2) Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.

D. Laminated Wood Lighting Standard:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Bell Lumber and Pole Company**]
b. [**Hughes Brothers, Inc.**]
c. [**Laminated Wood Systems, Inc.**]
d. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
e. [**McFarland Cascade**]
f. [**Timber Technologies, LLC**]
g. [**TimberWood Products; J.H. Baxter & Co.**]
h. [**Valmont Industries, Inc.**]
i. <**Insert manufacturer's name**>

2. Source Limitations: [**Obtain lighting standards from single manufacturer or producer**][**For lighting standards, obtain each color, grade, finish, type, and variety of lighting standard from single source with resources to provide products of consistent quality in appearance and physical properties**].
3. Standard Features:

a. Comply with requirements in Article 410 of NFPA 70 for luminaire supports.
b. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
c. General Finish Requirements:

1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
2) Appearance of the Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

d. Species and Grades for Structural Laminated Timber: Complying with APA A190.1. Use [**Southern pine**][**Douglas fir**][**Alaska cedar**][**any species listed in APA 117**], engineered and fabricated to withstand indicated structural loads without exceeding allowable design working stresses in accordance with [**APA 117**][**AWPA/ANSI O5.2**].
e. Features include [**wood bracket**][**wood crossarm**][**lighting standard-top adaptor**]<**Insert items**> for mounting luminaire(s), metal lighting standard cap, and concealed raceway path connected to access handhole.
f. Mounting Provisions: [**Embedded**]<**Insert description of other mounting unless detailed on the Drawings**>.
g. Appearance Grade: Architectural appearance grade complying with AITC 110.
h. Preservative Treatment:

1) Exposure: Comply with [**AWPA U1, Use Category UC4A**][**AWPA U1, Use Category UC4B**][**AWPA U1, Use Category UC4C**].
2) Treatment after Dressing and End Cutting: Comply with AWPA M4 for surface cuts to a depth of more than **1/16 inch**.

i. Adhesive: Wet-use type complying with ASTM D2559.
j. End Sealer: Manufacturer's standard, transparent, colorless wood sealer that is effective in retarding the transmission of moisture at cross-grain cuts and is compatible with indicated finish.
k. Penetrating Sealer: Manufacturer's standard, transparent, penetrating wood sealer that is compatible with indicated finish.
l. Finish: [**Natural, unstained wood**][**Semitransparent stain applied after erection**][**Factory-applied semitransparent stain**], color as selected by Architect.

4. Other Available Features Required by the Project:

a. Fasteners: [**Stainless steel**][**Galvanized steel**]<**Insert finish or grade**>, size and type as determined by manufacturer. Corrosion-resistant items compatible with support components.

1) Materials: Compatible with lighting standards as well as to substrates to which lighting standards are fastened and may not cause galvanic action at contact points.
2) Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication unless otherwise indicated.

E. Wood Lighting Standard:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**American Pole & Timber**]
b. [**Baldwin Pole & Piling Co., Inc.**]
c. [**Bell Lumber and Pole Company**]
d. [**Cavawood Architectural Products**]
e. [**Cobb Lumber Company**]

f. [**Cox Utility Products Division**]
g. [**Guelph Utility Pole Co., Ltd.; a Stella-Jones company**]
h. [**Koppers Performance Chemicals**]
i. [**Langdale Forest Products Company**]
j. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
k. [**McFarland Cascade**]
l. [**Stella-Jones**]
m. [**T.R. Miller Mill Co., Inc.**]
n. [**Texas Electric Cooperatives, Inc.**]
o. [**Thomasson Company**]
p. [**TimberWood Products; J.H. Baxter & Co.**]
q. [**United Wood Treating Company**]
r. [**Wood Preservers, Inc.**]
s. <**Insert manufacturer's name**>

2. Source Limitations: [**Obtain lighting standards from single manufacturer or producer**][**For lighting standards, obtain each color, grade, finish, type, and variety of lighting standard from single source with resources to provide products of consistent quality in appearance and physical properties**].
3. Standard Features:

a. Comply with requirements in Article 410 of NFPA 70 for luminaire supports.
b. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
c. General Finish Requirements:

1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
2) Appearance of the Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

d. [**Douglas fir**][**Southern yellow pine**], [**machine trimmed by turning,**] for wood species used; and bored, roofed, and grained before treatment.

1) Pole Brand: Brand the manufacturer's trademark and date of treatment, height and class of lighting standard, wood species, preservation code, and retention. Brand must be placed so that the bottom of the brand is minimum **10 ft** from lighting standard butt.
2) Mounting Provisions: Embedded.

e. Preservative Treatment: Treat in accordance with [**AWPA U1, Use Category UC4A**][**AWPA U1, Use Category UC4B**][**AWPA U1, Use Category UC4C**].
f. Luminaire Brackets: Comply with NEMA/ANSI C136.13.

4. Other Available Features Required by the Project:

a. Fasteners: [**Stainless steel**][**Galvanized steel**]<**Insert finish or grade**>, size and type as determined by manufacturer. Corrosion-resistant items compatible with support components.

1) Materials: Compatible with lighting standards as well as the substrates to which lighting standards are fastened and may not cause galvanic action at contact points.
2) Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after

fabrication unless otherwise indicated.

F. Prestressed Concrete Lighting Standard:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Baldwin Pole & Piling Co., Inc.**]
   b. [**Holophane; an Acuity Brands company**]
   c. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
   d. [**Lonestar Prestress Mfg., Inc.**]
   e. [**NOV Ameron**]
   f. [**Pre-Cast Specialties, Inc.**]
   g. [**Seminole Pole, Inc.**]
   h. [**StressCrete Group**]
   i. <**Insert manufacturer's name**>

2. Source Limitations: [**Obtain lighting standards from single manufacturer or producer**][**For lighting standards, obtain each color, grade, finish, type, and variety of lighting standard from single source with resources to provide products of consistent quality in appearance and physical properties**].
3. Standard Features:

   a. Comply with requirements in Article 410 of NFPA 70 for luminaire supports.
   b. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless steel fasteners and mounting bolts unless otherwise indicated.
   c. General Finish Requirements:

      1) Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
      2) Appearance of the Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

   d. Comply with ASTM C1089[**and manufactured by centrifugal spin-casting process**][**and manufactured by static-casting method**].

