 60.

7) Motors:

a) General requirements for motors are specified in Section 330500 "Common Work Results for Utilities."

i. Pumping Station Electrical Characteristics:

1) Full-Load Amperes: <**Insert value**>.
2) Minimum Circuit Ampacity: <**Insert value**>.
3) Maximum Overcurrent Protection: <**Insert amperage**>.

B. Packaged Sewage Pumping Stations - Dry Well with Vacuum-Primed Sewage Pumps:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Dakota Pump Incorporated**]
b. [**PumpTech, LLC**]
c. [**USEMCO**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Dakota Pump Incorporated**]
b. [**PumpTech, LLC**]
c. [**USEMCO**]
d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain dry well with vacuum-primed sewage pump, packaged sewage pumping stations from single manufacturer.
4. Description: Factory fabricated, assembled, and tested with wet well for [**comminutor and**]collection of sanitary sewage and with dry equipment chamber for sewage pumps, vacuum pumps, controls, and accessories.

a. Orientation: Shell underground with dry equipment chamber [**underground with top flush with grade**][**partially recessed underground**][**above grade**][**underground with entrance tube to grade**]<**Insert orientation**>.
b. Shell:

1) Fabricate shell from structural-steel plate with continuous welds to make watertight and gastight construction.

a) Walls: **1/4-inch (6.4-mm)** minimum thickness.
b) Top and Bottom Heads: **3/8-inch (9.5-mm)** minimum thickness. Weld reinforcing steel to top and bottom heads.
c) Entrance Tube: From dry compartment to entrance at grade, and of size required to replace largest piece of equipment, but not smaller than [**36 inches (914 mm)**]<**Insert dimension**> in diameter. Entrance tube walls are to be **1/4-inch (6.4-mm)** minimum thickness.
d) Weld steel access ladder and air vent to shell[**and entrance tube**].
e) Apply three coats of epoxy resin to interior and exterior surfaces.
f) Include [**at least two**][**four**]<**Insert number**> exterior magnesium anode(s) for cathodic protection.

2) Fabricate shell from fiberglass with structural-steel reinforcement.

a) Attach structural-steel reinforcement to top and bottom heads.
b) Fabricate shell with continuous joints to make watertight and gastight construction.
c) Attach air vent to pump chamber[**and entrance tube**].
d) Ladder: [**Steel**][**Fiberglass**].

3) Install sump, **18 inches (450 mm)** in diameter by **10 inches (254 mm)** deep in dry-chamber floor. Slope floor toward sump and fasten rubber mat to floor walkway with cement.
4) Entrance tube may be furnished separately for field installation.
5) Entrance Cover: Waterproof and corrosion resistant, with lock. Include way to open cover from inside tube if cover is locked.
6) Air Vent: Duct fabricated from corrosion-resistant material, extended to above grade,

outlet turned down, and with insect screen in outlet.

7) Factory fabricate piping between unit components.

   a) Use galvanized-steel pipe and cast-iron fittings or ductile-iron pipe and fittings.
   b) Use fittings for changes in direction and branch connections.
   c) Flanged and union joints may be used instead of joints specified.
   d) Use dielectric fittings for connections between ferrous- and copper-alloy piping.

8) Piping Connections: Unless otherwise indicated, make the following piping connections:

   a) Install unions, in piping **NPS 2 (DN 50)** and smaller, adjacent to each valve and at final connection to each piece of equipment having **NPS 2 (DN 50)** or smaller threaded pipe connection.
   b) Install flanges, in piping **NPS 2-1/2 (DN 65)** and larger, adjacent to flanged valves and at final connection to each piece of equipment having flanged pipe connection.

9) Valves: Ferrous alloy.

   a) Sewage Pump Piping: Include gate valve on each pump inlet and gate and check valves on each discharge pipe.
   b) Sump Pump Piping: Include ball or gate and check valves on discharge pipe.
   c) Compressed-Air Piping: Include ball and check valves on discharge pipe from each air compressor.
   d) Vacuum Piping: Include ball and check valves on inlet pipe to each vacuum pump.

10) Wiring: Tin-coated copper.

c. Comminutor: Full size of sewage inlet pipe.

   1) Description: Motor-operated, single- or twin-shaft, cutter- or grinder-design unit with controls; for pipeline installation.
   2) Body: Stainless steel or ductile iron with flanged ends and access plate.
   3) Cutting Elements: Motor-driven rotor and stationary cutters or grinders of hardened stainless or heat-treated steel.
   4) Motor: Explosion proof, directly connected to body.
   5) Control Panel: NEMA 250, Type 12 enclosure for installation in dry equipment chamber.
   6) <**Insert special control features**>.

d. Sewage Pumps: [**Two**][**Three**]<**Insert number**> dry-chamber-mounting, vacuum-primed, nonclog sewage pumps located in dry compartment above wet pit, with controls and piping. Include ASTM A48/A48M, Class 25, nonclog, cast-iron impeller capable of passing solids of **3-inch (76-mm)** minimum diameter; mechanical or stuffing-box seals; pedestal-mounted motor; and suction piping extending to bottom of wet pit.

e. Vacuum Pumps: Duplex arrangement with controls, vacuum piping, and vent piping of size and capacity required for system. Include automatic alternator, with manual disconnect switch, to change sequence of lead-lag vacuum pumps at completion of each cycle.

f. Controls:

   1) Control Sequence of Operation: Cycle each sewage pump on and off automatically to maintain wet-well sewage level. Automatic control operates both pumps in parallel

if wet-well level rises above starting point of low-level pump, until shutoff level is reached. Automatic alternator, with manual disconnect switch, changes sequence of lead-lag sewage pumps at completion of each pumping cycle.

2) Self-Purging, Air-Bubbler System: Senses variations of sewage level in wet well. Include duplex-arrangement oilless air compressors to furnish bubbler air; filters; air-storage reservoir; piping; airflow meter with needle valve adjustment for airflow regulation; sewage depth gauge; air-bubbler piping to wet well; and pressure-sensing, dustproof mercury switches.
3) System: [**Electrode**][**Float switch**][**Pressure switch**][**Ultrasonic**]. Senses variations of sewage level in wet well. Include high and low adjustments capable of operating on **6-inch (150-mm)** minimum differential of liquid level.
4) Motor Controllers: Magnetic, full voltage, nonreversing. Include undervoltage release, thermal-overload heaters in each phase, manual reset buttons, and hand-automatic selector switches. Include circuit breakers to provide branch-circuit protection for each controller.
5) 120 V accessory controls with 15 A, single-phase circuit breakers or fuses for each item.
6) Control Panel: Enclosure complying with UL 508A with separate compartments and covers for controllers, circuit breakers, transformers, alternators, and single-phase controls. Include 20 A duplex receptacle in NEMA WD 1, Configuration 5-20R mounted on exterior of control panel.

    a) Mounting: [**Inside, on dry-chamber wall**][**Outside, on pedestal, at grade**]<**Insert building description and room number**>.
    b) Enclosure: NEMA 250, [**Type 1**][**Type 4**][**Type 4X**]<**Insert type**>.

7) Install labels on panel face to identify switches and controls.
8) Wiring: Tin-copper wiring.
9) Connection for Portable Generator: Nonautomatic (manual) transfer switch with receptacle matching generator electrical power requirements. Nonautomatic transfer switches are specified in Section 263600 "Transfer Switches" and receptacles are specified in Section 262726 "Wiring Devices."

g. Submersible Sump Pump:

1) Discharge Size: **NPS 1-1/4 (DN 32)** minimum.
2) Pump End Bell and Motor Shell: Cast iron.
3) Motor: 1/3 hp, 1750 rpm, hermetically sealed, capacitor-start, with built-in overload protection.
4) Impeller: ASTM B584, cast bronze or ASTM B36/B36M, brass.
5) Shaft: Stainless steel.
6) Bearings: Grease-lubricated, factory-sealed ball bearings.
7) Seals: Mechanical.
8) Accessories: Inlet strainer.
9) Controls: Float switch.

h. Accessories:

1) Lighting: Minimum of two, UL 1598, heavy-duty, cast-metal, wet-location-type fixtures with 100 W bulbs and guards in service area. Locate switches, with pilot lights, at chamber entrance.
2) Dehumidifier: Electric refrigeration system, adjustable humidistat, reverse-acting thermostat for low-temperature cutoff controls, and condensate pump with drain piping to sump.

a) Dehumidification system capacity adequate to remove at least **15 pints (7 L)** of water per day from service area air that is **80 deg F (27 deg C)** with a relative humidity of 60 percent.

3) Ventilation: Electrically powered ventilation system. Include centrifugal blower with **4-inch- (100-mm-)** round exhaust vent designed to keep out rain, insects, and other foreign matter; limit switch to start blower if entrance door or lid is opened; 0- to 15-minute timer; and separate manual switch.

a) Ventilating system capacity to change air in dry equipment chamber every two minutes.

4) Heater: Electric, 1.5 kW minimum, with fan and thermostat control.
5) High-Water Audio Alarm: Horn for audio indication of station high-water level, energized by separate level-detecting device. Include alarm silencer switch and relay in station.
6) Remote Alarm Circuit: Include contacts for connection to remote alarm panel.

5. Capacities and Characteristics:

a. Diameter or Dimensions of Shell: <**Insert inches (mm) or other dimensions**>.
b. Height of Shell Base Section: <**Insert inches (mm)**>.
c. Pumping Station, Inlet Pipe Size: <**Insert NPS (DN)**>.
d. Pumping Station, Discharge Pipe Size: <**Insert NPS (DN)**>.
e. Comminutor:

1) Capacity: <**Insert gpm (L/s)**>.
2) Pipe Size: <**Insert NPS (DN)**>.
3) Motor Size: <**Insert value**> hp.
4) Electrical Characteristics:

a) Volts: [**240**][**277**][**480**]<**Insert value**> V.
b) Phases: [**Single**][**Three**].
c) Hertz: 60.

f. Sewage Pumps: [**Two**][**Three**]<**Insert number**> required.
g. Each Sewage Pump:

1) Capacity: <**Insert gpm (L/s)**>.
2) Total Dynamic Head: <**Insert feet (kPa)**>.
3) Speed: <**Insert rpm**>.
4) Impeller:

a) Type: <**Insert type**>.
b) Diameter: <**Insert inches (mm)**>.
c) Solids Size Design: <**Insert inches (mm)**>.

5) Inlet Size: <**Insert NPS (DN)**>.
6) Discharge Size: <**Insert NPS (DN)**>.
7) Motor Size: <**Insert value**> hp.
8) Electrical Characteristics:

a) Volts: [**240**][**277**][**480**]<**Insert value**> V.
b) Phases: [**Single**][**Three**].
c) Hertz: 60.

9) Motors:

a) General requirements for motors are specified in Section 330500 "Common Work Results for Utilities."

h. Sump Pump:

1) Capacity: <**Insert gpm (L/s)**>.
2) Total Dynamic Head: <**Insert feet (kPa)**>.
3) Speed: <**Insert rpm**>.
4) Discharge Size: <**Insert NPS (DN)**>.
5) Motor Size: <**Insert value**> hp.
6) Electrical Characteristics:

a) Volts: [**120**][**240**][**277**][**480**]<**Insert value**> V.
b) Phases: [**Single**][**Three**].
c) Hertz: 60.

7) Motors:

a) General requirements for motors are specified in Section 330500 "Common Work Results for Utilities."

i. Pumping Station Electrical Characteristics:

1) Full-Load Amperes: <**Insert value**>.
2) Minimum Circuit Ampacity: <**Insert value**>.
3) Maximum Overcurrent Protection: <**Insert amperage**>.

2.2 PACKAGED SEWAGE PUMPING STATIONS - WET WELL

A. Packaged Sewage Pumping Stations - Wet Well with Submersible Sewage Pumps:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Metropolitan Industries, Inc**]
b. [**PumpTech, LLC**]
c. [**USEMCO**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Metropolitan Industries, Inc**]
b. [**PumpTech, LLC**]
c. [**USEMCO**]
d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain wet well with submersible sewage pumps, packaged sewage pumping

stations from single manufacturer.

4. Description: Factory fabricated, assembled, and tested with wet well for [**comminutor,**]submersible sewage pumps and collection of sanitary sewage and dry equipment chamber for controls and accessories.

   a. Orientation: Shell underground with dry equipment chamber [**underground with top flush with grade**][**partially recessed underground**][**above grade**][**underground with entrance tube to grade**]<**Insert orientation**>.
   b. Shell:

      1) Fabricate shell from structural-steel plate with continuous welds to make watertight and gastight construction.

         a) Walls: **1/4-inch (6.4-mm)** minimum thickness.
         b) Top and Bottom Heads: **3/8-inch (9.5-mm)** minimum thickness. Weld reinforcing steel to top and bottom heads.
         c) Entrance Tube: From dry compartment to entrance at grade, and of size required to replace largest piece of equipment, but not smaller than [**36 inches (914 mm)**]<**Insert dimension**> in diameter. Entrance tube walls are to be **1/4-inch (6.4-mm)** minimum thickness.
         d) Weld steel access ladder and air vent to shell[**and entrance tube**].
         e) Apply three coats of epoxy resin to interior and exterior surfaces.
         f) Include [**at least two**][**four**]<**Insert number**> exterior magnesium anode(s) for cathodic protection.

      2) Fabricate shell from fiberglass with structural-steel reinforcement.

         a) Attach structural-steel reinforcement to top and bottom heads.
         b) Fabricate shell with continuous joints to make watertight and gastight construction.
         c) Attach air vent to pump chamber[**and entrance tube**].
         d) Ladder: [**Steel**][**Fiberglass**].

      3) Install sump, **18 inches (450 mm)** in diameter by **10 inches (254 mm)** deep in dry-chamber floor. Slope floor toward sump and fasten rubber mat to floor walkway with cement.
      4) Entrance tube may be furnished separately for field installation.
      5) Entrance Cover: Waterproof and corrosion resistant, with lock. Include way to open cover from inside tube if cover is locked.
      6) Air Vent: Duct fabricated from corrosion-resistant material, extended to above grade, outlet turned down, and with insect screen in outlet.
      7) Factory fabricate piping between unit components.

         a) Use galvanized-steel pipe and cast-iron fittings or ductile-iron pipe and fittings.
         b) Use fittings for changes in direction and branch connections.
         c) Flanged and union joints may be used instead of joints specified.
         d) Use dielectric fittings for connections between ferrous- and copper-alloy piping.

      8) Piping Connections: Unless otherwise indicated, make the following piping connections:

         a) Install unions, in piping **NPS 2 (DN 50)** and smaller, adjacent to each valve and at final connection to each piece of equipment having **NPS 2 (DN 50)** or smaller threaded pipe connection.

b) Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment having flanged pipe connection.

9) Valves: Ferrous alloy.

a) Sewage Pump Piping: Include gate valve on each pump inlet and gate and check valves on each discharge pipe.
b) Sump Pump Piping: Include ball or gate and check valves on discharge pipe.
c) Compressed-Air Piping: Include ball and check valves on discharge pipe from each air compressor.
d) Vacuum Piping: Include ball and check valves on inlet pipe to each vacuum pump.

10) Wiring: Tin-coated copper.

c. Comminutor: Full size of sewage inlet pipe.

1) Description: Motor-operated, single- or twin-shaft, cutter- or grinder-design unit with controls; for pipeline installation.
2) Body: Stainless steel or ductile iron with flanged ends and access plate.
3) Cutting Elements: Motor-driven rotor and stationary cutters or grinders of hardened stainless or heat-treated steel.
4) Motor: Explosion proof, directly connected to body.
5) Control Panel: NEMA 250, Type 12 enclosure for installation in dry equipment chamber.
6) <**Insert special control features**>.

d. Sewage Pumps: [**Two**][**Three**]<**Insert number**> submersible-type sewage pumps, with guide rail, quick-disconnect system, controls, and piping. Include ASTM A48/A48M, Class 25, nonclog, cast-iron impeller capable of passing solids of 3-inch (76-mm) minimum diameter; and hermetically sealed motor with moisture-sensing probe, mechanical seals, and waterproof power cable.

e. Controls:

1) Control Sequence of Operation: Cycle each sewage pump on and off automatically to maintain wet-well sewage level. Automatic control operates both pumps in parallel if wet-well level rises above starting point of low-level pump, until shutoff level is reached. Automatic alternator, with manual disconnect switch, changes sequence of lead-lag sewage pumps at completion of each pumping cycle.
2) Self-Purging, Air-Bubbler System: Senses variations of sewage level in wet well. Include duplex-arrangement oilless air compressors to furnish bubbler air; filters; air-storage reservoir; piping; airflow meter with needle valve adjustment for airflow regulation; sewage depth gauge; air-bubbler piping to wet well; and pressure-sensing, dustproof mercury switches.
3) System: [**Electrode**][**Float switch**][**Pressure switch**][**Ultrasonic**]. Senses variations of sewage level in wet well. Include high and low adjustments capable of operating on 6-inch (150-mm) minimum differential of liquid level.
4) Motor Controllers: Magnetic, full voltage, nonreversing. Include undervoltage release, thermal-overload heaters in each phase, manual reset buttons, and hand-automatic selector switches. Include circuit breakers to provide branch-circuit protection for each controller.
5) 120 V accessory controls with 15 A, single-phase circuit breakers or fuses for each item.
6) Control Panel: Enclosure complying with UL 508A with separate compartments and

covers for controllers, circuit breakers, transformers, alternators, and single-phase controls. Include 20 A duplex receptacle in NEMA WD 1, Configuration 5-20R mounted on exterior of control panel.

a) Mounting: [**Inside, on dry-chamber wall**][**Outside, on pedestal, at grade**]<**Insert building description and room number**>.
b) Enclosure: NEMA 250, [**Type 1**][**Type 4**][**Type 4X**]<**Insert type**>.

7) Install labels on panel face to identify switches and controls.
8) Wiring: Tin-copper wiring.
9) Connection for Portable Generator: Nonautomatic (manual) transfer switch with receptacle matching generator electrical power requirements. Nonautomatic transfer switches are specified in Section 263600 "Transfer Switches" and receptacles are specified in Section 262726 "Wiring Devices."

f. Submersible Sump Pump:

1) Discharge Size: **NPS 1-1/4 (DN 32)** minimum.
2) Pump End Bell and Motor Shell: Cast iron.
3) Motor: 1/3 hp, 1750 rpm, hermetically sealed, capacitor-start, with built-in overload protection.
4) Impeller: ASTM B584, cast bronze or ASTM B36/B36M, brass.
5) Shaft: Stainless steel.
6) Bearings: Grease-lubricated, factory-sealed ball bearings.
7) Seals: Mechanical.
8) Accessories: Inlet strainer.
9) Controls: Float switch.

g. Accessories:

1) Lighting: Minimum of two, UL 1598, heavy-duty, cast-metal, wet-location-type fixtures with 100 W bulbs and guards in service area. Locate switches, with pilot lights, at chamber entrance.
2) Dehumidifier: Electric refrigeration system, adjustable humidistat, reverse-acting thermostat for low-temperature cutoff controls, and condensate pump with drain piping to sump.

a) Dehumidification system capacity adequate to remove at least **15 pints (7 L)** of water per day from service area air that is **80 deg F (27 deg C)** with a relative humidity of 60 percent.

3) Ventilation: Electrically powered ventilation system. Include centrifugal blower with **4-inch- (100-mm-)** round exhaust vent designed to keep out rain, insects, and other foreign matter; limit switch to start blower if entrance door or lid is opened; 0- to 15-minute timer; and separate manual switch.

a) Ventilating system capacity to change air in dry equipment chamber every two minutes.

4) Heater: Electric, 1.5 kW minimum, with fan and thermostat control.
5) High-Water Audio Alarm: Horn for audio indication of station high-water level, energized by separate level-detecting device. Include alarm silencer switch and relay in station.
6) Remote Alarm Circuit: Include contacts for connection to remote alarm panel.

5. Capacities and Characteristics:

a. Diameter or Dimensions of Shell: <**Insert inches (mm) or other dimensions**>.
b. Height of Shell Base Section: <**Insert inches (mm)**>.
c. Pumping Station, Inlet Pipe Size: <**Insert NPS (DN)**>.
d. Pumping Station, Discharge Pipe Size: <**Insert NPS (DN)**>.
e. Comminutor:

1) Capacity: <**Insert gpm (L/s)**>.
2) Pipe Size: <**Insert NPS (DN)**>.
3) Motor Size: <**Insert value**> hp.
4) Electrical Characteristics:

a) Volts: [**240**][**277**][**480**]<**Insert value**> V.
b) Phases: [**Single**][**Three**].
c) Hertz: 60.

f. Sewage Pumps: [**Two**][**Three**]<**Insert number**> required.
g. Each Sewage Pump:

1) Capacity: <**Insert gpm (L/s)**>.
2) Total Dynamic Head: <**Insert feet (kPa)**>.
3) Speed: <**Insert rpm**>.
4) Impeller:

a) Type: <**Insert type**>.
b) Diameter: <**Insert inches (mm)**>.
c) Solids Size Design: <**Insert inches (mm)**>.

5) Inlet Size: <**Insert NPS (DN)**>.
6) Discharge Size: <**Insert NPS (DN)**>.
7) Motor Size: <**Insert value**> hp.
8) Electrical Characteristics:

a) Volts: [**240**][**277**][**480**]<**Insert value**> V.
b) Phases: [**Single**][**Three**].
c) Hertz: 60.

9) Motors:

a) General requirements for motors are specified in Section 330500 "Common Work Results for Utilities."

h. Sump Pump:

1) Capacity: <**Insert gpm (L/s)**>.
2) Total Dynamic Head: <**Insert feet (kPa)**>.
3) Speed: <**Insert rpm**>.
4) Discharge Size: <**Insert NPS (DN)**>.
5) Motor Size: <**Insert value**> hp.
6) Electrical Characteristics:

a) Volts: [**120**][**240**][**277**][**480**]<**Insert value**> V.
b) Phases: [**Single**][**Three**].
c) Hertz: 60.

7) Motors:

a) General requirements for motors are specified in Section 330500 "Common Work Results for Utilities."

i. Pumping Station Electrical Characteristics:

1) Full-Load Amperes: <**Insert value**>.
2) Minimum Circuit Ampacity: <**Insert value**>.
3) Maximum Overcurrent Protection: <**Insert amperage**>.

B. Packaged Sewage Pumping Stations - Wet Well with Submersible Grinder Sewage Pumps:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Environment One Corporation**]
b. [**Metropolitan Industries, Inc**]
c. [**PumpTech, LLC**]
d. [**USEMCO**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Environment One Corporation**]
b. [**Metropolitan Industries, Inc**]
c. [**PumpTech, LLC**]
d. [**USEMCO**]
e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain wet well with submersible grinder sewage pumps, packaged sewage pumping stations from single manufacturer.
4. Description: Factory fabricated, assembled, and tested with wet well for submersible grinder sewage pumps and collection of sanitary sewage and with dry equipment chamber for controls and accessories.

a. Orientation: Shell underground with dry equipment chamber [**underground with top flush with grade**][**partially recessed underground**][**above grade**][**underground with entrance tube to grade**]<**Insert orientation**>.
b. Shell:

1) Fabricate shell from structural-steel plate with continuous welds to make watertight and gastight construction.

a) Walls: **1/4-inch (6.4-mm)** minimum thickness.
b) Top and Bottom Heads: **3/8-inch (9.5-mm)** minimum thickness. Weld reinforcing steel to top and bottom heads.
c) Entrance Tube: From dry compartment to entrance at grade, and of size required to replace largest piece of equipment, but not smaller than [**36 inches (914 mm)**]<**Insert dimension**> in diameter. Entrance tube walls are to be **1/4-inch (6.4-mm)** minimum thickness.
d) Weld steel access ladder and air vent to shell[**and entrance tube**].
e) Apply three coats of epoxy resin to interior and exterior surfaces.
f) Include [**at least two**][**four**]<**Insert number**> exterior magnesium anode(s)

for cathodic protection.

2) Fabricate shell from fiberglass with structural-steel reinforcement.

   a) Attach structural-steel reinforcement to top and bottom heads.
   b) Fabricate shell with continuous joints to make watertight and gastight construction.
   c) Attach air vent to pump chamber[**and entrance tube**].
   d) Ladder: [**Steel**][**Fiberglass**].

3) Install sump, **18 inches (450 mm)** in diameter by **10 inches (254 mm)** deep in dry-chamber floor. Slope floor toward sump and fasten rubber mat to floor walkway with cement.
4) Entrance tube may be furnished separately for field installation.
5) Entrance Cover: Waterproof and corrosion resistant, with lock. Include way to open cover from inside tube if cover is locked.
6) Air Vent: Duct fabricated from corrosion-resistant material, extended to above grade, outlet turned down, and with insect screen in outlet.
7) Factory fabricate piping between unit components.

   a) Use galvanized-steel pipe and cast-iron fittings or ductile-iron pipe and fittings.
   b) Use fittings for changes in direction and branch connections.
   c) Flanged and union joints may be used instead of joints specified.
   d) Use dielectric fittings for connections between ferrous- and copper-alloy piping.

8) Piping Connections: Unless otherwise indicated, make the following piping connections:

   a) Install unions, in piping **NPS 2 (DN 50)** and smaller, adjacent to each valve and at final connection to each piece of equipment having **NPS 2 (DN 50)** or smaller threaded pipe connection.
   b) Install flanges, in piping **NPS 2-1/2 (DN 65)** and larger, adjacent to flanged valves and at final connection to each piece of equipment having flanged pipe connection.

9) Valves: Ferrous alloy.

   a) Sewage Pump Piping: Include gate valve on each pump inlet and gate and check valves on each discharge pipe.
   b) Sump Pump Piping: Include ball or gate and check valves on discharge pipe.
   c) Compressed-Air Piping: Include ball and check valves on discharge pipe from each air compressor.
   d) Vacuum Piping: Include ball and check valves on inlet pipe to each vacuum pump.

10) Wiring: Tin-coated copper.

c. Sewage Pumps: [**Two**][**Three**]<**Insert number**> submersible grinder-type sewage pumps, with guide rail, quick-disconnect system, controls, and piping. Include stainless-steel grinder impeller and hermetically sealed motor with moisture-sensing probe, mechanical seals, and waterproof power cable.
d. Controls:

1) Control Sequence of Operation: Cycle each sewage pump on and off automatically to maintain wet-well sewage level. Automatic control operates both pumps in parallel if wet-well level rises above starting point of low-level pump, until shutoff level is reached. Automatic alternator, with manual disconnect switch, changes sequence of lead-lag sewage pumps at completion of each pumping cycle.
2) Self-Purging, Air-Bubbler System: Senses variations of sewage level in wet well. Include duplex-arrangement oilless air compressors to furnish bubbler air; filters; air-storage reservoir; piping; airflow meter with needle valve adjustment for airflow regulation; sewage depth gauge; air-bubbler piping to wet well; and pressure-sensing, dustproof mercury switches.
3) System: [**Electrode**][**Float switch**][**Pressure switch**][**Ultrasonic**]. Senses variations of sewage level in wet well. Include high and low adjustments capable of operating on **6-inch (150-mm)** minimum differential of liquid level.
4) Motor Controllers: Magnetic, full voltage, nonreversing. Include undervoltage release, thermal-overload heaters in each phase, manual reset buttons, and hand-automatic selector switches. Include circuit breakers to provide branch-circuit protection for each controller.
5) 120 V accessory controls with 15 A, single-phase circuit breakers or fuses for each item.
6) Control Panel: Enclosure complying with UL 508A with separate compartments and covers for controllers, circuit breakers, transformers, alternators, and single-phase controls. Include 20 A duplex receptacle in NEMA WD 1, Configuration 5-20R mounted on exterior of control panel.

    a) Mounting: [**Inside, on dry-chamber wall**][**Outside, on pedestal, at grade**]<**Insert building description and room number**>.
    b) Enclosure: NEMA 250, [**Type 1**][**Type 4**][**Type 4X**]<**Insert type**>.

7) Install labels on panel face to identify switches and controls.
8) Wiring: Tin-copper wiring.
9) Connection for Portable Generator: Nonautomatic (manual) transfer switch with receptacle matching generator electrical power requirements. Nonautomatic transfer switches are specified in Section 263600 "Transfer Switches" and receptacles are specified in Section 262726 "Wiring Devices."

e. Submersible Sump Pump:

1) Discharge Size: **NPS 1-1/4 (DN 32)** minimum.
2) Pump End Bell and Motor Shell: Cast iron.
3) Motor: 1/3 hp, 1750 rpm, hermetically sealed, capacitor-start, with built-in overload protection.
4) Impeller: ASTM B584, cast bronze or ASTM B36/B36M, brass.
5) Shaft: Stainless steel.
6) Bearings: Grease-lubricated, factory-sealed ball bearings.
7) Seals: Mechanical.
8) Accessories: Inlet strainer.
9) Controls: Float switch.

f. Accessories:

1) Lighting: Minimum of two, UL 1598, heavy-duty, cast-metal, wet-location-type fixtures with 100 W bulbs and guards in service area. Locate switches, with pilot lights, at chamber entrance.
2) Dehumidifier: Electric refrigeration system, adjustable humidistat, reverse-acting thermostat for low-temperature cutoff controls, and condensate pump with drain piping to sump.

a) Dehumidification system capacity adequate to remove at least **15 pints (7 L)** of water per day from service area air that is **80 deg F (27 deg C)** with a relative humidity of 60 percent.

3) Ventilation: Electrically powered ventilation system. Include centrifugal blower with **4-inch- (100-mm-)** round exhaust vent designed to keep out rain, insects, and other foreign matter; limit switch to start blower if entrance door or lid is opened; 0- to 15-minute timer; and separate manual switch.

a) Ventilating system capacity to change air in dry equipment chamber every two minutes.

4) Heater: Electric, 1.5 kW minimum, with fan and thermostat control.
5) High-Water Audio Alarm: Horn for audio indication of station high-water level, energized by separate level-detecting device. Include alarm silencer switch and relay in station.
6) Remote Alarm Circuit: Include contacts for connection to remote alarm panel.

5. Capacities and Characteristics:

a. Diameter or Dimensions of Shell: <**Insert inches (mm) or other dimensions**>.
b. Height of Shell Base Section: <**Insert inches (mm)**>.
c. Pumping Station, Inlet Pipe Size: <**Insert NPS (DN)**>.
d. Pumping Station, Discharge Pipe Size: <**Insert NPS (DN)**>.
e. Sewage Pumps: [**Two**][**Three**]<**Insert number**> required.
f. Each Sewage Pump:

1) Capacity: <**Insert gpm (L/s)**>.
2) Total Dynamic Head: <**Insert feet (kPa)**>.
3) Speed: <**Insert rpm**>.
4) Impeller: [**Cutter**][**Cutter or grinder**][**Grinder**] type.
5) Inlet Size: <**Insert NPS (DN)**>.
6) Discharge Size: <**Insert NPS (DN)**>.
7) Motor Size: <**Insert value**> hp.
8) Electrical Characteristics:

a) Volts: [**240**][**277**][**480**]<**Insert value**> V.
b) Phases: [**Single**][**Three**].
c) Hertz: 60.

9) Motors:

a) General requirements for motors are specified in Section 330500 "Common Work Results for Utilities."

g. Sump Pump:

1) Capacity: <**Insert gpm (L/s)**>.
2) Total Dynamic Head: <**Insert feet (kPa)**>.
3) Speed: <**Insert rpm**>.
4) Discharge Size: <**Insert NPS (DN)**>.
5) Motor Size: <**Insert value**> hp.
6) Electrical Characteristics:

a) Volts: [**120**][**240**][**277**][**480**]<**Insert value**> V.

b) Phases: [**Single**][**Three**].
c) Hertz: 60.

7) Motors:

a) General requirements for motors are specified in Section 330500 "Common Work Results for Utilities."

h. Pumping Station Electrical Characteristics:

1) Full-Load Amperes: <**Insert value**>.
2) Minimum Circuit Ampacity: <**Insert value**>.
3) Maximum Overcurrent Protection: <**Insert amperage**>.

C. Packaged Sewage Pumping Stations - Wet Well with Suspended Sewage Pumps:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Dakota Pump Incorporated**]
b. [**PumpTech, LLC**]
c. [**Smith & Loveless**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Dakota Pump Incorporated**]
b. [**PumpTech, LLC**]
c. [**Smith & Loveless**]
d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain wet well with suspended sewage pumps, packaged sewage pumping stations from single manufacturer.
4. Description: Factory fabricated, assembled, and tested with wet well for [**comminutor,**]suspended sewage pumps and collection of sanitary sewage and with dry equipment chamber for pump motors, controls, and accessories.

a. Orientation: Shell underground with dry equipment chamber [**underground with top flush with grade**][**partially recessed underground**][**above grade**][**underground with entrance tube to grade**]<**Insert orientation**>.
b. Shell:

1) Fabricate shell from structural-steel plate with continuous welds to make watertight and gastight construction.

a) Walls: **1/4-inch (6.4-mm)** minimum thickness.
b) Top and Bottom Heads: **3/8-inch (9.5-mm)** minimum thickness. Weld reinforcing steel to top and bottom heads.
c) Entrance Tube: From dry compartment to entrance at grade, and of size required to replace largest piece of equipment, but not smaller than [**36 inches (914 mm)**]<**Insert dimension**> in diameter. Entrance tube walls are to be **1/4-inch (6.4-mm)** minimum thickness.

d) Weld steel access ladder and air vent to shell[**and entrance tube**].
e) Apply three coats of epoxy resin to interior and exterior surfaces.
f) Include [**at least two**][**four**]<**Insert number**> exterior magnesium anode(s) for cathodic protection.

2) Fabricate shell from fiberglass with structural-steel reinforcement.

a) Attach structural-steel reinforcement to top and bottom heads.
b) Fabricate shell with continuous joints to make watertight and gastight construction.
c) Attach air vent to pump chamber[**and entrance tube**].
d) Ladder: [**Steel**][**Fiberglass**].

3) Install sump, **18 inches (450 mm)** in diameter by **10 inches (254 mm)** deep in dry-chamber floor. Slope floor toward sump and fasten rubber mat to floor walkway with cement.
4) Entrance tube may be furnished separately for field installation.
5) Entrance Cover: Waterproof and corrosion resistant, with lock. Include way to open cover from inside tube if cover is locked.
6) Air Vent: Duct fabricated from corrosion-resistant material, extended to above grade, outlet turned down, and with insect screen in outlet.
7) Factory fabricate piping between unit components.

a) Use galvanized-steel pipe and cast-iron fittings or ductile-iron pipe and fittings.
b) Use fittings for changes in direction and branch connections.
c) Flanged and union joints may be used instead of joints specified.
d) Use dielectric fittings for connections between ferrous- and copper-alloy piping.

8) Piping Connections: Unless otherwise indicated, make the following piping connections:

a) Install unions, in piping **NPS 2 (DN 50)** and smaller, adjacent to each valve and at final connection to each piece of equipment having **NPS 2 (DN 50)** or smaller threaded pipe connection.
b) Install flanges, in piping **NPS 2-1/2 (DN 65)** and larger, adjacent to flanged valves and at final connection to each piece of equipment having flanged pipe connection.

9) Valves: Ferrous alloy.

a) Sewage Pump Piping: Include gate valve on each pump inlet and gate and check valves on each discharge pipe.
b) Sump Pump Piping: Include ball or gate and check valves on discharge pipe.
c) Compressed-Air Piping: Include ball and check valves on discharge pipe from each air compressor.
d) Vacuum Piping: Include ball and check valves on inlet pipe to each vacuum pump.

10) Wiring: Tin-coated copper.

c. Comminutor: Full size of sewage inlet pipe.

1) Description: Motor-operated, single- or twin-shaft, cutter- or grinder-design unit with

controls; for pipeline installation.
2) Body: Stainless steel or ductile iron with flanged ends and access plate.
3) Cutting Elements: Motor-driven rotor and stationary cutters or grinders of hardened stainless or heat-treated steel.
4) Motor: Explosion proof, directly connected to body.
5) Control Panel: [**NEMA 250, Type12**]<**Insert designation**> enclosure for installation in dry equipment chamber.
6) <**Insert special control features**>.

d. Sewage Pumps: [**Two**][**Three**]<**Insert number**> wet-well-mounting-type, nonclog sewage pumps suspended from dry-compartment floor, with controls and piping. Include ASTM A48/A48M, Class 25, nonclog, cast-iron impeller capable of passing solids of **3-inch (76-mm)** minimum diameter; grease-lubricated bearings and stuffing-box seal; shaft coupling; and pedestal-mounted motor.

e. Controls:

1) Control Sequence of Operation: Cycle each sewage pump on and off automatically to maintain wet-well sewage level. Automatic control operates both pumps in parallel if wet-well level rises above starting point of low-level pump, until shutoff level is reached. Automatic alternator, with manual disconnect switch, changes sequence of lead-lag sewage pumps at completion of each pumping cycle.
2) Self-Purging, Air-Bubbler System: Senses variations of sewage level in wet well. Include duplex-arrangement oilless air compressors to furnish bubbler air; filters; air-storage reservoir; piping; airflow meter with needle valve adjustment for airflow regulation; sewage depth gauge; air-bubbler piping to wet well; and pressure-sensing, dustproof mercury switches.
3) System: [**Electrode**][**Float switch**][**Pressure switch**][**Ultrasonic**]. Senses variations of sewage level in wet well. Include high and low adjustments capable of operating on **6-inch (150-mm)** minimum differential of liquid level.
4) Motor Controllers: Magnetic, full voltage, nonreversing. Include undervoltage release, thermal-overload heaters in each phase, manual reset buttons, and hand-automatic selector switches. Include circuit breakers to provide branch-circuit protection for each controller.
5) 120 V accessory controls with 15 A, single-phase circuit breakers or fuses for each item.
6) Control Panel: Enclosure complying with UL 508A with separate compartments and covers for controllers, circuit breakers, transformers, alternators, and single-phase controls. Include 20 A duplex receptacle in NEMA WD 1, Configuration 5-20R mounted on exterior of control panel.

a) Mounting: [**Inside, on dry-chamber wall**][**Outside, on pedestal, at grade**]<**Insert building description and room number**>.
b) Enclosure: NEMA 250, [**Type 1**][**Type 4**][**Type 4X**]<**Insert type**>.

7) Install labels on panel face to identify switches and controls.
8) Wiring: Tin-copper wiring.
9) Connection for Portable Generator: Nonautomatic (manual) transfer switch with receptacle matching generator electrical power requirements. Nonautomatic transfer switches are specified in Section 263600 "Transfer Switches" and receptacles are specified in Section 262726 "Wiring Devices."

f. Submersible Sump Pump:

1) Discharge Size: **NPS 1-1/4 (DN 32)** minimum.
2) Pump End Bell and Motor Shell: Cast iron.
3) Motor: 1/3 hp, 1750 rpm, hermetically sealed, capacitor-start, with built-in overload

protection.
4) Impeller: ASTM B584, cast bronze or ASTM B36/B36M, brass.
5) Shaft: Stainless steel.
6) Bearings: Grease-lubricated, factory-sealed ball bearings.
7) Seals: Mechanical.
8) Accessories: Inlet strainer.
9) Controls: Float switch.

g. Accessories:

1) Lighting: Minimum of two, UL 1598, heavy-duty, cast-metal, wet-location-type fixtures with 100 W bulbs and guards in service area. Locate switches, with pilot lights, at chamber entrance.
2) Dehumidifier: Electric refrigeration system, adjustable humidistat, reverse-acting thermostat for low-temperature cutoff controls, and condensate pump with drain piping to sump.

a) Dehumidification system capacity adequate to remove at least **15 pints (7 L)** of water per day from service area air that is **80 deg F (27 deg C)** with a relative humidity of 60 percent.

3) Ventilation: Electrically powered ventilation system. Include centrifugal blower with **4-inch- (100-mm-)** round exhaust vent designed to keep out rain, insects, and other foreign matter; limit switch to start blower if entrance door or lid is opened; 0- to 15-minute timer; and separate manual switch.

a) Ventilating system capacity to change air in dry equipment chamber every two minutes.

4) Heater: Electric, 1.5 kW minimum, with fan and thermostat control.
5) High-Water Audio Alarm: Horn for audio indication of station high-water level, energized by separate level-detecting device. Include alarm silencer switch and relay in station.
6) Remote Alarm Circuit: Include contacts for connection to remote alarm panel.

5. Capacities and Characteristics:

a. Diameter or Dimensions of Shell: <**Insert inches (mm) or other dimensions**>.
b. Height of Shell Base Section: <**Insert inches (mm)**>.
c. Pumping Station, Inlet Pipe Size: <**Insert NPS (DN)**>.
d. Pumping Station, Discharge Pipe Size: <**Insert NPS (DN)**>.
e. Comminutor:

1) Capacity: <**Insert gpm (L/s)**>.
2) Pipe Size: <**Insert NPS (DN)**>.
3) Motor Size: <**Insert value**> hp.
4) Electrical Characteristics:

a) Volts: [**240**][**277**][**480**]<**Insert value**> V.
b) Phases: [**Single**][**Three**].
c) Hertz: 60.

f. Sewage Pumps: [**Two**][**Three**]<**Insert number**> required.
g. Each Sewage Pump:

1) Capacity: <**Insert gpm (L/s)**>.
2) Total Dynamic Head: <**Insert feet (kPa)**>.
3) Speed: <**Insert rpm**>.
4) Impeller:

    a) Type: <**Insert type**>.
    b) Diameter: <**Insert inches (mm)**>.
    c) Solids Size Design: <**Insert inches (mm)**>.

5) Inlet Size: <**Insert NPS (DN)**>.
6) Discharge Size: <**Insert NPS (DN)**>.
7) Motor Size: <**Insert value**> hp.
8) Electrical Characteristics:

    a) Volts: [**240**][**277**][**480**]<**Insert value**> V.
    b) Phases: [**Single**][**Three**].
    c) Hertz: 60.

9) Motors:

    a) General requirements for motors are specified in Section 330500 "Common Work Results for Utilities."

h. Sump Pump:

1) Capacity: <**Insert gpm (L/s)**>.
2) Total Dynamic Head: <**Insert feet (kPa)**>.
3) Speed: <**Insert rpm**>.
4) Discharge Size: <**Insert NPS (DN)**>.
5) Motor Size: <**Insert value**> hp.
6) Electrical Characteristics:

    a) Volts: [**120**][**240**][**277**][**480**]<**Insert value**> V.
    b) Phases: [**Single**][**Three**].
    c) Hertz: 60.

7) Motors:

    a) General requirements for motors are specified in Section 330500 "Common Work Results for Utilities."

i. Pumping Station Electrical Characteristics:

1) Full-Load Amperes: <**Insert value**>.
2) Minimum Circuit Ampacity: <**Insert value**>.
3) Maximum Overcurrent Protection: <**Insert amperage**>.

2.3 MISCELLANEOUS MATERIALS

A. Structural Steel: ASTM A6/A6M, W or HP shapes, or ASTM A36/A36M, plates or beams.

B. Grout: ASTM C1107/C1107M, Grade B, nonshrink cement grout.

1. Design Mix: **5000 psi (34.5 MPa)**, 28-day compressive strength.

C. Concrete: Specified in Section 033000 "Cast-in-Place Concrete."

2.4 SOURCE QUALITY CONTROL

A. Test and inspect sewage[**and sump**] pumps in accordance with HI 14.6. Include test recordings that substantiate correct performance of pumps at design head, capacity, suction lift, speed, and horsepower.

B. Test accessories and controls through complete cycle. Include test recordings that substantiate correct performance.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in of sewerage piping systems to verify actual locations of piping connections before packaged sewage pumping station installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EARTHWORK

A. Excavation, trenching, and backfilling are specified in Section 312000 "Earth Moving."

3.3 INSTALLATION OF PACKAGED SEWAGE PUMPING STATIONS

A. Install packaged sewage pumping station components where indicated, in accordance with specific equipment and piping arrangement indicated.

B. Shell Base Supports: Form from structural-steel beams, of number and lengths required to support bottom of shell and to anchor beams to concrete foundation.

1. Use elevator blocks attached to bottom of shell to slope station floor **1 inch in 10 ft. (25.4 mm in 3 m)** down toward sump.

C. Grout under and around shell. Ensure that there are no voids between foundation slab and underslab of pumping station.

D. Fill voids between shell sidewalls, sleeves, and piping and make watertight seal with grout.

E. Connect anode conductors to grounding lugs on steel housing.

F. Join separate sections of housing by field welding.

G. Field weld entrance tube to housing.

3.4 PIPING CONNECTIONS

A. Sanitary sewer piping installation requirements are specified in Section 333115 "Site Sanitary Sewerage Piping." Drawings indicate general arrangement of piping.

B. Install piping adjacent to machine to allow service and maintenance.

3.5 ELECTRICAL CONNECTIONS

A. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.6 IDENTIFICATION

A. Install identifying labels permanently attached to equipment.

B. Install operating instruction signs permanently attached to equipment or on pumping station wall near equipment.

C. Arrange for installing green[**warning tape or**] detectable warning tape over outside edges of underground packaged sewage pumping stations. Tape materials and their installation are specified in Section 312000 "Earth Moving."

3.7 PAINTING

A. Prepare and paint ferrous piping in wet wells, structural-steel supports, and anchor devices with an epoxy-polyamide paint in accordance with SSPC-Paint 16.

B. Paint field-welded areas to match factory coating.

3.8 STARTUP SERVICE

A. [**Engage a factory-authorized service representative to perform**][**Perform**] startup service.

1. Complete installation and startup checks in accordance with manufacturer's written instructions.
2. Adjust pump, accessory, and control settings, and safety and alarm devices.
3. <**Insert, in separate subparagraphs, startup steps if any**>.

3.9 FIELD QUALITY CONTROL

A. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service, Including Testing: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

C. Perform tests and inspections and prepare test reports.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

D. Tests and Inspections:

1. After installing packaged sewage pumping stations and after electrical circuitry has been energized, test for compliance with requirements. Furnish water required for pump tests.
2. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
5. Packaged sewage pumping stations will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.10 DEMONSTRATION

A. [**Engage a factory-authorized service representative to train**][**Train**] Owner's maintenance personnel to adjust, operate, and maintain packaged sewage pumping stations. See Section 017900 "Demonstration and Training."

END OF SECTION 33 32 00 00

Task	Specification	Specification Description
33 32 16 00	33 32 00 00	Site Packaged Sewage Pumping Stations

SECTION 33 42 00 00 - STORMWATER CONVEYANCE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Hub-and-spigot, cast-iron soil pipe and fittings.
2. Hubless cast-iron soil pipe and fittings.
3. Ductile-iron, culvert pipe and fittings.
4. Ductile-iron, pressure pipe and fittings.
5. Corrugated-steel pipe and fittings.
6. Corrugated-aluminum pipe and fittings.
7. ABS pipe and fittings.
8. Corrugated-PE pipe and fittings.
9. PVC pipe and fittings.
10. Fiberglass sewer pipe and fittings.
11. Concrete pipe and fittings.
12. Nonpressure transition couplings.
13. Pressure pipe couplings.
14. Expansion joints and deflection fittings.
15. Backwater valves.
16. Cleanouts.
17. Drains.
18. Concrete trench drain forming system.
19. Encasement for piping.
20. Manholes.
21. Polymer-concrete, channel drainage systems.
22. Plastic, channel drainage systems.
23. Catch basins.
24. Stormwater inlets.
25. Stormwater detention structures.
26. Pipe outlets.
27. Dry wells.
28. Stormwater disposal systems.

1.2 DEFINITIONS

A. FRP: Fiberglass-reinforced plastic.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Manholes: Include plans, elevations, sections, details, frames, and covers.
2. [**Catch basins**][**stormwater inlets**][**and**][**dry wells**]. Include plans, elevations, sections, details, frames, covers, and grates.
3. Stormwater Detention Structures: Include plans, elevations, sections, details, frames, covers,

design calculations, and concrete design-mix reports.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Show pipe sizes, locations, and elevations. Show other piping in same trench and clearances from storm drainage system piping. Indicate interface and spatial relationship between manholes, piping, and proximate structures.

B. Profile Drawings: Show system piping in elevation. Draw profiles at horizontal scale of not less than **1 inch equals 50 feet (1:500)** and vertical scale of not less than **1 inch equals 5 feet (1:50)**. Indicate manholes and piping. Show types, sizes, materials, and elevations of other utilities crossing system piping.

C. Product Certificates: For each type of cast-iron soil pipe and fitting, from manufacturer.

D. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Piping materials are to bear label, stamp, or other markings of specified testing agency.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Do not store plastic manholes, pipe, and fittings in direct sunlight.

B. Protect pipe, pipe fittings, and seals from dirt and damage.

C. Handle manholes in accordance with manufacturer's written rigging instructions.

D. Handle [**catch basins**][**and**][**stormwater inlets**] in accordance with manufacturer's written rigging instructions.

1.7 FIELD CONDITIONS

A. Interruption of Existing Storm Drainage Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service in accordance with requirements indicated:

1. Notify [**Architect**][**Construction Manager**][**Owner**] no fewer than [**two**]<**Insert number**> days in advance of proposed interruption of service.
2. Do not proceed with interruption of service without [**Architect's**][**Construction Manager's**][**Owner's**] written permission.

PART 2 - PRODUCTS

2.1 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide**

products by one of the following][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AB & I Foundry; a part of the McWane family of companies**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AB & I Foundry; a part of the McWane family of companies**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain hub-and-spigot, cast-iron soil pipe and fittings from single manufacturer.

D. Pipe and Fittings:

1. Marked with CISPI collective trademark and NSF certification mark.
2. Class: ASTM A74, [**Service**][**and**][**Extra Heavy**] class(es).

E. Gaskets: ASTM C564, rubber.

F. Caulking Materials: ASTM B29, pure lead and oakum or hemp fiber.

2.2 HUBLESS CAST-IRON SOIL PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**AB & I Foundry; a part of the McWane family of companies**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**AB & I Foundry; a part of the McWane family of companies**]
2. [**Charlotte Pipe and Foundry Company**]
3. [**Tyler Pipe; a part of the McWane family of companies**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain hubless cast-iron soil pipe and fittings from single manufacturer.

D. Pipe and Fittings:

1. Marked with CISPI collective trademark and NSF certification mark.
2. Standard: ASTM A888 or CISPI 301.

E. CISPI, Hubless-Piping Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ANACO-Husky; a part of the McWane family of companies**]
    b. [**Charlotte Pipe and Foundry Company**]
    c. [**Dallas Specialty & Mfg. Co.**]
    d. [**Fernco Inc**]
    e. [**Ideal Tridon Group**]
    f. [**Matco-Norca**]
    g. [**MIFAB, Inc**]
    h. [**Mission Rubber Company, LLC**]
    i. [**Tyler Pipe; a subsidiary of McWane Inc.**]
    j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ANACO-Husky; a part of the McWane family of companies**]
    b. [**Charlotte Pipe and Foundry Company**]
    c. [**Dallas Specialty & Mfg. Co.**]
    d. [**Fernco Inc**]
    e. [**Ideal Tridon Group**]
    f. [**Matco-Norca**]
    g. [**MIFAB, Inc**]
    h. [**Mission Rubber Company, LLC**]
    i. [**Tyler Pipe; a subsidiary of McWane Inc.**]
    j. <**Insert manufacturer's name**>

3. Source Limitations: Obtain CISPI, hubless-piping couplings from single manufacturer.
4. Description: Stainless steel corrugated shield; stainless steel bands and tightening devices; and rubber sleeve with integral, center pipe stop.
5. Standards:

    a. ASTM C1277 and CIPSI 310 for couplings.
    b. ASTM C564 for gaskets.

F. Heavy-Duty, Hubless-Piping Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ANACO-Husky; a part of the McWane family of companies**]
    b. [**Charlotte Pipe and Foundry Company**]
    c. [**Dallas Specialty & Mfg. Co.**]
    d. [**Fernco Inc**]
    e. [**Ideal Tridon Group**]
    f. [**Matco-Norca**]
    g. [**MIFAB, Inc**]
    h. [**Mission Rubber Company, LLC**]
    i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ANACO-Husky; a part of the McWane family of companies**]
    b. [**Charlotte Pipe and Foundry Company**]
    c. [**Dallas Specialty & Mfg. Co.**]
    d. [**Fernco Inc**]
    e. [**Ideal Tridon Group**]
    f. [**Matco-Norca**]
    g. [**MIFAB, Inc**]
    h. [**Mission Rubber Company, LLC**]
    i. <**Insert manufacturer's name**>

3. Source Limitations: Obtain heavy-duty, hubless-piping couplings from single manufacturer.
4. Description: Stainless steel shield; stainless steel bands and tightening devices; and rubber sleeve with integral, center pipe stop.
5. Standards:

    a. ASTM C1277 and ASTM C1540 for couplings.
    b. ASTM C564 for rubber gaskets.

G. Cast-Iron, Hubless-Piping Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**MG Coupling**]
    b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**MG Coupling**]
    b. <**Insert manufacturer's name**>

3. Source Limitations: Obtain cast-iron, hubless-piping couplings from single manufacturer.
4. Description: Two-piece, cast-iron housing; stainless steel bolts and nuts; and rubber sleeve with integral, center pipe stop.
5. Standards:

    a. ASTM C1277 for couplings.
    b. ASTM A48/A48M for cast-iron castings.
    c. ASTM C564 for gaskets.

2.3 DUCTILE-IRON, CULVERT PIPE AND FITTINGS

A. Pipe: ASTM A716, for push-on joints.

B. Standard Fittings: AWWA C110/A21.10, ductile or gray iron, for push-on joints.

C. Compact Fittings: AWWA C153/A21.53, for push-on joints.

D. Gaskets: AWWA C111/A21.11, rubber.

2.4 PPE Channel Drainage Systems

A. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. <**Insert manufacturer's name**>

2.5 DUCTILE-IRON, PRESSURE PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**American Cast Iron Pipe Company**]
2. [**McWane Ductile; a part of the McWane family of companies**]
3. [**U.S. Pipe**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**American Cast Iron Pipe Company**]
2. [**McWane Ductile; a part of the McWane family of companies**]
3. [**U.S. Pipe**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain ductile-iron, pressure pipe and fittings from single manufacturer.

D. Ductile-Iron, Push-on-Joint Piping:

1. Ductile-Iron Pipe: AWWA C151/A21.51, with push-on-joint bell and plain spigot end unless grooved or flanged ends are indicated.
2. Ductile-Iron Fittings: AWWA C110/A21.10, push-on-joint ductile- or gray-iron standard pattern or AWWA C153/A21.53, ductile-iron compact pattern.
3. Gaskets: AWWA C111/A21.11, rubber.

E. Ductile-Iron, Mechanical-Joint Piping:

1. Ductile-Iron Pipe: AWWA C151/A21.51, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.
2. Ductile-Iron Fittings: AWWA C110/A21.10, mechanical-joint ductile- or gray-iron standard pattern or AWWA C153/A21.53, ductile-iron compact pattern.
3. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

2.6 CORRUGATED-STEEL PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be**

incorporated into the Work include, but are not limited to, the following]:

1. [**American Piping Products**]
2. [**Specialty Pipe & Tube**]
3. [**Steel Mart, Inc.**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**American Piping Products**]
2. [**Specialty Pipe & Tube**]
3. [**Steel Mart, Inc.**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain corrugated-steel pipe and fittings from single manufacturer.

D. Description: ASTM A760/A760M, Type I with fittings of similar form and construction as pipe.

1. Special-Joint Bands: Corrugated steel with O-ring seals.
2. Standard-Joint Bands: Corrugated steel.
3. Coating: [**Aluminum**][**Zinc**].

2.7 CORRUGATED-ALUMINUM PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Brunner Enterprises, Inc.**]
2. [**Continental Steel & Tube**]
3. [**Sapa North America**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Brunner Enterprises, Inc.**]
2. [**Continental Steel & Tube**]
3. [**Sapa North America**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain corrugated-aluminum pipe and fittings from single manufacturer.

D. Description: ASTM B745/B745M, Type I with fittings of similar form and construction as pipe.

1. Special-Joint Bands: Corrugated aluminum with O-ring seals.
2. Standard-Joint Bands: Corrugated aluminum.

2.8 ABS PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be**

incorporated into the Work include, but are not limited to, the following]:

1. [**Charlotte Pipe and Foundry Company**]
2. [**JM Eagle**]
3. [**Royal Building Products, a Westlake Company**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Charlotte Pipe and Foundry Company**]
2. [**JM Eagle**]
3. [**Royal Building Products, a Westlake Company**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain ABS pipe and fittings from single manufacturer.

D. NSF Marking: Comply with NSF 14, "Plastics Piping System Components and Related Materials," for plastic piping components. Include marking with "NSF-drain" for plastic storm drain and "NSF-sewer" for plastic storm sewer piping.

E. Solid-Wall ABS Pipe: ASTM D2661, Schedule 40.

F. Cellular-Core ABS Pipe: ASTM F628, Schedule 40.

G. ABS Socket Fittings: ASTM D2661, made to ASTM D3311, drain, waste, and vent patterns.

H. Gaskets: ASTM F477, elastomeric seals.

I. Solvent Cement: ASTM D2235.

2.9 CORRUGATED-PE PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Emco Industrial Plastics**]
2. [**Industrial Specialties Mfg, Inc.**]
3. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Emco Industrial Plastics**]
2. [**Industrial Specialties Mfg, Inc.**]
3. <**Insert manufacturer's name**>

C. Source Limitations: Obtain corrugated-PE pipe and fittings from single manufacturer.

D. Corrugated-PE Drainage Pipe and Fittings NPS 3 to NPS 10 (DN 80 to DN 250): AASHTO M 252, Type S, with smooth waterway for coupling joints.

E. Corrugated-PE Pipe and Fittings NPS 12 to NPS 60 (DN 300 to DN 1500): AASHTO M 294, Type S, with smooth waterway for coupling joints.

F. Corrugated-PE Silttight Couplings: PE sleeve with ASTM D1056, Type 2, Class A, Grade 2 gasket material that mates with pipe and fittings.

G. Corrugated-PE Soiltight Couplings: AASHTO M 294, corrugated, matching pipe and fittings.

2.10 PVC PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Charlotte Pipe and Foundry Company**]
2. [**GF Piping Systems**]
3. [**JM Eagle**]
4. [**National Pipe and Plastic, Inc. (Oldcastle)**]
5. [**North America Pipe Corporation**]
6. [**Rocky Mountain Colby Pipe Company**]
7. [**Silver-line Plastics**]
8. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Charlotte Pipe and Foundry Company**]
2. [**GF Piping Systems**]
3. [**JM Eagle**]
4. [**National Pipe and Plastic, Inc. (Oldcastle)**]
5. [**North America Pipe Corporation**]
6. [**Rocky Mountain Colby Pipe Company**]
7. [**Silver-line Plastics**]
8. <**Insert manufacturer's name**>

C. Source Limitations: Obtain PVC pipe and fittings from single manufacturer.

D. NSF Marking: Comply with NSF 14, "Plastics Piping Systems Components and Related Materials," for plastic piping components. Include marking with "NSF-drain" for plastic storm drain and "NSF-sewer" for plastic storm sewer piping.

E. PVC Cellular-Core Piping:

1. PVC Cellular-Core Pipe and Fittings: ASTM F891, Sewer and Drain Series, PS 50 minimum stiffness, PVC cellular-core pipe with plain ends for solvent-cemented joints.
2. Fittings: ASTM D3034, [**SDR 35**]<**Insert SDR**>, PVC socket-type fittings.

F. PVC Corrugated Sewer Piping:

1. Pipe: ASTM F949, PVC, corrugated pipe with bell-and-spigot ends for gasketed joints.
2. Fittings: ASTM F949, PVC molded or fabricated, socket type.
3. Gaskets: ASTM F477, elastomeric seals.

G. PVC Profile Sewer Piping:

1. Pipe: ASTM F794, PVC profile, gravity sewer pipe with bell-and-spigot ends for gasketed joints.
2. Fittings: ASTM D3034, PVC with bell ends.
3. Gaskets: ASTM F477, elastomeric seals.

H. PVC Type PSM Sewer Piping:

1. Pipe: ASTM D3034, [**SDR 35**]<**Insert SDR**>, PVC Type PSM sewer pipe with bell-and-spigot ends for gasketed joints.
2. Fittings: ASTM D3034, PVC with bell ends.
3. Gaskets: ASTM F477, elastomeric seals.

I. PVC Gravity Sewer Piping:

1. Pipe and Fittings: ASTM F679, [**T-1**][**T-2**] wall thickness, PVC gravity sewer pipe with bell-and-spigot ends and with integral ASTM F477, elastomeric seals for gasketed joints.

J. PVC Pressure Piping:

1. Pipe: AWWA C900, [**Class 100**][**Class 150**][**and**][**Class 200**] PVC pipe with bell-and-spigot ends for gasketed joints.
2. Fittings: AWWA C900, [**Class 100**][**Class 150**][**and**][**Class 200**] PVC pipe with bell ends
3. Gaskets: ASTM F477, elastomeric seals.

K. PVC Water-Service Piping:

1. Pipe: ASTM D1785, [**Schedule 40**][**and**][**Schedule 80**] PVC, with plain ends for solvent-cemented joints.
2. Fittings: [**ASTM D2466, Schedule 40**][**and**][**ASTM D2467, Schedule 80**] PVC, socket type.

L. Adhesive Primer: ASTM F656.

2.11 FIBERGLASS SEWER PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Augusta Fiberglass**]
2. [**Industrial Fiberglass Specialties, Inc.**]
3. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Augusta Fiberglass**]
2. [**Industrial Fiberglass Specialties, Inc.**]
3. <**Insert manufacturer's name**>

C. Source Limitations: Obtain fiberglass sewer pipe and fittings from single manufacturer.

D. Fiberglass Sewer Pipe: ASTM D3262, RTRP for gasketed joints fabricated with [**Type 2, polyester**][**Type 4, epoxy**][**Type 2, polyester or Type 4, epoxy**] resin.

1. Liner: [**Reinforced thermoset**][**Nonreinforced thermoset**][**Thermoplastic**][**No liner**].
2. Grade: [**Reinforced, surface layer matching pipe resin**][**Nonreinforced, surface layer matching pipe resin**][**No surface layer**]<**Insert grade**>.
3. Stiffness: [**9 psig (62 kPa)**][**18 psig (124 kPa)**][**36 psig (248 kPa)**][**72 psig (496 kPa)**].

E. Fiberglass Nonpressure Fittings: ASTM D3840, RTRF for gasketed joints.

1. Laminating Resin: [**Type 1, polyester**][**Type 2, epoxy**][**Type 1, polyester or Type 2, epoxy**] resin.
2. Reinforcement: Grade with finish compatible with resin.

F. Gaskets: ASTM F477, elastomeric seals.

2.12 CONCRETE PIPE AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**FOLTZ Concrete Pipe Co.**]
2. [**Northern Concrete Pipe, Inc.**]
3. [**Rinker Materials Corporation, Concrete Pipe Division**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**FOLTZ Concrete Pipe Co.**]
2. [**Northern Concrete Pipe, Inc.**]
3. [**Rinker Materials Corporation, Concrete Pipe Division**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain concrete pipe and fittings from single manufacturer.

D. Nonreinforced-Concrete Sewer Pipe and Fittings: **ASTM C14 (ASTM C14M)**, [**Class 1**][**Class 2**][**Class 3**], with [**bell-and-spigot**][**or**][**tongue-and-groove**] ends and [**gasketed joints with ASTM C443 (ASTM C443M), rubber gaskets**][**sealant joints with ASTM C990 (ASTM C990M), bitumen or butyl-rubber sealant**].

E. Reinforced-Concrete Sewer Pipe and Fittings: **ASTM C76 (ASTM C76M)**.

1. [**Bell-and-spigot**][**or**][**tongue-and-groove**] ends and [**gasketed joints with ASTM C443 (ASTM C443M), rubber gaskets**][**sealant joints with ASTM C990 (ASTM C990M), bitumen or butyl-rubber sealant**]
2. Class I, Wall [**A**][**B**].
3. Class II, Wall [**A**][**B**][**C**].
4. Class III, Wall [**A**][**B**][**C**].
5. Class IV, Wall [**A**][**B**][**C**].
6. Class V, Wall [**B**][**C**].

2.13 NONPRESSURE TRANSITION COUPLINGS

A. Comply with ASTM C1173, elastomeric, sleeve-type, reducing or transition coupling, for joining underground nonpressure piping. Include ends of same sizes as piping to be joined, and corrosion-

resistant-metal tension band and tightening mechanism on each end.

B. Sleeve Materials:

1. For Concrete Pipes: **ASTM C443 (ASTM C443M)**, rubber.
2. For Cast-Iron Soil Pipes: ASTM C564, rubber.
3. For Fiberglass Pipes: ASTM F477, elastomeric seal or ASTM D5926, PVC.
4. For Plastic Pipes: ASTM F477, elastomeric seal or ASTM D5926, PVC.
5. For Dissimilar Pipes: ASTM D5926, PVC or other material compatible with pipe materials being joined.

C. Unshielded, Flexible Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Dallas Specialty & Mfg. Co.**]
   b. [**Fernco Inc**]
   c. [**Logan Clay Pipe**]
   d. [**Mission Rubber Company, LLC**]
   e. [**NDS Inc**]
   f. [**Plastic Oddities**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Dallas Specialty & Mfg. Co.**]
   b. [**Fernco Inc**]
   c. [**Logan Clay Pipe**]
   d. [**Mission Rubber Company, LLC**]
   e. [**NDS Inc**]
   f. [**Plastic Oddities**]
   g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain unshielded, flexible couplings from single manufacturer.
4. Description: Elastomeric sleeve with[**stainless steel shear ring and**] corrosion-resistant-metal tension band and tightening mechanism on each end.

D. Shielded, Flexible Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Cascade Waterworks Mfg. Co.**]
   b. [**Dallas Specialty & Mfg. Co.**]
   c. [**Mission Rubber Company, LLC**]
   d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

a. [**Cascade Waterworks Mfg. Co.**]
b. [**Dallas Specialty & Mfg. Co.**]
c. [**Mission Rubber Company, LLC**]
d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain shielded, flexible couplings from single manufacturer.
4. Description: ASTM C1460, elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.

E. Ring-Type, Flexible Couplings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Fernco Inc**]
b. [**Logan Clay Pipe**]
c. [**Mission Rubber Company, LLC**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Fernco Inc**]
b. [**Logan Clay Pipe**]
c. [**Mission Rubber Company, LLC**]
d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain ring-type, flexible couplings from single manufacturer.
4. Description: Elastomeric compression seal with dimensions to fit inside bell of larger pipe and for spigot of smaller pipe to fit inside ring.

2.14 PRESSURE PIPE COUPLINGS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Cascade Waterworks Mfg. Co.**]
2. [**Dresser Utility Solutions**]
3. [**Ford Meter Box Company, Inc. (The)**]
4. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
5. [**JCM Industries, Inc**]
6. [**Romac Industries, Inc.**]
7. [**Victaulic Company**]
8. [**Viking Johnson**]
9. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Cascade Waterworks Mfg. Co.**]
2. [**Dresser Utility Solutions**]
3. [**Ford Meter Box Company, Inc. (The)**]
4. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
5. [**JCM Industries, Inc**]
6. [**Romac Industries, Inc.**]
7. [**Victaulic Company**]
8. [**Viking Johnson**]
9. <**Insert manufacturer's name**>

C. Source Limitations: Obtain pressure pipe couplings from single manufacturer.

D. Description: AWWA C219, tubular-sleeve coupling, with center sleeve, gaskets, end rings, and bolt fasteners.

E. Metal, bolted, sleeve-type, reducing or transition coupling, for joining underground pressure piping. Include [**150-psig (1035-kPa)**][**200-psig (1380-kPa)**]<**Insert psig (kPa)**> minimum pressure rating and ends sized to fit adjoining pipes.

F. Center-Sleeve Material: [**Manufacturer's standard**][**Carbon steel**][**Stainless steel**][**Ductile iron**][**Malleable iron**].

G. Gasket Material: Natural or synthetic rubber.

H. Metal Component Finish: Corrosion-resistant coating or material.

2.15 EXPANSION JOINTS AND DEFLECTION FITTINGS

A. Ductile-Iron, Flexible Expansion Joints:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**EBAA Iron Sales, Inc.**]
    b. [**Romac Industries, Inc.**]
    c. [**Star Pipe Products**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**EBAA Iron Sales, Inc.**]
    b. [**Romac Industries, Inc.**]
    c. [**Star Pipe Products**]
    d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain ductile-iron, flexible expansion joints from single manufacturer.
4. Description: Compound fitting with combination of flanged and mechanical-joint ends complying with AWWA C110/A21.10 or AWWA C153/A21.53. Include two gasketed ball-joint sections and one or more gasketed sleeve sections, rated for **250-psig (1725-kPa)** minimum working pressure and for offset and expansion indicated.

B. Ductile-Iron Expansion Joints:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Dresser Utility Solutions**]
    b. [**EBAA Iron Sales, Inc.**]
    c. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    d. [**JCM Industries, Inc**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Dresser Utility Solutions**]
    b. [**EBAA Iron Sales, Inc.**]
    c. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    d. [**JCM Industries, Inc**]
    e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain ductile-iron expansion joints from single manufacturer.
4. Description: Three-piece assembly of telescoping sleeve with gaskets and restrained-type, ductile iron [**or**][**steel with protective coating**]; bell-and-spigot end sections complying with AWWA C110/A21.10 or AWWA C153/A21.53.
5. Pressure Rating: **250-psig (1725-kPa)** minimum working pressure and for expansion indicated.

C. Ductile-Iron Deflection Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**EBAA Iron Sales, Inc.**]
    b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**EBAA Iron Sales, Inc.**]
    b. <**Insert manufacturer's name**>

3. Source Limitations: Obtain ductile-iron deflection fittings from single manufacturer.
4. Description: Compound, ductile-iron coupling fitting with sleeve and one or two flexing sections for up to 15-degree deflection, gaskets, and restrained-joint ends complying with AWWA C110/A21.10 or AWWA C153/A21.53. Include AWWA C111/A21.11, ductile-iron glands, rubber gaskets, and steel bolts. Include AWWA C111/A21.11 ductile-iron glands, rubber gaskets, and steel bolts.
5. Pressure Rating: **250 psig (1725 kPa)** minimum.

2.16 BACKWATER VALVES

A. Cast-Iron Backwater Valves:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    b. [**Josam Company**]
    c. [**Tyler Pipe; a subsidiary of McWane Inc.**]
    d. [**WATTS; A Watts Water Technologies Company**]
    e. [**Zurn Industries, LLC**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    b. [**Josam Company**]
    c. [**Tyler Pipe; a subsidiary of McWane Inc.**]
    d. [**WATTS; A Watts Water Technologies Company**]
    e. [**Zurn Industries, LLC**]
    f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain cast-iron backwater valves from single manufacturer.
4. Description: ASME A112.14.1, gray-iron body and bolted cover, with bronze seat.
5. Horizontal type; with swing check valve and hub-and-spigot ends.
6. Combination horizontal and manual gate-valve type; with swing check valve, integral gate valve, and hub-and-spigot ends.
7. Terminal type; with bronze seat, swing check valve, and hub inlet.

B. PVC Backwater Valves:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Endura; a brand of IPEX**]
    b. [**IPS Corporation**]
    c. [**NDS Inc**]
    d. [**Plastic Oddities**]
    e. [**Sioux Chief Manufacturing Company, Inc.**]
    f. [**Zurn Industries, LLC**]
    g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Endura; a brand of IPEX**]
    b. [**IPS Corporation**]

c. [**NDS Inc**]
d. [**Plastic Oddities**]
e. [**Sioux Chief Manufacturing Company, Inc.**]
f. [**Zurn Industries, LLC**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain PVC backwater valves from single manufacturer.
4. Description: Horizontal type; with PVC body, PVC removable cover, and PVC swing check valve.

2.17 CLEANOUTS

A. Cast-Iron Cleanouts:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
b. [**Josam Company**]
c. [**MIFAB, Inc**]
d. [**Tyler Pipe; a subsidiary of McWane Inc.**]
e. [**WATTS; A Watts Water Technologies Company**]
f. [**Zurn Industries, LLC**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
b. [**Josam Company**]
c. [**MIFAB, Inc**]
d. [**Tyler Pipe; a subsidiary of McWane Inc.**]
e. [**WATTS; A Watts Water Technologies Company**]
f. [**Zurn Industries, LLC**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain cast-iron cleanouts from single manufacturer.
4. Description: ASME A112.36.2M, round, gray-iron housing with clamping device and round, secured, scoriated, gray-iron cover. Include gray-iron ferrule with inside caulk or spigot connection and countersunk, tapered-thread, brass closure plug.
5. Top-Loading Classification(s): [**Light Duty**][**Medium Duty**][**Heavy Duty**][**and**][**Extra-Heavy Duty**].
6. Sewer Pipe Fitting and Riser to Cleanout: ASTM A74, Service class, cast-iron soil pipe and fittings.

B. PVC Cleanouts:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Endura; a brand of IPEX**]

b. [**IPS Corporation**]
c. [**NDS Inc**]
d. [**Plastic Oddities**]
e. [**Sioux Chief Manufacturing Company, Inc.**]
f. [**Zurn Industries, LLC**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Endura; a brand of IPEX**]
b. [**IPS Corporation**]
c. [**NDS Inc**]
d. [**Plastic Oddities**]
e. [**Sioux Chief Manufacturing Company, Inc.**]
f. [**Zurn Industries, LLC**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain PVC cleanouts from single manufacturer.
4. Description: PVC body with PVC threaded plug. Include PVC sewer pipe fitting and riser to cleanout of same material as sewer piping.

2.18 DRAINS

A. Cast-Iron Area Drains:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
b. [**Josam Company**]
c. [**MIFAB, Inc**]
d. [**Neenah Foundry Company**]
e. [**Tyler Pipe; a subsidiary of McWane Inc.**]
f. [**WATTS; A Watts Water Technologies Company**]
g. [**Zurn Industries, LLC**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
b. [**Josam Company**]
c. [**MIFAB, Inc**]
d. [**Neenah Foundry Company**]
e. [**Tyler Pipe; a subsidiary of McWane Inc.**]
f. [**WATTS; A Watts Water Technologies Company**]
g. [**Zurn Industries, LLC**]
h. <**Insert manufacturer's name**>

3. Source Limitations: Obtain cast-iron area drains from single manufacturer.
4. Description: ASME A112.6.3 gray-iron round body with anchor flange and round[**secured**] grate. Include bottom outlet with inside caulk or spigot connection, of sizes indicated.
5. Top-Loading Classification(s): [**Medium Duty**][**and**][**Heavy Duty**].

B. Cast-Iron Trench Drains:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    b. [**Josam Company**]
    c. [**MIFAB, Inc**]
    d. [**Tyler Pipe; a subsidiary of McWane Inc.**]
    e. [**WATTS; A Watts Water Technologies Company**]
    f. [**Zurn Industries, LLC**]
    g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
    b. [**Josam Company**]
    c. [**MIFAB, Inc**]
    d. [**Tyler Pipe; a subsidiary of McWane Inc.**]
    e. [**WATTS; A Watts Water Technologies Company**]
    f. [**Zurn Industries, LLC**]
    g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain cast-iron trench drains from single manufacturer.
4. Description: ASME A112.6.3, **6-inch- (150-mm-)** wide top surface, rectangular body with anchor flange or other anchoring device, and rectangular[**secured**] grate. Include units of total length indicated and quantity of bottom outlets with inside caulk or spigot connections, of sizes indicated.
5. Top-Loading Classification(s): [**Medium Duty**][**Heavy Duty**][**and**][**Extra-Heavy Duty**].

C. Steel Trench Drains:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Rockford Sanitary Systems, Inc**]
    b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Rockford Sanitary Systems, Inc**]
    b. <**Insert manufacturer's name**>

3. Source Limitations: Obtain steel trench drains from single manufacturer.

4. Description: Factory fabricated from ASTM A242/A242M, welded steel plate, to form rectangular body with uniform bottom downward slope of 2 percent toward outlet, anchor flange, and grate. Include units of total length indicated, bottom outlet of size indicated, outlet strainer, acid-resistant enamel coating on inside and outside surfaces, and grate with openings of total free area at least two times cross-sectional area of outlet.
5. Plate Thicknesses: [**1/8 inch (3.2 mm)**][**and**][**1/4 inch (6.4 mm)**].
6. Overall Widths: [**7-1/2 inches (190 mm)**][**and**][**12-1/3 inches (313 mm)**].

D. Grate Openings: [**1/4 inch (6.4 mm) circular**][**3/8 inch (9.5 mm) circular**][**3/8 inch (9.5 mm) circular or 3/8-by-3-inch (9.5-by-76-mm) slots**][**3/8-by-3-inch (9.5-by-76-mm) slots**].

2.19 CONCRETE TRENCH DRAIN FORMING SYSTEM

A. Concrete Trench Drain Forming System :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABT, Inc.**]
    b. [**Eric'sons Dura Trench**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABT, Inc.**]
    b. [**Eric'sons Dura Trench**]
    c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain concrete trench drain forming system from single manufacturer.
4. Description: Radius trench drain forming system including a removable form that is customizable for width, depth, length, shape, slope, frame material, and grate material.
5. Form Bottom: [**Smooth radius**][**Vee**][**Flat**]<**Insert option**>.
6. Form Use: [**Single use**][**or**][**reusable**].
7. Form Covers: Plywood or metal to keep concrete out of trench form during installation.
8. Width: [**8 inches (203 mm)**][**10 inches (254 mm)**][**12 inches (305 mm)**][**18 inches (457 mm)**][**24 inches (610 mm)**]<**Insert width**> inside dimension.
9. Depth: [**See drawings**]<**Insert dimension**>.
10. Length: [**See drawings**]<**Insert dimension**>.
11. Bottom Shape: [**Smooth radius**][**Vee**]<**Insert shape**>.
12. Slope: [**Level - no slope**][**0.5 percent**][**1.0 percent**]<**Insert slope**>.
13. Frame/Grate Seat:

    a. Load Bearing, <**Insert loading requirement**>.
    b. Material: [**Powder-coated steel**][**Galvanized steel**][**Iron**][**Aluminum**][**Plastic**][**FRP**][**Stainless steel**]<**Insert material**>.

14. Concrete Anchors: [**18 inches (457 mm) on center**]<**Insert spacing**>
15. Grate:

    a. Manufacturer's Load Bearing Designation: "[**Heavy**][**Medium**] Duty."

b. Material: [**Ductile iron**][**FRP**][**Galvanized steel**][**Cast iron**][**Stainless steel**]<**Insert material**>.
c. Grate Type: [**ADA**][**Heel-proof**][**slotted**][**perforated**][**bar**]<**Insert grate type**>.

2.20 ENCASEMENT FOR PIPING

A. Standard: ASTM A674 or AWWA C105/A21.5.

B. Material: [**Linear low-density polyethylene film of 0.008-inch (0.20-mm)**][**or**][**cross-laminated HDPE film of 0.004-inch (0.10-mm)**] minimum thickness.

C. Form: [**Sheet**][**or**][**tube**].

D. Color: [**Black**][**or**][**natural**]<**Insert color**>.

2.21 MANHOLES

A. Standard Precast Concrete Manholes:

1. Description: **ASTM C478 (ASTM C478M)**, precast, reinforced concrete, of depth indicated, with provision for sealant joints.
2. Diameter: **48 inches (1200 mm)** minimum unless otherwise indicated.
3. Ballast: Increase thickness of precast concrete sections or add concrete to base section as required to prevent flotation.
4. Base Section: **6-inch (150-mm)** minimum thickness for floor slab and **4-inch (102-mm)** minimum thickness for walls and base riser section, and separate base slab or base section with integral floor.
5. Riser Sections: **4-inch (102-mm)** minimum thickness, and lengths to provide depth indicated.
6. Top Section: Eccentric-cone type unless concentric-cone or flat-slab-top type is indicated, and top of cone of size that matches grade rings.
7. Joint Sealant: **ASTM C990 (ASTM C990M)**, bitumen or butyl rubber.
8. Resilient Pipe Connectors: **ASTM C923 (ASTM C923M)**, cast or fitted into manhole walls, for each pipe connection.
9. Steps: [**Individual FRP steps or FRP ladder**][**Individual FRP steps; FRP ladder; or ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**][**ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**]<**Insert material**>, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at **12- to 16-inch (300- to 400-mm)** intervals. Omit steps if total depth from floor of manhole to finished grade is less than [**60 inches (1500 mm)**]<**Insert inches (mm)**>.
10. Adjusting Rings: Interlocking HDPE rings with level or sloped edge in thickness and diameter matching manhole frame and cover, and of height required to adjust manhole frame and cover to indicated elevation and slope. Include sealant recommended by ring manufacturer.
11. Grade Rings: Reinforced-concrete rings, **6- to 9-inch (150- to 225-mm)** total thickness, to match diameter of manhole frame and cover, and height as required to adjust manhole frame and cover to indicated elevation and slope.

B. Designed Precast Concrete Manholes:

1. Description: ASTM C913; designed in accordance with ASTM C890 for A-16 (AASHTO HS20-44), heavy-traffic, structural loading; of depth, shape, and dimensions indicated, with provision for sealant joints.
2. Ballast: Increase thickness of one or more precast concrete sections or add concrete to manhole as required to prevent flotation.

3. Joint Sealant: **ASTM C990 (ASTM C990M)**, bitumen or butyl rubber.
4. Resilient Pipe Connectors: **ASTM C923 (ASTM C923M)**, cast or fitted into manhole walls, for each pipe connection.
5. Steps: [**Individual FRP steps or FRP ladder**][**Individual FRP steps; FRP ladder; or ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**][**ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**]<**Insert material**>, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at **12- to 16-inch (300- to 400-mm)** intervals. Omit steps if total depth from floor of manhole to finished grade is less than [**60 inches (1500 mm)**]<**Insert inches (mm)**>.
6. Adjusting Rings: Interlocking HDPE rings with level or sloped edge in thickness and diameter matching manhole frame and cover, and of height required to adjust manhole frame and cover to indicated elevation and slope. Include sealant recommended by ring manufacturer.
7. Grade Rings: Reinforced-concrete rings, **6- to 9-inch (150- to 225-mm)** total thickness, to match diameter of manhole frame and cover, and of height required to adjust manhole frame and cover to indicated elevation and slope.