      1) Shape: [**Round, tapered**][**Round, straight**][**Square, tapered**][**Square, straight**].
      2) Mounting Provisions: [**Steel butt flange for bolted mounting to foundation or breakaway support**][**Embedded**].
      3) Finishing: Capped at top and plugged at bottom. Seat each reinforcing strand with epoxy adhesive.
      4) Grounding: Continuous copper ground wire cast into lighting standard. Terminate at top of lighting standard[**and attach to 24 inch lighting rod**].
      5) Raceway: Smooth, internal, and not less than **3 inch** in diameter.

   e. Concrete: Minimum 28-day compressive strength of [**7000 psi**]<**Insert value**>.
   f. Cured with wet steam and aged for a minimum of 15 days prior to installation.
   g. Reinforcement: [**Reinforcing bars complying with ASTM A615/A615M**][**Cold-drawn spiral wire complying with ASTM A1064/A1064M**][**Prestressing strand, 270 K, complying with ASTM A416/A416M**].
   h. Surface Treatment: Hard, nonporous, and resistant to water, frost, and road and soil chemicals; and must have a maximum water-absorption rate of 3 percent.

i. Finish Texture: [**Standard form**][**Polished exposed aggregate**][**Etched exposed aggregate**].

1) Exposed aggregate must be of <**Insert aggregate type selected from manufacturers' lists**> type.

j. Nameplate: Aluminum cast into lighting standard wall at approximately **5 ft** above ground line, listing name of manufacturer, the Project identifier, overall height, and approximate weight.

k. Pole Brackets: Comply with NEMA/ANSI C136.31.

4. Other Available Features Required by the Project:

a. Fasteners: [**Stainless steel**][**Galvanized steel**]<**Insert finish or grade**>, size and type as determined by manufacturer. Compatible with lighting standards as well as the substrates to which lighting standards are fastened and may not cause galvanic action at contact points.

2.3 LIGHTING STANDARD ACCESSORIES

A. Duplex Receptacle: Ground-fault circuit interrupter type, 120 V(ac), 20 A in a weatherproof assembly.

1. [**Surface mounted**][**Recessed**][**12 inch**]<**Insert dimensions**> above finished grade.

a. UL 50E, [**Type 3R**][**Type 4X**], nonmetallic polycarbonate plastic or reinforced fiberglass, enclosure with cover; color to match pole.

b. Lockable hasp and latch complying with OSHA lockout and tag-out requirements.

B. Minimum 1800 W transformer, protected by replaceable fuses, mounted behind access cover.

C. Base Covers: Manufacturers' standard metal units, finished same as pole, and arranged to cover pole's mounting bolts and nuts.

D. Transformer-Type Base: Same material and color as pole. Coordinate dimensions to suit pole's base flange and to accept [**ballast(s)**][**indicated accessories**]. Include removable flanged access cover secured with bolts or screws.

E. Decorative accessories, supplied by decorative pole manufacturer, include the following:

1. Banner Arms: <**Insert material**>.
2. Flag Holders: <**Insert material**>.
3. Ladder Rests: <**Insert material**>.

F. Lowering System for Luminaires:

1. System Description: Capable of lowering luminaire [**assembly**]to a service position within **36 inch** of finished grade in winds up to **30 mile/h**. Provide manual plug connection to electrical power accessible in lowered position. Assembled system of pole, luminaire, and lowering device must be capable of loads specified in "Performance Requirements" Article.
2. Compatibility of Material: Materials for attachment and connection of luminaire-mounting assembly, lowering device, lowering cable, and portable winch must be compatible to avoid corrosion and electrolysis.
3. Structural and Mechanical Design Safety Factor: 5.0, minimum, for static and dynamic loads of

load-bearing components, including cable.

4. Luminaire-Mounting and Disconnect Arrangement: Multiple [**ring**][**carriage**]-mounted luminaires, arranged for lowering and rising as a group.

    a. Electrical cable for normal operating power to luminaires must manually disconnect inside pole base, using weatherproof multi-pin connector, and must be arranged to move within the pole during lowering and rising of luminaire assembly.
    b. Electrical cable for normal operating power to luminaires must automatically disconnect at weatherproof multi-pin connector within the pole-top lowering head at the beginning of the lowering cycle and reconnect when luminaire or luminaire assembly is raised to the operating position.

5. Lowering Device: Weatherproof, cast-aluminum housing, and multiple mechanical latches. Moving parts of latching assembly must be located in the portion of the unit that is lowered to servicing position. Positive latching in the operating position must be indicated to the operator at the base of the pole by a clear visual signal or by other means acceptable to Owner or authorities having jurisdiction.
6. Lowering Cable: [**Zinc-electroplated-steel**][**or**][**stainless steel**] aircraft cable.
7. Portable Winch: [**Manual**][**120 V electric**] type. [**One**]<**Insert number**> required.

    a. Winch Power Connection: Cord and plug.
    b. Winch Raise-Lower Control: Remote-control station with [**15 ft**]<**Insert dimension**> of cable.

G. Mounting Hardware:

1. Anchor Bolts: Manufactured [**to ASTM F1554, Grade 55,**]with a minimum yield strength of **55,000 psi**.

    a. Galvanizing: [**Hot-dip galvanized in accordance with ASTM A153/A153M, Class C**][**Mechanically deposited galvanization in accordance with ASTM B695, Class 50**].
    b. [**Bent**][**Headed**] rods <**Insert dimension**> in diameter by <**Insert dimension**> in length.
    c. Threading: [**Uniform National Coarse**][**Uniform National 8**], Class 2A.

2. Nuts: ASTM A563/A563M, Grade A, Heavy-Hex.

    a. Galvanizing: [**Hot-dip galvanized in accordance with ASTM A153/A153M, Class C**][**Mechanically deposited galvanization in accordance with ASTM B695, Class 50**].
    b. [**Two**][**Four**]<**Insert number**> nuts provided per anchor bolt[**, shipped with nuts preassembled to the anchor bolts**].

3. Washers: ASTM F436/F436M, Type 1.

    a. Galvanizing: [**Hot-dip galvanized in accordance with ASTM A153/A153M, Class C**][**Mechanically deposited galvanization in accordance with ASTM B695, Class 50**].
    b. [**One**][**Two**]<**Insert number**> washer(s) provided per anchor bolt.

2.4 UTILITY POLES

A. Wood Utility Pole:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Ace Pole Company**]
b. [**Baxter, J. H. & Co**]
c. [**Bell Lumber and Pole Company**]
d. [**Brown Wood Preserving Co., Inc.**]
e. [**Dayton Superior Corporation**]
f. [**Koppers Performance Chemicals**]
g. [**McFarland Cascade**]
h. <**Insert manufacturer's name**>

2. Source Limitations: [**Obtain poles from single manufacturer or producer**][**For poles, obtain each color, grade, finish, type, and variety of pole from single source with resources to provide products of consistent quality in appearance and physical properties**].
3. Standard Features:

a. Comply with ATIS O5.1 and RUS Bulletin 1728F-700, for wood poles pressure treated with [**creosote**][**pentachlorophenol**][**ammoniacal copper arsenate**][**ammoniacal copper zinc arsenate**][**and**][**chromated copper arsenate**].
b. Wood Species: [**Douglas fir**][**Lodgepole pine**][**Western larch**][**Southern yellow pine**]<**Insert wood species selected from ATIS O5.1**>.
c. Pole Marking:

1) Manufacturer's Mark: Comply with ATIS O5.1; locate **10 ft** from the pole butt for poles **50 ft** long or less.
2) Pole Number: Machine-embossed aluminum, alphanumeric characters not less than **2-1/2 inch** high, with aluminum nails.

d. Factory Operations: Machine trim poles by turning smooth, full length. Roof, gain, and bore poles before pressure treatment.