C. Fiberglass Manholes:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Associated Fiberglass Enterprises**]
    b. [**Containment Solutions, Inc**]
    c. [**L. F. Manufacturing, Inc**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Associated Fiberglass Enterprises**]
    b. [**Containment Solutions, Inc**]
    c. [**L. F. Manufacturing, Inc**]
    d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain fiberglass manholes from single manufacturer.
4. Description: ASTM D3753.
5. Diameter: **48 inches (1200 mm)** minimum unless otherwise indicated.
6. Ballast: Increase thickness of concrete base as required to prevent flotation.
7. Base Section: Concrete, **6-inch (150-mm)** minimum thickness.
8. Resilient Pipe Connectors: **ASTM C923 (ASTM C923M)**, cast or fitted into manhole walls, for each pipe connection.
9. Steps: Individual FRP steps or FRP ladder, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at **12- to 16-inch (300- to 400-mm)** intervals. Omit steps if total depth from floor of manhole to finished grade is less than [**60 inches (1500 mm)**]<**Insert inches (mm)**>.
10. Adjusting Rings: Interlocking HDPE rings with level or sloped edge in thickness and diameter matching manhole frame and cover, and of height required to adjust manhole frame and cover to indicated elevation and slope. Include sealant recommended by ring manufacturer.
11. Grade Rings: Reinforced-concrete rings, **6- to 9-inch (150- to 225-mm)** total thickness, to match diameter of manhole frame and cover, and height as required to adjust manhole frame and cover to indicated elevation and slope.

D. Manhole Frames and Covers:

1. Description: Ferrous; **24-inch (610-mm)** ID by **7- to 9-inch (175- to 225-mm)** riser with **4-inch- (102-mm-)** minimum width flange and **26-inch- (660-mm-)** diameter cover. Include indented top design with lettering cast into cover, using wording equivalent to "STORM SEWER."
2. Material: [**ASTM A536, Grade 60-40-18 ductile**][**ASTM A48/A48M, Class 35 gray**] iron unless otherwise indicated.

2.22 CONCRETE

A. General: Cast-in-place concrete in accordance with **ACI 318 (ACI 318M)**, **ACI 350 (ACI 350M)**, and the following:

1. Cement: ASTM C150/C150M, Type II.
2. Fine Aggregate: ASTM C33/C33M, sand.
3. Coarse Aggregate: ASTM C33/C33M, crushed gravel.
4. Water: Potable.

B. Portland Cement Design Mix: **4000 psi (27.6 MPa)** minimum, with 0.45 maximum water/cementitious materials ratio.

1. Reinforcing Fabric: ASTM A1064/A1064M, steel, welded wire fabric, plain.
2. Reinforcing Bars: ASTM A615/A615M, Grade 60 (420 MPa) deformed steel.

C. Manhole Channels and Benches: Factory or field formed from concrete. Portland cement design mix, **4000 psi (27.6 MPa)** minimum, with 0.45 maximum water/cementitious materials ratio. Include channels and benches in manholes.

1. Channels: Concrete invert, formed to same width as connected piping, with height of vertical sides to three-fourths of pipe diameter. Form curved channels with smooth, uniform radius and slope.

   a. Invert Slope: [**1**][**2**] percent through manhole.

2. Benches: Concrete, sloped to drain into channel.

   a. Slope: [**4**][**8**] percent.

D. Ballast and Pipe Supports: Portland cement design mix, **3000 psi (20.7 MPa)** minimum, with 0.58 maximum water/cementitious materials ratio.

1. Reinforcing Fabric: ASTM A1064/A1064M, steel, welded wire fabric, plain.
2. Reinforcing Bars: ASTM A615/A615M, Grade 60 (420 MPa) deformed steel.

2.23 POLYMER-CONCRETE, CHANNEL DRAINAGE SYSTEMS

A. Narrow, Sloped-Invert, Polymer-Concrete Channel Drainage Systems :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABT, Inc.**]
b. [**ACO, Inc.**]
c. [**Forté Composites, Inc.**]
d. [**Hubbell Utility Solutions; Hubbell Incorporated**]
e. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
f. [**Josam Company**]
g. [**MultiDrain Systems, Inc.**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABT, Inc.**]
b. [**ACO, Inc.**]
c. [**Forté Composites, Inc.**]
d. [**Hubbell Utility Solutions; Hubbell Incorporated**]
e. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
f. [**Josam Company**]
g. [**MultiDrain Systems, Inc.**]
h. <**Insert manufacturer's name**>

3. Source Limitations: Obtain narrow, sloped-invert channel drainage systems from single manufacturer.
4. Description: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
5. Channel Sections: Narrow, interlocking-joint, sloped-invert, polymer-concrete modular units with end caps.

a. Include rounded bottom, with built-in invert slope of 0.6 percent and with outlets in number, sizes, and locations indicated.
b. Include extension sections necessary for required depth.
c. Dimensions: **4-inch (102-mm)** inside width. Include number of units required to form total lengths indicated.
d. Frame: [**Gray-iron or galvanized steel for grates**][**Not required**].
e. Joining Section: As recommended in writing by system manufacturer.

6. Grates: Manufacturer's designation "[**heavy**][**medium**] duty," with slots or perforations, and of width and thickness that fit recesses in channel sections.

a. Material: [**Ductile iron**][**Fiberglass**][**Galvanized steel**][**Gray iron**][**Stainless steel**]<**Insert material**>.
b. Locking Mechanism: [**Manufacturer's standard device for securing grates to channel sections**][**Not required**].

7. Covers: Solid [**ductile or gray iron**]<**Insert material**>, of width and thickness that fit recesses in channel sections, and of lengths indicated.
8. Supports, Anchors, and Setting Devices: Manufacturer's standard unless otherwise indicated.

B. Narrow, Level-Invert, Polymer-Concrete Channel Drainage Systems :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABT, Inc.**]
b. [**ACO, Inc.**]
c. [**Eric'sons Dura Trench**]
d. [**Forté Composites, Inc.**]
e. [**Josam Company**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABT, Inc.**]
b. [**ACO, Inc.**]
c. [**Eric'sons Dura Trench**]
d. [**Forté Composites, Inc.**]
e. [**Josam Company**]
f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain narrow, level-invert channel drainage systems from single manufacturer.
4. Description: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
5. Channel Sections: Narrow, interlocking-joint, precast, polymer-concrete modular units with end caps.

a. Include rounded bottom, with level invert and with **NPS 4 (DN 100)** outlets in number and locations indicated.
b. Dimensions: [**5-inch (127-mm)**]<**Insert inches (mm)**> inside width and [**9-3/4 inches (248 mm)**]<**Insert inches (mm)**> deep. Include number of units required to form total lengths indicated.
c. Frame: [**Gray-iron or galvanized steel for grates**][**Not required**].

6. Grates: Manufacturer's designation "[**heavy**][**medium**] duty," with slots or perforations, and of width and thickness that fit recesses in channel sections.

a. Material: [**Ductile iron**][**Fiberglass**][**Galvanized steel**][**Gray iron**][**Stainless steel**]<**Insert material**>.
b. Locking Mechanism: [**Manufacturer's standard device for securing grates to channel sections**][**Not required**].

7. Covers: Solid [**ductile or gray iron**]<**Insert material**>, of width and thickness that fit recesses in channel sections, and of lengths indicated.
8. Supports, Anchors, and Setting Devices: Manufacturer's standard unless otherwise indicated.
9. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

C. Wide, Level-Invert, Polymer-Concrete Channel Drainage Systems :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABT, Inc.**]
b. [**ACO, Inc.**]
c. [**Eric'sons Dura Trench**]
d. [**Hubbell Utility Solutions; Hubbell Incorporated**]

e. [**Josam Company**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABT, Inc.**]
b. [**ACO, Inc.**]
c. [**Eric'sons Dura Trench**]
d. [**Hubbell Utility Solutions; Hubbell Incorporated**]
e. [**Josam Company**]
f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain wide, level-invert channel drainage systems from single manufacturer.
4. Description: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
5. Channel Sections: Wide, interlocking-joint, precast, polymer-concrete modular units with end caps.

a. Include flat or rounded bottom, with level invert and with outlets in number, sizes, and locations indicated.
b. Dimensions: [**8-inch (203-mm)**]<**Insert inch (mm)**> inside width and [**13-3/4 inches (350 mm)**]<**Insert inches (mm)**> deep. Include number of units required to form total lengths indicated.
c. Frame: [**Gray iron or galvanized steel for grates**][**Not required**].
d. Channel-Section Joining and Fastening Materials: As recommended in writing by system manufacturer.

6. Grates: Manufacturer's designation "[**heavy**][**medium**] duty," with slots or perforations, and of width and thickness that fit recesses in channel sections.

a. Material: [**Ductile iron**][**Fiberglass**][**Galvanized steel**][**Gray iron**][**Stainless steel**]<**Insert material**>.
b. Locking Mechanism: [**Manufacturer's standard device for securing grates to channel sections**][**Not required**].

7. Covers: Solid [**ductile or gray iron**]<**Insert material**>, of width and thickness that fit recesses in channel sections, and of lengths indicated.
8. Supports, Anchors, and Setting Devices: Manufacturer's standard unless otherwise indicated.

D. Drainage Specialties: Precast, polymer-concrete units.

1. Large Catch Basins:

a. **24-by-12-inch (610-by-305-mm)** polymer-concrete body, with outlets in quantities and sizes indicated.
b. Gray-iron slotted grate.
c. Frame: Include gray-iron or steel frame for grate.

2. Small Catch Basins:

a. **19- to 24-inch by approximately 6-inch (483- to 610-mm by approximately 150-mm)** polymer-concrete body, with outlets in quantities and sizes indicated.
b. Gray-iron slotted grate.

c. Frame: Include gray-iron or steel frame for grate.

3. Oil Interceptors:

a. Polymer-concrete body with interior baffle and four steel support channels and two **1/4-inch- (6.4-mm-)** thick, steel-plate covers.
b. Capacity: [**140 gal. (530 L)**][**200 gal. (757 L)**][**260 gal. (984 L)**].
c. Inlet and Outlet: [**NPS 4 (DN 100)**][**NPS 6 (DN 150)**].

4. Sediment Interceptors:

a. **27-inch- (686-mm-)** square, polymer-concrete body, with outlets in quantities and sizes indicated.
b. **24-inch- (610-mm-)** square, gray-iron frame and slotted grate.

2.24 PLASTIC, CHANNEL DRAINAGE SYSTEMS

A. General Requirements for Plastic, Channel Drainage Systems:

1. Modular system of plastic channel sections, grates, and appurtenances.
2. Designed so grates fit into frames without rocking or rattling.
3. Number of units required to form total lengths indicated.

B. FRP Channel Drainage Systems :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ACO, Inc.**]
b. [**Aquaduct, Inc.**]
c. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
d. [**Zurn Industries, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ACO, Inc.**]
b. [**Aquaduct, Inc.**]
c. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
d. [**Zurn Industries, LLC**]
e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain FRP channel drainage systems from single manufacturer.
4. Description: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
5. Channel Sections: Interlocking-joint, sloped-invert, FRP modular units, with end caps. Include flat, rounded, or inclined inside bottom, with outlets in number, sizes, and locations indicated.

a. Dimensions: [**4 inches (102 mm)**][**4 or 6 inches (102 or 152 mm)**][**6 inches (152 mm)**][**6 or 8 inches (152 or 203 mm)**][**8 inches (203 mm)**] wide. Include number of units required to form total lengths indicated.

b. Frame: [**Galvanized steel**][**Stainless steel**][**Manufacturer's standard metal**]<**Insert material**> for grates.

6. Grates: With slots or perforations and widths and thickness that fit recesses in channel sections.

a. Material: [**Fiberglass**][**Galvanized steel**][**Gray iron**][**Stainless steel**]<**Insert material**>.
b. Locking Mechanism: [**Manufacturer's standard device for securing grates to channel sections**][**Not required**].

7. Covers: Solid [**ductile or gray iron**]<**Insert material**>, of width and thickness that fit recesses in channel sections, and of lengths indicated.
8. Supports, Anchors, and Setting Devices: Manufacturer's standard unless otherwise indicated.
9. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

C. HDPE or PE Channel Drainage Systems :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
b. [**Sioux Chief Manufacturing Company, Inc.**]
c. [**Tuf-Tite Corporation**]
d. [**Zurn Industries, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Jay R. Smith Mfg Co; a division of Morris Group International**]
b. [**Sioux Chief Manufacturing Company, Inc.**]
c. [**Tuf-Tite Corporation**]
d. [**Zurn Industries, LLC**]
e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain HDPE or PE channel drainage systems from single manufacturer.
4. Description: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
5. Channel Sections: Interlocking-joint, HDPE or PE modular units, with end caps. Include flat, rounded, or inclined bottom, with level invert and with outlets in number, sizes, and locations indicated.

a. Dimensions: **4 inches (102 mm)** wide. Include number of units required to form total lengths indicated.

6. Grates: With slots or perforations and widths and thickness that fit recesses in channel sections.

a. Material: [**Fiberglass**][**Galvanized steel**][**Gray iron**][**Stainless steel**]<**Insert material**>.
b. Color: <**Insert color or delete subparagraph**>.

7. Supports, Anchors, and Setting Devices: Manufacturer's standard unless otherwise indicated.
8. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

2.25 CATCH BASINS

A. Standard Precast Concrete Catch Basins:

1. Description: **ASTM C478 (ASTM C478M)**, precast, reinforced concrete, of depth indicated, with provision for sealant joints.
2. Base Section: **6-inch (150-mm)** minimum thickness for floor slab and **4-inch (102-mm)** minimum thickness for walls and base riser section, and separate base slab or base section with integral floor.
3. Riser Sections: **4-inch (102-mm)** minimum thickness, **48-inch (1200-mm)** diameter, and lengths to provide depth indicated.
4. Top Section: Eccentric-cone type unless concentric-cone or flat-slab-top type is indicated. Top of cone of size that matches grade rings.
5. Joint Sealant: **ASTM C990 (ASTM C990M)**, bitumen or butyl rubber.
6. Adjusting Rings: Interlocking rings with level or sloped edge in thickness and shape matching catch basin frame and grate. Include sealant recommended by ring manufacturer.
7. Grade Rings: Include two or three reinforced-concrete rings, of **6- to 9-inch (150- to 225-mm)** total thickness, that match **24-inch- (610-mm-)** diameter frame and grate.
8. Steps: [**Individual FRP steps or FRP ladder**][**Individual FRP steps; FRP ladder; or ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**][**ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**]<**Insert material**>, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at **12- to 16-inch (300- to 400-mm)** intervals. Omit steps if total depth from floor of catch basin to finished grade is less than [**60 inches (1500 mm)**]<**Insert inches (mm)**>.
9. Pipe Connectors: **ASTM C923 (ASTM C923M)**, resilient, of size required, for each pipe connecting to base section.

B. Designed Precast Concrete Catch Basins: ASTM C913, precast, reinforced concrete; designed in accordance with ASTM C890 for A-16 (ASSHTO HS20-44), heavy-traffic, structural loading; of depth, shape, and dimensions indicated, with provision for joint sealants.

1. Joint Sealants: **ASTM C990 (ASTM C990M)**, bitumen or butyl rubber.
2. Adjusting Rings: Interlocking rings with level or sloped edge in thickness and shape matching catch basin frame and grate. Include sealant recommended by ring manufacturer.
3. Grade Rings: Include two or three reinforced-concrete rings, of **6- to 9-inch (150- to 225-mm)** total thickness, that match **24-inch- (610-mm-)** diameter frame and grate.
4. Steps: [**Individual FRP steps or FRP ladder**][**Individual FRP steps; FRP ladder; or ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**][**ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**]<**Insert material**>, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at **12- to 16-inch (300- to 400-mm)** intervals. Omit steps if total depth from floor of catch basin to finished grade is less than [**60 inches (1500 mm)**]<**Insert inches (mm)**>.
5. Pipe Connectors: **ASTM C923 (ASTM C923M)**, resilient, of size required, for each pipe connecting to base section.

C. Rectangular Frames and Grates: ASTM A536, Grade 60-40-18, ductile iron designed for A-16 (AASHTO HS20-44), structural loading. Include flat grate with small square or short-slotted drainage openings.

1. Size: **24 by 24 inches (610 by 610 mm)** minimum unless otherwise indicated.
2. Grate Free Area: Approximately 50 percent unless otherwise indicated.

D. Round Frames and Grates: ASTM A536, Grade 60-40-18, ductile iron designed for A-16 (AASHTO HS20-44), structural loading. Include **24-inch (610-mm)** ID by **7- to 9-inch (175- to 225-mm)** riser with

4-inch- (102-mm-) minimum width flange, and 26-inch- (660-mm-) diameter flat grate with small square or short-slotted drainage openings.

1. Grate Free Area: Approximately 50 percent unless otherwise indicated.

2.26 STORMWATER INLETS

A. Curb Inlets: Made with vertical curb opening[**, of materials and dimensions in accordance with utility standards**].

B. Gutter Inlets: Made with horizontal gutter opening[**, of materials and dimensions in accordance with utility standards**]. Include heavy-duty frames and grates.

C. Combination Inlets: Made with vertical curb and horizontal gutter openings[**, of materials and dimensions in accordance with utility standards**]. Include heavy-duty frames and grates.

D. Frames and Grates: Heavy duty[**, in accordance with utility standards**].

2.27 STORMWATER DETENTION STRUCTURES

A. Cast-in-Place Concrete, Stormwater Detention Structures: Constructed of reinforced-concrete bottom, walls, and top; designed in accordance with ASTM C890 for A-16 (AASHTO HS20-44), heavy-traffic, structural loading; of depth, shape, dimensions, and appurtenances indicated.

1. Ballast: Increase thickness of concrete as required to prevent flotation.
2. Grade Rings: Include two or three reinforced-concrete rings, of 6- to 9-inch (150- to 229-mm) total thickness, that match 24-inch- (610-mm-) diameter frame and cover.
3. Steps: [**Individual FRP steps or FRP ladder**][**Individual FRP steps; FRP ladder; or ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**][**ASTM A615/A615M, deformed, 1/2-inch (13-mm) steel reinforcing rods encased in ASTM D4101, PP**]<**Insert material**>, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at 12- to 16-inch (300- to 400-mm) intervals. Omit steps if total depth from floor of structure to finished grade is less than [60 inches (1500 mm)]<**Insert** inches (mm)>.

B. Manhole Frames and Covers: ASTM A536, Grade 60-40-18, ductile-iron castings designed for heavy-duty service. Include 24-inch (610-mm) ID by 7- to 9-inch (175- to 225-mm) riser with 4-inch- (102-mm-) minimum width flange, and 26-inch- (660-mm-) diameter cover. Include indented top design with lettering cast into cover, using wording equivalent to "STORM SEWER."

2.28 PIPE OUTLETS

A. Head Walls: Cast-in-place reinforced concrete, with apron and tapered sides.

B. Riprap Basins: Broken, irregularly sized and shaped, graded stone in accordance with NSSGA's "Quarried Stone for Erosion and Sediment Control."

1. Average Size:

   a. NSSGA No. R-3, screen opening 2 inches (51 mm).
   b. NSSGA No. R-4, screen opening 3 inches (76 mm).

c. NSSGA No. R-5, screen opening **5 inches (127 mm)**.

C. Filter Stone: In accordance with NSSGA's "Quarried Stone for Erosion and Sediment Control," No. FS-2, No. 4 screen opening, average-size graded stone.

D. Energy Dissipaters: In accordance with NSSGA's "Quarried Stone for Erosion and Sediment Control," No. A-1, **3-ton (2721-kg)** average weight armor stone, unless otherwise indicated.

2.29 DRY WELLS

A. ASTM C913, precast, reinforced, perforated concrete rings. Include the following:

1. Floor: Cast-in-place concrete.
2. Cover: Liftoff-type concrete cover with cast-in lift rings.
3. Wall Thickness: **4 inches (102 mm)** minimum with **1-inch (25-mm)** diameter or **1-by-3-inch- (25-by-76-mm-)** maximum slotted perforations arranged in rows parallel to axis of ring.

    a. Total Free Area of Perforations: Approximately 15 percent of ring interior surface.
    b. Ring Construction: Designed to be self-aligning.

4. Filtering Material: ASTM D448, Size No. 24, **3/4- to 2-1/2-inch (19- to 63-mm)** washed, crushed stone or gravel.

B. Manufactured PE Dry Wells:

1. Description: Manufactured PE side panels and top cover that assemble into **50-gal. (190-L)** storage capacity units.
2. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**NDS Inc**]
    b. <**Insert manufacturer's name**>

3. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**NDS Inc**]
    b. <**Insert manufacturer's name**>

4. Source Limitations: Obtain manufactured PE dry wells from single manufacturer.
5. Side Panels: With knockout ports for piping and seepage holes.
6. Top Cover: With knockout port for drain.
7. Filter Fabric: As recommended by unit manufacturer.
8. Filtering Material: ASTM D448, Size No. 24, **3/4- to 2-1/2-inch (19- to 63-mm)** washed, crushed stone or gravel.

C. Constructed-in-place aggregate type. Include the following:

1. Lining:

    a. Clay or concrete bricks.

b. Concrete blocks or precast concrete rings with notches or weep holes.

2. Filtering Material: ASTM D448, Size No. 24, **3/4- to 2-1/2-inch (19- to 63-mm)** washed, crushed stone or gravel.
3. Cover: Precast, reinforced-concrete slab, designed for structural loading in accordance with ASTM C890 and made in accordance with ASTM C913. Include slab dimensions that will extend **12 inches (300 mm)** minimum beyond edge of excavation, with bituminous coating over entire surface. Cast cover with opening for manhole in center.
4. Manhole: **24-inch- (610-mm-)** diameter, reinforced-concrete access lid with steel lift rings. Include bituminous coating over entire surface.

2.30 STORMWATER DISPOSAL SYSTEMS

A. Chamber Systems:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Advanced Drainage Systems, Inc**]
   b. [**CULTEC, Inc**]
   c. [**Hancor Inc.**]
   d. [**Infiltrator Systems Inc**]
   e. [**Interface H2O**]
   f. [**StormTech LLC**]
   g. [**Suntree Technologies, Inc.**]
   h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Advanced Drainage Systems, Inc**]
   b. [**CULTEC, Inc**]
   c. [**Hancor Inc.**]
   d. [**Infiltrator Systems Inc**]
   e. [**Interface H2O**]
   f. [**StormTech LLC**]
   g. [**Suntree Technologies, Inc.**]
   h. <**Insert manufacturer's name**>

3. Source Limitations: Obtain chamber systems from single manufacturer.
4. Storage and Leaching Chambers: Molded PE with perforated sides and open bottom. Include number of chambers, distribution piping, end plates, and other standard components as required for system total capacity.
5. Filtering Material: ASTM D448, Size No. 24, **3/4- to 2-1/2-inch (19- to 63-mm)** washed, crushed stone or gravel.
6. Filter Mat: Geotextile woven or spun filter fabric, in one or more layers, for minimum total unit weight of **4 oz./sq. yd. (135 g/sq. m)**.

B. Piping Systems: Perforated manifold, header, and lateral piping complying with AASHTO M 252 for **NPS 10 (DN 250)** and smaller, AASHTO M 294 for **NPS 12 to NPS 60 (DN 300 to DN 1500)**. Include proprietary fittings, couplings, seals, and filter fabric.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Advanced Drainage Systems, Inc**]
    b. [**Hancor Inc.**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Advanced Drainage Systems, Inc**]
    b. [**Hancor Inc.**]
    c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain pipe systems from single manufacturer.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Excavation, trenching, and backfilling are specified in Section 312000 "Earth Moving."

3.2 INSTALLATION OF PIPING

A. General Locations and Arrangements: Drawing plans and details indicate general location and arrangement of underground storm drainage piping. Location and arrangement of piping layout take into account design considerations. Install piping as indicated, to extent practical. Where specific installation is not indicated, follow piping manufacturer's written instructions.

B. Install piping beginning at low point, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install gaskets, seals, sleeves, and couplings in accordance with manufacturer's written instructions for use of lubricants, cements, and other installation requirements.

C. Install manholes for changes in direction unless fittings are indicated. Use fittings for branch connections unless direct tap into existing sewer is indicated.

D. Install proper size increasers, reducers, and couplings where different sizes or materials of pipes and fittings are connected. Reducing size of piping in direction of flow is prohibited.

E. When installing pipe under streets or other obstructions that cannot be disturbed, use pipe-jacking process of microtunneling.

F. Install gravity-flow, nonpressure drainage piping in accordance with the following:

1. Install piping pitched down in direction of flow.
2. Install piping [**NPS 6 (DN 150)**]<**Insert value**> and larger with restrained joints at tee fittings and at changes in direction. Use corrosion-resistant rods, pipe or fitting manufacturer's proprietary restraint system, or cast-in-place concrete supports or anchors.

3. Install piping with [36-inch- (915-mm-)][48-inch- (1220-mm-)][60-inch- (1520-mm-)][72-inch- (1830-mm-)]<**Insert** inch- (mm-)> minimum cover.
4. Install hub-and-spigot, cast-iron soil piping in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook."
5. Install hubless cast-iron soil piping in accordance with CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook."
6. Install ductile-iron piping and special fittings in accordance with AWWA C600 or AWWA M41.
7. Install corrugated-steel piping in accordance with ASTM A798/A798M.
8. Install corrugated-aluminum piping in accordance with ASTM B788/B788M.
9. Install ABS sewer piping in accordance with ASTM D2321 and ASTM F1668.
10. Install PE corrugated sewer piping in accordance with ASTM D2321.
11. Install PVC cellular-core piping in accordance with ASTM D2321 and ASTM F1668.
12. Install PVC sewer piping in accordance with ASTM D2321 and ASTM F1668.
13. Install PVC profile gravity sewer piping in accordance with ASTM D2321 and ASTM F1668.
14. Install PVC water-service piping in accordance with ASTM D2321 and ASTM F1668.
15. Install fiberglass sewer piping in accordance with ASTM D3839 and ASTM F1668.
16. Install nonreinforced-concrete sewer piping in accordance with ASTM C1479 and ACPA's "Concrete Pipe Installation Manual."
17. Install reinforced-concrete sewer piping in accordance with ASTM C1479 and ACPA's "Concrete Pipe Installation Manual."

G. Install force-main pressure piping in accordance with the following:

1. Install piping with restrained joints at tee fittings and at horizontal and vertical changes in direction. Use corrosion-resistant rods, pipe or fitting manufacturer's proprietary restraint system, or cast-in-place concrete supports or anchors.
2. Install piping with [36-inch- (915-mm-)][48-inch- (1220-mm-)][60-inch- (1520-mm-)][72-inch- (1830-mm-)]<**Insert** inch- (mm-)> minimum cover.
3. Install ductile-iron pressure piping in accordance with AWWA C600 or AWWA M41.
4. Install ductile-iron special fittings in accordance with AWWA C600.
5. Install PVC pressure piping in accordance with AWWA M23, or ASTM D2774 and ASTM F1668.
6. Install PVC water-service piping in accordance with ASTM D2774 and ASTM F1668.

H. Install corrosion-protection piping encasement over the following underground metal piping in accordance with ASTM A674 or AWWA C105/A21.5:

1. Hub-and-spigot, cast-iron soil pipe and fittings.
2. Hubless cast-iron soil pipe and fittings.
3. Ductile-iron pipe and fittings.
4. Expansion joints and deflection fittings.

3.3 PIPE JOINT CONSTRUCTION

A. Join gravity-flow, nonpressure drainage piping in accordance with the following:

1. Join hub-and-spigot, cast-iron soil piping with gasketed joints in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.
2. Join hub-and-spigot, cast-iron soil piping with caulked joints in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for lead and oakum caulked joints.
3. Join hubless cast-iron soil piping in accordance with CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-coupling joints.
4. Join ductile-iron culvert piping in accordance with AWWA C600 for push-on joints.
5. Join ductile-iron piping and special fittings in accordance with AWWA C600 or AWWA M41.
6. Join corrugated-steel sewer piping in accordance with ASTM A798/A798M.

7. Join corrugated-aluminum sewer piping in accordance with ASTM B788/B788M.
8. Join ABS sewer piping in accordance with ASTM D2321 for elastomeric-seal joints.
9. Join corrugated-PE piping in accordance with ASTM D3212 for push-on joints.
10. Join PVC cellular-core piping in accordance with ASTM D2321 and ASTM F891 for solvent-cemented joints.
11. Join PVC corrugated sewer piping in accordance with ASTM D2321 for elastomeric-seal joints.
12. Join PVC sewer piping in accordance with ASTM D2321 and ASTM D3034 for elastomeric-seal joints or ASTM D3034 for elastomeric-gasketed joints.
13. Join PVC profile gravity sewer piping in accordance with ASTM D2321 for elastomeric-seal joints or ASTM F794 for gasketed joints.
14. Join fiberglass sewer piping in accordance with ASTM D3839 for elastomeric-seal joints.
15. Join nonreinforced-concrete sewer piping in accordance with **ASTM C14 (ASTM C14M)** and ACPA's "Concrete Pipe Installation Manual" for rubber-gasketed joints.
16. Join reinforced-concrete sewer piping in accordance with ACPA's "Concrete Pipe Installation Manual" for rubber-gasketed joints.
17. Join dissimilar pipe materials with nonpressure-type flexible couplings.

B. Join force-main pressure piping in accordance with the following:

1. Join ductile-iron pressure piping in accordance with AWWA C600 or AWWA M41 for push-on joints.
2. Join ductile-iron special fittings in accordance with AWWA C600 or AWWA M41 for push-on joints.
3. Join PVC pressure piping in accordance with AWWA M23 for gasketed joints.
4. Join PVC water-service piping in accordance with ASTM D2855 for solvent-cemented joints.
5. Join dissimilar pipe materials with pressure-type couplings.

3.4 INSTALLATION OF BACKWATER VALVES

A. Install horizontal-type backwater valves in piping where indicated.

B. Install combination horizontal and manual gate-valve type in piping and in manholes where indicated.

C. Install terminal-type backwater valves on end of piping and in manholes where indicated.

3.5 INSTALLATION OF CLEANOUTS

A. Install cleanouts and riser extensions from sewer pipes to cleanouts at grade. Use cast-iron soil pipe fittings in sewer pipes at branches for cleanouts and cast-iron soil pipe for riser extensions to cleanouts. Install piping so cleanouts open in direction of flow in sewer pipe.

1. Use Light-Duty, top-loading classification cleanouts in [**earth or unpaved foot-traffic**]<**Insert area type**> areas.
2. Use Medium-Duty, top-loading classification cleanouts in [**paved foot-traffic**]<**Insert area type**> areas.
3. Use Heavy-Duty, top-loading classification cleanouts in [**vehicle-traffic service**]<**Insert area type**> areas.
4. Use Extra-Heavy-Duty, top-loading classification cleanouts in [**roads**]<**Insert area**>.

B. Set cleanout frames and covers in earth in cast-in-place concrete block, [**18 by 18 by 12 inches (450 by 450 by 300 mm)**]<**Insert inches (mm)**> deep. Set with tops [**1 inch (25 mm)**]<**Insert inch(es (mm)**> above surrounding earth grade.

C. Set cleanout frames and covers in concrete pavement and roads with tops flush with pavement surface.

3.6 INSTALLATION OF DRAINS

A. Install type of drains in locations indicated.

1. Use Light-Duty, top-loading classification drains in [**earth or unpaved foot-traffic**]<**Insert area type**> areas.
2. Use Medium-Duty, top-loading classification drains in [**paved foot-traffic**]<**Insert area type**> areas.
3. Use Heavy-Duty, top-loading classification drains in [**vehicle-traffic service**]<**Insert area type**> areas.
4. Use Extra-Heavy-Duty, top-loading classification drains in [**roads**]<**Insert area**>.

B. Embed drains in **4-inch- (102-mm-)** minimum concrete around bottom and sides.

C. Fasten grates to drains if indicated.

D. Set drain frames and covers with tops flush with pavement surface.

E. Assemble trench sections with flanged joints.

F. Embed trench sections in [**4-inch- (102-mm-)**]<**Insert inch- (mm-)**> minimum concrete around bottom and sides.

3.7 INSTALLATION OF MANHOLES

A. General: Install manholes, complete with appurtenances and accessories indicated.

B. Install precast concrete manhole sections with sealants in accordance with ASTM C891.

C. Where specific manhole construction is not indicated, follow manhole manufacturer's written instructions.

D. Set tops of frames and covers flush with finished surface of manholes that occur in pavements. Set tops [**3 inches (76 mm)**]<**Insert inches (mm)**> above finished surface elsewhere unless otherwise indicated.

3.8 INSTALLATION OF CATCH BASINS

A. Construct catch basins to sizes and shapes indicated.

B. Set frames and grates to elevations indicated.

3.9 INSTALLATION OF STORMWATER INLETS/OUTLETS

A. Construct inlet head walls, aprons, and sides of reinforced concrete, as indicated.

B. Construct riprap of broken stone, as indicated.

C. Install outlets that spill onto grade, anchored with concrete, where indicated.

D. Install outlets that spill onto grade, with flared end sections that match pipe, where indicated.

E. Construct energy dissipaters at outlets, as indicated.

3.10 INSTALLATION OF DRY WELLS

A. Excavate hole to diameter of at least **6 inches (150 mm)** greater than outside of dry well. Do not extend excavation into ground-water table.

B. Install precast, concrete-ring dry wells in accordance with the following:

1. Assemble rings to depth indicated.
2. Extend rings to height where top of cover will be approximately **8 inches (203 mm)** below finished grade.
3. Backfill bottom of inside of rings with filtering material to level at least **12 inches (300 mm)** above bottom.
4. Extend effluent inlet pipe **12 inches (300 mm)** into rings and terminate into side of tee fitting.
5. Backfill around outside of rings with filtering material to top level of rings.
6. Install cover over top of rings.

C. Install manufactured, PE dry wells in accordance with manufacturer's written instructions and the following:

1. Assemble and install panels and cover.
2. Backfill bottom of inside of unit with filtering material to level at least [**12 inches (300 mm)**]<**Insert inches (mm)**> above bottom.
3. Extend effluent inlet pipe [**12 inches (300 mm)**]<**Insert inches (mm)**> into unit and terminate into side of tee fitting.
4. Install filter fabric around outside of unit.
5. Install filtering material around outside of unit.

D. Install constructed-in-place dry wells in accordance with the following:

1. Install brick lining material dry and laid flat, with staggered joints for seepage. Build to diameter and depth indicated.
2. Install block lining material dry, with staggered joints and 20 percent minimum of blocks on side for seepage. Install precast concrete rings with notches or weep holes for seepage. Build to diameter and depth indicated.
3. Extend lining material to height where top of manhole will be approximately [**8 inches (203 mm)**]<**Insert inches (mm)**> below finished grade.
4. Backfill bottom of inside of lining with filtering material to level at least [**12 inches (300 mm)**]<**Insert inches (mm)**> above bottom.
5. Extend effluent inlet pipe [**12 inches (300 mm)**]<**Insert inches (mm)**> into lining and terminate into side of tee fitting.
6. Backfill around outside of lining with filtering material to top level of lining.
7. Install manhole over top of dry well. Support cover on undisturbed soil. Do not support cover on lining.

3.11 CONCRETE PLACEMENT

A. Place cast-in-place concrete in accordance with **ACI 318 (ACI 318M)**.

3.12 INSTALLATION OF CHANNEL DRAINAGE SYSTEMS

A. Install with top surfaces of components, except piping, flush with finished surface.

B. Assemble channel sections to form slope down toward drain outlets. Use sealants, adhesives, fasteners, and other materials recommended by system manufacturer.

C. Embed channel sections and drainage specialties in [4-inch- (102-mm-)]<Insert inch- (mm-)> minimum concrete around bottom and sides.

D. Fasten grates to channel sections if indicated.

E. Assemble channel sections with flanged or interlocking joints.

F. Embed channel sections in [4-inch- (102-mm-)]<Insert inch- (mm-)> minimum concrete around bottom and sides.

3.13 INSTALLATION OF STORMWATER DISPOSAL SYSTEMS

A. Chamber Systems: Excavate trenches of width and depth, and install system and backfill in accordance with chamber manufacturer's written instructions. Include storage and leaching chambers, filtering material, and filter mat.

B. Piping Systems: Excavate trenches of width and depth, and install piping system, filter fabric, and backfill, in accordance with piping manufacturer's written instructions.

3.14 CONNECTIONS

A. Connect nonpressure, gravity-flow drainage piping in building's storm building drains specified in Section 221414 "Storm Drainage Piping."

B. Connect force-main piping to building's storm drainage force mains specified in Section 221414 "Storm Drainage Piping." Terminate piping where indicated.

C. Make connections to existing piping and underground manholes.

1. Use commercially manufactured wye fittings for piping branch connections. Remove section of existing pipe; install wye fitting into existing piping; and encase entire wye fitting, plus 6-inch (150-mm) overlap, with not less than 6 inches (150 mm) of concrete with 28-day compressive strength of 3000 psi (20.7 MPa).
2. Make branch connections from side into existing piping, NPS 4 to NPS 20 (DN 100 to DN 500). Remove section of existing pipe, install wye fitting into existing piping, and encase entire wye with not less than 6 inches (150 mm) of concrete with 28-day compressive strength of 3000 psi (20.7 MPa).
3. Make branch connections from side into existing piping, NPS 21 (DN 525) or larger, or to underground manholes and structures by cutting into existing unit and creating an opening large enough to allow 3 inches (76 mm) of concrete to be packed around entering connection. Cut end of connection pipe passing through pipe or structure wall to conform to shape of and be flush with inside wall unless otherwise indicated. On outside of pipe, manhole, or structure wall, encase entering connection in 6 inches (150 mm) of concrete for minimum length of 12 inches (300 mm) to provide additional support of collar from connection to undisturbed ground.

    a. Use concrete that will attain a minimum 28-day compressive strength of 3000 psi (20.7 MPa) unless otherwise indicated.
    b. Use epoxy-bonding compound as interface between new and existing concrete and piping materials.

4. Protect existing piping, manholes, and structures to prevent concrete or debris from entering while making tap connections. Remove debris or other extraneous material that may accumulate.

D. Connect to sediment interceptors specified in Section 221323 "Sanitary Waste Interceptors."

E. Pipe couplings, expansion joints, and deflection fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.

1. Use nonpressure-type flexible couplings where required to join gravity-flow, nonpressure sewer piping unless otherwise indicated.

   a. [**Unshielded**][**Shielded**] flexible couplings for same or minor difference OD pipes.
   b. Unshielded, increaser/reducer-pattern, flexible couplings for pipes with different OD.
   c. Ring-type flexible couplings for piping of different sizes where annular space between smaller piping's OD and larger piping's ID permits installation.

2. Use pressure-type pipe couplings for force-main joints.

3.15 CLOSING ABANDONED STORM DRAINAGE SYSTEMS

A. Abandoned Piping: Close open ends of abandoned underground piping indicated to remain in place. Include closures strong enough to withstand hydrostatic and earth pressures that may result after ends of abandoned piping have been closed. Use either procedure below:

1. Close open ends of piping with at least [**8-inch- (203-mm-)**]<**Insert inch- (mm-)**> thick, brick masonry bulkheads.
2. Close open ends of piping with threaded metal caps, plastic plugs, or other acceptable methods suitable for size and type of material being closed. Do not use wood plugs.

B. Abandoned Manholes and Structures: Excavate around manholes and structures as required and use one procedure below:

1. Remove manhole or structure and close open ends of remaining piping.
2. Remove top of manhole or structure down to at least [**36 inches (915 mm)**]<**Insert inches (mm)**> below final grade. Fill to within [**12 inches (300 mm)**]<**Insert inches (mm)**> of top with stone, rubble, gravel, or compacted dirt. Fill to top with concrete.

C. Backfill to grade in accordance with Section 312000 "Earth Moving."

3.16 IDENTIFICATION

A. Materials and their installation are specified in Section 312000 "Earth Moving." Arrange for installation of green warning tape directly over piping and at outside edge of underground structures.

1. Use[**warning tape or**] detectable warning tape over ferrous piping.
2. Use detectable warning tape over nonferrous piping and over edges of underground structures.

3.17 FIELD QUALITY CONTROL

A. Inspect interior of piping to determine whether line displacement or other damage has occurred. Inspect after approximately **24 inches (610 mm)** of backfill is in place, and again at completion of Project.

1. Submit separate reports for each system inspection.
2. Defects requiring correction include the following:

    a. Alignment: Less than full diameter of inside of pipe is visible between structures.
    b. Deflection: Flexible piping with deflection that prevents passage of ball or cylinder of size not less than 92.5 percent of piping diameter.
    c. Damage: Crushed, broken, cracked, or otherwise damaged piping.
    d. Infiltration: Water leakage into piping.
    e. Exfiltration: Water leakage from or around piping.

3. Replace defective piping using new materials, and repeat inspections until defects are within allowances specified.
4. Reinspect and repeat procedure until results are satisfactory.

B. Test new piping systems, and parts of existing systems that have been altered, extended, or repaired, for leaks and defects.

1. Do not enclose, cover, or put into service before inspection and approval.
2. Test completed piping systems in accordance with requirements of authorities having jurisdiction.
3. Schedule tests and inspections by authorities having jurisdiction with at least 24 hours' advance notice.
4. Submit separate report for each test.
5. Gravity-Flow Storm Drainage Piping: Test in accordance with requirements of authorities having jurisdiction, UNI-B-6, and the following:

    a. Exception: Piping with soiltight joints unless required by authorities having jurisdiction.
    b. Option: Test plastic piping in accordance with ASTM F1417.

6. Force-Main Storm Drainage Piping: Perform hydrostatic test after thrust blocks, supports, and anchors have hardened. Test at pressure not less than 1-1/2 times the maximum system operating pressure, but not less than [**150 psig (1035 kPa)**]<**Insert psig (kPa)**>.

    a. Ductile-Iron Piping: Test in accordance with AWWA C600, "Hydraulic Testing" Section.
    b. PVC Piping: Test in accordance with AWWA M23, "Testing and Maintenance" Chapter.

C. Leaks and loss in test pressure constitute defects that must be repaired.

D. Replace leaking piping using new materials, and repeat testing until leakage is within allowances specified.

3.18 CLEANING

A. Clean interior of piping of dirt and superfluous materials.[**Flush with potable water.**]

SECTION 33 44 36 00 - OIL WATER SEPARATOR

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for oil/water separator. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Scope
1. The separator shall be designed for gravity separation of sand, grit, settleable solids, or semisolids, and free oils (hydrocarbons and other petroleum products) from wastewater. Separator shall be installed belowground with top access at or above grade level. The source of the influent to the separator shall be gravity flow from storm water runoff, hydrocarbon spills, and/or cleaning/maintenance operations.

C. Performance
1. Influent Characteristics
a. Provide separator designed for intermittent and variable flows of water, oil, or any combination of non-emulsified oil-water mixtures. Minimum separator retention time shall be 10 minutes. Operating temperatures of the influent oil in water mixture shall range from 40 degrees F. to 80 degrees F. The specific gravity of the oils at operating temperatures shall range from 0.71 to 0.92. The specific gravity of the fresh water at operating temperatures shall range from 1.00 to 1.03.
2. Effluent Characteristics
a. The free oil and grease concentration in the effluent from the separator shall not exceed 10 mg/l (10 PPM) to satisfy requirements of the NPDES stormwater discharge permit. To achieve this goal, it will be necessary to remove all free oil droplets equal to and greater than 20 microns.

D. Design Criteria
1. The separator shall be listed to Underwriters' Laboratories UL-SU2215. Construction and performance of the oil/water separators shall be in accordance with UL-SU2215. Provide certification documentation detailing criteria under which the system was tested. UL-SU2215 label shall be prominently displayed on manway covers.
2. Separator shall be designed in accordance with Stokes Law and the American Petroleum Institute Publication 421, "Monographs on Refinery Environmental Control - Management of Water Discharges; Design and Operation of Oil/Water Separators." Effective surface area calculations, signed and stamped by a Registered Professional Engineer shall be submitted to document specified effluent quality based on complete removal of the specified oil globule at design flow. A separator with lower effective surface area than required is not permissible.
3. Separator capacities, dimensions, construction, and thickness shall be in strict accordance with Underwriters' Laboratories, Subject UL-58 Standard for Safety, Steel Underground Tanks for Flammable and Combustible Liquids, September 30, 1997, Double Wall construction with 360 degree Steel Secondary Containment. The inner steel tank shall be completely contained within the outer steel tank, enclosing 100% of the tank volume. The tank shall have a double steel shell with a space between the layers. The space between the inner and outer steel walls shall be monitored with an approved electronic leak detection device through a pipe that extends vertically to the top of the tank from a small sump at the bottom. Tank construction using thin walled primary tank with external fiberglass jacket shall not be permissible.
4. Separator Corrosion Control System shall be in strict accordance with Underwriters' Laboratories Inc. Subject UL-1746 Standard for External Corrosion Protection Systems for Steel Underground Storage Tanks and the HighGuard® External Corrosion Protection Specifications.

5. Oil/water separator shall comply with National Fire Protection Association NFPA 30 Flammable and Combustible Liquids Code, 2003 Edition.
6. Separator vessel volume shall allow for a hydraulic retention time of ten (10) minutes to ensure laminar flow conditions which result in hydraulic uniformity and high effluent quality. Volume reduction will adversely affect separator performance by increasing horizontal velocity and turbulence, therefore a separator of smaller volume is not permissible.
7. Separator shall be the standard patented product of a steel tank manufacturer regularly engaged in the production of such equipment. Manufacturer shall have at least 20 years experience in manufacturing similar units for identical applications. No subcontracting of tank fabrication shall be permitted.
8. Separator shall be fabricated, inspected, and tested for leakage before shipment from the factory by manufacturer as a completely assembled vessel ready for installation.
9. Separator shall be cylindrical, horizontal, atmospheric-type steel vessel intended for the separation and storage of flammable and combustible liquids. The separator shall have the structural strength to withstand static and dynamic hydraulic loading while empty and during operating conditions. The Oil/Water Separator's dimensions and thickness shall be in strict compliance with Roark's Formulas for Stress and Strain as presented in UL 58, September 30, 1997. Calculations, signed and stamped by a Registered Professional Engineer shall be submitted to document structural strength under specified overbearing or external pressure. A separator with a reduced shell thickness is not permissible.
10. Separator shall have an oil storage capacity equal to about 43% of the total vessel volume and an emergency oil spill capacity equal to 80% of the total vessel volume.
11. To prevent extensive shutdown and maintenance, the separator design must allow solids to fall unhindered by turbulence, and oil droplets to rise without risk of re-emulsifying due to collisions with interfering solids. The use of plastic perforated tubes, spherical balls, or irregular shaped media will increase the facility's maintenance costs and shall not be permitted.
12. Separator shall consist of inlet and outlet connections, integral sand interceptor compartment, non-clogging flow distributor and energy dissipater device, stationary under flow baffle, presettling chamber for solids, sludge baffle, oil coalescing chamber with removable parallel flat/corrugated plate coalescer, with removable plates, and sectionalized removable polypropylene impingement coalescers to optimize separation of free oil from water, effluent downcomer positioned to prevent discharge of free oil that has been separated from the water, access ways for coalescers and each chamber, fittings for vent, oil pump-out, sampling, gauging, leak detection, and lifting lugs.

E. Submittals:
1. Shop Drawings: shop drawings for oil water separators shall show principal dimensions and location of all fittings.
2. Instructions: provide three complete sets of installation, operation, and maintenance instructions with separator.
3. Quality Control: Quality control, inspection procedures, and reports shall be considered part of the submittal package.

F. Warranty
1. The manufacturer shall warrant its products to be free from defects in material and workmanship for a period of one year from the date of shipment. The warranty shall be limited to repair or replacement of the defective part(s).
2. The manufacturer's warranty shall be standard limited warranty in effect at time of purchase.

1.2 PRODUCTS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Highland Tank, One Highland Road, Box 338, Stoystown, PA 15563, Phone 814-893-5701, FAX 893-6126, E-mail ows.info@highlandtank.com, Website http://www.highlandtank.com

B. Product
1. Provide and install Highland Tank Model HTC Series “G” UL-SU2215 approved Belowground Double Wall Parallel Flat/Corrugated Plate Gravity Displacement Oil/Water Separator with Integral Sand Interceptor Compartment. Separator shall be furnished with oil level alarm and leak detection systems. Oil/Water Separator shall be of capacity to comply with Spill Prevention Control and Countermeasures (SPCC) plan requirements at the facility. The sizing of this oil/water separator is consistent with industry protocols for complying with the minimum federal spill and discharge regulations therefore a separator of smaller volume is not permissible.
2. Separator shall be furnished with a Corella™ inclined parallel flat/corrugated plate coalescer to simultaneously separate free oil droplets and settleable or suspended solids particles from water without clogging of the coalescer.

C. Description
1. Separator shall be standard prefabricated inclined parallel flat/corrugated plate, gravity displacement type unit.
2. Separator shall be cylindrical with capacities, dimensions, construction, and thickness in strict accordance with Underwriters’ Laboratories Subject 58, Double Wall construction using flat-flanged heads. Separator shall comply with National Fire Protection Association NFPA 30 Flammable and Combustible Liquids Code, 2003 Edition.
3. The separator shall be a pre-packaged, pre-engineered, ready to install unit consisting of:
   a. An influent connection, flanged. An internal influent nozzle at the inlet end of the separator. Nozzle discharge to be located at the furthest diagonal point from the effluent discharge opening.
   b. An integral sand interceptor compartment containing one (1) manhole, UL approved, complete with extension, cover, gasket, and bolts. A heavy-duty bulkhead shall retain sand, grit, settleable solids or semisolids and prevent them from entering the separation chamber. Bulkhead shall have a transfer pipe.
   c. A velocity head diffusion baffle at the inlet to:
      1) reduce horizontal velocity and flow turbulence.
      2) distribute the flow equally over the separators cross sectional area.
      3) direct the flow in a serpentine path in order to enhance hydraulic characteristics and fully utilize all separator volume.
      4) completely isolate all inlet turbulence from the separation chamber.
   d. A sediment chamber to disperse flow and collect oily solids and sediments.
   e. A sludge baffle to retain settleable solids and sediment and prevent them from entering the separation chamber.
   f. An Oil/Water Separation Chamber containing a removable Corella™ inclined parallel flat/corrugated plate coalescer. The coalescer shall have individual removable plates, sloped towards the sediment chamber. Each coalescing polate shall be flat on the top and corrugated on the bottom. The flat top plate shall resist clogging and clotting with solids. The corrugations of each of the plate bottoms shall be shaped and positioned to enhance collisions between the rising oil droplets and coalesce between them thereby improving separator efficiency. The coalescer shall:
      1) effect separation of oil and solids from all strata of the wastewater stream.
      2) shorten the vertical distance that an oil globule or solid particle has to rise or sink, respectively, for effective removal. Minimum plate gap to be 3/4".
      3) enhance coalescence and agglomeration by causing the smaller globules and particles (those possessing smaller rising/settling rates) to coalesce and collect on the plates thereby forming larger globules and particles that separate rapidly in water.
      4) direct the flow paths of the separated oil to the surface of the separator and separated solids to the bottom of the separator.
      5) allow solids to fall unhindered by turbulence, and oil droplets to rise without risk of re-emulsifying due to collisions with interfering solids.
   g. The Oil/Water Separation Chamber shall also contain a sectionalized removable “Petro-Screen”™ polypropylene impingement coalescer designed to intercept oil globules of less

than 20 microns in diameter. Heavy, one-piece impingement coalescers are not permissible.

h. An internal effluent downcomer at the outlet end of the separator, to allow for discharge from the bottom of the separation chamber only.

i. An effluent connection, flanged.

j. Fittings for vent, interface/level sensor, leak detection, waste oil pump-out, sampling, and gauge.

k. Two (2) manholes, UL approved, complete with extension, cover, gasket, and bolts. One manway shall be placed between the inlet and the parallel flat/corrugated plate coalescer to facilitate access into sediment chamber for solids removal. One manway shall be placed between the parallel flat/corrugated plate coalescer and outlet to facilitate access into the oil water separation chamber for oil removal.

l. Lifting lugs at balancing points for handling and installation.

m. Identification plates: Plates shall be affixed in prominent location and be durable and legible throughout equipment life.

n. HighGuard® Corrosion Protection System consisting of:
   1) Isolation Spool Pieces
   2) Dielectric Isolation Gaskets and Bushings
   3) External surfaces commercial grit blast, coated 75 mils DFT Self-Reinforcing Polyurethane.

o. Internal surfaces commercial grit blast and coated with 10 mils DFT heavy duty Polyurethane.

D. Accessories

1. Separator shall be supplied with an audible and visual alarm system that indicates hi oil level (visual only) and hi hi oil level (audible and visual) of oil storage in the oil/water separator and an audible and visual leak detection alarm system that indicates hydrocarbon and/or water in the interstice. A silence control shall be provided for the audible alarms. Level sensor(s) shall be intrinsically safe. Level sensor floats shall be made of stainless steel. The control panel shall contain both level sensor and detection control. The control panel shall be NEMA 4. Power to the control panel shall be as directed by the Owner.
2. Separator shall be supplied with Polyester Hold-down straps.
3. Separator shall be supplied with prefabricated Concrete Deadman Anchors.
4. Separator shall be supplied with cylindrical and/or rectangular steel Grade Level Manways designed to AASHTO H20 requirements.

1.3 EXECUTION

A. Installation

1. Installation shall be in strict compliance with manufacturer's instructions and shall comply with all applicable local, state, and federal requirements.

SECTION 33 46 00 00 - SUBDRAINAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Perforated-wall pipes and fittings.
2. Drainage conduits.
3. Drainage panels.
4. Geotextile filter fabrics.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

PART 2 - PRODUCTS

2.1 PERFORATED-WALL PIPES AND FITTINGS

A. Perforated PE Pipe and Fittings:

1. NPS 6 (DN 150) and Smaller: ASTM F405 or AASHTO M 252, Type CP; corrugated, for coupled joints.
2. NPS 8 (DN 200) and Larger: ASTM F667; AASHTO M 252, Type CP; or AASHTO M 294, Type CP; corrugated; for coupled joints.
3. Couplings: Manufacturer's standard, band type.

B. Perforated PVC Sewer Pipe and Fittings: ASTM D2729, bell-and-spigot ends, for loose joints.

2.2 DRAINAGE CONDUITS

A. Molded-Sheet Drainage Conduits: Prefabricated geocomposite with cuspated, molded-plastic drainage core wrapped in geotextile filter fabric.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Airfield Systems, LLC**]
b. [**American Wick Drain Corporation (AWD)**]
c. [**JDR Enterprises, Inc**]
d. [**MAPEI Corporation**]
e. [**TenCate Geosynthetics**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Airfield Systems, LLC**]
    b. [**American Wick Drain Corporation (AWD)**]
    c. [**JDR Enterprises, Inc**]
    d. [**MAPEI Corporation**]
    e. [**TenCate Geosynthetics**]
    f. <**Insert manufacturer's name**>

3. Nominal Size:

    a. 12 Inches (305 mm) High by Approximately 1 Inch (25 mm) Thick: With minimum in-plane flow of [**30 gpm (114 L/min.)**]<**Insert value**> at hydraulic gradient of [**1.0**]<**Insert value**> when tested in accordance with ASTM D4716.
    b. 18 Inches (457 mm) High by Approximately 1 Inch (25 mm) Thick: With minimum in-plane flow of [**45 gpm (170 L/min.)**]<**Insert value**> at hydraulic gradient of [**1.0**]<**Insert value**> when tested in accordance with ASTM D4716.

4. Filter Fabric: PP geotextile.
5. Fittings: HDPE with combination **NPS 4 and NPS 6 (DN 100 and DN 150)** outlet connection.

B. Multipipe Drainage Conduits: Prefabricated geocomposite with interconnected, corrugated, perforated-pipe core molded from HDPE complying with ASTM D1248 and wrapped in geotextile filter fabric.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Varicore Technologies, Inc.**]
    b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Varicore Technologies, Inc.**]
    b. <**Insert manufacturer's name**>

3. Nominal Size:

    a. 6 Inches (152 mm) High by Approximately 1-1/4 Inches (31 mm) Thick: With minimum in-plane flow of [**15 gpm (57 L/min.)**]<**Insert value**> at hydraulic gradient of [**1.0**]<**Insert value**> when tested in accordance with ASTM D4716.
    b. 12 Inches (305 mm) High by Approximately 1-1/4 Inches (31 mm) Thick: With minimum in-plane flow of [**30 gpm (114 L/min.)**]<**Insert value**> at hydraulic gradient of [**1.0**]<**Insert value**> when tested in accordance with ASTM D4716.
    c. 18 Inches (457 mm) High by Approximately 1-1/4 Inches (31 mm) Thick: With minimum in-plane flow of [**45 gpm (170 L/min.)**]<**Insert value**> at hydraulic gradient of [**1.0**]<**Insert value**> when tested in accordance with ASTM D4716.

4. Filter Fabric: Nonwoven, needle-punched geotextile.
5. Fittings: HDPE with combination **NPS 4 and NPS 6 (DN 100 and DN 150)** outlet connection.

6. Couplings: HDPE.

C. Single-Pipe Drainage Conduits: Prefabricated geocomposite with perforated corrugated core molded from HDPE complying with ASTM D3350 and wrapped in geotextile filter fabric.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Advanced Drainage Systems, Inc**]
   b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Advanced Drainage Systems, Inc**]
   b. <**Insert manufacturer's name**>

3. Nominal Size:

   a. 12 Inches (305 mm) High by Approximately 1 Inch (25 mm) Thick: With minimum in-plane flow of [**30 gpm (114 L/min.)**]<**Insert value**> at hydraulic gradient of [**1.0**]<**Insert value**> when tested in accordance with ASTM D4716.
   b. 18 Inches (457 mm) High by Approximately 1 Inch (25 mm) Thick: With minimum in-plane flow of [**45 gpm (170 L/min.)**]<**Insert value**> at hydraulic gradient of [**1.0**]<**Insert value**> when tested in accordance with ASTM D4716.

4. Filter Fabric: PP geotextile.
5. Fittings: HDPE with combination **NPS 4 and NPS 6 (DN 100 and DN 150)** outlet connection.
6. Couplings: Corrugated HDPE band.

D. Mesh Fabric Drainage Conduits: Prefabricated geocomposite with plastic-filament drainage core wrapped in geotextile filter fabric. Include fittings for bends and connection to drainage piping.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Advanced Building Products Inc.**]
   b. [**Low & Bonar PLC**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Advanced Building Products Inc.**]
   b. [**Low & Bonar PLC**]
   c. <**Insert manufacturer's name**>

3. Nominal Size: **6 inches (150 mm)** high by approximately **0.9 inch (23 mm)** thick.

   a. Minimum In-Plane Flow: [**2.4 gpm (9.1 L/min.)**]<**Insert value**> at hydraulic gradient of

[**1.0**]<**Insert value**> when tested in accordance with ASTM D4716.

4. Filter Fabric: Nonwoven geotextile made of PP or polyester fibers or combination of both. Flow rates range from **120 to 200 gpm/sq. ft. (81 to 136 L/s per sq. m)** when tested in accordance with ASTM D4491.

E. Ring Fabric Drainage Conduits: Drainage conduit with HDPE rings-in-grid pattern drainage core, for field-applied geotextile filter fabric. Include fittings for bends and connection to drainage piping.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Invisible Structures, Inc.**]
   b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Invisible Structures, Inc.**]
   b. <**Insert manufacturer's name**>

3. Nominal Size:

   a. 18 Inches (0.5 m) High by 1 Inch (25 mm) Thick: With minimum in-plane flow of [**82 gpm (310 L/min.)**]<**Insert value**> at hydraulic gradient of [**1.0**]<**Insert value**> when tested in accordance with ASTM D4716.
   b. 36 Inches (1 m) High by 1 Inch (25 mm) Thick: With minimum in-plane flow of [**164 gpm (621 L/min.)**]<**Insert value**> at hydraulic gradient of [**1.0**]<**Insert value**> when tested in accordance with ASTM D4716.

4. Filter Fabric: Comply with requirements for flat geotextile filter fabric specified in Part 2 "Geotextile Filter Fabrics" Article.

2.3 DRAINAGE PANELS

A. Molded-Sheet Drainage Panels: Prefabricated geocomposite, [**36 to 60 inches (915 to 1525 mm)**]<**Insert dimensions**> wide with drainage core faced with geotextile filter fabric.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**American Wick Drain Corporation (AWD)**]
   b. [**Dorken Systems Inc.**]
   c. [**Eljen Corporation**]
   d. [**JDR Enterprises, Inc**]
   e. [**MAPEI Corporation**]
   f. [**Mar-flex Waterproofing & Building Products**]
   g. [**Midwest Diversified Technologies Incorporated**]
   h. [**Sika Greenstreak**]

i. [**TenCate Geosynthetics**]
j. [**Thrace-LINQ, Inc.; Thrace Group**]
k. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**American Wick Drain Corporation (AWD)**]
b. [**Dorken Systems Inc.**]
c. [**Eljen Corporation**]
d. [**JDR Enterprises, Inc**]
e. [**MAPEI Corporation**]
f. [**Mar-flex Waterproofing & Building Products**]
g. [**Midwest Diversified Technologies Incorporated**]
h. [**Sika Greenstreak**]
i. [**TenCate Geosynthetics**]
j. [**Thrace-LINQ, Inc.; Thrace Group**]
k. <**Insert manufacturer's name**>

3. Drainage Core: Three-dimensional, nonbiodegradable, molded PP.

a. Minimum Compressive Strength: [**10,000 lbf/sq. ft. (479 kPa)**][**15,000 lbf/sq. ft. (718 kPa)**][**18,000 lbf/sq. ft. (862 kPa)**][**21,000 lbf/sq. ft. (1005 kPa)**]<**Insert value**> when tested in accordance with ASTM D1621.
b. Minimum In-Plane Flow Rate: [**2.8 gpm/ft. (35 L/min. per m)**][**7 gpm/ft. (87 L/min. per m)**][**15 gpm/ft. (186 L/min. per m)**]<**Insert value**> of unit width at hydraulic gradient of [**1.0**]<**Insert value**> and compressive stress of [**25 psig (172 kPa)**]<**Insert value**> when tested in accordance with ASTM D4716.

4. Filter Fabric, Nonwoven: Needle-punched geotextile, manufactured for subsurface drainage, made from polyolefins or polyesters; with elongation greater than 50 percent; complying with the following properties determined in accordance with AASHTO M 288:

a. Survivability: [**Class 1**][**Class 2**][**Class 3**].
b. Apparent Opening Size: [**No. 40 (0.425-mm)**][**No. 60 (0.25-mm)**][**No. 70 (0.212-mm)**] sieve, maximum.
c. Permittivity: [**0.5**][**0.2**][**0.1**] per second, minimum.

5. Filter Fabric, Woven: Geotextile fabric, manufactured for subsurface drainage, made from polyolefins or polyesters; with elongation less than 50 percent; complying with the following properties determined in accordance with AASHTO M 288:

a. Survivability: [**Class 1**][**Class 2**][**Class 3**].
b. Apparent Opening Size: [**No. 40 (0.425-mm)**][**No. 60 (0.25-mm)**][**No. 70 (0.212-mm)**][**No. 30 (0.6-mm)**] sieve, maximum.
c. Permittivity: [**0.5**][**0.2**][**0.1**][**0.02**] per second, minimum.

6. Film Backing: Polymeric film bonded to drainage core surface.

B. Mesh Fabric Drainage Panels: Prefabricated geocomposite with drainage core faced with geotextile filter fabric.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

a. [**Advanced Building Products Inc.**]
b. [**Low & Bonar PLC**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Advanced Building Products Inc.**]
b. [**Low & Bonar PLC**]
c. <**Insert manufacturer's name**>

3. Drainage Core: Open-construction, resilient, plastic-filament mesh, approximately **0.4 inches (10.2 mm)** thick.

a. Minimum In-Plane Flow Rate: [**2.4 gpm/ft. (30 L/min. per m)**]<**Insert value**> of unit width at hydraulic gradient of [**1.0**]<**Insert value**> and normal pressure of **25 psig (172 kPa)** when tested in accordance with ASTM D4716.

4. Filter Fabric: Nonwoven geotextile of PP or polyester fibers or combination of both. Flow rates range from **120 to 200 gpm/sq. ft. (81 to 136 L/s per sq. m)** when tested in accordance with ASTM D4491.

C. Net Fabric Drainage Panels: Prefabricated geocomposite with drainage core faced with geotextile filter fabric.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**JDR Enterprises, Inc**]
b. [**Solmax International Inc.**]
c. [**Strata Systems, Inc**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**JDR Enterprises, Inc**]
b. [**Solmax International Inc.**]
c. [**Strata Systems, Inc**]
d. <**Insert manufacturer's name**>

3. Drainage Core: Three-dimensional, PE nonwoven-strand geonet, approximately **0.25 inches (6 mm)** thick.

a. Minimum In-Plane Flow Rate: [**2.4 gpm/ft. (30 L/min. per m)**][**5 gpm/ft. (62 L/min. per m)**]<**Insert value**> of unit width at hydraulic gradient of [**1.0**]<**Insert value**> and normal pressure of **25 psig (172 kPa)** when tested in accordance with ASTM D4716.

4. Filter Fabric: Nonwoven geotextile of PP or polyester fibers or combination of both. Flow rates

range from **120 to 200 gpm/sq. ft. (81 to 136 L/s per sq. m)** when tested in accordance with ASTM D4491.

D. Ring Fabric Drainage Panels: Drainage-core panel for field application of geotextile filter fabric.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Invisible Structures, Inc.**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Invisible Structures, Inc.**]
b. <**Insert manufacturer's name**>

3. Drainage Core: Three-dimensional, HDPE rings-in-grid pattern, approximately **1 inch (25 mm)** thick.

a. Minimum In-Plane Flow Rate: [**40 gpm/ft. (500 L/min. per m)**]<**Insert value**> of unit width at hydraulic gradient of [**1.0**]<**Insert value**> and normal pressure of **25 psig (172 kPa)** when tested in accordance with ASTM D4716.

2.4 SOIL MATERIALS

A. Soil materials are specified in Section 312000 "Earth Moving."

2.5 WATERPROOFING FELTS

A. Material: Comply with [**ASTM D226, Type I, asphalt**][**or**][**ASTM D227, coal-tar**]-saturated organic felt.

2.6 GEOTEXTILE FILTER FABRICS

A. Description: Fabric of PP or polyester fibers or combination of both, with flow rate range from **110 to 330 gpm/sq. ft. (4480 to 13 440 L/min. per sq. m)** when tested in accordance with ASTM D4491.

B. Structure Type: Nonwoven, needle-punched continuous filament.

1. Survivability: AASHTO [**M 288 Class 2**]<**Insert class**>.
2. Styles: Flat and sock.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces and areas for suitable conditions where subdrainage systems are to be installed.

B. If subdrainage is required for landscaping, locate and mark existing utilities, underground structures, and aboveground obstructions before beginning installation and avoid disruption and damage of services.

C. Verify that drainage panels installed as part of foundation wall waterproofing is properly positioned to drain into subdrainage system.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EARTHWORK

A. Excavating, trenching, and backfilling are specified in Section 312000 "Earth Moving."

3.3 INSTALLATION OF FOUNDATION DRAINAGE

A. Place impervious fill material on subgrade adjacent to bottom of footing after concrete footing forms have been removed. Place and compact impervious fill to dimensions indicated, but not less than **6 inches (150 mm)** deep and **12 inches (300 mm)** wide.

B. Lay flat-style geotextile filter fabric in trench and overlap trench sides.

C. Place supporting layer of drainage course over compacted subgrade and geotextile filter fabric, to compacted depth of not less than **4 inches (100 mm)**.

D. Encase pipe with sock-style geotextile filter fabric before installing pipe. Connect sock sections with [**adhesive**][**or**][**tape**].

E. Install drainage piping as indicated in Part 3 "Piping Installation" Article for foundation subdrainage.

F. Add drainage course to width of at least **6 inches (150 mm)** on side away from wall and to top of pipe to perform tests.

G. After satisfactory testing, cover drainage piping to width of at least **6 inches (150 mm)** on side away from footing and above top of pipe to within **12 inches (300 mm)** of finish grade.

H. Install drainage course and wrap top of drainage course with flat-style geotextile filter fabric.

I. Place layer of [**flat-style geotextile filter fabric**][**waterproofing felt**] over top of drainage course, overlapping edges at least **4 inches (100 mm)**.

J. Install drainage panels on foundation walls as follows:

1. Coordinate placement with other drainage materials.
2. Lay perforated drainage pipe at base of footing. Install as indicated in Part 3 "Piping Installation" Article.
3. Separate **4 inches (100 mm)** of fabric at beginning of roll and cut away **4 inches (100 mm)** of core. Wrap fabric around end of remaining core.
4. Attach panels to wall beginning at subdrainage pipe. Place and secure molded-sheet drainage panels, with geotextile facing away from wall.

K. Place backfill material over compacted drainage course. Place material in loose-depth layers not exceeding **6 inches (150 mm)**. Thoroughly compact each layer. Final backfill to finish elevations and

slope away from building.

3.4 INSTALLATION OF UNDERSLAB DRAINAGE

A. Excavate for underslab drainage system after subgrade material has been compacted but before drainage course has been placed. Include horizontal distance of at least **6 inches (150 mm)** between drainage pipe and trench walls. Grade bottom of trench excavations to required slope, and compact to firm, solid bed for drainage system.

B. Lay flat-style geotextile filter fabric in trench and overlap trench sides.

C. Place supporting layer of drainage course over compacted subgrade and geotextile filter fabric, to compacted depth of not less than **4 inches (100 mm)**.

D. Encase pipe with sock-style geotextile filter fabric before installing pipe. Connect sock sections with [**adhesive**][**or**][**tape**].

E. Install drainage piping as indicated in Part 3 "Piping Installation" Article for underslab subdrainage.

F. Add drainage course to width of at least **6 inches (150 mm)** on side away from wall and to top of pipe to perform tests.

G. After satisfactory testing, cover drainage piping with drainage course to elevation of bottom of slab, and compact and wrap top of drainage course with flat-style geotextile filter fabric.

H. Install horizontal drainage panels as follows:

1. Coordinate placement with other drainage materials.
2. Lay perforated drainage pipe at inside edge of footing.
3. Place drainage panel over drainage pipe with core side up. Peel back fabric and wrap fabric around pipe. Locate top of core at bottom elevation of floor slab.
4. Butt additional panels against other installed panels. If panels have plastic flanges, overlap installed panel with flange.

3.5 INSTALLATION OF RETAINING-WALL DRAINAGE

A. Lay flat-style geotextile filter fabric in trench and overlap trench sides.

B. Place supporting layer of drainage course over compacted subgrade to compacted depth of not less than **4 inches (100 mm)**.

C. Encase pipe with sock-style geotextile filter fabric before installing pipe. Connect sock sections with [**adhesive**][**or**][**tape**].

D. Install drainage piping as indicated in Part 3 "Piping Installation" Article for retaining-wall subdrainage.

E. Add drainage course to width of at least **6 inches (150 mm)** on side away from wall and to top of pipe to perform tests.

F. After satisfactory testing, cover drainage piping to width of at least **6 inches (150 mm)** on side away from footing and above top of pipe to within **12 inches (300 mm)** of finish grade.

G. Place drainage course in layers not exceeding **3 inches (75 mm)** in loose depth; compact each layer

placed and wrap top of drainage course with flat-style geotextile filter fabric.

H. Place layer of [**flat-style geotextile filter fabric**][**waterproofing felt**] over top of drainage course, overlapping edges at least **4 inches (100 mm)**.

I. Install drainage panels on wall as follows:

1. Coordinate placement with other drainage materials.
2. Lay perforated drainage pipe at base of footing as described elsewhere in this Specification. Do not install aggregate.
3. If weep holes are used instead of drainage pipe, cut **1/2-inch- (13-mm-)** diameter holes on core side at weep-hole locations. Do not cut fabric.
4. Mark horizontal calk line on wall at a point **6 inches (150 mm)** less than panel width above footing bottom. Before marking wall, subtract footing width.
5. Separate **4 inches (100 mm)** of fabric at beginning of roll and cut away **4 inches (100 mm)** of core. Wrap fabric around end of remaining core.
6. Attach panel to wall at horizontal mark and at beginning of wall corner. Place core side of panel against wall. Use concrete nails with washers through product. Place nails from **2 to 6 inches (50 to 150 mm)** below top of panel, approximately **48 inches (1200 mm)** apart.[**Construction adhesives, metal stick pins, or double-sided tape may be used instead of nails.**] Do not penetrate waterproofing. Before using adhesives, discuss with waterproofing manufacturer.
7. If another panel is required on same row, cut away **4 inches (100 mm)** of installed panel core and wrap fabric over new panel.
8. If additional rows of panel are required, overlap lower panel with **4 inches (100 mm)** of fabric.
9. Cut panel as necessary to keep top **12 inches (300 mm)** below finish grade.
10. For inside corners, bend panel. For outside corners, cut core to provide **3 inches (75 mm)** for overlap.

J. Fill to Grade: Place satisfactory soil fill material over compacted drainage course. Place material in loose-depth layers not exceeding **6 inches (150 mm)**. Thoroughly compact each layer. Fill to finish grade.

3.6 INSTALLATION OF LANDSCAPING DRAINAGE

A. Provide trench width to allow installation of drainage conduit. Grade bottom of trench excavations to required slope, and compact to firm, solid bed for drainage system.

B. Lay flat-style geotextile filter fabric in trench and overlap trench sides.

C. Place supporting layer of drainage course over compacted subgrade and geotextile filter fabric, to compacted depth of not less than **4 inches (100 mm)**.

D. Install drainage conduits as indicated in Part 3 "Piping Installation" Article for landscaping subdrainage with horizontal distance of at least **6 inches (150 mm)** between conduit and trench walls. Wrap drainage conduits without integral geotextile filter fabric with flat-style geotextile filter fabric before installation. Connect fabric sections with [**adhesive**][**or**][**tape**].

E. Add drainage course to top of drainage conduits.

F. After satisfactory testing, cover drainage conduit to within **12 inches (300 mm)** of finish grade.

G. Install drainage course and wrap top of drainage course with flat-style geotextile filter fabric.

H. Place layer of [**flat-style geotextile filter fabric**][**waterproofing felt**] over top of drainage course,

overlapping edges at least **4 inches (100 mm)**.

I. Fill to Grade: Place satisfactory soil fill material over drainage course. Place material in loose-depth layers not exceeding **6 inches (150 mm)**. Thoroughly compact each layer. Fill to finish grade.

3.7 INSTALLATION OF PIPING

A. Install piping beginning at low points of system, true to grades and alignment indicated, with unbroken continuity of invert. Bed piping with full bearing in filtering material. Install gaskets, seals, sleeves, and couplings in accordance with manufacturer's written instructions and other requirements indicated.

1. Foundation Subdrainage: Install piping level and with a minimum cover of [**36 inches (915 mm)**]<**Insert dimension**> unless otherwise indicated.
2. Underslab Subdrainage: Install piping level.
3. Plaza Deck Subdrainage: Install piping level.
4. Retaining-Wall Subdrainage: When water discharges at end of wall into stormwater piping system, install piping level and with a minimum cover of [**36 inches (915 mm)**]<**Insert dimension**> unless otherwise indicated.
5. Landscaping Subdrainage: Install piping pitched down in direction of flow, at a minimum slope of [**0.5**]<**Insert value**> percent and with a minimum cover of [**36 inches (915 mm)**]<**Insert dimension**> unless otherwise indicated.
6. Lay perforated pipe with perforations down.
7. Excavate recesses in trench bottom for bell ends of pipe. Lay pipe with bells facing upslope and with spigot end entered fully into adjacent bell.

B. Use increasers, reducers, and couplings made for different sizes or materials of pipes and fittings being connected. Reduction of pipe size in direction of flow is prohibited.

C. Install thermoplastic piping in accordance with ASTM D2321.

3.8 CONSTRUCTION OF PIPE JOINTS

A. Join perforated PE pipe and fittings with couplings in accordance with ASTM D3212 with loose banded, coupled, or push-on joints.

B. Join perforated PVC sewer pipe and fittings in accordance with ASTM D3212 with loose bell-and-spigot, push-on joints.

C. Special Pipe Couplings: Join piping made of different materials and dimensions with special couplings made for this application. Use couplings that are compatible with and fit materials and dimensions of both pipes.

3.9 INSTALLATION OF BACKWATER VALVES

A. Comply with requirements for backwater valves specified in Section 334100 "Storm Utility Drainage Piping."

B. Install horizontal backwater valves in header piping downstream from perforated subdrainage piping.

C. Install horizontal backwater valves in piping[**in manholes or pits**] where indicated.

3.10 INSTALLATION OF CLEANOUTS

A. Comply with requirements for cleanouts specified in Section 334100 "Storm Utility Drainage Piping."

B. Cleanouts for [**Foundation**][**Retaining-Wall**][**and**][**Landscaping**] Subdrainage:

1. Install cleanouts from piping to grade. Locate cleanouts at beginning of piping run and at changes in direction. Install fittings so cleanouts open in direction of flow in piping.
2. In vehicular-traffic areas, use **NPS 4 (DN 100)** cast-iron soil pipe and fittings for piping branch fittings and riser extensions to cleanout. Set cleanout frames and covers in a cast-in-place concrete anchor, [**18 by 18 by 12 inches (450 by 450 by 300 mm)**]<**Insert dimensions**> deep. Set top of cleanout flush with grade.
3. In nonvehicular-traffic areas, use **NPS 4 (DN 100)** [**cast-iron**][**PVC**] pipe and fittings for piping branch fittings and riser extensions to cleanout. Set cleanout frames and covers in a cast-in-place concrete anchor, [**12 by 12 by 4 inches (300 by 300 by 100 mm)**]<**Insert dimensions**> deep. Set top of cleanout [**1 inch (25 mm)**][**2 inches (50 mm)**]<**Insert dimension**> above grade.
4. Comply with requirements for concrete specified in Section 033000 "Cast-in-Place Concrete."

C. Cleanouts for Underslab Subdrainage:

1. Install cleanouts and riser extensions from piping to top of slab. Locate cleanouts at beginning of piping run and at changes in direction. Install fittings so cleanouts open in direction of flow in piping.
2. Use **NPS 4 (DN 100)** cast-iron soil pipe and fittings for piping branch fittings and riser extensions to cleanout flush with top of slab.

3.11 CONNECTIONS

A. Comply with requirements for piping specified in Section 334100 "Storm Utility Drainage Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect low elevations of subdrainage system to[**building's**] solid-wall-piping storm drainage system.

C. Where required, connect low elevations of [**foundation**][**underslab**] subdrainage to stormwater sump pumps. Comply with requirements for sump pumps specified in Section 221429 "Sump Pumps."

3.12 IDENTIFICATION

A. Arrange for installation of green warning tapes directly over piping. Comply with requirements for underground warning tapes specified in specified in Section 312000 "Earth Moving."

1. Install PE warning tape or detectable warning tape over ferrous piping.
2. Install detectable warning tape over nonferrous piping and over edges of underground structures.

3.13 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. After installing drainage course to top of piping, test drain piping with water to ensure free flow before backfilling.
2. Remove obstructions, replace damaged components, and repeat test until results are

satisfactory.

B. Drain piping will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.14 CLEANING

A. Clear interior of installed piping and structures of dirt and other superfluous material as work progresses. Maintain swab or drag in piping and pull past each joint as it is completed. Place plugs in ends of uncompleted pipe at end of each day or when work stops.

SECTION 33 52 16 13 - FACILITY NATURAL-GAS PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Steel pipe and fittings.
2. CSST and fittings.
3. Aluminum tubing, piping, and fittings.
4. Copper tubing and fittings.
5. PE pipe, tubing, and fittings.
6. Mechanical couplings.
7. Piping specialties.
8. Manual gas shutoff valve.
9. Manual gas shutoff ball valve.
10. Automatic gas shutoff valve.
11. Earthquake valve.
12. Pressure regulators.
13. Service meters.
14. Dielectric fittings.
15. Detectable warning tape.

B. Related Requirements:

1. Section 231126 "Facility Liquified-Petroleum Gas Piping."

1.2 DEFINITIONS

A. CSST: Corrugated stainless steel tubing.

B. CWP: Cold working pressure.

C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. An example includes rooftop locations.

D. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

E. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

F. PE: Polyethylene.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of specified product.

B. Shop Drawings: Provide plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion joints and loops.

1. Shop Drawing Scale: [**1/4 inch per foot (1:50)**]<**Insert scale**> .
2. Detail mounting, supports, and valve arrangements for [**service-meter assembly and**] pressure regulator assembly.

C. Delegated Design Submittals: Comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of seismic restraints.
2. Design Calculations: Calculate requirements for selecting seismic restraints.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans and details, drawn to scale, on which natural-gas piping is shown and coordinated with other installations, using input from installers of the items involved.

B. Site Survey: Plans, drawn to scale, on which natural-gas piping is shown and coordinated with other services and utilities.

C. Seismic Qualification Data: Submit certification that vaporizer, air mixer, storage container supports, accessories, and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC." Include the following:

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

D. Welding Certificates: For piping.

E. Field Quality Control Reports: For specified tests and inspections.

F. Qualification Statements: For professional engineer.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For [**automatic gas shutoff valves**][**pressure regulators**][**and**][**service meters**] .

1.6 QUALITY ASSURANCE

A. Steel Support Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Pipe Welding Qualifications: Qualify procedures and operators in accordance with the ASME Boiler and

Pressure Vessel Code.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Handling Flammable Liquids: Remove and dispose of liquids from existing natural-gas piping in accordance with requirements of authorities having jurisdiction.

B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

C. Store and handle pipes and tubes having factory-applied protective coatings to avoid damaging coating, and protect from direct sunlight.

D. Protect stored PE pipes, tubing, and valves from direct sunlight.

1.8 PROJECT CONDITIONS

A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area where Project is located.

B. Interruption of Existing Natural-Gas Service: Do not interrupt natural-gas service to facilities occupied by Owner or others unless permitted under the following conditions, and then only after arranging to provide purging and startup of natural-gas supply in accordance with requirements indicated:

1. Notify [**Architect**][**Construction Manager**][**Owner**] no fewer than [**seven**]<**Insert number**> days in advance of proposed interruption of natural-gas service.
2. Do not proceed with interruption of natural-gas service without [**Architect's**][**Construction Manager's**][**Owner's**] written permission.

1.9 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

B. Coordinate requirements for access panels and doors for valves installed and concealed behind finished surfaces. Comply with requirements in Section 083113 "Access Doors and Frames."

C. Coordinate requirements for piping identification for natural-gas piping. Comply with requirements in Section 230553 "Identification of HVAC Piping and Equipment."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Comply with [**NFPA 54**][**and**][**the International Fuel Gas Code**] for natural-gas distribution system, including materials, installation, and testing.

B. Comply with requirements of authorities having jurisdiction.

C. Comply with requirements of utility company supplying natural-gas.

D. Minimum Operating-Pressure Ratings:

1. Piping and Valves: [**100 psig (690 kPa)**]<**Insert pressure**> minimum.
2. Service Regulators: [**65 psig (450 kPa)**][**100 psig (690 kPa)**]<**Insert pressure**> minimum.
3. Service Meter: [**5 psig (34.5 kPa)**][**10 psig (69 kPa)**][**20 psig (138 kPa)**][**65 psig (450 kPa)**]<**Insert value**> .

E. Natural-Gas System Pressure within Buildings:

1. Single Pressure: [**0.5 psig (3.45 kPa) or less**][**More than 0.5 psig (3.45 kPa) but not more than 2 psig (13.8 kPa)**][**More than 2 psig (13.8 kPa) but not more than 5 psig (34.5 kPa)**]<**Insert pressure range**> .
2. Two Pressure Ranges, Not More Than 2 psig (13.8 kPa): Primary pressure is more than **0.5 psig (3.45 kPa)** but not more than **2 psig (13.8 kPa)** and is reduced to secondary pressure of **0.5 psig (3.45 kPa)** or less.
3. Two Pressure Ranges, Not More Than 5 psig (34.5 kPa): Primary pressure is more than **2 psig (13.8 kPa)** but not more than **5 psig (34.5 kPa)** and is reduced to secondary pressure of more than **0.5 psig (3.45 kPa)**, but not more than **2 psig (13.8 kPa)**.
4. Three Pressure Ranges: Primary pressure is more than **2 psig (13.8 kPa)** but not more than **5 psig (34.5 kPa)** is reduced to secondary pressures of more than **0.5 psig (3.45 kPa)** but not more than **2 psig (13.8 kPa)** and is reduced again to pressures of **0.5 psig (3.45 kPa)** or less.

F. Delegated Design: Design restraints and anchors for LPG piping and equipment, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

H. Seismic Performance: Natural-gas piping system is to withstand the effects of earthquake motions determined in accordance with [**ASCE/SEI 7**]<**Insert requirement**> . See Section 230548 "Vibration and Seismic Controls for HVAC."

1. The term "withstand" means "the piping system will remain in place without separation of any parts from the device when subjected to the seismic forces specified [**and the piping system will be fully operational after the seismic event**] ."
2. Component Importance Factor: [**1.5**][**1.0**] .
3. Component Amplification Factor: <**Insert requirement**> .
4. Component Response Modification Factor: <**Insert requirement**> .

2.2 PIPE, TUBES, AND FITTINGS

A. Steel Pipe and Fittings:

1. Steel Pipe: ASTM A53/A53M, black steel, Schedule 40, Type E or S, Grade B.
2. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
3. Wrought-Steel Welding Fittings: ASTM A234/A234M for butt welding and socket welding.
4. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
5. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:

a. Material Group: 1.1.
b. End Connections: Threaded or butt welding to match pipe.

c. Lapped Face: Unacceptable for underground.
d. Gasket Materials: ASME B16.20, metallic, flat, asbestos free, aluminum O-rings, and spiral-wound metal gaskets.
e. Bolts and Nuts: ASME B18.2.1, carbon steel aboveground and stainless steel underground.

6. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.

a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.

B. CSST and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**FlashShield Products; Gastite, a division of Titeflex Corp.**]
b. [**TracPipe CounterStrike; OmegaFlex, Inc.**]
c. [**Tru-Flex Metal Hose Corp**]
d. [**Ward Manufacturing LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**FlashShield Products; Gastite, a division of Titeflex Corp.**]
b. [**TracPipe CounterStrike; OmegaFlex, Inc.**]
c. [**Tru-Flex Metal Hose Corp**]
d. [**Ward Manufacturing LLC**]
e. <**Insert manufacturer's name**>

3. Source Limitation: Obtain CSST and fittings from single manufacturer.
4. Standard: CSA/ANSI LC 1/CSA 6.26.
5. Tubing: ASTM A240/A240M, corrugated, Series 300 stainless steel.
6. Jacket: Electrically insulative and UV-resistant polymer with flame retardant.

a. Surface-Burning Characteristics: As determined by testing identical products in accordance with ASTM E84 by qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1) Flame-Spread Index: 25 or less.
2) Smoke-Developed Index: 50 or less.

7. Jacket with Fully Vent-Capable PE Sleeve: Include associated fittings suitable for locations requiring vented containment.
8. Fittings: Copper-alloy mechanical fittings with ends made to fit and listed for use with CSST and capable of metal-to-metal seal without gaskets. Include brazing socket or threaded ends complying with ASME B1.20.1.
9. Striker Plates: Steel, designed to protect tubing from penetrations.
10. Manifolds: Malleable iron or steel with factory-applied protective coating. Threaded connections are to comply with ASME B1.20.1 for pipe inlet and corrugated tubing outlets.
11. Operating-Pressure Rating: **5 psig (34.5 kPa)**.

C. Aluminum Tubing, Piping, and Fittings:

1. Aluminum Tubing and Piping:

a. Standards:

1) ASTM B210/B210M.
2) ASTM B241/B241M.

b. Material: Aluminum Alloy 5456 is prohibited by NFPA 54.

2. Protective Coating: Factory-applied coating capable of resisting corrosion on tubing in contact with masonry, plaster, insulation, water, detergents, and sewerage.
3. Flare Fittings: ASME B16.26 and SAE J513.

a. Copper-alloy fittings.
b. Metal-to-metal compression seal without gasket.
c. Dryseal threads complying with ASME B1.20.3.

D. Copper Tubing and Fittings:

1. Drawn-Temper Copper Tube: [**ASTM B88, Type K (ASTM B88M, Type A)**][**and**][**ASTM B88, Type L (ASTM B88M, Type B)**][**ASTM B280, Type ACR**][**ASTM B837, Type G**] .
2. Annealed-Temper Copper Tube: [**ASTM B88, Type K (ASTM B88M, Type A)**][**and**][**ASTM B88, Type L (ASTM B88M, Type B)**][**ASTM B280, Type ACR**][**ASTM B837, Type G**] .
3. Coating: Factory-applied, extruded PE a minimum of **0.025 inch (0.64 mm)** thick. Continuously marked with size, specification information, manufacturing code, and footage every **2 ft. (610 mm)**.
4. Tin-Lined Copper Tube: ASTM B280, seamless, annealed, with interior tin-plated lining.
5. Copper Fittings: ASME B16.22, wrought copper, and streamlined pattern.
6. Bronze Flanges and Flanged Fittings: ASME B16.24, Class 150.

a. Gasket Material: ASME B16.20, metallic, flat, asbestos free, aluminum O-rings, and spiral-wound metal gaskets.
b. Bolts and Nuts: ASME B18.2.1, carbon steel or stainless steel.

7. Flare Fittings: Comply with ASME B16.26 and SAE J513.

a. Copper fittings with long nuts.
b. Metal-to-metal compression seal without gasket.
c. Dryseal threads complying with ASME B1.20.3.

8. Protective Coating for Underground Tubing: Factory-applied, extruded PE a minimum of **0.022 inch (0.56 mm)** thick.

E. PE Pipe, Tubing, and Fittings:

1. PE Pipe and Tubing: ASTM D2513, SDR 11.
2. PE Fittings: ASTM D2683, socket-fusion type or ASTM D3261, butt-fusion type.
3. PE Transition Fittings: Factory-fabricated fittings with PE pipe complying with ASTM D2513, SDR 11; and steel pipe complying with ASTM A53/A53M, black steel, Schedule 40, Type E or S, Grade B.
4. Anodeless Service-Line Risers: Factory fabricated and leak tested.

a. Underground Portion: PE pipe complying with ASTM D2513, SDR 11 inlet.

b. Casing: Steel pipe complying with ASTM A53/A53M, Schedule 40, black steel, Type E or S, Grade B, with corrosion-protective coating covering. [**Vent casing aboveground.**]
c. Aboveground Portion: PE transition fitting.
d. Provide outlet threaded or flanged or suitable for welded connection.
e. Provide tracer wire connection.
f. Provide UV shield.

5. Transition Service-Line Risers: Factory fabricated and leak tested.

a. Underground Portion: PE pipe complying with ASTM D2513, SDR 11 inlet connected to steel pipe complying with ASTM A53/A53M, Schedule 40, Type E or S, Grade B, with corrosion-protective coating for aboveground outlet.
b. Provide outlet threaded or flanged or suitable for welded connection.
c. Provide bridging sleeve over mechanical coupling.
d. Provide factory-connected anode.
e. Provide tracer wire connection.
f. Provide UV shield.

2.3 MECHANICAL COUPLINGS

A. Mechanical Coupling - Plastic, NPS 1-1/2 (DN 40) and Smaller:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Continental Industries; brand of Hubbell Incorporated**]
b. [**Elster Perfection; Honeywell**]
c. [**Lyall; brand of Hubbell Incorporated**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Continental Industries; brand of Hubbell Incorporated**]
b. [**Elster Perfection; Honeywell**]
c. [**Lyall; brand of Hubbell Incorporated**]
d. <**Insert manufacturer's name**>

3. Source Limitation: Obtain couplings from single manufacturer.
4. Standard: ASTM D2513.
5. PE body.
6. Elastomeric seals.
7. Independent gripping collets.
8. Suitable for joining PE pipe to PE pipe.

B. Mechanical Coupling - Plastic, NPS 2 (DN 50) and Larger:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Elster Perfection; Honeywell**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Elster Perfection; Honeywell**]
b. <**Insert manufacturer's name**>

3. Source Limitation: Obtain couplings from single manufacturer.
4. Standard: ASTM D2513.
5. Stainless steel bolts, nuts, and washers.
6. Suitable for joining PE pipe to PE pipe.

C. Mechanical Coupling - Steel:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Smith-Blair, a Xylem brand.**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Smith-Blair, a Xylem brand.**]
b. <**Insert manufacturer's name**>

3. Source Limitation: Obtain couplings from single manufacturer.
4. Flanges and Tube: [**Stainless steel**][**Steel**] with epoxy finish.
5. Seals: NBR.
6. Bolts, Washers, and Nuts: [**Stainless steel**][**Steel**] bolts, washers, and nuts.
7. Factory-installed anode for steel-body couplings installed underground.
8. Suitable for joining plain-end PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.

2.4 PIPING SPECIALTIES

A. Appliance Flexible Connector:

1. Indoor, Fixed-Appliance Flexible Connectors: ANSI Z21.24.
2. Indoor, Movable-Appliance Flexible Connectors: ANSI Z21.69.
3. Outdoor, Appliance Flexible Connectors: ANSI Z21.75.
4. CSST with polymer coating.
5. Operating-Pressure Rating: **0.5 psig (3.45 kPa)**.
6. End Fittings: Zinc-coated steel.
7. Threaded Ends: Comply with ASME B1.20.1.
8. Maximum Length: **72 inches (1830 mm)**.

B. Quick-Disconnect Device:

1. Standard: ANSI Z21.41/CSA 6.9.
2. Copper-alloy convenience outlet and matching plug connector.
3. Nitrile seals.
4. Hand operated with automatic shutoff when disconnected.
5. For indoor or outdoor applications.
6. Adjustable, retractable restraining cable.

C. Y-Pattern Strainer:

1. Body: ASTM A126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for **NPS 2 (DN 50)** and smaller; flanged ends for **NPS 2-1/2 (DN 65)** and larger.
3. Strainer Screen: [**40**][**60**] -mesh startup strainer, and perforated stainless steel basket with 50 percent free area.
4. CWP Rating: **125 psig (862 kPa)**.

D. Basket Strainer:

1. Body: ASTM A126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for **NPS 2 (DN 50)** and smaller; flanged ends for **NPS 2-1/2 (DN 65)** and larger.
3. Strainer Screen: [**40**][**60**] -mesh startup strainer, and perforated stainless steel basket with 50 percent free area.
4. CWP Rating: **125 psig (862 kPa)**.

E. T-Pattern Strainer:

1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
2. End Connections: Grooved ends.
3. Strainer Screen: [**40**][**60**] -mesh startup strainer, and perforated stainless steel basket with 57 percent free area.
4. CWP Rating: **750 psig (5170 kPa)**.

F. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

2.5 Steel Pressure-Seal Fittings

A. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. <**Insert manufacturer's name**>

2.6 JOINING MATERIALS

A. Joint Compound and Tape: Suitable for natural gas.

B. Welding Filler Metals: AWS D10.12/D10.12M.

C. Brazing Filler Metals: AWS A5.8/A5.8M alloy with melting point greater than **1000 deg F (540 deg C)**. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.

2.7 GAS VALVES

A. Manual Gas Shutoff Valve - Metallic:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**A.Y. McDonald Mfg. Co.**]
    b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
    c. [**BrassCraft Manufacturing Co.; a Masco company**]
    d. [**Jenkins Valves; a Crane Co. brand**]
    e. [**Jomar Valve**]
    f. [**Mueller Co.; Gas Products Division; a subsidiary of Mueller Gas Products Inc.**]
    g. [**NIBCO INC.**]
    h. [**Stockham; a Crane Co. brand**]
    i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**A.Y. McDonald Mfg. Co.**]
    b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
    c. [**BrassCraft Manufacturing Co.; a Masco company**]
    d. [**Jenkins Valves; a Crane Co. brand**]
    e. [**Jomar Valve**]
    f. [**Mueller Co.; Gas Products Division; a subsidiary of Mueller Gas Products Inc.**]
    g. [**NIBCO INC.**]
    h. [**Stockham; a Crane Co. brand**]
    i. <**Insert manufacturer's name**>

3. Source Limitation: Obtain metallic manual gas shutoff valves from single manufacturer.
4. Description: Metallic ball valve or metallic plug valve of type indicated in schedules under Part 3.
5. Standards:

    a. CSA/ANSI Z21.15/CSA 9.1.
    b. ASME B16.33.
    c. ASME B16.44.

6. System Pressure Rating: [**0.5 psig (3.45 kPa) or less**][**More than 0.5 psig (3.45 kPa) but not more than 2 psig (13.8 kPa)**][**More than 2 psig (13.8 kPa) but not more than 5 psig (34.5 kPa)**][**More than 5 psig (34.5 kPa) but not more than 125 psig (862 kPa)**]<**Insert pressure**> .
7. Listed and labeled by an NRTL acceptable to authorities having jurisdiction.
8. Service Mark: Initials "WOG" permanently marked on valve body.
9. End Connections:

    a. Threaded Ends: ASME B1.20.1.
    b. Dryseal Threads on Flare Ends: ASME B1.20.3.
    c. Flanged Ends: ASME B16.5 for steel flanges.

10. Tamperproof locking feature.

B. Manual Gas Shutoff Ball Valve - PE:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Elster Perfection; Honeywell**]
    b. [**Kerotest Manufacturing Corp**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Elster Perfection; Honeywell**]
    b. [**Kerotest Manufacturing Corp**]
    c. <**Insert manufacturer's name**>

3. Source Limitation: Obtain PE manual gas shutoff valves from single manufacturer.
4. Standard: ASME B16.40.
5. Body: PE.
6. Ball: Polypropylene.
7. Stem: Acetal.
8. Seats and Seals: NBR.
9. Ends: Plain or fusible to match piping.
10. CWP Rating: [**80 psig (552 kPa)**]<**Insert pressure**> .
11. Operating Temperature: [**Minus 20 to plus 140 deg F (Minus 29 to plus 60 deg C)**]<**Insert temperature range**> .
12. Operator: Nut or flat head for key operation.
13. Plastic valve extension.
14. Tamperproof locking feature.

C. Valve Box:

1. Cast-iron, two-section box.
2. Top section with cover with "GAS" lettering.
3. Bottom section with base to fit over valve and barrel a minimum of **5 inches (125 mm)** in diameter.
4. Adjustable cast-iron extensions of length required for depth of bury.
5. Include tee-handle, steel operating wrench with socket end fitting valve nut or flat head, and with stem of length required to operate valve.

D. Automatic Gas Shutoff Valve - Electrically Operated:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**American Gas Safety, LLC.**]
    b. [**ASCO; an Emerson company**]
    c. [**BASO Gas Products, LLC**]
    d. [**Magnatrol Valve Corporation**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the

following:

a. [**American Gas Safety, LLC.**]
b. [**ASCO; an Emerson company**]
c. [**BASO Gas Products, LLC**]
d. [**Magnatrol Valve Corporation**]
e. <**Insert manufacturer's name**>

3. Source Limitation: Obtain electrically operated automatic gas shutoff valves from single manufacturer.
4. Description: Electrically operated automatic valve, solenoid type, used in natural-gas piping for automatic shutoff of service when interlocked with a hazard-condition initiating device.
5. Standards:

a. CSA/ANSI Z21.21/CSA 6.5.
b. UL 429.
c. FM Global approved.

6. Body: Brass or aluminum.
7. Seats and Disc: NBR.
8. Springs and Valve Trim: Stainless steel.
9. Coil: Continuous-duty, molded coil, replaceable.
10. Normally closed.
11. Visual position indicator.
12. Electrical Characteristics: [**120 V ac, 60 Hz**][**24 V ac, 60 Hz**][**24 V dc**]<**Insert value**> .

E. Earthquake Valve:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Firefighter Gas Safety Products**]
b. [**Pacific Seismic Products, Inc**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Firefighter Gas Safety Products**]
b. [**Pacific Seismic Products, Inc**]
c. <**Insert manufacturer's name**>

3. Source Limitation: Obtain earthquake valves from same manufacturer.
4. Description: Seismically activated automatic gas shutoff valve.
5. Standard: ANSI/ASCE/SEI 25.
6. Maximum Operating Pressure: [**5 psig (34.5 kPa)**][**10 psig (69 kPa)**][**60 psig (414 kPa)**]<**Insert pressure**> .
7. Sight windows for visual indication of valve position.
8. Threaded end connections complying with ASME B1.20.1.
9. Threaded for valves **NPS 4 (DN 100)** and smaller; or flanged for valves **NPS 2 (DN 50)** and larger.
10. Wall-mounting bracket with bubble level indicator.

2.8 PRESSURE REGULATORS

A. Service Pressure Regulator:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Dresser Utility Solutions**]
   b. [**Elster-American Meter**]
   c. [**Fairview Ltd.**]
   d. [**Fischer; Emerson Electric Co., Automation Solutions**]
   e. [**Marshall Excelsior Company**]
   f. [**Maxitrol Company**]
   g. [**RegO Products; a brand of Engineered Controls International, LLC**]
   h. [**Richards Industrials**]
   i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Dresser Utility Solutions**]
   b. [**Elster-American Meter**]
   c. [**Fairview Ltd.**]
   d. [**Fischer; Emerson Electric Co., Automation Solutions**]
   e. [**Marshall Excelsior Company**]
   f. [**Maxitrol Company**]
   g. [**RegO Products; a brand of Engineered Controls International, LLC**]
   h. [**Richards Industrials**]
   i. <**Insert manufacturer's name**>

3. Source Limitation: Obtain service pressure regulators from single manufacturer.
4. Standards:

   a. NFPA 54.
   b. ANSI Z21.80/CSA 6.22.

5. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to regulator.
6. Pressure regulator is to maintain discharge pressure setting downstream and is to not exceed 150 percent of design discharge pressure at shutoff.
7. Maximum Inlet Pressure: [**100 psig (690 kPa)**]<**Insert pressure**> .
8. Maximum Outlet Pressure: [**2 psig (13.8 kPa)**][**5 psig (34.5 kPa)**][**10 psig (69 kPa)**][**20 psig (138 kPa)**]<**Insert pressure**> .
9. End Connections: Threaded for regulators **NPS 2 (DN 50)** and smaller; flanged for regulators **NPS 2-1/2 (DN 65)** and larger.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless steel screen in opening if not connected to vent piping.

B. Line Pressure Regulator:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following] :

a. [**Cavagna North America**]
b. [**Dormont; A Watts Water Technologies Company**]
c. [**Dresser Utility Solutions**]
d. [**Elster-American Meter**]
e. [**Fischer; Emerson Electric Co., Automation Solutions**]
f. [**Marshall Excelsior Company**]
g. [**Maxitrol Company**]
h. [**RegO Products; a brand of Engineered Controls International, LLC**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Cavagna North America**]
b. [**Dormont; A Watts Water Technologies Company**]
c. [**Dresser Utility Solutions**]
d. [**Elster-American Meter**]
e. [**Fischer; Emerson Electric Co., Automation Solutions**]
f. [**Marshall Excelsior Company**]
g. [**Maxitrol Company**]
h. [**RegO Products; a brand of Engineered Controls International, LLC**]
i. <**Insert manufacturer's name**>

3. Source Limitation: Obtain line-pressure regulators from single manufacturer.
4. Standards:

a. NFPA 54.
b. CSA/ANSI Z21.80/CSA 6.22.

5. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to regulator.
6. Pressure regulator is to maintain discharge pressure setting downstream and is to not exceed 150 percent of design discharge pressure at shutoff.
7. Maximum Inlet Pressure: [**2 psig (13.8 kPa)**][**5 psig (34.5 kPa)**][**10 psig (69 kPa)**]<**Insert pressure**> .
8. Maximum Outlet Pressure: [**2 psig (13.8 kPa)**][**5 psig (34.5 kPa)**]<**Insert pressure**> .
9. End Connections: Threaded for regulators **NPS 2 (DN 50)** and smaller; flanged for regulators **NPS 2-1/2 (DN 65)** and larger.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless steel screen in opening if not connected to vent piping.

C. Appliance Pressure Regulator:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Cavagna North America**]
b. [**Dormont; A Watts Water Technologies Company**]

c. [**Dresser Utility Solutions**]
d. [**Elster-American Meter**]
e. [**Fairview Ltd.**]
f. [**Marshall Excelsior Company**]
g. [**Maxitrol Company**]
h. [**RegO Products; a brand of Engineered Controls International, LLC**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Cavagna North America**]
b. [**Dormont; A Watts Water Technologies Company**]
c. [**Dresser Utility Solutions**]
d. [**Elster-American Meter**]
e. [**Fairview Ltd.**]
f. [**Marshall Excelsior Company**]
g. [**Maxitrol Company**]
h. [**RegO Products; a brand of Engineered Controls International, LLC**]
i. <**Insert manufacturer's name**>

3. Source Limitation: Obtain appliance pressure regulators from single manufacturer.
4. Standards:

a. NFPA 54.
b. CSA/ANSI Z21.18/CSA 6.3.

5. Regulator may include vent limiting device, instead of vent connection, if approved by authorities having jurisdiction.
6. Maximum Inlet Pressure: [**1 psig (6.9 kPa)**][**2 psig (13.8 kPa)**][**5 psig (34.5 kPa)**]<**Insert pressure**> .
7. Maximum Outlet Pressure: [**1 psig (6.9 kPa)**][**2 psig (13.8 kPa)**]<**Insert pressure**> .
8. End Connections: Threaded for regulators **NPS 2 (DN 50)** and smaller; flanged for regulators **NPS 2-1/2 (DN 65)** and larger.

2.9 SERVICE METERS

A. Diaphragm-Type Service Meter:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Dresser Utility Solutions**]
b. [**Elster-American Meter**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Dresser Utility Solutions**]
b. [**Elster-American Meter**]

c. **<Insert manufacturer's name>**

3. Source Limitation: Obtain diaphragm-type service meters from single manufacturer.
4. Standard: [**ANSI B109.1**][**ANSI B109.2**] .
5. Case: Die-cast aluminum.
6. Connections: Steel threads.
7. Diaphragm: Synthetic fabric.
8. Diaphragm Support Bearings: Self-lubricating.
9. Compensation: Continuous temperature [**and pressure**] .
10. Meter Index: [**Cubic feet**][**Liters**][**Cubic feet and liters**] .
11. Meter Case and Index: Tamper resistant.
12. Remote meter reader compatible.
13. Maximum Inlet Pressure: [**100 psig (690 kPa)**]<**Insert pressure**> .
14. Pressure Loss: Maximum [**0.5 inch wg (124 Pa)**][**2.0 inch wg (498 Pa)**]<**Insert pressure differential**> .
15. Accuracy: Maximum plus or minus [**1.0**]<**Insert number**> percent.

B. Rotary-Type Service Meter:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Dresser Utility Solutions**]
   b. [**Elster-American Meter**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Dresser Utility Solutions**]
   b. [**Elster-American Meter**]
   c. <**Insert manufacturer's name**>

3. Source Limitation: Obtain rotary-type service meters from single manufacturer.
4. Standard: ANSI B109.3.
5. Case: Extruded aluminum.
6. Connection: Flange.
7. Impellers: Polished aluminum.
8. Rotor Bearings: Self-lubricating.
9. Compensation: Continuous temperature [**and pressure**] .
10. Meter Index: [**Cubic feet**][**Liters**][**Cubic feet and liters**] .
11. Tamper resistant.
12. Remote meter reader compatible.
13. Maximum Inlet Pressure: [**100 psig (690 kPa)**]<**Insert pressure**> .
14. Accuracy: Maximum plus or minus [**2.0**]<**Insert number**> percent.

C. Turbine Meter:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Dresser Utility Solutions**]
b. [**Elster-American Meter**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Dresser Utility Solutions**]
b. [**Elster-American Meter**]
c. <**Insert manufacturer's name**>

3. Source Limitation: Obtain turbine meters from single manufacturer.
4. Standard: ASME MFC.4M.
5. Housing: Cast iron or welded steel.
6. Connection Threads or Flanges: Steel.
7. Turbine: Aluminum or plastic.
8. Turbine Bearings: Self-lubricating.
9. Compensation: Continuous temperature [**and pressure**] .
10. Meter Index: [**Cubic feet**][**Liters**][**Cubic feet and liters**] .
11. Tamper resistant.
12. Remote meter reader compatible.
13. Maximum Inlet Pressure: [**100 psig (690 kPa)**]<**Insert pressure**> .
14. Accuracy: Maximum plus or minus [**2.0**]<**Insert number**> percent.

D. Service-Meter Bar:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**A.Y. McDonald Mfg. Co.**]
b. [**Mueller Co.; Gas Products Division; a subsidiary of Mueller Gas Products Inc.**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**A.Y. McDonald Mfg. Co.**]
b. [**Mueller Co.; Gas Products Division; a subsidiary of Mueller Gas Products Inc.**]
c. <**Insert manufacturer's name**>

3. Malleable- or cast-iron frame for supporting service meter.
4. Include offset swivel pipes, meter nuts with O-ring seal, and factory- or field-installed dielectric unions.
5. Omit meter offset swivel pipes if service-meter bar dimensions match service-meter connections.

E. Service-Meter Bypass Fitting:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**A.Y. McDonald Mfg. Co.**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**A.Y. McDonald Mfg. Co.**]
b. <**Insert manufacturer's name**>

3. Ferrous, tee, pipe fitting with capped side inlet for temporary natural-gas supply.
4. Integral ball-check bypass valve.

2.10 DIELECTRIC FITTINGS

A. Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.

B. Dielectric Union:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**A.Y. McDonald Mfg. Co.**]
b. [**HART Industrial Unions, LLC**]
c. [**Jomar Valve**]
d. [**Matco-Norca**]
e. [**WATTS; A Watts Water Technologies Company**]
f. [**Zurn Industries, LLC**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**A.Y. McDonald Mfg. Co.**]
b. [**HART Industrial Unions, LLC**]
c. [**Jomar Valve**]
d. [**Matco-Norca**]
e. [**WATTS; A Watts Water Technologies Company**]
f. [**Zurn Industries, LLC**]
g. <**Insert manufacturer's name**>

3. Standard: ASSE/IAMPO/ANSI/CAN 1079.
4. Pressure Rating: [**125 psig (860 kPa) minimum at 180 deg F (82 deg C)**][**150 psig (1035 kPa) minimum at 180 deg F (82 deg C)**][**250 psig (1725 kPa) minimum at 180 deg F (82 deg C)**]<**Insert pressure rating at temperature**> .
5. End Connections: Solder-joint copper alloy and threaded ferrous.

C. Dielectric Flange:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the**

following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following] :

a. [**Matco-Norca**]
b. [**WATTS; A Watts Water Technologies Company**]
c. [**Zurn Industries, LLC**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Matco-Norca**]
b. [**WATTS; A Watts Water Technologies Company**]
c. [**Zurn Industries, LLC**]
d. <**Insert manufacturer's name**>

3. Standard: ASSE 1079.
4. Factory-fabricated, bolted, companion-flange assembly.
5. Pressure Rating: [**125 psig (860 kPa) minimum at 180 deg F (82 deg C)**][**150 psig (1035 kPa) minimum at 180 deg F (82 deg C)**][**175 psig (1200 kPa) minimum at 180 deg F (82 deg C)**][**300 psig (2070 kPa) minimum at 180 deg F (82 deg C)**]<**Insert pressure at temperature**> .
6. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

D. Dielectric-Flange Insulating Kit:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following][provide products by one of the following][available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Advance Products & Systems, LLC**]
b. [**CALPICO, Inc.**]
c. [**GPT Industries, LLC.**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Advance Products & Systems, LLC**]
b. [**CALPICO, Inc.**]
c. [**GPT Industries, LLC.**]
d. <**Insert manufacturer's name**>

3. Nonconducting materials for field assembly of companion flanges.
4. Pressure Rating: [**150 psig (1035 kPa)**]<**Insert pressure**> .
5. Gasket: Neoprene or phenolic.
6. Bolt Sleeves: Phenolic or polyethylene.
7. Washers: Phenolic with steel backing washers.

2.11 DETECTABLE WARNING TAPE

A. Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of **6 inches (150 mm)** wide and **4 mils (0.1 mm)** thick, continuously inscribed with a description and rated pressure of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to **30 inches (750 mm)** deep; colored yellow.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in for natural-gas piping system to verify actual locations of piping connections before equipment installation.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EARTHWORK

A. Comply with requirements in Section 312000 "Earth Moving" for excavating, trenching, and backfilling.

3.3 PREPARATION

A. Close equipment shutoff valves before turning off natural gas to premises or piping section.

B. Inspect natural-gas piping in accordance with [**NFPA 54,**][**the International Fuel Gas Code,**] and authorities having jurisdiction to determine that natural-gas utilization devices are turned off in piping section affected.

C. Comply with [**NFPA 54,**][**the International Fuel Gas Code,**] and authorities having jurisdiction requirements for preventing accidental ignition.

3.4 INSTALLATION OF PIPE, TUBES, AND FITTINGS

A. Outdoor Piping: Comply with [**NFPA 54,**][**the International Fuel Gas Code,**] and authorities having jurisdiction requirements for installation and purging of natural-gas piping.

1. Install underground, natural-gas piping buried at least [**18 inches (460 mm)**]<**Insert value**> below finished grade. Comply with requirements in Section 312000 "Earth Moving" for excavating, trenching, and backfilling.

    a. If natural-gas piping is installed less than **12 inches (300 mm)** below finished grade, install it in containment conduit.

2. Install underground, PE, natural-gas piping in accordance with ASTM D2774.
3. Steel Piping with Protective Coating:

    a. Apply joint cover kits to pipe after joining to cover, seal, and protect joints.
    b. Repair damage to PE coating on pipe as recommended in writing by protective coating

manufacturer.
c. Replace pipe having damaged PE coating with new pipe.

4. Copper Tubing with Protective Coating:

a. Apply joint cover kits over tubing to cover, seal, and protect joints.
b. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.

5. Install fittings for changes in direction and branch connections.
6. Joints for connection to inlets and outlets on regulators, and valves may be flanged or threaded to match the equipment.
7. Install pressure gauge [**downstream**][**upstream and downstream**] from each service regulator. Pressure gauges are specified in Section 230500 "Common Work Results for HVAC."

B. Indoor Piping: Comply with [**NFPA 54,**][**the International Fuel Gas Code,**] and authorities having jurisdiction requirements for installation and purging of natural-gas piping.

1. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
2. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
3. Install piping in concealed locations unless otherwise indicated on Drawings. Piping in equipment rooms and service areas may be installed exposed. Piping is not to be installed in inaccessible locations.

a. Conceal piping in walls, pipe spaces, utility spaces, above ceilings, below grade or floors, and in floor channels unless indicated to be exposed to view.
b. Except as specified below, install concealed natural-gas piping and piping installed under the building in containment conduit in accordance with [**NFPA 54,**][**the International Fuel Gas Code,**] and authorities having jurisdiction. Install a vent pipe from containment conduit to outdoors and terminate with weatherproof vent cap.

1) Above Accessible Ceilings: Natural-gas piping, fittings, valves, and regulators may be installed in accessible spaces without containment conduit.

a) Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

2) In Floors: Install natural-gas piping with welded or brazed joints and protective coating in cast-in-place concrete floors. Cover piping to be cast in concrete slabs with minimum of **1-1/2 inches (38 mm)** of concrete. Piping may not be in physical contact with other metallic structures, such as reinforcing rods or electrically neutral conductors. Do not embed piping in concrete slabs containing quick-set additives or cinder aggregate.
3) In Floor Channels: Channels must have cover and be open to space above cover for ventilation.
4) In Walls or Partitions: Protect tubing installed inside partitions or hollow walls from physical damage using steel striker barriers at rigid supports.

a) Exception: Tubing passing through partitions or walls does not require striker barriers.

5) Prohibited Locations:

a) Do not install natural-gas piping in or through circulating air ducts, clothes or trash chutes, chimneys or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
b) Do not install natural-gas piping in return-air plenums.
c) Do not install natural-gas piping in solid walls or partitions.

6) Under the Building: Install in vented containment conduit or CSST with integral vented sleeve and associated fittings.

4. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise on Drawings.
5. Locate valves for easy access from a standing position. Do not locate valves within return air plenums.
6. Install natural-gas piping at uniform grade of 2 percent down toward drip and sediment traps.
7. Install piping free of sags and bends.
8. Install fittings for changes in direction and branch connections.
9. Comply with requirements in Sections specifying gas-fired appliances and equipment, and verify final appliance and equipment locations for roughing-in requirements.
10. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where readily accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.

    a. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of three pipe diameters, but not less than **3 inches (75 mm)** long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.
    b. Install sediment trap on both sides of regulators for gas reduction to **2 psig (13.8 kPa)** with valve and cap.

11. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors, and terminate with weatherproof vent cap.
12. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
13. Connect branch piping from top or side of horizontal piping.
14. Install unions in pipes **NPS 2 (DN 50)** and smaller, adjacent to each valve, at final connection to each piece of equipment. Unions are not required at flanged connections.
15. Do not use natural-gas piping as grounding electrode.
16. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve. Remove and replace startup strainer with new strainer prior to final acceptance tests.
17. Install pressure gauge [**downstream**][**upstream and downstream**] from each line regulator. Pressure gauges are specified in Section 230500 "Common Work Results for HVAC."
18. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230500 "Common Work Results for HVAC."
19. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 230500 "Common Work Results for HVAC."
20. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230500 "Common Work Results for HVAC."

3.5 INSTALLATION OF SERVICE METERS

A. Install service-meter assemblies aboveground [**, on concrete bases**] .

B. Install metal shutoff valves upstream from service regulators. Shutoff valves are not required at second regulators if two regulators are installed in series.

C. Install strainer on inlet of service-pressure regulator and meter set.

D. Install service regulators mounted outside with vent outlet horizontal or facing down. Install screen in vent outlet if not integral with service regulator.

E. Install metal shutoff valves upstream from service meters. Install dielectric fittings downstream from service meters.

F. Install service meters downstream from pressure regulators.

G. Install metal bollards to protect meter assemblies. Comply with requirements in Section 055000 "Metal Fabrications" for pipe bollards.

3.6 INSTALLATION OF PRESSURE REGULATORS

A. Ensure the gas supply is completely shut off at the main valve and that the line is fully depressurized.

B. Remove any shipping plugs from the inlet, outlet, and vent connections. Ensure the pipe interior and regulator are free of dirt, debris, and contaminants.

C. Apply pipe joint sealant or Teflon tape rated for gas use to the male threads of the pipe. Avoid getting sealant on the female threads or inside the regulator.

D. Mount the regulator in the correct orientation, aligning the flow arrow on the body with the direction of gas flow. The piping must be properly aligned and supported to avoid stressing the regulator.

E. If the pressure regulator is installed inside of a building, install a dedicated vent line directly from the regulator to the outdoors. The vent terminal must be insect resistant and rain resistant. The regulator should be at least **3 ft. (914 mm)** horizontally from any building opening below the vent opening, and positioned so that gas can disperse freely.

3.7 INSTALLATION OF GAS VALVES

A. Install manual gas shutoff valve for each gas appliance ahead of CSST, aluminum, or copper connector.

B. Install underground valves with valve boxes.

C. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.

D. Install earthquake valves aboveground outside buildings according to listing.

E. Install anode for metallic valves in underground PE piping.

F. Do not install valves in return-air plenums.

3.8 PIPING JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs.

B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

C. Threaded Joints:

1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
2. Cut threads full and clean using sharp dies.
3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

D. Welded Joints:

1. Construct joints in accordance with AWS D10.12/D10.12M, using qualified processes and welding operators.
2. Bevel plain ends of steel pipe.
3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.

E. Brazed Joints: Construct joints in accordance with AWS's "Brazing Handbook," "Pipe and Tube" Chapter.

F. Flanged Joints: Install gasket material, size, type, and thickness appropriate for natural-gas service. Install gasket concentrically positioned.

G. Flared Joints: Cut tubing with roll cutting tool. Flare tube end with tool to result in flare dimensions complying with SAE J513. Tighten finger tight, and then use wrench. Do not overtighten.

H. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join in accordance with ASTM D2657.

1. Plain-End Pipe and Fittings: Use butt fusion.
2. Plain-End Pipe and Socket Fittings: Use socket fusion.

3.9 INSTALLATION OF HANGERS AND SUPPORTS

A. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."

B. Comply with requirements in Section 230529 "Hangers and Supports for HVAC Piping and Equipment" for hangers, supports, and anchor devices.

C. Install hangers for [**steel piping**][**and**][**copper tubing**] , with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

D. Install hangers for corrugated stainless steel tubing, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

E. Support horizontal piping within [**12 inches (300 mm)**]<**Insert dimension**> of each fitting.

F. Support vertical runs of [**steel piping**][**and**][**copper tubing**] to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

G. Support vertical runs of corrugated stainless steel tubing to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

3.10 PIPING CONNECTIONS

A. Connect to utility's gas main according to utility's procedures and requirements.

B. Install natural-gas piping electrically continuous, and bonded to gas-appliance equipment grounding conductor of the circuit powering the appliance in accordance with NFPA 70.

C. Install piping adjacent to appliances to allow space for service and maintenance of appliances.

D. Connect piping to appliances using manual gas-shutoff valves and unions. Install valve within **72 inches (1800 mm)** of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.

3.11 INSTALLATION OF LABELING AND IDENTIFICATION

A. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for piping and valve identification.

B. Install detectable warning tape directly above gas piping, **12 inches (300 mm)** below finished grade, except **6 inches (150 mm)** below subgrade under pavements and slabs.

C. Label and identify gas piping and pressure outside a multitenant building by tenant.

3.12 CONCRETE BASES

A. Anchor equipment to concrete base [.][**in accordance with seismic codes of Project. See Section 230548 "Vibration and Seismic Controls for HVAC."**]

B. Construct concrete bases of dimensions indicated, but not less than **4 inches (100 mm)** larger in both directions than supported unit.

C. Install dowel rods to connect concrete base to concrete floor. Install dowel rods on [**18-inch (450-mm)**]<**Insert dimension**> centers around the full perimeter of the base.

D. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.

E. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

F. Install anchor bolts to elevations required for proper attachment to supported equipment.

G. Use [**3000 psig (20.7 MPa)**]<**Insert value**> , 28-day, compressive-strength concrete and reinforcement as specified in Section 033000 "Cast-in-Place Concrete."

3.13 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Comply with [**NFPA 54,**][**the International Fuel Gas Code,**] and authorities having jurisdiction requirements for testing, inspection, and purging of natural-gas installation.
2. Natural-gas installation will be considered defective if it does not pass tests and inspections. Defective products are to be replaced. Retest installation after defective products have been replaced for code compliance.

B. Prepare test and inspection reports.

3.14 DEMONSTRATION

A. [**Engage a factory-authorized service representative to train**][**Train**] Owner's maintenance personnel to adjust, operate, and maintain earthquake valves.

3.15 OUTDOOR NATURAL-GAS PIPING SCHEDULE

A. Underground Natural-Gas Piping: To be one of the following:

1. PE Pipe, Tubing and Fittings: Terminate service-line risers with tracer wire in an accessible location.
2. Steel Pipe: With wrought-steel welding fittings or mechanical couplings. Coat pipe and fittings with protective coating for steel piping.
3. Drawn-Temper Copper Tube: With copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.
4. Annealed-Temper Copper Tube: With copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.
5. Containment Conduit: In accordance with [**NFPA 54,**][**the International Fuel Gas Code,**] and authorities having jurisdiction.
6. CSST and Fittings: With integral vented sleeve terminated in an accessible location.

B. Aboveground Natural-Gas Piping: To be one of the following:

1. CSST and fittings.
2. Steel pipe with malleable-iron threaded fittings.
3. Steel pipe with wrought-steel welded fittings.
4. Drawn-Temper Copper Tube: With wrought-copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.
5. Annealed-Temper Copper Tube: With wrought-copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.

3.16 INDOOR NATURAL-GAS PIPING SCHEDULE FOR SYSTEM PRESSURES LESS THAN 0.5 PSIG (3.45 kPa)

A. Aboveground Branch Piping NPS 1 (DN 25) and Smaller: To be one of the following:

1. CSST and fittings.
2. Tin-Lined Copper Tube: With flared joints and fittings.
3. Annealed-Temper Copper Tube: With wrought-copper fittings and [**brazed**][**flared**] joints.

4. Aluminum Tube: With flared fittings and joints.
5. Steel Pipe: With malleable-iron threaded fittings.

B. Aboveground Distribution Piping: To be one of the following:

1. Steel pipe with malleable-iron threaded fittings.
2. Steel pipe with wrought-steel welding fittings.
3. Drawn-Temper Copper Tube: With wrought-copper fittings and brazed joints.

C. Underground Below-Building Piping: To be one of the following:

1. Steel pipe with malleable-iron threaded fittings.
2. Steel pipe with wrought-steel welding fittings.
3. Containment Conduit: In accordance with [**NFPA 54,**][**the International Fuel Gas Code,**] and authorities having jurisdiction.
4. Containment Conduit Vent Piping: In accordance with [**NFPA 54,**][**the International Fuel Gas Code,**] and authorities having jurisdiction.

3.17 INDOOR NATURAL-GAS PIPING SCHEDULE FOR SYSTEM PRESSURES MORE THAN 0.5 PSIG (3.45 kPa) AND LESS THAN 5 PSIG (34.5 kPa)

A. Aboveground Branch Piping NPS 1 (DN 25) and Smaller: To be one of the following:

1. CSST and fittings.
2. Tin-Lined Copper Tube: With flared joints and fittings.
3. Annealed-Temper Copper Tube: With wrought-copper fittings and [**brazed**][**flared**] joints.
4. Aluminum Tubing and Piping: With flared fittings and joints.
5. Steel Pipe: With malleable-iron threaded fittings.

B. Aboveground Distribution Piping: To be one of the following:

1. Steel pipe with malleable-iron threaded fittings.
2. Steel pipe with wrought-steel welding fittings.
3. Drawn-Temper Copper Tube: With wrought-copper fittings and brazed joints.

C. Underground Below-Building Piping: To be one of the following:

1. Steel pipe with malleable-iron threaded fittings.
2. Steel pipe with wrought-steel welding fittings.
3. Containment Conduit: In accordance with [**NFPA 54,**][**the International Fuel Gas Code,**] and authorities having jurisdiction.
4. Containment Conduit Vent Piping: In accordance with [**NFPA 54,**][**the International Fuel Gas Code,**] and authorities having jurisdiction.

3.18 INDOOR NATURAL-GAS PIPING SCHEDULE FOR SYSTEM PRESSURES MORE THAN 5 PSIG (34.5 kPa)

A. Aboveground Piping: Maximum operating pressure more than [**5 psig (34.5 kPa)**]<**Insert pressure**> .

B. Aboveground, Branch Piping:

1. Steel Pipe: With wrought-steel welding fittings.

C. Aboveground Distribution Piping: To be one of the following:

1. Steel Pipe: With wrought-steel welding fittings.
2. Drawn-Temper Copper Tube: With wrought-copper fittings and brazed joints.

D. Underground Below-Building Piping: To be one of the following:

1. Steel pipe with malleable-iron threaded fittings.
2. Steel pipe with wrought-steel welding fittings.
3. Containment Conduit: In accordance with [**NFPA 54,**][**the International Fuel Gas Code,**] and authorities having jurisdiction.
4. Containment Conduit Vent Piping: In accordance with [**NFPA 54,**][**the International Fuel Gas Code,**] and authorities having jurisdiction.

3.19 UNDERGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE

A. Connections to Existing Gas Piping: Use valve and fitting assemblies made for tapping utility's gas mains and listed by an NRTL.

B. Underground:

1. Manual gas shutoff ball valve - PE.
2. Manual gas shutoff valve - metallic.

3.20 ABOVEGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE

A. Aboveground Natural-Gas Piping: Manual gas shutoff valve - metallic.

END OF SECTION 33 52 16 13

SECTION 33 52 16 13A - FACILITY LIQUEFIED-PETROLEUM GAS PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Steel pipe and fittings.
2. CSST and fittings.
3. Aluminum tubing, piping, and fittings.
4. Copper tubing and fittings.
5. PE pipe, tubing, and fittings.
6. Polyamide pipe, tubing, and fittings.
7. Mechanical couplings.
8. Piping specialties.
9. Manual gas shutoff valve.
10. Manual gas shutoff ball valve.
11. Valve boxes.
12. Automatic gas shutoff valve.
13. Earthquake valve.
14. Pressure regulators.
15. Service meters.
16. Dielectric fittings.
17. Storage containers.
18. Transport truck unloading facility.
19. Vaporizers.
20. Detectable warning tape.

B. Related Requirements:

1. Section 231123 Facility Natural-Gas Piping.

1.2 DEFINITIONS

A. CSST: Corrugated stainless steel tubing.

B. CWP: Cold working pressure.

C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

D. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

E. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

F. LPG: Liquefied-petroleum gas.

G. PE: Polyethylene.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of specified product.

B. Shop Drawings: Provide plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion joints and loops.

1. Shop Drawings Scale: [**1/4 inch per foot (1:50)**]<**Insert scale**> .
2. Detail mounting, supports, and valve arrangements for [**service meter assembly and**] pressure regulator assembly.

C. Delegated Design Submittals: Comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of seismic restraints.
2. Design Calculations: Calculate requirements for selecting seismic restraints.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans and details, drawn to scale, on which LPG piping is indicated and coordinated with other installations, using input from installers of the items involved.

B. Site Survey: Plans, drawn to scale, on which LPG piping is shown and coordinated with other services and utilities.

C. Seismic Qualification Data: Submit certification that vaporizer, air mixer, storage container supports, accessories, and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC." Include the following:

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

D. Welding Certificates: For piping.

E. Field Quality Control Reports: For specified tests and inspections.

F. Qualification Statements: For professional engineer.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For [**automatic gas shutoff valves**][**pressure regulators**][**and**][**service meters**] .

1.6 QUALITY ASSURANCE

A. Steel Support Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Pipe Welding Qualifications: Qualify procedures and operators in accordance with the ASME Boiler and Pressure Vessel Code.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Handling Flammable Liquids: Remove and dispose of liquids from existing LPG piping in accordance with requirements of authorities having jurisdiction.

B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

C. Store and handle pipes and tubes with factory-applied protective coating to avoid damaging coating, and protect from direct sunlight.

D. Protect stored PE pipes, tubing, and valves from direct sunlight.

1.8 PROJECT CONDITIONS

A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area where Project is located.

B. Interruption of Existing LPG Service: Do not interrupt LPG service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide purging and startup of LPG supply in accordance with requirements indicated:

1. Notify [**Architect**][**Construction Manager**][**Owner**] no fewer than [**seven**]<**Insert number**> days in advance of proposed interruption of LPG service.
2. Do not proceed with interruption of LPG service without [**Architect's**][**Construction Manager's**][**Owner's**] written permission.

1.9 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

B. Coordinate requirements for access panels and doors for valves installed concealed behind finished surfaces. Comply with requirements in Section 083113 "Access Doors and Frames."

C. Coordinate requirements for piping identification for natural-gas piping. Comply with requirements in Section 230553 "Identification of HVAC Piping and Equipment."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Comply with requirements of [**NFPA 58**][**and**][**the International Fuel Gas Code**] for LPG distribution

system, including materials, installation, and testing.

B. Comply with requirements of authorities having jurisdiction.

C. Comply with requirements of utility company supplying LPG.

D. Minimum Operating-Pressure Ratings:

1. Piping and Valves: [**125 psig (862 kPa)**]<**Insert pressure**> minimum.
2. Service Regulators: [**65 psig (450 kPa)**][**100 psig (690 kPa)**]<**Insert pressure**> minimum.
3. Service Meter: [**5 psig (34.5 kPa)**][**10 psig (69 kPa)**][**20 psig (138 kPa)**][**65 psig (450 kPa)**]<**Insert pressure**> .

E. LPG System Pressure within Buildings:

1. Single Pressure: [**0.5 psig (3.45 kPa) or less**][**More than 0.5 psig (3.45 kPa) but not more than 2 psig (13.8 kPa)**][**More than 2 psig (13.8 kPa) but not more than 5 psig (34.5 kPa)**]<**Insert pressure range**> .
2. Two Pressure Ranges, Not More Than 2 psig (13.8 kPa): Primary pressure is more than **0.5 psig (3.45 kPa)** but not more than **2 psig (13.8 kPa)** and is reduced to secondary pressure of **0.5 psig (3.45 kPa)** or less.
3. Two Pressure Ranges, Not More Than 5 psig (34.5 kPa): Primary pressure is more than **2 psig (13.8 kPa)** but not more than **5 psig (34.5 kPa)** and is reduced to secondary pressure of more than **0.5 psig (3.45 kPa)** but not more than **2 psig (13.8 kPa)**.
4. Three Pressure Ranges: Primary pressure is more than **2 psig (13.8 kPa)** but not more than **5 psig (34.5 kPa)**, is reduced to secondary pressures of more than **0.5 psig (3.45 kPa)** but not more than **2 psig (13.8 kPa)** and is reduced again to pressures of **0.5 psig (3.45 kPa)** or less.

F. Delegated Design: Design restraints and anchors for LPG piping and equipment, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

H. Seismic Performance: LPG piping system, vaporizers, and storage container supports are to withstand the effects of earthquake motions determined in accordance with [**ASCE/SEI 7**]<**Insert requirement**> . See Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."

1. The term "withstand" means "the piping/unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified [**and the piping system will be fully operational after the seismic event**] ."
2. Component Importance Factor: [**1.5**][**1.0**] .
3. Component Amplification Factor: <**Insert requirement**>
4. Component Response Modification Factor: <**Insert requirement**>

2.2 PIPE, TUBING, AND FITTINGS

A. Steel Pipe and Fittings:

1. Steel Pipe: ASTM A53/A53M black steel, Schedules 40 and 80, Type E or S, Grade B.
2. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
3. Wrought-Steel Welding Fittings: ASTM A234/A234M for butt welding and socket welding.
4. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and

threaded ends.

5. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:

    a. Material Group: 1.1.
    b. End Connections: Threaded or butt welding to match pipe.
    c. Lapped Face: Unacceptable for underground.
    d. Gasket Materials: ASME B16.20, metallic, flat, asbestos free, aluminum O-rings, and spiral-wound metal gaskets.
    e. Bolts and Nuts: ASME B18.2.1, carbon steel aboveground, and stainless steel underground.

6. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.

    a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.

B. CSST and Fittings:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**FlashShield Products; Gastite, a division of Titeflex Corp.**]
    b. [**TracPipe CounterStrike; OmegaFlex, Inc.**]
    c. [**Tru-Flex Metal Hose Corp**]
    d. [**Ward Manufacturing LLC**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**FlashShield Products; Gastite, a division of Titeflex Corp.**]
    b. [**TracPipe CounterStrike; OmegaFlex, Inc.**]
    c. [**Tru-Flex Metal Hose Corp**]
    d. [**Ward Manufacturing LLC**]
    e. <**Insert manufacturer's name**>

3. Source Limitation: Obtain CSST and fittings from single manufacturer.
4. Standard: CSA/ANSI LC 1/CSA 6.26.
5. Tubing: ASTM A240/A240M, corrugated, Series 300 stainless steel.
6. Jacket: Electrically Insulative and UV-Resistant Polymer with Flame Retardant.

    a. Surface-Burning Characteristics: As determined by testing identical products in accordance with ASTM E84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

        1) Flame-Spread Index: 25 or less.
        2) Smoke-Developed Index: 50 or less.

7. Jacket with Fully Vent-Capable PE Sleeve: Include associated fittings suitable for locations requiring vented containment.
8. Fittings: Copper-alloy mechanical fittings with ends made to fit and listed for use with CSST and suitable for metal-to-metal seal without gaskets. Include brazing socket or threaded ends

complying with ASME B1.20.1.
9. Striker Plates: Steel, designed to protect tubing from penetrations.
10. Manifolds: Malleable iron or steel with factory-applied protective coating. Threaded connections are to comply with ASME B1.20.1 for pipe inlet and corrugated tubing outlets.
11. Operating-Pressure Rating: **5 psig (34.5 kPa)**.

C. Aluminum Tubing, Piping, and Fittings:

1. Aluminum Tubing:

a. Standards:

1) ASTM B210/B210M.
2) ASTM B241/B241M.

b. Material: Aluminum Alloy 5456 is prohibited per NFPA 54.

2. Protective Coating: Factory-applied coating capable of resisting corrosion on tubing in contact with masonry, plaster, insulation, water, detergents, and sewerage.
3. Flare Fittings: Comply with ASME B16.26 and SAE J513.

a. Copper-alloy fittings.
b. Metal-to-metal compression seal without gasket.
c. Dryseal threads are to comply with ASME B1.20.3.

D. Copper Tubing and Fittings:

1. Drawn-Temper Copper Tube: [**ASTM B88, Type K (ASTM B88M, Type A)**][**and**][**ASTM B88, Type L (ASTM B88M, Type B)**][**ASTM B280, Type ACR**][**ASTM B837, Type G**] .
2. Annealed-Temper Copper Tube: [**ASTM B88, Type K (ASTM B88M, Type A)**][**and**][**ASTM B88, Type L (ASTM B88M, Type B)**][**ASTM B280, Type ACR**][**ASTM B837, Type G**] .
3. Coating: Factory-applied, extruded PE a minimum of **0.025 inch (0.64 mm)** thick. Continuously marked with size, specification information, manufacturing code, and footage every **2 ft. (610 mm)**.
4. Tin-Lined Copper Tube: ASTM B280, seamless, annealed, with interior tin-plated lining.
5. Copper Fittings: ASME B16.22, wrought copper, and streamlined pattern.
6. Bronze Flanges and Flanged Fittings: ASME B16.24, Class 150.

a. Gasket Material: ASME B16.20, metallic, flat, asbestos-free, aluminum o-rings and spiral-wound metal gaskets.
b. Bolts and Nuts: ASME B18.2.1, carbon steel or stainless steel.

7. Flare Fittings: ASME B16.26 and SAE J513.

a. Copper fittings with long nuts.
b. Metal-to-metal compression seal without gasket.
c. Dryseal threads complying with ASME B1.20.3.

8. Protective Coating for Underground Tubing: Factory-applied, extruded PE a minimum of **0.022 inch (0.56 mm)** thick.

E. PE Pipe, Tubing, and Fittings:

1. PE Pipe and Tubing: ASTM D2513, SDR 11.
2. PE Fittings: ASTM D2683, socket-fusion type or ASTM D3261, butt-fusion type.

3. PE Transition Fittings: Factory-fabricated fittings with PE pipe complying with ASTM D2513, SDR 11, and steel pipe complying with ASTM A53/A53M, black steel, Schedule 40, Type E or S, Grade B.
4. Anodeless Service-Line Riser: Factory fabricated and leak tested.

    a. Underground Portion: PE pipe complying with ASTM D2513, SDR 11 inlet.
    b. Casing: Steel pipe complying with ASTM A53/A53M, Schedule 40, black steel, Type E or S, Grade B with corrosion-protective coating covering. [**Vent casing aboveground.**]
    c. Aboveground Portion: PE transition fitting.
    d. Provide outlet threaded or flanged or suitable for welded connection.
    e. Provide tracer wire connection.
    f. Provide UV shield.

5. Transition Service-Line Riser: Factory fabricated and leak tested.

    a. Underground Portion: PE pipe complying with ASTM D2513, SDR 11 inlet connected to steel pipe complying with ASTM A53/A53M, Schedule 40, Type E or S, Grade B, with corrosion-protective coating for aboveground outlet.
    b. Provide outlet threaded or flanged or suitable for welded connection.
    c. Provide bridging sleeve over mechanical coupling.
    d. Provide factory-connected anode.
    e. Provide tracer wire connection.
    f. Provide UV shield.

F. Polyamide Pipe, Tubing, and Fittings: ASTM F2945.

2.3 MECHANICAL COUPLINGS

A. Mechanical Coupling - Plastic, NPS 1-1/2 (DN 40) and Smaller:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Continental Industries; brand of Hubbell Incorporated**]
    b. [**Elster Perfection; Honeywell**]
    c. [**Lyall; brand of Hubbell Incorporated**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Continental Industries; brand of Hubbell Incorporated**]
    b. [**Elster Perfection; Honeywell**]
    c. [**Lyall; brand of Hubbell Incorporated**]
    d. <**Insert manufacturer's name**>

3. Source Limitation: Obtain couplings from single manufacturer.
4. Standard: ASTM D2513.
5. PE body.
6. Elastomeric seals.
7. Independent gripping collets.
8. Couplings are to be suitable for joining PE pipe to PE pipe.

B. Mechanical Coupling - Plastic, NPS 2 (DN 50) and Larger:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Elster Perfection; Honeywell**]
   b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Elster Perfection; Honeywell**]
   b. <**Insert manufacturer's name**>

3. Source Limitation: Obtain couplings from single manufacturer.
4. Standard: ASTM D2513.
5. Stainless steel bolts, nuts, and washers.
6. Couplings are to be suitable for joining PE pipe to PE pipe.

C. Mechanical Coupling - Steel:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Smith-Blair, a Xylem brand.**]
   b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Smith-Blair, a Xylem brand.**]
   b. <**Insert manufacturer's name**>

3. Source Limitation: Obtain couplings from single manufacturer.
4. Flanges and Tube: [**Stainless steel**][**Steel**] with epoxy finish.
5. Seals: NBR.
6. Bolts, Washers, and Nuts: [**Stainless steel**][**Steel**] bolts, washers, and nuts.
7. Factory-installed anode for steel-body couplings installed underground.
8. Suitable for joining plain-end PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.

2.4 PIPING SPECIALTIES

A. Flexible Piping Joint:

1. Approved for LPG service.
2. Stainless steel bellows with woven, flexible, bronze, wire-reinforcing protective jacket.
3. Minimum working pressure of **250 psig (1723 kPa)** and **250 deg F (121 deg C)** operating temperature.

4. Flanged- or threaded-end connections to match equipment connected and to be capable of minimum **3/4-inch (20-mm)** misalignment.
5. Maximum **36-inch (914-mm)** length for liquid LPG lines.

B. Appliance Flexible Connector:

1. Indoor, Fixed-Appliance Flexible Connectors: CSA/ANSI Z21.24.
2. Indoor, Movable-Appliance Flexible Connectors: CSA/ANSI Z21.69.
3. Outdoor, Appliance Flexible Connectors: CSA/ANSI Z21.75.
4. CSST with polymer coating.
5. Operating-Pressure Rating: **0.5 psig (3.45 kPa)**.
6. End Fittings: Zinc-coated steel.
7. Threaded Ends: ASME B1.20.1.
8. Maximum Length: **72 inches (1830 mm)**.

C. Quick-Disconnect Device:

1. Standard: CSA/ANSI Z21.41/CSA 6.9.
2. Copper-alloy convenience outlet and matching plug connector.
3. Nitrile seals.
4. Hand operated with automatic shutoff when disconnected.
5. For indoor or outdoor applications.
6. Adjustable, retractable restraining cable.

D. Y-Pattern Strainer:

1. Body: ASTM A126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for **NPS 2 (DN 50)** and smaller; flanged ends for **NPS 2-1/2 (DN 65)** and larger.
3. Strainer Screen: [**40**][**60**] -mesh startup strainer and perforated stainless steel basket with 50 percent free area.
4. CWP Rating: **125 psig (862 kPa)**.

E. Basket Strainer:

1. Body: ASTM A126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for **NPS 2 (DN 50)** and smaller; flanged ends for **NPS 2-1/2 (DN 65)** and larger.
3. Strainer Screen: [**40**][**60**] -mesh startup strainer and perforated stainless steel basket with 50 percent free area.
4. CWP Rating: **125 psig (862 kPa)**.

F. T-Pattern Strainer:

1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
2. End Connections: Grooved ends.
3. Strainer Screen: [**40**][**60**] -mesh startup strainer and perforated stainless steel basket with 57 percent free area.
4. CWP Rating: **750 psig (5170 kPa)**.

G. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

2.5 JOINING MATERIALS

A. Joint Compound and Tape: Suitable for LPG.

B. Welding Filler Metals: AWS D10.12/D10.12M.

C. Brazing Filler Metals: AWS A5.8/A5.8M alloy with melting point greater than **1000 deg F (540 deg C)**. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.

2.6 GAS VALVES

A. Manual Gas Shutoff Valve - Metallic:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**A.Y. McDonald Mfg. Co.**]
   b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
   c. [**BrassCraft Manufacturing Co.; a Masco company**]
   d. [**Jenkins Valves; a Crane Co. brand**]
   e. [**Jomar Valve**]
   f. [**Mueller Co.; Gas Products Division; a subsidiary of Mueller Gas Products Inc.**]
   g. [**NIBCO INC.**]
   h. [**Stockham; a Crane Co. brand**]
   i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**A.Y. McDonald Mfg. Co.**]
   b. [**Apollo Valves; a part of Aalberts Integrated Piping Systems**]
   c. [**BrassCraft Manufacturing Co.; a Masco company**]
   d. [**Jenkins Valves; a Crane Co. brand**]
   e. [**Jomar Valve**]
   f. [**Mueller Co.; Gas Products Division; a subsidiary of Mueller Gas Products Inc.**]
   g. [**NIBCO INC.**]
   h. [**Stockham; a Crane Co. brand**]
   i. <**Insert manufacturer's name**>

3. Source Limitation: Obtain metallic manual gas shutoff valves from single manufacturer.
4. Description: Metallic ball valve or metallic plug valve of type indicated in schedules under Part 3.
5. Standards:

   a. CSA/ANSI Z21.15/CSA 9.1.
   b. ASME B16.33.
   c. ASME B16.44.

6. System Pressure Rating: [**0.5 psig (3.45 kPa) or less**][**More than 0.5 psig (3.45 kPa) but not more than 2 psig (13.8 kPa)**][**More than 2 psig (13.8 kPa) but not more than 5 psig (34.5 kPa)**][**More than 5 psig (34.5 kPa) but not more than 125 psig (862 kPa)**]<**Insert pressure**> .
7. Listed and labeled by an NRTL acceptable to authorities having jurisdiction.

8. Service Mark: Initials "WOG" permanently marked on valve body.
9. End Connections:

    a. Threaded Ends: ASME B1.20.1.
    b. Dryseal Threads on Flare Ends: ASME B1.20.3.
    c. Flanged Ends: ASME B16.5 for steel flanges.

10. Tamperproof locking feature.

B. Manual Gas Shutoff Ball Valve - PE:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Elster Perfection; Honeywell**]
    b. [**Kerotest Manufacturing Corp**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Elster Perfection; Honeywell**]
    b. [**Kerotest Manufacturing Corp**]
    c. <**Insert manufacturer's name**>

3. Source Limitation: Obtain PE manual gas shutoff valves from single manufacturer.
4. Standard: ASME B16.40.
5. Body: PE.
6. Ball: Polypropylene.
7. Stem: Acetal.
8. Seats and Seals: NBR.
9. Ends: Plain or fusible to match piping.
10. CWP Rating: [**80 psig (552 kPa)**]<**Insert pressure**> .
11. Operating Temperature: [**Minus 20 to plus 140 deg F (Minus 29 to plus 60 deg C)**]<**Insert temperature range**> .
12. Operator: Nut or flat head for key operation.
13. Plastic valve extension.
14. Tamperproof locking feature.

C. Valve Boxes:

1. Cast-iron, two-section box.
2. Top section with cover with "GAS" lettering.
3. Bottom section with base to fit over valve and barrel a minimum of **5 inches (125 mm)** in diameter.
4. Adjustable cast-iron extensions of length required for depth of bury.
5. Include tee-handle, steel operating wrench with socket end fitting valve nut or flat head and with stem of length required to operate valve.

D. Automatic Gas Shutoff Valve - Hydrostatic Relief:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following] :

a. [**Fischer; Emerson Electric Co., Automation Solutions**]
b. [**Marshall Excelsior Company**]
c. [**RegO Products; a brand of Engineered Controls International, LLC**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Fischer; Emerson Electric Co., Automation Solutions**]
b. [**Marshall Excelsior Company**]
c. [**RegO Products; a brand of Engineered Controls International, LLC**]
d. <**Insert manufacturer's name**>

3. Source Limitation: Obtain hydrostatic relief valves from single manufacturer.
4. Standard: NFPA 58.
5. Operating Pressure: [**350 psig (2413 kPa)**]<**Insert pressure**> .
6. Body: Brass.
7. Spring: Stainless steel.
8. Disc and Seat: NBR.
9. Brass body and stainless steel, spring-operated valve with resilient rubber disc seat and protective cap.
10. Factory set and tested.
11. Valve is to automatically reseat after relieving pressure.

E. Automatic Gas Shutoff Valve - Electrically Operated:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**American Gas Safety, LLC.**]
b. [**ASCO; an Emerson company**]
c. [**BASO Gas Products, LLC**]
d. [**Magnatrol Valve Corporation**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**American Gas Safety, LLC.**]
b. [**ASCO; an Emerson company**]
c. [**BASO Gas Products, LLC**]
d. [**Magnatrol Valve Corporation**]
e. <**Insert manufacturer's name**>

3. Source Limitation: Obtain electrically operated automatic gas shutoff valves from single manufacturer.
4. Description: Electrically operated automatic valve, solenoid type, used in LPG piping for automatic shutoff of service when interlocked with a hazard-condition initiating device.

5. Standards:

    a. CSA/ANSI Z21.21/CSA 6.5.
    b. UL 429.
    c. FM Global approved.

6. Body: Brass or aluminum.
7. Seats and Disc: NBR.
8. Springs and Valve Trim: Stainless steel.
9. Coil: Continuous-duty, molded enclosure, replaceable.
10. Normally closed.
11. Visual position indicator.
12. Electrical Characteristics: [**120 V ac, 60 Hz**][**24 V ac, 60 Hz**][**24 V dc**]<**Insert value**> .

F. Earthquake Valve:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Firefighter Gas Safety Products**]
    b. [**Pacific Seismic Products, Inc**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Firefighter Gas Safety Products**]
    b. [**Pacific Seismic Products, Inc**]
    c. <**Insert manufacturer's name**>

3. Source Limitation: Obtain earthquake valves from single manufacturer.
4. Description: Seismically activated automatic gas shutoff valve.
5. Standard: ANSI/ASCE/SEI 25.
6. Maximum Operating Pressure: [**10 psig (69 kPa)**][**60 psig (414 kPa)**]<**Insert pressure**> .
7. Sight windows for visual indication of valve position.
8. Threaded end connections complying with ASME B1.20.1.
9. Threaded for valves **NPS 4 (DN 100)** and smaller; or flanged for valves **NPS 2 (DN 50)** and larger.
10. Wall-mounting bracket with bubble level indicator.

2.7 PRESSURE REGULATORS

A. Service Pressure Regulator:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Cavagna North America**]
    b. [**Dresser Utility Solutions**]
    c. [**Elster-American Meter**]

d. [**Fairview Ltd.**]
e. [**Fischer; Emerson Electric Co., Automation Solutions**]
f. [**Marshall Excelsior Company**]
g. [**Maxitrol Company**]
h. [**RegO Products; a brand of Engineered Controls International, LLC**]
i. [**Richards Industrials**]
j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Cavagna North America**]
b. [**Dresser Utility Solutions**]
c. [**Elster-American Meter**]
d. [**Fairview Ltd.**]
e. [**Fischer; Emerson Electric Co., Automation Solutions**]
f. [**Marshall Excelsior Company**]
g. [**Maxitrol Company**]
h. [**RegO Products; a brand of Engineered Controls International, LLC**]
i. [**Richards Industrials**]
j. <**Insert manufacturer's name**>

3. Source Limitation: Obtain service pressure regulators from single manufacturer.
4. Standards:

a. NFPA 58.
b. CSA/ANSI Z21.80/CSA 6.22.

5. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet and no pressure-sensing piping external to the regulator.
6. Pressure regulator is to maintain discharge pressure-setting downstream and is not to exceed 150 percent of design discharge pressure at shutoff.
7. Maximum Inlet Pressure: [**100 psig (690 kPa)**]<**Insert pressure**> .
8. Maximum Outlet Pressure: [**2 psig (13.8 kPa)**][**5 psig (34.5 kPa)**][**10 psig (69 kPa)**][**20 psig (138 kPa)**]<**Insert pressure**> .
9. End Connections: Threaded for regulators **NPS 2 (DN 50)** and smaller; flanged for regulators **NPS 2-1/2 (DN 65)** and larger.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless steel screen in opening if not connected to vent piping.

B. Line-Pressure Regulator:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Cavagna North America**]
b. [**Dormont; A Watts Water Technologies Company**]
c. [**Dresser Utility Solutions**]
d. [**Elster-American Meter**]
e. [**Fischer; Emerson Electric Co., Automation Solutions**]
f. [**Marshall Excelsior Company**]

g. [**Maxitrol Company**]
h. [**RegO Products; a brand of Engineered Controls International, LLC**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Cavagna North America**]
b. [**Dormont; A Watts Water Technologies Company**]
c. [**Dresser Utility Solutions**]
d. [**Elster-American Meter**]
e. [**Fischer; Emerson Electric Co., Automation Solutions**]
f. [**Marshall Excelsior Company**]
g. [**Maxitrol Company**]
h. [**RegO Products; a brand of Engineered Controls International, LLC**]
i. <**Insert manufacturer's name**>

3. Source Limitation: Obtain line-pressure regulators from single manufacturer.
4. Standards:

a. NFPA 58.
b. CSA/ANSI Z21.80/CSA 6.22.

5. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet and no pressure-sensing piping external to the regulator.
6. Pressure regulator is to maintain discharge pressure-setting downstream and is not exceed 150 percent of design discharge pressure at shutoff.
7. Maximum Inlet Pressure: [**2 psig (13.8 kPa)**][**5 psig (34.5 kPa)**][**10 psig (69 kPa)**]<**Insert pressure**> .
8. Maximum Outlet Pressure: [**2 psig (13.8 kPa)**][**5 psig (34.5 kPa)**]<**Insert pressure**> .
9. End Connections: Threaded for regulators **NPS 2 (DN 50)** and smaller; flanged for regulators **NPS 2-1/2 (DN 65)** and larger.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless steel screen in opening if not connected to vent piping.

C. Appliance Pressure Regulator:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Cavagna North America**]
b. [**Dormont; A Watts Water Technologies Company**]
c. [**Dresser Utility Solutions**]
d. [**Elster-American Meter**]
e. [**Fairview Ltd.**]
f. [**Marshall Excelsior Company**]
g. [**Maxitrol Company**]
h. [**RegO Products; a brand of Engineered Controls International, LLC**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the

following:

a. [**Cavagna North America**]
b. [**Dormont; A Watts Water Technologies Company**]
c. [**Dresser Utility Solutions**]
d. [**Elster-American Meter**]
e. [**Fairview Ltd.**]
f. [**Marshall Excelsior Company**]
g. [**Maxitrol Company**]
h. [**RegO Products; a brand of Engineered Controls International, LLC**]
i. <**Insert manufacturer's name**>

3. Source Limitation: Obtain appliance pressure regulators from single manufacturer.
4. Standards:

a. NFPA 58.
b. CSA/ANSI Z21.18/CSA 6.3.

5. Regulator may include vent-limiting device, instead of vent connection, if approved by authorities having jurisdiction.
6. Maximum Inlet Pressure: [**1 psig (6.9 kPa)**][**2 psig (13.8 kPa)**][**5 psig (34.5 kPa)**]<**Insert pressure**> .
7. Maximum Outlet Pressure: [**1 psig (6.9 kPa)**][**2 psig (13.8 kPa)**]<**Insert pressure**> .
8. End Connections: Threaded for regulators **NPS 2 (DN 50)** and smaller; flanged for regulators **NPS 2-1/2 (DN 65)** and larger.

2.8 SERVICE METERS

A. Diaphragm-Type Service Meter:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Dresser Utility Solutions**]
b. [**Elster-American Meter**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Dresser Utility Solutions**]
b. [**Elster-American Meter**]
c. <**Insert manufacturer's name**>

3. Source Limitation: Obtain diaphragm-type service meters from single manufacturer.
4. Standard: [**ANSI B109.1**][**ANSI B109.2**] .
5. Case: Die-cast aluminum.
6. Connections: Steel threads.
7. Diaphragm: Synthetic fabric.
8. Diaphragm Support Bearings: Self-lubricating.
9. Compensation: Continuous temperature [**and pressure**] .

10. Meter Index: [**Cubic feet**][**Liters**][**Cubic feet and liters**] .
11. Meter Case and Index: Tamper resistant.
12. Remote meter reader compatible.
13. Maximum Inlet Pressure: [**100 psig (690 kPa)**]<**Insert pressure**> .
14. Pressure Loss: Maximum [**0.5 inch wg (124 Pa)**][**2.0 inch wg (498 Pa)**]<**Insert pressure differential**> .
15. Accuracy: Maximum plus or minus [**1.0**]<**Insert number**> percent.

B. Rotary-Type Service Meter:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Dresser Utility Solutions**]
    b. [**Elster-American Meter**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Dresser Utility Solutions**]
    b. [**Elster-American Meter**]
    c. <**Insert manufacturer's name**>

3. Source Limitation: Obtain rotary-type service meters from single manufacturer.
4. Standard: ANSI B109.3.
5. Case: Extruded aluminum.
6. Connection: Flange.
7. Impellers: Polished aluminum.
8. Rotor Bearings: Self-lubricating.
9. Compensation: Continuous temperature [**and pressure**] .
10. Meter Index: [**Cubic feet**][**Liters**][**Cubic feet and liters**] .
11. Tamper resistant.
12. Remote meter reader compatible.
13. Maximum Inlet Pressure: [**100 psig (690 kPa)**]<**Insert pressure**> .
14. Accuracy: Maximum plus or minus [**2.0**]<**Insert number**> percent.

C. Turbine Meter:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Dresser Utility Solutions**]
    b. [**Elster-American Meter**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Dresser Utility Solutions**]

b. [**Elster-American Meter**]
c. <**Insert manufacturer's name**>

3. Source Limitation: Obtain turbine meters from single manufacturer.
4. Standard: ASME MFC.4M.
5. Housing: Cast iron or welded steel.
6. Connection Threads or Flanges: Steel.
7. Turbine: Aluminum or plastic.
8. Turbine Bearings: Self-lubricating.
9. Compensation: Continuous temperature [**and pressure**] .
10. Meter Index: [**Cubic feet**][**Liters**][**Cubic feet and liters**] .
11. Tamper resistant.
12. Remote meter reader compatible.
13. Maximum Inlet Pressure: [**100 psig (690 kPa)**]<**Insert pressure**> .
14. Accuracy: Maximum plus or minus [**2.0**]<**Insert number**> percent.

D. Service-Meter Bar:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**A.Y. McDonald Mfg. Co.**]
   b. [**Mueller Co.; Gas Products Division; a subsidiary of Mueller Gas Products Inc.**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**A.Y. McDonald Mfg. Co.**]
   b. [**Mueller Co.; Gas Products Division; a subsidiary of Mueller Gas Products Inc.**]
   c. <**Insert manufacturer's name**>

3. Malleable- or cast-iron frame for supporting service meter.
4. Include offset swivel pipes, meter nuts with o-ring seal, and factory- or field-installed dielectric unions.
5. Omit meter offset swivel pipes if service-meter bar dimensions match service-meter connections.

E. Service-Meter Bypass Fitting:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**A.Y. McDonald Mfg. Co.**]
   b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**A.Y. McDonald Mfg. Co.**]

b. <**Insert manufacturer's name**>

3. Ferrous, tee, pipe fitting with capped side inlet for temporary LPG supply.
4. Integral ball-check bypass valve.

2.9 DIELECTRIC FITTINGS

A. Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.

B. Dielectric Union:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**A.Y. McDonald Mfg. Co.**]
   b. [**HART Industrial Unions, LLC**]
   c. [**Jomar Valve**]
   d. [**Matco-Norca**]
   e. [**WATTS; A Watts Water Technologies Company**]
   f. [**Zurn Industries, LLC**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**A.Y. McDonald Mfg. Co.**]
   b. [**HART Industrial Unions, LLC**]
   c. [**Jomar Valve**]
   d. [**Matco-Norca**]
   e. [**WATTS; A Watts Water Technologies Company**]
   f. [**Zurn Industries, LLC**]
   g. <**Insert manufacturer's name**>

3. Standard: ASSE/IAMPO/ANSI/CAN 1079.
4. Pressure Rating: [**125 psig (860 kPa) minimum at 180 deg F (82 deg C)**][**150 psig (1035 kPa) minimum at 180 deg F (82 deg C)**][**250 psig (1725 kPa) minimum at 180 deg F (82 deg C)**]<**Insert pressure rating at temperature**> .
5. End Connections: Solder-joint copper alloy and threaded ferrous.

C. Dielectric Flange:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Matco-Norca**]
   b. [**WATTS; A Watts Water Technologies Company**]
   c. [**Zurn Industries, LLC**]
   d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Matco-Norca**]
    b. [**WATTS; A Watts Water Technologies Company**]
    c. [**Zurn Industries, LLC**]
    d. <**Insert manufacturer's name**>

3. Standard: ASSE/IAMPO/ANSI/CAN 1079.
4. Factory-fabricated, bolted, companion-flange assembly.
5. Pressure Rating: [**125 psig (860 kPa) minimum at 180 deg F (82 deg C)**][**150 psig (1035 kPa) minimum at 180 deg F (82 deg C)**][**175 psig (1200 kPa) minimum at 180 deg F (82 deg C)**][**300 psig (2070 kPa) minimum at 250 deg F (282 deg C)**]<**Insert pressure**> .
6. End Connections: Solder-joint copper alloy and threaded ferrous; threaded copper alloy and threaded ferrous.

D. Dielectric-Flange Insulating Kit:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Advance Products & Systems, LLC**]
    b. [**CALPICO, Inc.**]
    c. [**GPT Industries, LLC.**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Advance Products & Systems, LLC**]
    b. [**CALPICO, Inc.**]
    c. [**GPT Industries, LLC.**]
    d. <**Insert manufacturer's name**>

3. Nonconducting materials for field assembly of companion flanges.
4. Pressure Rating: [**150 psig (1035 kPa)**]<**Insert pressure**> .
5. Gasket: Neoprene or phenolic.
6. Bolt Sleeves: Phenolic or PE.
7. Washers: Phenolic with steel backing washers.

2.10 STORAGE CONTAINERS

A. Storage Container:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Roy E. Hanson Jr. Mfg.**]

b. [**TransTech Energy, LLC**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Roy E. Hanson Jr. Mfg.**]
   b. [**TransTech Energy, LLC**]
   c. <**Insert manufacturer's name**>

3. Description: Factory-designed, -fabricated, and -tested container.
4. Standards:

   a. NFPA 58.
   b. ASME BPVC-VIII-1.
   c. ANSI/CAN/UL/ULC 125.
   d. ANSI/CAN/UL/ULC 842.
   e. Department of Transportation (DOT) Regulations.
   f. Provide all appurtenances as required by NFPA 58, qualified to ANSI/CAN/UL/ULC 125.
   g. Vapor-shutoff valve.
   h. Liquid-shutoff valve.
   i. Pressure-relief valve.
   j. Fixed maximum liquid level gauge.
   k. Filler valve.
   l. Overfilling protection device.
   m. Actuated liquid withdrawal excess-flow valve.
   n. Provide container appurtenances with a minimum service pressure rating of **250 psig (1724 kPa)**.

5. Provide exposed metal surfaces mechanically cleaned, primed, and painted for resistance to corrosion for outdoor installation.
6. Provide ladders for access to valves more than **72 inches (1830 mm)** aboveground.
7. Stainless Steel Nameplate: Attach to aboveground storage container or to adjacent structure for underground storage container.

   a. Name and address of supplier or trade name of container.
   b. Water capacity in gallons and liters.
   c. Design pressure in psig and kPa.

      1) Statement: "This container does not contain a product having a vapor pressure in excess of <**Insert maximum pressure in psig (kPa) at 100 deg F (37.8 deg C)**> ."
      2) Outside surface area in square feet and square meters.
      3) Year of manufacture.
      4) Shell thickness in inches and millimeters.
      5) Overall length in feet and meters.
      6) OD in feet and meters.
      7) Manufacturer's serial number.
      8) ASME code label.

   d. Felt support pads and two concrete or painted-steel saddles per storage container. Corrosion protection required at container-to-felt contact.
   e. Tie straps for each saddle.
   f. Straps and anchors for tie-down slab.
   g. Asphalt-based coating for corrosion protection.
   h. Container connections and valves protected in manway at top of storage container.

i. Manway equipped with ventilation louvers.

2.11 TRANSPORT TRUCK UNLOADING FACILITY

A. Transport Truck Unloading Facility: Provide in accordance with the requirements in NFPA 58.

1. Support structure consisting of a minimum **6-inch (150-mm)** steel channel or **6-by-4-inch (150-by-100-mm)** rectangular steel tubing, a minimum of **36 inches (914 mm)** above and below grade.
2. Liquid-fill and vapor-return, quick-disconnect fittings.
3. Liquid- and vapor-shutoff valves with hydrostatic relief valves mounted between the quick-disconnect fittings and shutoff valves.
4. Excess-flow safety shutoff valve in vapor-return line.
5. Backflow check valve in liquid-fill line.
6. Remote emergency shutoff valve station with underground cable to the vapor emergency shutoff valve.

2.12 VAPORIZERS

A. Vaporizer - Direct-Type, Direct-Fired Heat Exchanger:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Algas-SDI**]
   b. [**Ransome Manufacturing**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Algas-SDI**]
   b. [**Ransome Manufacturing**]
   c. <**Insert manufacturer's name**>

3. Description: Factory-fabricated, -assembled, -calibrated, and -tested vaporizer.
4. Standards:

   a. NFPA 58.
   b. ASME BPVC-VIII-1.
   c. NFPA 70.
   d. FM Global labeled.