B. Concrete Utility Pole:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Accord Industries**]
b. [**Bayshore Concrete Products Corporation**]
c. [**CPI Concrete Products**]
d. [**StressCrete Group**]
e. [**Valmont Industries, Inc.**]
f. <**Insert manufacturer's name**>

2. Source Limitations: [**Obtain poles from single manufacturer or producer**][**For poles, obtain each color, grade, finish, type, and variety of pole from single source with resources to provide products of consistent quality in appearance and physical properties**].
3. Standard Features:

a. Spun-cast prestressed concrete, complying with requirements of ASTM C1089.

1) Comply with requirements of RUS Bulletin 1724E-216.

b. Design: Base design on calculation of strength required by IEEE C2 or indicated on the Drawings, whichever is greater. Design must be suitable for installation at a location where annual temperature range is between [**minus 4 deg F and plus 100 deg F**]<**Insert design**

temperature range at site location>. Include pole design for embedded attachments matching fittings, brackets, and other items installed in the field.

c. Shaft: Hollow, for poles at overhead-to-underground connections. Provide metric designator 91 (trade size 3-1/2) minimum cable raceway capacity, with [**conduit elbow**][**cable entry port**] at base.

d. Water Absorption: Not more than 3 percent.

e. Surface: Smooth, hard, nonporous, and resistant to [**soil acids**][**road salts**][**frost and freezing damage**].

f. Pole Marking:

1) Manufacturer's Mark: Comply with ATIS O5.1; locate **10 ft** from the pole butt for poles **50 ft** long or less.

2) Pole Number: Machine-embossed aluminum, alphanumeric characters not less than **2-1/2 inch** high.

2.5 UTILITY POLE ACCESSORIES

A. Crossarms:

1. Description: [**Solid-wood distribution type, complying with RUS Bulletin 1728H-701 for specified construction grade**][**Galvanized, steel angles**], and complying with IEEE C2 for required climbing space and wire clearances.
2. Braces: Galvanized, flat, ferrous-metal units; **1/4 inch** thick by **1-1/4 inch** wide, minimum, with length to suit crossarm dimensions.

B. Guys and Anchors:

1. Guy Strand Assemblies: Cable and attachment assemblies must have uniform minimum breaking strength of the cable.

a. Cable: Seven strands. [**Zinc-coated steel, complying with ASTM A475**][**Aluminum-clad steel, complying with ASTM B416**][**Copper-clad steel, complying with ASTM B228**]. Breaking strength must be not less than [**10,000 lb**]<**Insert value**>.

b. Cable Termination:

1) Thimble eye.

2) Hooks and guy strain plates, complying with IEEE C135.1.

3) Preformed galvanized-steel guy grips, matching material, galvanizing, and strength of the guy strand assembly.

2. Anchor and Anchor-Rod Assemblies: Hot-dip galvanized steel.

a. Power-installed, screw-type anchors.

1) **15 inch** screw; with rod **8 ft** long by **1-1/2 inch** in diameter. Rated at **10,000 lb** when installed.

2) Guy anchors must have strength and holding area as required for anchor load and soil conditions at location of that anchor.

b. <**Insert anchor size or type**>.

3. Strain Insulators: Epoxy-bonded fiberglass of length to meet clearance requirements specified in "Installation of Guys and Anchors" Subparagraph in "Installation of Utility Poles" Article.
4. Guy Markers: Round, of vinyl or PVC material, [**white**][**yellow**] color, **8 ft** long. Shatter resistant at temperatures below **0 deg F**.

PART 3 - EXECUTION

3.1 INSTALLATION OF FOUNDATIONS FOR POLES AND LIGHTING STANDARDS

A. Concrete Pole Foundations: Cast in place, with anchor bolts to match pole-base flange. Structural steel complying with ASTM A36/A36M and hot-dip galvanized in accordance with ASTM A123/A123M; and with top-plate and mounting bolts to match pole-base flange and strength required to support pole, luminaire, and accessories. Concrete, reinforcement, and formwork are specified in Section 033000 "Cast-in-Place Concrete."

B. Precast Foundations: Factory fabricated, with structural steel complying with ASTM A36/A36M and hot-dip galvanized in accordance with ASTM A123/A123M; and with top-plate and mounting bolts to match pole-base flange and strength required to support pole, luminaire, and accessories. Concrete, reinforcement, and formwork are specified in Section 033000 "Cast-in-Place Concrete."

C. Power-Installed Screw Foundations: Factory fabricated by pole manufacturer, with structural steel complying with ASTM A36/A36M and hot-dip galvanized in accordance with ASTM A123/A123M; and with top-plate and mounting bolts to match pole-base flange and strength required to support pole, luminaire, and accessories.

1. Baseplate: Stamped with manufacturer's name, date of production, and cable entry.

D. Direct-Buried Foundations: Install to depth indicated on the Drawings, but not less than [**one-sixth of pole height**][**as indicated**]. Add backfill [**in 6 to 9 inch layers, tamping each layer before adding the next**][**as indicated on the Drawings**]<**Insert requirement**>. To ensure a plumb installation, continuously check pole orientation with plumb bob while tamping.

E. Direct-Buried Poles with Concrete Backfill: Set poles in augered holes to depth below finished grade indicated on the Drawings, but not less than [**one-sixth of pole height**][**as indicated**]. To ensure a plumb installation, continuously check pole orientation with plumb bob while tamping.

1. Make holes **6 inch** in diameter larger than pole diameter.
2. Fill augered hole around pole with air-entrained concrete having a minimum compressive strength of **3000 psi** at 28 days and finish in a dome above finished grade.
3. Use a short piece of **1/2 inch** diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.
4. Cure concrete a minimum of 72 hours before performing work on pole.

F. Anchor Bolts: Install plumb using manufacturer-supplied [**steel**][**plywood**] template, uniformly spaced.

3.2 INSTALLATION OF LIGHTING STANDARDS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturers' published instructions, comply with the following:

1. Electrical Construction: NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Hot Work: NFPA 51B.
4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
5. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Alignment: [**Align foundations and lighting standards for optimum directional alignment of luminaires and their mounting provisions on lighting standards**][**Align lighting standards as indicated**].
2. Clearances: Maintain the following minimum horizontal distances of lighting standards from surface and underground features unless otherwise indicated on the Drawings:

    a. Fire Hydrants and Water Piping: [**60 inch**]<**Insert dimension**>.
    b. Water, Gas, Electric, Communications, and Sewer Lines: [**10 ft**]<**Insert dimension**>.
    c. Trees: **15 ft** from tree trunk.
    d. <**Insert features and clearance dimensions**>.