5. ASME-Rated and -Stamped: LPG vaporizer coil contained in an insulated enclosure insulated with a burner.
6. Burner Tubes and Orifices: Stainless steel.
7. Gas Train: Control devices and burner-control sequence are to be FM Global labeled. Provide shutoff valve, high- and low-pressure safety switches, pressure regulator, and main- and pilot-control valves.
8. Burner Operating Controls:

a. Controls are to maintain safe operating conditions.
b. High-Pressure Cutoff: Manual reset stops burner if operating conditions rise above maximum design pressure.
c. Operating Vapor-Pressure Control: Factory piped and mounted to control burner.

B. Vaporizer - Indirect-Type, Direct-Fired Heat Exchanger:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Algas-SDI**]
b. [**Ransome Manufacturing**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Algas-SDI**]
b. [**Ransome Manufacturing**]
c. <**Insert manufacturer's name**>

3. Description: Factory-fabricated, -assembled, -calibrated, and -tested vaporizer.
4. Standards:

a. NFPA 58.
b. ASME BPVC-VIII-1.
c. NFPA 70.
d. FM Global labeled.

5. ASME-Rated and -Stamped: LPG vaporizer vessel with a replaceable, immersion-type, electric heating element.
6. Heating Element Operating Controls:

a. Controls are to maintain safe operating conditions.
b. Operating Vapor-Pressure Control: Factory wired and mounted to control heating element.
c. High-Pressure Cutoff: Manual reset stops burner if operating conditions rise above maximum design pressure.
d. Alarm Bell and Rotary Beacon: Factory mounted on control panel with silence switch; is to sound alarm for out-of-normal conditions.
e. Control Transformer: 115 V maximum control voltage.

C. Vaporizer - Direct-Type, Water-Bath Heat Exchanger:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Algas-SDI**]
b. [**Alternate Energy Systems, Inc**]
c. [**Ransome Manufacturing**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Algas-SDI**]
    b. [**Alternate Energy Systems, Inc**]
    c. [**Ransome Manufacturing**]
    d. <**Insert manufacturer's name**>

3. Description: Factory-fabricated, -assembled, -calibrated, and -tested vaporizer.
4. Standards:

    a. NFPA 58.
    b. ASME BPVC-VIII-1.
    c. NFPA 70.
    d. FM Global labeled.

5. ASME-Rated and -Stamped: Helical LPG vaporizer coil submerged in water bath. Straight, steel fire tubes welded into steel headers.
6. Water Bath:

    a. Water bath filled with water/glycol solution designed to prevent freezing at [**minus 30 deg F (minus 34 deg C)**]<**Insert temperature**> .
    b. Water-bath, high- and low-level sight glasses.
    c. Low-water cutoff to stop burner and annunciate alarm.
    d. Water/glycol fill and vent fitting.
    e. Minimum **NPS 3/4 (DN 20)** hose-end drain valves.
    f. Operating high- and low-limit aquastat controllers.
    g. Water-bath temperature gauge; a minimum of **2-1/2 inches (63 mm)** in diameter. Gauges are to have operating-temperature ranges, so normal operating range is at approximately 50 percent of full range.

7. Burner Tubes and Orifices: Stainless steel.
8. Gas Train: Control devices and burner-modulation control sequence is to be FM Global labeled. Provide shutoff valve, high- and low-pressure safety switches, pressure regulator, and main- and pilot-control valves.
9. Burner Operating Controls:

    a. Operating controls are to maintain safe operating conditions.
    b. Operating Water-Bath Temperature Control: Factory wired and mounted to control burner.
    c. High-Temperature and High-Pressure Cutoff: Manual reset stops burner if operating conditions rise above maximum design temperature or vapor pressure.
    d. Alarm Bell and Rotary Beacon: Factory mounted on control panel with silence switch; is to sound alarm for out-of-normal conditions.
    e. Control Transformer: 115 V maximum control voltage.

D. Vaporizer - Indirect-Type, Heat Exchanger:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Algas-SDI**]
    b. [**Alternate Energy Systems, Inc**]

c. [**Ransome Manufacturing**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Algas-SDI**]
b. [**Alternate Energy Systems, Inc**]
c. [**Ransome Manufacturing**]
d. <**Insert manufacturer's name**>

3. Description: Factory-fabricated, -assembled, -calibrated, and -tested vaporizer.
4. Standards:

a. NFPA 58.
b. ASME BPVC-VIII-1.
c. NFPA 70.
d. FM Global labeled.

5. ASME-Rated and -Stamped: LPG vaporizer with immersion tubes containing [**steam**][**hot water**] and LPG in surrounding shell.
6. Operating Controls:

a. Controls are to maintain safe operating conditions.
b. High-Temperature and High-Pressure Cutoff: Manual reset if operating conditions rise above maximum design temperature or pressure.
c. Alarm Bell and Rotary Beacon: Factory mounted on control panel with silence switch; sound alarm for out-of-normal conditions.
d. Control Transformer: 115 V maximum control voltage.

E. Building Management System Interface: Factory-installed hardware and software to enable building management system to monitor and control set points and display vaporizer status and alarms.

F. Capacities and Characteristics:

1. Heating Fuel: [**Propane**][**Butane**][**Electric**] .
2. Vaporization Heat Exchanger:

a. Minimum Working-Pressure Rating: [**250 psig (1723 kPa)**]<**Insert value**> .
b. Test Pressure: [**375 psig (2586 kPa)**]<**Insert value**> .

3. LPG Vaporization Rate: <**Insert gph (mL/s)**> .
4. Entering-LPG Temperature: [**Minus 30 deg F (Minus 34 deg C)**]<**Insert temperature**> .
5. Leaving-LPG Temperature: [**80 deg F (26.7 deg C)**]<**Insert temperature**> .
6. Discharge-LPG Pressure: [**90 psig (621 kPa)**]<**Insert value**> .
7. Burner Gas Input: <**Insert Btu/h (kW)**> .
8. Electric Burner Input: <**Insert kilowatts**> .
9. Water-Bath Vaporizers:

a. Operating Pressure: [**Atmospheric**]<**Insert psig (kPa)**> .
b. Operating Temperature: [**160 deg F (71 deg C)**]<**Insert temperature**> .

10. Electrical Characteristics:

a. Volts: [**120**][**240**][**480**]<**Insert number**> V.

b. Phase: [**Single**][**Three**] .
c. Hertz: 60.
d. Minimum Circuit Ampacity: <**Insert number**> A.
e. Maximum Overcurrent Protection: <**Insert number**> A.

2.13 DETECTABLE WARNING TAPE

A. Acid- and alkali-resistant PE film warning tape manufactured for marking and identifying underground utilities, a minimum of **6 inches (150 mm)** wide and **4 mils (0.1 mm)** thick, continuously inscribed with a description and rated pressure of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to **30 inches (750 mm)** deep; colored yellow.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in for LPG piping system to verify actual locations of piping connections before equipment installation.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EARTHWORK

A. Comply with requirements in Section 312000 "Earth Moving" for excavating, trenching, and backfilling.

3.3 PREPARATION

A. Close equipment-shutoff valves before turning off LPG to premises or piping section.

B. Inspect LPG piping in accordance with [**NFPA 58,**][**the International Fuel Gas Code,**] and requirements of authorities having jurisdiction to determine that LPG utilization devices are turned off in piping section affected.

C. Comply with [**NFPA 58,**][**the International Fuel Gas Code,**] and requirements of authorities having jurisdiction for prevention of accidental ignition.

3.4 INSTALLATION OF PIPE, TUBING, AND FITTINGS

A. Outdoor Pipe:

1. Comply with [**NFPA 58,**][**the International Fuel Gas Code,**] and requirements of authorities having jurisdiction for installation and purging of LPG piping.
2. Install underground, LPG piping buried a minimum of [**12 inches (300 mm)**]<**Insert dimension**> below finished grade. Comply with requirements in Section 312000 "Earth Moving" for excavating, trenching, and backfilling.

a. If LPG piping is installed less than **12 inches (300 mm)** below finished grade, install it in

containment conduit.

3. Install underground, PE, natural-gas piping in accordance with ASTM D2774.
4. Steel Piping with Protective Coating:

    a. Apply joint cover kits to pipe after joining to cover, seal, and protect joints.
    b. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
    c. Replace pipe having damaged PE coating with new pipe.

B. Copper Tubing with Protective Coating:

1. Apply joint cover kits over tubing to cover, seal, and protect joints.
2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
3. Install fittings for changes in direction and branch connections.
4. Joints for connection to inlets and outlets on vaporizers, regulators, and valves may be flanged or threaded to match the equipment.
5. Install pressure gauge [**downstream**][**upstream and downstream**] from each service regulator. Pressure gauges are specified in Section 230500 "Common Work Results for HVAC."

C. Indoor Pipe:

1. Comply with [**NFPA 58,**][**the International Fuel Gas Code,**] and requirements of authorities having jurisdiction for installation and purging of LPG piping.
2. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
3. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
4. Install piping in concealed locations unless otherwise indicated on Drawings. Piping in equipment rooms and service areas may be installed exposed. Piping is not to be installed in inaccessible locations.

    a. Conceal piping in walls, pipe spaces, utility spaces, above ceilings, below grade or floors, and in floor channels unless indicated to be exposed to view.
    b. Except as specified below, install concealed piping and piping installed under the building in containment conduit in accordance with [**NFPA 58,**][**the International Fuel Gas Code,**] and requirements of authorities having jurisdiction. Install a vent pipe from containment conduit to outdoors and terminate with weatherproof vent cap.

        1) Above Accessible Ceilings: Piping, fittings, valves, and regulators may be installed in accessible spaces without containment conduit.

            a) Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

        2) In Floors: Install piping with welded or brazed joints and protective coating in cast-in-place concrete floors. Cover piping to be cast in concrete slabs with minimum of **1-1/2 inches (38 mm)** of concrete. Piping may not be in physical contact with other metallic structures, such as reinforcing rods or electrically neutral conductors. Do not embed piping in concrete slabs containing quick-set additives or cinder aggregate.
        3) In Floor Channels: Channels must have cover and be open to space above cover for ventilation.
        4) In Walls or Partitions: Protect piping installed inside partitions or hollow walls from

physical damage using steel striker barriers at rigid supports.

a) Exception: Piping passing through partitions or walls does not require striker barriers.

c. Prohibited Locations:

1) Do not install piping in or through circulating air ducts, clothes or trash chutes, chimneys or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
2) Do not install piping in return-air plenums.
3) Do not install piping in solid walls or partitions.

d. Under the Building: Install in vented containment conduit or CSST with integral vented sleeve and associated fittings.

5. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise on Drawings.
6. Locate valves for easy access from a standing position. Do not locate valves within return air plenums.
7. Install LPG piping at uniform grade of 2 percent down toward drip and sediment traps.
8. Install piping free of sags and bends.
9. Install fittings for changes in direction and branch connections.
10. Comply with requirements in Sections specifying gas-fired appliances and equipment, and verify final appliance and equipment locations for roughing-in requirements.
11. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where readily accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.

a. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of three pipe diameters, but not less than **3 inches (75 mm)** long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.

12. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors, and terminate with weatherproof vent cap.
13. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
14. Connect branch piping from top or side of horizontal piping.
15. Install unions in pipes **NPS 2 (DN 50)** and smaller, adjacent to each valve, at final connection to each piece of equipment. Unions are not required at flanged connections.
16. Do not use LPG piping as grounding electrode.
17. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve. Remove and replace startup strainer with new strainer prior to final acceptance tests.
18. Install pressure gauge [**downstream**][**upstream and downstream**] from each line regulator. Pressure gauges are specified in Section 230500 "Common Work Results for HVAC."
19. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230500 "Common Work Results for HVAC."
20. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 230500 "Common Work Results for HVAC."
21. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230500 "Common Work Results for HVAC."

3.5 INSTALLATION OF SERVICE METERS

A. Install service-meter assemblies aboveground [**, on concrete bases**] .

B. Install metal shutoff valves upstream from service regulators. Shutoff valves are not required at second regulators if two regulators are installed in series.

C. Install strainer on inlet of service-pressure regulator and meter set.

D. Install service regulators mounted outside with vent outlet horizontal or facing down. Install screen in vent outlet if not integral with service regulator.

E. Install metal shutoff valves upstream from service meters. Install dielectric fittings downstream from service meters.

F. Install service meters downstream from pressure regulators.

G. Install metal bollards to protect meter assemblies. Comply with requirements in Section 055000 "Metal Fabrications" for pipe bollards.

3.6 INSTALLATION OF PRESSURE REGULATORS

A. Ensure the gas supply is completely shut off at the main valve and that the line is fully depressurized.

B. Remove any shipping plugs from the inlet, outlet, and vent connections. Ensure the pipe interior and regulator are free of dirt, debris, and contaminants.

C. Apply pipe joint sealant or Teflon tape rated for gas use to the male threads of the pipe. Avoid getting sealant on the female threads or inside the regulator.

D. Mount the regulator in the correct orientation, aligning the flow arrow on the body with the direction of gas flow. The piping must be properly aligned and supported to avoid stressing the regulator.

E. If the pressure regulator is installed inside of a building, install a dedicated vent line directly from the regulator to the outdoors. The vent terminal must be insect resistant and rain resistant. The regulator should be at least **3 ft. (914 mm)** horizontally from any building opening below the vent opening and positioned so that gas can disperse freely.

3.7 INSTALLATION OF GAS VALVES

A. Install manual gas shutoff valve for each gas appliance ahead of CSST, aluminum, or copper connector.

B. Install underground valves with valve boxes.

C. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.

D. Install earthquake valves aboveground outside buildings according to listing.

E. Install anode for metallic valves in underground PE piping.

F. Do not install valves in return-air plenums.

3.8 PIPING JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs.

B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

C. Threaded Joints:

1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
2. Cut threads full and clean using sharp dies.
3. Ream threaded pipe ends to remove burrs and restore full ID of pipe.
4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

D. Welded Joints:

1. Construct joints in accordance with AWS D10.12/D10.12M, using qualified processes and welding operators.
2. Bevel plain ends of steel pipe.
3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.

E. Brazed Joints: Construct joints in accordance with AWS's "Brazing Handbook," "Pipe and Tube" Chapter.

F. Flanged Joints: Install gasket material, size, type, and thickness appropriate for LPG service. Install gasket concentrically positioned.

G. Flared Joints: Cut tubing with roll cutting tool. Flare tube end with tool to result in flare dimensions complying with SAE J513. Tighten finger tight, then use wrench. Do not overtighten.

H. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join in accordance with ASTM D2657.

1. Plain-End Pipe and Fittings: Use butt fusion.
2. Plain-End Pipe and Socket Fittings: Use socket fusion.

3.9 INSTALLATION OF HANGERS AND SUPPORTS

A. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."

B. Comply with requirements in Section 230529 "Hangers and Supports for HVAC Piping and Equipment" for hangers, supports, and anchor devices.

C. Install hangers for [**steel piping**][**and**][**copper tubing**] , with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and requirements of authorities having jurisdiction, whichever are most stringent.

D. Install hangers for corrugated stainless steel tubing, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and requirements

of authorities having jurisdiction, whichever are most stringent.

E. Support horizontal piping within [12 inches (300 mm)]<**Insert dimension**> of each fitting.

F. Support vertical runs of [**steel piping**][**and**][**copper tubing**] to comply with MSS SP-58, locally enforced codes, and requirements of authorities having jurisdiction, whichever are most stringent.

G. Support vertical runs of corrugated stainless steel tubing to comply with manufacturer's written instructions, locally enforced codes, and requirements of authorities having jurisdiction, whichever are most stringent.

3.10 PIPING CONNECTIONS

A. Connect to utility's gas main according to utility's procedures and requirements.

B. Install LPG piping electrically continuous, and bonded to gas-appliance equipment grounding conductor of the circuit powering the appliance in accordance with NFPA 70.

C. Install piping adjacent to appliances to allow service and maintenance of appliances.

D. Connect piping to appliances using manual gas-shutoff valves and unions. Install valve within 72 inches (1830 mm) of each gas-fired appliances and equipment. Install union between valve and appliances or equipment.

3.11 INSTALLATION OF TRANSPORT TRUCK UNLOADING FACILITY

A. Install transport truck unloading in a cast-in-place concrete base, 48 inches (1220 mm) square by 36 inches (914 mm) deep. Set top of concrete base at least 6 inches (150 mm) above finished grade.

B. Install remote emergency shutoff station with cable release in an accessible location, a minimum of 25 ft. (7.6 m) and a maximum of 100 ft. (30 m) away from transport truck unloading.

C. Install at least two 6-inch- (150-mm-) diameter metal bollards set in and filled with concrete on both sides of transport truck unloading. Bollard length is to be at least 48 inches (1220 mm) above and below grade, with concrete encasement a minimum of 12 inches (300 mm) in diameter.

3.12 INSTALLATION OF STORAGE CONTAINER

A. Do not install storage containers in a pit.

B. Fill storage container to at least 80 percent capacity with [**butane**][**propane**] .

C. Install piping connections with swing joints or flexible connectors to allow for storage container settlement and for thermal expansion and contraction.

D. Ground containers in accordance with NFPA 780. Grounding is specified in Section 264113 "Lightning Protection for Structures."

E. Set storage containers in felt pads on concrete or steel saddles. Install corrosion protection at container-to-felt contact.

F. Install tie-downs over storage containers on saddles with proper tension.

G. Set concrete saddles on dowels set in concrete base. Anchor steel saddles to concrete base.

H. Set storage container on concrete ballast base large enough to offset buoyancy of empty storage container immersed in water.

I. Install tie-down straps over container anchored in ballast base, and repair damaged coating.

J. Backfill with a minimum coverage for underground or mounded storage containers in accordance with NFPA 58.

K. Backfill with pea gravel as required in Section 312000 "Earth Moving."

L. Install cathodic protection for storage container. Cathodic protection is specified in Section 134713 "Cathodic Protection."

3.13 INSTALLATION OF VAPORIZER

A. Install vaporizer with access space for periodic maintenance.

B. Set vaporizers on and anchor to concrete base.

C. Connect liquid line from pump set, and connect vapor supply to distribution piping.

D. Install backup connection from vapor space of container to inlet of pressure-regulating valve at vaporizer discharge to bypass the vaporizer during maintenance. Install shutoff valves to change source from vaporizer to storage container.

3.14 INSTALLATION OF LABELING AND IDENTIFICATION

A. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for piping and valve identification.

B. Install detectable warning tape directly above gas piping, **12 inches (305 mm)** below finished grade, except **6 inches (150 mm)** below subgrade under pavements and slabs.

C. Label and identify gas piping and pressure outside a multitenant building by tenant.

3.15 CONCRETE BASES

A. Anchor equipment to concrete base [.][**in accordance with seismic codes of Project. See Section 230548 "Vibration and Seismic Controls for HVAC."**]

B. Construct concrete bases of dimensions indicated, but not less than **4 inches (100 mm)** larger in both directions than supported unit.

C. Install dowel rods to connect concrete base to concrete floor. Install dowel rods on [**18-inch (451-mm)**]<**Insert dimension**> centers around the full perimeter of the base.

D. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.

E. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

F. Install anchor bolts to elevations required for proper attachment to supported equipment.

G. Use [**3000 psig (20.7 MPa)**]<**Insert value**> , 28-day, compressive-strength concrete and reinforcement, as specified in Section 033000 "Cast-in-Place Concrete."

3.16 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Comply with [**NFPA 58,**][**the International Fuel Gas Code,**] and requirements of authorities having jurisdiction for testing, inspection, and purging of LPG installation.
2. LPG installation will be considered defective if it does not pass tests and inspections. Defective products are to be replaced. Retest installation after defective products have been replaced for code compliance.

B. Prepare test and inspection reports.

3.17 DEMONSTRATION

A. [**Engage a factory-authorized service representative to train**][**Train**] Owner's maintenance personnel to adjust, operate, and maintain LPG equipment.

3.18 OUTDOOR LPG PIPING SCHEDULE

A. Underground LPG Piping: To be one of the following:

1. PE Pipe, Tubing, and Fittings: Terminate service-line risers with tracer wire in an accessible location.
2. Polyamide Pipe, Tubing, and Fittings: Terminate in an accessible location.
3. Steel Pipe: With wrought-steel welding fittings or mechanical couplings. Coat pipe and fittings with protective coating for steel piping.
4. Drawn-Temper Copper Tube: With copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.
5. Annealed-Temper Copper Tube: With copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.
6. Containment Conduit: In accordance with [**NFPA 58,**][**the International Fuel Gas Code,**] and requirements of authorities having jurisdiction.
7. CSST and Fittings: With integral vented sleeve terminated in an accessible location.

B. Aboveground LPG Piping: To be one of the following:

1. CSST and fittings.
2. Steel Pipe: With [**malleable-iron threaded fittings**][**wrought-steel welded fittings or mechanical couplings**] .
3. Drawn-Temper Copper Tube: With wrought-copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.
4. Annealed-Temper Copper Tube: With copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.

C. Branch Piping in Cast-in-Place Concrete to Single Appliance:

1. Annealed-Temper Copper Tube: With wrought-copper fittings and [**brazed**][**flared**] joints. Install piping embedded in concrete with no joints in concrete. Coat pipe and fittings with protective coating for copper tubing.

3.19 INDOOR LPG PIPING SCHEDULE FOR SYSTEM PRESSURES LESS THAN 0.5 PSIG (3.45 kPa)

A. Aboveground Piping: To be one of the following:

1. CSST and Fittings.
2. Tin-Lined Copper Tube: With flared joints and fittings.
3. Annealed-Temper Copper Tube: With wrought-copper fittings and [**brazed**][**flared**] joints.
4. Aluminum Tube: With flared fittings and joints.
5. Steel Pipe: With [**malleable-iron threaded**][**wrought-steel welding**] fittings.
6. Drawn-Temper Copper Tube: With wrought-copper fittings and brazed joints.

B. Underground (Below Building) Piping: To be one of the following:

1. Steel Pipe: With [**malleable-iron threaded**][**wrought-steel welding**] fittings.
2. Containment Conduit: In accordance with [**NFPA 58,**][**the International Fuel Gas Code,**] and requirements of authorities having jurisdiction.
3. Containment Conduit Vent Piping: In accordance with [**NFPA 58,**][**the International Fuel Gas Code**] and requirements of authorities having jurisdiction.

3.20 INDOOR LPG PIPING SCHEDULE FOR SYSTEM PRESSURES MORE THAN 0.5 PSIG (3.45 kPa) AND LESS THAN 5 PSIG (34.5 kPa)

A. Aboveground Piping: To be one of the following:

1. CSST and fittings.
2. Tin-Lined Copper Tube: With flared joints and fittings.
3. Annealed-Temper Copper Tube: With wrought-copper fittings and [**brazed**][**flared**] joints.
4. Aluminum Tubing and Piping: With flared fittings and joints.
5. Steel Pipe: With malleable-iron threaded fittings.
6. Schedule 40, steel pipe with steel welding fittings.
7. Drawn-Temper Copper Tube: With wrought-copper fittings and brazed joints.

B. Underground (Below Building) Piping: To be one of the following:

1. Steel Pipe: With [**malleable-iron threaded**][**wrought-steel welding**] fittings.
2. Containment Conduit: In accordance with [**NFPA 58,**][**the International Fuel Gas Code,**] and requirements of authorities having jurisdiction.
3. Containment Conduit Vent Piping: In accordance with [**NFPA 58,**][**the International Fuel Gas Code,**] and requirements of authorities having jurisdiction.

3.21 INDOOR LPG PIPING SCHEDULE FOR SYSTEM PRESSURES MORE THAN 5 PSIG (34.5 kPa)

A. Aboveground Piping: Maximum operating pressure more than [**5 psig (34.5 kPa)**]<**Insert pressure**> .

1. Steel Pipe: With wrought-steel welding fittings.

2. Drawn-Temper Copper Tube: With wrought-copper fittings and brazed joints.

B. Underground (Below Building) Piping: To be the following:

1. Steel Pipe: With [**malleable-iron threaded**][**wrought-steel welding**] fittings.
2. Containment Conduit: In accordance with [**NFPA 58,**][**the International Fuel Gas Code,**] and requirements of authorities having jurisdiction.
3. Containment Conduit Vent Piping: In accordance with [**NFPA 58,**][**the International Fuel Gas Code,**] and requirements of authorities having jurisdiction.

3.22 UNDERGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE

A. Connections to Existing Gas Piping: Use valve and fitting assemblies made for tapping utility's gas mains and listed by an NRTL.

B. Underground Vapor Piping:

1. Manual gas shutoff ball valve - PE.
2. Manual gas shutoff valve - metallic.

3.23 ABOVEGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE

A. Aboveground LPG Piping: Manual gas shutoff valve - metallic.

SECTION 33 71 00 00 - OVERHEAD MEDIUM-VOLTAGE WIRING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Conductors, connectors, and splices.
2. Wood poles.
3. Concrete poles.
4. Crossarms.
5. Guys and anchors.
6. Hardware and accessories.
7. Surge arresters.
8. Cutouts, switches, and fuses.
9. Pole-mounted distribution transformers.
10. Primary metering products.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 DEFINITIONS

A. Sag: The distance measured vertically from a conductor to the straight line joining its two points of support, measured at the midpoint of the span, unless otherwise indicated.

1. Final Sag: The sag of a conductor under specified conditions of loading and temperature applied after it has been subjected, for an appreciable period, to the loading prescribed for the loading district in which it is situated, or equivalent loading, and the loading removed. Final sag includes the effect of inelastic deformation (creep).
2. Initial Unloaded Sag: The sag of a conductor before the application of an external load.

B. Secondary: Conductors and components for circuits operating at the utilization voltage of 600 V or less.

C. Service: Set of insulated conductors extending from a pole to the metering point or service entrance connection at the location of utilization of electricity.

1.3 COORDINATION

A. Coordinate with utility supplying electricity to lines specified in this Section, and make [**final connections**][**arrangements for final connections by utility**].

B. Coordinate with those responsible for [**voice**][**data**][**video**]<**Insert services involved**> systems that will have cables supported by poles installed in accordance with this Section.

1.4 ACTION SUBMITTALS

A. Product Data:

1. Conductors, connectors, and splices.
2. Wood poles.
3. Concrete poles.
4. Crossarms.
5. Guys and anchors.
6. Hardware and accessories.
7. Surge arresters.
8. Cutouts, switches, and fuses.
9. Pole-mounted distribution transformers.
10. Primary metering products.

B. Field quality-control reports.

1.5 INFORMATIONAL SUBMITTALS

A. Manufacturers' published instructions.

B. Field Reports:

1. Factory Test Reports:

a. Wood poles.
b. Concrete poles.
c. Crossarms.
d. Cutouts, switches, and fuses.
e. Pole-mounted distribution transformers.
f. Primary metering products.

2. Manufacturer's field reports for field quality-control support.

1.6 CLOSEOUT SUBMITTALS

A. Survey records for locations of pole, anchors, and other features for inclusion in Project Record Documents.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Extra Stock Material: Furnish to Owner extra materials**[, from same production run,]** that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.[**Include the following:**]

1. Fuses: [**One**]<**Insert number**> additional spare fuse(s) or fuse element(s) for each furnished fuse or fuse element.
2. Padlocks: [**One**]<**Insert number**> for every [**three**]<**Insert number**> installed, but no fewer than [**three**]<**Insert number**>.
3. Insulators: [**One**]<**Insert number**> for every 10 of each type, but no fewer than [**three**]<**Insert number**> of each type.

B. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to overhead medium-voltage wiring, that are packaged with protective covering for storage on-site and identified with labels describing contents.[**Include the following:**]

1. [**Two**]<**Insert number**> sets of special-purpose tools required for maintenance of cutouts, switches, and reclosers, complete with toolbox.

1.8 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

B. Overhead-Line Components, Devices, and Accessories: Currently listed in RUS Informational Publication 202-1 without restriction for the intended application.

C. Comply with [**IEEE C2**][**CPUC General Order 95**], except where stricter requirements are indicated or where local requirements that are stricter apply.

D. Strength of Line and Line Components Selected by Contractor: Provide grades of construction and strength required by IEEE C2 for conditions encountered at Project site for [**heavy**][**medium**][**light**] line loading unless otherwise indicated.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Wood Pole Storage and Handling: Comply with ATIS O5.1. Do not use pointed handling tools capable of producing indentations greater than **1 inch (25 mm)**.

PART 2 - PRODUCTS

2.1 CONDUCTORS, CONNECTORS, AND SPLICES

A. Conductor Type AAC: [**Bare**][**and covered**], all-aluminum, Alloy 1350-H19, complying with ASTM B230/B230M and ASTM B231/B231M.

B. Conductor Type AAAC: [**Bare**][**and covered**], all-aluminum-alloy, Alloy 6201-T81, complying with ASTM B398/B398M and ASTM B399/B399M.

C. Conductor Type ACSR: [**Bare**][**and covered**], aluminum conductor, steel reinforced, complying with ASTM B232/B232M.

D. Conductor Type CU: [**Bare**][**and covered**], hard-drawn copper, complying with ASTM B1 and ASTM B8.

E. Conductor Covering: UV resistant, complying with ICEA-S-70-547. [**HDPE**][**or**][**XLP**], [**150 mil (3.81 mm)**]<**Insert value**> thick.

F. Self-Supported, Multiconductor, Insulated Medium-Voltage Wiring: Factory-assembled, messenger-supported type, listed under UL 1072 as sunlight-resistant Type MV cable for cable tray use.

1. Conductors: [**Aluminum, Alloy 1350, complying with ASTM B230/B230M and ASTM**

B231/B231M][**Hard-drawn copper, complying with ASTM B1 and ASTM B8**]; stranded for 2 AWG and larger.

2. Conductor Insulation: [**XLP, complying with NEMA WC 70/ICEA S-95-658**][**EPR, complying with NEMA WC 70/ICEA S-95-658**]<**Insert insulation**>.
3. Insulation Level: [**100**][**133**]<**Insert number**> percent of rated circuit line-to-line voltage.
4. Conductor Shield: Extruded, nonconducting, thermoset material, complying with NEMA WC 70/ICEA S-95-658; **18 mil (460 µm)** minimum thickness.
5. Insulation Shield: Include the following two components:

    a. Nonmetallic conducting, material complying with NEMA WC 70/ICEA S-95-658 and UL 1072, extruded over, and free stripping from the insulation.
    b. Metallic Tape Shield: Bare copper, **5 mil (127 µm)** minimum thickness, helically applied with a 15 percent minimum overlap.

6. Conductor Jacket: Extruded, chlorosulfonated-polyethylene-based material, complying with NEMA WC 70/ICEA S-95-658.
7. Messenger: [**Copper**][**Composite copper and copper**]-clad steel.
8. Conductor Support Strap: Copper strap, wound around conductors and messenger the full length of the cable.

G. Aluminum Secondary-Voltage Line Conductors: [**Aluminum conductor, steel reinforced, complying with ASTM B232/B232M**][**Covered aluminum conductor, steel reinforced, complying with ICEA S-70-547, with HDPE or XLP covering**], [**60 mil (1.52 mm)**]<**Insert value**> thick.

H. Copper Secondary-Voltage Line Conductors: [**Bare hard-drawn copper, complying with ASTM B1 and ASTM B8**][**Covered hard-drawn copper, complying with ICEA S-70-547, with HDPE or XLP covering**], [**60 mil (1.52 mm)**]<**Insert value**> thick.[**Neutral-supported, secondary service-drop cable.**]

I. Racked Secondary Conductors, 600 V and Less: [**Copper, insulated with XLP, complying with NEMA WC 70/ICEA S-95-658**]<**Insert conductor and insulation combination**>.

J. Neutral-Supported, Secondary Service-Drop Cable, 600 V and Less: Insulated conductors with bare neutral, complying with ICEA S-76-474, and using the following combination of materials:

1. Conductors and Neutral: [**Copper with copper-clad-steel neutral**][**Aluminum with bare Alloy 1350 aluminum neutral**][**Aluminum with ACSR neutral**].
2. Insulation: [**XLP, complying with NEMA WC 70/ICEA S-95-658**][**High-modular-weight, low-density polyethylene**][**Weather-resistant polyolefin, complying with ICEA S-70-547**].

K. Connectors, Splices, and Conductor Securing and Protecting Components: Items include wire clamps, ties, conductor armor, fittings, connectors, and terminals. Listed for the specific applications and conductor types and combinations of materials used. Descriptions as follows for various applications:

1. Copper to Copper: Copper alloy, complying with UL 486A-486B.
2. Aluminum Composition to Aluminum Composition: Aluminum alloy, complying with UL 486A-486B.
3. Copper to Aluminum Composition: Type suitable for this purpose, complying with UL 486A-486B.
4. Connectors and Splices for Secondary Conductors: Listed and labeled for the conditions and materials involved in each application.
5. Taps for Medium-Voltage Line Conductors: Hot-line clamps, screw type, with concealed threads and bare, hard-drawn copper stirrups. Listed for the combination of materials being connected.
6. Splices under Tension: Compression type with strength exceeding the conductors spliced.
7. Splices and Terminations for Covered Conductors: As recommended by conductor manufacturer for conductor and covering combination and for specific materials and physical arrangement of

each splice.

8. Splices and Terminations for Insulated Medium-Voltage Conductors: Comply with requirements in Section 260513 "Medium-Voltage Cables."

2.2 WOOD POLES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Ace Pole Company**]
2. [**Baxter, J. H. & Co**]
3. [**Bell Lumber and Pole Company**]
4. [**Brown Wood Preserving Co., Inc.**]
5. [**Dayton Superior Corporation**]
6. [**Koppers Performance Chemicals**]
7. [**McFarland Cascade**]
8. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Ace Pole Company**]
2. [**Baxter, J. H. & Co**]
3. [**Bell Lumber and Pole Company**]
4. [**Brown Wood Preserving Co., Inc.**]
5. [**Dayton Superior Corporation**]
6. [**Koppers Performance Chemicals**]
7. [**McFarland Cascade**]
8. <**Insert manufacturer's name**>

C. Comply with ATIS O5.1 and RUS Bulletin 1728F-700, for wood poles pressure treated with [**creosote**][**pentachlorophenol,**][**ammoniacal copper arsenate,**][**ammoniacal copper zinc arsenate**][**chromated copper arsenate**].

D. Wood Species: [**Douglas fir**][**Lodgepole pine**][**Western larch**][**Southern yellow pine**]<**Insert wood species selected from ATIS O5.1**>.

E. Pole Marking:

1. Manufacturer's Mark: Comply with ATIS O5.1; locate **10 ft (3 m)** from the pole butt for poles **50 ft (15 m)** long or less.
2. Pole Number: Machine-embossed aluminum, alphanumeric characters not less than **2-1/2 inch (65 mm)** high, with aluminum nails.

F. Factory Operations: Machine trim poles by turning smooth, full length. Roof, gain, and bore poles before pressure treatment.

2.3 CONCRETE POLES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Accord Industries**]
2. [**Bayshore Concrete Products Corporation**]
3. [**CPI Concrete Products**]
4. [**StressCrete Group**]
5. [**Valmont Industries, Inc.**]
6. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Accord Industries**]
2. [**Bayshore Concrete Products Corporation**]
3. [**CPI Concrete Products**]
4. [**StressCrete Group**]
5. [**Valmont Industries, Inc.**]
6. <**Insert manufacturer's name**>

C. Description: Spuncast prestressed concrete, complying with requirements of ASTM C1089.

1. Comply with requirements of RUS Bulletin 1724E-216.

D. Design: Base design on calculation of strength required by IEEE C2 or indicated on Drawings, whichever is greater. Design must be suitable for installation at a location where annual temperature range is between [**minus 4 deg F and plus 100 deg F (minus 20 deg C and plus 38 deg C)**]<**Insert design temperature range at site location**>. Include pole design for embedded attachments matching fittings, brackets, and other items installed in the field.

E. Shaft: Hollow, for poles at overhead-to-underground connections. Provide metric designator 91 (trade size 3-1/2) minimum cable raceway capacity, with [**conduit elbow**][**cable entry port**] at base.

F. Water Absorption: Not more than 3 percent.

G. Surface: Smooth, hard, nonporous, and resistant to [**soil acids**][**road salts**][**frost and freezing damage**].

H. Pole Marking:

1. Manufacturer's Mark: Comply with ATIS O5.1; locate **10 ft (3 m)** from the pole butt for poles **50 ft (15 m)** long or less.
2. Pole Number: Machine-embossed aluminum, alphanumeric characters not less than **2-1/2 inch (65 mm)** high.

2.4 CROSSARMS

A. Description: [**Solid-wood distribution type, complying with RUS Bulletin 1728H-701 for specified construction grade**][**Galvanized, steel angles**], and complying with IEEE C2 for required climbing space and wire clearances.

B. Braces: Galvanized, flat, ferrous-metal units; **1/4 inch (6 mm)** thick by **1-1/4 inch (30 mm)** wide, minimum, with length to suit crossarm dimensions.

2.5 GUYS AND ANCHORS

A. Guy Strand Assemblies: Cable and attachment assemblies must have uniform minimum breaking strength of the cable.

1. Cable: Seven strands. [**Zinc-coated steel, complying with ASTM A475**][**Aluminum-clad steel, complying with ASTM B416**][**Copper-clad steel, complying with ASTM B228**]. Breaking strength must be not less than [**10,000 lb (45 kN)**]<**Insert value**>.
2. Cable Termination:

a. Thimble eye.
b. Hooks and guy strain plates, complying with IEEE C135.1.
c. Preformed galvanized-steel guy grips, matching material, galvanizing, and strength of the guy strand assembly.

B. Anchor and Anchor-Rod Assemblies: Hot-dip galvanized steel.

1. Power-installed screw-type anchors.

a. **15 inch (380 mm)** screw; with rod **8 ft (2.4 m)** long by **1-1/2 inch (38 mm)** in diameter. Rated at **10,000 lb (45 kN)** when installed.
b. Guy anchors must have strength and holding area as required for anchor load and soil conditions at location of that anchor.

2. <**Insert anchor size or type**>.

C. Strain Insulators: Epoxy-bonded fiberglass of length to meet clearance requirements specified in "Installation of Guys and Anchors" Article.

D. Guy Markers: Round, of vinyl or PVC material, [**white**][**yellow**] color, **8 ft (2.4 m)** long. Shatter resistant at temperatures below **0 deg F (minus 18 deg C)**.

2.6 HARDWARE AND ACCESSORIES

A. Description: Ferrous-metal items include, but are not limited to, bolts, nuts, washers, crossarm gains and braces, insulator pins, anchor rods, anchors, eyebolts, staples, and transformer brackets.

1. Comply with IEEE C135.1, IEEE C135.2, ANSI C135.4, ANSI C135.22, and RUS Informational Publication 202-1 listings[**with the exception that base material must be malleable iron or ductile iron, and finish must be hot-dip galvanized**].

B. Insulator Brackets: Hot-dip galvanized steel, style as indicated, designed to hold vertical-post-type or pin-type insulators, with [**one**][**two**]-bolt attachment to pole.

C. Secondary Insulator Racks: Hot-dip galvanized steel, style as indicated, with smooth, rounded 12 gage struts designed to support [**two**][**three**][**four**] spool insulators for attachment of secondary drop conductors. Spool spacing of [**4 inch (100 mm)**][**8 inch (200 mm)**][**12 inch (300 mm)**].

D. Pole Riser Shields: Galvanized steel with [**boot**][**backplate**][**vent**].

E. Padlocks: ASTM F883.

1. Class: [**PO1**][**PO2**].
2. Grade: [**1**][**2**][**3**][**3**][**5**][**6**].

3. Option: [**A**][**B**][**C**][**D**][**E**][**F**][**G**].

F. Insulators: Units rated 6 kV and above must be free from radio interference.

1. Porcelain insulators must be wet-process type, complying with the following:

a. Pin: ANSI C29.5.
b. Line Post: ANSI C29.7. Include mounting stud of length suitable for each mounting arrangement used.
c. Suspension: ANSI C29.2.
d. Guy Strain: ANSI C29.4.
e. Secondary Spool: ANSI C29.3, Class 53-2.

2. Polymer-composite, fiberglass-reinforced insulators must comply with the following:

a. Line Post: CEA LWIWG-02.
b. Dead End/Suspension: CEA LWIWG-01.
c. Guy Strain: Fiberglass reinforced, epoxy finished. Designed specifically for use in guy assemblies.

G. Grounding Materials: Comply with Section 260526 "Grounding and Bonding for Electrical Systems," using materials listed by RUS for the intended purpose without restriction.

1. Conductors: 4 AWG, minimum; bare, solid, annealed copper, complying with ASTM B8 unless otherwise indicated.
2. Ground Conductor Protectors: PVC or half-round wood molding, [**fir, pressure treated in accordance with AWPA C25**][**cypress**][**cedar**].

2.7 SURGE ARRESTERS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
4. [**Hubbell Utility Solutions; Hubbell Incorporated**]
5. [**MacLean Power Systems**]
6. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
4. [**Hubbell Utility Solutions; Hubbell Incorporated**]
5. [**MacLean Power Systems**]
6. <**Insert manufacturer's name**>

C. Distribution-Class Surge Arresters: [**Porcelain**][**Polymer**]-enclosed, gapless, metal-oxide type[**with automatic-indicating type, ground-lead disconnection feature**], complying with IEEE C62.11 and NEMA LA 1.

D. Intermediate-Class Surge Arresters: [**Porcelain**][**Polymer**]-enclosed, gapless, metal-oxide type, complying with IEEE C62.11 and NEMA LA 1.

1. Voltage Rating: [**3**][**6**][**9**][**10**][**12**][**15**][**27**][**30**][**36**] kV[**, at the altitude of Project,**] unless otherwise indicated.

2.8 CUTOUTS, SWITCHES, AND FUSES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Eaton**]
2. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
3. [**Hubbell Utility Solutions; Hubbell Incorporated**]
4. [**Joslyn Hi-Voltage**]
5. [**MacLean Power Systems**]
6. [**S&C Electric Company**]
7. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Eaton**]
2. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
3. [**Hubbell Utility Solutions; Hubbell Incorporated**]
4. [**Joslyn Hi-Voltage**]
5. [**MacLean Power Systems**]
6. [**S&C Electric Company**]
7. <**Insert manufacturer's name**>

C. Description: Medium-voltage disconnect, protective[**, and bypass**] units must be rated for the line-to-line voltage of the systems in which installed, unless higher ratings are indicated. BIL ratings are [**45**][**60**][**75**][**95**][**150**][**200**] kV.

1. Momentary Current Rating of Switching Devices: [**20**][**40**]<**Insert value**> kA, asymmetrical at nominal system operating voltage.
2. Fuse Characteristics: Time-current characteristics for each set of fuses selected in accordance with published recommendations of manufacturer of component protected by the fuses and coordinated with upstream and downstream protective devices. Prepare time-current coordination curves in accordance with IEEE 242 that illustrate optimum coordination of devices in this Project.
3. Interrupting Rating of Fuses: <**Insert value**> symmetrical A at nominal system operating voltage.

D. Fuse Cutouts: [**Open**][**enclosed**] type, rated [**100**][**200**] A, continuous, complying with ANSI C37.42.

1. Fuses: Enclosed link, [**Type K**][**Type T**], complying with ANSI C37.42.
2. Fuse Current Rating: 150 percent of the transformer full-load current unless otherwise indicated.
3. Switching Application: Include switch link instead of fuse.
4. Switch Current Interrupting Rating: [**Transformer magnetizing current**]<**Insert value**>.

E. Fused Switches: Single-pole, manual units.

1. Switch Rating: [**400**][**600**] A(rms) continuous and load-current interrupting.
2. Fuses: Dropout-type power fuses.

F. Nonfused Switches: Single-pole, manual units, rated [**100**][**200**][**400**][**600**] A(rms) continuous.

G. Group-Operated, Load-Interrupter Switches: [**Fused**][**Nonfused**], three-pole, single-throw units, manually operated by handle through insulated mechanical linkage.

1. High-pressure contact type, complying with ANSI C37.32.
2. Factory assembled to suit specific configuration and mounting conditions for this Project.
3. Operating Handle: Padlock equipped.
4. Current Interrupting Rating: Equal to continuous current rating of switch.
5. Fuses: Nondropout power type.

H. Group-Operated, Air-Break (Nonloadbreak) Switches: Three-pole, single-throw units, manually operated by handle through insulated mechanical linkage.

1. Comply with ANSI C37.32.
2. Factory assembled to suit specific configuration and mounting conditions for this Project.
3. Operating Handle: Padlock equipped.
4. Suitable for field conversion to load-interrupter switch by adding interrupter modules.

2.9 POLE-MOUNTED DISTRIBUTION TRANSFORMERS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Eaton**]
2. [**GE Power; General Electric Company**]
3. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
4. [**Howard Industries, Inc**]
5. [**Kuhlman Electric Corporation**]
6. [**Pauwels Transformers**]
7. [**Pioneer Transformers Ltd**]
8. [**Prolec GE; A Xignux and General Electric Company Joint Venture**]
9. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Eaton**]
2. [**GE Power; General Electric Company**]
3. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
4. [**Howard Industries, Inc**]
5. [**Kuhlman Electric Corporation**]
6. [**Pauwels Transformers**]
7. [**Pioneer Transformers Ltd**]
8. [**Prolec GE; A Xignux and General Electric Company Joint Venture**]
9. <**Insert manufacturer's name**>

C. Description: Single-phase, two-winding, [**single**][**two**]-bushing, liquid-filled, self-cooled, pole-mounting distribution type, suitable for external fuse and surge suppressor protection; complying with IEEE C 57.12.00, and tested in accordance with IEEE C 57.12.90[**.**][**and with the following additional requirements:**]

1. Cooling Class: OA.

2. Temperature Rise: 65 deg C.
3. Insulating Liquid:

    a. Mineral oil, ASTM D3487, Type II.
    b. High molecular weight, mineral oil based, and UL listed as less-flammable type.
    c. Biodegradable insulating and cooling liquid, UL listed as less flammable type.
    d. Identification: Label the transformer as "non-PCB" and place manufacturer's name and type of fluid on the nameplate.

D. BIL: [**95**][**75**][**60**] kV.

E. Primary Voltage: <**Insert voltage**>.

F. Taps: [**Two, 2.5 percent above and below**][**Four, 2.5 percent below**], high-voltage and full-load rated.[**Tap changer must have an external operating handle.**]

G. Mounting Brackets: [**Single**][**Double**], integral; suitable for pole mounting, individually or in cluster, or on crossarm.

H. Minimum Efficiency: Class 1, as defined by NEMA TP 1, based on test results that comply with requirements of NEMA TP 2.

I. Bushings: Creepage distance must exceed nominal value standard for unit rating by at least 75 percent.

J. Hardware: Stainless steel.

K. Tank and Cover: Stainless steel, complying with ASTM A167, Type 304 or 304L, with paint coating exterior finish system complying with IEEE C57.12.28, including manufacturer's standard color finish coat.

L. Show transformer kiloampere capacity using **2-1/2 inch (65 mm)** numerals placed near the low-voltage bushings.

2.10 PRIMARY METERING PRODUCTS

A. Primary Metering Equipment:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Eaton**]
    b. [**GE Power; General Electric Company**]
    c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
    d. [**Landis+Gyr Inc.**]
    e. [**Schweitzer Engineering Laboratories, Inc.**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Eaton**]

b. [**GE Power; General Electric Company**]
c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
d. [**Landis+Gyr Inc.**]
e. [**Schweitzer Engineering Laboratories, Inc.**]
f. <**Insert manufacturer's name**>

B. Metering Transformers:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**GE Power; General Electric Company**]
b. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
c. [**Kuhlman Electric Corporation**]
d. [**Prolec GE; A Xignux and General Electric Company Joint Venture**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**GE Power; General Electric Company**]
b. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
c. [**Kuhlman Electric Corporation**]
d. [**Prolec GE; A Xignux and General Electric Company Joint Venture**]
e. <**Insert manufacturer's name**>

C. Description: Outdoor current and potential transformers, designed for crossarm mounting, complying with IEEE C57.13, and having the following features:

1. BIL: [**45**][**60**][**75**][**95**][**150**][**200**] kV.
2. Secondary connection box arranged for conduit connection.
3. Potential-Transformer Voltage Rating: [**2.4**][**4.16**][**7.2**][**12.0**][**12.47**]<**Insert value**> kV to 120 V(ac), 60 Hz.
4. Potential-Transformer Accuracy Class: Minimum 0.3 at [**75**]<**Insert value**> VA burden.
5. Voltage Rating: [**2.4**][**4.16**][**7.2**][**12.0**][**12.47**]<**Insert value**> kV.
6. Current Rating: <**Insert value**> to 5 A.
7. Accuracy Class: Minimum 0.2 at [**50**]<**Insert value**> VA burden.

D. Watt-Hour Meter: Outdoor solid-state unit, [**with demand register,**][**arranged for pulse initiation,**] complying with ANSI C12.10, and including the following ratings and features:

1. Form: [**8S**][**9S**].
2. Element: [**2**][**2-1/2**][**3**].
3. Voltage: 120 V.
4. Current: 2-1/2 A.
5. Frequency: 60 Hz.
6. Kilowatt-Hour Register: Five-digit type.
7. Demand-Register Multiplier: A quantity in even hundreds, indicated on meter face.
8. Demand-Register Interval: [**15**][**30**] minutes.
9. Mounting: On matching socket, complying with ANSI C12.7, and complete with automatic current short-circuiting device.
10. Meter Test Block: Matched to meter, and furnished and equipped with open knife switches

designed to isolate each metering component for test.

11. Meter Cabinet: Galvanized steel; weatherproof enclosure with pole-mounting bracket and the following features:

    a. Hinged Door: Arranged for padlocking in closed position.
    b. Size: Adequate to house meter and other equipment indicated, but not less than **20-by-30-by-11 inch (510-by-760-by-280 mm)** deep.

2.11 SOURCE QUALITY CONTROL

A. Product Data: Prepare and submit catalog cuts, brochures,[**diagrams,**][**schedules,**] and performance data illustrating size, physical appearance, and other characteristics of product.

1. For each type of product include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Material Certificates: For the following items, from manufacturers:

    a. Wood poles.
    b. Concrete poles.
    c. Wood crossarms.

3. Listing Documentation: Indicate that products comply with requirements specified in "Quality Assurance" Article.
4. Time-Current Coordination Curves: Illustrate optimum coordination of protective devices involved in the Work of this Section.

B. Manufacturer's Published Instructions: Prepare and submit installation, testing, and operating instructions for product.

C. Factory Tests:

1. Testing Administrant: [**Owner will engage**][**Engage**] qualified pole and crossarm inspection agency to evaluate poles and crossarms.
2. Factory Tests and Inspections:

    a. Inspect poles and crossarms, by, or under supervision of, qualified pole and crossarm inspection agency recognized by authorities having jurisdiction, in accordance with referenced standards before delivering to site. Affix label with name and date of [**manufacturer's**][**qualified pole and crossarm inspection agency's**] certification of system compliance.

        1) RUS quality mark "WQC" on each item is acceptable in place of inspection as evidence of compliance.

    b. Conduct routine tests of [**transformers**][**medium-voltage switches**][**and**][**metering equipment**] by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with referenced standards. Affix label with name and date of [**manufacturer's**][**qualified electrical testing laboratory's**] certification of system compliance.

3. Nonconforming Work: Units that do not pass tests and inspections will be considered defective.
4. Factory Test Reports: Prepare and submit factory test and inspection reports.

PART 3 - EXECUTION

3.1 RIGHT-OF-WAY CLEARANCE AND TREE TRIMMING

A. Clear right of way in accordance with Section 015639 "Temporary Tree and Plant Protection" and Section 311000 "Site Clearing."

B. Clear right of way to maintain minimum clearances required by IEEE C2, unless Drawings indicate greater clearances or greater clearances are required by state or local codes or regulations. If no minimum requirements are mandated, maintain a minimum of **15 ft (4.5 m)** on both sides horizontally and below medium-voltage conductors and **60 inch (1500 mm)** on both sides horizontally and below secondary-voltage conductors. Remove overhanging branches.

3.2 GENERAL INSTALLATION REQUIREMENTS

A. Install underground power and metering circuits and those circuits indicated to be in raceways in accordance with Section 260543 "Underground Ducts and Raceways for Electrical Systems" and Section 260513 "Medium-Voltage Cables," and make splices and terminations for those circuits in accordance with the applicable Sections.

B. Engage the services of a licensed surveyor to verify dimensions by field measurement, to identify locations of poles, anchors, and other features, and to verify all clearances. The survey document must also identify locations of connections to new and existing supply lines and to primary and secondary services. Notify Architect of discrepancies and field conditions that are not indicated and that will affect installation.

C. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

D. Apply warning signs and equipment labels in accordance with Section 260553 "Identification for Electrical Systems."

3.3 INSTALLATION OF MEDIUM-VOLTAGE LINE CONDUCTORS

A. Selection: Install bare conductors unless otherwise indicated.

B. Handle and string conductors to prevent cuts, gouges, scratches, kinks, flattening, or deformation. Remove damaged sections and splice conductors.

1. String new conductors to "initial" sag values recommended by manufacturer for type and size of conductor except as otherwise indicated.
2. Conductors Reinstalled or Resagged: String to "final" sag values recommended by manufacturer for type and size of conductor except as otherwise indicated.

C. Connections, Splices, and Terminations: Use kits listed for the specific type of connection and combination of materials in the connection or recommended for the specific use by manufacturer of material on which applied.

1. Splice Location: Do not install within **10 ft (3 m)** of a support.
2. Line Conductors and Service Drops: Install so strength exceeds ultimate rated strength of conductor.
3. Splices and Terminations of Covered Conductors: Comply with manufacturer's published

instructions.

4. Splices and Terminations of Insulated Conductors of Self-Supported, Medium-Voltage Cable: Comply with manufacturer's published instructions.

D. Armor Rod: Install to protect conductors if line conductors are supported by insulators.

E. Flat Aluminum Armor Wire: Install to protect conductors if they are supported by, or attached to, galvanized or coated iron or steel clamps or fittings.

F. Support line conductors and taps as follows:

1. Use wire ties for conductor attachment to pin and vertical post insulators unless otherwise indicated.
2. Install wire ties tight against conductor and insulator, and turn ends back and flat against conductor, to eliminate exposed wire ends.
3. Use wire clamps on horizontal post, dead end, and suspension insulators unless otherwise indicated.

3.4 INSTALLATION OF POLES AND CROSSARMS

A. Pole Orientation: Align curve of curved wood poles with straight-line runs of three or more poles. Align gained surfaces perpendicular to runs.

B. Elevation of Line above Grade: Install poles with top at same elevation, unless grade changes dictate elevation change in poles, and in accordance with the following:

1. On level ground, set poles so tops of consecutive poles vary not more than **60 inch (1500 mm)** in elevation.
2. Shorten wood poles by cutting off the top and make cuts to shed water. Apply preservative to cuts.

C. Set poles in accordance with the following:

1. Make pole holes vertical, uniform in diameter, and large enough to permit effective use of tamping bars all around. Bore or excavate holes with an average diameter at grade less than twice the diameter of the pole at the same grade.
2. Use minimum depths indicated, except at locations where hole is partly or entirely in rock and if hole is not vertical or has a diameter at grade more than two times the pole diameter at the same level; in these conditions, increase the depth of the hole by the following increments before setting the pole:

    a. Poles up to 35 ft (10.6 m) Long: **24 inch (600 mm)**.
    b. Poles 36 to 60 ft (11 to 18.3 m) Long: **30 inch (760 mm)**.
    c. Poles 61 to 75 ft (18.6 to 22.9 m) Long: **36 inch (900 mm)**.

3. For poles on slopes, indicated hole depth is from finished grade at lowest side of hole.
4. Set poles in alignment and plumb except at dead ends, angles, and points of extra strain; rake poles against conductor strain **1 inch (25 mm)** minimum, **2 inch (51 mm)** maximum, (after conductors are installed at required tension) for each **10 ft (3 m)** of pole length. Rake poles so they will not lean or bend in direction of strain when loaded.
5. Backfill holes in **6 inch (150 mm)** maximum lifts, and thoroughly tamp each layer before starting the next.
6. Place surplus earth around pole in a conical shape, and tamp thoroughly to provide drainage away from pole.
7. Set poles so alternate crossarm gains face in alternate directions, except at terminals and dead

ends; place gains on last two poles on side facing terminal or dead end.

8. Poles Set in Concrete Paved Areas: Install poles with minimum of **6 inch (150 mm)** wide, unpaved gap between the pole and the edge of adjacent concrete slab. Fill unpaved ring with [**pea gravel**]<**Insert appropriate material**> to a level **1 inch (25 mm)** below top of concrete slab.

D. Field treat factory-treated poles and crossarms as follows:

1. Poles Treated More Than One Year before Installation: Treat portion from **24 inch (600 mm)** above ground line to butt.
2. Field-Bored Holes and Field-Cut Gains and Pole Tops: Treat cut portions.
3. Unused Holes: Treat and plug with treated-wood-dowel drive pins.
4. Engage the services of qualified wood pole and crossarm treatment technician to apply treatment. Comply with requirements in AWPA standards that govern original factory treatment for field-applied treatment and application of chemicals.

E. Crossarm Installation: Set line crossarms at right angle to line for straight runs and for angles 45 degrees and more. Bisect angles less than 45 degrees.

1. Buck Arms: Install at corners and junction poles unless otherwise indicated.
2. Double Crossarms: Install at dead ends, corners, angles, and line crossings.
3. Equipment Arms: Locate below lines and set parallel or at right angles to them, whichever provides best climbing space.
4. Gains: Install factory-cut or metal-pole gains only. Do not cut gains in field without specific written approval.

F. Locate pole numbers to provide maximum visibility from the road or patrol route.

3.5 INSTALLATION OF GUYS AND ANCHORS

A. Install guys to resist unbalanced loads, including those developed at angles, corners, and dead ends. Install two or more guys if a single guy will not provide adequate strength. Install separate guys if unbalanced loads are separated by **36 inch (900 mm)** or more. Comply with IEEE C2.

1. Unless a thimble eye is used, at the pole end, install a minimum of two guy hooks and two guy strain plates.
2. At the anchor end, attach guy strand assembly with preformed grips.

B. Protect guy strands from damage. Replace damaged guy strands. Install guy insulators where required to comply with IEEE C2 clearance requirements.

C. Install guys with a lead-to-height ratio of 1 to 1 unless otherwise indicated. The minimum lead-to-height ratio must be 1/2 to 1. When less than 1 to 1, increase guy strength by the ratio of the sine of the lead angle indicated to the sine of the lead angle provided.

D. Install screw-type guy anchors aligned in soil with guy. Set with anchor rod pointing at guy attachment on pole and rod projecting **6 to 9 inch (150 to 230 mm)** from ground.

E. Install strain insulators to provide a minimum of **12 inch (300 mm)** of clearance between the nearest energized surface and the strain insulator fitting farthest from the pole. When loaded to the tension indicated, fiberglass strain insulators must be loaded to not more than two-thirds of manufacturer's published rating.

F. Guy Markers: Install at anchor end of guys to visually mark the guy wire at all accessible locations. Clamp to guy strand or anchor at top and bottom of marker.

3.6 INSTALLATION OF HARDWARE AND ACCESSORIES

A. Install washers against wood and under nuts, including eyenuts and locknuts.

B. Install nuts and locknuts wrench-tight on threaded connections.

C. Medium-Voltage Line Insulators: Install [**pin**][**or**][**post**] type, except install suspension type at corners, angles, dead ends, and other locations where horizontal forces exceed rated values for pin or line-post-type units.

1. Install suspension insulators and hardware that have mechanical strength exceeding rated breaking strength of attached conductors.
2. Install horizontal line-post insulators for armless construction.

D. Post-Insulator Conductor Support: Where installed horizontally and for line angles more than 15 degrees, install clamp-top conductor clamps.

E. Install spool-type insulators for secondary lines mounted on clevis attachments or secondary racks.

F. Guy Strain Type Insulators: Install [**porcelain**][**fiberglass-reinforced**] units.

3.7 INSTALLATION OF SURGE ARRESTERS

A. Install surge arresters to protect [**distribution**][**metering equipment**][**reclosers**], [**group-operated, load-interrupter switches**], [**aerial-to-underground transitions**], and other items indicated.

1. Units Installed 6000 ft (1800 m) or More above Sea Level: Use arresters specifically rated for this service.

3.8 INSTALLATION OF CUTOUTS, SWITCHES, AND FUSES

A. Hook-Stick-Operated Switches: Install to maximize safe operating access.

B. Group-Operated, Load-Interrupter Switches and Air-Break Switches: Install operating handle **42 inch (1067 mm)** above finished grade.

1. Locking Provisions: Install padlock at hasp.

3.9 INSTALLATION OF PRIMARY METERING PRODUCTS

A. Current and Voltage Transformers: Install secondary conductors between transformers and cabinet in sleeves made of [**galvanized rigid steel**][**intermediate metal**][**PVC**] conduit. Install to prevent collection of moisture in raceway and cabinet system.

B. Meter Cabinet: Mount on pole, **72 inch (1825 mm)** above finished grade to center of cabinet.

1. Make conduit connections with raintight hubs.
2. Install metering transformer secondary leads without splices. Train leads at sides and bottom of enclosure, and secure with wire ties.
3. Install meter and meter test block within cabinet.
4. Install identical phase sequence, and color-code for both potential and current leads.
5. Identify leads using designations consistent with marking on transformer terminals.

3.10 GROUNDING

A. Comply with IEEE C2 grounding requirements.

B. Ground Rods: [**Copper-clad**][**Zinc-coated**][**Stainless**] steel[**, sectional type**]; [**3/4 inch-by-10 ft (19 mm-by-3 m)**][**5/8 inch-by-8 ft (16 mm-by-2.4 m)**] in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

1. Install [**two**]<**Insert number**> parallel ground rods if resistance to ground by a single, ground-rod electrode exceeds 25 Ω.
2. Drive ground rods until tops are **12 inch (300 mm)** below finished grade in undisturbed earth.

C. Grounding Conductors:

1. 4 AWG minimum, soft-drawn copper.
2. Conductor Protectors for Wood Poles: Half-round PVC or wood molding; if wood, use pressure-treated fir, cypress, or cedar. Protect grounding conductors running on surface of wood poles with molding extended from grade level up to and through communications service and transformer spaces.
3. Ground-Rod Connections: Install bolted connectors for underground connections and connections to rods.
4. Lightning Arrester Grounding Conductors: Separate from other grounding conductors.
5. Transformer Enclosures and Secondary Neutrals: Interconnect and connect to grounding conductor.

3.11 FIELD QUALITY CONTROL

A. Acceptance Testing Preparation:

1. <**Insert requirements**>.

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

C. Tests and Inspections:

1. Furnish instruments and equipment required for tests that comply with NETA Acceptance Testing Specification.
2. Guy Anchors: Test one of each type and capacity installed[**, plus additional units specifically indicated for testing**]. Apply rated pull-out force in the same pull direction applied by the guy at the test location.

    a. Acceptable Test Results: Denoted by movement of less than **3/8 inch (10 mm)** by the holding component of the anchor in the earth or other medium in which it is installed.
    b. Replace or reinstall, at Architect's option, all anchors of same type and capacity as anchor type that fails this test.

3. Ground Resistance: Comply with Section 260526 "Grounding and Bonding for Electrical Systems." Measure resistance of each separate grounding electrode, including pole grounds. Also measure resistance of separate grounding electrode systems before bonding together.

    a. Perform tests and obtain acceptable results before energizing any portion of overhead electrical distribution system.
    b. Results and Follow-up: If ground resistance for a single ground electrode or pole ground,

tested individually, exceeds 25 Ω, add a ground electrode not less than **10 ft (3 m)** away and interconnect with 2 AWG, minimum, bare conductor buried at least **12 inch (300 mm)** below furnished grade.

4. Aerial Conductor Sag and Tension: Observe procedures used by Contractor to verify that initial stringing sags and tensions comply with IEEE C2 and conductor manufacturer's product data and published recommendations.
5. Self-Supported, Medium-Voltage Cable: After installation, while cable is isolated, and after terminations are installed and before connecting or energizing, apply DC voltage between each phase conductor and grounding connections of sheath or metallic shield. Comply with NEMA WC 70/ICEA S-95-658 for method, voltage, duration, pass-fail performance, and other test criteria. Perform other field inspections and tests recommended by manufacturer.
6. Neutral-Supported, Secondary Service-Drop Cable: Test for insulation resistance while cable is isolated, before connecting or energizing. Minimum acceptable resistance is 100 MΩ.
7. Existing Surge Arresters: Disconnect and measure resistance between line and ground terminals with a megger test rated 600 V or more. Acceptable resistance values are 300 MΩ and more.
8. New Surge Arresters, Cutouts, and Switches: Inspect after installation and connection to wiring. Verify that ratings and characteristics match approved submittals and comply with system requirements. Verify that installation complies with requirements and that clearances of units and connecting wiring comply with IEEE C2 requirements.

    a. Verify proper grounding of metallic equipment parts.
    b. Fuses and Disconnect Links: Verify that ratings and characteristics match submittals and comply with system requirements.
    c. Switches:

        1) Manually operate each cutout and switch at least three times, to verify proper operation.
        2) Verify correct contact alignment, blade penetration, travel stops, and arc interrupter operation.

    d. Group-Operated, Load-Interrupter Switches and Air-Break Switches:

        1) Perform mechanical operator tests in accordance with manufacturer's published instructions.
        2) Test resistance to ground of parts to be energized. Acceptable value is 200 000 MΩ.
        3) Perform contact-resistance test across all switch blade contacts. Refer to manufacturer's data for acceptable contact resistance.

    e. Verify that clearances of energized parts and connecting wires comply with IEEE C2 requirements.

9. Distribution Transformers: Inspect after installation and connection to wiring and verify that ratings and characteristics match approved submittals and comply with system requirements. Verify the integrity and good condition of unit.

    a. Inspect for physical damage, cracked insulators, leaks, tightness of connections, and overall mechanical and electrical integrity.
    b. Perform preenergizing inspections and tests recommended by manufacturer.
    c. Verify proper equipment grounding.
    d. Verify that clearances of terminals and connecting wires comply with IEEE C2.

10. Metering Transformers: Inspect after installation and connection to wires, and verify that ratings and characteristics match approved submittals and comply with system requirements. Verify the integrity and good condition of unit.

a. Verify proper connections, tightness of bolted connections, and integrity of mounting provisions.
b. Verify that required grounding and shorting connections provide good contact.
c. Verify that clearances of terminals and connecting wires comply with IEEE C2.
d. Perform electrical tests in accordance with manufacturer's published instructions, including insulation-resistance tests, polarity tests, and turns-ratio and ratio-verification tests.

11. Meters: Inspect after installation and connection to wiring and verify that ratings and characteristics match approved submittals and comply with system requirements. Verify the integrity and good condition of unit.

a. Verify tightness of electrical connections.
b. Verify accuracy at 25, 50, 75, and 100 percent of full-rated load and verify all instrument multipliers in accordance with manufacturer's published instructions.

D. Nonconforming Work:

1. Units will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at Project site.

3.12 ADJUSTING

A. Pole-Mounted Distribution Transformers: Set voltage taps as directed by Architect.

3.13 CLEANING

A. After completing equipment installation, inspect equipment. Remove spots, dirt, and debris. Repair damaged finish to match original finish. For distribution transformer, use tank touchup paint provided by manufacturer.

1. Clean enclosures internally, on completion of installation, in accordance with manufacturer's published instructions.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 34 01 23 33 - RAIL TRACKS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of railroad track and accessories. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals: Submit the following.
1. Shop Drawings
   a. Turnouts
   b. Road crossings
   c. Car bumper
   d. Railroad crossings
   e. Layout drawings
2. Product Data
   a. Rails
   b. Wood ties
   c. Precast concrete ties
   d. Tie plates
   e. Tie pads
   f. Track bolts, nuts, and spring washers
   g. Standard, compromise, and insulated joint bars
   h. Rail anchors
   i. Rail clips and fasteners
   j. Track spikes
   k. Turnouts
   l. Pre-manufactured road crossings crossing surfaces
   m. Car bumper
   n. Wheel stops
   o. Derails
   p. Gage rods
   q. Switch point protectors
   r. Switch stands
   s. Geotextile fabric
3. Test Reports
   a. Ties preservative treatment
   b. Ballast tests
4. Certificates
   a. Rail welding procedures
5. Operation and Maintenance Data
   a. Rails
   b. Accessories
   c. Pre-manufactured road crossings
   d. Turnouts

C. Temporary Work: During construction, provide suitable roads and crossing with necessary lights, signs, drainage, and other appurtenances required for safe public and local travel. Erect and maintain suitable temporary fences where required to prevent trespass upon work or damage to adjoining property. Maintain drainage and prevent accumulation of water that might affect roadbed stability.

D. Quality Assurance

1. Layout Drawings: Layout Drawings: Submit for approval by the Owner before work is started. Do not prepare layout drawings until field surveys and measurements are completed. Do not order materials until layout drawings are approved. Include on layout drawings locations of turnouts, various sizes of rail, compromise joints, and locations of rail accessories.
2. Ties Preservative Treatment: Ties shall be marked in accordance with American Wood-Preservers' Association (AWPA) M6 and inspected in accordance with AWPA M2, for conformance with the specified AWPA Standards, by an independent inspection agency approved by the Owner. The agency's report of inspection shall accompany delivery of the ties, and shall be provided to the Owner's representative.

1.2 PRODUCTS

A. Ballast, Subballast and Geotextile
1. Ballast: Crushed stone Size No. 3, 4, 4A, 5, or 57 conforming to American Railway Engineering and Maintenance-of-Way Association (AREMA) Ch. 1 for quality, soundness and gradation. Ballast materials shall meet the property requirements shown in Table I.

TABLE I - MINIMUM PROPERTY REQUIREMENTS - BALLAST

Property	Test Method	Max. Value	Min. Value
Percent Passing (No. 200) Sieve	ASTM C 136	1.0 percent	
Bulk Specific Gravity - Rock	ASTM C 127		2.60
Absorption - Rock	ASTM C 127		2.0 percent
Clay Lumps and Friable Particles	ASTM C 142	0.5 percent	
Degradation	ASTM C 131 ASTM C 535	35 percent	
Soundness	ASTM C 88		
Sodium Sulfate - 5 Cycles		10 percent	

2. Subballast: Consists of aggregate-soil mixtures conforming to an ASTM D 1241 Type I, Gradation A **OR** B, **OR** C, **OR** D, **as directed,** mixture as approved.
3. Geotextile Fabric: Consists of a needle-punched nonwoven material that provides a permeable layer, planar flow, and tensile reinforcement, while retaining the soil matrix. Fabric shall be inert to commonly encountered chemicals, mildew, rot, insects, rodents and shall be treated to resist degradation caused by exposure to sunlight. Fabric will conform to the properties in Table II.

TABLE II - MINIMUM PROPERTY REQUIREMENTS - GEOTEXTILE FABRIC

Fabric Property	Test Method	Fabric Requirement Minimum Value
Grab Tensile Strength, (lbs)	ASTM D 4632	175
Grab Tensile Elongation, percent	ASTM D 4632	20
Coefficient of Water Permeability, (cm/sec)	ASTM D 4491	0.10
Puncture Strength, (lbs)	ASTM D 3787*	110
Mullen Burst Strength, (psi)	ASTM D 3786	400
Apparent Opening Size (AOS) (U.S. Standard Sieve)	COE CW 02215	70

*Tension testing machine with ring clamp; steel ball replaced with a 5/16-inch diameter solid steel cylinder, with flat tip and beveled edges, centered within the ring clamp.

B. Rails: New, minimum 115 pound RE section conforming to AREMA Ch. 4. Provide in 39 **OR** 78, **as directed**, foot lengths. Provide no closure pieces less than 13 feet. Bend in shop curved rail to proper radii, where degree of curvature exceeds 18 degrees.

1. Relayer Rail: Ninety pounds or heavier up to 136 pounds. Characteristics shall conform to requirements of MIL-R-3911 as modified in Table III:

TABLE III - RELAY RAIL CHARACTERISTICS

Minimum Weight per Yard	(original (lbs):	(90 to 136)
Wear:	Max. top wear (in.):	(3/16)
	Max. side wear (in.):	(1/8)
Length:	As ordered but not less than (13 feet).	
Defects permitted:	None	
Max. Lip (in.):	(1/16)	

2. Relayer rail shall be of the same section and drilling pattern throughout the project, except that the drilling pattern for bolt holes at turnouts shall be as indicated. No mingling of new and relayer rail will be permitted, and all relayer rail of the same section and drilling pattern shall be kept together in one area.

C. Wood Ties: Except as otherwise noted, ties shall be in accordance with FS MM-T-371, Types II cross ties and III switch ties, treated in accordance with AWPA C6. Species shall be as listed in FS MM-T-371 except that species shall not be mixed in a charge or bundle. Each treated piece shall be permanently marked or branded, by the producer, in accordance with AWPA M6. All ties except Southern, red, and ponderosa pine shall be incised prior to treatment. Splits shall not be longer than 4 inches nor wider than 1/4 inch at either end. Splits longer than 4 inches but not longer than the width of the face in which the split appears shall be acceptable if anti-splitting devices are installed with splits compressed. S-irons, dowels, and end plates are acceptable anti-splitting devices. Treatment shall be verified by an approved independent inspection agency report. Note: When the Owner inspections result in product rejection, the Contractor shall promptly segregate and remove rejected material from the premises. the Owner may also charge the Contractor additional cost of inspection or test when prior rejection makes reinspection or retest necessary.

1. Cross Ties: Size: 7 inches thick by 9 inches wide. Length: 8 feet 6 inches.
2. Switch Ties: Size: 7 inches thick by 9 inches wide. Length and quantities as indicated.
3. Tie Plugs: Conform to AREMA Ch. 30. Treat plugs with creosote-coal-tar solution of 8 pounds per cubic foot in accordance with AWPA C6. Provide plugs to fit holes from which spikes are drawn.

D. Precast Concrete Ties: Provide in the dimensions indicated, designed and manufactured in accordance with AREMA Ch. 8. Provided by manufacturers regularly engaged in the manufacture of precast concrete ties and essentially duplicate items that have been in satisfactory use at least 2 years prior to bid opening.

1. Tie Plates: Provide new or used tie plates in good condition conforming to AREMA Ch. 5-1. Provide plates of the dimensions and punching pattern to fit the rail. Relayer (used) tied plates provided shall have no deformities or cracks, a minimum amount of surface rust, no pitting in excess of 1/16 inch deep, no cutters (bottom ribs), 1:40 cant on rail seat area, a maximum of 1/8 inch wear on seat section and physical dimensions in accordance with AREMA Ch. 5-1. The relayer tie plates may be repunched to accept base of existing rails but no slotting shall be accepted. New holes must have one inch clearance from closest existing hole and no hole shall be punched on the shoulder side of tie plate. Relayer tie plates shall be approved on individual basis by the Owner.

E. Tie Pads: Conform to AREMA Ch. 30-2 for use with precast concrete ties.

F. Track Bolts, Nuts, And Spring Washers: Provide new throughout the project. Provide oval-neck, heat-treated, carbon-steel track nuts and carbon-steel track bolts conforming to AREMA 4-2. Spring washers shall conform to AREMA 4-2 and shall be of the size to fit the bolt and nut used and a minimum of 1/2 inch thick.

G. Joint Bars: Provide new or used joint bars in good condition conforming to AREMA Ch.4-3. For new construction, provide bars of the "toeless" head free type, of the size, shape, and punching pattern to fit the rail. Joint bars shall be 24 inches **OR** 36 inches, **as directed**, long and have four **OR** six, **as directed**, bolt holes. For repair work, provide head-contact joint bars. Contractor shall verify the punching pattern of existing rail before ordering joint bars.

H. Compromise Joint Bars: Provide new, conforming to AREMA Ch.4-3, for changes in rail size or where rail drilling differs. Compromise joints shall be angle bar type of forged or cast steel accurately machined to properly align the combination of rail sections indicated. Steel shall have physical properties equal to or exceeding AREMA specifications for those of standard rolled steel joints. Joints shall be manufactured by an established track appliance manufacturer.

I. Track Spikes: AREMA Ch. 5-2 for track spikes, size 6 by 5/8 **OR** 5 1/2 by 9/16, **as directed**, inches. Provide new spikes throughout the project.

J. Rail Clips And Fasteners: Provide single tight fit clips with fillers as necessary to fit rail section furnished. Clip or fastener design shall anchor rail against longitudinal movement.

K. Accessories
1. Rail Anchors: Standard manufacture as approved and of the size to fit the rail section. Where special installation tools are required, furnish a minimum of one tool for each 2,000 anchors.
2. Gage Rods: Provide Type A gage rods of 1 1/4 inch round steel rods with double adjustable clamps at both ends, suitably sized for use with the standard rail section furnished. Provide Type B gage rods of 1 1/4 inch round steel rods with a hook at one end and a single adjustable clamp at the other end, suitably sized for use with the standard rail section furnished. Use the product of a manufacturer who is regularly engaged in the manufacture of steel gage rods.
3. Switch Point Guard-Rail Type Protectors: Guard-rail type, standard manufacturer's product of heat-treated rail **OR** manganese steel, **as directed**, and of size to fit rail section furnished. Protectors shall be bolted to rails.
4. Flangeway Guard: Flangeway guard assembly shall include steel casting blocks, hook bolts, set bolts, and steel angle. The steel casting blocks and hook bolts shall be sized and provided to fit the rail section furnished and shall be a standard manufacturer's product, designed and constructed for use as a flangeway guard in railroad applications in pavement. Provide and secure steel angles to the steel casting blocks by the set bolts as indicated; other steel shapes shall not be substituted for steel angles shown. Prior to paving, the flangeway guard shall be coated with two coats of an asphalt varnish applied to a dry-film thickness of at least two mils total thickness.

5. Wheel Stops: Cast steel of double wedge design, and of standard commercial manufacture for the purpose.
6. Derails: Conform to MIL-D-11302 and satisfactory for use with the weight rail specified. Provide derails at locations and in numbers indicated or specified. Complete unit shall weigh not less than 100 pounds.
7. Car Bumper Post: Standard product of a commercial manufacturer of railroad accessories. Post shall be made from structural steel sections arranged for attachments to the rails by bolting, and located so that the thrust will be transmitted through the cross ties to ballast and earth. Post shall consist of a head to accept horizontal thrust of the car couple and transmit it to tension members and compression members having at least a moment of inertia not less than 17.1. Complete unit shall weigh not less than 800 pounds.

L. Oil: Oil for rail and other track materials, except joints, shall conform to the following:
1. Flash point: minimum 130 degrees F, ASTM D 1310.
2. Asphalt: 100 penetration, minimum 45 percent.
3. Viscosity: Saybolt Universal, 130 degrees F, 240 to 350 seconds, ASTM D 88.

M. Electrodes: Provide AWS low-hydrogen, high-tensile 140-16 (extrapolation) or 25-20 electrode, Grade 310-16 and 310-15 stainless steel rod welding electrodes. Provide electrodes of the smallest practical diameter worked at the lowest compatible current. Coating on low-hydrogen type electrodes shall be thoroughly dry when the electrode is provided. Use electrodes taken from hermetically sealed packages within one hour of the time the package is opened. Electrodes not used within this one-hour period and electrodes taken from non-hermetically sealed packages shall be dried for at least one hour between 700 and 800 degrees F. Electrodes so dried may be stored at temperatures between 225 and 400 degrees F until used, or, if not stored and not used within one hour after this drying is completed, shall be re-dried before use. Do not use electrodes which have been wet.

N. Turnouts: Component parts of the turnouts to be furnished shall be the products of manufacturers regularly engaged in the manufacture of such products, and shall essentially duplicate items that have been in satisfactory use at least 2 years prior to bid opening. The parts need not all be made by the same manufacturer, but each turnout shall be the product of a single firm. Provide complete, including all track materials and switch ties in accordance with appropriate area trackwork plan. Switch assemblies, stands, rigid bolted frogs, and guard-rail assemblies shall conform to AREMA PTWP (Portfolio of Trackwork Plans). One switch point in each turnout shall be manganese tipped in accordance with AREMA PTWP Plan governing manganese tipped switch points, installed on the side opposite the turnout side of the switch. Rail used in turnout shall be new end hardened, minimum 115 pound RE section, drilled for four **OR** six, **as directed**, holes. Bend in stock rail shall be in accordance with AREMA.
1. Turn Out Plates: Provide plates and rail braces in strict accordance with the current AREMA trackwork plan governing the turnout with respect to the number of the turnout. Provide turnout plate system complete with slide plates, heel plates, guard rail tie plates, hook twin tie plates, including those for the frog, rail braces, standard tie plates or other accessories required to complete the installation. Hook twin tie plates shall be in accordance with AREMA PTWP governing hook twin tie plates. Gage plates shall be solid. Rail braces shall be either fixed or adjustable type of standard manufacture.
2. Switch Stands: Low-stand type, adjustable from top with shims through a moveable cover and a replaceable double crank of malleable iron, complete with reflectorized red and white aluminum target minimum thickness 14 gage, self-locking connecting rod, reversible target tip arm crank, parallel throwing latch and interchangeable parts. Each stand shall be equipped with one of the following switch lamps as indicated:
    a. Reflecting type: Approved reflecting switch lamps fitted with standard commercial-type double red and white reflecting lenses but without day signal targets.
    b. Reflecting type with daylight disk: Approved reflecting switch lamps fitted with standard commercial-type double red and white reflecting lenses, and with approved day signal targets.

c. Illuminated type: Approved illuminated lamps with primary battery, battery housing, and cable.

O. Road Crossings
1. Bituminous, Wood or Treated Timber Crossings: Wood and treated timber material for road crossing shall conform to AWPA C6. Bituminous crossings shall conform to Division 2 Section "Hot-Mix Asphalt Paving."
2. Rubber Railroad Crossings: Manufacturers standard product for a rubber railroad crossing consisting of manufactured panels of full depth rubber or partial depth panels of rubber and steel conforming to the following requirements:
   a. Partial depth panels shall be reinforced with steel plates, arches, or post tensioned cable fully encased in the rubber. Post tensioned cables shall be encased with a polycarbon material before rubber encasement.
   b. Rubber hardness of 55 to 80 (tested in accordance with ASTM D 2240, Durometer A).
   c. Rubber tensile strength of 1000 psi to 2500 psi (tested in accordance with ASTM D 412).
   d. Rubber elongation of 100 to 400 percent (tested in accordance with ASTM D 412).
   e. Headers shall be manufacturer's standard rubber header.
   f. Shims shall be hardwood, treated with creosote in accordance with AREMA Ch 3, for lumber and timber in ground contact.
   g. Materials for securing the crossing shall be as recommended by the rubber crossing manufacturer.
   h. Provide components pertinent to each manufacturer's system to provide each rubber railroad system complete and ready for use.

1.3 EXECUTION

A. General Trackwork: Perform track construction not covered specifically herein in accordance with AREMA MRE (Manual for Railway Engineering (Fixed Properties) recommended practices.

B. Subgrade Preparation: Obtain approval of roadbed surface, grade, and drainage prior to distribution of construction material. Provide equipment that will not form ruts or water pockets when distributing material over the finished road bed. Where subgrade or road bed surface is damaged, perform repairs including regrading and recompaction in accordance with Division 2 Section "Earthwork."

C. Ties
1. Wood Ties: Space cross ties 24 to the 39 foot rail for mainlines, access tracks or other tracks where the movement may be classified as heavy. Space cross ties 20 to the 39 foot rail for body tracks in yards, sidings, running tracks and access tracks where the movement is not classified as heavy. Space switch ties and bridge ties as indicated. Use oak cross ties in road crossings. All curved track should have oak ties installed. All curved track should have as a minimum 6 oak ties spaced uniformly among the number of ties required. Lay ties normal to the centerline of the track with the wide heartwood face down. Provide the best ties at rail joints. Do not move or place ties with picks, shovels, mauls, sledges, or spiking hammers. Make ends of ties on one side of the track parallel to the rail so that center of tie will be on the approximate centerline of the track. Align the ends on the inside of curves and continue on that side until reaching a curve in the opposite direction. On double tracks, align the ties on the outside ends. Provide full bearing for tie plates. Restrict adzing to that necessary to provide a sound true bearing for the tie plate. Where necessary to adz, dap or drill holes in the timber tie. Saturate cut surface with creosote or other approved preservatives.
2. Precast Concrete Ties: Provide ties in accordance with AREMA Ch. 30.

D. Tie Plates: Place tie plates with full bearing on the tie. Tie plates shall be free of dirt and other foreign material when installed. Set tie plates at right angles to the rail with the outside shoulder against the

base of the rail, and centered on the tie. Place tie plates so that the rails will have full bearing on the plate and the plate will have full bearing on the tie.

E. Tie Pads: Place pad on concrete tie so that rail will have full bearing on tie pad.

F. Rails: Clean base of rail and tie plate prior to laying. Lay rails without bumping or striking to standard gage 4 feet 8 1/2 inches on tangents and on curves up to 12 degrees. Widen gage on curves greater than 12 degrees, 1/8 inch for each additional increment of 2 degrees above 12 degrees to a maximum gage of 4 feet 9 inches. Gage the track normal to the rails at joints, centers, and quarters as spikes are being driven. Stagger joints in opposite rails not less than 13 feet apart, except closer joints may be required at turnouts or insulated joints. Rails of less than standard length may be used, but no less than 13 feet, to space the joints on curves. No joint shall be less than 6 feet from the ends of open-deck bridges, or less than 3 feet from switch points. Do not install joints within 20 feet of a road crossing, outer perimeter of structure, or location which restricts access to the joint. Where joints are required in these areas, the joints shall be welded. Provide allowance for thermal expansion at bolted rail joints by using rail-expansion shims of wood, fiber, or metal. Remove shims to within 12 rails of the laying. Provide shims of the thickness, based upon rail temperature during construction, as shown in Table IV. Determine the temperature of the rail by use of a thermometer placed on the base of the rail in the shade. Use rail saws to cut rail. Drill new holes. Holes cut with a torch will not be acceptable. Adjacent relayer rails shall be matched to prevent lipped or uneven joints, and any mismatched rail ends shall be ground or built-up welded.

TABLE IV - SHIM THICKNESS

33 Foot Rail		39 Foot Rail		78 Foot Rail	
Rail Temperature, Degrees F	Shim Thickness, Inches	Rail Temperature, Degrees F	Shim Thickness, Inches	Rail Temperature, Degrees F	Shim Thickness, Inches
Below -10	5/16	Below 6	5/16	Below 35	5/16
10 to 14	1/4	6 to 25	1/4	35 to 47	1/4
15 to 34	3/16	26 to 45	3/16	48 to 60	3/16
35 to 59	1/8	46 to 65	1/8	61 to 73	1/8
60 to 85	1/16	66 to 85	1/16	74 to 85	1/16
Over 85	None	Over 85	None	Over 85	None

G. Joint Bars: Coat clean joint bars with petroleum or petroleum based compound with a corrosion inhibitor. Rail joints shall be installed so that the bars are not cocked between the base and head of the rail. Base shall be properly seated in the rail and the full number of correct-size bolts, nuts, and spring washers installed. Apply corrosion resistant grease to the bolt threads prior to application of nuts. Place bolts with nuts alternately on inside and outside of rail and draw tight before spiking. Bolts shall be tightened at the center of the joint and working both ways to the ends of the joint. At initial tightening, make bolt tension 20,000 to 30,000) lbs/bolt. After track has been in service and before acceptance of the work, check all bolts and tighten. Allow two threads of all bolt lengths to protrude from the nut after tightening. Connect rails of different sections by properly fitting compromise joint bars. The mismatch for compromise joints for either tread surface or gage side alignment shall not exceed 1/16 inch.

H. Welding Joints

1. Welded Rail Joints: Properly clean rails of foreign substances such as dirt, grease, loose oxide, and slag, prior to welding. Rail ends shall be properly aligned with the provisions for proper joint gap, and lateral and vertical positioning of the rail ends. Proper joint gap and positioning of rail ends shall be in accordance with the recommendations and specifications of the manufacturer and supplier of the particular welding process used, all subject to prior approval by the Owner. Weld rail in an approved manner and by workmen familiar with the welding method used. Do not weld when the rail temperature is lower than that recommended for the welding method used. Welding together of rails which have been drilled for bolted joints will not be permitted. Rail joints except those joints at fittings shall be welded. Use the thermite self-preheat method **OR** manual shielded-arc welding method, **as directed**.
   a. Thermite Self-Preheat Method: See Division 34 Section “Welding Crane And Railroad Rail-thermite Method" for specifications.
   b. Manual Shielded-Arc Welding Method: Use this process in accordance with applicable provisions of the AWS WHB-2 CH 2 and the following instructions:
      1) Rail end preparation: Bevel the ends of the rails at approximately 35 degrees full bevel on the head, 35 degrees double bevel on the web, and 35 degrees full bevel on the upper side of the base. Retain a narrow "nose", approximately 1/16 inch, of the original rail-end face across the base and up the web following the beveling operation, to permit proper alignment of rail ends. When beveling with a torch, first preheat each rail end to 500 degrees F. After torch cutting, grind off scale and oxides. Grind level faces only after preheating. Use proper grinding wheel and speed to avoid grinding "burns" or formation of "hard spots" from localized overheating.
      2) Alignment of rails: Align the beveled rail ends, allowing approximately 1/8-inch root clearance, and place a copper shim under the joint opening. Clamp the rails during the welding with up to 1/4-inch vertical camber (ends high) in four feet, centered over the joint to compensate for contractional distortion.

3) Preheating joints: Preheat the joint area to approximately 500 degrees F for a distance of 6 to 8 inches on each side of the joint, using a suitable heat source such as an oxy-acetylene or propane torch.
4) Arc welding: Initiate welding of the joint immediately after preheating in the following sequence: base, web and head. Weld alternately on both sides of the base and web. Do not entrap foreign material, such as slag, in the weld. Ground, chip, or arc-air the root of the initial weld to sound metal before welding is started from the second side. Maintain a 500 degrees F to moderately higher interpass temperature. Proceed with welding until the joint is completed and sufficient metal has been deposited to permit grinding to finish contour in the head area. Provide slight reinforcement of the web and top of base areas.
5) Postheating of welds: Postheat the joint area to approximately 700 degrees F immediately after the welding operation, using the same technique for preheating. After postheating, protect the weld area against rain and snow and cool as slowly as possible by covering with an insulating blanket.
6) Grinding of welds: Remove the excess deposited weld metal from the sides and top of the rail head using a heavy-duty grinder. Grind the area smooth, finishing closely as practical to the original contour. Use proper grinding wheel, speed, and rate of metal removal to avoid grinding "burns" or formation of "hard spots" from localized overheating. Exercise care to prevent grinding cracks.
7) Temperatures: Measure the temperatures as indicated herein by temperature pencils.

c. Electric Flash-Butt Method: Welding process shall conform to applicable provisions of AREMA Ch. 4-3.

I. Spiking Wood Ties: Spike rail promptly after laying. Do not remove gage until spikes are driven. Start and drive spikes vertically and square with the rail and allow about 1/8 inch space between spike head and rail base. Provide four rail-holding spikes on each tie on tangent track and on curved track up to 6 degrees of curvature; spikes being staggered with outside spikes in each tie near the same edge, and inside spikes near opposite edge of tie with position of spikes the same on ties requiring four spikes. Provide six rail-holding spikes on each tie on curves of larger than 6 degrees of curvature, one on outside and two on inside of each rail. Provide eight rail-holding spikes on each tie through road crossings. At joints, hold rail in place by reversing the normal position of the spike when it is driven.

1. Plate Holding Spikes: Plate holding spikes shall have pilot holes predrilled in accordance with AREMA Ch. 30. Swab field-drilled pilot holes with creosote prior to spiking.
2. Tie Plugs: If spikes are withdrawn, swab the holes with creosote and plug with creosoted tie plugs of proper size to fit the hole. If spikes are withdrawn and spikes are to be re-inserted in existing spike holes, the holes shall be swabbed with creosote and plugged with creosoted tie plugs prior to re-driving the spike.

J. Fastening Concrete Ties: Install fastenings for concrete ties in accordance with manufacturer's recommendations. Protect exposed portions of fasteners from corrosion.

K. Turnouts And Crossovers: Locate turnouts and crossovers as indicated. Frog, switch, and guard-rail assemblies shall be complete. Accurately bend stock rails. A switch point protector shall be provided at each switch, on the rail as required to meet project requirements. Place headblocks at right angles to the main track and securely spike. Except where directed otherwise, set switch stands on the closed-point side when the switch is in normal position. Adjust switches properly. Swab turnout fixtures with oil. Changes in rail section will not be permitted within the limits of switch ties.

L. Accessories

1. Rail Anchors: Locate as indicated. Apply 16 anchors per 39 feet of rail in the pattern indicated in accordance with AREMA recommendations for "Light Density Lines" in AREMA Ch. 5. Distribute anchors uniformly along rail without application on joint ties. Install rail anchors on gage side of rail against same tie face on opposite rails. Rail anchors shall grip the base of the rail firmly and shall have full bearing against face of tie. Rail anchors shall not be removed by driving them

along the rail. Rail anchors shall not be applied to track on an open-deck bridge. Where anchors are applied on track approaching an open-deck bridge, every third tie shall be box anchored for at least two rail lengths off each end of the bridge.

2. Guard Rails: Install guard rails on curves, bridges and trestles in accordance with AREMA PTWP. Bridge guard rails shall be approximately 11 inches from gage side of track rails, and shall extend a minimum of 30 feet beyond the structure. Ends shall be curved inward and beveled. Fully bolt guard rails. Guard rails shall not be higher than the running rails, and shall not be more than one inch lower than the running rail. Each guard rail shall be spiked with two spikes to each tie, but shall not be tie-plated. Unfit track rail in short lengths can be used for guard rails. Relay rail of the same size as the running rail may be used if it meets the requirements of MIL-R-3911.
3. Derails: Install derails where indicated. Place derails so that derailed equipment will not foul other tracks.
4. Bumpers and Wheel Stops: Install bumpers and wheel stops where indicated.

M. Ballast Distribution
1. Subballast shall be installed if required and as required to meet project requirements.
2. Geotextile fabric shall be installed if required and as required to meet project requirements.
3. Ballast shall not be distributed until area where ballast is to be installed has been approved by the Owner. No ballast shall be distributed without the Owner's approval. Ballast distribution shall be to depth indicated and may be from either trucks or railroad cars. Take care when distributing ballast from automotive equipment to prevent forming of ruts that would impair proper roadway drainage. Ruts formed that would impair drainage shall be leveled and graded to drain. Excess ballast shall be picked up and redistributed at the Contractor's expense. If additional ballast is required for dressing, it shall be added by the Contractor at no increase in price. No ballast cars shall be released until they have been inspected by the Owner. Cars may be weighed by the Owner at no cost to the Contractor.
4. Install Size No. 3, 4, or 4A for mainline ballast and Size No. 5 or 57 for yard and house tracks. Depth shall be as required to meet project requirements.

N. Surfacing
1. Superelevation: Superelevate curves as shown unless otherwise as required to meet project requirements. Obtain superelevation by raising outside rail of curve. Maintain inside rail at grade. Maximum superelevation shall be 6 inches. Full superelevation shall be carried throughout each curve, unless otherwise directed or shown. Superelevation runoff shall be at a uniform rate, and shall extend at least the full length of the spirals. The normal rate of superelevation runoff will be 1/2 inch in 31 feet; however, this may be increased to one inch in 31 feet with prior approval of the Owner.
2. Preliminary Surfacing: Perform preliminary alignment and surfacing after unloading of ballast. After preliminary alignment, bring the track to grade and surface in lifts not exceeding 6 inches each. After each lift, tamp the ballast. Place jacks close enough together to prevent undue bending of rail or stress of rail and joint. Raise both rails uniformly except where superelevation is required. Power tamp ballast under both sides of cross ties from each end to a point 15 inches inside each rail. Fill the center with ballast, but do not tamp the center between the above stated limits. Tamp both ends of the cross ties simultaneously, including tamping inside and outside of the rail. Regardless of the kind of ballast or the kind of power tamper used, work tamping tools opposite each other on the same tie. Tamp ballast under switch ties for the entire length of each switch tie. After tamping has been completed and jacks removed, re-spike loose ties securely in proper position with full bearing on tie plates.
3. Final Surfacing: After preliminary surfacing has been completed, or for track being repaired, where preliminary surfacing is not required, check line and grade stakes, operate engine and equipment over track, and align track. Bring track to grade and re-tamp ballast in the manner described for preliminary surfacing. Decrease tamping distance inside rail on cross ties from 15 to 13 inches. Give track a final lining conforming to established track centers. Dress ballast to section indicated and bring subgrade shoulders to line and surface.

4. Final Adjustments: Sixty calendar days after track has been accepted and put in operation, the Contractor shall perform necessary resurfacing adjustments without cost, to leave the track in alignment and on grade.

O. Tolerance: Completed track shall meet the following tolerances. Repair track not meeting the tolerances specified below to meet the requirements at no additional cost to the Owner.
   1. Alignment: Shall not deviate from uniformity more than the following prescribed amounts:
      a. Tangent Track: Change between any adjacent 31 foot stations measured at the mid offset from a 62 foot line may not be more than 1/2 inch from the gage line. (The gage line shall be defined as the line on the gage side of the line rail, 5/8 inch below the top of the centerline of the railhead. Either rail may be used as the line rail; however, the same rail must be used for the full length of the tangential segment of track.)
      b. Curved Track: Change between any adjacent 31 foot stations measured at the mid-ordinate from a 62 foot chord may not be more than 3/8 inch for 36 degree curves and flatter. For curves greater than 36 degrees, change between any adjacent 15 1/2 foot stations measured at the mid-ordinate from a 31 foot chord may not be more than 1/2 inch. (The ends of the chord must be at points on the gage side of the outer rail, 5/8 inch below the top of the railhead.)
   2. Track Surface: May not deviate from uniformity more than the amount prescribed below:
      a. Runoff in any 31 foot of rail at the end of a raise may not be more than 1/2 inch.
      b. Deviation from uniform profile on either rail at the mid-ordinate of a 62 foot chord may not be more than 1/2 inch.
      c. Deviation from designated elevations on a spiral may not be more than 1/2 inch.
      d. Deviation in cross level in spirals in any 31 foot may not be more than 1/2 inch.
      e. Deviation from zero cross level at any point on tangent or from designated elevation on curves between spirals may not be more than 1/2 inch.
      f. Difference in cross level between any two points less than 62 foot apart on tangents and curves between spirals may not be more than 5/8 inch.
   3. Gage
      a. Track Gage: Within plus 1/4 inch of standard gage in tangent track and curves less than 12 degrees.
      b. Curved Track: For curves larger than 12 degrees, lay rail to within plus 1/4 inch or minus 1/8 inch of required gage.
      c. Guard Face Gage: Distance between guard lines measured across the track at right angles to gage line, and is measured at the point of frog on both sides of the turnout. Design value for guard face gage is 52-3/4 inches. Guard face gage shall be within plus or minus 1/4-inch of design value.
      d. Guard Check Gage: Distance between gage line of a frog and guard line of its guard rail, or guarding face, measured across the track at right angles to the gage line. The design value for guard check gage is 54-5/8 inches. Guard check gage shall be within plus or minus 1/8-inch of design value.

P. Railroad Crossing: Install bituminous, wood plank, prefabricated sectional treated timbers, or rubber crossing as indicated, and in accordance with manufacturer's recommendations and specifications.

Q. Bonding And Grounding Track: Track shall be bonded and grounded as indicated. Where track is designated for bonding and grounding, rails shall be bonded electrically continuous and effectively grounded. The grounding system shall consist of ground conductors and ground rods. Make connections by the exothermic weld process in accordance with manufacturer's instructions. Maximum resistance to ground from grounded rail or structure shall not exceed 10 ohms. When work, in addition to that indicated or specified, is directed in order to obtain the specified ground resistance, the provision of the contract covering "changes" shall apply.
   1. Rail Joint Bond: Bond rail joints on both rails of each track. Bond rails together with not less than No. 1/0 AWG 3/8-inch diameter bare stranded soft drawn copper conductor. Track to be bonded and grounded shall be electrically isolated from the remaining track.

2. Rail Cross-Bond and Ground: Rail cross-bond and ground shall be as indicated. Make connections between grounding system or ground rods and rails with a minimum No. 1/0 AWG bare stranded soft drawn copper cable, installed at least 12 inches below the bottom of the ties. Ground rods shall be 3/4-inch diameter copper-clad steel rods. Rods shall have a hard, clean, smooth, continuous copper surface and the portion of copper shall be uniform throughout the length of the rod. The copper shall have a minimum wall thickness of 0.013 inch at any point in the rod. Each ground rod shall be die-stamped near the top with the name or trademark of the manufacturer and the length of rod in feet. Connection of conductors to the ground rods shall be by all bronze, U bolt type ground clamp. Ground rods shall be a minimum of 10 feet long and shall be driven vertically full length. Provide one cross-bond and ground for each section of bonded and grounded track.

R. Supplementary Installations: Furnish and install permanent signs and signals such as crossing, clearance, derail and other safeguards in accordance with recommended practice of the AREMA.

S. Field Quality Control
   1. Inspection of Rail Welds
      a. Visual Inspection: Inspect new rail fittings thoroughly. Pay particular attention to any defect that might hinder satisfactory operation. Inspect bolted joints for loose bolts and smooth transitions between rails of different sections. Inspect each welded joint thoroughly after removal of mold and grinding of excess metal. Pay particular attention to surface cracking, slag inclusion, gas pockets, and lack of fusion. Correct or replace parts of welds found defective. Method of correction shall be as approved by the Owner.
      b. Ultrasonic Inspection of Welded Rail Joints: Inspect each weld ultrasonically following the visual inspection. the Owner will test each weld ultrasonically following the visual inspection. Inspect and test in accordance with MIL-STD-1699. Clean rails at testing locations as directed by the Owner. The Contractor is responsible for the correction or replacement of defective parts or welds. The method of correction shall be as approved by the Owner.
   2. Inspection of Track: Perform tests to verify gage, alignment, cross level and grade at least once every 100 feet or less of track centerline length. Measure gage between points on inside of rails, 5/8-inch below top of railhead.

END OF SECTION 34 01 23 33

SECTION 34 01 23 33a - WELDED TRACK RAILS

1.1 GENERAL

A. Description
1. This specification covers the furnishing and installation of continuous welded rail, and continuous welded rail. Products shall match existing materials and/or shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Quality Control: Construction Equipment: Subject to inspection and acceptance by the Owner. Track equipment shall satisfy clearance requirements of Exhibit G of this Section, and shall have tapered wheels and a wheel gauge of 56-11/16 inches.
1. Rail tester: Automation Industries, Inc., Sperry Div.'s SRS Car 802, or accepted equivalent.
2. Rail grinder: Rail-mounted, self-propelled, high-speed type capable of removing at least 0.001 inch of metal per pass after track has been installed; Fairmont Railway Motors, A Division of Harsco Corp.'s RGC-24-A-1, or accepted equivalent. Diameter of grinding wheel shall be not smaller than 10 inches. Downward pressure of grinder shall be controllable to the extent that more metal may be removed per pass at high spots and that low spots shorter than five inches may be bridged.
3. Track geometry car: Capable of measuring deviation from track construction tolerances indicated in Exhibit H of this Section, and of recording those deviations; System Sciences Inc.'s EM-25 Hy-Rail Geometry Car, or accepted equivalent.

1.2 PRODUCTS

A. Tags: Brass or anodized aluminum; 1-1/4 inches wide by two inches long by 0.050 inch thick; and stamped with numerals 3/4 inch high, except that numerals for fractions shall be 3/8 inch high.

B. Adhesive For Bonding Tags To Concrete: Either Tru Loc United of Dublin's TRU LOC Epoxy No. 135, or DevCon Corp.'s 2-Ton Clear Epoxy Stock No. 14310, or accepted equivalent.

C. Paint: Yellow alkyd primer; FS TT-P-645.

D. Welding Material: Full penetration, complete fusion thermit type.

1.3 EXECUTION

A. Examination
1. Inspect CWR before loading CWR onto rail train; accept only undamaged CWR. Replace in-kind CWR which becomes damaged and stolen after Contractor has accepted CWR.
2. Examine ties before laying CWR; ensure that ties are free from ballast and that inserts contain no debris.

B. Laying CWR
1. Lower CWR onto tract, and with gauge side of CWR facing centerline of track. If CWR will be cut, paint a six- inch stripe on gauge side of each sawn rail. After CWR has been placed, arrange ends of opposite CWR to be more than ten feet from the ends of the placed CWR when measured along centerline of track, and arrange field weld to be more than 10 feet from weld in opposite CWR, more than 14 feet from shop welds in same CWR, and more than 14 feet from center of bonded joints. Align gauge side of CWR in tangent track to be equidistant from track centerline, and align gauge side of low CWR in curved track to be 28-1/4 inches from track

centerline. Do not strike rail with metal objects. If rail ends will be welded, align rail ends with a rail alignment beam. Record weight, mill-brand, rolling year, and heat number of end rails in CWR; date and time of placing CWR; length of CWR; air and rail temperature; stationing of both ends of CWR; and weather conditions. Place thermometer on shaded side of CWR base next to web and allow thermometer to remain there until no change in temperature is detected, but for not less than five minutes, then read and record temperature and remove thermometer.

a. If CWR will be bolted to abutting CWR, saw-cut end of CWR in which pulling hole has been drilled; sawcut one inch from hole away from end of CWR and perpendicular to CWR, then discard portion containing hole. Cut off bent rail ends of CWR square and clean with either rail saw or abrasive cutting disc. Bevel end of CWR in accordance with AREA Standard Plan Number 1005-40, and drill bolt holes perpendicular to web of CWR using template as drilling guide. If rail is not heat-treated carbon type, harden and chamfer end of CWR by methods and with results specified in AREA MRE, Chapter 4, Part 2, Supplementary Requirement S1.

b. If CWR will be welded to abutting CWR, remove burrs and lipped metal from end of CWR, then remove loose oxide, scale, and foreign material from within six inches of end of CWR.

2. Gapping CWR

a. At Joints to be welded: Align CWR with abutting CWR, and adjust end of CWR to be thickness-of-field-weld away from abutting CWR.

b. At Joints to be bonded: Calculate gap width by the formula:

$G = 0.000078L(t-T) + Q$

where G = gap, in inches.
L = length of CWR, in feet.
t = 60 degrees F if rail will be anchored in subway;
75 degrees F if rail will be anchored in Station undercover;
80 degrees F if rail will be anchored elsewhere.
T = temperature of rail when being anchored.
Q = 0.125 inch if joint will be noninsulated; end post thickness otherwise.

c. Align CWR with abutting CWR, adjust end of CWR to be width-of-gap away from abutting CWR, and, if gap will be wider than 1- 1/2 inches, insert a dutchman 1/2 inch shorter than width of gap. Remove dutchman before anchoring rail and if it is anticipated that rail will become warmer before being bonded.

C. Temporarily Anchoring CWR: If CWR is either on tangent or on curves the radius of which is larger than 1,900 feet, anchor CWR, by either rail clips or track spikes, at track gauge on every fifth rail fastener or tie plate. CWR on curves with radius of less than 1,900 feet, anchor CWR, by either rail clips or track spikes, at track gauge on every third rail fastener or tie plate. Anchor CWR to tie plates with track spikes and insulators at grade crossing and with rail clips and insulators on concrete ties. Anchor CWR to rail fasteners with bolted rail clips at hi-rail access.

1. Drive track spikes adjacent to and along both sides of each CWR base with insulator placed between rail and track spike.
2. Anchor CWR to concrete ties with rail insulators placed on rail base and driving rail clips in tie embedded rail shoulders.
3. Anchor CWR to rail fasteners at hi-rail access with rail clips inserted in rail fastener, and torque clip bolt to 250 pounds.

D. Joining CWR: Remove rail clips within 300 feet of joint to be welded and of joints to be bonded. Weld ends of CWR indicated to be welded. Bond ends of CWR indicated to be bonded; if a dutchman has been inserted at joints to be bonded, remove dutchman.

1. Welding

a. Weld in accordance with Specifications for Fabrication of Continuous Welded Rail in Chapter 4, Part 2 of AREA MBE except that running surface shall have a crown ensuring that top of weld is smooth and flat after weld has cooled and excess weld has been ground off. Welding will be acceptable if it satisfies the requirements of Du-Wel Steel Products Co.'s Recommended Procedures for Boutet Process Quick Preheat Thermit Rail Welding.

b. Finish weld by methods and with tools not causing weld to become hotter than 1077 degrees F. Remove surplus metal from hot rail head weld with a mechanical or hydraulic rail- shearing device. Trim and finish welds with a profile grinder. When measured with a three-foot metal straightedge, portions of rail shall be within the following tolerances:
   1) Top and sides of rail head: Within plus 0.03 inch and minus 0.00 inch of parent rail section.
   2) Rail base: Within plus 0.01 inch and minus 0.00 inch of the parent rail section, only for welds which are within three inches of edge of rail fasteners and tie plates.
   3) Rail web and remainder of rail weld: Within plus 0.125 inch and minus 0.00 inch of the parent rail section.

c. Reinstall rail clip on fastener from which removed.

d. Remove oxide, scale, and foreign material from web of rail on both sides of CWR and for three inches on one side of field weld. Paint a two-inch wide stripe one inch from weld the full height of the web on gauge side of CWR and along the base of CWR.

2. Bonding: TRACK APPURTENANCES.

E. Measuring Rail Alignment At Shop Welds: Using a steel straightedge and a tapered gauge specified, measure the horizontal and vertical alignment of each string of CWR on both sides of rail head at each shop weld and at points 5/8 inch below top of rail and on top of rail along its centerline. Record measurements at center of welds and at points six inches and 18 inches each way of the weld to the nearest 0.001 inch.

F. Grinding And Removing Shop Welds: If the Owner judges that a shop weld in CWR is misaligned, the Owner will order weld be ground or removed. If the Owner orders weld be ground, grind weld and adjacent rail to the extent determined by the Owner, but not more than 1/16 inch thickness. If the Owner orders weld be removed, saw-cut rails 1/2 inch from each side of weld, field-weld ends of CWR, and finish welds in accordance with directions by the Owner.

G. Permanently Anchoring CWR: Anchor CWR on aerial structures, in tie- and-ballasted track, in subways, and through station platforms only if temperature of CWR is as specified.
1. Mechanically vibrate CWR and loosen rail clips that have been temporarily fastened at every third or fifth tie or rail fastener and in increments of 500 feet. Set CWR to horizontal and vertical alignments within construction tolerances as directed by the Owner.
2. Continue vibrating CWR as remainder of rail clips are being permanently installed.
3. Record rail-anchoring data include type of adjustment by which zero stress in CWR was achieved and end movement of CWR at 30- minute intervals or at 200-foot lengths of track when rail is being anchored.
4. After CWR has been finally surfaced, rail fasteners shall be laterally adjustable not less than 1/4 inch in both directions.

H. Testing
1. CWR and shop welds: Ultrasonically test CWR and shop welds with a track inspection car. Identify each test with the Project number and title, date, testing agent, and location by station.
2. Field welds: Test field welds ultrasonically by the multiprobe pulse-echo technique, and with the Kroutkrame USK-7 tester or accepted equivalent.

I. Adjusting: If shop weld is determined to be defective by ultrasonic testing, remove weld by saw cutting CWR not less than one inch on both sides of the weld, making another cut in CWR not less than 20 feet from weld, and installing new section of rail with two field welds; or cutting out a section of CWR equal distance each way from shop weld.
1. If weld and section of CWR is on tangent track, furnish and install a rail not shorter than 14 feet and field-weld that rail to installed CWR.
2. If weld and section of CWR is on curved track, furnish and install a rail not shorter than 39 feet and field-weld that rail to installed CWR.

J. Installing Tags: Install one foot inside superelevated CWR, and orient tag to be read in ascending order from tangent to spiral to spiral to curve.
   1. If concrete surfaces of tag locations are rough, grind surfaces smooth. Remove laitance, dust, and clean concrete surface.
   2. Apply epoxy to back of tags, and tags on track concrete surfaces and on concrete ties at beginning and ending points of curved track and at elevation increments of 1/4 inch within spirals and curves.

K. Grinding CWR: Grind top of rail head not fewer than three times and in a continuous operation, all within three days after starting to grind. Remove not less than 95 percent of rust and mill scale.

L. Adjusting Track: Eliminate track deviations, as disclosed by the Owner's analysis of as-built survey data and final track inspection, exceeding specified tolerances.

M. Clean-Up: Remove debris, excess rail, spilled concrete, and clusters of grinding particles. Cut exposed tie wires and stirrups flush with concrete surfaces, remove cuttings.

END OF SECTION 34 01 23 33a

SECTION 34 01 23 33b - THERMITE WELDED TRACK RAIL

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of welding crane and railroad rail -thermite method. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals: Submit the following.
1. Samples
   a. Operator qualification welds
   b. Procedure qualification welds
2. Test Reports
   a. Ultrasonic tests
   b. Hardness tests
3. Certificates
   a. Rails
   b. Welder's qualification
   c. Welding procedure
   d. Cold weather welding procedures
   e. Wet weather welding procedures
   f. Rail correction method
   g. Rail preparation
4. Manufacturer's Instructions: Thermite kit
5. Closeout Submittals: Submit welded joint records as required by paragraph entitled "Joint Records."

C. Quality Assurance: Use only qualified procedures and personnel. Procedures and personnel previously qualified in accordance with this specification shall not require requalification, provided qualifications have not lapsed and qualification records are available.
1. Operator Qualification: The Contractor shall notify the Owner in writing one week prior to making qualification welds. Operators shall qualify by welding one acceptable rail joint in accordance with a qualified procedure. This qualification may be accomplished either prior to production welding or on the first joints to be welded at the work site. If welding operator qualification is conducted at the work site, perform no further welding until the qualification weldments have been accepted by visual inspection and ultrasonic tests. Written approval of the acceptability of the welded joint shall be obtained from the Owner prior to continuing with welding. Welding operator's qualification shall be effective from the test date and will remain in effect for a period of one year.
2. Acceptable Welds: Shall be those welds that meet the visual inspection and ultrasonic test requirements of MIL-STD-1699. Welds selected for testing for Brinell Hardness shall meet the requirements of ASTM E 10 and paragraph entitled "Hardness Test."
3. Procedure Qualification
   a. Written Procedure: Prepare for the welding process to be used. The procedure shall include the information specified in paragraph entitled "Submittals," as well as any particulars of the process deemed pertinent to the successful completion of the welds.
   b. Manufacturer's Procedure: No separate qualification is necessary for various rail weights, although in order to be qualified for a specific rail weight or cross section, the procedure shall include fit-up requirements and other features unique to the rail weight or cross section of the rails to be welded.
   c. Welding Procedure Qualification

1) Provide welding procedure qualification records acceptable to the Owner as proof of previous qualification under this specification. The records shall include the information specified in paragraph entitled "Submittals," as well as any particulars of the process deemed pertinent to the successful completion of the welds.
2) Welding procedure not previously qualified under this specification may be qualified by providing four consecutive acceptable welded rail joints. An acceptable weld is defined as a weld which has been visually inspected and ultrasonically tested and has been found acceptable in accordance with MIL-STD-1699 and ASTM E 10. This qualification may be accomplished either by shop fabrication of the joints or on the first four joints welded at the work site. If procedure qualification is accomplished at the work site, perform no further welding until the qualification weldments have been accepted by visual inspection and ultrasonic tests. Obtain written approval of the acceptability of the four welded joints from the Owner prior to continuing with welding.
3) Ambient temperature: Welding procedure shall be considered qualified for use at an ambient temperature of 50 degrees F and above regardless of ambient temperature during welding of qualification assemblies. No welding shall be conducted below 50 degrees F without a specifically qualified procedure. Procedures qualified for use at ambient temperatures less than 50 degrees F shall be qualified by welding test assemblies in accordance with the procedure qualification requirements of this specification at the desired minimum ambient temperature plus or minus 5 degrees F. Procedures thus qualified shall be considered acceptable for use at the minimum qualified ambient temperature and above.
4) Wet weather welding: Perform welding only during dry weather. No welding will normally be permitted on wet, showery and inclement days. However, if means are provided to protect the work and work area, welding may be performed during other than dry weather, if approved by the Owner. Welding in confined spaces shall comply with AWS D1.1 to assure adequate ventilation for personnel safety.

4. Required Data: Submit thermite kit manufacturer's instructions and recommendations covering rail end preheat treatment, thermite ignition, mold removal, and finishing.
5. Welding Procedure
   1) Thermite kit manufacturer's name and kit size or designation
   2) Thermite kit batch numbers and manufacturing date
   3) Welding procedure designation (name, number)
   4) Size of rail section being joined and type of rail
   5) Test assembly identification number
   6) Results of nondestructive testing of qualifications assemblies
   7) Date of qualification (test date)
6. Required Qualification Welds: Submit operator qualification welds in accordance with paragraph entitled "Operator Qualification." Submit procedure qualification welds in accordance with paragraph entitled "Welding Procedure Qualifications." Include results of ultrasonic test and hardness tests. Welder’s certification or procedure qualification may be substituted, pursuant to paragraph entitled "Quality Assurance."

D. Delivery And Storage: Deliver materials in the manufacturer's original unbroken packages or containers plainly labeled with the manufacturer's name and brand.
1. Receipt Inspection of All Thermite Weld Kits: Shall consist of a visual inspection of the weld kit package for freedom from damage and the recording of the thermite weld mix batch number and manufacturing date. Do not use kits which have been manufactured more than 2 years before the date of use or show signs of having been wet.
2. Material Control: Store materials in the original package and keep dry at all times until used.

1.2 PRODUCTS

A. Materials: Provide in kit form including preformed mold, thermite powder, wicking cord, luting material, and all necessary materials and accessories needed to provide one welded rail joint per kit. Molds shall be factory-made, moisture free, and of nonhygroscopic material.

1.3 EXECUTION

A. Sequence Of Operation: Perform work in strict accordance with the qualified procedure.
   1. Rail Preparation: Cut rails which are battered, cracked or notched, or which contain bolt holes so that these irregularities are removed. Rail surface shall be free of grease, dirt, loose oxide, and moisture on the face of and for approximately 5 inches from the joint to be welded. Clean rail ends by grinding or wire brushing. Use a torch to remove grease, oil, or moisture in accordance with procedures in thermite manufacturers instructions. Rail cutting, when necessary, shall be by the saw-cut method. Remove all burrs, rolled-over edges, and loose oxide before applying the mold. No flame cutting of rails is permitted. If the space between the mold and the rail is unusually large on used or relayer rails, fill this gap with a piece of wicking cord before luting or packing.
   2. Rail Alignment: Separate rail ends as recommended by the welding process manufacturer. Align rails as to both surface and gage, and raise the rails at the joint to compensate for the greater thermal contraction that occurs in the rail head during cooling relative to the web and base regions. Measure the amount of joint elevation with a 36 inch long straightedge centered at the joint. The correct elevation is obtained when 1/16 inch separates the top of the rail head and bottom surface of the straightedge at both ends.
   3. Placing of Molds: Attach the molds to the rails, centered over the joint, and seal the molds to the rail with luting material according the welding kit manufacturer's instructions. Handle the luting material, a mixture of clay and sand, so that none is introduced into the weld chamber. Align so that the centerline of the mold coincides with the centerline of the gap. Install the tapping plug or discs in the crucible and pour in the prescribed amount of thermite mixture.
   4. Preheating Rail Ends: In accordance with the manufacturer's instructions and recommendations.
   5. Ignition of Thermite: Follow manufacturer's instructions and recommendations.
   6. Mold Removal: Follow manufacturer's instructions.
   7. Finishing: Follow manufacturer's instructions and recommendations. No finishing is required on the web and base of rail. Perform final grinding when the weld and rail have cooled to ambient temperature. Under no circumstances shall a cutting torch be used to remove excess weld metal.
   8. Joint Records: Provide a record of the date and location of each weld made. The record shall also include the rail type, size, thermite kit manufacturer's name, and thermite weld portion batch number. Also, provide a record of the nondestructive test date and acceptance date.

B. Inspection And Testing
   1. Visual Inspection: Each welded joint shall be inspected by the Contractor after removal of the mold and grinding or removal of excess metal. The inspector shall pay particular attention to surface cracking, lack of fusion and other surface irregularities. The Contractor shall correct or replace all defective welds at no additional cost to the Owner. The method of correction shall be approved by the Owner.
   2. Nondestructive Inspection: Inspect each welded joint by ultrasonic tests using the method of inspection and acceptance as prescribed in MIL-STD-1699. The Contractor shall correct or replace all defective welds at no additional cost to the Owner. The method of correction shall be approved by the Owner. All repairs to defective welds shall be ultrasonically inspected by the Contractor using the method of inspection and acceptance as prescribed in MIL-STD-1699.
   3. Hardness Tests: Perform Brinell hardness test in accordance with ASTM E 10 and ASTM E 110. The Brinell Hardness Number (BHN) of the weld and for the rail for a distance of 6 inches on each side of the joint shall be greater than 250. In the heat-affected zone (a distance not greater than one inch to each side of the joint) the BHN may be up to 20 points lower except for the top of the rail, which shall be not less than 250. Check hardness on at least 10 percent of all welds. Tests shall be performed on randomly selected welds or as directed by the Owner.

END OF SECTION 34 01 23 33b

SECTION 34 01 23 33c - DIRECT FIXATION TRACK

1.1 GENERAL

A. Description
1. This specification covers the furnishing and installation of direct-fixation track. Products shall match existing materials and/or shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Quality Control
1. Construct a complete section of direct-fixation track not shorter than 250 track feet; construct within trackway and where required by the Owner. Section constructed as indicated will become a part of the permanent track; otherwise, remove section and construct another section until section is constructed as indicated.
2. If inserts will be installed in a hole cored into the track concrete, furnish services of grout manufacturer's representative for one working day at start of coring operations. Representative shall inspect cored hole; if hole is acceptable to representative, representative shall enforce grout manufacturer's mixing and installation procedures and methods and witness the placing of grout and inserts.

1.2 PRODUCTS

A. Grout: Premeasured, prepackaged, cement-based, nonmetallic, nonshrink type; CRD C621. Retemper only in accordance with manufacturer's printed instructions. Water shall be potable.
1. Shrinkage
a. Grout for repairing voids in track concrete: Zero percent shrinkage in plastic state and not more than 0.1 percent expansion in hardened state when tested in accordance with CRD-C621, Sections 10.1 and 10.2.
b. Grout for setting anchorage inserts: Zero percent shrinkage and expansion in plastic and hardened states when tested in accordance with CRD C621, Sections 10.1 and 10.2.
2. Compressive strength, when tested in accordance with CRD C621:
a. Grout for repairing voids in track concrete: 5,000 psi at end of 28 days.
b. Grout for setting anchorage inserts: 2,000 psi at end of seven days.
3. Initial setting time, when tested in accordance with ASTM C191:
a. Grout for repairing voids in track concrete: Not sooner than 60 minutes.
b. Grout for setting anchorage inserts: Not sooner than 10 minutes.

B. Shims: ASTM A 167, UNS S30400; and 1/16-, 1/8- and 1/4-inch thick. Shim for rail fastener not having full bottom plate shall be 1/4 inch larger on all sides than rail fastener under which it will be placed. Holes shall be one inch diameter, and either punched or drilled to anchor bolt pattern.

C. Thread Sealant: Low melting point wax; Sanchem, Inc.'s NO-OX-ID 'A' Special, or accepted equivalent.

1.3 EXECUTION

A. Preparation: Test the Owner -selected anchorage inserts.
1. Pull-out test
a. Test equipment
1) Reaction plate: Steel plate with a hole drilled in center that is one inch larger than the insert top collar.
2) Loading system: As shown on accepted working drawings.

b. Test Procedures
   1) Restrained test: Place reaction plate over anchorage insert to be tested. Set-up accepted loading system and connect that system to bolt engaged in anchorage insert. Exert initial uplift of 1,000 pounds against reaction plate. Increase load against reaction plate at rate of 1,000 pounds per second until load becomes 20,000 pounds.
   2) Unrestrained test: Remove reaction plate and apply load of 10,000 pounds uplift on anchorage insert against reaction surface outside six-inch diameter area in which anchorage insert is centered.
c. Acceptance criteria: No evidence of anchorage moving upward.
d. Remedies: Anchorage insert failing to satisfy acceptance criteria will be rejected.
   1) Test every insert along that rail in both directions until 10 successive inserts in each direction satisfy the acceptance criteria.
   2) Remove defective anchorage insert and furnish and install new insert. Test new insert, and prepare a pullout test inspection report after that insert has been tested.

2. Torque test
   a. Procedure: Screw anchor bolt into anchorage insert tight against lock nut set two inches from end of bolt. Apply 500 foot-pounds to anchor bolt head.
   b. Acceptance criteria: Anchorage insert shall show no evidence of rotational movement.
   c. Remedies: Anchorage insert failing to satisfy acceptance criteria or not installed within the tolerances specified or both, will be rejected. Should an insert fail the torque test, test inserts in accordance with Article 1.4A.1.a.1).

B. Examination: Verify that the following conditions exist, and record data on Exhibits A, B, and C of this Section and of other Sections:
   1. Bearing surface of track concrete is within allowable tolerances for cant, elevation, and dimensions.
   2. Rail fastener anchorage inserts are undamaged, and have been installed perpendicular to and flush with top of concrete.
   3. Anchorage inserts have been subjected to restrained and unrestrained pull-out tests and torque tests, and defective inserts have been removed and replaced.

C. Installation
   1. Remove plugs from anchorage inserts and place rail fasteners with anchor bolts engaged in inserts. Coat threads of anchor bolts with thread sealant.
   2. Install shims between rail fastener and track concrete. Install not more than two shims at each rail fastener.
   3. Fully anchor rail fasteners to track concrete with anchor bolts torqued to 300 foot-pounds. Tighten anchor bolts on both sides of rail simultaneously. Check torquing equipment daily; torque of equipment shall be within two foot-pounds of that of calibrated and certified torque wrench specified in CONTINUOUS WELDED RAIL.

END OF SECTION 34 01 23 33c

SECTION 34 01 23 33d - CONCRETE TRACK CROSS TIES

1.1 GENERAL

A. Description
1. This specification covers the furnishing and installation of ballast, precast concrete ties, rail fastenings, and continuous welded rail. Products shall match existing materials and/or shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals
1. Submit certified test results of ballast tests not less than 15 days before starting shipment.

C. Quality Control
1. Source quality control: If ballast source or appearance change, test ballast gradation and visually inspect production site immediately before initially shipping first batch of ballast from that source and of that appearance.
2. Construction equipment: Subject to inspection and acceptance by the Owner.
   a. Ballast roller: Self-propelled, pneumatic-tired, and not lighter than nine tons.
   b. Ballast compactor: Vibratory, not lighter than 2-1/2 ton, and be capable of applying a dynamic load of nine tons. Ensure that control of compactor's tamping cycle will induce maximum uniform compaction.
   c. Ballast tamper: Production Type with a minimum of 16 squeeze-vibratory tamping shoes.

1.2 PRODUCTS

A. Materials
1. Sub-ballast (where required): Aggregate-soil materials conforming to an ASTM D 1241, Type I, Gradation A mixture. Use sub-ballast in frost areas where the ballast thickness requirement exceeds 10 inches and elsewhere as required.
2. Ballast: Crushed stone, Size No. 4 for mainline ballast materials and Size No. 5 for yard and house tracks, conforming to Chapter 1, Part 2, of American Railway Engineering Association (AREA) “Manual for Railway Engineering (Fixed Properties).”
3. Concrete Ties: Comply with the material requirements specified in Chapter 10 of AREA “Manual for Railway Engineering (Fixed Properties).” Concrete ties shall be a minimum of 8 ft. 6 in. in length.
4. Welded Rail: New rail shall be 115 lb. Section, **unless directed otherwise**, and shall conform to Chapter 4, Part 2 of AREA “Manual for Railway Engineering (Fixed Properties).” Relay rail shall conform to criteria specified in Chapter 4, Part 2 of AREA “Manual for Railway Engineering (Fixed Properties).” Mingling of new and relay rail will not be permitted.

1.3 EXECUTION

A. Installation
1. Initial ballast
   a. Uniformly distribute ballast over the sub-ballast and firmly compact before distributing ties.
   b. Uniformly spread each lift of ballast within initial layer with not less than four passes of either a roller or compactor. Limit the depth of each compacted lift within the initial layer to four inches. Make top of initial layer not less than four inches below final ballast surface.
2. Ties: Place primary track ties on 30-inch centers. Place secondary track ties on 33-inch centers.

a. Place ties to ensure that bottom of each tie will bear fully on initial layer of ballast and be normal to track centerline.
b. Arrange ends of ties containing contact rail bracket anchor inserts to be on contact rail side.

3. Continuous Welded Rail (CWR)
   a. Remove ballast and debris from inserts and concrete ties before placing rail pads, CWR, and rail clips.
   b. Place CWR on the pads in accordance with accepted working drawings. Do not drag CWR over rail pads. Use no on-track equipment until CWR has been fastened to concrete ties.
   c. Install, anchor and field-weld CWR producing zero thermal stress in rail at 85 degrees F, plus five degrees F, or minus 10 degrees F. Anchor opposite rails at temperatures within five degrees F of each other.
   d. Anchor rails in ballasted track by installing rail clips and fastener insulators in accordance with concrete tie manufacturer's recommendations. Proceed with final rail anchoring in ballasted track only after track has been ballasted preventing tie movements caused by thermally induced force and until track has been initially raised, tamped, and aligned.

B. Surfacing And Aligning: Place ballast in cribs and shoulders of track structures, and in quantities which will fill tie cribs and be sufficient for initial track raise and to hold track after initial track raise.
   1. Surface track without bending rail, straining joints, or damaging rail fastenings. Simultaneously tamp ballast on both sides of tie, from points 15 inches inside both rail centers to ends of tie. Limit each track lift to not more than four inches. Initially raise track to an elevation ensuring that a final raise of neither less than one inch nor more than three inches will be required to bring track to final elevation.
   2. After track has been initially raised and aligned, field-weld and anchor rails within specified zero thermal stress range. Remove damaged ties and fastenings, in the judgment of the Owner, during surfacing operation and install new ties and clips. Suspend surfacing when ambient temperature is hotter than 95 degrees F.
   3. Compact shoulders and cribs with a vibrator compactor acceptable to the Owner. At no additional expense to the Owner, remove at random a maximum of one percent of ties so that the Owner may inspect compaction of ballast beneath ties to determine tamping variables of each piece of tamping equipment, and to spot-check production work. Reinstall ties immediately after compacted ballast has been accepted.
   4. Complete final surfacing and aligning of track. Reslope fouled and disturbed subballast outside toe of ballast slope.

END OF SECTION 34 01 23 33d

SECTION 34 01 23 33e - TIMBER TRACK CROSS TIES

1.1 GENERAL

A. Description
1. This specification covers the furnishing and installation of products for hi-rail accesses, timber panels, and grade crossings. Products shall match existing materials and/or shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

1.2 PRODUCTS

A. Ties: Timber type; 8-1/2 feet long except ties on which contact rail insulators will be mounted shall be ten feet long. Furnish ties which will be within limits of panels, and ties which will be not more than 10 feet beyond panels.

B. Panel Timbers, Flangeway Timbers, And Support Blocks: American Railway Engineering Association (AREA) “Manual for Railway Engineering,” Chapter 3, Part 6, Type A, fine-grained hardwood such as maple, gum, or birch and specially fabricated as indicated. Support blocks shall be fabricated from a single piece of timber.

C. Hi-Rail Access: Panel timbers, flangeway timbers, and support blocks.

D. Drive Dowels: Steel conforming to ASTM A 575, twisted, of diameter not smaller than 3/4 inch.

E. Drive Spikes: Dome head steel type, 3/4-inch diameter by 12-inches long, and galvanized in accordance with ASTM A 153; Lewis Bolt and Nut Co., or accepted equivalent.

F. Guard Posts: Galvanized steel pipe conforming to ASTM A 53, Grade B, 4-inch diameter by 8-feet long.

G. Ballast Prime Coat: Grade MC-250.

H. Asphalt Concrete: Asphaltic Concrete in accordance with the requirements of YYYY57YYYY.

I. Concrete: Class 3000 Portland Cement Concrete, in accordance with requirements of YYYY73YYYY.

J. Timber Screws For Anchoring Rail Fasteners

K. Rail Fasteners: L. B. Foster Co.'s, Transit Products Division, "Type H-10", or approved equivalent.

L. Tie Plates:

M. Track Spikes:

N. Guard Rails: Guard Rail, conforming to the requirements of YYYY616YYYY.

O. Ballast: Conforming to the requirements of YYYY602YYYY.

P. Aggregate Base: Aggregate.

Q. Fabrication: Fabricate timbers and blocks before pressure-treating.
1. Fabricate timbers to be eight feet long.

a. Orient timber heartwood to be downward.
b. Cut ends of timbers square except bevel distal ends of timbers, which will comprise the end panels, at 45 degrees.
c. Cut timbers to dimension ensuring that top of installed panel is 3/4 inch below top of rail.
d. Notch flangeway timbers to clear rail fastener and tie plate hardware by not less than 1/2 inch.
e. Drill 5/8 inch diameter holes for drive spikes through timbers, and on 19 3/16-inch centers. Arrange adjacent holes to be on opposite sides of tie centerline.
f. In hi-rail access timber panels, drill four, 5/8 inch diameter holes for drive dowels; drill parallel to center of timbers' vertical dimension. Holes shall be no closer to end of timbers than one foot, and remainder equidistant from each other.

2. Fabricate blocks to fit between rail fasteners and tie plates, and such that blocks will support notched portion of flangeway timbers.
3. Pressure-treat timbers and blocks in accordance with AREA Chapter 3, Part 6.
4. Assemble treated timbers into panels eight feet long, with heartwood downward and ends aligned with each other. Drive dowels.

1.3 EXECUTION

A. Examination: In accordance with requirements of YYYY602YYYY.

B. Preparation: In accordance with requirements of YYYY602YYYY.

C. Installation:
1. Place initial layer of ballast.
2. Distribute and place timber ties on 19-3/16-inch centers, with wider heartwood downward, normal to centerline of track, and aligned with ends of ties on line side of track equal distance from rail.
3. Place aggregate base.
4. Place and anchor rail fasteners and tie plates to timber ties with timber screws and track lock spikes
5. Unload, lay, and join CWR; clip and spike CWR to rail fasteners and tie plates, and raise, align, and surface track to indicated lines, grades, and elevations.
6. Dress ballast level one inch below top of ties and to slopes indicated.
7. Drill 1/2 inch diameter holes into installed ties for drive spikes for a depth of five inches, immediately remove debris from holes, and fill holes with pentachlorophenol. Panels may be installed to facilitate the temporary access by hi-rail equipment, but shall be removed for grinding of the running rail.
8. Place one-piece support blocks in space between ties and flangeway timbers, against base of rail, and between rail fasteners. Place panels on ties and support blocks, and arrange panels with ends coinciding with centers between the ties; butt ends of panels. Dap and saw flangeway timbers, panel timbers, and support blocks to satisfy field conditions within specified tolerances, and apply pentachlorophenol to dapped and sawed timbers and blocks. Insert no shims between panels and ties.
9. Drive spikes vertically, and until spike head bears on timbers.
10. Apply prime coat and asphalt concrete in accordance with the requirements of YYYY57YYYY.
11. Apply asphaltic concrete between flangeway timbers and grade crossings in accordance with the requirements of YYYY57YYYY.
12. Install crossing in accordance with crossing manufacturer's printed installation instructions.
13. Install guard posts vertically and project posts three feet above top of rail; fill posts with concrete and crown top in accordance with the requirements of YYYY73YYYY.
14. Install guard rail in accordance with the requirements of YYYY616YYYY.
15. Tolerances from design dimensions.
a. Top of flangeway timber, vertical depression below top of rail: Plus 1/4 inch, minus zero.
b. Clearance between side of flangeway timbers and edge of rail: Plus 1/2 inch, minus zero.

c. Difference in elevation between surface of flangeway timber and surface of abutting asphalt concrete: 1/4 inch.

END OF SECTION 34 01 23 33e

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 34 01 23 33f - RESILIENT TRACK CROSS TIES

1.1 GENERAL

A. Description
1. This specification covers the furnishing and installation of resiliently supported track at-grade, and continuous welded rail. Products shall match existing materials and/or shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Quality Control:
1. Testing of Resiliently Supported Two-Block Concrete Tie Assembly: In lieu of qualification testing of two-block concrete tie complete with resilient supports and rail fastening assemblies in accordance with Flexural Strength Testing of two-block ties in AREA MRE Chapter 10, Section 1.10 and tests for Noise and Vibration Performance as specified in this Section, Contractor may submit for the Owner approval certification by an independent testing laboratory that ties, supports, and rail fastenings have passed the tests specified or equivalent tests.
   a. Submit for the Owner approval, prior to fabrication and testing, shop drawings detailing two-block concrete ties, resilient supports, and rail fastenings; detailed description of steps required for complete installation, replacement and adjustment of individual components; and detailed description of all tests.
   b. Arrange testing to be performed by an independent testing agency approved by the Owner. Production testing may be performed at Contractor's facility providing that facilities and testing procedures meet the approval of the Owner.
   c. All testing performed by Contractor shall be witnessed by the Owner.
   d. Qualification tests for Noise and Vibration Performance.
      1) Test assembly
         a) Except as otherwise specified herein, perform tests on a single concrete tie block complete with resilient supports, and rail fastening assembly certified to be identical to those to be furnished. Single concrete tie block shall be cut from a complete two-block tie assembly by cutting in half the tie bar joining the tie blocks.
         b) Cast or grout two-block tie and single tie block complete with resilient supports in a Class 4000 concrete foundation block as specified.
         c) Assemble a section of 115 RE rail not shorter than one foot, rail pad, and rail fastenings to two-block tie. Torque or drive rail fastenings in same manner and with the same force or torque as specified.
         d) Immediately prior to starting tests, stabilize temperature of all components of the assembly at 68 degrees F, plus or minus four degrees F.
         e) Perform testing only when ambient temperature is 68 degrees F, plus or minus four degrees F unless otherwise specified.
      2) Sequence of tests on assembled resiliently supported two-block concrete tie.
         a) Static vertical stiffness test
            i. Vertical test load: Zero to 15,000 pounds, applied at a steady rate of 2,000 pounds per minute with optional 30-second pauses at every 1,000-pound increment.
            ii. Point of application: Downward at and normal to centerline of rail and centerline of tie block.
         b) Test procedure
            i. Preconditioning and seating loading: Apply vertical load varying at a rate of 2,000 pounds per minute from zero to 15,000 pounds and back to zero load. Set the deflection reading devices at zero one minute after load returns to zero pounds.

ii. For each 1,000-pound load increment, measure and record vertical deflection of the rail head to the nearest 0.001 inch 30 seconds after rail head has stopped moving.

iii. Upon completing measuring and recording vertical deflection of the rail lead at 15,000 pounds nominal load, commence reducing the load at the same rate that was used for loading and record vertical deflections of the rail at 1,000-pound load reduction increments. One minute after reaching zero load on rail, measure and record the residual deflection of the rail.

iv. Average the two sets of vertical deflection readings for determining the normal deflections of the rail. Plot the normal deflections against the record values for vertical loads.

v. Calculate the vertical static stiffness of the resiliently supported two-block assembly by dividing the measured difference in static force between nominal values of 7,000 and 8,000 pounds by the measured difference in the average static deflection at 7,000 and 8,000 pounds.

c) Test acceptance criteria

i. Slope of the load-deflection curve: Not less than 50,000 pounds per inch nor more than 90,000 pounds per inch for all loads between 5,000 pounds and 15,000 pounds. Constancy of slope: Within 10 percent over the load range.

ii. Recovery of tie block to original rail-head position: Within 0.015 inch of its pre-test position within one minute after test load has been removed.

3) Dynamic vertical stiffness test

a) Vertical test load: Sinusoidal force with a zero-to-peak amplitude of 500 pounds and a frequency of six Hertz, superimposed on a static compressive force of 7,500 pounds.

b) Point of application: Downward at and normal to centerline of rail and centerline of tie block.

c) Points on rail for measuring deflections: Two along centerline of rail and equidistant from point of load application.

d) Measurement technique: Measure vertical force with a device capable of long term DC response to force, such as a strain gauge load cell. Measure vertical deflection with two identical linear variable differential transformer (LVDT) displacement gauges located symmetrically about the line of vertical force application. Locate displacement transducers above or below rail. Indicate DC force with a device capable of DC response without interference from the dynamic force component, such as an oscilloscope, oscillograph, or meter with long averaging time. Indicate the dynamic force and displacement with a device capable of detecting a six Hertz signal, but not responding to or compensating for DC signals, such as an oscilloscope, oscillograph or low frequency AC coupler meter.

e) Test procedure

i. Apply a constant vertical compressive force of 7,500 pounds to the top of the rail, centered over the rail and the centerline of the single tie block. After the constant force has been established, superimpose on it a sinusoidally varying six Hertz force with a zero-to-peak amplitude of 500 pounds.

ii. Observe and document the DC and AC components of the force and the AC component of the deflection to an accuracy of plus or minus three percent.

iii. Calculate the dynamic stiffness of the single tie block at a static compressive force of 7,500 pounds by dividing the measured peak-to-peak force by the measured peak-to-peak deflection.

f) Test acceptance criteria: Dynamic vertical stiffness shall be not less than 300,000 pounds per inch nor more than 500,000 pounds per inch.

4) Static lateral stiffness test
   a) Vertical preload: Apply a constant force of 7,500 pounds through the centerline of rail and centerline of tie block with a fixture not restraining or causing lateral motion of the tie block or imposing lateral forces in excess of two percent of the maximum lateral test force.
   b) Lateral test load: Zero to 7,500 pounds, applied at a steady rate of 1,000 pounds per minute with optional 30-second pauses at each 500-pound increment. One complete test cycle shall be run using a compressive load on the tie bar, and one complete test cycle shall be run with a tensile load on the tie bar.
   c) Point of application: Apply lateral test loads to the projecting end of the cut tie bar, with the line of action of the force along the centroid of the lower horizontal leg of the tie bar. Rollers or large radius linkages may be used to restrain motion of the tie bar caused by the eccentricity of the line of action of the force with the area of the boot resisting the lateral force. However, the means of restraint must not interfere with the deflection of the tie block under the vertical preload or the lateral deflection of the block.
   d) Points on tie block for measuring deflections: Measure deflection of tie block at a point on the end of tie block opposite tie bar, one inch above top of boot in the unloaded position, and on centerline of tie block.
   e) Test procedure
      i. Apply 7,500-pound vertical preload downward through center of rail at the centerline of tie block. Adjust linkages or rollers to prevent excessive motion of the tie bar normal to the line of action of the lateral force.
      ii. To precondition and seat tie and boot assembly, apply a lateral load varying from zero to 7,500 pounds and immediately return to zero at a rate of 1,000 pounds per minute. Zero lateral deflection reading devices one minute after the lateral load returns to zero pounds and immediately commence test.
      iii. Apply lateral load to the tie bar at a constant rate of 1,000 pounds per minute. If non-recording instrumentation requires pauses in loading to read instruments, stop loading at each 500-pound increment, read instruments 30 seconds after stopping loading and immediately resume loading.
      iv. Upon reading the load and deflection of the rail at 7,500 pounds lateral load, reduce lateral load to zero, then reduce vertical preload to zero.
      v. If data was manually read, record data points on a graph of lateral deflection as a function of load.
      vi. Calculate lateral static stiffness of the single tie block, boot and pad assembly by dividing the measured difference in static force between nominal values of 3,000 and 4,000 pounds by the measured difference in static deflection at 3,000 and 4,000 pounds.
      vii. The nominal static lateral stiffness of a complete resiliently supported tie assembly is equal to the sum of stiffnesses measured under compression and tension of the tie bar.
   f) Test acceptance criteria
      i. Lateral stiffness with lateral load applied from gauge side: 120,000 to 170,000 pounds per inch.
      ii. Lateral stiffness with lateral load applied from field side: 165,000 to 170,000 pounds per inch.

5) Water absorption of tie pad test:
   a) Test procedure: ASTM D 1056

i. Cut two 29 mm diameter samples of the pad used between the bottom of the tie and the elastomer boot from two different pads and weigh them to an accuracy of plus or minus one percent. This weight is designated as P0 for each pad in the following formula.

ii. Immerse the samples in distilled water at room temperature, and hold them 50 mm below the surface with a wire probe or cage.

iii. Decrease the pressure in the atmosphere above the water to 635 mm of mercury.

iv. After three minutes at the reduced pressure, return the pressure above the water to ambient atmospheric pressure.

v. After three minutes at ambient atmospheric pressure, remove samples from water, superficially dry surfaces by gentle blotting without squeezing samples and weigh them to an accuracy of plus or minus one percent. This weight is designated as P1 for each pad in the following formula.

vi. Calculate the percentage change in weight of each sample using the formula:

$$A = 100(P1 - P0)/P0 \text{ percent}$$

b) Test acceptance criteria

i. Weight change due to water absorption: not more than 0.10 grams

ii. Volume change due to water absorption: not more than 0.10 grams

6) High voltage withstand test: effect of high voltage on quality of tie pad material.

a) Test Procedure: Place a metal ground plate between concrete test block and tie pad. Apply a DC potential of 15KV between rail-head and ground plate for one minute.

b) Test acceptance criteria: Neither cracks, pin-holes or electric flash over or arcing nor fracture to occur.

7) Electrical resistance and impedance test

a) Dry resistance:

i. Remove moisture, if any, from concrete tie block assembly and with one lead of high potential tester connected to rail head and ground lead connected to rail fastening system, apply 500 volts DC for three minutes. Use the current value obtained to calculate resistance.

ii. Acceptable resistance to 500 volts DC: not less than 10 megohms.

b) Wet resistance:

i. Release ground plate, tie pad, and rail fastening system from concrete tie block and rail; immerse tie pad in distilled water for six hours at 100 degrees C for neoprene based elastomers and for 336 hours at 70 degrees C for natural rubber based elastomers.

ii. After tie pad has been removed from water without drying and with no portion of the concrete tie block assembly cooler than 35 degrees C., reassemble ground plate, tie pad, rail fastening system, and rail on the tie block and test for electrical resistance as follows:

With one lead of high potential tester connected to rail head and the other lead ground to rail fastening system, apply 500 volts DC for three minutes, and test for electrical resistance. Use current value obtained to calculate resistance.

Allowable resistance: Not less than one megohm.

c) Wet impedance:

i. With the rail tie pad and rail fastening system still wet and with no portion of the concrete tie block assembly cooler than 35 degrees C, apply a potential of 50 volts AC between rail head and grounded rail fastening system until reading has stabilized for 30 seconds of

measurement for frequencies 1,000, 2,000, 4,000, 6,000, 8,000, and 10,000 Hertz.

ii. After reading has stabilized for 30 seconds, measure impedance of each frequency within an accuracy of plus or minus two percent and record each frequency.

iii. Impedance for frequencies between 20 Hz and 5 kHz with 50 volts AC shall be 10,000 ohms, at 6 kHz shall be 9,000 ohms, at 8 kHz shall be 7,000 ohms, and at 10 kHz shall be 6,000 ohms.

2. Construct a complete demonstration section of resiliently supported track not shorter than 50 track feet; construct within trackway and where required by the Owner. Section constructed to specified tolerances will become a part of the permanent track; otherwise, remove section and construct another section until constructed as indicated.

1.2 PRODUCTS

A. Ties: Concrete and steel two-block type; either Nucor Corp.'s Nucor-VSB or Stedef Inc.'s Stedef-VSB, or accepted equivalent.

B. Rail-Fastening System: Either Nucor Corp.'s S75 Fastenings, Stedef Inc.'s A. P. Fastening System, or accepted equivalent.

C. Resilient Support
1. Tie Boot And Pad: Conform to either Nucor Corp.'s S75, Stedef Inc.'s Technical Specification No. S120-4, or accepted equivalent.
a. Rubber boot with microcellular pad.
b. Tie pad: closed-cell cellular neoprene or elastomer.
c. Boot restraints: Either a rigid support that will engage lip of boot on both sides of the rail or a series of rubber bands or plastic strapping of size and strength which will restrain applied boot against sides and bottom of tie without noticeable sag and without compressing tie pad.
2. Rail Pad: Rubber; nine millimeters thick; have longitudinal grooves; conform to either Nucor Corp.'s S75; International Union of Railways' Technical Specifications 864-5-0, Stedef Inc.'s Technical Specifications No. S120-OB; or accepted equivalent.

D. Concrete Reinforcement: CONCRETE REINFORCEMENT.

E. Concrete Formwork: CONCRETE FORMWORK.

F. Concrete: Class 4000 Portland Cement Concrete.

G. Superelevation Tags: Brass or anodized aluminum; 1-1/4 inches wide by two inches long by 0.050 inch thick; and stamped with numerals 3/4 inch high, except that numerals for fractions shall be 3/8 inch high.

1.3 EXECUTION

A. Preparation: Establish track offset reference line, and chisel reference line mark on slab at intervals of not more than 20 feet. Along curved sections of track, chisel offset reference line mark at intervals to ensure that distance between chord drawn between two marks and indicated curve reference line will be not more than 0.005 foot.

B. Installation
1. Space two-block ties perpendicular to track centerline, and on 30-inch centers, plus or minus one inch except at insulated joints. Place two-block ties at insulated joints as indicated within plus or minus 1/2 inch.

2. Place rail pads between shoulders on concrete ties.
3. Place rail on rail pads; do not disturb ties when connecting rails and fastening rail to ties. Torque or drive rail fastenings in accordance with manufacturer's printed instructions.
4. Raise track, and support and block track to its final line and grade. Secure to hold track at final line and grade during concrete placement. Support assemblage only from base of rail. Conform track to required position.
    a. Completely brace and support track section to be concreted at one time. Support track for not less than 100 feet beyond that track section being concreted, to ensure that track section will not be stressed.
    b. Install reinforcement in accordance with CONCRETE REINFORCEMENT.
    c. Install formwork in accordance with CONCRETE FORMWORK.
    d. Immediately before installing boot and tie pad, ensure that no water is in boot. Apply boot restraints to each tie without scratching and tearing boot and pad; ensure that boot and tie pad fit flush against sides and bottom of tie.
    e. Ensure that ties are normal to centerline of track. If tie needs to be adjusted to be perpendicular to track centerline, loosen rail-fastening system, align tie, and retighten or redrive rail-fastening system.
    f. Before placing concrete, survey and verify final line and grade on raised and supported track comply with established controls.
    g. Place concrete in accordance with CAST-IN-PLACE CONCRETE.
    h. Ensure that there is no concrete spillage on ties, lip of boots, rail fastenings, and inside boot.
5. After concrete has been placed for not less than four hours, loosen rail fastenings to prevent thermal stresses in rail.
6. Remove track supports and formwork and cleanout drainage chases and blockouts.

C. Jointing And Anchoring Rail: CONTINUOUS WELDED RAIL.

D. Installing Superelevation Tags: Install tags on concrete ties one foot inside superelevated CWR, and orient tag to be read in ascending order from tangent to spiral, through spiral to curve.
1. Wire brush attachment surfaces and remove all loose material from concrete surfaces.
2. Wire brush back side of tags, apply epoxy to tags, and press tags onto concrete ties at beginning and ending points of curved track and at elevation increments of 1/4 inch within spirals.

E. Final Alignment And Track Inspection: CONTINUOUS WELDED RAIL.

END OF SECTION 34 01 23 33f

SECTION 34 01 23 33g - TRACK APPURTENANCES AND ACCESSORIES

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of buffers. Products shall match existing materials and/or shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Quality Control
1. Field quality control
a. Before installing insulated joints, have each joint installing crew prepare two samples of that joint.
b. Have an independent testing laboratory test each insulated joint sample for resistance to longitudinal pull-apart.
c. Record and certify that rail has been re-anchored within the zero stress temperature range.
2. Testing: In lieu of qualification testing of insulated joints, Contractor may submit certification by an independent testing laboratory that insulated joints have passed either the tests specified in this Article or equivalent tests. Test two samples for resistance to longitudinal pull apart, and test one sample for electrical resistance.
a. Longitudinal pull apart test
1) Preparation
a) Assemble bonded insulated joint complete, on two pieces of 115-pound RE rail each two feet long.
b) Saw joint assembly in half where rails are butted together and at right angles to centroid of rail.
c) Ensure that sawing does not overheat and damage prebonding adhesive.
d) Affix a device which will confine the reaction at the sawn end to the face of the joint bar when a load is applied at the centroid of the rail at the opposite end.
2) Testing
a) Apply test longitudinally in increments of 25,000 pounds maintaining each increment until longitudinal deflection of rail ceases before increasing load to next increment.
b) Increase load in increments until a total load of 650,000 pounds is attained or failure occurs.
c) At each increment of loading, measure and record load, and differential movement of rail and joint bars, to nearest 0.001 inch.
3) Acceptance criteria
a) Stability: No indication of slippage of rail joint before total test load reaches 650,000 pounds.
b) Differential movement in all directions: not more than 1/8 inch.
c) Difference between original position of joint bar and rail and final position thereof after final test load has been released: not more than 1/32 inch.
d) Basis of rejection: Failure of joint to satisfy above requirements.
b. Stroke rolling loading test
1) Preparation: Mount bonded joint on a 33-inch stroke rolling load test machine and support on 36-inch centers; center joint.
2) Testing: Apply 44,400 pound load on rail for 2,000,000 cycles. Measure and record deflection at rail centerline to nearest 0.001 inch when wheel load is over points A and B for every 500,000 cycles.
3) Develop moment diagram.
4) Acceptance criteria

a) Moment diagram envelope generated by methods other than those specified and submitted in accordance with this Section.
b) After 2,000,000 cycles: Exhibit no evidence of failure by bending of bonded insulated joint.
c) Deflection exhibited by bonded insulated joint: Not further than 0.065 inch.

c. Electrical resistance test: If specimen satisfies mechanical acceptance criteria of preceding tests, test specimen for electrical resistance; record results.
1) Preparation: Assemble bonded insulated joint complete, in accordance with manufacturer's instructions, on two pieces of 115 pound RE rail, one rail 24 inches long, the other 42 inches long. Support both rails on electrically nonconductive material.
2) Testing
a) Apply 500 volts DC to rail across bonded insulated joint for three minutes. During that time, measure and record, to nearest 0.1 ampere, current flow through joint.
b) Apply 50 volts AC to rail across joint for three minutes for each increment of measurement at frequencies of 20 hertz to 10 kilohertz in increments of 20 hertz to 100 hertz, 200 hertz to 1,000 hertz, and two kilohertz to 10 kilohertz. After three minutes, measure and record impedance within accuracy of plus or minus two percent.
3) Acceptance criteria
a) Resistance for 500 volts DC: Not less than 10 megohms.
b) Impedance for all frequencies between 20 hertz and 10 kilohertz with 50 volts AC not less than 10 megohms.

1.2 PRODUCTS

A. Insulated Joint
1. Joint bar: 36 inches long; quenched and tempered carbon steel; fabricated in accordance with AREA MRE Chapter 4, Part 1, Table 1, for 115-pound RE rail; have six, 1-1/4-inch diameter holes spaced in accordance with AREA MRE Chapter 4, Part 1, Table 1; have a length tolerance of 1/8 inch; have a straightness tolerance of 1/32 inch on 36 inches along contact surface; and have no marking on contact surface. Modify bar for rail restrained by direct-fixation fasteners.
2. Adhesive: Allegheny Drop Forge Co.'s "Temprange" or accepted equivalent.
3. Mesh: Fiberglass; Allegheny Drop Forge Co., or accepted equivalent.
4. Pin bolts and insulation for bonded insulated joint
a. Bolt: 9-1/8-inch by 1-1/8-inch diameter pin-type; ASTM A 325; Huck Corp's C50LR-BR-36-68, or accepted equivalent.
b. Washer: ASTM A 325, flat, 2-1/4 inches O.D. by 1-3/16 inches I.D. by 1/8 inch thick.
c. Collar: 1-1/8-inch diameter; ASTM A 325; Huck Corp.'s LC- 2R36, or accepted equivalent.
d. Bushing: Fiberglass conforming to NEMA LI-1, Grade G10.
e. Post: High-pressure laminate conforming to NEMA LI-1, Grade CE.
5. Pin-bolts for unbonded insulated joints
a. Bolt: ASTM A 490, 1-1/8-inch diameter, hex head type, six inches long.
b. Washer: ASTM A 325, spring steel, 1/8 inch thick, 2-1/4-inch O.D.
c. Nut: ASTM A 490, hex head locknut.

B. Buffer: Friction type having head modified for the Owner anti-climber; Godwin Warren Engineering Inc.'s Type 12/4, or accepted equivalent.
1. Type A: Capable of controlling the stopping of an eight-car train under the following conditions:
a. Impact force: Not more than 130,000 pounds;
b. Impact speed: 15 mph;
c. Weight per car: 81,000 pounds;
d. Rotational inertial weight per car: 7,800 pounds; and

e. 98 feet of track available for buffer installation.

2. Type B: Capable of controlling the stopping of a two-car train in the yard when that train, decelerating at a rate of not more than 0.3 g's, strikes the buffer at 15 mph; and capable of controlling the stopping of a four-car train under the following conditions:
   a. Impact force: Not more than 130,000 pounds;
   b. Impact speed: 15 mph;
   c. Weight per car: 81,000 pounds;
   d. Rotational inertial weight per car: 7,800 pounds; and
   e. 38 feet of track available for buffer installation.
3. Paint for structural steel surfaces not facing transit vehicle
   a. Primer: Either Pratt and Lambert Co.'s Rust-Inhibiting Effecto Enamel, PPG Corp.'s No. 6-208, Porter Paint Co.'s No. 297, Sherwin-Williams Co.'s Kem Kromik, or Tnemec Co.'s No. 10-99, or accepted equivalent.
   b. Enamel: Color international orange; either Pratt and Lambert Co.'s Effecto Enamel, PPG Corp.'s No. 6-252, Porter Paint Co.'s No. 400, Sherwin-Williams Co.'s Industrial Enamel B54 Series, or Tnemec Co.'s Series 2H, or accepted equivalent.
4. Paint for structural steel surfaces facing transit vehicle: Reflective type; Ferro Corp., Cataphote Division's Alert- Reflective Yellow, 3M Co.'s Scotchlite Brand Reflective Liquid, or accepted equivalent.

C. Bumper: Capable of controlling the stopping of a two-car train under the following conditions.
1. Impact force: Not more than 150,000 pounds.
2. Impact speed: 10 mph
3. Weight per car: 81,000 pounds.
4. Rotational inertial weight per car: 7,800 pounds.
5. Striking block
   a. Adapter plate: Mild steel.
   b. Rubber block: 70 to 80 shore hardness, and adhered to adapter plate.
6. Shock absorber: Hydraulic type having 31-1/2-inch stroke; Gantrex Corp.'s Type 15 Oleo, or accepted equivalent.
7. Post
   a. Structural steel plates, shapes, and bars: Carbon steel; ASTM A36.
   b. Welding electrodes: AWS D1.1; E70XX.
   c. Anchor bolts: 5/8 inch and 3/4 inch diameter; ASTM A 325.
   d. Concrete forms: CONCRETE FORMWORK
   e. Concrete: PORTLAND CEMENT CONCRETE.
   f. Reinforcing bars: CONCRETE REINFORCEMENT.
8. Paint
   a. Primer: Either Pratt and Lambert Co.'s Rust-Inhibiting Effecto Enamel, PPG Corp.'s No. 6-208, Porter Paint Co.'s No. 297, Sherwin-Williams Co.'s Kem Kromik, or Tnemec Co.'s No. 10-99, or accepted equivalent.
   b. Enamel: Color international orange; either Pratt and Lambert Co.'s Effecto Enamel, PPG Corp.'s No. 6-252, Porter Paint Co.'s No. 400, Sherwin-Williams Co.'s Industrial Enamel B54 Series, or Tnemec Co.'s Series 2H, or accepted equivalent.

D. Rail Lubricator: Moore and Steele Corp.'s Model No. DR-4 (561), or accepted equivalent.

E. Car Stop: L. B. Foster Co.'s Figure X, or accepted equivalent.

1.3 EXECUTION

A. Insulated Joints
1. Preparation: If rail brand exists where joint bar will touch CWR, remove rail brand. Calibrate bolt-tightening and -swaging tool by testing three typical bolts in a device capable of indicating actual bolt tension.

2. Installation
   a. Drilling: Position holes in accordance with AREA MRE Chapter 4, Part 1, Table 1. Drill 1-3/8-inch diameter holes; use template as a drilling guide.
   b. Install joint bar, adhesive, fasteners, and insulating materials in accordance with manufacturer's printed recommendations except install no adhesive at joints at Stations.
      1) Bonded insulated joint: Drive pin bolts with tool capable of swaging collars to the extent that bolts may be adjusted. Set tool to produce not less than 56,000 pounds tension in pin bolts, to swage collars into annular locking grooves, to form collar, and to ensure that bolts will conform to grip range limits recommended by bolt manufacturer.
      2) Unbonded insulated joint: Tighten each track bolt to 25,000 pounds, starting from middle of joint and working to the ends.
   c. Ensure that joint products and rail fasteners do not touch each other.
   d. Center insulated joints not less than five inches from edge of tie and rail fastener.
   e. Attach grounding cable, to base of each CWR, immediately adjacent to joint at Stations.
   f. Tolerances from design dimensions.
      1) Bonded insulated joint bar
         a) Finishing height: 1/64 inch.
         b) Length: 1/8 inch.
         c) Straightness, as determined by use of a 36-inch straightedge: 1/32 inch.
      2) Bonded insulated joint end post
         a) Thickness: Plus 1/16 inch, minus zero inch.
         b) Projection below base of rail: 1/16 inch
3. Joint bolt hole: AREA MRE, Chapter 4.
   a. Testing: Measure continuity across joint.
4. Remove clamps, flexible ground cables, fasteners, and joint bars from joints at Stations; deliver those products to the Owner 's Yard.

B. Buffers: Install buffers in accordance with manufacturer's printed instructions, and with four sets of trailing shoes set at a torque of 100-foot pounds, except that friction buffer at Station shall be installed with two sets of trailing shoes set at a torque of 150-foot pounds. Installed buffers shall be inspected by manufacturer's representative and, if approved by that representative, commissioned by that representative.
   1. Dismantle buffer at Stations , and temporarily install buffer at Station .
   2. Install new buffers at Stations .
   3. Install friction buffer at Station .
   4. Cleaning and painting
      a. Clean surfaces to be painted; wash surfaces with mineral spirits, and dry. Open drain holes in structural framework. Wire brush or blast unpainted ferrous surfaces to white metal.
      b. Apply paint with clean and operable equipment and tools as soon as practicable after surfaces have been prepared; wet film shall cure to specified dry film thickness.

C. Bumper
   1. Weld in accordance with AWS D1.1.
   2. Form concrete in accordance with CONCRETE FORMWORK. Place concrete reinforcement and concrete in accordance with CONCRETE REINFORCEMENT, and CAST-IN-PLACE CONCRETE, respectively. Finish exposed concrete in accordance with UNFORMED-CONCRETE FINISHES.
   3. Cleaning and painting: Clean and paint posts and framework as specified.

D. Rail Lubricator: Install lubricator in accordance with manufacturer's printed instructions.

E. Car Stops: Install stops in accordance with stop manufacturer's printed installation instructions. Install one stop three feet from end of shorter rail behind each buffer, and install one stop directly opposite that stop.

END OF SECTION 34 01 23 33g

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 34 01 23 33h - TRACTION POWER

1.1 GENERAL

A. Description
1. This specification covers the furnishing and installation of products for bonding joints in running rail. Products shall match existing materials and/or shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Quality Control: Construction Equipment
1. Rail grinder: Have vitrified grinding wheel.
2. Rail cleaner: Nontoxic, and capable of removing grease, rust, scale, and dirt.

1.2 PRODUCTS

A. Cable For Pin-Type Bond: Consist of 500 MCM, 259 strands, single conductor, insulated, nonshielded cable specified in Division 34 Section “Contact Rail System".

B. Cable For Welded-Type Bond: Bare, annealed copper 250 MCM, single conductor, and stranding conforming to ASTM B 173 Class G, and have swaged steel sleeve or ferrule type welding lugs designed to enable cable ends to be exothermically welded to running rails; ERICO Products Inc.'s Part No. PBC1-2W-13, or accepted equivalent.

C. Pin-Type Traction Power Bond: Fit 500 MCM cable and one inch diameter hole in rail; Erico Products, Inc.'s No. B-188-3Q slotted rail terminal having pin, washer, and lock nut, or accepted equivalent.

D. Protective Coating: Dearborn Chemicals Co.'s NO-OX-ID, or accepted equivalent.

1.3 EXECUTION

A. Preparation: Grind bonding surfaces of rail; and remove scale, rust, grease, and dirt.

B. Pin-Type Bond
1. Position bond further than six inches from a joint bar, further than 18 inches from center of a welded joint, and further than six inches from each other.
2. Drill one inch diameter hole at the neutral axis of the rail, perpendicular to the vertical and longitudinal axis of the rail, but not through rail brand. Holes shall be bright, clean, dry, and free from rust, burrs, and foreign substances affecting conductivity of joint and soundness of rail.
3. Drive a lubricated tapered punch, of a size recommended by bond manufacturer, through slotted rail terminal; then insert a correctly-sized drift pin. Install washer and torque lock nut in accordance with nut manufacturer's printed recommendation.
4. Connect cable to terminal by either compression method or exothermically welding; connect in accordance with connection manufacturer's printed recommendations.
5. Peen installed bonds.
6. Place cables along bottom flange of running rails and secure cables to flange with cable clips.