3. Concrete Lighting Standard Foundations: Set anchor bolts in accordance with anchor-bolt templates furnished by manufacturer. Concrete materials, installation, and finishing requirements are specified in Section 033000 "Cast-in-Place Concrete."
4. Foundation-Mounted Lighting Standards: Mount lighting standards with leveling nuts and tighten top nuts to torque level in accordance with manufacturer's published instructions.

    a. Use anchor bolts and nuts selected to resist seismic forces specified for the application and approved by manufacturer.
    b. Grout void between lighting standard base and foundation. Use nonshrink or expanding concrete grout firmly packed to fill space.
    c. Install base covers unless otherwise indicated.
    d. Use a short piece of **1/2 inch** diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of lighting standard.

5. Lighting Standards and Foundations Set in Concrete-Paved Areas: Install lighting standards with a minimum **6 inch** wide, unpaved gap between the lighting standard or foundation and the edge of the adjacent concrete slab. Fill unpaved ring with pea gravel. Insert material to a level **1 inch** below top of concrete slab.
6. Raise and set lighting standard using web fabric slings (not chain or cable) at locations indicated by manufacturer.
7. Corrosion Prevention:

    a. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum using insulating fittings or treatment.
    b. Steel Conduits: Comply with requirements in Section 260533.13 "Conduits for Electrical Systems." In concrete foundations, wrap conduit with **0.010 inch** thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

D. Interfaces with Other Work:

1. Grounding and Bonding: Bond metallic components of lighting standards and support structures as follows:

    a. Provide insulated equipment grounding conductors with supply feeders for bonding luminaires and other pole-mounted electrical or electronic equipment to ground terminals of their supplying power sources in accordance with Article 250 of NFPA 70.
    b. Bond metallic components of luminaires, pole accessories, and foundation to insulated equipment grounding conductor.

2. Identification: Provide labels for lighting standards, components, wiring, cabling, terminals, and associated electrical equipment.

    a. Identify field-installed conductors, interconnecting wiring, and components.

b. Label each enclosure with engraved metal or laminated-plastic nameplate.
c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

3.3 INSTALLATION OF UTILITY POLES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturers' published instructions, comply with the following:

1. Electrical Construction: [**IEEE C2**][**NFPA 70 and NECA NEIS 1**].
2. Electrical Safety: NFPA 70E.
3. Hot Work: NFPA 51B.
4. Grounding and Bonding: [**IEEE C2**][**NECA NEIS 331 and Article 250 of NFPA 70**].
5. Communications Work: BICSI N1.
6. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Engage the services of a licensed surveyor to verify dimensions by field measurement, to identify locations of poles, anchors, and other features, and to verify all clearances. The survey document must also identify locations of connections to new and existing supply lines and to primary and secondary services. Notify Architect of discrepancies and field conditions that are not indicated and that will affect installation.
2. Pole Orientation: Align curve of curved wood poles with straight-line runs of three or more poles. Align gained surfaces perpendicular to runs.
3. Elevation of Line above Grade: Install poles with top at same elevation, unless grade changes dictate elevation change in poles, and in accordance with the following:

   a. On level ground, set poles so tops of consecutive poles vary not more than **60 inch** in elevation.
   b. Shorten wood poles by cutting off the top and make cuts to shed water. Apply preservative to cuts.

4. Set poles in accordance with the following:

   a. Make pole holes vertical, uniform in diameter, and large enough to permit effective use of tamping bars all around. Bore or excavate holes with an average diameter at grade less than twice the diameter of the pole at the same grade.
   b. Use minimum depths indicated, except at locations where hole is partly or entirely in rock and if hole is not vertical or has a diameter at grade more than two times the pole diameter at the same level; in these conditions, increase the depth of the hole by the following increments before setting the pole:

      1) Poles up to 35 ft (10.6 m) Long: **24 inch**.
      2) Poles 36 to 60 ft (11 to 18.3 m) Long: **30 inch**.
      3) Poles 61 to 75 ft (18.6 to 22.9 m) Long: **36 inch**.

   c. For poles on slopes, indicated hole depth is from finished grade at lowest side of hole.
   d. Set poles in alignment and plumb except at dead ends, angles, and points of extra strain; rake poles against conductor strain **1 inch** minimum, **2 inch** maximum, (after conductors are installed at required tension) for each **10 ft** of pole length. Rake poles so they will not lean or bend in direction of strain when loaded.
   e. Backfill holes in **6 inch** maximum lifts, and thoroughly tamp each layer before starting the

next.

f. Place surplus earth around pole in a conical shape, and tamp thoroughly to provide drainage away from pole.
g. Set poles so alternate crossarm gains face in alternate directions, except at terminals and dead ends; place gains on last two poles on side facing terminal or dead end.
h. Poles Set in Concrete Paved Areas: Install poles with minimum of **6 inch** wide, unpaved gap between the pole and the edge of adjacent concrete slab. Fill unpaved ring with [**pea gravel**]<**Insert appropriate material**> to a level **1 inch** below top of concrete slab.

5. Field treat factory-treated poles and crossarms as follows:

a. Poles Treated More Than One Year before Installation: Treat portion from **24 inch** above ground line to butt.
b. Field-Bored Holes and Field-Cut Gains and Pole Tops: Treat cut portions.
c. Unused Holes: Treat and plug with treated-wood-dowel drive pins.
d. Engage the services of qualified wood pole and crossarm treatment technician to apply treatment. Comply with requirements in AWPA standards that govern original factory treatment for field-applied treatment and application of chemicals.

6. Installation of Crossarms: Set line crossarms at right angle to line for straight runs and for angles 45 degrees and more. Bisect angles less than 45 degrees.

a. Buck Arms: Install at corners and junction poles unless otherwise indicated.
b. Double Crossarms: Install at dead ends, corners, angles, and line crossings.
c. Equipment Arms: Locate below lines and set parallel or at right angles to them, whichever provides best climbing space.
d. Gains: Install factory-cut or metal-pole gains only. Do not cut gains in field without specific written approval.

7. Installation of Guys and Anchors:

a. Install guys to resist unbalanced loads, including those developed at angles, corners, and dead ends. Install two or more guys if a single guy will not provide adequate strength. Install separate guys if unbalanced loads are separated by **36 inch** or more. Comply with IEEE C2.