C. Welded-Type Bond
1. Position bond on field side of rail heads around bolted joints.
2. Exothermically weld bond in accordance with weld manufacturer's printed instructions, ensuring that weld will be mechanically and electrically continuous.

3. Apply protective coating to rail head bond in accordance with coating manufacturer's printed instructions.

D. Field Testing: Test welded bond by hammer and striker test, and in accordance with welding kit manufacturer's printed instructions. If bond is defective, remove bond, furnish and install new products for bonding joints, and test new bond.

END OF SECTION 34 01 23 33h

SECTION 34 01 23 33i - ROADWAY CROSSING CONTROL EQUIPMENT

1.1 GENERAL

A. Description
1. This specification covers the furnishing and installation of products for crosswalk and grade crossing. Products shall match existing materials and/or shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

1.2 PRODUCTS

A. Crosswalk
1. Timber: Number 2 pressure-treated yellow pine. Stamp each timber AWPI DRY and AWPI LP-2 before treating timber. Reduce moisture content of decking and decking support members to not more than 19 percent by weight by kiln drying before treating those products. Maintain water-absorbing property which is not greater than that of untreated lumber.
2. Hardware
   a. Fastener for securing deck timbers to cross beams: Joist hanger nail galvanized in accordance with ASTM A 153; Cleveland Specialty Co., or accepted equivalent.
   b. Fastener for securing cross beams to support beams: Galvanized dome head drive spike or washer-head timber screw; Lewis Nut and Bolt Co.'s Sealtite, Cancar Div. of Textron Industries, Inc.'s Torx Truss Washer Head, or accepted equivalent.
   c. Fastener for securing support beams to concrete ties: Threaded hook bolt galvanized in accordance with ASTM A 153 after threading; Lewis Bolt and Nut Co.'s Sealtite having Sealtite washer nut and hook lock plate, or accepted equivalent.
   d. Fastener for securing flangeway timbers to direct fixation concrete: Anchor bolt, conforming to ASTM A 307 and hot-dip galvanized in accordance with ASTM A 153, and concrete insert.
3. Preservative solution for treating field-cut timber: 0.9 Osmose Solution, or accepted equivalent.
4. Anti-slip coating: Two-part epoxy resin and graded aggregate dispersed throughout epoxy. Not less than 100 percent of aggregate shall pass the No. 30 sieve and not less than 95 percent shall pass the No. 50 sieve; Tasa Corp., or accepted equivalent.
5. Sealant: Asphalt mastic conforming to ASTM D 491, or accepted equivalent.
6. Bonding agent: Preco Co.'s Rockweld C, or accepted equivalent.
7. Concrete formwork: CONCRETE FORMWORK.
8. Concrete reinforcement: CONCRETE REINFORCEMENT.
9. Portland cement concrete: Class 3000 PORTLAND CEMENT CONCRETE.
10. Grout: Nonshrink type conforming to CRD C621.
11. Asphaltic concrete
   a. Bituminous prime coat: Cutback asphalt MC250.
   b. Bituminous tack coat.
   c. Base course: Asphaltic Concrete "Base".
   d. Surface course: Asphaltic Concrete “Surface”.
12. Fabrication
   a. Orient timber heartwood face downward.
   b. Cut beams square. Bevel outside ends of timber decking and flangeway timbers four inches at 45 degrees.
   c. Drill holes for anchor bolts; countersink ends of holes for washers and nuts. Drill no holes the centerline of which is less than two inches from edge of timber.
   d. Pressure-treat cut and drilled timbers by the Osmose K-33 method in accordance with AWPI; develop preservative retention of not less than 0.25 pound per cubic foot.

e. Assemble crosswalk with heartwood facing downward and ends of decking timbers, cross-beams, and support beams being aligned. Nail decking to cross-beams with two nails per timber.

B. Grade Crossing
1. Timber: Maple, gum, or birch.
2. Fastener for securing timber flangeway to wood tie: Dome-head drive spike; Lewis Nut and Bolt Co.'s Sealtite, or accepted equivalent.
3. Preservative: Creosote type.
4. Asphaltic concrete
a. Bituminous prime coat: Cutback asphalt MC250.
b. Base course: Asphaltic Concrete "Base".
c. Surface course: Asphaltic Concrete "Surface".
5. Fabrication
a. Orient flangeway timber heartwood to face downward.
b. Cut timbers square except bevel ends of flangeway timbers, which will not abut other timber, four inches at 45 degrees. Notch flangeway timber to clear tie plate hardware by not less than 1/2 inch.
c. Pressure-treat cut and drilled timbers in accordance with AREA MRE Chapter 3, Part 9.

1.3 EXECUTION

A. Examination: Examine surfaces on which crosswalk and grade crossing will be placed.
1. Ensure that track has been raised and aligned to its final alignment and profile and has been accepted by the Owner.
2. Ensure that ballast has been dressed to final cross section.

B. Surveying: Survey installed CWR; determine its horizontal and vertical track alignments.

C. Preparation
1. Remove loose material from tie, rail, and rail fastenings.
2. If wood products have been field-drilled and field-cut, coat drilled and cut surfaces with preservative solution immediately after holes have been drilled and surfaces have been cut.

D. Installation
1. Anchor timbers; seat solidly.
2. Drive spikes and nails, and torque screws; make timber connections rigid.
3. Fill space between countersunk timber and bolt and washer with sealant.
4. Apply not less than 1/16 inch of anti-slip compound to wearing surfaces of flangeway timber and crosswalk timber decking in accordance with anti-slip manufacturer's printed instructions.
5. Place concrete formwork in accordance with CONCRETE FORMWORK. Place concrete reinforcement in accordance with CONCRETE REINFORCEMENT. Place concrete in accordance with CAST-IN-PLACE CONCRETE. Broom- finish concrete surface in accordance with UNFORMED- CONCRETE FINISHES.
6. Tolerances
a. Top of flangeway and timber, vertical depression below top of rail: plus 1/4 inch, minus zero.
b. Clearance between sides of flangeway and timbers and edge of rail: plus 1/4 inch, minus zero.
c. Difference in elevation between surfaces of flangeway and timber and surface of abutting paving: 1/8 inch.

END OF SECTION 34 01 23 33i

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
34 05 43 00	03 01 30 00	Maintenance of Cast-in-Place Concrete
34 05 43 00	03 41 00 00	Precast Structural Concrete
34 05 43 00	05 12 00 00	Structural Steel Framing
34 05 43 00	05 40 00 00	Cold-Formed Metal Framing
34 05 43 00	05 50 00 00	Metal Fabrications

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 34 41 13 00 - WIRING DEVICES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. General-use switches, dimmer switches, and fan-speed controller switches.
2. General-grade single straight-blade receptacles.
3. General-grade duplex straight-blade receptacles.
4. Hospital-grade straight-blade receptacles.
5. Receptacles with arc-fault and ground-fault protective devices.
6. Locking receptacles.
7. Pin-and-sleeve receptacles.
8. Cord reels and fittings.
9. Connectors, cords, and plugs.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies temperature, humidity, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies seismic hazard, wind hazard, other structural load design conditions applicable to the Work specified in this Section.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
4. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
5. Section 260533.16 "Boxes and Covers for Electrical Systems" specifies covers and cover plates referenced by this Section.
6. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
7. Section 260923 "Lighting Control Devices" for occupancy sensors, timers, control-voltage switches, and control-voltage dimmers.
8. Section 260936 "Modular Dimming Controls" for multiscene and multipreset dimming controls.
9. Section 260943.16 "Addressable Luminaire Lighting Controls" for network lighting control solid-state devices.
10. Section 260943.23 "Relay-Based Lighting Controls" for network lighting control relay devices.
11. Section 262726.11 "General-Use Switches, Dimmer Switches, and Fan-Speed Controller Switches" for additional wiring device products.
12. Section 262726.31 "General-Grade Single Straight-Blade Receptacles" for additional wiring device products.
13. Section 262726.33 "General-Grade Duplex Straight-Blade Receptacles" for additional wiring device products.
14. Section 262726.35 "Hospital-Grade Straight-Blade Receptacles" for additional wiring device products.
15. Section 262726.37 "Receptacles with Arc-Fault and Ground-Fault Protective Devices" for additional wiring device products.
16. Section 262726.39 "Locking Receptacles" for additional wiring device products.
17. Section 262726.41 "Pin-and-Sleeve Receptacles" for additional wiring device products.

18. Section 262726.43 "Special-Purpose Power Outlet Assemblies" for additional wiring device products.
19. Section 262726.51 "Connectors, Cords, and Plugs" for additional wiring device products.
20. Section 270528 "Pathways for Communications Systems" [**and Section 271100 "Communications Equipment Room Fittings"**] specifies additional requirements for raceway materials, routing, locations, and identification of communications equipment and cabling.

1.2 DEFINITIONS

A. AFCI: Arc-Fault Circuit Interrupter.

B. Commercial/Industrial-Use Cord Reel: A cord reel subject to severe use in factories, commercial garages, construction sites, and similar locations requiring a harder service-type cord.

C. GFCI: Ground-Fault Circuit Interrupter.

D. SPD: Surge Protective Device.

E. UL 1472 Type I Dimmer: Dimmer in which air-gap switch is used to energize preset lighting levels.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference [**at the Project site**][**by web conference**].

B. Preinstallation Coordination Meeting(s): For ceiling-mounted cable reels. Conduct meeting [**as videoconference**][**at Project site**].

1. Attendees: Installers, fabricators, representatives of manufacturers, and administrants for field tests and inspections. Notify Architect [**Construction Manager**][**and the Owner's Commissioning Authority**] of scheduled meeting dates.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of specified product.

1. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.

2. Include manufacturer's sample extended warranty language.

B. Samples: One for each type of product specified, in each finish and color specified for [**public spaces**] .

C. Shop Drawings: Prepare and submit wiring diagrams for duplex straight-blade receptacles with integral switching means.

D. Sustainable Design Submittals:

1. Product data for sustainable design features for each type of product.

2. Lighting Control Documentation: Floor plans indicating the following information:

a. As-installed locations of switches and dimmers.
b. Lighting zones and control strategy for each switch or dimmer, including unoccupied time-delay setting for shut-off and override time-delay setting for shut-off.
c. Multilevel or dimming range capability for each switch or dimmer.
d. Which switches or dimmers are operated by occupancy sensors, vacancy sensors, daylighting sensors, or time clocks.

3. Record floor plan Drawings indicating as-installed locations of switches and dimmers, indicating lighting zone's each device control, to verify extent of ability of the installed Work to provide occupant control for customizing environment.
4. Record floor plan Drawings indicating as-installed locations of uncontrolled and marked controlled receptacles superimposed on office furniture layout, to verify extent of ability of the installed Work to provide each occupant ability to select at least one uncontrolled receptacle and at least one controlled receptacle for powering workspace equipment. Indicate locations of UL-approved relocatable power taps and power strips, indicating means of securing protection from damage and accessibility for inspection. Indicate locations of temporary extension cords, indicating plan for replacing them with permanent wiring within 90 days.

5. Product Data for Automated Demand Response Controls: For automated demand response controls connected to [**HVAC systems,**][**lighting systems,**][**automatic receptacle controls,**][**service water heating,**][**and**][**electric vehicle supply equipment**] .

E. Field QC Reports: For specified tests and inspections.

1.5 INFORMATIONAL SUBMITTALS

A. Manufacturer's Published Instructions: For wiring devices.

B. Field Reports: Manufacturer's field reports for field QC support.

1.6 CLOSEOUT SUBMITTALS

A. Warranty Documentation:

1. Special manufacturer extended warranty for devices and cord reels and fittings.
2. Special installer extended warranty for devices and cord reels and fittings.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Extra Stock Material: Furnish straight-blade receptacles and connectors, cords, and plugs.

B. Special Tools: Furnish straight-blade receptacles and connectors, cords, and plugs.

1.8 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, conduct tests of complex equipment, analyze test and equipment data, plan a job, and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able

to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.

C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

1.9 WARRANTY FOR DEVICES

A. Special Installer Extended Warranty: Installer warrants that installed devices perform in accordance with specified requirements and agrees to repair or replace products that fail to perform as specified within extended-warranty period. Warranty must convey to the Owner upon acceptance of the Work.

1. Extended-Warranty Period: [**Two**][**Three**][**Four**] years from date of Substantial Completion; full coverage for labor, materials, and equipment.

B. Special Manufacturer Extended Warranty: Manufacturer warrants that devices perform in accordance with specified requirements and agrees to provide repair or replacement of devices that fail to perform as specified within extended warranty period.

1. Initial Extended Warranty Period: [**Three**][**Four**][**Five**] years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.

2. Follow-On Extended Warranty Period: [**Eight**] years from date of Substantial Completion; [**full**][**prorated**] coverage for materials only, free on board [**origin**][**destination**] , freight prepaid.

1.10 WARRANTY FOR CORD REELS AND FITTINGS

A. Special Installer Extended Warranty: Installer warrants that fabricated and installed cord-reel power outlet assemblies perform in accordance with specified requirements and agrees to repair or replace assemblies that fail to perform as specified within extended warranty period.

1. Extended Warranty Period: [**Two**][**Three**][**Four**] years from date of Substantial Completion; full coverage for labor, materials, and equipment.

B. Special Manufacturer Extended Warranty: Manufacturer warrants that components of cord-reel power outlet assemblies perform in accordance with specified requirements and agrees to provide repair or replacement of components that fail to perform as specified within extended warranty period.

1. Initial Extended Warranty Period: [**Three**][**Four**][**Five**] years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.

2. Follow-On Extended Warranty Period: [**Eight**] years from date of Substantial Completion; [**full**][**prorated**] coverage for materials only, free on board [**origin**][**destination**] , freight prepaid.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

A. Description:

1. Sustainable Design Features:

a. Material Reuse: Product is salvaged, refurbished, or reused.

2.2 EXISTING PRODUCTS TO BE REMOVED AND REINSTALLED

A. Description:

1. Sustainable Design Features:

a. Material Reuse: Product is salvaged, refurbished, or reused.

2.3 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2.4 GENERAL-USE SWITCHES, DIMMER SWITCHES, AND FAN-SPEED CONTROLLER SWITCHES

A. Toggle Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Flush Switches: UL CCN WMUZ and UL 20.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance**

with NEMA WD 1][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .

b. Configuration:

1) General-duty, 120-277 V, 15 A, [**single pole**][**double pole**][**three way**][**four way**] .
2) General-duty, 120-277 V, 20 A, [**single pole**][**double pole**][**three way**][**four way**] .
3) Extra-heavy-duty, 120-277 V, 15 A, [**single pole**][**double pole**][**three way**][**four way**] .
4) Extra-heavy-duty, 120-277 V, 20 A, [**single pole**][**double pole**][**three way**][**four way**] .
5) Extra-heavy-duty, 120-277 V, 30 A, [**single pole**][**double pole**][**three way**] .

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**] corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Toggle Switch with Forked Key Lock :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical**

testing laboratory recognized by authorities having jurisdiction] in accordance with one or more of the following guide information and corresponding standards:

a. Flush Switches: UL CCN WMUZ and UL 20.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Black**][**As indicated on architectural Drawings**] as directed by the Owner .
b. Configuration:

1) 120-277 V, 15 A, [**single pole**][**double pole**][**three way**][**four way**] .
2) 120-277 V, 20 A, [**single pole**][**double pole**][**three way**][**four way**] .
3) 120-277 V, 30 A, [**single pole**][**double pole**] .

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**] corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. Rocker Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Flush Switches: UL CCN WMUZ and UL 20.

4. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
   b. Configuration:

      1) 120-277 V, 15 A, [**single pole**][**three way**][**four way**] .
      2) 120-277 V, 20 A, [**single pole**][**double pole**][**three way**][**four way**] .

5. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**] corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

   c. Regional Materials (IgCC): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

   d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

   e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Accessories:

   a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

D. Rocker Switch with Nightlight :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton, Wiring Devices; Arrow Hart**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Flush Switches: UL CCN WMUZ and UL 20.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
b. Configuration: 120-277 V, 20 A, [**single pole**][**three way**][**four way**] .

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**] corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

E. Type I Dimmer Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**GE Lighting; a Savant Company**]
c. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Leviton Manufacturing Co., Inc.**]
e. [**Lutron Electronics Co., Inc**]
f. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. General-Use Switch Dimmers: UL CCN EOYX and UL 1472.

4. Standard Features:

a. UL 1472 Type I dimmer.

b. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
c. Switch Style: [**Toggle**][**Rocker**][**Push button**] .
d. Dimming Control Style: [**Slide**][**Rotary**] .

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**] corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

F. Air-Gap Fan-Speed Controller Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical**

testing laboratory recognized by authorities having jurisdiction] in accordance with one or more of the following guide information and corresponding standards:

a. Fan-Speed Controls: UL CCN GQHG and UL 1917.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**] corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.5 GENERAL-GRADE SINGLE STRAIGHT-BLADE RECEPTACLES

A. Single Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Leviton Manufacturing Co., Inc.**]
c. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or

more of the following guide information and corresponding standards:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
b. Configuration:

1) General-duty, [**NEMA 5-15R**][**NEMA 5-20R**][**NEMA 5-30R**][**NEMA 5-50R**] .
2) General-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
3) General-duty, [**NEMA 6-15R**][**NEMA 6-20R**][**NEMA 6-30R**][**NEMA 6-50R**] .
4) General-duty, smooth face, NEMA 6-20R.
5) General-duty, [**NEMA 14-30R (Dryer)**][**NEMA 14-50R (Range)**] .
6) Heavy-duty, [**NEMA 5-30R**][**NEMA 5-50R**] .
7) Heavy-duty, [**NEMA 6-30R**][**NEMA 6-50R**] .
8) Heavy-duty, [**NEMA 7-20R**][**NEMA 7-30R**][**NEMA 7-50R**] .
9) Heavy-duty, [**NEMA 14-20R**][**NEMA 14-30R (Dryer)**][**NEMA 14-50R (Range)**][**NEMA 14-60R**] .
10) Heavy-duty, [**NEMA 15-20R**][**NEMA 15-30R**][**NEMA 15-50R**][**NEMA 15-60R**] .
11) Heavy-duty, [**NEMA 18-20R**][**NEMA 18-30R**][**NEMA 18-50R**][**NEMA 18-60R**] .
12) Extra-heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
13) Extra-heavy-duty, [**NEMA 6-15R**][**NEMA 6-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Tamper-Resistant, Clock Hanger Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

3. Standard Features:

   a. Finish: [**White nylon**][**Ivory nylon**][**Brass**][**Stainless steel**][**Brushed brass**][**Nickel plated**] .
   b. Configuration: Recessed, smooth wallplate; [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

C. Tamper-Resistant, Floor-Mounted Display Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

3. Standard Features:

   a. Finish: [**Brushed brass**][**Nickel plated**] .

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

2.6 GENERAL-GRADE DUPLEX STRAIGHT-BLADE RECEPTACLES

A. Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton, Wiring Devices; Arrow Hart**]
   b. [**Leviton Manufacturing Co., Inc.**]
   c. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or

more of the following guide information and corresponding standards:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
b. Configuration:

1) General-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
2) General-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
3) General-duty, [**NEMA 6-15R**][**NEMA 6-20R**] .
4) General-duty, smooth face, [**NEMA 6-15R**][**NEMA 6-20R**] .
5) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
6) Heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
7) Heavy-duty, [**NEMA 6-15R**][**NEMA 6-20R**] .
8) Heavy-duty, smooth face, NEMA 6-15R.
9) Heavy-duty, NEMA 7-15R.
10) Extra-heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
11) Extra-heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
12) Extra-heavy-duty, [**NEMA 6-15R**][**NEMA 6-20R**] .
13) Extra-heavy-duty, smooth face, [**NEMA 6-15R**][**NEMA 6-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Tamper-Resistant Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Leviton Manufacturing Co., Inc.**]
c. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
   b. Configuration:

      1) General-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
      2) General-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
      3) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
      4) Heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
      5) Extra-heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

   a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

C. Isolated Ground Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Leviton Manufacturing Co., Inc.**]
   b. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
   b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
   b. Configuration:

      1) General-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
      2) General-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
      3) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
      4) Heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
      5) Extra-heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
      6) Extra heavy-duty, [**NEMA 6-15R**][**NEMA 6-20R**] .

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

   a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

D. Isolated Ground Duplex Straight-Blade Receptacle with Type 3 Surge Protective Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton, Wiring Devices; Arrow Hart**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
   b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
   b. Configuration: Heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

   a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

E. Tamper-Resistant Duplex Straight-Blade Receptacle with USB Outlet to Power Class 2 Equipment :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
b. Configuration:

1) General-duty, [**NEMA 5-15R**][**NEMA 5-20R**] ; two USB-A ports.
2) General-duty, [**NEMA 5-15R**][**NEMA 5-20R**] ; two USB-C ports.
3) General-duty, [**NEMA 5-15R**][**NEMA 5-20R**] ; one USB-A port; one USB-C port.
4) General-duty, smooth face, two USB-A ports.
5) General-duty, smooth face, four USB-A ports.

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

F. Wired Full-Controlled Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Hubbell Lighting; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or

more of the following guide information and corresponding standards:

a. Receptacles with Integral Switching Means: UL CCN RTXI and UL Subject 498B.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
b. Configuration: [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

G. Wired Half-Controlled Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Hubbell Lighting; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Receptacles with Integral Switching Means: UL CCN RTXI and UL Subject 498B.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
b. Configuration: [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.7 HOSPITAL-GRADE STRAIGHT-BLADE RECEPTACLES

A. Hospital-Grade, Non-Ferrous Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton, Wiring Devices; Arrow Hart**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
   b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
   b. Configuration: Extra-heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

   a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Hospital-Grade, Tamper-Resistant Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton, Wiring Devices; Arrow Hart**]
   b. [**Leviton Manufacturing Co., Inc.**]
   c. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
    b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

    a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
    b. Configuration:

        1) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
        2) Heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
        3) Extra-heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
        4) Extra-heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

    a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

    a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
    b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

C. Hospital-Grade, Tamper-Resistant, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Eaton, Wiring Devices; Arrow Hart**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
    b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

    a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance**

with NEMA WD 1][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.

b. Configuration:

1) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
2) Heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

D. Hospital-Grade, Tamper-Resistant, Isolated Ground Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Leviton Manufacturing Co., Inc.**]
b. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
b. Configuration:

1) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
2) Heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

E. Hospital-Grade, Tamper-Resistant Duplex Straight-Blade Receptacle with USB Outlet to Power Class 2 Equipment :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton, Wiring Devices; Arrow Hart**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Pass & Seymour; Legrand North America, LLC**]
   d. >

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
   b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
   b. Configuration:

      1) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] ; two USB-A ports.
      2) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] ; two USB-C ports.
      3) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] ; one USB-A port; one USB-C port.

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

   a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.8 RECEPTACLES WITH ARC-FAULT AND GROUND-FAULT PROTECTIVE DEVICES

A. General-Grade, Tamper-Resistant Duplex Straight-Blade Receptacle with AFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton, Wiring Devices; Arrow Hart**]

b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Outlet Branch-Circuit Type AFCIs: UL CCN AWBZ, UL 498, UL 1699, and UL Subject 1699A.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. General-Grade, Tamper-Resistant Duplex Straight-Blade Receptacle with AFCI and GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Leviton Manufacturing Co., Inc.**]
c. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Outlet Branch-Circuit Type GFCIs and AFCIs: UL CCN KCXX, UL 498, UL 943, UL 1699, and UL Subject 1699A.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.

b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

C. General-Grade, Weather-Resistant, Tamper-Resistant Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

D. General-Grade, Weather-Resistant, Tamper-Resistant, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Eaton, Wiring Devices; Arrow Hart**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

    a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
    b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

    a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

    a. Cover Plate: **0.060 inch** **(1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
    b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

E. Hospital-Grade, Weather-Resistant, Tamper-Resistant, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Eaton, Wiring Devices; Arrow Hart**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

F. Hospital-Grade, Isolated Ground, Weather-Resistant, Tamper-Resistant Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.9 LOCKING RECEPTACLES

A. UL RTRT - NEMA, 125 V, Locking Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**ABB Electrification Installations Products**]
    b. [**Eaton, Wiring Devices; Arrow Hart**]
    c. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    d. [**Leviton Manufacturing Co., Inc.**]
    e. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

4. Standard Features:

    a. Device Color: Black with yellow voltage indication on face.
    b. Configuration: 2 pole, 3 wire, grounding, [**NEMA L5-15R**][**NEMA L5-20R**][**NEMA L5-30R**] .

B. UL RTRT - NEMA, 125 V, Isolated Ground Locking Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Eaton, Wiring Devices; Arrow Hart**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

4. Standard Features:

    a. Device Color: Black with yellow voltage indication on face.
    b. Configuration: 2 pole, 3 wire, grounding, [**NEMA L5-15R**][**NEMA L5-20R**][**NEMA L5-30R**] .

C. UL RTRT - NEMA, 250 V, Locking Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Eaton, Wiring Devices; Arrow Hart**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

4. Standard Features:

    a. Device Color: Black with blue voltage indication on face.
    b. Configuration:

        1) 2 pole, 3 wire, grounding, [**NEMA L6-15R**][**NEMA L6-20R**][**NEMA L6-30R**] .
        2) 3 pole, 4 wire, grounding, [**NEMA L15-20R**][**NEMA L15-30R**] .
        3) 4 pole, 4 wire, non-grounding, [**NEMA L18-20R**][**NEMA L18-30R**] .
        4) 4 pole, 5 wire, grounding, [**NEMA L21-20R**][**NEMA L21-30R**] .

D. UL RTRT - NEMA, 250 V, Isolated Ground Locking Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Eaton, Wiring Devices; Arrow Hart**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or

more of the following guide information and corresponding standards:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

4. Standard Features:

a. Device Color: Black with blue voltage indication on face.
b. Configuration:

1) 2 pole, 3 wire, grounding, [**NEMA L6-15R**][**NEMA L6-20R**][**NEMA L6-30R**] .
2) 3 pole, 4 wire, grounding, [**NEMA L15-20R**][**NEMA L15-30R**] .
3) 4 pole, 5 wire, grounding, [**NEMA L21-20R**][**NEMA L21-30R**] .

2.10 PIN-AND-SLEEVE RECEPTACLES

A. UL QLIW - C2 Series, 125/250 V, Pin-and-Sleeve Receptacles :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**ABB Electrification Installations Products**]
b. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
c. [**Eaton, Wiring Devices; Arrow Hart**]
d. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
e. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
f. [**Leviton Manufacturing Co., Inc.**]
g. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Pin-and-Sleeve Type Receptacles: UL CCN QLIW; including UL 1682.

4. Standard Features:

a. Series: UL 1686 Series C2 and IEC 60309-2 Series II.
b. Voltage Rating: 125/250 V.
c. Configuration:

1) 2 pole, 3 wire, [**20 A**][**30 A, IP67**][**30 A, IP69k**][**60 A, IP67**][**60 A, IP69k**][**100 A**] .
2) 3 pole, 4 wire, [**20 A**][**30 A, IP67**][**30 A, IP69k**][**60 A, IP67**][**60 A, IP69k**][**100 A, IP67**][**100 A, IP69k**] .
3) 4 pole, 5 wire, [**20 A**][**30 A, IP67**][**30 A, IP69k**][**60 A, IP67**][**60 A, IP69k**][**100 A, IP67**][**100 A, IP69k**] .

B. UL QLIW - C2 Series, 480 V, Pin-and-Sleeve Receptacles :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the**

following][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**ABB Electrification Installations Products**]
b. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
c. [**Eaton, Wiring Devices; Arrow Hart**]
d. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
e. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
f. [**Leviton Manufacturing Co., Inc.**]
g. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Pin-and-Sleeve Type Receptacles: UL CCN QLIW; including UL 1682.

4. Standard Features:

   a. Series: UL 1686 Series C2 and IEC 60309-2 Series II.
   b. Voltage Rating: 480 V.
   c. Configuration:

      1) 2 pole, 3 wire, [**20 A**][**30 A, IP67**][**30 A, IP69k**][**60 A, IP67**][**60 A, IP69k**][**100 A**] .
      2) 3 pole, 4 wire, [**20 A**][**30 A, IP67**][**30 A, IP69k**][**60 A, IP67**][**60 A, IP69k**][**100 A, IP67**][**100 A, IP69k**] .
      3) 4 pole, 5 wire, [**20 A**][**30 A, IP67**][**30 A, IP69k**][**60 A, IP67**][**60 A, IP69k**][**100 A, IP67**][**100 A, IP69k**] .

2.11 CORD REELS AND FITTINGS

A. Power Outlet Cord Management Assembly :

1. Source Limitations: Obtain all components for each power outlet cord management assembly from single manufacturer.
2. General Characteristics: Provide the following specified products with fabricated power outlet cord management assembly:

   a. Cord Management System:

      1) Spring-driven commercial/industrial-use cord reel .
      2) Cord reel for use in Class I Group D hazardous location .

   b. Termination Fitting:

      1) the Owner-furnished fitting.

      2) Outdoor-use, watertight, sealed cord connector;

3. Accessories:

   a. Mounting: [**Ceiling**][**Wall**][**Floor**] mounted.

4. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

   a. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events [**and unit must be fully operational after seismic events**] ."

   b. Component Importance Factor (Ip): [**1.0**][**1.5**] .

   c. Component Amplification Factor (ap): [**1.0**][**2.5**].

   d. Component Response Modification Factor (Rp): [**1.5**][**2.0**][**2.5**][**6.0**].

   e. Component Overstrength Factor (Ωo): [**1.5**][**2.5**] .

B. Spring-Driven Commercial/Industrial-Use Cord Reel, 14 AWG Conductors :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton**]
   b. [**Ericson Manufacturing Company**]
   c. [**Gleason Reel; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Cord and Cable Reels: UL CCN SBCV and UL 355.

3. Standard Features:

   a. Spring take-up retraction mechanism.

   b. Electrical Rating with Cable: 600 V, [**18 A**][**15 A**][**12 A**][**10.5 A**][**7.5 A**] .
   c. Color: [**Yellow**][**Black**][**White**].
   d. Enclosure Degree of Protection: [**Type 4**][**Type 4X**] .
   e. Ball stop.
   f. Pivot base.
   g. Spool Capacity:

      1) 14 AWG, two wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**][**50 ft (15.2 m)**][**60 ft (18.3 m)**][**70 ft (21.3 m)**] .

2) 14 AWG, three wires and equipment ground, [20 ft (6 m)][30 ft (9.1 m)][35 ft (10.7 m)][40 ft (12.2 m)][50 ft (15.2 m)][60 ft (18.3 m)][70 ft (21.3 m)] .
3) 14 AWG, five wires and equipment ground, [20 ft (6 m)][30 ft (9.1 m)][40 ft (12.2 m)][50 ft (15.2 m)][60 ft (18.3 m)] .
4) 14 AWG, seven wires and equipment ground, [20 ft (6 m)][30 ft (9.1 m)][40 ft (12.2 m)][50 ft (15.2 m)] .
5) 14 AWG, nine wires and equipment ground, [20 ft (6 m)][30 ft (9.1 m)] .
6) 14 AWG, eleven wires and equipment ground, [20 ft (6 m)][60 ft (18.3 m)] .

7) 14 AWG, two wires and equipment ground, [25 ft (7.6 m)][35 ft (10.7 m)][45 ft (13.7 m)][90 ft (27.4 m)][100 ft (30.5 m)][125 ft (38.1 m)][150 ft (45.7 m)] .
8) 14 AWG, three wires and equipment ground, [25 ft (7.6 m)][45 ft (13.7 m)][65 ft (19.8 m)][80 ft (24.4 m)][90 ft (27.4 m)][100 ft (30.5 m)][125 ft (38.1 m)][150 ft (45.7 m)] .
9) 14 AWG, five wires and equipment ground, [25 ft (7.6 m)][35 ft (10.7 m)][45 ft (13.7 m)] .
10) 14 AWG, seven wires and equipment ground, [25 ft (7.6 m)][35 ft (10.7 m)][45 ft (13.7 m)] .
11) 14 AWG, nine wires and equipment ground, [25 ft (7.6 m)][50 ft (15.2 m)] .
12) 14 AWG, eleven wires and equipment ground, [25 ft (7.6 m)][30 ft (9.1 m)] .

4. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

   a. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events [**and unit must be fully operational after seismic events**] ."

   b. Component Importance Factor (Ip): [**1.0**][**1.5**] .

   c. Component Amplification Factor (ap): [**1.0**][**2.5**].

   d. Component Response Modification Factor (Rp): [**1.5**][**2.0**][**2.5**][**6.0**].

   e. Component Overstrength Factor (Ωo): [**1.5**][**2.5**].

C. Spring-Driven Commercial/Industrial-Use Cord Reel, 12 AWG Conductors :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Appleton; Emerson Electric Co., Automation Solutions**]
   b. [**Ericson Manufacturing Company**]
   c. [**Gleason Reel; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   d. [**Reelcraft Industries Inc**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Cord and Cable Reels: UL CCN SBCV and UL 355.

3. Standard Features:

   a. Spring take-up retraction mechanism.

   b. Electrical Rating with Cable: 600 V, [**25 A**][**20 A**][**16 A**][**14 A**] .
   c. Color: [**Yellow**][**Black**][**White**].
   d. Enclosure Degree of Protection: [**Type 4**][**Type 4X**] .
   e. Ball stop.
   f. Pivot base.
   g. Spool Capacity:

      1) 12 AWG, two wires and equipment ground, [**20 ft (6 m)**][**25 ft (7.6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**][**50 ft (15.2 m)**][**60 ft (18.3 m)**] .
      2) 12 AWG, three wires and equipment ground, [**20 ft (6 m)**][**25 ft (7.6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**][**45 ft (13.7 m)**][**50 ft (15.2 m)**][**60 ft (18.3 m)**][**100 ft (30.5 m)**] .
      3) 12 AWG, five wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**] .
      4) 12 AWG, seven wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**] .

      5) 12 AWG, two wires and equipment ground, [**35 ft (10.7 m)**][**45 ft (13.7 m)**][**70 ft (21.3 m)**][**80 ft (24.4 m)**][**90 ft (27.4 m)**][**100 ft (30.5 m)**][**125 ft (38.1 m)**][**150 ft (45.7 m)**] .
      6) 12 AWG, three wires and equipment ground, [**35 ft (10.7 m)**][**70 ft (21.3 m)**][**80 ft (24.4 m)**][**90 ft (27.4 m)**][**125 ft (38.1 m)**] .
      7) 12 AWG, four wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**] .
      8) 12 AWG, five wires and equipment ground, [**25 ft (7.6 m)**][**35 ft (10.7 m)**][**45 ft (13.7 m)**] .
      9) 12 AWG, seven wires and equipment ground, [**25 ft (7.6 m)**][**40 ft (12.2 m)**] .

4. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

   a. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events [**and unit must be fully operational after seismic events**] ."

   b. Component Importance Factor (Ip): [**1.0**][**1.5**] .

   c. Component Amplification Factor (ap): [**1.0**][**2.5**].

   d. Component Response Modification Factor (Rp): [**1.5**][**2.0**][**2.5**][**6.0**].

   e. Component Overstrength Factor (Ωo): [**1.5**][**2.5**].

D. Spring-Driven Cord Reel for Use in Class I Group D Hazardous Locations :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Appleton; Emerson Electric Co., Automation Solutions**]
   b. [**Conductix-Wampfler USA; Delachaux Group**]
   c. [**KH Industries, Inc.**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Cord Reels for Use in Hazardous Locations: UL CCN SAOX and UL 355.

3. Standard Features:

    a. Spring take-up retraction mechanism.

    b. Electrical Rating with Cable: 600 V, [**35 A**][**25 A**][**20 A**][**18 A**][**15 A**] .
    c. Color: [**Yellow**][**Black**][**White**].
    d. Enclosure Degree of Protection: [**Type 4**][**Type 4X**] .
    e. Ball stop.
    f. Pivot base.
    g. Spool Capacity:

        1) 14 AWG, two wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**50 ft (15.2 m)**] .
        2) 14 AWG, three wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**50 ft (15.2 m)**] .
        3) 12 AWG, two wires and equipment ground, [**30 ft (9.1 m)**][**50 ft (15.2 m)**] .
        4) 14 AWG, two wires and equipment ground, [**40 ft (12.2 m)**][**60 ft (18.3 m)**][**70 ft (21.3 m)**] .
        5) 14 AWG, three wires and equipment ground, [**40 ft (12.2 m)**][**60 ft (18.3 m)**] .
        6) 12 AWG, two wires and equipment ground, [**20 ft (6 m)**][**40 ft (12.2 m)**][**60 ft (18.3 m)**] .
        7) 12 AWG, three wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**][**50 ft (15.2 m)**] .
        8) No. 10 AWG, two wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**] .
        9) No. 10 AWG, three wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**] .

4. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

    a. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events [**and unit must be fully operational after seismic events**] ."

    b. Component Importance Factor (Ip): [**1.0**][**1.5**] .

    c. Component Amplification Factor (ap): [**1.0**][**2.5**].

    d. Component Response Modification Factor (Rp): [**1.5**][**2.0**][**2.5**][**6.0**].

    e. Component Overstrength Factor (Ωo): [**1.5**][**2.5**].

2.12 CONNECTORS, CORDS, AND PLUGS

A. Outdoor-Use, Watertight, Sealed Cord Connector :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Ericson Manufacturing Company**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Fuseless Attachment Plugs: UL CCN AXUT and UL 498.

3. Standard Features:

a. Configuration:

1) NEMA 5-15 [**with diagnostic LED indicator**] .
2) NEMA 5-20 [**with diagnostic LED indicator**] .
3) NEMA 6-15.
4) NEMA 6-20.
5) NEMA L5-15.
6) NEMA L5-20 [**with diagnostic LED indicator**] .
7) NEMA L5-30.
8) NEMA L6-15.
9) NEMA L6-20.
10) NEMA L6-30.
11) NEMA L7-15.
12) NEMA L7-20.
13) NEMA L7-30.
14) NEMA L14-20.
15) NEMA L14-30.
16) NEMA L15-20.
17) NEMA L15-30.
18) NEMA L16-20.
19) NEMA L16-30.
20) NEMA L17-30.
21) NEMA L18-30.

2.13 MAINTENANCE MATERIAL ITEMS FOR STRAIGHT-BLADE RECEPTACLES

A. Extra Stock Material: Furnish to the Owner extra materials [**from same production run,**] that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. [**Include the following:**]

1. SPD Receptacles: Equal to [**10**] percent of quantity installed for each kind specified, but no fewer than [**one**] units.
2. Controlled Receptacles: Equal to [**10**] percent of quantity installed for each kind specified, but no fewer than [**one**] units.

B. Special Tools: Furnish to the Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to controlled receptacles, that are packaged with protective covering for storage on-site and identified with labels describing contents.

2.14 MAINTENANCE MATERIAL ITEMS FOR CONNECTORS, CORDS, AND PLUGS

A. Extra Stock Material: Furnish to the Owner extra materials [**from same production run,**] that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. [**Include the following:**]

1. Cord Connectors: [**One**] of each kind.

B. Special Tools: Furnish to the Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to cord connectors, that are packaged with protective covering for storage on-site and identified with labels describing contents.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Receptacles:

1. Verify that receptacles to be procured and installed for the Owner-furnished equipment are compatible with mating attachment plugs on equipment.

B. Cord Reels and Fittings:

1. Examine roughing-in for cord reel mounting and power connections to verify actual locations of mounts and power connections before cord reel installation.
2. Examine walls, floors, and ceilings for suitable conditions where cord reel will be installed.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SELECTION OF CONTROLLED AND UNCONTROLLED RECEPTACLES

A. Private and Open Office Spaces:

1. Uncontrolled Receptacles at Workstations: Coordinate final locations of receptacles with furniture plan such that at least one uncontrolled receptacle is selected for installation not greater than **6 ft. (1.8 m)** from each workstation.
2. Controlled Receptacles at Workstations: Coordinate final locations of receptacles with furniture plan such that at least one controlled receptacle is selected for installation not greater than **6 ft. (1.8 m)** from each workstation.
3. Contact Architect for resolution of discrepancies between these requirements and Drawings, as directed by the Owner.

3.3 SELECTION OF GFCI RECEPTACLES

A. Healthcare Facilities: Unless protection of downstream branch-circuit wiring, cord sets, and power-supply cords is required by NFPA 70 or NFPA 99, provide non-feed-through GFCI receptacles.

3.4 INSTALLATION OF GENERAL-USE SWITCHES, DIMMER SWITCHES, AND FAN-SPEED CONTROLLER SWITCHES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Life Safety and Means of Egress Work: NFPA 101.
4. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
5. Wiring Devices: NECA NEIS 130.
6. Mounting Heights: NECA NEIS 1.
7. Consult Architect for resolution of conflicting requirements, as directed by the Owner.

C. Interfaces with Other Work:

1. Identification:

a. Identify cover or cover plate for device with panelboard identification and circuit number.

b. Mark cover or cover plate using hot, stamped, or engraved machine printing with [**black**][**white**][**red**] -filled lettering, and provide durable wire markers or tags inside device box or outlet box.

c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

d. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

3.5 INSTALLATION OF STRAIGHT-BLADE RECEPTACLES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
4. Work in ITE Rooms: NFPA 75.
5. Work in Health Care Facilities: NFPA 99 and Article 517 of NFPA 70.
6. Work in Confined Spaces: NFPA 350.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
8. Installing and Maintaining Wiring Devices: NECA NEIS 130.
9. Mounting Heights: Unless otherwise indicated in the Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
10. Receptacle Orientation: Unless otherwise indicated in the Contract Documents, orient receptacle to match configuration diagram in NEMA WD 6.

a. Hospital-Grade Receptacle Orientation: Orient receptacle with ground pin or neutral pin at top.

11. Consult Architect for resolution of conflicting requirements, as directed by the Owner.

C. Interfaces with Other Work:

1. Identification: Provide labels for receptacles and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure with engraved metal or laminated-plastic nameplate.

1) Identify cover or cover plate for device with panelboard identification and circuit number.

2) Mark cover or cover plate using hot, stamped, or engraved machine printing with [**black**][**white**][**red**] -filled lettering, and provide durable wire markers or tags inside device box or outlet box.

c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

d. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

2. Do not install Type 3 SPD, including surge-protected relocatable taps and power strips, on branch circuit downstream of GFCI device.

3.6 INSTALLATION OF LOCKING RECEPTACLES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
4. Work in ITE Rooms: NFPA 75.
5. Work in Health Care Facilities: NFPA 99 and Article 517 of NFPA 70.
6. Work in Confined Spaces: NFPA 350.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
8. Installing and Maintaining Wiring Devices: NECA NEIS 130.
9. Mounting Heights: Unless otherwise indicated in the Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
10. Receptacle Orientation: Unless otherwise indicated in the Contract Documents, orient receptacle to match configuration diagram in NEMA WD 6.
11. Consult Architect for resolution of conflicting requirements, as directed by the Owner.

C. Interfaces with Other Work:

1. Identification: Provide labels for receptacles and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure with engraved metal or laminated-plastic nameplate.

1) Identify cover or cover plate for device with panelboard identification and circuit number.

2) Mark cover or cover plate using hot, stamped, or engraved machine printing with [**black**][**white**][**red**] -filled lettering, and provide durable wire markers or tags inside device box or outlet box.

c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

d. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

3.7 INSTALLATION OF PIN-AND-SLEEVE RECEPTACLES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
4. Work in ITE Rooms: NFPA 75.
5. Work in Health Care Facilities: NFPA 99 and Article 517 of NFPA 70.
6. Work in Confined Spaces: NFPA 350.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
8. Installing and Maintaining Wiring Devices: NECA NEIS 130.
9. Mounting Heights: Unless otherwise indicated in the Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
10. Receptacle Orientation: Unless otherwise indicated in the Contract Documents, orient receptacle to match configuration diagram in UL 1686.
11. Consult Architect for resolution of conflicting requirements, as directed by the Owner.

C. Interfaces with Other Work:

1. Identification: Provide labels for receptacles and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure with engraved metal or laminated-plastic nameplate.

1) Identify cover or cover plate for device with panelboard identification and circuit number.

2) Mark cover or cover plate using hot, stamped, or engraved machine printing with [**black**][**white**][**red**] -filled lettering, and provide durable wire markers or tags inside device box or outlet box.

c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

d. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

3.8 INSTALLATION OF CORD REELS AND FITTINGS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Hot Work: NFPA 51B.
5. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
6. Work in Confined Spaces: NFPA 350.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.

3.9 INSTALLATION OF CONNECTORS, CORDS, AND PLUGS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
5. Work in ITE Rooms: NFPA 75.
6. Work in Health Care Facilities: NFPA 99 and Article 517 of NFPA 70.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
8. Consult Architect for resolution of conflicting requirements, as directed by the Owner.

3.10 FIELD QUALITY CONTROL OF GENERAL-USE SWITCHES, DIMMER SWITCHES, AND FAN-SPEED CONTROLLER SWITCHES

A. Administrant for Electrical Power Tests and Inspections:

1. [**the Owner**][**Tenant**] will engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections [**with assistance of factory-authorized service representative**] .

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**] as directed by the Owner.

C. Tests and Inspections: Perform tests and inspections in accordance with manufacturers' published instructions.

D. Nonconforming Work:

1. Unit will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field Quality Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.11 FIELD QUALITY CONTROL OF STRAIGHT-BLADE RECEPTACLES

A. Administrant for Electrical Power Tests and Inspections:

1. [**the Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections [**with assistance of factory-authorized service representative**] .

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**] as directed by the Owner.

C. Tests and Inspections:

1. Insert and remove test plug to verify that device is securely mounted.
2. Verify polarity of hot and neutral pins.
3. Measure line voltage.
4. Measure percent voltage drop.
5. Measure grounding circuit continuity; impedance must be not greater than 2 ohms.

6. Healthcare Facilities: Test straight-blade receptacles in patient care spaces with receptacle pin tension test instrument in accordance with NFPA 99. Retention force of ground pin must be not less than 115 g (4 oz).
7. Perform additional installation and maintenance inspections and diagnostic tests in accordance with NECA NEIS 130 and manufacturers' published instructions.

D. Nonconforming Work:

1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field Quality Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.12 FIELD QUALITY CONTROL OF LOCKING RECEPTACLES

A. Administrant for Low-Voltage Electrical Tests and Inspections:

1. [**the Owner**][**Tenant**] will engage qualified low-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified low-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections [**with assistance of factory-authorized service representative**] .

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**] as directed by the Owner.

C. Tests and Inspections:

1. Insert and remove test plug to verify that device is securely mounted.
2. Verify polarity of hot and neutral pins.
3. Measure line voltage.
4. Measure percent voltage drop.
5. Measure grounding circuit continuity; impedance must be not greater than 2 ohms.
6. Perform additional installation and maintenance inspections and diagnostic tests in accordance with NECA NEIS 130 and manufacturers' published instructions.

D. Nonconforming Work:

1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field Quality Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.13 FIELD QUALITY CONTROL OF PIN-AND-SLEEVE RECEPTACLES

A. Administrant for Low-Voltage Electrical Tests and Inspections:

1. [**the Owner**][**Tenant**] will engage qualified low-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified low-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections [**with assistance of factory-authorized service representative**] .

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]

as directed by the Owner.

C. Tests and Inspections:

1. Insert and remove test plug to verify that device is securely mounted.
2. Measure line voltage.
3. Measure percent voltage drop.
4. Measure ground impedance, which must be not greater than 2 ohms.
5. Perform additional installation and maintenance inspections and diagnostic tests in accordance with NECA NEIS 130 and manufacturers' published instructions.

D. Nonconforming Work:

1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field Quality Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.14 FIELD QUALITY CONTROL OF CORD REELS AND FITTINGS

A. Administrant for Electrical Power Tests and Inspections:

1. [**the Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections [**with assistance of factory-authorized service representative**] .

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**] as directed by the Owner.

C. Tests and Inspections: Perform tests and inspections indicated in manufacturer's published instructions.

D. Nonconforming Work:

1. Components and assemblies will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field Quality Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.15 FIELD QUALITY CONTROL OF CONNECTORS, CORDS, AND PLUGS

A. Administrant for Electrical Power Tests and Inspections:

1. [**the Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections [**with assistance of factory-authorized service representative**] .

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**] as directed by the Owner.

C. Tests and Inspections: Perform tests and inspections indicated in manufacturer's published instructions.

D. Nonconforming Work:

1. Unit will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field Quality Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.16 SYSTEM STARTUP FOR GENERAL-USE SWITCHES, DIMMER SWITCHES, AND FAN-SPEED CONTROLLER SWITCHES

A. Perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's published instructions.

B. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] system startup.

1. Manufacturer's Field Reports for System Startup Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.17 ADJUSTING

A. Occupancy Adjustments for Controlled Receptacles: When requested within [**12**] months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two**] visits to the Project during other-than-normal occupancy hours for this purpose.

B. Cord Reels and Fittings: Adjust spring mechanisms and moving parts of cord reels and fittings to function smoothly, and lubricate as recommended in writing by manufacturer.

3.18 PROTECTION

A. Devices:

1. Schedule and sequence installation to minimize risk of contamination of wires and cables, devices, device boxes, outlet boxes, covers, and cover plates by plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other materials.
2. After installation, protect wires and cables, devices, device boxes, outlet boxes, covers, and cover plates from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by the Owner.

B. Cord Reels and Fittings: After installation, protect cord reels and fittings from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by the Owner.

C. Connectors, Cords, and Plugs: After installation, protect connectors, cords, and plugs from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by the Owner.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 34 71 13 00 - ACTIVE VEHICLE BARRIERS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for active vehicle barriers. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals
1. Shop Drawings: Installation, Equipment, and Electrical Work
a. Detail drawings containing complete wiring and schematic diagrams, and any other details required to demonstrate that the system has been coordinated and will properly function as a unit. Drawings shall show proposed layout and anchorage of equipment and appurtenances, and equipment relationship to other parts of the work including foundation and clearances for maintenance and operation. For Federal work, detail drawings shall include a copy of the Department of State certificate of barrier performance.
2. Product Data:
a. Vehicle Barriers: A complete list of equipment, materials, including industrial standards used and how they apply to the applicable component and manufacturer's descriptive data and technical literature, catalog cuts, and installation instructions. Information necessary to document a minimum 1-year successful field operation performance history for each type of vehicle barrier installed.
b. Spare Parts: Spare parts data for each different item of material and equipment used, after approval of the detail drawings. The data shall include a complete list of parts and supplies, with current unit prices and source of supply.
3. Test Reports
a. Field Testing: Test reports in booklet form showing all field tests, including component adjustments and demonstration of compliance with the specified performance criteria, upon completion and testing of the installed system. Each test report shall indicate the final position of controls.
4. Operation and Maintenance Data
a. Vehicle Barriers: Operating and Maintenance Instructions
1) Six copies of operation and maintenance manuals, a minimum of 2 weeks prior to field training. One complete set prior to performance testing and the remainder upon acceptance. Manuals shall be approved prior to acceptance. Operation manuals shall outline the step-by-step procedures required for system startup, operation, and shutdown. The manuals shall include the manufacturer's name, model number, service manual, parts list, and brief description of all equipment and their basic operating features. Maintenance manuals shall include routine maintenance procedures, possible breakdowns and repairs, and troubleshooting guide. The manuals shall include piping layout, equipment layout, and simplified wiring and control diagrams of the system as installed. The manuals shall also include synthetic biodegradable hydraulic oil types to be used for ambient temperature ranges of minus 30 degrees F (minus 34 degrees C) to 150 degrees F (plus 66 degrees C) to cover winter operation, summer operation, and ambient temperature ranges in between.

C. General Requirements
1. Performance levels shall be based on the following:
a. The Department of State (DOS) publication SD-SDT-02.01 Specification for Vehicle Crash Testing of Perimeter Barriers and Gates (April 1985) in which:
1) Impact Conditions:

Condition Designation	Vehicle Weight	Impact Speed	Kinetic Energy
K4	15,000 lb (6,800 kg)	30 mph (48 km/h)	450,000 ft-lb (610 kJ)
K8	15,000 lb (6,800 kg)	40 mph (65 km/h)	800,000 ft-lb (1084 kJ)
K12	15,000 lb (6,800 kg)	50 mph (80 km/h)	1,250,000 ft-lb (1695 kJ)

2) Performance Levels:
   a) L 3.0 Vehicle and cargo are to be stopped although vehicle partial penetration and/or barrier deflection of up to 3 feet (1 m) permitted.
   b) L 2.0 Vehicle and cargo are to be stopped although vehicle partial penetration and/or barrier deflection of up to 20 feet (6 m) is permitted.
   c) L 1.0 Vehicle is disabled and does not travel more than 50 feet (15 m) after impact.

2. Vehicle Barriers furnished shall in all respects be identical to the unit tested and certified except for the width of the vehicle barrier, which is as indicated and except for bollards which have a diameter based on a required crash rating. Crash test shall be performed and data compiled by an approved independent testing agency. Test vehicle shall not vault or penetrate the barrier during the test. The design and structural materials of the vehicle barrier furnished shall be the same as those used in the crash tested barrier.

D. Nameplates
1. Nameplate data shall be permanently attached to each vehicle barrier. The data shall be legibly marked on corrosion-resistant metal plates and shall consist of at least the following:
   a. Manufacturer's name.
   b. Model number.
   c. Serial number.
   d. Date of manufacture.

E. Delivery And Storage
1. Components placed in storage shall be protected from the weather, humidity, and temperature variation, dirt and dust, or other contaminants. Structural materials shall be stored on sleepers or pallets and shall be protected from rust and objectionable materials such as dirt, grease, or oil.

F. Spare Parts
1. A manufacturer's standard recommended spare parts package, with current unit prices and source of supply complete with detailed manuals on parts replacement, shall be provided with each barrier to facilitate 1 year of normal operation. Particular consideration shall be given to system components which are not readily available from local or commercial sources and which are critical to the operation of the system.

G. Manufacturer's Services
1. Services of a manufacturer's representative who is experienced in the installation, adjustment, and operation of the equipment supplied shall be available. The representative shall supervise the installation, adjustment, and testing of the equipment.

1.2 PRODUCT

A. Retractable Barriers: When in the raised position, the total retractable barrier heights shall be no less than 28 inches (711 mm) above the roadway surface and shall be 144 inches (3.66 m) wide. When in the lowered position, the retractable barrier shall extend no more than 5/8 inch (16 mm) above the roadway surface. Retractable barriers in the lowered position shall be capable of supporting a 32,000 pound (142 kN) axle load or a 16,000 (71 kN) wheel load. Design for this load shall be in accordance with AASHTO HB-17.
1. Powered Retractable Barrier: The retractable barrier shall be capable of 300 complete up/down cycles per hour. The retractable barrier motion shall be instantly reversible and shall be capable

of raising the barrier from the lowered position to the raised position within 8 seconds during normal use, and within 2 seconds during an emergency. Also, the barrier shall be capable of being lowered from the raised position to the lowered position in not more than 3 seconds. Retractable barrier shall withstand a K4 **OR** K8 **OR** K12, **as directed**, impact condition with Performance Level of L1.0 **OR** L2.0 **OR** L3.0, **as directed**.

a. Failure Modes of Operation: The system shall be designed to remain in the last commanded position in the event of hydraulic, electrical, or mechanical failure. A manual pump, or other system, shall be included for operation of hydraulic barriers without power.

b. Electric Motors: Unless otherwise indicated, electric motors shall have drip-proof **OR** totally enclosed **OR** totally enclosed fan cooled, **as directed**, enclosures. All couplings, motor shafts, gears, and other moving parts shall be fully guarded in accordance with 29 CFR 1910 Subpart O. Guards shall be removable without disassembling the guarded unit. For multiple barriers operated from a single hydraulic unit it is highly recommended that the electric motor be 3-phase.

c. System: The system shall be designed to maintain the barriers in the raised position, without inspection, for periods of time of up to 1 week. If a hydraulic system is used, it shall be equipped with pressure relief valves to prevent overpressure. The system shall not require continuous running of the motor to stay in the raised position, excluding the use of manual pinning to do so.

d. Hydraulic Power Unit: The hydraulic power unit shall contain synthetic biodegradable hydraulic fluid which maintains its viscosity operating range, even at constant heaviest use rate, for an ambient temperature range of 20 to 150 degrees F (minus 7 to plus 66 degrees C). A hydraulic fluid heater shall be provided so that the viscosity remains within its operating range if ambient temperatures below 20 degrees F (minus 7 degrees C) are expected. Buried hydraulic lines for the connection of the hydraulic power unit to the barrier shall be flexible or carbon steel pipe, or a combination of flexible and carbon steel pipe. Flexible and rigid hydraulic line working pressures shall exceed the maximum system relief pressure. PVC pipe and fittings for burial of hydraulic lines shall be in accordance with ASTM D 3034 Type PS 46 with minimum pipe stiffness of 46.
   1) Flexible hydraulic lines shall be in accordance with SAE J517.
   2) Rigid hydraulic lines shall be seamless carbon steel pipe in accordance with ASTM A 106.

e. Hydraulic Power Unit Enclosure: A NEMA Type 3R enclosure as specified in NEMA 250 shall be provided to enclose the hydraulic power unit. The enclosure shall be designed for easy removal of the hydraulic power unit and other accessories without complete removal of the enclosure. An access door with hinges and an inside and outside operable/lockable (exterior) door latch shall be provided. Equipment within the enclosure shall be placed and configured so that all periodic maintenance can be performed through the access door without removal of the equipment. The enclosure shall be equipped with weatherproof louver vents appropriately sized and located to dissipate internal heat generation.

2. Manual Retractable Barriers: The manual barrier shall be capable of being raised and lowered by manual means such as levers or hydraulics requiring a maximum 60 pounds (267 N) of force. The manual mechanism shall contain a locking pin which accepts a padlock for securing the barrier when it is in the "UP" position. Retractable barrier shall withstand a K4 **OR** K8 **OR** K12, **as directed**, impact condition with Performance Level of L1.0 **OR** L2.0 **OR** L3.0, **as directed**. Barrier should be capable of being locked in the down position.

B. Retractable Bollards: The total bollard height when in the raised position shall be no less than 30 inches (750 mm) above the roadway surface and shall have an outside diameter of no less than 8 inches (200 mm). A bollard system shall consist of a minimum of 3 bollards spaced no more than 36 inches (915 mm) from centerline to centerline of bollards across a 10 foot (3.0 m) roadway. Bollards in the lowered position shall be capable of supporting a 16,000 pound (71 kN) wheel load each. Design for this load shall be in accordance with AASHTO HB-17. Retractable bollards shall withstand a K4 **OR** K8 **OR** K12, **as directed**, Impact Condition with Performance Level of L1.0 **OR** L2.0 **OR** L3.0, **as directed**.

1. Powered Retractable Bollards: The retractable bollard shall be capable of 300 complete up/down cycles per hour. Bollards shall be capable of being raised or lowered within a 3 to 15-second range during normal use and within 2.5 seconds for emergency operations.
   a. Failure Modes of Operation: The system shall be designed to prevent lowering of the barrier in the event of hydraulic, electrical, or mechanical failure. A manual pump, or other system, shall be included for operation of hydraulic and/or mechanical barriers without power.
   b. Electric Motors: Unless otherwise indicated, electric motors shall have drip-proof **OR** totally enclosed, **as directed**, enclosures. For multiple barriers being operated from a hydraulic power unit it is highly recommended that the electric motor be 3-phase.
   c. System: The system shall be designed to maintain the barriers in the raised position, without inspection, for period of time of up to 1 week. If a hydraulic system is used, it shall be equipped with pressure relief valves to prevent overpressure.
   d. Hydraulic Power Unit: The hydraulic power unit shall contain synthetic biodegradable hydraulic fluid which maintains its viscosity operating range, even at constant heaviest use rate, for an ambient temperature range of 20 to 150 degrees F (minus 7 to plus 66 degrees C). A hydraulic fluid heater shall be provided so that the viscosity remains within its operating range, if ambient temperatures below 20 degrees F (minus 7 degrees C) are expected. Buried hydraulic lines for the connection of the hydraulic power unit to the barrier shall be flexible or carbon steel pipe, or a combination of flexible and carbon steel pipe. Flexible and rigid hydraulic line working pressures shall exceed the maximum system relief pressure. PVC pipe and fittings for burial of hydraulic lines shall be in accordance with ASTM D 3034 Type PS 46 with minimum pipe stiffness of 46.
      1) Flexible hydraulic lines shall be in accordance with SAE J517.
      2) Rigid hydraulic lines shall be seamless carbon steel pipe in accordance with ASTM A 106.
   e. Hydraulic Power Unit Enclosure: A NEMA Type 3R enclosure as specified in NEMA 250 shall be provided to enclose the hydraulic power unit. The enclosure shall be designed for easy removal of the hydraulic power unit and other accessories without complete removal of the enclosure. An access door with hinges and an inside and outside operable/lockable (exterior) door latch shall be provided. Equipment within the enclosure shall be placed and configured so that all periodic maintenance can be performed through the access door without removal of the equipment. The enclosure shall be equipped with weatherproof louver vents appropriately sized and located to dissipate internal heat generation.
2. Manual Retractable Bollards: Manual bollards shall be capable of being raised and lowered utilizing a recessed handle on the top surface of the bollard or a manual hydraulic pump, either requiring a maximum 60 pounds (267 N) of force. A mechanism, that is lockable, shall be provided to secure the bollard in either the full "UP" or full "DOWN" position.

C. Crash Gate: The crash gate shall consist of steel buttresses anchored into the ground and an above grade assembly consisting of a heavy steel structure or a combination of heavy steel and structural aluminum capable of being opened and closed. The height of the gate shall be a minimum of 84 inches (2.1 m) from the road surface to the top of the gate frame. The length shall close and protect a minimum 120 inch (3.0 m) clear opening. The maximum clear opening between the gate frame and end posts, between the bottom of the gate and finished grade, and between any grill work shall be 3 inches (75 mm).
   1. Powered Crash Gate: The gate movement shall be controlled by an electro-mechanical gate operator **OR** a hydraulic gate operator, **as directed**, consisting of an operator unit with required control circuits and operator station. The control and operating voltage shall be 24 vac (nominal) or, as an option 24 vdc. A remote control master station shall be capable of driving the gate at minimum 48 fpm (14.6 m per minute) for a slide gate or 6 degrees per second for a swing gate. Unless otherwise indicated, motors shall have drip-proof **OR** totally enclosed, **as directed**, enclosures. Crash gate shall withstand a 15,000 pound (6804 kg) vehicle at impact speed of 30 **OR** 40 **OR** 50, **as directed**, mph (48 **OR** 64 **OR** 80, **as directed**, km/hour), with maximum barrier deflection or vehicle penetration of 3 feet (1 m).

a. Failure Mode of Operation: The system shall be designed to prevent opening of the crash gate in the event of electrical or mechanical failure. A disconnect system for the gate drive shall be provided to allow manual operation of the barrier in the event of a power outage.

b. Hydraulic Power Unit: The hydraulic power unit shall contain synthetic biodegradable hydraulic fluid which maintains its viscosity within its operating range, even at constant heaviest use rate, for an ambient temperature range of 20 to 150 degrees F (minus 7 to plus 66 degrees C). A hydraulic fluid heater shall be provided so that the viscosity remains within its operating range if ambient temperatures below 20 degrees F (minus 7 degrees C) are expected. Buried hydraulic lines for the connection of the hydraulic power unit to the barrier shall be flexible or carbon steel pipe, or a combination of flexible and carbon steel. Flexible and rigid hydraulic line working pressures shall exceed the maximum system relief pressure. PVC pipe and fittings for burial of hydraulic lines shall be in accordance with ASTM D 3034 Type PS 46 with minimum pipe stiffness of 46.
   1) Flexible hydraulic lines shall be in accordance with SAE J517.
   2) Rigid hydraulic lines shall be seamless carbon steel pipe in accordance with ASTM A 106.

c. Hydraulic Power Unit Enclosure: A NEMA Type 3R enclosure as specified in NEMA 250 shall be provided to enclose the hydraulic power unit. The enclosure shall be designed for easy removal of the hydraulic power unit and other accessories without complete removal of the enclosure. An access door with hinges and an inside and outside operable/lockable (exterior) door latch shall be provided. Equipment within the enclosure shall be placed and configured so that all periodic maintenance can be performed through the access door without removal of the equipment. The enclosure shall be equipped with weatherproof louver vents appropriately sized and located to dissipate internal heat generation.

2. Manual Crash Gate: The manual crash gate shall be capable of being hinged from either side. Hinge points of both buttresses shall each contain a locking pin with padlock acceptance for securing the crash gate in the closed position. The crash gate shall withstand a 10,000 pound (4535 kg) vehicle at impact speed of 50 mph (80 km/hour), with maximum gate deflection or vehicle penetration of 10 feet (3 m) 15,000 pound (6804 kg) vehicle traveling at impact speed of 30 **OR** 40 **OR** 50, **as directed**, mph (48 **OR** 64 **OR** 80, **as directed**, km/hour), with a maximum gate deflection or vehicle penetration of up to 3 feet (1 m).

D. Crash Beam: The crash beam shall be an above-grade assembly that, in the "DOWN" position, shall present a visible obstacle to approaching vehicles. The height of the barrier shall be a minimum of 30 inches (750 mm) as measured from the roadway surface to the centerline of the crash beam. The crash beam shall be capable of blocking a minimum road width of 120 inches (3.0 m). The crash beam end shall contain a locking pin with padlock acceptance for securing the crash beam when it is in the "DOWN" position. Crash beam shall withstand a 15,000 pound (6804 kg) vehicle traveling at 30 **OR** 40 **OR** 50, **as directed**, mph (48 **OR** 64 **OR** 80, **as directed**, km/hour), with maximum vehicle penetration of 20 feet (6 m) 10,000 pound (4535 kg) vehicle at impact speed of 15 mph (24 km/hour), with a maximum vehicle penetration of 10 feet (3 m).

1. Powered Crash Beam: The crash beam shall be operated by means of a hydraulic power system. The crash beam shall be capable of being raised or lowered within an 8 to 15 second time range.

a. Failure Mode of Operation: A disconnect system for the crash beam shall be provided to allow manual operation of the barrier in the event of an electrical or mechanical failure.

b. Hydraulic Power Unit: The hydraulic power unit shall contain synthetic biodegradable hydraulic fluid which maintains its viscosity operating range, even at constant heaviest use rate, for an ambient temperature range of 20 to 150 degrees F (minus 7 to plus 66 degrees C). A hydraulic fluid heater shall be provided so that the viscosity remains within its operating range if ambient temperatures below 20 degrees F (minus 7 degrees C) are expected. Buried hydraulic lines for the connection of the hydraulic power unit to the barrier shall be flexible or carbon steel pipe or a combination of flexible and carbon steel pipe. Flexible and rigid hydraulic line working pressures shall exceed the maximum system relief pressure. PVC pipe and fittings for burial of hydraulic lines shall be in accordance with ASTM D 3034 Type PS 46 with minimum pipe stiffness of 46.

1) Flexible hydraulic lines shall be in accordance with SAE J517.
2) Rigid hydraulic lines shall be seamless carbon steel pipe in accordance with ASTM A 106.

c. Hydraulic Power Unit Enclosure: A NEMA Type 3R enclosure as specified in NEMA 250 shall be provided to enclose the hydraulic power unit. The enclosure shall be designed for easy removal of the hydraulic power unit components and other accessories without complete removal of the enclosure. An access door with hinges and an inside and outside operable/lockable exterior door latch shall be provided. Equipment within the enclosure shall be placed and configured so that all periodic maintenance can be performed through the access door without removal of the equipment. The enclosure shall be equipped with weatherproof louver vents appropriately sized and located to dissipate internal heat generation.

2. Manual Crash Beam: The crash beam shall be manually raised and lowered with the aid of a counterbalanced end requiring approximately 60 pounds (267 N) of force.

E. Portable Retractable Barrier: The portable retractable barrier shall be transportable and capable of manual and/or electro-mechanical operation. When in the raised position, the total barrier heights shall be no less than 28 inches (711 mm) above the roadway surface and shall be up to 144 inches (3.66 m wide). The barrier shall be equipped with entrance/exit ramps when the barrier extends more than 5/8 inch (16 mm) above the roadway surface. Retractable barriers in the lowered position shall be capable of supporting a 32,000 pound (142 kN) axle load or a 16,000 (71 kN) pound wheel load. Design for this load shall be accordance with AASHTO HB-17.

1. Powered Portable Retractable Barrier: The portable retractable barrier shall be capable of 300 complete up/down cycles per hour. The retractable barrier motion shall be instantly reversible and shall be capable of raising the barrier from the lowered position to the raised position within 8 seconds during normal use, and within 2 seconds during an emergency. Also, the barrier shall be capable of being closed from the raised position to the lowered position in not more than 3 seconds. Retractable barrier shall withstand a K4 **OR** K8 **OR** K12, **as directed**, impact condition with Performance Level of L1.0 **OR** L2.0 **OR** L3.0, **as directed**. Portable retractable barrier, when impacted by a 15,000 pound (6,800 kg) vehicle at impact speed of 50 mph (80 km/hour) shall disable the vehicle and allow it to travel no more than 50 feet (15.2 m) after impact. Portable power assisted retractable barriers shall be equipped with on and off ramps for smooth transition between surfaces when the barrier extends more than 5/8 inch (16 mm) above the roadway surface.
   a. Failure Modes of Operation: The system shall be designed to prevent lowering of the barrier in the event of hydraulic, electric, or mechanical failure. A manual pump shall be included for operation of hydraulic and/or mechanical barriers without power.
   b. Electric Motors: Unless otherwise indicated, electric motors shall have drip-proof **OR** totally enclosed, **as directed**, enclosures.
   c. System: The system shall be designed to maintain the barriers in the raised position, without inspection, for periods of time of up to 1 week. If a hydraulic system is used, it shall be equipped with pressure relief valves to prevent overpressure.
   d. Hydraulic Power Unit: The hydraulic power unit shall contain synthetic biodegradable hydraulic fluid which maintains its viscosity operating range, even at constant heaviest use rate, for an ambient temperature range of 20 to 150 degrees F (minus 7 to plus 66 degrees C). A hydraulic fluid heater shall be provided so that the viscosity remains within its operating range if ambient temperatures below 20 degrees F (minus 7 degrees C) are expected. Flexible hydraulic lines shall be used for the connection of the hydraulic power unit to the barrier. Flexible hydraulic line working pressures shall exceed the maximum system relief pressure; flexible hydraulic lines shall be in accordance with SAE J517.
2. Manual Retractable Portable Barriers: The manual barrier shall be capable of being raised and lowered by manual means such as levers or hydraulics requiring a maximum 60 pounds (267 N) of force. The manual mechanism shall contain a locking pin which accepts a padlock for securing the barrier when it is in the "UP" position and shall also be capable of being locked in the

"DOWN" position. Retractable barrier shall withstand a K4 **OR** K8 **OR** K12, **as directed**, impact condition with Performance Level of L1.0 **OR** L2.0 **OR** L3.0, **as directed**

F. Portable Crash Beam: The portable crash beam shall be an above-grade assembly that, in the "DOWN" position, shall present a visible obstacle to approaching vehicles. The height of the barrier shall be a minimum of 30 inches (750 mm) as measured from the roadway surface to the centerline of the crash beam. The crash beam shall be capable of blocking a minimum road width of 120 inches (3.0 m). The crash beam end shall contain a locking pin with padlock acceptance for securing the crash beam when it is in the "DOWN" position. Crash beam shall withstand a 15,000 pound (6804 kg) vehicle traveling at 30 mph (48 km/hour), with maximum vehicle penetration and/or barrier deflection of 20 feet (6 m).

1. Powered Portable Crash Beam: The portable crash beam shall be operated by means of a hydraulic power system. The crash beam shall be capable of being raised or lowered within an 8 to 15 second time range.
   a. Failure Mode of Operation: A disconnect system for the portable crash beam shall be provided to allow manual operation of the barrier in the event of an electrical or mechanical failure.
   b. Hydraulic Power Unit: The hydraulic power unit shall contain synthetic biodegradable hydraulic fluid which maintains its viscosity operating range, even at constant heaviest use rate, for an ambient temperature range of 20 to 150 degrees F (minus 7 to plus 66 degrees C). A hydraulic fluid heater shall be provided so that the viscosity remains within its operating range if ambient temperatures below 20 degrees F (minus 7 degrees C) are expected. Flexible hydraulic lines shall be used for the connection of the hydraulic power unit to the barrier. Flexible hydraulic line working pressures shall exceed the maximum system relief pressure; flexible hydraulic lines shall be in accordance with SAE J517.
   c. Hydraulic Power Unit Enclosure: A weather resistant enclosure shall be provided to enclose the hydraulic power unit. The enclosure shall be designed for easy removal of the hydraulic power unit components and other accessories without complete removal of the enclosure. An access door with hinges and an inside and outside operable lockable (exterior) door latch shall be provided. Equipment within the enclosure shall be placed and configured so that all periodic maintenance can be performed through the access door without removal of the equipment. The enclosure shall be equipped with weatherproof louver vents appropriately sized and located to dissipate internal heat generation.
2. Manual Portable Crash Beam: The crash beam shall be manually operated by means of a counter balanced system requiring approximately 60 pounds (267 N) of force.

G. Electrical Work: Motors, manual or automatic motor control equipment except where installed in motor control centers and protective or signal devices required for the operation specified herein shall be provided in accordance with YYYY597YYYY. All field wiring for loop detectors, communication lines, and power circuits shall have surge protection. Any wiring required for the operation specified herein, but not shown on the electrical plans, shall be provided under this section in accordance with YYYY597YYYY.

H. Control Panel: A control panel and control circuit shall be provided to interface between all barrier control stations and the power unit. A control panel shall be provided for the inbound lanes and a separate one for the outbound lanes where the barriers are located. The control station is defined as the main control panel and the remote control panel as shown. The control circuit shall contain all relays, timers, and other devices or an industrial programmable controller programmed as necessary for the barrier operation. The control panel shall allow direct interface with auxiliary equipment such as card readers, remote switches, loop detectors, infrared sensors, and sliding **OR** swinging, **as directed**, gate limit switches. Loop controllers shall not cause an automatic barrier raise following power loss or restoration. The enclosure shall be as indicated on the drawings. All device interconnect lines shall be run to terminal strips.

1. Voltage: The control circuit shall operate from a 120 volt 60 **OR** 50, **as directed**, Hz supply. The control circuit voltage shall be 12 **OR** 24, **as directed**, ac **OR** dc, **as directed**, for all external control panels.

2. Main Control Panel: A main control panel shall be supplied to control barrier function. This panel shall have a key-lockable main switch with main power "ON" and panel "ON" lights. Buttons to raise and lower each barrier **OR** set of barriers, **as directed**, shall be provided. Barrier "UP" and "DOWN" indicator lights shall be included for each barrier **OR** set of barriers, **as directed**. An emergency fast operate circuit (EFO) shall be operated from a push button larger than the normal controls and have a flip safety cover installed over the push button or toggle switch. The EFO shall also be furnished with an EFO-active light and reset button. The main control panel shall have a key lockable switch to arm or disable the remote control panel. An indicator light shall show if the remote control panel is enabled.
3. Remote Control Panel: A remote control panel, one panel for the inbound lane(s) and a separate panel for the outbound lane(s), shall have a panel "ON" light that is lit when enabled by a key lockable switch on the main control panel. Buttons to raise and lower each barrier shall be provided. Barrier "UP" and "DOWN" indicator lights shall be included for each barrier. The EFO shall be operated from a push button larger than the normal controls and have a flip safety cover installed over the push button or toggle switch. Activation of either EFO will operate all barriers. The EFO shall be interconnected with an EFO-active light. When the remote control panel EFO is pushed, operation of the barrier will not be possible from this panel until reset at the main control panel.

I. Miscellaneous Equipment
1. Safety Equipment
   a. Barrier Systems Sensors: The sensors shall be compatible with the barrier controller and shall function as part of a complete barrier control system. The barrier system sensors shall consist of the following:
      1) Suppression Loops - Two inductive loops whose outputs shall be used to prevent barriers raising when a vehicle is within a prescribed distance of the barrier. The output of the loops shall override all barrier rise signals until one second after a vehicle clears the suppression loop.
      2) Speed Loops - Two inductive loops whose output shall be used to signal the barrier controller of a vehicle approaching at a speed greater than the posted speed (25 mph (11.2 m/sec) or less (recommended)). The speed loops shall cause the barrier control panel to annunciate a warning sound alerting the guard to make a decision as to whether the barrier should be raised or not.
      3) Wrong Way Loops - Two inductive loops whose output shall be used to signal the barrier control panel to ennunciate a warning sound if a vehicle is attempting to enter the facility through the exit lane. The warning sound will alert the guard to make a decision as to whether the barrier should be raised or not.
   b. Traffic Lights: Red/yellow 8 inch (200 mm) traffic lights shall be supplied for each entrance and exit to alert motorists of the barrier position. Traffic lights are not required for manual barriers. The yellow flashing light shall indicate that the barrier is fully open. All other positions shall cause the light to show red. Brackets shall be supplied to allow the light to be mounted a minimum 4.5 feet (1.4 m) above the roadway pavement on a 3.5 inch (90 mm) outside diameter metal post or mounted directly on the crash gate.
2. Warning Annunciator: Provide a warning annunciator built into the barrier control panel that produces a pulsing audible sound when the speed loop detects a vehicle entering the facility with excess speed. Provide a warning annunciator built into the barrier control panel that produces a continuous sound whenever a wrong way loop detects a vehicle entering from the exit. The warning annunciator shall sound until a warning annunciator silence reset button is pressed.
3. Heater: A waterproof barrier heater with a thermostat control and NEMA 4 junction box connection point shall be provided for de-icing and snow melting. The heater shall provide barrier operation to an ambient temperature of minus 40 degrees F (minus 40 degrees C). For retractable bollards, a 250-watt heater shall be provided for each bollard.
4. Signage: Signage shall read "Axle Weight Limit 9 Tons" and shall conform to FHWA SA-89-006 sign (R12.2).

5. Vertical Arm Gates (Traffic Arms): Vertical arm gates shall have an opening and closing time of less than or equal to 5 seconds. The gates shall be capable of 500 duty cycles per hour as a minimum. Gate shall operate the arm through 90 degrees. Gate operators shall be supplied with single phase 120 volt motors. Each entry lane shall be provided with a vertical arm gate. Each gate shall be capable of being operated from a remote open-close push button station in each guard booth and the gatehouse for the respective entry lane. Gates shall have a hand-crank, or other means, which will allow manual operation during power failures. Gate arms shall be constructed out of wood, steel, fiberglass, or aluminum, as specified by the manufacturer for the given lengths as shown on the drawings. Gate arms shall be covered with 16 inch (406 mm) wide reflectorized red and white sheeting. Each gate shall be furnished with a spare gate arm. Gate operator cabinets shall be constructed of galvanized steel, or aluminum and shall be painted manufacturers standard color as approved. Each gate operator shall be provided with an obstruction detector that will automatically reverse the gate motor when an obstruction is detected. The obstruction detector shall be any of the following 3 types: An electronic loop vehicle detector buried in the road, a photocell electric eye mounted on the gate operator, or a safety strip mounted on the lower edge of the arm. The detector system shall be automatically deactivated when the arm reaches the fully lowered position. Slab size and anchorage for gate operator shall be per manufacturer requirements.
6. Vehicle Barrier Vertical Arm Gate (Traffic Arm): A traffic arm, as a separate piece of equipment, will be included with each non-portable active vehicle barrier as part of the barrier safety operating system. This traffic arm shall automatically deploy (close) when the emergency up button is activated and open when the vehicle barrier is reset. This traffic arm will not be equipped with an automatic obstruction detector.

J. Finish: Surfaces shall be painted in accordance with requirements of YYYY267|268YYYY, as applicable. The roadway plate shall have a nonskid surface painted white with reflective red 4 **OR** 6, **as directed**, inch (100 **OR** 150, **as directed**, mm) wide red reflective stripes 4 inches (100 mm) apart. The barrier front shall be painted white and have 4 **OR** 6, **as directed**, inch (100 **OR** 150, **as directed**, mm) wide reflective red stripes 4 inches (100 mm) apart. The diagonal striping should point down and outward from the center of the device. Bollards shall be painted white with 2 **OR** 3, **as directed**, inch (50 **OR** 75, **as directed**, mm) wide reflective red diagonal stripes. The barrier crash gate shall be painted as specified by purchaser and the crash beam shall be painted white with 3 inch (75 mm) wide reflective red diagonal stripes.

K. Concrete: The concrete shall conform to YYYY73YYYY.

L. Welding: Welding shall be in accordance with AWS D1.1/D1.1M.

M. Pavement: After placement of the vehicle barrier, the pavement sections shall be replaced to match the section and depth of the surrounding pavement. Pavement shall be warped to match the elevations of existing pavement. Positive surface drainage, away from the vehicle barrier, shall be provided by pavement slope.

1.3 EXECUTION

A. Installation: Installation shall be in accordance with manufacturer's instructions and in the presence of a representative of the manufacturer. Manufacturer's representative shall be experienced in the installation, adjustment, and operation of the equipment provided. The representative shall also be present during adjustment and testing of the equipment.

B. Hydraulic Lines: Buried hydraulic lines shall be placed in polyvinyl chloride (PVC) sleeves. Positive drainage shall be provided from the hydraulic power unit to the barrier for drainage of condensation within the PVC sleeve.

C. Pit Drainage: A drain connection and oil/water separator, **as directed**, shall be provided in each barrier that requires pit/vault type construction. Hookups between the storm drains shall be made. The self-priming sump pump shall have the capacity to remove minimum 150 gallons per minute (34 cubic meters per hour).

D. Electrical: All control power wiring requiring compression terminals shall use ring-style terminals. Terminals and compression tools shall conform to UL 486A. Roundhead screws and lockwashers shall be used to provide vibration-resistant connections. Connections between any printed circuit cards and the chassis shall be made with screw connections or other locking means to prevent shock or vibration separation of the card from its chassis. The electrical power supply breaker for the hydraulic power unit shall be capable of being locked in the power on and power off positions.

E. Field Testing: Upon completion of construction, a field test shall be performed for each vehicle barrier. The test shall include raising and lowering the barrier, both electrically and manually, through its complete range of operation. Each vehicle barrier shall then be continuously cycled for not less than 30 minutes to test for heat build-up in the hydraulic system. the Owner shall be notified at least 7 days prior to the beginning of the field test. The Contractor shall furnish all equipment and make all necessary corrections and adjustments prior to tests witnessed by the Owner. Any conditions that interfere with the proper operation of the barrier disclosed by the test shall be corrected at no additional cost to the Owner. Adjustments and repairs shall be done by the Contractor under the direction of the Owner. After adjustments are made to assure correct functioning of components, applicable tests shall be completed.

F. Field Training: A field training course shall be provided for designated operating staff members. Training shall be provided for a total period of not less than 8 hours (for electrical/hydraulic operated units) or 1 hour (for manually operated units) of normal working time and shall start after the system is functionally complete but prior to final acceptance tests. Field training shall cover all of the items contained in the operating and maintenance instructions.

SECTION 34 71 13 26 - VEHICLE GUIDE RAILS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for beam-type guardrail. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals
1. Product Data: For each type of product indicated.
2. Shop drawings shall be submitted for approval.

1.2 PRODUCTS

A. Rail Elements, End Sections, and Fasteners
1. ARTBA technical bulletin No. 268-B.
2. Provide galvanized steel W-beam in accordance with AASHTO M-180, class A, type 1.
3. Shop curve rail elements when required radius of installation on horizontal curve is 150 ft (46 m) or less. Provide W-beam rail (ARTBA RE-3) with a flared end section (ARTBA RE-5), rounded end section (ARTBA RE-6) at each end of installations.
4. Provide standard back-up plates behind rail elements at all intermediate, non-splice posts when steel posts and blocks are used.
5. Galvanize the rail sections, including end sections, in accordance with ASTM A 525, coating G-210.

B. Posts
1. Wood: Provide wood posts with blocks, size as required by State DOT. Rough sawn or S4S timber of Douglas Fir or any other locally approved species that is either No. 1 grade or Select Structural grade when graded in accordance with the requirements for Timber and Posts as set forth in WWPA-01 may be used. Give all wood posts and blocks a preservative treatment in accordance with the requirements of AASHTO M-133. Cut to length and bore posts and blocks for bolt holes before treatment.
2. Steel: Provide steel posts with blocks. Fabricate posts and blocks from W6X9 structural steel shapes complying with the requirements of ASTM A 36. Fabricate in the shop, grind smooth all corners and edges, galvanize posts and blocks after fabrication in accordance with ASTM A 123.

C. Bolts, Nuts, and Washers
1. Provide galvanized bolts, nuts, and washers that meet common ARTBA standards, designed to develop the required joint strength. Provide bolts with rounded heads to provide minimum obstruction.
2. Provide galvanized steel bolts conforming to the requirements of ASTM A 307, nuts conforming to the requirements of ASTM A 563, Grade A or better and galvanized steel washers, all galvanized in accordance with the requirements of ASTM A 153. Provide high strength bolts conforming to the requirements of ASTM A 325 where needed.

D. Reflectors: Provide guardrail reflectors as indicated. Place the galvanized steel tabs with reflective sheeting at every post except no reflectors are to be placed along the guardrail end flares.

E. Breakaway Cable Terminal (BCT) Assemblies: Provide BCT assemblies in accordance with the ARTBA details and standards referenced on the details.

F. Concrete and Reinforcement for the Post Footings: In accordance with applicable sections of Division 3 Section “Cast-in-place Concrete".

1.3 EXECUTION

A. Guardrail: Erect steel beam-type guardrail in locations and to lines and grades as directed and in accordance with details indicated.

B. Erection
1. Firmly set posts spaced at 6 ft. 3 in. (1.9 m) centers to the required depth. Set posts by placing in hand or mechanically dug holes or by driving, with or without pilot holes. Backfill gaps around posts with approved material that is moistened and thoroughly compacted. Repair damaged roadway surfacing where pavement is disturbed.
2. Position the top of W-beam rail at 27 in. (0.69 m) above the finished roadway surface. Align rail both vertically and horizontally within 1/4-in. (6 mm) from the theoretical alignments. Lap the rail sections at posts, in the direction of traffic in the adjacent lane, and lap end sections on the face of the rail.
3. Exercise care to avoid damage to treated wood and galvanized steel parts. Repair or replace damaged parts at the Contractor's expense. Securely tighten all bolts in the finished guardrail. Toenail the wood blocks to wood posts with two 16 penny galvanized nails, one on each side of the top of the block.

SECTION 35 22 26 00 - SLUICE GATES

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of sluice gate. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

1.2 PRODUCTS

A. Sluice Gates: The sluice gate shall conform to the latest edition of AWWA 501 Sluice Gate Standards. Gate and accessories shall be as manufactured by Rodney Hunt Company or Hydrogate, or approved equal.
1. Sluice gates shall be cast iron, fully bronze mounted, and will have side wedges for seating head conditions and side, top and bottom wedges for unseating head conditions, where scheduled.
2. Liberal safety factors shall be used in the design of all the equipment. Working stresses shall not exceed the lower value of one-third (1/3) of the yield strength or one-fifth (1/5) of the ultimate strength of the material. The slide or disc shall be designed with a minimum safety factor of six (6). The sluice gates and operators shall be completely shop-assembled, inspected and tested to ensure proper fit and adjustment of all parts.
3. The sluice gate shall be substantially watertight under the design head conditions. The leakage shall not exceed 0.10 gallons per minute per foot of periphery for either the rated seating or unseating of the gate. The gate shall be rated for 60 feet of seating head and 35 feet of unseating head.
4. All materials used in the construction of the gates and appurtenances shall be designed for the application and shall conform to the following specifications.
5. Iron casting for wall thimbles, frame, disc, and guides, stem guides, floor stands and other items - ASTM A 126, Class B.
6. Bronze castings for wedges, thrust nut, and lift nut - ASTM B 584, Alloy 86500 or 87200.
7. Bronze for seat facings in frame and disc - ASTM B 21, Alloy 48200, extruded or ASTM B 139, Alloy 510, extruded.
8. Stainless steel for stems, stem couplings and fasteners - ASTM A 276, Type 304.
9. Silicon bronze for fasteners - ASTM B 98, Alloy 651, or 661.
10. Rubber for flush bottom seal - ASTM D 2000, grade AA625.

B. Frame: The frame shall be of cast iron, one-piece construction, flanged with rectangular or circular. All contact surfaces of the frame shall be machined. The frame shall have machined dovetailed grooves on the front face into which bronze seat facings shall be driven and machined to a 63 micro-inch finish. The back flange of the frame shall be machined to bolt directly to the machined face of the “F” type wall thimble. Frames for the sluice gates subject to unseating heads shall have integrally cast pads machined with keyways to receive top and bottom wedge seats.

C. Disc: The disc shall be of cast iron, one-piece construction rectangular with integrally cast vertical and horizontal ribs. The disc shall have a minimum thickness of 3/4 inch on gates which are 18 inches in diameter or larger. A heavy vertical reinforcing rib along each side shall be provided to ensure rigidity between the side wedges. All interior vertical ribs shall be of equal depth and shall not have any horizontal jogs along their entire length. Spacing of horizontal ribs shall not exceed 12 inches. The maximum deflection of horizontal ribs based on a working stress of 6,000 pounds per square inch for cast iron shall not exceed 0.07 inch under design pressure. The disc shall have machined dovetailed grooves on the seating face into which bronze seat facings shall be driven and machined to a 63 micro-inch finish. A tongue on each side, extending the full length of the disc, shall be machined on all sides

with a 1/8 inch clearance maintained between the disc tongue and the gate guide groove. Wedge pads for side wedges and for top and bottom wedges when required, shall be cast integrally on the disc and machined to receive the adjustable bronze wedges. A heavily reinforced nut pocket shall be cast integrally on the vertical centerline and above the horizontal center and be of such shape as to receive the square backed bronze thrust nut.

D. Guides: The guides shall be one piece, integrally cast type, designed to withstand the total thrust due to the water pressure and the wedging action. The guides shall be either bolted onto or integrally cast with the frame. The guides shall be machined on all contact surfaces and a groove shall be machined along the entire length of the guide to allow not more than 1/8 inch clearance between the disc tongue and the guide groove. The guides shall be of such length as to retain and support at least one-half (1/2) of the disc in the full open position. The bolt-on guides shall be attached to the frame with silicon bronze or stainless steel studs and nuts and shall be doweled to prevent any relative motion between the guides and the frame. The integrally cast guides shall have wedge blocks which are attached to the guide with silicon bronze fasteners. Gates having integrally cast frames, guides and wedge blocks shall be unacceptable. Both the integrally cast and bolt-on blocks shall have machined dove-tailed grooves in which the bronze wedge seats shall be driven and machined. Wedge seats which are bolted onto the wedge block or guide shall be unacceptable.

E. Wedges: Each gate shall be provided with a sufficient number of wedging devices to assure its compliance with the leakage requirements. Side wedges shall be designed to make full metal-to-metal contact with the wedge seats mounted on the guide wedge blocks. The wedges shall be solid cast bronze, machined on all contact surfaces, and keyed to the cast iron pads on the disc to prevent rotation and lateral motion. The wedges shall be attached to the disc with silicon bronze studs and nuts to lock them securely in position after they have been adjusted.
   1. Adjustable top and bottom wedges, where applicable, shall be attached to the disc either by tongue-and-groove arrangement with a signal fastener or by two fasteners. All mating and contact surfaces on the wedging devices shall be fully machined.

F. Seat Facings: The extruded seat facings shall be of a special shape to fill and permanently lock in the machined dovetail grooves on the frame and disc when pneumatically impacted into place. Attaching pins and screws shall not be acceptable. The installed seat facings shall be machined to a 63 micro-inch finish or better. Maximum clearance between seating faces shall not exceed 0.004 inch when the disc is in the fully closed position.

G. Stem
   1. The operating stem shall be of a size to safely withstand the stresses induced by normal operating forces without buckling or permanent distortion. The stem shall be designed to transmit in compression at least two (2) times the rated output of the floorstand or benchstand with a 40-pound effort on the crank or handwheel. The sluice gate manufacturer shall submit these calculations, if required by the Owner. The threaded portion of the stem shall have machined cut or rolled threads.
   2. Acme type. The contact surfaces of the threads shall have a maximum 16 micro-inch finish. Stems of more than one (1) section shall be jointed by stainless steel couplings threaded and keyed or bored and pinned to the stems. All threaded and keyed couplings of the same size shall be interchangeable. Manually operated, rising stem gates shall be provided with an adjustable bronze stop collar on the stem above the floorstand lift nut.

H. Stem Guides: Stem guides shall be cast iron, bronze brushed, mounted on cast iron brackets. They shall be adjustable in two (2) directions and shall be spaced at sufficient intervals to adequately support the stem. Stem guide spacing shall not exceed 10 feet, or an L/R ratio of 200.

I. Pipe Covers: Provide fabricated galvanized steel stem cover w/position indication on all rising stems.

J. Crank Operators: All gates shall have crank-operated floorstands or benchstands. Crank handle shall be removable. Crank operated type shall be geared and shall have a weatherproof housing with a solid bronze operating nut mounted on high-strength cast iron pedestals or base plates. The operating nut shall be internally threaded with threads corresponding to stem threading. Tapered roller or ball bearings shall be provided above and below a flange on the operating nut to support both opening and closing thrusts. All gears shall be constructed of steel and shall be accurately machine cut and of proper design to provide smooth operation and to support load conditions. Lubrication fittings shall be provided in the gear housing to permit lubrication of all gears and bearings. All reduction gear cases shall be precision machined and equipped with tapered rolled or needle bearings and sealed about all reduction shafts. Geared hoists shall have a 4:1 ratio. Each hoist shall be supplied with a 2-inch square operating nut, and a removable cast iron crank arm with revolving brass grip. Floorstands shall include a cast iron pedestal designed to position the input shaft approximately 36 inches above the operating floor. Where called for, the floorstand shall be mounted on a cast iron wall bracket which is specifically designed for the particular operator being used. An arrow with the word “Open” will be permanently attached or cast in the floorstand indicating the direction of rotation to open the gate.

K. All geared and handwheel floorstands shall operate with a maximum effort not to exceed 40 pounds on the crank or handwheel.

L. Painting - All submerged ferrous metal components (i.e., gate and frame, thimble, stem guides) shall be shop painted as follows: prepare surfaces to SSPC-SP-6; Primer - Amer Lock 400 by Ameron International Inc. Performance Coatings and Finishes Group, or approved equal, 5.0 mil dry film thickness; Top Coat - Amer Lock 400, or approved equal, 5.0 mil dry film thickness.

M. All exposed ferrous metal components (i.e., crank operator and floor stand) shall be shop painted as follows: prepare surfaces to SSPC-SP-3; Primer - Amer Lock 400, or approved equal, 5.0 mil dry film thickness, Top Coat - Amer Lock 450 HS, or approved equal, 2.0 mil dry film thickness

N. All bolts, studs and nuts required for setting the sluice gates, frames and operating stands shall be stainless steel and shall be supplied by the manufacturer.

1.3 EXECUTION

A. Provide and deliver cast iron thimble to be cast into wall as per manufacturer’s recommendations and as specified herein. Install the sluice gate with all appurtenances in strict conformance with manufacturer’s instructions.

SECTION 35 24 00 00 - DREDGING

1.1 GENERAL

A. Description Of Work
1. This specification covers dredging. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Definition
1. Hard material is defined as material requiring blasting or the use of special equipment for economical removal, and includes boulders or fragments too large to be removed in one piece by the dredge.

C. Submittals: Submit the following:
1. Shop Drawings: Indicate pipeline location and installation details. Submit drawings of surveys during progress of work by soundings or sweepings.
2. Protection plan: If blasting will be allowed, submit a plan for protection of surrounding structures, equipment, and vessels.

D. Material to be Removed
1. The material to be removed is silt and mud **OR** new material, **as directed**, applicable to the specific project.
a. Hard Material: Remove hard material. Blasting will not be permitted **OR** Blasting shall be performed only by experienced persons, **as directed**. Conduct operations in strict accordance with applicable regulations. Protect exposed structures from the effects of the blast in accordance with the protection plan

E. Artificial Obstructions
1. Except as indicated, the Owner has no knowledge of cables, pipes, or other artificial obstructions or of any wrecks, wreckage, or other material that would necessitate the use of explosives or the employment of additional equipment for economical removal. If actual conditions differ from those stated or shown, or both, an adjustment in contract price or time for completion, or both, will be made.
OR
The Owner has knowledge of debris such as, but not limited to, metal bands, pallets, pieces of broken cable, rope, fire hose, and broken piles. The Owner has no knowledge of existing wrecks, wreckage, or other material of such size or character as to require the use of explosives or special or additional plant for its economical removal. Prior to dredging, the Contractor shall rake the dredge areas and shall remove debris encountered. Debris removed from the dredged area shall be removed from the water. Disposal shall be the responsibility of the Contractor and disposal shall be outside the limits of government property. In case the actual conditions differ from those stated or shown, or both, an adjustment in contract price or time of completion, or both, will be made.

F. Side Slopes
1. Dredging on side slopes shall follow, as closely as practicable, the lines indicated or specified. An allowance will be made for dredging beyond the lines indicated or specified for side slopes. The allowance will be determined by projecting a line upwards, paralleling the project design side slopes, from the intersection of the overdepth dredging limit (at a point located vertically below the limit of dredging at the top of slope). The amount of material excavated from side slopes will be determined by either cross-sections or computer, or both.

G. Permit
1. The Contractor shall comply with conditions and requirements of State or Federal permits. the Owner will secure the permit for dredging and disposal of material as indicated. Make arrangements for disposal of excavated materials.

H. Environmental Protection Requirements
1. Provide and maintain during the life of the contract, environmental protective measures. Also, provide environmental protective measures required to correct conditions, such as oil spills or debris, that occur during the dredging operations. Comply with Federal, State, and local regulations pertaining to water, air, and noise pollution.

1.2 PRODUCTS - (Not Used)

1.3 EXECUTION

A. Conduct Of Dredging Work
1. Order of Work Interference with Navigation: Minimize interference with the use of channels and passages. the Owner will direct the shifting or moving of dredges or the interruption of dredging operations to accommodate the movement of vessels and floating equipment, if necessary.
2. Compensation for Interruption of Operations: If dredging operations are interrupted due to the movement of vessels or floating equipment, an adjustment in the contract price or time for completion, or both, will be made as provided by the contract. the Owner will notify the Contractor 7 days prior to ship movements that will affect dredging operations.
3. Lights: Each night, between sunset and sunrise and during periods of restricted visibility, provide lights for floating plants, pipelines, ranges, and markers. Also, provide lights for buoys that could endanger or obstruct navigation. When night work is in progress, maintain lights from sunset to sunrise for the observation of dredging operations. Lighting shall conform to United States Coast Guard requirements for visibility and color.
4. Ranges, Gages, and Lines: Furnish, set, and maintain ranges, buoys, and markers needed to define the work and to facilitate inspection. Establish and maintain gages in locations observable from each part of the work so that the depth may be determined. Suspend dredging when the gages or ranges cannot be seen or followed. the Owner will furnish, upon request by the Contractor, survey lines, points, and elevations necessary for the setting of ranges, gages, and buoys.
5. Plant: Maintain the plant, scows, coamings, barges, pipelines, and associated equipment to meet the requirements of the work. Promptly repair leaks or breaks along pipelines. Remove dredged material placed due to leaks and breaks.
6. Disposal of Excavated Material: Provide for safe transportation and disposal of dredged materials. Transport and dispose of dredged material in the area designated for disposal of dredged material.
OR
The Contractor may, at his option, dispose of dredge material at an approved disposal area. The deposit of dredged materials in unauthorized places is forbidden. Comply with rules and regulations of local port and harbor governing authorities.
a. Method of Disposal: Deposit dredged material by the hydraulic process **OR** hopper dredge **OR** self-dumping scow or barge, **as directed**. Pipeline for hydraulic dredging shall discharge into the disposal area.
b. Disposal in Indicated Fill Areas: In depositing excavated material for fill, uniformly grade and allow for shrinkage. Provide and maintain necessary bulkheads, dikes, ditches, weirs, spillways, and other construction necessary to confine and retain the fill in the dredge fill area.
c. Operation of Sluiceways: Sluiceways on the disposal area levees will be operated and maintained by the Owner. The Contractor will be relieved of operations thereof.

d. Submerged Pipeline: If a leak occurs in the discharge pipeline, immediately discontinue using the line until leaks are repaired. Remove material placed due to leaks or breaks.

7. Navigation Warnings: Furnish and maintain navigation warning signs along the pipeline.
8. Method of Communication: Provide a system of communication between the dredge crew and the crew at the disposal area. A portable two-way radio is acceptable.
9. Salvaged Material: Anchors, chains, firearms, and other articles of value, which are brought to the surface during dredging operations, shall remain or become the property of the Owner and shall be deposited on shore at a convenient location near the site of the work, as directed.
10. Safety of Structures: The prosecution of work shall ensure the stability of piers, bulkheads, and other structures lying on or adjacent to the site of the work, insofar as structures may be jeopardized by dredging operations. Repair damage resulting from dredging operations, insofar as such damage may be caused by variation in locations or depth of dredging, or both, from that indicated or permitted under the contract.
11. Plant Removal: Upon completion of the work, promptly remove plant, including ranges, buoys, piles, and other markers or obstructions.

B. Measurement

1. Contractor shall take soundings before and after dredging.
   a. Method of Measurement: The material removed will be measured by means of soundings taken before and after dredging. The drawings represent existing conditions based on current available information, but will be verified and corrected, if necessary, by soundings taken before dredging in each locality. Soundings will be taken by lead line or 200 kHz sonic methods, or both, as determined by the Owner; results of soundings by either or both methods will be the basis for payment. Areas sounded more than 30 days prior to dredging will be re-sounded when requested by the Contractor. The Contractor has the option of being present when such soundings are made.
   b. Surveys During Progress of Work: Contract depth will be determined by soundings or sweepings taken behind the dredge as work progresses. The Contractor shall take progress soundings or sweepings.

C. Final Examination And Acceptance

1. As soon as practicable after the completion of areas, which in the opinion of the Owner, will not be affected by further dredging operations, each area will be examined by the Owner by sounding or sweeping, or both. Remove shoals and lumps by dragging the bottom or by dredging. However, if the bottom is soft and the shoal areas form no material obstruction to navigation, removal may be waived at the discretion of the Owner. The Contractor will be notified when soundings or sweepings are to be made and will be permitted to accompany the sounding or sweeping party and to inspect the data and methods used in preparing the final estimate. When areas are found to be in a satisfactory condition, the work therein will be accepted as complete. Final estimates will be subject to deductions or correction of deductions previously made because of excessive overdepth, dredging outside or authorized areas, or disposal of material in an unauthorized manner.

SECTION 35 51 13 00 - FLOATING PIERS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of boat barrier float system. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.
2. The Contractor shall install both a temporary and a permanent boat barrier float system. The temporary system shall remain the property of the Owner.

1.2 PRODUCTS

A. Temporary System
1. Spar Buoys: ABS plastic exterior, urethane foam filled, 5 inch diameter, 76 inch long, with hazard warning symbol and “DANGER” message.
2. Can Buoys: ABS plastic exterior, urethane foam filled, 14 inch can diameter, 30 inch can height, 28 inch collar diameter, 12 inch collar height, internal ballast, bottom attachment, with hazard warning symbol and “DANGER” message and approved J.A. McDermott Type BUNY, or approved equal, light assembly. Light shall be 60 flashes per minute, medium intensity with clear polycarbonate lens. Also to be provided are: one spare light assembly, 4 sets of batteries and 6 spare bulbs.
3. Buoys are to be anchored using 1/4-inch galvanized chain with galvanized connecting links and galvanized anchor shackles attached to concrete anchors.
4. Barrier rope to be 3/8 inch diameter white polypropylene rope with 2-1/2 inch diameter, 5 inch long red and white rope floats with float clips.

B. Permanent System
1. Two 16 inch diameter, urethane foam filled, orange polyethylene spheres with 1/2-inch diameter steel rod through the float with galvanized eye nut swivels on both ends.
2. Three 18 inch diameter, 30 inch long, urethane foam filled, white polyethylene floats with 1 inch diameter Schedule 40 galvanized steel pipe through the float.
3. Barrier cable to be 5/16 inch diameter, yellow polypropylene coated, galvanized cable, “Permaflex,“ or approved equal
4. The spherical floats will be anchored to the bottom using 1/4-inch galvanized chain with galvanized anchor shackles attached to concrete anchors.

1.3 EXECUTION

A. Both systems shall be installed per the manufacturer’s recommendations.

END OF SECTION 35 51 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 35 51 13 23 - STONE GROINS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing of labor and materials for installation of temporary rock groins.

1.2 PRODUCT - (Not Used)

1.3 EXECUTION

A. The Contractor shall temporarily place a heavy stone fill rock groin in the river as directed by the Owner. Construction of the stone groin shall be completed before any excavation or permanent stone fill work is started. After excavation and stone fill work is completed to the elevations as directed by the Owner, the stone shall be removed from the groin and incorporated into the final stone fill section. Removal of the stone groin shall begin at the down river end and proceed up river. The rock groin shall overlap completed stone fill sections by 15 ft. at all times.

END OF SECTION 35 51 13 23

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 35 51 13 23a - STOP LOGS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing of labor, material and equipment for the installation of timber stop logs.

1.2 PRODUCTS

A. Stoplog tools will be provided as required to meet project requirements. Handle shall be 1-1/2 in. (38 mm) diameter ash handle, 10 ft. (3 m) long, equal to No. 75188. Tools shall be capable of lifting stop logs out of the structure.

1.3 EXECUTION

A. Stop logs shall be constructed from seasoned White Oak. Stop logs shall be dressed to the size as required to meet project requirements with a maximum moisture content of 19% at time of dressing. The timbers shall be #1 or better, as determined by visual grading in conformance with the latest standards of the National Forest Products Association. Bolts, nuts, flat washers and lock washers shall be galvanized steel. All stop logs shall be field installed and removed to demonstrate acceptability. Size and number of stop logs shall be as required to meet project requirements.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 41 22 23 00 - HOISTS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for monorails with air motor powered hoist. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Verification Of Dimensions
1. The Contractor shall be responsible for the coordination of his work with the work of all trades involved and as it relates to the building structure. The Contractor shall verify all building dimensions that relate to fabrication of the monorail system, and shall notify the the Owner of any discrepancy before order to the monorail manufacturer is finalized.

C. Submittals
1. Shop Drawings
2. Design Data
3. Test Reports
4. Certificates
5. Operation and Maintenance Data

D. Quality Assurance
1. Drawings: Submit drawings showing the general arrangement of the track beam system, including curves and switches, clearances, principal dimensions, details of structural connections, air system details, and all component details. Manufacturer's catalog data will suffice for items of standard manufacturer.
2. Certificates: Submit certification of minimum wire rope breaking strength for each hoist. Where applicable, submit factory certification of the load chain rated capacity.
3. Design Data: Submit design calculations verifying the size of structural members, structural supports (fittings, rods, brackets, and components), and lifting beams for the track beam system. The calculations shall include stress and loading diagrams. Submit calculations with monorail drawings.

E. Maintenance: Submit data package for the entire monorail system.

1.2 PRODUCTS

A. Fabrication And Construction
1. The hoist and trolley shall conform to ANSI/ASME HST-5M or ANSI/ASME HST-6M, **2 OR 3 OR** 5, **as directed**, ton (2 **OR** 3 **OR** 5, **as directed**, metric ton), for general service **OR** protected indoor **OR** all weather outdoor, **as directed**, (0 degrees to 100 degrees F (-18 to 38 degrees C)) working conditions. 2 ton (2 metric ton) design criteria shall apply to hoists of 2 ton (2 metric ton), or less, rated lifting capacity. Hoists of 2, 3, or 5 ton (2, 3, or 5 metric ton) rated capacity, shall be equipped with an automatic mechanical load lowering brake.
2. Capacity: The hoist shall have a minimum rated capacity as required to meet project requirements. The monorail system shall have a minimum rated capacity as required to meet project requirements.
3. Hook Lift and Speed: Shall be the manufacturer's standard within the limits specified in ANSI/ASME HST-5M or ANSI/ASME HST-6M. The hook lift shall be at its highest point a minimum height as required to meet project requirements above the finished floor and at its lowest point a minimum as required to meet project requirements below the finished floor.

OR

B. Fabrication And Construction

1. The 1/4 **OR** 1/2 **OR** 1, **as directed**, ton (1/4 **OR** 1/2 **OR** 1, **as directed**, metric ton) hoist and trolley shall meet the design requirements specified in ANSI/ASME HST-5M or ANSI/ASME HST-6M for the 2 ton (2 metric ton) hoist trolley.
2. Capacity: The hoist shall have a minimum rated capacity as required to meet project requirements. The monorail system shall have a minimum rated capacity as required to meet project requirements.
3. Hook Lift and Speed: For 1/4 **OR** 1/2 **OR** 1, **as directed**, ton (1/4 **OR** 1/2 **OR** 1, **as directed**, metric ton) hoist(s), the hook lift shall be at its highest point a minimum height as required to meet project requirements above the finished floor and at its lowest point a maximum **OR** minimum, **as directed**, as required to meet project requirements above **OR** below, **as directed**, the finished floor. The hook lift and speed limits for 1/4 **OR** 1/2, **OR** 1 ton, **as directed**, (1/4 **OR** 1/2 **OR** 1, **as directed**, metric ton) rated capacity hoists shall be within the limits shown in the following table.

Standardized hoist lift ranges and rated lifting speed ranges for 1/4, 1/2, and 1 metric ton rated capacity

Rated load Capacity (metric tons)	Hoist lift range (meter)	Hoist lifting speed range (mm/s) Low	High
1/4	3 to 15	120	350
1/2	3 to 12	80	250
1	3 to 10	40	225

Standardized hoist lift ranges and rated lifting speed ranges for 1/4-, 1/2-, and 1-ton rated capacity

Rated load capacity (tons)	Hoist lift range (feet)	Hoist lifting speed range (feet per minute) Low	High
1/4	10 to 50	24	70
1/2	10 to 40	16	50
1	10 to 30	8	45

4. Hooks: Shall be of the safety type with hook nuts keyed to hook shanks by means of a setscrew installed in a plane parallel to the longitudinal axis of the hook shank, or by any other similar easily removable securing device. All hook components shall be magnetic-particle inspected over the entire area in accordance with ASTM A 275/A 275M. The acceptance standard shall be one of no defects. A defect is defined as a linear indication revealed by magnetic-particle inspection that is greater than 1/8 inch (3 mm) long whose length is equal to or is greater than three times its width.
5. Hoist Wire Rope: Rope lengths shall be sufficient to maintain a minimum of two full wraps of rope at the dead end(s) of the drum, with the block in its lowest indicated position.
6. Hoist Chain: Chain hoists of 10 foot (3 m) lift or more shall be equipped with a load chain bucket.
7. Hoist Limit Switch: Hoists shall be equipped with upper and lower hoist limit switches/devices.
8. Control Pendant: Shall extend as required to meet project requirements below the underside of the track beam.
9. Trolley: Shall have a manual **OR** geared manual **OR** air motor powered, **as directed**, drive and shall be designed to operate from track beam section. Where two or more hoists are located on the same monorail beam, the trolleys shall be equipped with rubber bumper devices designed to prevent contact of any part or parts of the hoists.

C. Monorail Track Beam System
1. Shall conform to MMA MH27.1, for powered hoists. The maximum allowable deflection shall not exceed 1/600 of the unsupported span, with the hoist(s) at rated load(s) and at any location(s). The track beam system shall have trolley stops at all open end locations. The stops shall be designed to retain the hoist on the track. Wheel stops shall interface with the trolley wheel treads on both sides of the track web simultaneously and shall not interface with the trolley wheel flanges. The air supply valve specified shall be of the quick shutoff type, readily accessible from the floor, and located within proximity to the monorail system.
2. Color of Finished Equipment: Shall be the manufacturer's standard brilliant yellow.
3. Identification Plates: The manufacturer shall furnish and install identification plates of noncorrosive metal. Information and data on the plates shall include, in clearly legible permanent lettering, the manufacturer's name, model number, capacity rating, and other essential information. In addition, the monorail track beam system shall be furnished with identification plates showing the capacity of the system, which shall be legible from the floor and from either side of the monorail track beam.

1.3 EXECUTION

A. Erection And Installation
1. The Contractor shall erect and install the hoist and monorail system in accordance with of MMA MH27.1. The monorail supplier shall provide supervisory erection services.

B. Field Inspection And Tests
1. Pre-Erection Inspection: Before erection, the Contractor and the manufacturer's representative shall jointly inspect the monorail and hoist systems and components at the job site to determine compliance with specifications and manufacturer's data and detail drawings as approved. The Contractor shall notify the the Owner 3 days before the inspection.
2. Load Tests: Upon completion, and before final acceptance, the hoist, trolley, and monorail shall be tested in operation as specified, carrying 125 percent of the rated capacity, and with the units spaced to obtain maximum possible loads in the monorail track beam systems. The air equipment will not necessarily operate at rated speed with a 125 percent overload. For hoists that incorporate mechanical load brakes, the mechanical load brake shall hold a static, as well as control a dynamic, 125 percent rated load. The systems shall be thoroughly tested in service to determine that each component of the system operates as specified, is properly installed and adjusted, and is free from defects in material, manufacture, installation, and workmanship. The Contractor shall furnish test loads, operating personnel, instruments, and other apparatus as necessary to conduct field tests on hoist and monorail. The test and final adjustments of the equipment shall be under the supervision of the the Owner. The Contractor shall rectify any deficiencies found and completely retest work affected by such deficiencies.

END OF SECTION 41 22 23 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 41 22 23 00a - SPECIALTY HOISTS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of material handling hoists. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals
1. Product Data: For each type of product indicated.

1.2 PRODUCTS

A. Electric Chain Hoists
1. Hoist motors shall be H4 duty classification. Class F insulation shall be used in hoist motor for 30 minute operation. Load chain shall be grade 80 alloy, case hardened and zinc plated sized for the intended load. Hoists shall employ AC motor brakes employing single or multiple all-steel disks. Controls shall be hand-held, low voltage electrical, with emergency shut off and enclosed in NEMA 3R rated weatherproof enclosure. Hoist shall include fail safe limit switches in the hoist enclosure. Hoist shall meet requirements of ANSI B30.16 standard. Load hook shall be heavy-duty drop forged with safety latch. Hoist shall have swivel top and bottom hooks.

B. Manual Chain Hoists
1. Load capacity of hoist shall be as specified. Load chain shall be grade 80 alloy, case hardened and zinc plated sized for the intended load. Load hook shall be heavy-duty drop forged with safety latch. Hoist mechanism shall be double pawl ratchet system with Weston type brake using a non-asbestos friction disk. Hoist shall have swivel top and bottom hooks. Hoist shall require between 50 and 80 pounds effort to move load.

C. Electric Wire Rope Hoists
1. Hoist motors shall be H4 duty classification. Class F insulation shall be used in hoist motor for 30 minute operation. Lift range shall be between 20 and 150 feet. Lifting cable shall be pre-formed wire rope, of hoisting service construction, made of extra improved steel (XIP) with an independent wire rope center. Load hook shall be heavy-duty drop forged with safety latch. Hoist shall have swivel top and bottom hooks. Controls shall be hand held, low voltage electrical, with emergency shut off and enclosed in NEMA 3R rated weatherproof enclosure. Hoist shall include fail-safe limit switches in the hoist enclosure. Hoist shall meet requirements of ANSI B30.16 standard.

1.3 EXECUTION

A. Installation
1. The Contractor shall complete the assembly of any equipment furnished partially assembled and place the items in position as directed. The hoists shall be assembled and securely bolted in position, hoisting chain or wire rope installed, and the hoist made ready for regular operation. The Contractor shall furnish all miscellaneous hardware items required to complete the installation of all equipment and components. Equipment shall be primed and finish painted with a suitable corrosion-resistant paint on all parts and components not made of corrosion-resistant materials or otherwise protected.

END OF SECTION 41 22 23 00a

SECTION 41 22 23 00b - MONORAILS WITH ELECTRIC POWERED HOISTS

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for monorails with electric powered hoists. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. System Description
1. Provide a monorail system with electric powered hoist(s) and plain type (hand operated) **OR** hand chain operated **OR** electric powered, **as directed**, trolley(s) complete, tested and ready for operation. Monorails, hoist(s), trolley(s), equipment, materials, installation, examination, inspection, and workmanship shall be in accordance with the applicable requirements of NFPA 70, ASME/ANSI B30.11, ASME/ANSI B30.16, ASME HST-1M, ANSI/ASME HST-4M, and MMA MH27.1, with modifications specified herein. Reference in these publications to the "authority having jurisdiction" shall be interpreted to mean the "the Owner."

C. Submittals
1. Shop Drawings: Monorail system
2. Product Data: Monorail track system including switches, suspension system and other components; Electric wire rope hoist; Electric chain hoist; Trolley; Pendant pushbutton station; Electrification.
3. Design Data: Load and sizing calculations.
4. Test Reports
5. Certificates
6. Operation and Maintenance Data

D. Delivery, Storage, and Handling
1. Delivery and Storage: Inspect materials delivered to site for damage; unload and store with minimum handling. Store materials on-site in enclosures or under protective coverings. Protect materials not suitable for outdoor storage to prevent damage during periods of inclement weather, including subfreezing temperatures, precipitation, and high winds. Store materials susceptible to deterioration by direct sunlight under cover and avoid damage due to high temperatures. Do not store materials directly on ground. When special precautions are required, prominently and legibly stencil instructions for such precautions on outside of equipment or its crating.
2. Handling: Handle materials in such a manner as to ensure delivery to final location in undamaged condition. Make repairs to damaged materials at no cost to the Owner.

E. Quality Assurance
1. Certificates: Overload Test Certificate: Submit a statement that the monorail system can be periodically load tested to 125 percent (plus 5 minus 0) of rated load.
2. Drawings: Monorail System: Show the general arrangement of all components, clearances and principal dimensions, assemblies of hoist, trolley, track, track suspension system, and electrical schematic drawings.
3. Design Data: Load and Sizing Calculations: Submit calculations verifying the sizing of any track, track suspension device and additional supports which are not the monorail system manufacturer's standard cataloged product.

1.2 PRODUCTS

A. Overhead Monorail System: Provide overhead monorail system conforming to MMA MH27.1, Class C, for indoor **OR** outdoor, **as directed**, service, with an electric wire rope or chain hoist mounted on a movable trolley. Trolley shall be plain type (hand operated) **OR** hand chain operated **OR** motor operated, **as directed**. Monorail system shall operate on AC voltage as required to meet project requirements, 60 Hz, single **OR** three, **as directed**, phase power source.

1. Capacity: The monorail system shall have a minimum rated capacity as required to meet project requirements. Mark the hoist capacity in pounds (kg) on both sides of the hoist or load block.
2. Speeds: The hoist shall have two operating speeds, **unless directed otherwise,** and shall be capable of hoisting and lowering the rated load at a high speed of 20 feet per minute (fpm) (100 mm/s). The trolley shall have two operating speeds, **unless directed otherwise,** and shall be capable of moving the rated load at a high speed of 50 fpm **OR** 100 fpm, **as directed**, (250 mm/s **OR** 500 mm/s, **as directed**,). Low speed(s) shall be one quarter to one third of high speed(s). Actual speed(s) shall be within plus or minus 15 percent of those specified.
3. Material Limitations: Shafts, keys, couplings, sprockets, and chains shall be steel. All gears shall be steel except for worm gears, which shall be bronze or steel. Cast iron and aluminum used to support components of the hoist power transmission train shall be ductile.
4. Safety: Comply with the mandatory and advisory safety requirements of ASME/ANSI B30.11, ASME/ANSI B30.16, and 29 CFR 1910.179.

B. Monorail Track System: MMA MH27.1. Track beams shall be patented track sections fabricated by a manufacturer regularly engaged in production of this type of beam.

1. Track Suspension System: Monorail suspension shall be flexible **OR** rigid, **as directed**, type. Make bolted connections to supporting structure, excluding hanger rods, with ASTM A 325/A 325M bolts, ASTM A 563/A 563M nuts, and ASTM F 959/F 959M load indicator washers. ASTM A 325/A 325M bolts shall be fully pre-tensioned in accordance with AISC S329. Support monorail track system from the structural members shown. Provide additional supports as required to carry monorail track system loads to the structural members shown. Materials for additional supports shall conform to the material requirements contained in Division 5 Section “Structural Steel Framing".

C. Electric Wire Rope Hoist: ANSI/ASME HST-4M, Class H3, except as modified herein. Hoist shall be double reeved, **unless directed otherwise**.

1. Hoisting Ropes: FS RR-W-410, improved or extra improved plow steel, regular lay, uncoated, 6 by 37 class construction, with an independent wire rope core. Provide proof of wire rope breaking strength test report.
2. Sheaves: Sheaves shall be steel or ductile cast iron. Pitch diameter of running sheaves shall not be less than 16 times the rope diameter. Pitch diameter of non running sheaves shall not be less than 12 times the rope diameter.
3. Drum: Drum shall be steel or ductile cast iron. Pitch diameter of the drum shall not be less than 18 times the rope diameter. Not less than two dead wraps of the hoisting rope shall remain on each anchorage when the hook is in its extreme low position.

D. Electric Chain Hoist: ASME HST-1M, Class H3, except as modified herein. Provide load chain proof test.

E. Trolley: Trolley shall meet all applicable requirements of MMA MH27.1, ASME HST-1M and ANSI/ASME HST-4M. Trolley shall have elastomeric bumpers to engage runway stops.

F. Motors: NEMA MG 1. Hoist motor shall be single **OR** two, **as directed**, speed AC squirrel cage induction type. Trolley motor shall be single **OR** two, **as directed**, speed AC squirrel cage induction type. Motor insulation shall be Class B minimum. Provide totally enclosed non-ventilated (TENV) motor enclosures. Maximum motor speed shall not exceed 1800 RPM.

G. Controls: Provide single **OR** two, **as directed**, speed magnetic control for the hoist. Provide single **OR** two, **as directed**, speed magnetic controls for the trolley. Provide reduced voltage starting, acceleration and deceleration for the trolley drive.

H. Limit Switches: Provide upper and lower limit switches which de-energize the hoist motor.

I. Brakes: Provide hoist with an electro-mechanical holding brake and a mechanical load brake, each capable of holding 130 percent of the rated hoist capacity. Hoist holding brake shall be capable of being released to test the load brake. Provide trolley with an electro-mechanical brake. Provide trolley brake with a minimum torque rating of 100 percent (for outdoor monorails) or 50 percent (for indoor monorails) of the drive motor rated torque. Trolley brake torque shall be adjustable down to 85 percent of its torque rating.

J. Load Block And Hook: Construct load blocks of steel. Provide forged steel, swivel type hook, with hook nut keyed to hook shank by means of a setscrew installed in a plane parallel to the longitudinal axis of the hook shank, or other similar easily removable securing device. Hook throat opening shall not be less than as required to meet project requirements. Provide hook with spring loaded steel safety latch for closing the hook throat opening. The hook and hook nut shall be unpainted. Permanently mark hook and hook nut with an identification number.
   1. Hook and Hook Nut Magnetic Particle Inspection: Magnetic particle inspect the hook and nut over the entire area in accordance with ASTM A 275/A 275M. Acceptance standard shall be no defects. A defect is defined as a linear indication that is greater than 1/8 inch (3 mm) long whose length is equal to or greater than three times it width.

K. Bearings: All bearings except those subject to a small rocker motion shall be anti-friction type. Bearings not considered lifetime lubricated by the manufacturer shall be provided with a means for lubrication.

L. Pendant Pushbutton Station: Hoist and trolley, **unless directed otherwise,** shall be controlled from a pendant pushbutton station. Arrange pushbuttons in accordance with ASME/ANSI B30.11recommendations. Locate station 4 feet (1.2 m) above the finished floor

M. Electrification: Runway electrification shall be of the flat festooned type **OR** enclosed safety bar type, **as directed**, with four continuous copper conductors. Provide electrical work for the monorail system in accordance with NFPA 70.

N. Identification Plates: Provide identification plates of noncorrosive metal with clearly legible permanent lettering giving the manufacturer's name, model number, capacity in pounds, and other essential information or identification.

O. Painting System: Painting shall be manufacturers standard. Provide a primer and a finish coat. For outdoor monorail systems, blast clean all components prior to painting and prime with inorganic zinc type primer; finish coat shall be an epoxy formulated for marine environments. Paint coats shall be smooth and even, free of runs, sags, orange peel, or other defects.

1.3 EXECUTION:

A. Erection And Installation: Erect and install the monorail system, complete in accordance with the approved submittals and in condition to perform the operational and acceptance tests.

B. Erection Services: Provide supervisory erection services from the monorail system manufacturer.

C. Field Quality Control
   1. Post-Erection Inspection: After erection, the Contractor and the the Owner shall jointly inspect the monorail and hoist systems and components to determine compliance with specifications and

approved submittals. The Contractor shall notify the the Owner 3 days before the inspection. Provide a report of the inspection indicating the monorail system is considered ready for operational tests

2. Operational Tests: After erection and inspection, test the hoist, and trolley as specified herein. Test the systems in service to determine that each component of the system operates as specified, is properly installed and adjusted, and is free from defects in material, manufacturer, installation, and workmanship. Rectify all deficiencies disclosed by testing and retest the system or component to prove the monorail system is operational. The Contractor shall furnish loads for testing, operating personnel, instruments, and all other necessary apparatus. The the Owner will furnish loads for testing; the Contractor shall receive and transport the loads from a location not more than 100 miles (161 km) from the job site and shall return them to that location after the tests have been completed.
3. Test Data: Record test data on appropriate test record forms suitable for retention for the life of the monorail system. Record operating and startup current measurements for electrical equipment (motors and coils) using appropriate instrumentation (i.e., clamp-on ammeters). Compare recorded values with design specifications or manufacturer's recommended values; abnormal differences (i.e., greater than 10 percent from manufacturer's or design values) shall be justified or appropriate adjustments performed. In addition, high temperatures or abnormal operation of any equipment or machinery shall be noted, investigated, and corrected. Record hoist and trolley speeds during each test cycle.
4. Hook Test: Measure hook for hook throat spread before and after load test. Establish a throat dimension base measurement by installing two tram points and measuring the distance between these tram points (plus or minus 1/64 inch (0.4 mm)). Record this base dimension. Measure the distance between tram points before and after load test. An increase in the throat opening by more than 5 percent from the base measurement shall be cause for rejection.
5. No-Load Test
    a. Hoist: Raise the load hook the full operating lift distance and verify satisfactory operation of hoist, upper limit switch, lower limit switch, and the hoisting and lowering speeds. Operate the hoist at low and high speed in both directions.
    b. Trolley: Operate trolley assembly the full length of the monorail in both directions. Operate trolley at low and high speed in each direction. Verify satisfactory operation and verify trolley speed. Operate all rail switches.
6. Load Test: 125 Percent (plus 5 percent minus 0) of rated capacity
    a. Hoist Static Test: Raise test load approximately one foot above the floor and hold for 10 minutes. Observe load lowering that may occur which will indicate malfunction of hoisting component or brake. Lower the test load to the floor until the hoist line is slack.
    b. Hoist Dynamic Test: Raise the test load to approximately 5 feet (1.5 m) above the floor using both speed points in the process. Lower the load back to the floor using both speed points. Stop the test load at least once while lowering at high speed and observe proper brake operation. Wait 5 minutes, then repeat the above cycle.
    c. Load Brake Test: Raise test load approximately 5 feet (1.5 m). With the hoist controller in the neutral position, release the holding brake. The load brake should hold the test load. Again with the holding brake in the released position, start the test load down at low speed and return the controller to off position as the test load lowers. The load brake should prevent the test load from accelerating. NOTE: It is not necessary for the load brake to halt the downward motion of the test load.
    d. Loss of Power Test: Raise the test load approximately 3 feet (1 m) and while lowering test load at low speed, cut main power to hoist. Load should stop.
    e. Trolley Test: With test load hoisted to a height of one foot (300 mm) above the floor, operate trolley the full distance of the monorail in both directions using both speed points in the process. Observe for any malfunctioning of the trolley assembly and monorail system. Operate all rail switches.
    f. Rated Load Speed Test: With the hoist loaded to rated capacity, raise and lower the load verifying that the hoisting and lowering speeds are provided as specified. With the hoist loaded to rated capacity, operate trolley along the monorail beam verifying that the trolley

speed is provided as specified. Further, verify that the trolley stops in each direction within a distance (in feet) equal to 10 percent of rated capacity high speed (in feet per minute) when initially travelling at high speed and carrying the rated capacity load. Record voltage, amperage, hoisting and lowering speeds, trolley travel speed, and motor speed for each motor.

END OF SECTION 41 22 23 00b

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 41 22 23 00c - MONORAILS WITH MANUAL HOIST

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of materials for monorails with manual hoist. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Verification Of Dimensions:
1. The Contractor shall verify all building dimensions that relate to fabrication of the monorail system, and shall notify the Owner of any discrepancy before the order to the monorail manufacturer is finalized.

C. Submittals
1. Shop Drawings: Submit drawings showing the general arrangement of the track beam system, including curves and switches, clearances, principal dimensions, details of structural connections, and all component details. Manufacturer's catalog data will suffice for items of standard manufacturer.
2. Design Data: Structural design calculations.
3. Test Reports
   a. Hook and hook nut magnetic-particle tests.
   b. Monorail system load tests
4. Certificates: Manual hoist load chain
5. Operation and Maintenance Data
   a. Track beam system
   b. Hoist and trolley

D. Quality Assurance
1. Certifications: Submit factory certification of load chain rated capacity.
2. Design Data: Submit design calculations verifying the size of structural members, structural support fittings, rods, brackets, components, and lifting beams for the track beam system. The calculations shall include stress and loading diagrams. Submit calculations with monorail drawings.

1.2 PRODUCTS

A. Fabrication And Construction: Provide manual hoist and trolley, ANSI/ASME HST-2M, ANSI/ASME HST-3M, trolley suspension. Trolley and wheels shall be suitable for operation on the steel monorail track beam provided, and shall have not less than four wheels.
1. Capacity: The hoist shall have a minimum rated capacity as required to meet project requirements. The monorail system shall have a minimum rated capacity as required to meet project requirements.
2. Hook Lift: Shall be the manufacturer's standard. The hoist lift shall be at its highest point a minimum of 8 feet (2400 mm) above the finished floor and at its lowest point a minimum of 2 feet (600 mm) below the finished floor.
3. Hooks: Shall be of the safety type with hook nuts keyed to hook shanks by means of a setscrew installed in a plane parallel to the longitudinal axis of the hook shank, or by any other similar easily removable securing device. All hook components shall be magnetic-particle inspected over the entire area in accordance with ASTM A 275/A 275M. The acceptance standard shall be one of no defects. A defect is defined as a linear indication revealed by magnetic-particle

inspection that is greater than 1/8 inch (3 mm) long whose length is equal to or is greater than three times its width.

4. Trolley: Shall be designed to operate from track beam section. Where two or more hoists are located on the same monorail beam, the trolleys shall be equipped with rubber bumper devices designed to prevent contact of any part or parts of the hoists.
5. Load Chain: High strength steel links, flexible; minimum safety factor of 5 to 1 based on ratio of minimum chain breaking load to the calculated load on the chain when the hoist is assumed loaded to rated capacity. Certification from hoist manufacturer of provided chain's breaking strength shall be submitted to the Owner and approved prior to final acceptance of hoist. Do not paint or coat the load chain.
6. Load Hooks and Load Hook Components
    a. Hook: Forged steel; complete with spring-loaded steel throat opening safety device. The hook shall be carried on suitably sealed or shielded anti-friction thrust bearings and shall swivel freely through 360 degrees rotation with full load without twisting chain.
        1) Disassembly. Hook and hook nut shall be capable of complete disassembly that enables access to all surfaces of the hook, including shank and hook nut for inspection purposes. Provision shall be made for the hook nut, or other hook-to-block fastener, to be keyed to hook shank by means of a set screw or similar, easily removable, securing device.
        2) Hook Non-Destructive Test. Each hook, including shank and hook nut, shall be inspected over the entire surface areas by magnetic particle inspection. If hook nut is not used, any device that functions the same as the hook nut shall be inspected by magnetic particle inspection.
            a) Procedure: Magnetic particle inspection shall be conducted in accordance with ASTM A 275/A 275M. This inspection shall be conducted at the factory of the hook manufacturer or hoist manufacturer. Alternately, a recognized independent testing lab may conduct the inspections if equipped and competent to perform such a service, and if approved by the the Owner.
            b) Acceptance Criteria: Defects found on the hook or hook nut shall result in rejection of defective items for use on furnished hoist. For this inspection, a defect is defined as a linear or non-linear indication for which the largest dimension is greater than 1/8 inch (3 mm). Weld repairs for defects on hook or hook nut will not be permitted.
            c) Test Report: A test report of the magnetic particle inspection of each hook and hook nut provided shall be submitted to and approved by the the Owner prior to final acceptance of hoist installation. Test reports shall be certified by the testing organization.

B. Monorail Track Beam System: Comply with MMA MH27.1 except as modified and supplemented herein.
    1. Patented Track: Provide specially designed trackage, e.g., patented track beam, curves, and switches constructed from welded steel components. The lower flange of the track section shall have flat wheel treads; minimum lower flange width of 3.25 inches (80 mm); chemical composition of 0.45 to 0.60 percent carbon content, 0.60 to 1.1 percent manganese content; and wheel treads shall be hardened to a minimum Brinell Hardness Number of 225. Upper flange and web of the track section shall be steel, continuously welded together or provided as one monolithic piece.
    2. Track Suspension: Provide means of suspending the monorail track system, including curves and switches from the structural supports. The suspension system shall be the sole responsibility of the track supplier; however, design shall be subject to the requirements specified herein.
        a. Cataloged Products: If possible, provide track manufacturer's standard cataloged devices for connection of the track to the indicated supporting structures. If track manufacturer's cataloged devices are not provided for this suspension system, complete shop drawings and calculations for the custom suspension device shall be submitted for review and approval by the the Owner. Track suspension devices which are not the track

manufacturer's cataloged products shall meet the additional requirements specified in YYYY99YYYY.

b. Design: The suspension system shall be designed and constructed to ensure no impairment of the strength of track or the structural support. A hanger or suspension shall be located at each rack splice joint. Provide bracing to hold track sections in rigid alignment at all joints.

c. Suspension of Curves and Switches: Provide steel framing (structural supports), in addition to that indicated, as required by monorail curve and switch manufacturer to support curves and switches. The additional steel framing shall be the sole responsibility of the monorail supplier. Submit shop drawings and framing design calculations to the the Owner for approval.

d. Sway Bracing: Where the track is suspended from hanger rods, track shall be braced laterally and longitudinally to prevent sway.

e. Lock Nuts: Where the track is suspended from hanger rods, lock nuts or other means shall be provided to prevent the nuts from backing off the rods.

f. Multiple Suspension Devices: Where more than one suspension device attached to the track at a single point, the suspension devices shall be provided so that the loads shall be induced in each in proportion to the device's size.

3. Identification Plates: Provide identification plates of noncorrosive metal. Information and data on the plates shall include, in clearly legible permanent lettering, the manufacturer's name, model number, capacity rating, and other essential information. In addition, the monorail track beam system shall be furnished with identification plates showing the capacity of the system, which shall be legible from the floor and from either side of the monorail track beam.

C. Painting Of System: Provide manufacturer's standard painting or shop painting of components specified in this section; comply with the requirements specified in YYYY578YYYY. Do not paint, coat, or galvanize load chain, load, hook nut, or load chain sheave.

1.3 EXECUTION

A. Erection And Installation: The Contractor shall erect and install the hoist trolley and monorail system in accordance with manufacturers written instructions, MMA MH27.1, and the contract drawings. The monorail supplier shall provide supervisory erection services. Welding new sections of monorail track to existing shall conform to AWS D1.1.

B. Field Inspection And Tests

1. Pre-Erection Inspection: Before erection, the Contractor and the manufacturer's representative shall jointly inspect the monorail and hoist systems and components at the job site to determine compliance with specifications and manufacturer's data and shop drawings as approved. The Contractor shall notify the the Owner 3 days before the inspection.

2. Operational Inspection and Load Tests: Upon completion, and before final acceptance, the hoist, trolley, and monorail shall be given the rated load test specified in ASME/ANSI B30.11, carrying 125 percent (plus 5 percent, minus 0 percent) of the rated capacity, and with the units spaced to obtain maximum possible loads in the monorail track beam systems. Hoists shall hold a static, as well as control a dynamic, 125 percent rated load. The systems shall be thoroughly tested in service to determine that each component of the system operates as specified, is properly installed and adjusted, and is free from defects in material, manufacture, installation, and workmanship. The Contractor shall furnish test loads, operating personnel, instruments, and all other necessary apparatus at no additional cost to the Owner. The test and final adjustments of the equipment will be under the supervision of the Owner. The Contractor shall rectify any deficiencies found and completely retest work affected by such deficiencies.

SECTION 43 11 43 00 - VACUUM EQUIPMENT FOR LABORATORY AND HEALTHCARE FACILITIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Medical vacuum packaged system.
2. Vacuum pump packaged system - liquid ring.
3. Vacuum pump packaged system - rotary screw, oil sealed.
4. Vacuum pump packaged system - rotary claw, dry.
5. Vacuum pump packaged system - rotary vane, oil less.
6. Vacuum pump packaged system - rotary vane, oil sealed.
7. Turbine exhausters.
8. Vacuum pump packaged system - diaphragm.
9. Dental vacuum packaged system.
10. Dental vacuum system control panels.

1.2 DEFINITIONS

A. Actual Air: Air delivered at vacuum producer inlet. Flow rate is air measured in **acfm (actual L/s)**.

B. HVE: High-volume oral evacuation for dental applications in healthcare facilities.

C. Laboratory Vacuum Equipment: Vacuum producers and accessories for laboratory facilities.

D. Medical Vacuum Equipment: Includes [**medical-surgical**][**WAGD**][**dental**][**and**][**HVE**] vacuum producers and accessories for healthcare facilities.

E. Standard Air: Free air at **68 deg F (20 deg C)** and **1 atmosphere (29.92 in. Hg)** before compression or expansion and measured in **scfm (standard L/s)**.

F. WAGD: Waste anesthetic gas disposal for medical-surgical applications in healthcare facilities.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Medical vacuum packaged system.
2. Vacuum pump packaged system - liquid ring.
3. Vacuum pump packaged system - rotary screw, oil sealed.
4. Vacuum pump packaged system - rotary claw, dry.
5. Vacuum pump packaged system - rotary vane, oil less.
6. Vacuum pump packaged system - rotary vane, oil sealed.
7. Turbine exhausters.
8. Vacuum pump packaged system - diaphragm.
9. Dental vacuum packaged system.
10. Dental vacuum system control panels.

B. Product Data Submittals: For each product.

1. Construction details, material descriptions, dimensions of individual components and profiles.
2. Rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

C. Shop Drawings:

1. Plans, elevations, sections, and [**mounting**][**attachment**] details.
2. Details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
4. Diagrams for power, signal, and control wiring.

D. Delegated Design Submittals:

1. Detail fabrication and assembly of supports.
2. Include design calculations for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases, indicated to comply with performance requirements and design criteria, including analysis data[**signed and sealed by the qualified professional engineer responsible for their preparation**].

1.4 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Data: Certificates for vacuum producers, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Field quality-control reports.

C. Qualification Statements: For [**Installer**][**and**][**testing agency**].

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For vacuum equipment.

1. Indicate actual installed items by marking the submittals with an arrow or box.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Extra Stock Material: Furnish extra materials[**, from the same production run,**] to Owner that match products installed and that are packaged with protective covering for storage and identified with labels

describing contents.

1. Belts: [**One**][**Two**]<**Insert number**> for each belt-driven vacuum producer.

1.7 FIELD CONDITIONS

A. Interruption of Existing Vacuum Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service in accordance with the requirements indicated:

1. Notify [**Architect**][**Construction Manager**][**Owner**] no fewer than [**seven**]<**Insert number**> days in advance of proposed interruption of vacuum service.
2. Do not proceed with interruption of vacuum service without [**Architect's**][**Construction Manager's**][**Owner's**] written permission.

1.8 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Comply with manufacturer's written instructions for delivery, storage, and handling.

1.10 QUALITY ASSURANCE

A. Installer Qualifications:

1. Laboratory Vacuum Equipment for Laboratory Facilities: An employer of workers trained and approved by manufacturer.
2. Medical Vacuum Equipment for Healthcare Facilities: Qualify installers in accordance with ASSE 6010.

B. Testing Agency Qualifications: An independent testing agency, with the experience and capability to conduct the vacuum equipment testing indicated, that is[**a member of the Medical Gas Professional Healthcare Organization or is**] an NRTL, and that is acceptable to authorities having jurisdiction.

1. Qualify testing personnel in accordance with ASSE 6020 for inspectors and ASSE 6030 for verifiers.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with NFPA 99, "Health Care Facilities Code," for vacuum equipment and accessories for medical and dental vacuum systems.

C. ASME Compliance: Fabricate and label receivers to comply with ASME Boiler and Pressure Vessel Code.

D. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design vacuum equipment mounting.

E. Seismic Performance: Vacuum equipment to withstand the effects of earthquake motions determined in accordance with [**ASCE/SEI 7**]<**Insert requirement**>.[**See Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."**]

1. The term "withstand" means the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
2. Component Importance Factor: [**1.5**][**1.0**].
3. <**Insert requirements for Component Amplification Factor and Component Response Modification Factor**>.

2.2 GENERAL REQUIREMENTS FOR VACUUM SYSTEMS

A. Description: Factory-assembled, -wired, -piped, and -tested; electric-motor-driven; air-cooled; continuous-duty vacuum pumps and receivers.

B. Control Panels: Automatic control station with load control and protection functions. Comply with NEMA ICS 2 and UL 508.

1. Enclosure: NEMA ICS 6, Type 12 control panel unless otherwise indicated.
2. Motor Controllers: Full-voltage, combination-magnetic type with undervoltage release feature and motor-circuit-protector-type disconnecting means and short-circuit protective device.
3. Control Voltage: 120 V ac or less, using integral control power transformer.
4. Motor Overload Protection: Overload relay in each phase.
5. Starting Devices: Hand-off-automatic selector switch in cover of control panel, plus pilot device for automatic control.
6. Automatic control switches to [**alternate lead-lag vacuum pumps for duplex**][**and**][**sequence lead-lag vacuum pumps for three or more**] vacuum pumps.
7. Instrumentation: Include vacuum pump inlet and receiver vacuum gauges, hour meter, vacuum pump discharge-air and coolant temperature gauges, and control transformer.
8. Alarm Signal Devices: For connection to alarm system to indicate when backup vacuum pump is operating.
9. Provide 65k AIC SCCR rating.

C. Receivers: Steel tank constructed in accordance with ASME Boiler and Pressure Vessel Code, Section VIII, Division 1; bearing appropriate code symbols.

1. Interior Finish: Corrosion-resistant coating.
2. Accessories: Include vacuum relief valve, vacuum gauge, and drain.

D. Mounting Frames: Fabricate base and attachment to vacuum pump and components with reinforcement strong enough to resist movement during a seismic event when base is anchored to building structure.

2.3 MEDICAL VACUUM PACKAGED SYSTEM

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Allied Healthcare Products Inc.**]
2. [**BeaconMedaes**]
3. [**Becker Pumps Corp**]
4. [**EMSE Corporation**]
5. [**Ohio Medical Corporation**]
6. [**Powerex, Inc.**]
7. [**Tri-Tech Medical**]
8. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Allied Healthcare Products Inc.**]
2. [**BeaconMedaes**]
3. [**Becker Pumps Corp**]
4. [**EMSE Corporation**]
5. [**Ohio Medical Corporation**]
6. [**Powerex, Inc.**]
7. [**Tri-Tech Medical**]
8. <**Insert manufacturer's name**>

C. Source Limitations: Obtain medical vacuum packaged system from single source from single manufacturer.

D. Description: Medical vacuum packaged system, factory assembled on a common base, factory tested, fully compliant with NFPA 99 and featuring single-point connections for electrical power, vacuum intake, vacuum exhaust, and drains. Components are to include vacuum pumps, receiver, filters, all interconnecting piping, power, and control wiring, and UL-labeled control system.

E. Capacities and Characteristics:

1. Vacuum Service: [**Medical-Surgical**][**WAGD**]<**Insert service**> vacuum.
2. Vacuum Pump(s): [**Duplex**]<**Insert number**>, [**liquid ring**][**rotary screw**][**rotary claw**][**rotary vane, oil-less**][**rotary vane, oil-sealed**]<**Insert type**>.
3. Standard-Air Capacity of Each Vacuum Pump: <**Insert scfm (standard L/s)**> free air.
4. Actual-Air Capacity of Each Vacuum Pump: <**Insert acfm (actual L/s)**> expanded air delivered.
5. Vacuum Required: [**20 in. Hg (510 mm Hg)**][**26 in. Hg (660 mm Hg)**]<**Insert value**>.
6. Mounting: [**Freestanding**][**Tank mounted**].
7. Motor (Each Vacuum Pump):
   a. Horsepower: <**Insert value**>.
   b. Speed: [**1750**][**3400**]<**Insert speed**> rpm.
8. Electrical Characteristics:
   a. Volts: <**Insert value**>.
   b. Phase(s): [**Single**][**Three**].
   c. Hertz: [**60**]<**Insert value**>.
   d. Full-Load Amperes: <**Insert value**>.

e. Minimum Circuit Ampacity: <**Insert value**>.
f. Maximum Overcurrent Protection: <**Insert amperage**>.

9. Receiver:

a. Orientation: [**Horizontal**][**Vertical**] arrangement.
b. Capacity: <**Insert gal. (L)**>.
c. Pressure Rating: [**100 psig (690 kPa)**]<**Insert value**> minimum.
d. Interior Finish: [**Epoxy**][**Epoxy or galvanized**][**Galvanized**]<**Insert coating**>.
e. Drain: [**Automatic**][**Manual**] valve.

10. Control System:

a. Description: Duplex mounted and wired control system.

1) UL labeled.
2) NEMA ICS 6, Type 12 control panel enclosure.
3) Circuit-breaker disconnects for each motor with external operators.
4) Full voltage motor starters with overload protection.
5) 24 V control circuit.
6) 65k AIC SCCR rating.
7) Touchscreen controls.
8) Screen displays and functions (to include, but not limited to, the following):

a) Service alerts.
b) Runtime hours.
c) System status.
d) System vacuum level.
e) Event logs.
f) <**Insert type**>.

9) Ethernet connectivity with embedded web page for remote monitoring.
10) Integral connectivity to the medical gas network via Ethernet.
11) Optional connectivity - BACnet communication with TCP/IP protocol.

11. Optional Accessories:

a. <**Insert type**>.

2.4 VACUUM PUMP PACKAGED SYSTEM - LIQUID RING

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**BeaconMedaes**]
2. [**EMSE Corporation**]
3. [**Flowserve SIHI**]
4. [**Gardner Denver, an Ingersoll Rand business**]
5. [**Nash; an Ingersoll Rand Business**]
6. [**Ohio Medical Corporation**]
7. [**Travaini Pumps USA, Inc**]

8. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**BeaconMedaes**]
2. [**EMSE Corporation**]
3. [**Flowserve SIHI**]
4. [**Gardner Denver, an Ingersoll Rand business**]
5. [**Nash; an Ingersoll Rand Business**]
6. [**Ohio Medical Corporation**]
7. [**Travaini Pumps USA, Inc**]
8. <**Insert manufacturer's name**>

C. Source Limitations: Obtain liquid-ring vacuum pumps from single source from single manufacturer.

D. Description: Packaged system.

E. Vacuum Pump(s): Nonpulsating, rotary, liquid-ring type.

1. Construction: [**Cast-iron body and**][**Cast-iron body with bronze**][**Bronze body and**] rotor.
2. Coupling: Nonlubricated, flexible type.
3. Sealing Fluid: Potable water with up to 90 percent recirculation.

F. Receiver: ASME construction steel tank with vacuum relief valve.

G. Outlet silencers and water-vapor separators on discharge connections.

H. Capacities and Characteristics:

1. Vacuum Service: [**Dental**][**Laboratory**]<**Insert service**> vacuum.
2. Vacuum Pump(s): [**Simplex**][**Duplex**]<**Insert number**>.
3. Standard-Air Capacity of Each Vacuum Pump: <**Insert scfm (standard L/s)**> free air.
4. Actual-Air Capacity of Each Vacuum Pump: <**Insert acfm (actual L/s)**> expanded air delivered.
5. Vacuum Required: [**8 in. Hg (205 mm Hg)**][**10 in. Hg (255 mm Hg)**][**12 in. Hg (305 mm Hg)**]<**Insert value**>.
6. Mounting: [**Freestanding**][**Tank mounted**].
7. Motor (Each Vacuum Pump):

    a. Horsepower: <**Insert value**>.
    b. Speed: [**1750**][**3400**]<**Insert speed**> rpm.

8. Electrical Characteristics:

    a. Volts: <**Insert value**>.
    b. Phase(s): [**Single**][**Three**].
    c. Hertz: [**60**]<**Insert value**>.
    d. Full-Load Amperes: <**Insert value**>.
    e. Minimum Circuit Ampacity: <**Insert value**>.
    f. Maximum Overcurrent Protection: <**Insert amperage**>.

9. Receiver:

    a. Orientation: [**Horizontal**][**Vertical**] arrangement.

b. Capacity: <**Insert gal. (L)**>.
c. Pressure Rating: [**100 psig (690 kPa)**]<**Insert value**> minimum.
d. Interior Finish: [**Epoxy**][**Epoxy or galvanized**][**Galvanized**]<**Insert coating**>.
e. Drain: [**Automatic**][**Manual**] valve.

2.5 VACUUM PUMP PACKAGED SYSTEM - ROTARY SCREW, OIL SEALED

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**BeaconMedaes**]
2. [**Kaeser Compressors, Inc**]
3. [**Quincy Compressor**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**BeaconMedaes**]
2. [**Kaeser Compressors, Inc**]
3. [**Quincy Compressor**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain rotary-screw, oil-sealed vacuum pumps from single source from single manufacturer.

D. Description: Packaged system.

E. Vacuum Pump(s): Single-stage, oil-sealed, rotary screw type.

1. Coupling: Nonlubricated, flexible type.
2. Cooling/Lubrication System: Unit-mounted, air-cooled exchanger package prepiped to unit; with air-pressure circulation system with coolant stop valve, full-flow coolant filter, and thermal-bypass valve.
3. Air/Coolant Receiver and Separation Systems: **150 psig (1035 kPa)** rated steel tank with ASME safety valve, coolant-level gauge, multistage air-coolant separator element, minimum pressure valve, blowdown valve, discharge check valve, coolant stop valve, full-flow coolant filter, and thermal-bypass valve.
4. Capacity Control: Capacity modulation between zero and 100 percent vacuum delivery. Include necessary control to hold constant vacuum. When vacuum demand is zero, unload unit by using vacuum switch and blowdown valve.

F. Receiver: ASME construction steel tank with vacuum relief valve.

G. Outlet silencers on discharge connections.

H. Capacities and Characteristics:

1. Vacuum Service: [**Dental**][**Laboratory**]<**Insert service**> vacuum.
2. Vacuum Pump(s): [**Simplex**][**Duplex**]<**Insert number**>.
3. Standard-Air Capacity of Each Vacuum Pump: <**Insert scfm (standard L/s)**> free air.

4. Actual-Air Capacity of Each Vacuum Pump: <**Insert acfm (actual L/s)**> expanded air delivered.
5. Vacuum Required: [**20 in. Hg (510 mm Hg)**][**26 in. Hg (660 mm Hg)**]<**Insert value**>.
6. Motor (Each Vacuum Pump):

    a. Horsepower: <**Insert value**>.
    b. Speed: [**1750**][**3400**]<**Insert speed**> rpm.

7. Electrical Characteristics:

    a. Volts: <**Insert value**>.
    b. Phase(s): [**Single**][**Three**].
    c. Hertz: [**60**]<**Insert value**>.
    d. Full-Load Amperes: <**Insert value**>.
    e. Minimum Circuit Ampacity: <**Insert value**>.
    f. Maximum Overcurrent Protection: <**Insert amperage**>.

8. Receiver:

    a. Orientation: [**Horizontal**][**Vertical**] arrangement.
    b. Capacity: <**Insert gal. (L)**>.
    c. Pressure Rating: [**100 psig (690 kPa)**]<**Insert value**> minimum.
    d. Interior Finish: [**Epoxy**][**Epoxy or galvanized**][**Galvanized**]<**Insert coating**>.
    e. Drain: [**Automatic**][**Manual**] valve.

2.6 VACUUM PUMP PACKAGED SYSTEM - ROTARY CLAW, DRY

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Allied Healthcare Products Inc.**]
2. [**BeaconMedaes**]
3. [**Becker Pumps Corp**]
4. [**Busch Vacuum Solutions**]
5. [**EMSE Corporation**]
6. [**Ohio Medical Corporation**]
7. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Allied Healthcare Products Inc.**]
2. [**BeaconMedaes**]
3. [**Becker Pumps Corp**]
4. [**Busch Vacuum Solutions**]
5. [**EMSE Corporation**]
6. [**Ohio Medical Corporation**]
7. <**Insert manufacturer's name**>

C. Source Limitations: Obtain rotary-claw, dry vacuum pumps from single source from single manufacturer.

D. Description: Packaged system.

E. Vacuum Pump(s): Single-stage, rotary-claw, dry type.

1. Coupling: Nonlubricated, flexible type.
2. Cooling System: Air cooled.
3. Capacity Control: Capacity modulation between zero and 100 percent vacuum delivery. Include necessary control to hold constant vacuum. When vacuum demand is zero, unload unit by using vacuum switch and blowdown valve.

F. Receiver: ASME construction steel tank with vacuum relief valve.

G. Outlet silencers on discharge connections.

H. Capacities and Characteristics:

1. Vacuum Service: [**Dental**][**Laboratory**]<**Insert service**> vacuum.
2. Vacuum Pump(s): [**Simplex**][**Duplex**]<**Insert number**>.
3. Standard-Air Capacity of Each Vacuum Pump: <**Insert scfm (standard L/s)**> free air.
4. Actual-Air Capacity of Each Vacuum Pump: <**Insert acfm (actual L/s)**> expanded air delivered.
5. Vacuum Required: [**20 in. Hg (510 mm Hg)**][**26 in. Hg (660 mm Hg)**]<**Insert value**>.
6. Motor (Each Vacuum Pump):
   a. Horsepower: <**Insert value**>.
   b. Speed: [**1750**][**3400**]<**Insert speed**> rpm.
7. Electrical Characteristics:
   a. Volts: <**Insert value**>.
   b. Phase(s): [**Single**][**Three**].
   c. Hertz: [**60**]<**Insert value**>.
   d. Full-Load Amperes: <**Insert value**>.
   e. Minimum Circuit Ampacity: <**Insert value**>.
   f. Maximum Overcurrent Protection: <**Insert amperage**>.
8. Receiver:
   a. Orientation: [**Horizontal**][**Vertical**] arrangement.
   b. Capacity: <**Insert gal. (L)**>.
   c. Pressure Rating: [**100 psig (690 kPa)**]<**Insert value**> minimum.
   d. Interior Finish: [**Epoxy**][**Epoxy or galvanized**][**Galvanized**]<**Insert coating**>.
   e. Drain: [**Automatic**][**Manual**] valve.

2.7 VACUUM PUMP PACKAGED SYSTEM - ROTARY VANE, OIL LESS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Allied Healthcare Products Inc.**]
2. [**BeaconMedaes**]
3. [**Becker Pumps Corp**]
4. [**Busch Vacuum Solutions**]
5. [**EMSE Corporation**]

6. [**Gardner Denver, an Ingersoll Rand business**]
7. [**Gast Manufacturing Inc**]
8. [**Ohio Medical Corporation**]
9. [**Powerex, Inc.**]
10. [**Thomas; an Ingersoll Rand Business**]
11. [**Tri-Tech Medical**]
12. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Allied Healthcare Products Inc.**]
2. [**BeaconMedaes**]
3. [**Becker Pumps Corp**]
4. [**Busch Vacuum Solutions**]
5. [**EMSE Corporation**]
6. [**Gardner Denver, an Ingersoll Rand business**]
7. [**Gast Manufacturing Inc**]
8. [**Ohio Medical Corporation**]
9. [**Powerex, Inc.**]
10. [**Thomas; an Ingersoll Rand Business**]
11. [**Tri-Tech Medical**]
12. <**Insert manufacturer's name**>

C. Source Limitations: Obtain rotary-vane, oil-less vacuum pumps from single source from single manufacturer.

D. Description: Packaged system.

E. Vacuum Pump(s): Nonpulsating, oil-less, rotary-vane type.

1. Cleanable inlet screens.

F. Outlet silencers on discharge connections.

G. Capacities and Characteristics:

1. Vacuum Service: [**Dental**][**Laboratory**]<**Insert service**> vacuum.
2. Vacuum Pump(s): [**Simplex**][**Duplex**]<**Insert number**>.
3. Standard-Air Capacity of Each Vacuum Pump: <**Insert scfm (standard L/s)**> free air.
4. Actual-Air Capacity of Each Vacuum Pump: <**Insert acfm (actual L/s)**> expanded air delivered.
5. Vacuum Required: [**20 in. Hg (510 mm Hg)**][**26 in. Hg (660 mm Hg)**]<**Insert value**>.
6. Mounting: [**Freestanding**][**Tank mounted**].
7. Motor (Each Vacuum Pump):

    a. Horsepower: <**Insert value**>.
    b. Speed: [**1750**][**3400**]<**Insert speed**> rpm.

8. Electrical Characteristics:

    a. Volts: <**Insert value**>.
    b. Phase(s): [**Single**][**Three**].
    c. Hertz: [**60**]<**Insert value**>.
    d. Full-Load Amperes: <**Insert value**>.
    e. Minimum Circuit Ampacity: <**Insert value**>.

f. Maximum Overcurrent Protection: <**Insert amperage**>.

9. Receiver:

a. Orientation: [**Horizontal**][**Vertical**] arrangement.
b. Capacity: <**Insert gal. (L)**>.
c. Pressure Rating: [**100 psig (690 kPa)**]<**Insert value**> minimum.
d. Interior Finish: [**Epoxy**][**Epoxy or galvanized**][**Galvanized**]<**Insert coating**>.
e. Drain: [**Automatic**][**Manual**] valve.

2.8 VACUUM PUMP PACKAGED SYSTEM - ROTARY VANE, OIL SEALED

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Allied Healthcare Products Inc.**]
2. [**BeaconMedaes**]
3. [**Becker Pumps Corp**]
4. [**Busch Vacuum Solutions**]
5. [**EMSE Corporation**]
6. [**Ohio Medical Corporation**]
7. [**Powerex, Inc.**]
8. [**Quincy Compressor**]
9. [**Travaini Pumps USA, Inc**]
10. [**Tri-Tech Medical**]
11. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Allied Healthcare Products Inc.**]
2. [**BeaconMedaes**]
3. [**Becker Pumps Corp**]
4. [**Busch Vacuum Solutions**]
5. [**EMSE Corporation**]
6. [**Ohio Medical Corporation**]
7. [**Powerex, Inc.**]
8. [**Quincy Compressor**]
9. [**Travaini Pumps USA, Inc**]
10. [**Tri-Tech Medical**]
11. <**Insert manufacturer's name**>

C. Source Limitations: Obtain rotary-vane, oil-sealed vacuum pumps from single source from single manufacturer.

D. Description: Packaged system.

E. Vacuum Pump(s): Nonpulsating, oil-sealed, rotary-vane type.

1. Cleanable inlet screens.
2. Outlet silencers and oil-mist separators on discharge connections.

F. Receiver: ASME construction steel tank with vacuum relief valve.

G. Capacities and Characteristics:

1. Vacuum Service: [**Dental**][**Laboratory**]<**Insert service**> vacuum.
2. Vacuum Pump(s): [**Simplex**][**Duplex**]<**Insert number**>.
3. Standard-Air Capacity of Each Vacuum Pump: <**Insert scfm (standard L/s)**> free air.
4. Actual-Air Capacity of Each Vacuum Pump: <**Insert acfm (actual L/s)**> expanded air delivered.
5. Vacuum Required: [**20 in. Hg (510 mm Hg)**][**26 in. Hg (660 mm Hg)**]<**Insert value**>.
6. Mounting: [**Freestanding**][**Tank mounted**].
7. Motor (Each Vacuum Pump):
    a. Horsepower: <**Insert value**>.
    b. Speed: [**1750**][**3400**]<**Insert speed**> rpm.
8. Electrical Characteristics:
    a. Volts: <**Insert value**>.
    b. Phase(s): [**Single**][**Three**].
    c. Hertz: [**60**]<**Insert value**>.
    d. Full-Load Amperes: <**Insert value**>.
    e. Minimum Circuit Ampacity: <**Insert value**>.
    f. Maximum Overcurrent Protection: <**Insert amperage**>.
9. Receiver:
    a. Orientation: [**Horizontal**][**Vertical**] arrangement.
    b. Capacity: <**Insert gal. (L)**>.
    c. Pressure Rating: [**100 psig (690 kPa)**]<**Insert value**> minimum.
    d. Interior Finish: [**Epoxy**][**Epoxy or galvanized**][**Galvanized**]<**Insert coating**>.
    e. Drain: [**Automatic**][**Manual**] valve.

2.9 TURBINE EXHAUSTERS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Spencer Turbine Co. (The)**]
2. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Spencer Turbine Co. (The)**]
2. <**Insert manufacturer's name**>

C. Source Limitations: Obtain turbine exhausters from single source from single manufacturer.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. Comply with NFPA 99, "Health Care Facilities Code," for vacuum equipment and accessories for dental

vacuum systems.

F. Description: Factory-assembled, -wired, -piped, -tested, and -packaged; electric-motor-driven; air-cooled; continuous-duty turbine exhausters and separators suitable for HVE applications and capable of producing not less than [**12 in. Hg (305 mm Hg)**]<**Insert value**>.

G. Control Panel: Automatic control station with load control and protection functions. Comply with NEMA ICS 2 and UL 508.

1. Enclosure: NEMA ICS 6, Type 12 control panel unless otherwise indicated.
2. Motor Controller: Full-voltage, combination-magnetic type with undervoltage release feature and motor-circuit-protector-type disconnecting means and short-circuit protective device.
3. Control Voltage: 120 V ac or less, using integral control power transformer.
4. Motor Overload Protection: Overload relay in each phase.
5. Starting Devices: Hand-off-automatic selector switch in cover of control panel, plus pilot device for automatic control.
6. Automatic control switches to alternate lead-lag turbine exhausters for duplex turbine exhausters.
7. Instrumentation: Include inlet turbine exhauster and separator vacuum gauges, hour meter, discharge-air temperature gauge, and control transformer.
8. Alarm Signal Device: For connection to alarm system to indicate when backup turbine exhauster is operating.
9. Air-Water Wet Separator: Vertical, steel tank constructed in accordance with ASME Boiler and Pressure Vessel Code, Section VIII, Division 1; bearing appropriate code symbols; and to withstand not less than [**25 in. Hg (635 mm Hg)**]<**Insert value**>.

    a. Airflow Inlet: Tangential, in sidewall near top.
    b. Wash-Down Assembly: Electric timer with devices to operate water spray nozzle.
    c. Water Spray Nozzle: Water inlet connection and nozzle in top head.
    d. Airflow Outlet: Centered, in top head.
    e. Cleanout: Handhold, in sidewall near bottom.
    f. Drain: Automatic type, and check valve in sidewall at bottom.
    g. Safety Valve: Vacuum relief valve.
    h. Gauge: Vacuum gauge, tank mounted or furnish for piping mounting.
    i. Directional Flow Valve: For installation in separator inlet piping.
    j. Silencer: For installation in turbine exhauster outlet piping.

H. Miscellaneous Devices: Safety valves, inlet vacuum gauges, and shutoff valves.

I. Mounting Frame: Fabricate base and attachment to separator with reinforcement strong enough to resist packaged equipment movement during a seismic event when base is anchored to building structure.

J. Capacities and Characteristics:

1. Vacuum Service: [**HVE**]<**Insert service**> vacuum.
2. Turbine Exhauster(s): [**Simplex**][**Duplex**]<**Insert number**>.
3. Standard-Air Capacity of Each Turbine Exhauster: <**Insert scfm (standard L/s)**> free air.
4. Actual-Air Capacity of Each Turbine Exhauster: <**Insert acfm (actual L/s)**> expanded air delivered.
5. Vacuum Required: [**8 in. Hg (205 mm Hg)**][**10 in. Hg (255 mm Hg)**]<**Insert value**>.
6. Motor (Each Turbine Exhauster):

    a. Horsepower: <**Insert value**>.
    b. Speed: [**1750**][**3400**]<**Insert speed**> rpm.

7. Electrical Characteristics:

   a. Volts: <**Insert value**>.
   b. Phase(s): [**Single**][**Three**].
   c. Hertz: [**60**]<**Insert value**>.
   d. Full-Load Amperes: <**Insert value**>.
   e. Minimum Circuit Ampacity: <**Insert value**>.
   f. Maximum Overcurrent Protection: <**Insert amperage**>.

8. Separator:

   a. Capacity: <**Insert gal. (L)**>.
   b. Pressure Rating: [**100 psig (690 kPa)**]<**Insert value**> minimum.
   c. Interior Finish: [**Epoxy**][**Epoxy or galvanized**][**Galvanized**]<**Insert coating**>.
   d. Liquid-Level Sensors: [**Automatic electric**][**Automatic electric or mechanical float switch**][**Mechanical float switch**] to operate drain valve.