1) Unless a thimble eye is used, at the pole end, install a minimum of two guy hooks and two guy strain plates.
2) At the anchor end, attach guy strand assembly with preformed grips.

b. Protect guy strands from damage. Replace damaged guy strands. Install guy insulators where required to comply with IEEE C2 clearance requirements.
c. Install guys with a lead-to-height ratio of 1 to 1 unless otherwise indicated. The minimum lead-to-height ratio must be 1/2 to 1. When less than 1 to 1, increase guy strength by the ratio of the sine of the lead angle indicated to the sine of the lead angle provided.
d. Install screw-type guy anchors aligned in soil with guy. Set with anchor rod pointing at guy attachment on pole and rod projecting **6 to 9 inch** from ground.
e. Install strain insulators to provide a minimum of **12 inch** of clearance between the nearest energized surface and the strain insulator fitting farthest from the pole. When loaded to the tension indicated, fiberglass strain insulators must be loaded to not more than two-thirds of manufacturer's published rating.

8. Guy Markers: Install at anchor end of guys to visually mark the guy wire at all accessible locations. Clamp to guy strand or anchor at top and bottom of marker.

D. Interfaces with Other Work:

1. Grounding and Bonding:

    a. Comply with [**IEEE C2**][**NFPA 70**] grounding and bonding requirements.
    b. Ground Rods: [**Copper-clad**][**Zinc-coated**][**Stainless**] steel[**, sectional type**]; [**3/4 inch by 10 ft**][**5/8 inch by 8 ft**].

        1) Install [**two**]<**Insert number**> parallel ground rods if resistance to ground by a single, ground-rod electrode exceeds 25 Ω.
        2) Drive ground rods until tops are **12 inch** below finished grade in undisturbed earth.

    c. Grounding (Earthing) Conductors:

        1) 4 AWG minimum, soft-drawn copper.
        2) Conductor Protectors for Wood Poles: Half-round PVC or wood molding; if wood, use pressure-treated fir, cypress, or cedar. Protect grounding conductors running on surface of wood poles with molding extended from grade level up to and through communications service and transformer spaces.
        3) Ground-Rod Connections: Install bolted connectors for underground connections and connections to rods.
        4) Lightning Arrester Grounding Conductors: Separate from other grounding conductors.

    d. Bonding Conductors: Provide equipment grounding conductors with supply feeders for bonding pole-mounted electrical and electronic equipment to ground terminals of their supplying power sources in accordance with Article 250 of NFPA 70.

2. Identification: Provide labels for poles, components, wiring, cabling, terminals, and associated electrical equipment.

    a. Identify field-installed conductors, interconnecting wiring, and components.
    b. Label each enclosure with engraved metal or laminated-plastic nameplate.
    c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.
    d. Locate pole numbers to provide maximum visibility from the road or patrol route.

3.4 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

1. <**Insert requirements**>.

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

D. Tests and Inspections:

1. Inspect poles for nicks, mars, dents, scratches, and other damage.
2. System function tests.
3. Guy Anchors: Test one of each type and capacity installed[**, plus additional units specifically indicated for testing**]. Apply rated pull-out force in the same pull direction applied by the guy at the test location.

    a. Acceptable Test Results: Denoted by movement of less than **3/8 inch** by the holding component of the anchor in the earth or other medium in which it is installed.
    b. Replace or reinstall, at Architect's option, all anchors of same type and capacity as anchor type that fails this test.

4. Pole Ground Resistance: Measure resistance of each separate grounding electrode, including pole grounds. Also measure resistance of separate grounding electrode systems before bonding together.

    a. Perform tests and obtain acceptable results before energizing any portion of overhead electrical distribution system.
    b. Results and Follow-up: If ground resistance for a single ground electrode or pole ground, tested individually, exceeds 25 Ω, add a ground electrode not less than **10 ft** away and interconnect with 2 AWG, minimum, bare conductor buried at least **12 inch** below furnished grade.

5. <**Insert special inspections**>.

E. Nonconforming Work:

1. Unit will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

G. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

END OF SECTION 26 05 46 00

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
26 05 46 00	01 55 26 00a	Fabricated Control Booths
26 05 46 00	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 53 00 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Labels.
2. Extruded insulating tubing.
3. Bands.
4. Tapes and stencils.
5. Tags.
6. Signs.
7. Cable ties.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 284600 "Fire Detection and Alarm"[**and Section 284614 "Single- and Multiple-Station Alarms"**] specifies fire detection and alarm devices referenced in this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: For each type of label and sign to illustrate composition, size, colors, lettering style, mounting provisions, and graphic features of identification products.

C. Identification Schedule: For each piece of electrical equipment and electrical system components to be index of nomenclature for electrical equipment and system components used in identification signs and labels. Use same designations indicated on Drawings.

PART 2 - PRODUCTS

2.1 LABELS

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
2. Listing Criteria: UL CCN PGDQ2 for components; including UL 969.

B. UL PGDQ2 - Vinyl Wraparound Labels: Preprinted, flexible labels laminated with clear, weather- and chemical-resistant coating and matching wraparound clear adhesive tape for securing label ends.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Champion America**]
c. [**emedco**]
d. [**Grafoplast Wire Markers**]
e. [**HellermannTyton**]
f. [**LEM Products Inc.**]
g. [**Marking Services Inc.**]
h. [**Panduit Corp**]
i. [**Seton Identification Products; a Brady Corporation company**]
j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Champion America**]
c. [**emedco**]
d. [**Grafoplast Wire Markers**]
e. [**HellermannTyton**]
f. [**LEM Products Inc.**]
g. [**Marking Services Inc.**]
h. [**Panduit Corp**]
i. [**Seton Identification Products; a Brady Corporation company**]
j. <**Insert manufacturer's name**>

C. UL PGDQ2 - Self-Adhesive Wraparound Labels: [**Preprinted**][**Write-on**], **3 mil (0.08 mm)** thick, [**polyester**][**vinyl**] flexible label with acrylic pressure-sensitive adhesive.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**A'n D Cable Products**]
b. [**Brady Corporation**]
c. [**Brother International Corporation**]
d. [**emedco**]
e. [**Grafoplast Wire Markers**]
f. [**Ideal Industries, Inc.**]
g. [**LEM Products Inc.**]
h. [**Marking Services Inc.**]
i. [**Panduit Corp**]
j. [**Seton Identification Products; a Brady Corporation company**]
k. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

a. [**A'n D Cable Products**]
b. [**Brady Corporation**]
c. [**Brother International Corporation**]
d. [**emedco**]
e. [**Grafoplast Wire Markers**]
f. [**Ideal Industries, Inc.**]
g. [**LEM Products Inc.**]
h. [**Marking Services Inc.**]
i. [**Panduit Corp**]
j. [**Seton Identification Products; a Brady Corporation company**]
k. <**Insert manufacturer's name**>

3. Self-Lamination: Clear; UV-, weather-, and chemical-resistant; self-laminating, with protective shield over legend. Size labels such that clear shield overlaps entire printed legend.
4. Marker for Labels:

a. Permanent, waterproof, black ink marker recommended by tag manufacturer.
b. Machine-printed, permanent, waterproof, black ink recommended by printer manufacturer.