2.10 VACUUM PUMP PACKAGED SYSTEM - DIAPHRAGM

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ACI Medical, Inc**]
2. [**Air Dimensions, Inc.**]
3. [**Gardner Denver, an Ingersoll Rand business**]
4. [**Gast Manufacturing Inc**]
5. [**KNF Neuberger, Inc**]
6. [**Thomas; an Ingersoll Rand Business**]
7. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ACI Medical, Inc**]
2. [**Air Dimensions, Inc.**]
3. [**Gardner Denver, an Ingersoll Rand business**]
4. [**Gast Manufacturing Inc**]
5. [**KNF Neuberger, Inc**]
6. [**Thomas; an Ingersoll Rand Business**]
7. <**Insert manufacturer's name**>

C. Source Limitations: Obtain diaphragm vacuum pumps from single source from single manufacturer.

D. Description: Simplex, single-stage, oil-less, diaphragm vacuum pump.

E. Control: Adjustable vacuum switch.

F. Cleanable inlet screen.

G. Outlet silencer and oil-mist separator on discharge.

H. Mounting: Freestanding.

I. Capacities and Characteristics:

1. Vacuum Service: [**Laboratory**]<**Insert service**> vacuum.
2. Standard-Air Capacity of Each Vacuum Pump: <**Insert scfm (standard L/s)**> free air.
3. Actual-Air Capacity of Each Vacuum Pump: <**Insert acfm (actual L/s)**> expanded air delivered.
4. Vacuum Required: [**10 in. Hg (255 mm Hg)**][**12 in. Hg (305)**]<**Insert value**>.
5. Motor:

    a. Horsepower: <**Insert value**>.
    b. Speed: [**1750**][**3400**]<**Insert speed**> rpm.

6. Electrical Characteristics:

    a. Volts: <**Insert value**>.
    b. Phase(s): [**Single**][**Three**].
    c. Hertz: [**60**]<**Insert value**>.
    d. Full-Load Amperes: <**Insert value**>.
    e. Minimum Circuit Ampacity: <**Insert value**>.
    f. Maximum Overcurrent Protection: <**Insert amperage**>.

2.11 DENTAL VACUUM PACKAGED SYSTEM

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Air Techniques**]
2. [**DentalEZ**]
3. [**Midmark Corp.**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Air Techniques**]
2. [**DentalEZ**]
3. [**Midmark Corp.**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain dental vacuum systems from single source from single manufacturer.

D. Description: Factory-assembled, -tested, and -packaged; [**simplex**][**duplex**]<**Insert number**>; automatic, dental vacuum packaged system; suitable for dental applications and capable of producing not less than [**12 in. Hg (305 mm Hg)**]<**Insert value**>.

E. Simplex Vacuum Pump: For mounting on base or on floor.

1. Vacuum Pump: Brass water-injection or liquid-ring type with rubber isolators on feet. Include fitting and tubing for circulation of approximately 80 percent of water through vacuum pump.
2. Cabinet: Enameled steel; open construction[**with sound-insulated cover**]. Include control panel with adjustable vacuum control, manual on-off switch, on light, and vacuum gauge.
3. Dual-Voltage Control: Conversion unit for connection to 208 or 230 V ac power.

4. Water Filter: For installation in inlet water supply.
5. Backflow Preventer: Integral with unit or separate reduced-pressure-zone type for field installation in inlet-water supply piping. See Section 221119 "Domestic Water Piping Specialties" for separate backflow preventers.
6. Check Valve: For installation in vacuum pump suction.
7. Vacuum Relief Valve: For installation in vacuum pump suction.
8. Air-Water Separator: With integral control to release wastewater when unit is shut off.
9. Waste Muffler: For installation in vacuum pump waste piping.

F. Duplex Vacuum Pumps: For mounting on base or on floor.

1. Vacuum Pumps: Brass water-injection or liquid-ring type with rubber isolators on feet. Include fitting and tubing for circulation of approximately 80 percent of water through vacuum pump.
2. Cabinet: Enameled steel; open construction[**with sound-insulated cover**]. Include control panel with alternator, adjustable vacuum control for each vacuum pump, manual on-off switches, on light, and vacuum gauge.
3. Dual-Voltage Control: Conversion unit for connection to 208 or 230 V ac power.
4. Water Filter: For installation in inlet water supply.
5. Backflow Preventer: Integral with unit or separate reduced-pressure-zone type for field installation in inlet-water supply piping. See Section 221319 "Sanitary Waste Piping Specialties" for separate backflow preventers.
6. Check Valves: For installation in each vacuum pump suction.
7. Vacuum Relief Valves: For installation in each vacuum pump suction.
8. Air-Water Separators: With integral control to release wastewater when unit is shut off.
9. Waste Mufflers: For installation in each vacuum pump waste piping.

G. Capacities and Characteristics:

1. Vacuum Service: Dental [**vacuum**][**HVE**]<**Insert service**>.
2. Vacuum Pump(s): [**Simplex**][**Duplex**]<**Insert number**>.
3. Standard-Air Capacity of Each Vacuum Pump: <**Insert scfm (standard L/s)**> free air.
4. Actual-Air Capacity of Each Vacuum Pump: <**Insert acfm (actual L/s)**> expanded air delivered.
5. Vacuum Required: [**10 in. Hg (255 mm Hg)**][**12 in. Hg (305 mm Hg)**]<**Insert value**>.
6. Motor (Each Vacuum Pump):

    a. Horsepower: <**Insert value**>.
    b. Speed: [**1750**][**3400**]<**Insert speed**> rpm.

7. Electrical Characteristics:

    a. Volts: <**Insert value**>.
    b. Phase(s): [**Single**][**Three**].
    c. Hertz: [**60**]<**Insert value**>.
    d. Full-Load Amperes: <**Insert value**>.
    e. Minimum Circuit Ampacity: <**Insert value**>.
    f. Maximum Overcurrent Protection: <**Insert amperage**>.

2.12 DENTAL VACUUM SYSTEM CONTROL PANELS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Air Techniques**]

2. [**DentalEZ**]
3. [**Midmark Corp.**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Air Techniques**]
2. [**DentalEZ**]
3. [**Midmark Corp.**]
4. <**Insert manufacturer's name**>

C. Source Limitations: Obtain dental vacuum system control panels from single source from single manufacturer.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. Comply with NFPA 99, "Health Care Facilities Code," for vacuum equipment and accessories for dental vacuum systems.

F. Description: Wall-mounted type with visual indicators to indicate equipment in operation and to perform the following:

1. Shut off dental vacuum equipment.
2. Shut off water supply to dental vacuum equipment. Include solenoid-operated valve for installation in water piping.

G. Dental vacuum control panels may be combined with dental air control panels in single dental equipment control panels.

2.13 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 220500 "Common Work Results for Plumbing."

1. Enclosure: [**Open, dripproof**][**Totally enclosed, fan cooled**][**Totally enclosed, air over**][**Open, externally ventilated**][**Totally enclosed, nonventilated**][**Severe duty**][**Explosion proof**][**Dust-ignition-proof machine**].
2. Enclosure Materials: [**Cast iron**][**Cast aluminum**][**Rolled steel**].
3. Motor Bearings: <**Insert requirements**>.
4. Unusual Service Conditions:

    a. Ambient Temperature: <**Insert deg C**>.
    b. Altitude: <**Insert feet (meter)**> above sea level.
    c. High humidity.
    d. <**Insert conditions**>.

5. Efficiency: Premium efficient.
6. NEMA Design: <**Insert designation**>.
7. Service Factor: <**Insert value**>.
8. Electrical Characteristics:

a. Horsepower: <**Insert horsepower**>.
b. Volts: [**120**][**208**][**230**][**460**]<**Insert value**>.
c. Phase: [**Single**][**Poly**].
d. Hertz: 60.
e. Full-Load Amperes: <**Insert value**>.
f. Minimum Circuit Ampacity: <**Insert value**>.
g. Maximum Overcurrent Protection: <**Insert amperage**>.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in of vacuum piping to verify actual location before vacuum pump installation.

3.2 PREPARATION

A. Clean vacuum equipment, accessories, and components that have not been cleaned for oxygen service and sealed or that are furnished unsuitable for [**laboratory vacuum**][**and**][**medical vacuum**] applications, in accordance with CGA G-4.1, "Cleaning of Equipment for Oxygen Service."

3.3 INSTALLATION OF VACUUM EQUIPMENT

A. Install [**medical**][**dental**] vacuum equipment for healthcare facilities in accordance with ASSE 6010 and NFPA 99.

B. Equipment Mounting:

1. Install [**vacuum producers**][**vacuum producers, except diaphragm vacuum pumps,**]<**Insert vacuum producer types**> on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment"
3. Comply with requirements for vibration isolation devices specified in Section 220548.13 "Vibration Controls for Plumbing Piping and Equipment."

C. Install vacuum equipment anchored to substrate.

D. Orient equipment so controls and devices are accessible for servicing.

E. Maintain manufacturer's recommended clearances for service and maintenance.

F. Install the following devices on vacuum equipment:

1. Thermometer, Vacuum Gauge, and Pressure Relief Valve: Install on each vacuum pump receiver.
2. Drain Valves: Install on [**receivers**][**and**][**separators**]. Discharge receiver condensate over nearest floor drain. Discharge separator oral evacuation fluids by direct connection into sanitary waste piping system.

3.4 INSTALLATION OF DENTAL VACUUM SYSTEM

A. Install in accordance with ASSE 6010 and NFPA 99.

B. Install dental vacuum system units [**directly on floor**][**on concrete bases**] with [**restrained**]elastomeric mounts with a minimum deflection of <**Insert deflection**>. Vibration isolation devices and installation requirements are specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."

C. Maintain manufacturer's recommended clearances for service and maintenance.

D. Install control panels for dental vacuum equipment on wall near [**equipment**][**office entrance**]<**Insert location**>.

3.5 PIPING CONNECTIONS

A. Comply with requirements for water-supply piping specified in Section 221116 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Comply with requirements for drain piping specified in Section 221316 "Sanitary Waste and Vent Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

C. Comply with requirements for vacuum piping specified in Section 226213 "Vacuum Piping for Laboratory and Healthcare Facilities." Drawings indicate general arrangement of piping, fittings, and specialties.

D. Where installing piping adjacent to equipment, allow space for service and maintenance.

E. Connect vacuum piping to vacuum equipment, accessories, and specialties with shutoff valve and union or flanged connection.

F. Connect water supply to vacuum equipment that requires water. Include backflow preventer. Backflow preventers are specified in Section 221119 "Domestic Water Piping Specialties."

G. Comply with [**NFPA 99 and**]authorities having jurisdiction on location of vacuum exhaust discharge.

3.6 ELECTRICAL CONNECTIONS

A. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate to be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."

2. Nameplate to be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least **1/2 inch (13 mm)** high.

3.7 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring in accordance with Section 260523 "Control-Voltage Electrical Power Cables."

3.8 IDENTIFICATION

A. Identify laboratory vacuum equipment system components. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

B. Identify medical vacuum equipment system components. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment" and with NFPA 99.

3.9 STARTUP SERVICE

A. [**Engage a factory-authorized service representative to perform**][**Perform**] startup service.

1. Complete installation and startup checks in accordance with manufacturer's written instructions.
2. Check for lubricating oil in lubricated-type equipment.
3. Check belt drives for proper tension.
4. Verify that vacuum producer outlet piping is clear.
5. Check for equipment vibration-control supports and flexible pipe connectors and verify that equipment is properly attached to substrate.
6. Check safety valves for correct settings.
7. Check for proper seismic restraints.
8. Drain [**receiver**][**and**][**separator**] tank(s).
9. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
10. Test and adjust controls and safeties.

B. Verify that vacuum equipment is installed and connected in accordance with the Contract Documents.

C. Verify that electrical wiring installation complies with manufacturer's submittal and written installation requirements in electrical Sections.

D. Prepare written report documenting testing procedures and results.

3.10 ADJUSTING

A. Adjust equipment to function smoothly, and lubricate as recommended by manufacturer.

B. Adjust control set points.

3.11 FIELD QUALITY CONTROL FOR HEALTHCARE FACILITY VACUUM EQUIPMENT

A. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

B. Tests and Inspections:

1. Medical Vacuum Equipment Testing Coordination: Perform tests, inspections, verifications, and certification of medical vacuum equipment concurrently with tests, inspections, and certification of [**medical compressed-air equipment**][**medical compressed-air piping**][**medical vacuum piping**][**and**][**medical gas piping**] systems.
2. Preparation: Perform medical vacuum equipment tests in accordance with requirements in NFPA 99 for the following:

    a. System operation test.
    b. <**Insert additional requirements**>.

3. Equipment Verification: Comply with requirements in ASSE 6020, ASSE 6030, and NFPA 99 for verification of medical vacuum equipment.
4. Replace damaged and malfunctioning controls and equipment.
5. Testing Certification: Certify that specified tests, inspections, and procedures have been performed and certify report results. Include the following:

    a. Inspections performed.
    b. Procedures and materials used.
    c. Test methods used.
    d. Results of tests.

6. Components will be considered defective if they do not pass tests and inspections and are to be replaced with new components.

C. Prepare test and inspection reports.

3.12 DEMONSTRATION

A. [**Engage a factory-authorized service representative to train**][**Train**] Owner's maintenance personnel to adjust, operate, and maintain vacuum systems.

END OF SECTION 43 11 43 00

SECTION 46 61 21 00 - HVAC WATER TREATMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. HVAC water treatment.
2. Manual chemical-feed equipment.
3. Automatic chemical-feed equipment.
4. Ozone-generator biocide equipment.
5. Stainless steel pipes and fittings.
6. UV biocide equipment.
7. Chemical-treatment test equipment.
8. Chemicals.
9. Inhibited ethylene glycol and propylene glycol.
10. HVAC makeup-water softener.
11. RO equipment for HVAC makeup water.
12. Filtration equipment.

1.2 DEFINITIONS

A. EEPROM: Electrically erasable, programmable read-only memory.

B. PPM: Parts per million.

C. RO: Reverse osmosis.

D. TDS: Total dissolved solids consist of salts and other materials that combine with water as a solution.

E. TSS: Total suspended solids include both organic and inorganic solids that are suspended in the water. These solids may include silt, plankton, and industrial wastes.

1.3 ACTION SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, and furnished specialties and accessories for the following products:

1. Bypass feeders.
2. Water meters.
3. Inhibitor injection timers.
4. pH controllers.
5. TDS controllers.
6. TSS controllers.
7. Biocide feeder timers.
8. Chemical solution tanks.
9. Injection pumps.
10. Ozone generators.
11. UV-irradiation units.

12. Chemical test equipment.
13. Chemical material safety data sheets.
14. Inhibited ethylene glycol.
15. Inhibited propylene glycol.
16. Water softeners.
17. RO units.
18. Multimedia filters.
19. Self-cleaning strainers.
20. Replaceable bag- or cartridge-type filters.
21. Centrifugal separators.

B. Shop Drawings: Pretreatment equipment and chemical- [**and ozone-generator-biocide-**][**and UV-irradiation-biocide-**] treatment equipment, showing tanks, maintenance space required, and piping connections to HVAC systems.

1. Include plans, elevations, sections, and attachment details.
2. Include diagrams for power and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For [**chemical-treatment equipment**][**water softeners**][**RO equipment**][**water-filtration units**] and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Water-Analysis Provider Qualifications: Verification of experience and capability of HVAC water-treatment service provider.

C. Field quality-control reports.

D. Water-Treatment Program: Written sequence of operation on an annual basis for the application equipment required to achieve water quality defined in "Performance Requirements" Article.

E. Water Analysis: Illustrate water quality available at Project site.

F. Passivation Confirmation Report: Verify passivation of galvanized-steel surfaces, and confirm this observation in a letter to Architect.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For sensors, injection pumps, [**water softeners,**][**RO equipment,**][**water-filtration units,**] and controllers to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

A. HVAC Water-Treatment Service Provider Qualifications: An experienced HVAC water-treatment service provider, capable of analyzing water qualities, installing water-treatment equipment, and applying water treatment as specified in this Section.

PART 2 - PRODUCTS

2.1 HVAC WATER TREATMENT

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Anderson Chemical Company**]
2. [**Aqua-Chem, Inc.**]
3. [**Barclay Water Management, Inc**]
4. [**Boland Trane Services**]
5. [**Cascade Water Services, Inc**]
6. [**Earthwise Environmental Inc**]
7. [**H-O-H Water Technology, Inc**]
8. [**LiquiTech, Inc.**]
9. [**Metro Group, Inc. (The)**]
10. [**Nalco; an Ecolab company**]
11. [**Sonitec-Vortisand Inc.**]
12. [**Suez Water Technologies (Formerly GE Water)**]
13. [**Watcon, Inc**]
14. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Anderson Chemical Company**]
2. [**Aqua-Chem, Inc.**]
3. [**Barclay Water Management, Inc**]
4. [**Boland Trane Services**]
5. [**Cascade Water Services, Inc**]
6. [**Earthwise Environmental Inc**]
7. [**H-O-H Water Technology, Inc**]
8. [**LiquiTech, Inc.**]
9. [**Metro Group, Inc. (The)**]
10. [**Nalco; an Ecolab company**]
11. [**Sonitec-Vortisand Inc.**]
12. [**Suez Water Technologies (Formerly GE Water)**]
13. [**Watcon, Inc**]
14. <**Insert manufacturer's name**>

2.2 PERFORMANCE REQUIREMENTS

A. Provide all hardware, chemicals, and other material necessary to maintain HVAC water quality in all systems as indicated in this Specification. Water quality for HVAC systems shall minimize corrosion, scale buildup, and biological growth for optimum efficiency of HVAC equipment without creating a hazard to operating personnel or to the environment.

B. Base HVAC water treatment on quality of water available at Project site, HVAC system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements and guidelines of authorities having jurisdiction.

C. Closed hydronic systems, including [**hot-water heating below 250 deg F (120 deg C)**][**chilled water**][**dual-temperature water**][**glycol heating**][**and**][**glycol cooling**] shall have the following water qualities:

1. pH: Maintain a value within <**Insert range**>.
2. Alkalinity: Maintain a value within <**Insert range**> mg/L as CaCO(3).
3. Steel Corrosion Inhibiters: Provide sufficient inhibitors to limit mild steel corrosion to <**Insert number**> mils per year. Maintain soluble iron concentrations at or below <**Insert value**> mg/L.
4. Yellow Metal Corrosion Inhibitor: Provide sufficient copper and brass corrosion inhibitors to limit copper corrosion to <**Insert number**> mils per year. Maintain soluble copper concentrations at or below <**Insert value**> mg/L.
5. Scale Control: Provide softened water for initial fill and makeup. [**Where softened water is not used, provide sufficient scale inhibitors to prevent formation of scale and maintain all scale-forming material in solution.**]
6. Dispersants: Provide sufficient dispersants to prevent sedimentation of fine particulate matter.
7. Microbiological Limits:
    a. Total Aerobic Plate Count: Maintain a maximum value of <**Insert number**> organisms/mL.
    b. Total Anaerobic Plate Count: Maintain a maximum value of <**Insert number**> organisms/mL.
    c. Nitrate Reducers: Maintain a maximum value of <**Insert number**> organisms/mL.
    d. Sulfate Reducers: Maintain a maximum value of <**Insert number**> organisms/mL.
    e. Iron Bacteria: Maintain a maximum value of <**Insert number**> organisms/mL.
8. <**Insert other applicable requirements**>.

D. Open hydronic systems, including [**condenser**][**and**][**fluid-cooler spray**] water, shall have the following water qualities:

1. pH: Maintain a value within <**Insert range**>.
2. Alkalinity: Maintain a maximum value of <**Insert range**> mg/L as CaCO(3).
3. Silica in Cooling Towers: Maintain a value no higher than <**Insert number**> mg/L.
4. Silica in Evaporative Condensers: Maintain a value no higher than <**Insert number**> mg/L.
5. Hardness in Cooling Towers: Maintain a value no higher than <**Insert value**> mg/L as CaCO(3).
6. Hardness in Evaporative Condensers: Maintain a value no higher than <**Insert value**> mg/L as CaCO(3).
7. Steel Corrosion Inhibiters: Provide sufficient inhibitors to limit mild steel corrosion to <**Insert number**> mils per year. Maintain soluble iron concentrations at or below <**Insert value**> mg/L.
8. Yellow Metal Corrosion Inhibitor: Provide sufficient copper and brass corrosion inhibitors to limit copper corrosion to <**Insert value**> mils per year. Maintain soluble copper concentrations at or below <**Insert value**> mg/L.
9. Scale Control: [**Provide softened water for initial fill and makeup.**][**Provide sufficient scale inhibitors to prevent formation of scale and maintain all scale-forming material in solution.**]
10. Dispersants: Provide sufficient dispersants to prevent sedimentation of fine particulate matter.
11. Microbiological Limits:
    a. Total Aerobic Plate Count: Maintain a maximum value of <**Insert number**> organisms/mL.
    b. Total Anaerobic Plate Count: Maintain a maximum value of <**Insert number**> organisms/mL.
    c. Nitrate Reducers: Maintain a maximum value of <**Insert number**> organisms/mL.

d. Sulfate Reducers: Maintain a maximum value of <**Insert number**> organisms/mL.
e. Iron Bacteria: Maintain a maximum value of <**Insert number**> organisms/mL.

12. <**Insert other applicable requirements**>.

E. Passivation for Galvanized Steel:

1. Passivation of all galvanized-steel cooling towers and other system components must be conducted strictly in accordance with manufacturer's instructions in order to validate warranties. During the required passivation period, all water-quality parameters must be maintained in accordance with manufacturer's specifications, and all other requirements must be observed.

F. Steam Boiler and Steam Condensate:

1. Steam Condensate:

a. pH: Maintain a value within <**Insert range**>.
b. Alkalinity: Maintain a value no higher than <**Insert range**> mg/L as CaCO(3).
c. Steel Corrosion Inhibiters: Provide sufficient inhibitors to limit mild steel corrosion to <**Insert number**> mils per year. Maintain soluble iron concentrations at or below <**Insert value**> mg/L.
d. Yellow Metal Corrosion Inhibitor: Provide sufficient copper and brass corrosion inhibitors to limit copper corrosion to <**Insert value**> mils per year. Maintain soluble copper concentrations at or below <**Insert value**> mg/L.
e. Ammonia: Maintain a value of <**Insert number**> mg/L.
f. <**Insert other requirements if necessary**>.

2. Steam boiler operating at **100 psig (690 kPa)** and less shall have the following water qualities:

a. Silica: Maintain a value no higher than <**Insert value**> mg/L as SiO(2).
b. TSS: Maintain a value no higher than <**Insert value**> mg/L.
c. TDS: Maintain a value no higher than <**Insert value**> mg/L.
d. Total Alkalinity: Maintain a value no higher than <**Insert value**> mg/L as CaCO(3).
e. pH: Maintain a value within <**Insert range**> pH.
f. <**Insert other applicable requirements**>.

2.3 MANUAL CHEMICAL-FEED EQUIPMENT

A. Bypass Feeders: Steel, with corrosion-resistant exterior coating, minimum **3-1/2-inch (89-mm)** fill opening in the top, and **NPS 3/4 (DN 20)** bottom inlet and top side outlet. Provide quarter- turn or threaded fill cap with gasket seal and diaphragm arranged to lock the top onto the feeder when exposed to system pressure in the vessel. Provide a **NPS 3/4 IN (DN 20)** quarter-turn valve on inlet and outlet.

1. Capacity: [**2 gal. (7.6 L)**][**5 gal. (19 L)**]<**Insert value**>.
2. Minimum Working Pressure: [**125 psig (860 kPa)**][**175 psig (1210 kPa)**]<**Insert value**>.

2.4 AUTOMATIC CHEMICAL-FEED EQUIPMENT

A. Water Meter, Oscillating Piston:

1. AWWA C700, oscillating-piston, magnetic-drive, totalization meter.
2. Body: Bronze.
3. Minimum Working-Pressure Rating: **150 psig (1035 kPa)**.
4. Maximum Pressure Loss at Design Flow: **3 psig (20 kPa)**.

5. Registration: **Gallons (Liters)** or **cubic feet (cubic meters)**.
6. End Connections: Threaded.
7. [**Controls: Flow-control switch with normally open contacts, rated for maximum 10 A, 250-V ac, that will momentarily close at adjustable increments of total flow.**]
8. [**Provide an electronic or digital interface for flow rate indication at central workstation compatible with DDC system, as described in Section 230923 "Direct Digital Control (DDC) System for HVAC." Low-voltage signal must be capable of transmitting 1000 feet (305 m).**]
9. [**All electrical components, devices, and accessories must be listed and labeled as defined in NFPA 70, by a qualified testing agency, and must be marked for intended location and application.**]

B. Water Meter, Turbine Type, Threaded:

1. AWWA C701, turbine-type, totalization meter.
2. Body: Bronze.
3. Minimum Working-Pressure Rating: **100 psig (690 kPa)**.
4. Maximum Pressure Loss at Design Flow: **3 psig (20 kPa)**.
5. Registration: **Gallons (Liters)** or **cubic feet (cubic meters)**.
6. End Connections: Threaded.
7. [**Controls: Flow-control switch with normally open contacts, rated for maximum 10 A, 250-V ac, that will momentarily close at adjustable increments of total flow.**]
8. [**Provide an electronic or digital interface for flow rate indication at central workstation compatible with DDC system, as described in Section 230923 "Direct Digital Control (DDC) System for HVAC." Low-voltage signal must be capable of transmitting 1000 feet (305 m).**]
9. [**All electrical components, devices, and accessories must be listed and labeled as defined in NFPA 70, by a qualified testing agency, and must be marked for intended location and application.**]

C. Water Meter, Turbine Type, Flanged:

1. AWWA C701, turbine-type, totalization meter.
2. Body: [**Bronze**][**Epoxy-coated cast iron**].
3. Minimum Working-Pressure Rating: **150 psig (1035 kPa)**.
4. Maximum Pressure Loss at Design Flow: **3 psig (20 kPa)**.
5. Registration: **Gallons (Liters)** or **cubic feet (cubic meters)**.
6. End Connections: Flanged.
7. [**Controls: Flow-control switch with normally open contacts, rated for maximum 10 A, 250-V ac, that will momentarily close at adjustable increments of total flow.**]
8. [**Provide and electronic or digital interface for flow rate indication at central workstation compatible with DDC system, as described in Section 230923 "Direct Digital Control (DDC) System for HVAC." Low-voltage signal must be capable of transmitting 1000 feet (305 m).**]
9. [**All electrical components, devices, and accessories must be listed and labeled as defined in NFPA 70, by a qualified testing agency, and must be marked for intended location and application.**]

D. Inhibitor Injection Timers:

1. Microprocessor-based controller with digital display in NEMA 250, Type 12 enclosure with gasketed and lockable door.[**Interface for start/stop and status indication at central workstation, as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]
2. Programmable timers with infinite adjustment over full range, mounted in cabinet with hand-off-auto switches and status lights.
3. Test switch.
4. Hand-off-auto switch for chemical pump.

5. Illuminated legend to indicate feed when pump is activated.
6. Programmable lockout timer with indicator light. Lockout timer to deactivate the pump and activate alarm circuits.
7. Digital display makeup totalizer to measure amount of makeup and bleed-off water from two water meter inputs.

E. pH Controller:

1. Microprocessor-based controller, 1 percent accuracy in a range from zero to 14 units. Incorporate solid-state integrated circuits and digital display in NEMA 250, Type 12 enclosure with gasketed and lockable door.[**Interface for start/stop and status indication at central workstation, as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]
2. Digital display and touch pad for input.
3. Sensor probe adaptable to sample stream manifold.
4. High, low, and normal pH indication.
5. High or low-pH-alarm-light trip points, field adjustable; with silence switch.
6. Hand-off-auto switch for acid pump.
7. Internal adjustable hysteresis or deadband.

F. TDS Controller:

1. Microprocessor-based controller, 1 percent accuracy in a range from zero to 5000 micromhos. Incorporate solid-state integrated circuits and digital display in NEMA 250, Type 12 enclosure with gasketed and lockable door.[**Interface for start/stop and status indication at central workstation, as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]
2. Digital display and touch pad for input.
3. Sensor probe adaptable to sample stream manifold.
4. High, low, and normal conductance indication.
5. High- or low-conductance-alarm-light trip points, field adjustable; with silence switch.
6. Hand-off-auto switch for solenoid bleed-off valve.
7. Bleed-off valve activated indication.
8. Internal adjustable hysteresis or deadband.
9. Bleed Valves:

    a. Cooling Systems: Forged-brass body, globe pattern, general-purpose solenoid with continuous-duty coil, or motorized valve.
    b. Steam Boilers: Motorized ball valve, steel body, and TFE seats and seals.

G. TSS Controller:

1. Microprocessor-based controller, 1 percent accuracy in a range from 0.001 mg/L to 50 g/L. Incorporate solid-state integrated circuits and digital display in NEMA 250, Type 4X enclosure.[**Interface for start/stop and status indication at central workstation, as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]
2. [**Forms of digital communication:**][**MODBUS RS-232**][**MODBUS RS-485**][**Profibus DP**].
3. Digital display and touch pad for input.
4. Sensor probe adaptable to sample stream manifold.
5. High- or low-value-alarm-light trip points, field adjustable; with silence switch.
6. Hand-off-auto switch for solenoid bleed-off valve.
7. Bleed-off valve activated indication.
8. Internal adjustable hysteresis or deadband.

H. Biocide Feeder Timer:

1. Microprocessor-based controller with digital display in NEMA 250, Type 12 enclosure with

gasketed and lockable door.[**Interface for start/stop and status indication at central workstation, as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]

2. 24-hour timer with 14-day skip feature to permit activation any hour of day.
3. Precision, solid-state, bleed-off lockout timer and clock-controlled biocide pump timer. Prebleed and bleed lockout timers.
4. Solid-state alternator to enable use of two formulations.
5. 24-hour display of time of day.
6. 14-day display of day of week.
7. Battery backup, so clock is not disturbed by power outages.
8. Hand-off-auto switches for biocide pumps.
9. Biocide A and Biocide B pump running indication.

I. Chemical Solution Tanks:

1. Chemical-resistant reservoirs fabricated from high-density opaque polyethylene with minimum 110 percent containment vessel.
2. Molded cover with recess for mounting pump.
3. Capacity: [**30 gal. (114 L)**][**50 gal. (189 L)**][**120 gal. (454 L)**]<**Insert value**>.

J. Chemical Solution Injection Pumps:

1. Self-priming, positive displacement; rated for intended chemical with minimum 25 percent safety factor for design pressure and temperature.
2. Adjustable flow rate.
3. Metal and thermoplastic construction.
4. Built-in relief valve.
5. Fully enclosed, continuous-duty, single-phase motor. Comply with requirements in Section 230500 "Common Work Results for HVAC."
6. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

K. Chemical Solution Tubing: Polyethylene tubing with compression fittings and joints, except ASTM A269/A269M, Type 304 stainless steel for steam boiler injection assemblies.

L. Injection Assembly:

1. Quill: Minimum **NPS 1/2 (DN 15)** with insertion length sufficient to discharge into at least 25 percent of pipe diameter.
2. Ball Valve: [**Three**][**Two**]-piece stainless steel, as described in "Stainless Steel Pipes and Fittings" Article; selected to fit quill.
3. Packing Gland: Mechanical seal on quill of sufficient length to allow quill removal during system operation.
4. Assembly Pressure/Temperature Rating: Minimum **600 psig (4137 kPa)** at **200 deg F (93 deg C)**.

2.5 OZONE-GENERATOR BIOCIDE EQUIPMENT

A. Corona discharge generator with stainless steel generating cells and transformer housed in a NEMA 250, Type 4 enclosure. Assembly shall be suitable for continuous duty. Provide site glasses to verify proper operation of generator.

B. Water-cooled generators shall be provided with cooling water at maximum [**70 deg F (21 deg C)**]<**Insert value**> and [**35 psig (241 kPa)**]<**Insert value**>.

C. Generator vessels exposed to system pressure shall be constructed in accordance with 2017 ASME Boiler and Pressure Vessel Code and be equipped with pressure-relief valve.

D. External air compressor or induced airflow through a cleanable prefilter supplies concentrated oxygen through a molecular sieve, with **minus 62 deg F (minus 52 deg C)** dew point to avoid the formation of nitric acid.

E. Microprocessor-based control with software in EEPROM, surge protection, high-temperature cutout, and operational status lights.[**Interface for start/stop and status indication at central workstation, as described in Section 230923 "Direct Digital Control (DDC) System for HVAC."**]

F. Ozone Contactors:

1. Bubble diffusers.
2. Induction injection nozzle.
3. Injectors with static mixers.

G. Ozone Detector and Alarm Devices:

1. Detector:

a. Sensor: Metal dioxide semiconductor.
b. Concentration Range: [**0 to 10**]<**Insert range**> ppm.
c. Accuracy: Plus or minus 0.01 ppm.
d. Sensitivity: 0.01 ppm.
e. Response Time: Maximum 10 seconds.
f. Operating Temperature: **50 to 100 deg F (10 to 38 deg C)**.
g. Relative Humidity: 15 to 90 percent, noncondensing over the operating temperature range.

2. Horns:

a. Electric-vibrating-polarized type.
b. 24-V dc, with provision for housing the operating mechanism behind a grille.
c. Horns shall produce a sound-pressure level of 90 dBA, measured **10 feet (3 m)** from the horn.
d. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

3. Visible Alarm Devices:

a. Xenon strobe lights listed in UL 1971, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate.
b. Rated Light Output: [**75**][**110**]<**Insert number**> candela.
c. Strobe Leads: Factory connected to screw terminals.

H. Self-Contained Breathing Apparatus: Open-circuit, pressure-demand compressed air includes completely assembled, portable, self-contained devices designed for hazardous breathing environment application.

1. Face Piece: EPDM or silicone rubber construction material, one-size-fits-all with double-sealing edge, stainless steel speaking diaphragm and lens retainer, five adjustable straps to hold face piece to head (two straps on each side and one on top), exhalation valve in mask, close-fitting nose piece to ensure no CO(2) buildup, and perspiration drain to avoid skin irritation and to prevent eyepiece, spectacle, and lens fogging.
2. Backplate: Orthopedically designed of [**chemical and impact-resistant, glass-fiber composite**][**aluminum**].

3. Harness and Carrier Assembly: Large triangular back pad, backplate, and adjustable waist and shoulder straps; modular in design, detachable components, and easy to clean and maintain. Shoulder straps are padded with flame-resistant material, reinforced with stainless steel cable, and attached with T-nuts, washers, and screws.
4. Air Cylinder: [**30**][**45**][**60**]-minute, low-pressure, air-supply-loaded [**fiberglass**][**aluminum**][**steel**] cylinders fitted with quick-fill assembly for refilling and air transfer.
5. Wall-Mounting Cabinet: Leakproof, corrosion-resistant, clear, plastic case.
6. Tested and Certified: By the National Institute for Occupational Safety and Health and by the Mine Safety and Health Administration, in accordance with 42 CFR 84, Subpart H.

2.6 STAINLESS STEEL PIPES AND FITTINGS

A. Stainless Steel Tubing: Comply with ASTM A269/A269M, Type 316.

B. Stainless Steel Fittings: Comply with ASTM A815/A815M, Type 316, Grade WP-S.

C. Two-Piece, Full-Port, Stainless Steel Ball Valves: ASTM A351/A351M, Type 316 stainless steel body; ASTM A276/A276M, Type 316 stainless steel stem and vented ball, carbon-filled TFE seats, threaded body design with adjustable stem packing, threaded ends, and **250-psig (1725-kPa)** steam working pressure and **600-psig (4140-kPa)** cold working pressure ratings.

D. Three-Piece, Full-Port, Stainless Steel Ball Valves: ASTM A351/A351M, Type 316 stainless steel body; ASTM A276/A276M, Type 316 stainless steel stem and vented ball, threaded body design with adjustable stem packing, threaded ends, and **150-psig (1035-kPa)** steam working pressure and **600-psig (4140-kPa)** cold working pressure rating.

2.7 UV BIOCIDE EQUIPMENT

A. Target Irradiation: Minimum [**5,000 microWxs/sq. cm**]<**Insert value**>.

B. Light Source Vessels:

1. ASTM A666, Type 304 stainless steel.
2. Construct for minimum [**150 psig (1035 kPa)**]<**Insert value**> at [**150 deg F (65 deg C)**]<**Insert value**> in accordance with ASME Boiler and Pressure Vessel Code, and equipped with pressure-relief valve.
3. Light Source Sleeve: Quartz, with EPDM O-ring seals.
4. Light Source: Replaceable UV lamp producing minimum target irradiation of 254-nm wavelength light.

C. Controls: Interlock with pumps to operate when water is circulating.

2.8 CHEMICAL-TREATMENT TEST EQUIPMENT

A. Test Kit: Manufacturer-recommended equipment and chemicals in a wall-mounted cabinet for testing pH, TSS, inhibitor, chloride, alkalinity, and hardness; sulfite and testable polymer tests for high-pressure boilers; and oxidizing biocide test for open cooling systems.

B. Sample Cooler:

1. Tube: Sample.

a. Size: **NPS 1/4 (DN 8)** tubing.
b. Material: ASTM A666, Type 316 stainless steel.
c. Pressure Rating: Minimum **2000 psig (13 790 kPa)**.
d. Temperature Rating: Minimum **850 deg F (454 deg C)**.

2. Shell: Cooling water.

a. Material: ASTM A666, Type 304 stainless steel.
b. Pressure Rating: Minimum **250 psig (1725 kPa)**.
c. Temperature Rating: Minimum **450 deg F (232 deg C)**.

3. Capacities and Characteristics:

a. Tube: Sample.

1) Flow Rate: [**0.25 gpm (0.016 L/s)**]<**Insert value**>.
2) Entering Temperature: [**400 deg F (204 deg C)**]<**Insert value**>.
3) Leaving Temperature: [**88 deg F (31 deg C)**]<**Insert value**>.
4) Pressure Loss: [**6.5 psig (44.8 kPa)**]<**Insert value**>.

b. Shell: Cooling water.

1) Flow Rate: [**3 gpm (0.19 L/s)**]<**Insert value**>.
2) Entering Temperature: [**70 deg F (21 deg C)**]<**Insert value**>.
3) Pressure Loss: [**1.0 psig (6.89 kPa)**]<**Insert value**>.

C. Corrosion Test-Coupon Assembly: Constructed of corrosive-resistant material, complete with piping, valves, and mild steel and copper coupons. Locate copper coupon downstream from mild steel coupon in the test-coupon assembly.

1. [**Two**]<**Insert number**>-station rack for closed-loop systems.
2. [**Four**]<**Insert number**>-station rack for open-loop systems.

2.9 CHEMICALS

A. Chemicals shall be as recommended by water-treatment system manufacturer that are compatible with piping system components and connected equipment and that can attain water quality specified in "Performance Requirements" Article.

B. Chemicals for direct steam injection humidification and for steam used in direct contact with food to be FDA approved and safe for these uses.

C. Water Softener Chemicals:

1. Mineral: High-capacity, sulfonated-polystyrene ion-exchange resin that is stable over entire pH range, with good resistance to bead fracture from attrition or shock. Resin exchange capacity minimum <**Insert grains/cu. ft. (kg/cu. m)**> of calcium carbonate of resin when regenerated with <**Insert lb (kg)**> of salt.
2. Salt for Brine Tanks: High-purity sodium chloride, free of dirt and foreign material. Rock and granulated forms are unacceptable.

2.10 INHIBITED ETHYLENE GLYCOL AND PROPYLENE GLYCOL

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**CORECHEM**]
2. [**Dynalene**]
3. [**Fremont Industries**]
4. [**Houghton Chemical Corp.**]
5. [**The Dow Chemical Company**]
6. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**CORECHEM**]
2. [**Dynalene**]
3. [**Fremont Industries**]
4. [**Houghton Chemical Corp.**]
5. [**The Dow Chemical Company**]
6. <**Insert manufacturer's name**>

C. Inhibited Ethylene Glycol:

1. Ethylene glycol with inhibitor additive, to provide freeze protection for heat-transfer fluid and corrosion protection for carbon-steel, brass, copper, stainless steel, and cast-iron piping and fittings.
2. Inhibitor creates a passive layer on all surfaces that contact ethylene glycol to prevent corrosion by stabilizing fluid pH, to compensate for acids formed from glycol degradation.
3. pH value shall be maintained between <**Insert range**>, with reserve alkalinity greater than <**Insert number**> mL.
4. Operating Temperature Range: [**Minus 60 deg F (minus 51 deg C) to 250 deg F (121 deg C)**]<**Insert range**>.
5. Concentrated inhibited ethylene glycol is to be 95.5 percent ethylene glycol by weight and 4.5 percent performance additives.
6. Concentrated inhibited ethylene glycol is mixed with water in proper proportion specified by the manufacturer to provide freeze protection to [**minus 20 deg F (minus 29 deg C)**]<**Insert number**>. Premixed heat-transfer fluid may be used, or glycol/water mixture may be prepared at time of installation. Use only deionized water for mixing.
7. Provide only ethylene glycol that is specifically blended for HVAC application. Automotive-type antifreeze is unacceptable.

D. Inhibited Propylene Glycol:

1. Propylene glycol with inhibitor additive, to provide freeze protection for heat-transfer fluid and corrosion protection for carbon-steel, brass, copper, stainless steel, and cast-iron piping and fittings.
2. Inhibitor creates a passive layer on all surfaces that contact propylene glycol to prevent corrosion and stabilizes fluid pH, to compensate for acids formed from glycol degradation.
3. pH value shall be maintained between <**Insert range**>, with reserve alkalinity greater than <**Insert number**> mL.
4. Operating Temperature Range: [**Minus 50 deg F (minus 46 deg C) to 250 deg F (121 deg C)**]<**Insert range**>.
5. Concentrated inhibited propylene glycol is to be 95.5 percent propylene glycol by weight and 4.5

percent performance additives.

6. Concentrated inhibited propylene glycol is mixed with water in proper proportion specified by the manufacturer to provide freeze protection to [**minus 20 deg F (minus 29 deg C)**]<**Insert number**>. Premixed heat-transfer fluid may be used, or glycol/water mixture may be prepared at the time of installation. Use only deionized water for mixing.
7. Provide only propylene glycol that is specifically blended for HVAC application. Automotive-type antifreeze is unacceptable.

2.11 HVAC MAKEUP-WATER SOFTENER

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**3M**]
2. [**CSI Water Treatment Systems**]
3. [**Culligan International Company**]
4. [**Diamond Water Conditioning; a Griesbach company**]
5. [**Ecodyne Limited**]
6. [**Hungerford & Terry, Inc**]
7. [**Kinetico Incorporated**]
8. [**Marlo Incorporated**]
9. [**Parker Boiler**]
10. [**Pentair, Inc.**]
11. [**RainSoft**]
12. [**Water King**]
13. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**3M**]
2. [**CSI Water Treatment Systems**]
3. [**Culligan International Company**]
4. [**Diamond Water Conditioning; a Griesbach company**]
5. [**Ecodyne Limited**]
6. [**Hungerford & Terry, Inc**]
7. [**Kinetico Incorporated**]
8. [**Marlo Incorporated**]
9. [**Parker Boiler**]
10. [**Pentair, Inc.**]
11. [**RainSoft**]
12. [**Water King**]
13. <**Insert manufacturer's name**>

C. Description: Twin mineral tanks and one brine tank, factory mounted on skid.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. Fabricate supports and attachments to tanks with reinforcement strong enough to resist tank movement during seismic event, when tank supports are anchored to building structure as recommended in writing by manufacturer.

F. Mineral Tanks:

1. Fabricate and label steel filter tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
2. Fabricate and label fiber-reinforced plastic filter tanks to comply with ASME Boiler and Pressure Vessel Code: Section X, if indicated.
3. Pressure Rating: [**100 psig (690 kPa)**][**125 psig (860 kPa)**][**150 psig (1035 kPa)**]<**Insert value**> minimum.
4. Wetted Components: Suitable for water temperatures from [**40 to at least 100 deg F (5 to at least 38 deg C)**]<**Insert range**>.
5. Freeboard: 50 percent minimum, for backwash expansion above the normal resin bed level.
6. Support Legs or Skirt: Constructed of structural steel, welded or bonded to tank before testing and labeling.
7. Finish: Hot-dip galvanized on exterior and interior of tank after fabrication.
8. Upper Distribution System: Single-point type, fabricated from galvanized-steel pipe and fittings.
9. Lower Distribution System: Hub and radial-arm or header-lateral type; fabricated from PVC pipe and fittings with individual, fine-slotted, nonclogging polyethylene strainers; arranged for even-flow distribution through resin bed.

G. Controls: Automatic; factory mounted on mineral tanks and factory wired.

1. Adjustable duration of regeneration steps.
2. Push-button start and complete manual operation override.
3. Pointer on pilot-control valve shall indicate cycle of operation.
4. Means of manual operation of pilot-control valve if power fails.
5. Main Operating Valves: Industrial, automatic, multiport, diaphragm type with the following features:

    a. Slow opening and closing, nonslam operation.
    b. Diaphragm guiding on full perimeter from fully open to fully closed.
    c. Isolated dissimilar metals within valve.
    d. Self-adjusting, internal, automatic brine injector that draws brine and rinses at constant rate independent of pressure.
    e. Float-operated brine valve to automatically measure the correct amount of brine to the softener, and refill with fresh water.
    f. Sampling cocks for soft water.

6. Flow Control: Automatic control of backwash and flush rates over variations in operating pressures that do not require field adjustments. Equip mineral tanks with automatic-reset-head water meter that electrically activates cycle controller to initiate regeneration at preset total in **gallons (liters)** and that automatically resets after regeneration to preset total in **gallons (liters)** for next service run. Include alternator to regenerate one mineral tank with the other in service.

H. Brine Tank: Combination measuring and wet-salt storing system.

1. Tank and Cover Material: Fiberglass a minimum of **3/16 inch (4.8 mm)** thick; or molded polyethylene a minimum of **3/8 inch (9.5 mm)** thick.
2. Brine Valve: Float operated and plastic fitted for automatic control of brine withdrawn and freshwater refill.
3. Size: Large enough for at least four regenerations at full salting.

I. Factory-Installed Accessories:

1. Piping, valves, tubing, and drains.
2. Sampling cocks.
3. Main-operating-valve position indicators.
4. Water meters.

J. Water Test Kit: Include in wall-mounted enclosure for water softener.

K. Capacities and Characteristics:

1. Continuous Service Flow Rate: <**Insert gpm (L/s)**> at **15-psig (104-kPa)** pressure loss.
2. Peak Service Flow Rate: <**Insert gpm (L/s)**> at **25-psig (173-kPa)** pressure loss.
3. Water Consumption: <**Insert gal./day (cu. m/day)**>.
4. Water Demand: <**Insert number**> hours/day.
5. Electrical Characteristics:

    a. Volts: <**Insert value**>.
    b. Phase: <**Insert value**>.
    c. Hertz: <**Insert value**>.
    d. Full-Load Amperes: <**Insert value**>.
    e. Minimum Circuit Ampacity: <**Insert value**>.
    f. Maximum Overcurrent Protection: <**Insert amperage**>.
    g. Interrupting Capacity: <**Insert amperage**>.

2.12 RO EQUIPMENT FOR HVAC MAKEUP WATER

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**3M**]
2. [**CSI Water Treatment Systems**]
3. [**Culligan International Company**]
4. [**Diamond Water Conditioning; a Griesbach company**]
5. [**Ecodyne Limited**]
6. [**Marlo Incorporated**]
7. [**Pentair, Inc.**]
8. [**Water & Power Technologies Incorporated**]
9. [**Water King**]
10. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**3M**]
2. [**CSI Water Treatment Systems**]
3. [**Culligan International Company**]
4. [**Diamond Water Conditioning; a Griesbach company**]
5. [**Ecodyne Limited**]
6. [**Marlo Incorporated**]
7. [**Pentair, Inc.**]
8. [**Water & Power Technologies Incorporated**]
9. [**Water King**]
10. <**Insert manufacturer's name**>

C. Description: Factory fabricated and tested with RO membrane elements in housings, high-pressure pumps and motors, controls, valves, and prefilter; mounted on skid.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. Fabricate supports and attachments to tanks with reinforcement strong enough to resist tank movement during seismic event when tank supports are anchored to building structure as recommended in writing by manufacturer.

F. Skid Assembly: Welded-steel frame coated with epoxy protective finish.

G. RO Membrane and Housing:

1. Element: Thin-film composite with U-cup brine seal, with minimum 98 percent salt rejection based on 2000-ppm water supplied at **225 psig (1551 kPa)** and **77 deg F (25 deg C)**.
2. Housing: ASTM A666, Type 304 stainless steel, with PVC end caps held in place with stainless steel straps.

H. High-Pressure Pumps and Motors:

1. Pump:

a. Vertical, multistage, centrifugal pump, operating at 3500 rpm, with ASTM A666, Type 304 stainless steel casing, shaft, impellers, and inlet and discharge casting.
b. Bearings shall be tungsten carbide and ceramic.
c. Cast-iron frame and flanged suction and discharge connections.
d. Motor: NEMA-standard, C-faced, totally enclosed, fan-cooled motor supported on the pump-bearing frame. General requirements for motors are specified in Section 230500 "Common Work Results for HVAC."

I. Controls:

1. Microprocessor-based controller with digital display.
2. Interlock for remote start/stop control.
3. Membrane flush sequence when pumps shut down.
4. Run time indicator.
5. Low-pressure safety cutoff.
6. Panel-mounted gages as follows:

a. Product and concentrate.
b. Inlet, cartridge filter outlet, RO feed, RO concentrate, and RO product pressures.
c. Product conductivity monitor.

J. Valves:

1. Stainless steel pump, concentrate, and recycle throttling valves rated for minimum **300 psig (2068 kPa)**.
2. Automatic inlet shutoff valve, diaphragm type; solenoid actuated, normally closed, and constructed of glass-reinforced noryl thermoplastic.
3. PVC valves with EPDM seats and seals for isolation at inlet, and check and sample valves at product and concentrate. Install sample valves at cartridge filter outlet, concentrate, and product outlet.

K. Prefilter:

1. Housing: Polypropylene with built-in relief or vent valve.
2. Element: Spun-wound polypropylene.

L. Inlet Water-Tempering Valve: Thermostatic water-tempering valve to maintain [**77 deg F (25 deg C)**]<**Insert value**> inlet water temperature to RO unit.

M. Activated Carbon Filter:

1. Media Tank: Fiberglass-reinforced polyester rated for minimum **150 psig (1035 kPa)** with internal backwash distributor and filtered water collector.
2. Media: 12-by-40-mesh, bituminous coal-based activated carbon.
3. Backwash Valve: Piston-operated control valve with drain-line, flow-control orifice.
4. Backwash Control: Seven-day time clock.

N. Atmospheric Storage Tank:

1. Tank: Polyethylene single piece with closed top and flat bottom with manway in top, 0.2-micron filter vent, inlet, discharge, and drain piping connections, and bulkhead fittings for level controls.
2. Control: Level switches start and stop RO unit. Low-level limit shall stop repressurization pumps and signal an alarm.

O. Repressurization Pumps:

1. Pumps: Two close-coupled, single-stage centrifugal pumps with mechanical seals. Wetted components are made of ASTM A666, Type 316 stainless steel.
2. Controls: NEMA 250, Type 4X pump control panel constructed of fiberglass to control pumps, one operating and one standby, with automatic alternator and fail-over control.
3. Motor: Open, drip-proof motor supported on the pump-bearing frame. General requirements for motors are specified in Section 230500 "Common Work Results for HVAC."

    a. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

P. Water Test Kit: Include in wall-mounting cabinet for RO unit.

Q. Capacities and Characteristics:

1. RO Product Flow Rate: <**Insert gpm (L/s)**>.
2. Total Water-Flow Rate: <**Insert gpm (L/s)**>.
3. Daily Water Consumption: <**Insert gal./day (cu. m/day)**>.
4. Water Demand: <**Insert number**> hours/day.
5. Storage Tank Size: <**Insert gal. (L)**>.
6. RO Inlet Operating Temperature: [**77 deg F (25 deg C)**]<**Insert value**>.
7. High-Pressure Pump:

    a. Discharge Pressure: <**Insert psig (kPa)**>.
    b. Flow Rate: <**Insert gpm (L/s)**>.
    c. Horsepower: <**Insert value**>.
    d. Motor Speed: [**3500**]<**Insert number**> rpm.

8. Repressure Pumps:

    a. Discharge Pressure: <**Insert psig (kPa)**>.
    b. Flow Rate: <**Insert gpm (L/s)**>.
    c. Horsepower: <**Insert value**>.
    d. Motor Speed: [**3500**]<**Insert number**> rpm.

9. Prefilter Design (at Total Water-Flow Rate):

    a. Filter Efficiency: [**98**]<**Insert number**> percent.
    b. Particle Size: [**5**]<**Insert number**> microns and larger.
    c. Clean Pressure Loss: [**2 psig (14 kPa)**]<**Insert value**>.

d. Replacement Pressure Loss: [6 psig (41 kPa)]<**Insert value**>.

10. Electrical Characteristics (Single-Point Connection):

a. Volts: <**Insert value**>.
b. Phase: <**Insert value**>.
c. Hertz: <**Insert value**>.
d. Full-Load Amperes: <**Insert value**>.
e. Minimum Circuit Ampacity: <**Insert value**>.
f. Maximum Overcurrent Protection: <**Insert amperage**>.
g. Interrupting Capacity: <**Insert amperage**>.

2.13 FILTRATION EQUIPMENT

A. Multimedia Filters:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Diamond Water Conditioning; a Griesbach company**]
b. [**Everfilt**]
c. [**LAKOS Filtration Solutions**]
d. [**Miami Filter, Inc.**]
e. [**PEP Filters, Inc.**]
f. [**Puroflux Corporation**]
g. [**Sonitec-Vortisand Inc.**]
h. [**United Industries, Inc; Tower-flo Water Systems**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Diamond Water Conditioning; a Griesbach company**]
b. [**Everfilt**]
c. [**LAKOS Filtration Solutions**]
d. [**Miami Filter, Inc.**]
e. [**PEP Filters, Inc.**]
f. [**Puroflux Corporation**]
g. [**Sonitec-Vortisand Inc.**]
h. [**United Industries, Inc; Tower-flo Water Systems**]
i. <**Insert manufacturer's name**>

3. Description: Factory-fabricated and -tested, simplex, multimedia filter system, consisting of filter tank, media, strainer, circulating pump, piping, and controls for removing particles from water.

a. Filter Tank: Corrosion resistant with distribution system and media.

4. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

a. Fabricate and label steel filter tanks to comply with ASME Boiler and Pressure Vessel

Code: Section VIII, Division 1.

b. Fabricate and label FRP filter tanks to comply with ASME Boiler and Pressure Vessel Code: Section X, if indicated.

c. Pipe Connections NPS 2 (DN 50) and Smaller: Threaded in accordance with ASME B1.20.1.

d. Steel Tank Pipe Connections NPS 2-1/2 (DN 65) and Larger: Steel, Class 150 flanges in accordance with ASME B16.5 or grooved in accordance with AWWA C606.

e. FRP Tank Pipe Connections NPS 2-1/2 (DN 65) and Larger: Type A, integral; [**Designation E, 125-psig (0.862-MPa)**][**or**][**Designation F, 150-psig (1.034-MPa)**] pressure category flanges of grade same as tank material, in accordance with ASTM D5421.

f. Motorized Valves: Flanged or grooved-end, ductile-iron butterfly type with [**EPDM**]<**Insert material**> valve seat and stem seal; with ASTM B148 aluminum bronze disc.

g. Strainer: Basket type mounted on pump suction.

h. Piping:

1) ASTM A53/A53M; Type S, F, or E; Grade B; Schedule 40 black steel, with flanged, grooved, or threaded joints and malleable, steel welding or ductile-iron fittings.
2) **ASTM B88, Type L (ASTM B88M, Type B)** copper water tube, copper-alloy solder-joint fittings, and brazed, flanged, or grooved joints.

i. Safety Valves: Automatic pressure relief.

j. Circulating Pump: Overhung impeller, close coupled, single stage, end suction, centrifugal. Comply with UL 778 and with HI 1.1-1.2 and HI 1.3.

1) Casing: Radially split, cast iron.
2) Pressure Rating: [**125 psig (860 kPa)**][**150 psig (1035 kPa)**] minimum.
3) Impeller: ASTM B584 cast bronze; statically and dynamically balanced, closed, and keyed to shaft.
4) Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve.
5) Seal: Mechanical.
6) Motor: Open, dripproof motor supported on the pump-bearing frame. General requirements for motors are specified in Section 230500 "Common Work Results for HVAC."

k. Controls: Automatic control of circulating pump and tank backwash; factory wired for single electrical connection.

1) Panel: NEMA 250, [**Type 4**]<**Insert type**> enclosure with time clock and pressure gages.
2) Pump: Automatic and manual switching; manual switch position bypasses safeties and controls.
3) Backwash: Automatic; with time clock and differential pressure switch.
4) Backwash Valve: Tank mounted with valves interlocked to single actuator.

l. Support: Skid mounting.[**Fabricate supports, base, and attachment to tank with reinforcement strong enough to resist filter movement during a seismic event, when filter base is anchored to building structure.**]

5. Capacities and Characteristics:

a. Filter Design:

1) Water Flow: <**Insert gpm (L/s)**>.
2) Clean Pressure Loss: [**5 psig (34.5 kPa)**]<**Insert value**>.
3) Maximum Media-Flow Rate: [**15 gpm/sq. ft. (10.2 L/s per sq. m)**]<**Insert value**>.

4) Filtration Efficiency: [**98**]<**Insert number**> percent.
5) Particle-Specific Gravity: [**1.8**]<**Insert number**>.
6) Particle Size: [**5**][**10**][**20**][**45**]<**Insert number**> microns.

b. Filter Tank: With internal distribution piping.

1) Pressure Rating: <**Insert psig (kPa)**>.
2) Diameter: <**Insert inches (mm)**>.
3) Inlet and Outlet Size: <**Insert NPS (DN)**>.
4) Blowdown Piping Outlet Size: <**Insert NPS (DN)**>.

c. Filter Media: <**Insert material**>.
d. Start Backwash Pressure Loss: [**13 psig (90 kPa)**]<**Insert value**>.
e. Backwash Period: [**10**]<**Insert number**> minutes.
f. Circulating Pump:

1) Capacity: <**Insert gpm (L/s)**>.
2) Total Dynamic Head: <**Insert feet (kPa)**>.
3) Motor Speed: <**Insert number**> rpm.
4) Inlet Size: <**Insert NPS (DN)**>.
5) Outlet Size: <**Insert NPS (DN)**>.

g. Pump Motor Size and Electrical Characteristics:

1) Horsepower: <**Insert value**>.
2) Volts: [**120**][**208**][**240**][**277**][**480**]<**Insert number**> V.
3) Phase: [**Single**][**Three**].
4) Hertz: [**60**]<**Insert number**> Hz.

h. Unit Electrical Characteristics:

1) Full-Load Amperes: <**Insert value**>.
2) Minimum Circuit Ampacity: <**Insert value**>.
3) Maximum Overcurrent Protection: <**Insert amperage**>.
4) Interrupting Capacity: <**Insert amperage**>.

B. Self-Cleaning Strainers:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Everfilt**]
b. [**Hayward Flow Control; Hayward Industries, Inc.**]
c. [**Islip Flow Controls Inc.**]
d. [**Orival, Inc.**]
e. [**Sure Flow Equipment Inc**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Everfilt**]

b. [**Hayward Flow Control; Hayward Industries, Inc.**]
c. [**Islip Flow Controls Inc.**]
d. [**Orival, Inc.**]
e. [**Sure Flow Equipment Inc**]
f. <**Insert manufacturer's name**>

3. Description: Factory-fabricated and -tested, ASTM A126, Class B, cast-iron or steel, self-cleaning strainer system of tank, strainer, backwash arm or cleaning spiral, drive and motor, piping, and controls for removing particles from water.

   a. Fabricate and label ASTM A126, Class B, cast-iron or steel strainer tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
   b. Pipe Connections:

      1) NPS 2 (DN 50) and Smaller: Threaded in accordance with ASME B1.20.1.
      2) NPS 2-1/2 (DN 65) and Larger: Steel, Class 150 flanges in accordance with ASME B16.5 or grooved in accordance with AWWA C606.

4. Motorized Valves: Flanged or grooved-end, ductile-iron angle type with [**EPDM**]<**Insert material**> valve seat and stem seal; with ASTM B148 aluminum bronze disc.
5. Strainer: ASTM A666, Type 316 stainless steel.
6. Piping: ASTM A53/A53M; Type S, F, or E; Grade B; Schedule 40 black steel, with flanged, grooved, or threaded joints and malleable, steel welding or ductile-iron fittings.
7. Safety Valves: Automatic pressure relief.
8. Backwash Arm Drive:

   a. Drive Casing: Cast iron.
   b. Worm Gears: Immersed in oil.
   c. Motor: Open, dripproof motor supported on the strainer-bearing frame. General requirements for motors are specified in Section 230500 "Common Work Results for HVAC."

9. Controls: Automatic control of backwash; factory wired for single electrical connection.

   a. Panel: NEMA 250, [**Type 4**]<**Insert type**> enclosure with time clock and pressure gages.
   b. Backwash Arm Drive: Automatic and manual switching; manual switch position bypasses safeties and controls.
   c. Backwash: Automatic; with time clock and differential pressure switch.
   d. Backwash Valve: Electric actuator.

10. Support: Skid mounting.[**Fabricate supports, base, and attachment to tank with reinforcement strong enough to resist strainer movement during a seismic event, when strainer base is anchored to building structure.**]
11. Capacities and Characteristics:

    a. Strainer Design:

       1) Water Flow: <**Insert gpm (L/s)**>.
       2) Clean Pressure Loss: [**5 psig (34.5 kPa)**]<**Insert value**>.
       3) Strainer Mesh: [**40**][**60**][**80**]<**Insert number**>.

    b. Strainer Tank: With internal distribution piping.

       1) Material: [**Cast iron**][**Steel**]<**Insert material**>.
       2) Pressure Rating: [**150 psig (1034 kPa)**]<**Insert value**>.
       3) Inlet and Outlet Size: <**Insert NPS (DN)**>.

4) Backwash Piping Outlet Size: <**Insert NPS (DN)**>.

c. Start Backwash: [**10 psig (69 kPa)**]<**Insert value**>.
d. Backwash Period: [**5**]<**Insert number**> minutes.
e. Drive Motor Size and Electrical Characteristics:

1) Horsepower: <**Insert value**>.
2) Volts: [**120**][**208**][**240**][**277**][**480**]<**Insert number**> V.
3) Phase: [**Single**][**Three**].
4) Hertz: [**60**]<**Insert number**> Hz.

f. Unit Electrical Characteristics:

1) Full-Load Amperes: <**Insert value**>.
2) Minimum Circuit Ampacity: <**Insert value**>.
3) Maximum Overcurrent Protection: <**Insert amperage**>.
4) Interrupting Capacity: <**Insert amperage**>.

C. Bag- or Cartridge-Type Filters:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Eden Equipment Company**]
b. [**Filtration Systems; Mechanical Mfg. Corporation**]
c. [**Hayward Flow Control; Hayward Industries, Inc.**]
d. [**Parker Hannifin Corp.; Process Filtration Div**]
e. [**Pentair, Inc.**]
f. [**PEP Filters, Inc.**]
g. [**Rosedale Products, Inc.**]
h. [**Shelco Filters**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Eden Equipment Company**]
b. [**Filtration Systems; Mechanical Mfg. Corporation**]
c. [**Hayward Flow Control; Hayward Industries, Inc.**]
d. [**Parker Hannifin Corp.; Process Filtration Div**]
e. [**Pentair, Inc.**]
f. [**PEP Filters, Inc.**]
g. [**Rosedale Products, Inc.**]
h. [**Shelco Filters**]
i. <**Insert manufacturer's name**>

3. Description: [**Floor-mounted housing**][**Housing**] with filter [**bags**][**cartridges**] for removing particles from water.

a. Housing: Corrosion resistant; designed to separate inlet from outlet and to direct inlet through [**bag**][**cartridge**]-type water filter; with [**bag support and**]base, feet, or skirt.

1) Pipe Connections NPS 2 (DN 50) and Smaller: Threaded in accordance with ASME B1.20.1.
2) Steel Housing Pipe Connections NPS 2-1/2 (DN 65) and Larger: Steel, Class 150 flanges in accordance with ASME B16.5 or grooved in accordance with AWWA C606.
3) Plastic Housing Pipe Connections NPS 2-1/2 (DN 65) and Larger: **150-psig (1035-kPa)** plastic flanges.

b. Bag or Cartridge, Replaceable: Of shape to fit housing.

4. Capacities and Characteristics:

a. Filter Design:

1) Water-Flow Rate: <**Insert gpm (L/s)**>.
2) Filtration Efficiency: [**98**]<**Insert number**> percent.
3) Particle Size: [**10**][**20**]<**Insert number**> microns and larger.
4) Clean Pressure Loss: [**2 psig (14 kPa)**]<**Insert value**>.
5) Pressure Loss at Replacement: [**6 psig (41 kPa)**]<**Insert value**>.

b. Housing:

1) Material: [**Carbon steel**][**Plastic**].
2) Pressure Rating: <**Insert psig (kPa)**>.
3) Seal Material: [**Nitrile rubber**]<**Insert material**>.
4) Diameter: <**Insert inches (mm)**>.
5) Height or Length: <**Insert inches (mm)**>.
6) Inlet and Outlet Size: <**Insert NPS (DN)**>.
7) Drain Size: [**Not applicable**]<**Insert NPS (DN)**>.
8) Bag Support Basket Material: [**Stainless steel**]<**Insert material**>.

c. Bag or Cartridge:

1) Number Required: <**Insert number**>.
2) Nominal Diameter: <**Insert inches (mm)**>.
3) Nominal Length: <**Insert inches (mm)**>.
4) Media Material: [**Cotton**][**Polyester**][**Polypropylene**]<**Insert material**>.

D. Centrifugal Separators:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Culligan International Company**]
b. [**Griswold Water Systems**]
c. [**LAKOS Filtration Solutions**]
d. [**PEP Filters, Inc.**]
e. [**Puroflux Corporation**]
f. [**Rosedale Products, Inc.**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Culligan International Company**]
b. [**Griswold Water Systems**]
c. [**LAKOS Filtration Solutions**]
d. [**PEP Filters, Inc.**]
e. [**Puroflux Corporation**]
f. [**Rosedale Products, Inc.**]
g. <**Insert manufacturer's name**>

3. Description: Simplex separator housing, with baffles and chambers for removing particles from water by centrifugal action and gravity.
4. Housing: With manufacturer's proprietary system of baffles and chambers.

    a. Construction: Fabricate and label steel separator housing to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
    b. Inlet: Designed with tangential entry to produce centrifugal flow of feedwater.
    c. Vortex Chamber: Designed for downward vortex flow and gravity separation of particles.
    d. Collection Chamber: Designed to hold separated particles.
    e. Outlet: Near top of unit.
    f. Purge: At bottom of collection chamber.
    g. Pipe Connections NPS 2 (DN 50) and Smaller: Threaded in accordance with ASME B1.20.1.
    h. Pipe Connections NPS 2-1/2 (DN 65) and Larger: Steel, Class 150 flanges in accordance with ASME B16.5 or grooved in accordance with AWWA C606. Provide stainless steel flanges if tank is stainless steel.

5. Motorized Purge Valve: Gate or plug pattern valve.

    a. Motorized Valves: Butterfly-type, flanged or grooved-end, ductile-iron body, with [**EPDM**]<**Insert material**> valve seat and stem seal; with ASTM B148 aluminum bronze disc.
    b. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

6. Strainer: Stainless steel basket type mounted on pump suction.
7. Piping, Steel: ASTM A53/A53M; Type S, F, or E; Grade B; Schedule 40 black steel, with flanged, grooved, or threaded joints and malleable, steel welding or ductile-iron fittings.
8. Piping, Copper: **ASTM B88, Type L (ASTM B88M, Type B)** copper water tube, copper-alloy solder-joint fittings, and brazed, flanged, or grooved joints.
9. Circulating Pump: Overhung impeller, close coupled, single stage, end suction, centrifugal. Comply with UL 778 and with HI 1.1-1.2 and HI 1.3.

    a. Casing: Radially split, cast iron.
    b. Pressure Rating: [**125 psig (860 kPa)**][**150 psig (1035 kPa)**] minimum.
    c. Impeller: ASTM B584 cast bronze; statically and dynamically balanced, closed, and keyed to shaft.
    d. Shaft and Shaft Sleeve: Steel shaft with copper-alloy shaft sleeve.
    e. Seal: Mechanical.
    f. Motor: Open, dripproof motor supported on the pump-bearing frame. General requirements for motors are specified in Section 230500 "Common Work Results for HVAC."
    g. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

10. Controls: Automatic control of circulating pump and separator purge; factory wired for single electrical connection.

a. Panel: NEMA 250, [**Type 4**]<**Insert type**> enclosure.
b. Pump: Automatic and manual switching; manual switch position bypasses safeties and controls.
c. Separator Purge: Automatic and manual.
d. TSS Controller Interlock: Open separator purge valve with bleed-off control.

11. Support: Skid mounting.[**Fabricate supports, base, and attachment to separator housing with reinforcement strong enough to resist separator movement during a seismic event, when separator base is anchored to building structure.**]
12. Capacities and Characteristics:

a. Separator Design:

1) Water-Flow Rate: <**Insert gpm (L/s)**>.
2) Pressure Loss: [**5 psig (34.5 kPa)**]<**Insert value**>.
3) Separator Efficiency: [**98**]<**Insert number**> percent.
4) Particle-Specific Gravity: [**1.8**]<**Insert number**>.
5) Particle Size: [**5**][**10**][**20**][**45**]<**Insert number**> microns.

b. Housing:

1) Material: [**Steel**][**Stainless steel**][**Plastic**][**Fiberglass**]<**Insert material**>.
2) Pressure Rating: <**Insert psig (kPa)**>.
3) Diameter: <**Insert inches (mm)**>.
4) Height: <**Insert inches (mm)**>.
5) Inlet and Outlet Size: <**Insert NPS (DN)**>.
6) Purge Size: <**Insert NPS (DN)**>.

c. Circulating Pump:

1) Capacity: <**Insert gpm (L/s)**>.
2) Total Dynamic Head: <**Insert feet (kPa)**>.
3) Motor Speed: <**Insert number**> rpm.
4) Inlet Size: <**Insert NPS (DN)**>.
5) Outlet Size: <**Insert NPS (DN)**>.

d. Pump Motor Size and Electrical Characteristics:

1) Horsepower: <**Insert value**>.
2) Volts: [**120**][**208**][**240**][**277**][**480**]<**Insert number**> V.
3) Phase: [**Single**][**Three**].
4) Hertz: [**60**]<**Insert number**> Hz.
5) Full-Load Amperes: <**Insert value**>.
6) Minimum Circuit Ampacity: <**Insert value**>.
7) Maximum Overcurrent Protection: <**Insert amperage**>.
8) Interrupting Capacity: <**Insert amperage**>.

PART 3 - EXECUTION

3.1 WATER ANALYSIS

A. Perform an analysis of supply water to determine quality of water available at Project site.

3.2 INSTALLATION

A. Install chemical-application equipment on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units, so controls and devices that require servicing are accessible. Anchor chemical tanks and floor-mounting accessories to substrate. Install all chemical application equipment within a spill-containment area without floor drains.

B. Install seismic restraints for equipment and floor-mounting accessories, and anchor to building structure. See Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.

C. Install water-testing equipment on wall near water-chemical-application equipment.

D. Install interconnecting control wiring for chemical-treatment controls and sensors.

E. Mount sensors and injectors in piping circuits.

F. Bypass Feeders: Install in closed hydronic systems, including[**hot-water heating,**][**chilled water,**][**dual-temperature water,**][**glycol heating,**][**and**][**glycol cooling**], and equip with the following:

1. Install bypass feeder in a bypass circuit around circulating pumps unless otherwise indicated on Drawings.
2. Install water meter in makeup-water supply.
3. Install test-coupon assembly in bypass circuit around circulating pumps unless otherwise indicated on Drawings.
4. Install a gate or full-port ball isolation valves on inlet, outlet, and drain below feeder inlet.
5. Install a swing check on inlet after the isolation valve.

G. Install automatic fluid make-up equipment for glycol water system and include the following:

1. Chemical solution tanks.
2. Chemical solution injection pumps.
3. Water meter in makeup supply to system.
4. Pressure switch to operate injection pump as necessary to maintain glycol system pressure.

H. Install automatic chemical-feed equipment for steam boiler and steam condensate systems and include the following:

1. Install makeup-water softener.
2. Install water meter in makeup-water supply.
3. Install inhibitor injection pumps and solution tanks with injection-timer-sensing contacts in water meter.

    a. Pumps shall operate for timed interval when contacts close at water meter in makeup-water supply connection.

4. Install test equipment and furnish test-kit to Owner.
5. Install RO unit for makeup water.
6. Install TDS controller with sensor and bleed valves.

    a. Bleed valves to cycle, to maintain maximum TDS concentration.

7. Install TSS controller with sensor and bleed valves.

a. Bleed valves to cycle, to maintain maximum TSS concentration.

8. Install inhibitor injection timer with injection pumps and solution tanks.

a. Pumps shall operate for timed interval on contact closure at water meter in makeup-water supply connection. Injection pump shall discharge into main steam supply header.

I. Install automatic chemical-feed equipment for open [**condenser**][**fluid-cooler spray**] water and include the following:

1. Install water meter in makeup-water supply.
2. Install inhibitor injection pumps and solution tanks with injection-timer-sensing contacts in water meter.

a. Pumps shall operate for timed interval on contact closure at water meter in makeup-water supply connection. Injection pump shall discharge into boiler feedwater tank or feedwater supply connection at boiler.

3. Install test equipment, and provide test-kit to Owner. Install test-coupon assembly in bypass circuit around circulating pumps unless otherwise indicated on Drawings.
4. Install TDS controller with sensor and bleed valves.

a. Bleed valves to cycle, to maintain maximum TDS concentration.

5. Install TSS controller with sensor and bleed valves.

a. Bleed valves to cycle, to maintain maximum TSS concentration.

6. Install pH sensor and controller with injection pumps and solution tanks.

a. Injector pumps shall operate to maintain required pH.

7. Install biocide feeder alternating timer with two sets of injection pumps and solution tanks.

a. Injection pumps shall operate to feed biocide on an alternating basis.

8. Install ozone generator with diffusers in condenser-water piping.

a. Ozone generator shall operate continuously with condenser-water flow.

9. Install UV-irradiation lamps in condenser-water piping.

a. UV lights shall operate continuously with condenser-water flow.

3.3 INSTALLATION OF OZONE GENERATOR

A. Install ozone generator and equipment on concrete bases level and plumb. Maintain manufacturer's recommended clearances. Arrange units, so controls and devices that require servicing are accessible. Anchor mineral and brine tanks and floor-mounting accessories to substrate.

B. Install seismic restraints for equipment and floor-mounting accessories, and anchor to building structure. See Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.

C. Pipe ozone from ozone generator to condenser water with stainless steel pipe and fittings with welded

joints.

D. Install [**two**][**three**]-piece, stainless steel ball valve in ozone supply to condenser water.

E. Pipe cooling water to ozone generator and to air-gap drain fitting with stainless steel pipe and fittings with welded joints where enclosed in ozone-generator room.

F. Install [**two**][**three**]-piece, stainless steel ball valve in cooling water supply to ozone generator.

G. Mounting supports for ozone generator shall be ASTM A666, Type 316 stainless steel.

H. Mount breathing apparatus outside ozone-generator room.

I. Mount and install ozone detector, warning lights, and audible alarm inside ozone-generator room. Mount another set of warning lights and audible alarm just outside the main entrance to ozone-generator room.

3.4 INSTALLATION OF UV-IRRADIATION UNIT

A. Install UV-irradiation units on concrete bases level and plumb. Maintain manufacturer's recommended clearances. Arrange units, so controls and devices that require servicing are accessible. Anchor mineral and brine tanks and floor-mounting accessories to substrate.

B. Install seismic restraints for UV-irradiation units and floor-mounting accessories, and anchor to building structure. See Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.

3.5 INSTALLATION OF WATER SOFTENER

A. Install water softener equipment on concrete bases level and plumb. Maintain manufacturer's recommended clearances. Arrange units, so controls and devices that require servicing are accessible. Anchor mineral and brine tanks and floor-mounting accessories to substrate.

B. Install seismic restraints for tanks and floor-mounting accessories, and anchor to building structure. See Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.

C. Install brine lines and fittings furnished by equipment manufacturer but not factory installed.

D. Prepare mineral-tank distribution system and underbed for minerals, and place specified mineral into mineral tanks.

E. Install water-testing sets on wall adjacent to water softeners.

3.6 INSTALLATION OF RO UNIT

A. Install RO unit and storage tank on concrete bases level and plumb. Maintain manufacturer's recommended clearances. Arrange units, so controls and devices that require servicing are accessible. Anchor RO unit and storage tank with pumps to substrate.

B. Install seismic restraints for tanks and floor-mounting accessories, and anchor to building structure. See Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.

C. Install interconnecting piping and controls furnished by equipment manufacturer but not factory installed.

D. Install water-testing sets on wall adjacent to RO unit.

3.7 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to equipment, allow space for service and maintenance.

C. Make piping connections between HVAC water-treatment equipment and dissimilar-metal piping with dielectric fittings. Dielectric fittings are specified in Section 232113 "Hydronic Piping."

D. Install shutoff valves on HVAC water-treatment equipment inlet and outlet. Metal general-duty valves are specified in Section 230523 "General-Duty Valves for HVAC Piping."

E. See Section 221119 "Domestic Water Piping Specialties" for backflow preventers required in makeup-water connections to potable-water systems.

3.8 ELECTRICAL CONNECTIONS

A. Confirm applicable electrical requirements in electrical Sections for connecting electrical equipment.

B. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.9 FIELD QUALITY CONTROL

A. Testing Agency:

1. Owner will engage a qualified testing agency to perform tests and inspections.
2. Engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections[**with the assistance of a factory-authorized service representative**].

D. Tests and Inspections:

1. Inspect field-assembled components and equipment installation, including piping and electrical connections.
2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.
3. Place HVAC water-treatment system into operation, and calibrate controls during the preliminary phase of HVAC system's startup procedures.
4. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.
5. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.

6. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
7. Cap and subject piping to static water pressure of **50 psig (345 kPa)** above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
8. Repair leaks and defects with new materials, and retest piping until no leaks exist.

E. Equipment will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

G. Sample boiler water at one-week intervals after boiler startup for a period of five weeks, and prepare test report, advising Owner of changes necessary to adhere to "Performance Requirements" Article for each required characteristic. Sample boiler water at [**four**][**six**][**eight**]<**Insert number**>-week intervals following the testing noted above to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section.

H. At [**four**][**six**][**eight**]<**Insert number**>-week intervals following Substantial Completion, perform separate water analyses on hydronic systems to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section. Submit written reports of water analysis, advising Owner of changes necessary to adhere to "Performance Requirements" Article.

I. Comply with ASTM D3370 and with the following standards:

1. Silica: ASTM D859.
2. Steam System: ASTM D1066.
3. Acidity and Alkalinity: ASTM D1067.
4. Iron: ASTM D1068.
5. Water Hardness: ASTM D1126.

3.10 MAINTENANCE SERVICE

A. Scope of Maintenance Service: Provide chemicals and service program to maintain water conditions required above, to inhibit corrosion, scale formation, and biological growth for [**cooling, chilled-water piping**][**heating, hot-water piping**][**heating, steam and condensate piping**][**steam and condensate system for humidifier and cooking appliance applications**][**condenser-water piping**] and equipment. Services and chemicals shall be provided for a period of one year from date of Substantial Completion and shall include the following:

1. Initial water analysis and HVAC water-treatment recommendations.
2. Startup assistance for Contractor to flush the systems, clean with detergents, and initially fill systems with required chemical treatment prior to operation.
3. Periodic field service and consultation.
4. Customer report charts and log sheets.
5. Laboratory technical analysis.
6. Analyses and reports of all chemical items concerning safety and compliance with government regulations.

3.11 DEMONSTRATION

A. [**Engage a factory-authorized service representative to train**][**Train**] Owner's maintenance personnel to adjust, operate, and maintain HVAC water-treatment systems and equipment.

B. Training: Provide a "how-to-use" self-contained breathing apparatus video that details exact operating procedures of equipment. When training is complete, turn over video to Owner for future use.

SECTION 46 82 83 00 - SEWAGE TREATMENT PLANT ELECTRICAL CONTROLS AND INSTRUMENTATION

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of sewage treatment plant electrical controls and instrumentation. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals
1. Product Data: For each type of product indicated.

1.2 PRODUCTS

A. Applicable Data
1. Flow diagrams, loop diagrams, and installation drawings of the existing instruments and sampling systems for which maintenance and repair is to be provided should be requested from the the Owner.

B. Instrumentation
1. All instrumentation shall be in accordance with the manufacturer's instructions.

1.3 EXECUTION

A. Scheduling and Coordination
1. Contractor shall determine that arrangements have been made to take the equipment out of service for the duration of the work.

B. General
1. Perform listed maintenance procedures and repairs on meter and sampling system in compliance with the manufacturer's recommendations.

C. Calibration
1. Calibrate meter over the meter's range and adjust to read correctly.

SECTION 46 86 29 00 - WATER TREATMENT PLANT ELECTRICAL CONTROLS AND INSTRUMENTATION

1.1 GENERAL

A. Description Of Work
1. This specification covers the furnishing and installation of water treatment plant electrical controls and instrumentation. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals
1. Product Data: For each type of product indicated.

1.2 PRODUCTS

A. General
1. Items not specified but required for the proper installation or repair of a specified item of work shall be provided. Items shall be of proper type, size, design, and characteristics for the use intended. Parts shall be factory-made.

B. Finishes
1. Items replacing existing items that are galvanized, plated, painted, or otherwise finished shall be finished with like finish in compliance with the manufacturer's standard practice.

C. Electrical Controls and Instrumentation Components
1. Components for replacement purposes shall be designed for same service as the existing.

1.3 EXECUTION

A. Coordination
1. Contractor shall determine that requirements for removal of the equipment from service, the bypassing of control valves, and installing of temporary replacements have been coordinated with the the Owner. Bypassing of control valves or putting a control instrument in the Remote-Hand-Control mode will be done by the plant operators.

B. Power Supplies
1. Units that may be a hazard during the performance of the work shall be locked out.

C. Testing
1. Check the operation of each instrument after it is returned to service. Adjust each instrument to operate properly over the design range.