D. UL PGDQ2 - Self-Adhesive Labels: [**Polyester**][**Vinyl**], thermal, transfer-printed, **3 mil (0.08 mm)** thick, multicolor, weather- and UV-resistant, pressure-sensitive adhesive labels, configured for intended use and location.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**A'n D Cable Products**]
b. [**Brady Corporation**]
c. [**Brother International Corporation**]
d. [**emedco**]
e. [**Grafoplast Wire Markers**]
f. [**HellermannTyton**]
g. [**Ideal Industries, Inc.**]
h. [**LEM Products Inc.**]
i. [**Marking Services Inc.**]
j. [**Panduit Corp**]
k. [**Seton Identification Products; a Brady Corporation company**]
l. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**A'n D Cable Products**]
b. [**Brady Corporation**]
c. [**Brother International Corporation**]
d. [**emedco**]
e. [**Grafoplast Wire Markers**]
f. [**HellermannTyton**]
g. [**Ideal Industries, Inc.**]
h. [**LEM Products Inc.**]

i. [**Marking Services Inc.**]
j. [**Panduit Corp**]
k. [**Seton Identification Products; a Brady Corporation company**]
l. <**Insert manufacturer's name**>

3. Minimum Nominal Size:

a. **1-1/2 by 6 inch (37 by 150 mm)** for raceway and conductors.
b. **3-1/2 by 5 inch (76 by 127 mm)** for equipment.
c. As required by authorities having jurisdiction.

2.2 EXTRUDED INSULATING TUBING

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
2. Listing Criteria: UL CCN YDPU2 for components; including UL 224.

B. UL YDPU2 - Heat-Shrink Preprinted Tubes: Flame-retardant polyolefin tubes with machine-printed identification labels, sized to suit diameter and shrunk to fit firmly. Full shrink recovery occurs at maximum of **200 deg F (93 deg C)**.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Panduit Corp**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Panduit Corp**]
c. <**Insert manufacturer's name**>

2.3 BANDS

A. Snap-Around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeves, with diameters sized to suit diameters and that stay in place by gripping action.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]

b. [**HellermannTyton**]
c. [**Marking Services Inc.**]
d. [**Panduit Corp**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**HellermannTyton**]
c. [**Marking Services Inc.**]
d. [**Panduit Corp**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

B. Snap-Around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeves, **2 inch (50 mm)** long, with diameters sized to suit diameters and that stay in place by gripping action.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**HellermannTyton**]
c. [**Marking Services Inc.**]
d. [**Panduit Corp**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**HellermannTyton**]
c. [**Marking Services Inc.**]
d. [**Panduit Corp**]
e. <**Insert manufacturer's name**>

2.4 TAPES AND STENCILS

A. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**Champion America**]
d. [**HellermannTyton**]

e. [**Ideal Industries, Inc.**]
f. [**Marking Services Inc.**]
g. [**Panduit Corp**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**Champion America**]
d. [**HellermannTyton**]
e. [**Ideal Industries, Inc.**]
f. [**Marking Services Inc.**]
g. [**Panduit Corp**]
h. <**Insert manufacturer's name**>

B. Self-Adhesive Vinyl Tape: Colored, heavy duty, waterproof, fade resistant; not less than **3 mil (0.08 mm)** thick by **1 to 2 inch (25 to 50 mm)** wide; compounded for outdoor use.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**emedco**]
d. [**Marking Services Inc.**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**emedco**]
d. [**Marking Services Inc.**]
e. <**Insert manufacturer's name**>

C. Tape and Stencil: **4 inch (100 mm)** wide black stripes on **10 inch (250 mm)** centers placed diagonally over orange background and are **12 inch (300 mm)** wide. Stop stripes at legends.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**HellermannTyton**]
b. [**LEM Products Inc.**]
c. [**Marking Services Inc.**]
d. [**Pipemarker.com; Brimar Industries, Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]

f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**HellermannTyton**]
b. [**LEM Products Inc.**]
c. [**Marking Services Inc.**]
d. [**Pipemarker.com; Brimar Industries, Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

D. Floor Marking Tape: **2 inch (50 mm)** wide, **5 mil (0.125 mm)** pressure-sensitive vinyl tape, with [**black and white**][**yellow and black**] stripes and clear vinyl overlay.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**Seton Identification Products; a Brady Corporation company**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**Seton Identification Products; a Brady Corporation company**]
d. <**Insert manufacturer's name**>

E. Underground-Line Warning Tape:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Ideal Industries, Inc.**]
c. [**LEM Products Inc.**]
d. [**Marking Services Inc.**]
e. [**Pipemarker.com; Brimar Industries, Inc.**]
f. [**Reef Industries, Inc.**]
g. [**Seton Identification Products; a Brady Corporation company**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]

b. [**Ideal Industries, Inc.**]
c. [**LEM Products Inc.**]
d. [**Marking Services Inc.**]
e. [**Pipemarker.com; Brimar Industries, Inc.**]
f. [**Reef Industries, Inc.**]
g. [**Seton Identification Products; a Brady Corporation company**]
h. <**Insert manufacturer's name**>

3. Tape:

a. Recommended by manufacturer for method of installation and suitable to identify and locate underground electrical [**and communications**]utility lines.
b. Printing on tape must be permanent and may not be damaged by burial operations.
c. Tape material and ink must be chemically inert and not be subject to degradation when exposed to acids, alkalis, and other destructive substances commonly found in soils.

4. Color and Printing:

a. Comply with APWA Uniform Color Code using NEMA Z535.1 safety colors.
b. Inscriptions for Red Tapes: [**"CAUTION BURIED ELECTRIC LINE BELOW"**]<**Insert inscription**>.
c. Inscriptions for Orange Tapes: [**"CAUTION BURIED CATV LINE BELOW"**][**"CAUTION BURIED TELEPHONE LINE BELOW"**][**"CAUTION BURIED FIBER OPTIC LINE BELOW"**][**"CAUTION BURIED COMMUNICATION LINE BELOW"**]<**Insert inscription**>.

5. Nonconducting Line-Warning Tape :

a. Pigmented polyolefin, bright colored, [**continuous-printed on one side with inscription of utility,**]compounded for direct-burial service.
b. Width: **3 inch (75 mm)**.
c. Thickness: **4 mil (0.1 mm)**.
d. Weight: **18.5 lb/1000 sq. ft (9.0 kg/100 sq. m)**.
e. Tensile in accordance with ASTM D882: **30 lbf (133.4 N)** and **2500 psi (17.2 MPa)**.

6. Reinforced Nonconducting Line-Warning Tape :

a. Multilayer laminate, consisting of high-density polyethylene scrim coated with pigmented polyolefin; bright colored, [**continuous-printed on one side with inscription of utility,**]compounded for direct-burial service.
b. Width: **3 inch (75 mm)**.
c. Thickness: **12 mil (0.3 mm)**.
d. Weight: **36.1 lb/1000 sq. ft (17.6 kg/100 sq. m)**.
e. Tensile in accordance with ASTM D882: **400 lbf (1780 N)** and **11,500 psi (79.2 MPa)**.

7. Detectable Line-Warning Tape :

a. Detectable three-layer laminate, consisting of printed pigmented polyolefin film, solid aluminum-foil core, and clear protective film that allows inspection of continuity of conductive core; bright colored, [**continuous-printed on one side with inscription of utility,**]compounded for direct-burial service.
b. Width: **3 inch (75 mm)**.
c. Overall Thickness: **5 mil (0.125 mm)**.
d. Foil Core Thickness: **0.35 mil (8.9 m)**.
e. Weight: **28 lb/1000 sq. ft (13.7 kg/100 sq. m)**.
f. Tensile in accordance with ASTM D882: **70 lbf (311.3 N)** and **4600 psi (31.7 MPa)**.

8. Reinforced Detectable Line-Warning Tape :

    a. Reinforced, detectable three-layer laminate, consisting of printed pigmented woven scrim, solid aluminum-foil core, and clear protective film that allows inspection of continuity of conductive core; bright-colored, [**continuous-printed on one side with inscription of utility,**]compounded for direct-burial service.
    b. Width: **3 inch (75 mm)**.
    c. Overall Thickness: **8 mil (0.2 mm)**.
    d. Foil Core Thickness: **0.35 mil (8.9 m)**.
    e. Weight: **34 lb/1000 sq. ft (16.6 kg/100 sq. m)**.
    f. Tensile in accordance with ASTM D882: **300 lbf (1334 N)** and **12,500 psi (86.1 MPa)**.

F. Concrete Cable Route Markers :

1. Description: Concrete markers visually aid tracing the route of electrical cables. Monument markers are typically installed at grade. Protective cover markers are typically installed above the cables at grade or below grade.
2. Product Characteristics:

    a. Material: Precast reinforced concrete.
    b. Marker Type:

        1) Above-Ground Monument Post:

            a) Nominal Dimensions (Height, Width, Depth): **30 inch (760 mm)**, **6 inch (150 mm)**, **3 inch (75 mm)**.

        2) Above-Ground Monument Block:

            a) Nominal Dimensions (Height, Width, Depth): [**12 inch (300 mm)**, **12 inch (300 mm)**, **6 inch (150 mm)**][**24 inch (600 mm)**, **24 inch (600 mm)**, **4 inch (100 mm)**].

        3) In-Ground Protective Cover (Plank or Slab):

            a) Nominal Dimensions (Length, Width, Depth): [**36 inch (914 mm)**, **6 inch (150 mm)**, **2 inch (50 mm)**][**36 inch (914 mm)**, **9 inch (230 mm)**, **2 inch (50 mm)**][**12 inch (305 mm)**, **12 inch (305 mm)**, **2 inch (50 mm)**][**24 inch (610 mm)**, **12 inch (305 mm)**, **2 inch (50 mm)**][**36 inch (914 mm)**, **12 inch (305 mm)**, **2 inch (50 mm)**].

    c. Legend: [**"DANGER - ELECTRICITY"**][**"ELECTRIC CABLES"**][**"ELECTRIC SPLICE"**].
    d. Lettering: Approximately **1/8 inch (3 mm)** deep, not less than [**1 inch (25 mm)**][**1.5 inch (38 mm)**] high, symmetrically spaced; marked on both sides to allow for reversal.

3. Required Product Options:

    a. Color: [**Red**]<**Insert color**> dye added to concrete during batching.
    b. Attach metal medallion or sign stamped with [**feeder number**]<**Insert required information**>.

G. Stenciled Legend: In nonfading, waterproof, [**black**]<**Insert color**> ink or paint. Minimum letter height must be [**1 inch (25 mm)**]<**Insert dimension**>.

2.5 TAGS

A. Metal Tags: Brass or aluminum, **2 by 2 by 0.05 inch (50 by 50 by 1.3 mm)**, with stamped legend, punched for use with self-locking cable tie fastener.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**emedco**]
d. [**Marking Services Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**emedco**]
d. [**Marking Services Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

B. Nonmetallic Preprinted Tags: Polyethylene tags, [**0.015 inch (0.38 mm)**][**0.023 inch (0.58 mm)**] thick, color-coded for phase and voltage level, with factory [**screened**][**printed**] permanent designations; punched for use with self-locking cable tie fastener.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**emedco**]
d. [**Grafoplast Wire Markers**]
e. [**LEM Products Inc.**]
f. [**Marking Services Inc.**]
g. [**Panduit Corp**]
h. [**Seton Identification Products; a Brady Corporation company**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**emedco**]
d. [**Grafoplast Wire Markers**]

e. [**LEM Products Inc.**]
f. [**Marking Services Inc.**]
g. [**Panduit Corp**]
h. [**Seton Identification Products; a Brady Corporation company**]
i. <**Insert manufacturer's name**>

C. Write-on Tags:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**LEM Products Inc.**]
d. [**Pipemarker.com; Brimar Industries, Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**LEM Products Inc.**]
d. [**Pipemarker.com; Brimar Industries, Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

3. Polyester Tags: [**0.010 inch (0.25 mm)**][**0.015 inch (0.38 mm)**]<**Insert dimension**> thick, with corrosion-resistant grommet and cable tie for attachment.
4. Marker for Tags:

a. Permanent, waterproof, black ink marker recommended by tag manufacturer.
b. Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

2.6 SIGNS

A. Baked-Enamel Signs:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**Champion America**]
d. [**emedco**]
e. [**Marking Services Inc.**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Brady Corporation**]
    b. [**Carlton Industries, LP**]
    c. [**Champion America**]
    d. [**emedco**]
    e. [**Marking Services Inc.**]
    f. <**Insert manufacturer's name**>

3. Preprinted aluminum signs, [**high-intensity reflective,**]punched or drilled for fasteners, with colors, legend, and size required for application.
4. **1/4 inch (6.4 mm)** grommets in corners for mounting.
5. Nominal Size: **7 by 10 inch (180 by 250 mm)**.

B. Metal-Backed Butyrate Signs:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Brady Corporation**]
    b. [**Champion America**]
    c. [**emedco**]
    d. [**Marking Services Inc.**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Brady Corporation**]
    b. [**Champion America**]
    c. [**emedco**]
    d. [**Marking Services Inc.**]
    e. <**Insert manufacturer's name**>

3. Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs, with **0.0396 inch (1 mm)** galvanized-steel backing, punched and drilled for fasteners, and with colors, legend, and size required for application.
4. **1/4 inch (6.4 mm)** grommets in corners for mounting.
5. Nominal Size: **10 by 14 inch (250 by 360 mm)**.

C. Laminated Acrylic or Melamine Plastic Signs:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Brady Corporation**]
    b. [**Carlton Industries, LP**]
    c. [**emedco**]

d. [**Marking Services Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Brady Corporation**]
b. [**Carlton Industries, LP**]
c. [**emedco**]
d. [**Marking Services Inc.**]
e. [**Seton Identification Products; a Brady Corporation company**]
f. <**Insert manufacturer's name**>

3. Engraved legend.
4. Thickness:

a. For signs up to **20 sq. inch (129 sq. cm)**, minimum **1/16 inch (1.6 mm)** thick.
b. For signs larger than **20 sq. inch (129 sq. cm)**, **1/8 inch (3.2 mm)** thick.
c. Engraved legend with [**black letters on white face**][**white letters on dark gray background**]<**Insert colors**>.
d. [**Punched or drilled for mechanical fasteners with 1/4 inch (6.4 mm) grommets in corners for mounting**][**Self-adhesive**].
e. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

2.7 CABLE TIES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**HellermannTyton**]
2. [**Ideal Industries, Inc.**]
3. [**Marking Services Inc.**]
4. [**Panduit Corp**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**HellermannTyton**]
2. [**Ideal Industries, Inc.**]
3. [**Marking Services Inc.**]
4. [**Panduit Corp**]
5. <**Insert manufacturer's name**>

C. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
2. Listing Criteria: UL CCN ZODZ; including UL 1565 or UL 62275.

D. UL ZODZ - General-Purpose Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking, and

Type 6/6 nylon.

1. Minimum Width: **3/16 inch (5 mm)**.
2. Tensile Strength at **73 deg F (23 deg C)** in accordance with ASTM D638: **12,000 psi (82.7 MPa)**.
3. Temperature Range: **Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C)**.
4. Color: Black, except where used for color-coding.

E. UL ZODZ - UV-Stabilized Cable Ties: Fungus inert, designed for continuous exposure to exterior sunlight, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.

1. Minimum Width: **3/16 inch (5 mm)**.
2. Tensile Strength at **73 deg F (23 deg C)** in accordance with ASTM D638: **12,000 psi (82.7 MPa)**.
3. Temperature Range: **Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C)**.
4. Color: Black.

F. UL ZODZ - Plenum-Rated Cable Ties: Self-extinguishing, UV stabilized, one piece, and self-locking.

1. Minimum Width: **3/16 inch (5 mm)**.
2. Tensile Strength at **73 deg F (23 deg C)** in accordance with ASTM D638: **7000 psi (48.2 MPa)**.
3. UL 94 Flame Rating: 94V-0.
4. Temperature Range: **Minus 50 to plus 284 deg F (Minus 46 to plus 140 deg C)**.
5. Color: Black.

PART 3 - EXECUTION

3.1 PREPARATION

A. Self-Adhesive Identification Products: Before applying electrical identification products, clean substrates of substances that could impair bond, using materials and methods recommended by manufacturer of identification product.

3.2 SELECTION OF COLORS AND IDENTIFICATION MARKINGS

A. Comply with 29 CFR 1910.144 for color identification of hazards, and the following:

1. Fire-protection[**and fire-alarm**] equipment[**, including raceways,**] must be finished, painted, or suitably marked safety red.
2. Ceiling-mounted hangers, supports, cable trays, and raceways must be finished, painted, or suitably marked safety yellow where less than [**7.7 ft (2.3 m)**]<**Insert height**> above finished floor.

B. Pipe and Conduit Labeling: Comply with ASME A13.1[**and IEEE C2**].

C. Color-Coding for Phase- and Voltage-Level Identification, 1000 V or Less: Use colors listed below for ungrounded [**service**][**feeder**][**and**][**branch-circuit**] conductors.

1. Color must be factory applied[**or field applied for sizes larger than 6 AWG when permitted by authorities having jurisdiction**].
2. Colors for 208Y/120 V Circuits:

    a. Phase A: Black.

b. Phase B: Red.
c. Phase C: Blue.

3. Colors for 240 V Circuits:

a. Phase A: Black.
b. Phase B: Red.

4. Colors for 480Y/277 V Circuits:

a. Phase A: Brown.
b. Phase B: Orange.
c. Phase C: Yellow.

5. Color for Neutral (Grounded Conductor): [**White**][**or**][**gray**].
6. Color for Equipment Ground: [**Bare copper**][**Green**][**Green with yellow stripe**].
7. Color for Isolated Ground: Green with two or more yellow stripes.

D. Color-Coding Raceways, Cable Trays, Junction Boxes, and Conductors for Intrinsically-Safe Circuits: Light blue. When used to identify intrinsically-safe circuits, Article 504 of NFPA 70 requires that the color light blue not be used for any other purpose.

E. Color-Coding Instructional Signs: Self-adhesive labels, including color code for grounded and ungrounded conductors.

F. Accessible Fittings for Raceways: Identify cover of junction and pull box of the following systems with wiring system legend and system voltage. System legends must be as follows:

1. "EMERGENCY POWER."
2. "POWER."
3. "UPS."
4. <**Insert name**>.

G. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations of high visibility. Identify by system and circuit designation.

H. Locations of Underground Lines: Underground-line warning tape for power and lighting.

I. Vaults, Manholes, Handholes, and Pull and Junction Boxes, More Than 1000 V: For conductors in vaults, pull and junction boxes, manholes, and handholes, use [**write-on tags**][**nonmetallic preprinted tags colored and marked to indicate phase, and separate tag with circuit designation**].

J. Concealed Raceways, Duct Banks, More Than 1000 V, within Buildings: Tape and stencil. Stencil legend "DANGER - CONCEALED HIGH-VOLTAGE WIRING" with **3 inch (75 mm)** high, black letters on **20 inch (500 mm)** centers.

1. Locate identification at changes in direction, at penetrations of walls and floors, and at [**10 ft (3 m)**][**30 ft (9 m)**] maximum intervals.
2. Identify system voltage[**and system or service type**] with black letters on orange field.
3. Apply floor marking tape to the following finished surfaces:

a. Floor surface directly above conduits running beneath and within **12 inch (300 mm)** of floor that is in contact with earth or is framed above unexcavated space.
b. Wall surfaces directly external to raceways concealed within wall.
c. Accessible surfaces of concrete envelope around raceways in vertical shafts, exposed in building, or concealed above suspended ceilings.

K. Accessible Raceways, Armored and Metal-Clad Cables, More Than 1000 V: [**Vinyl wraparound labels**][**Snap-around labels**][**Self-adhesive labels**][**Snap-around color-coding bands for raceway and cables**].

1. Locate identification at changes in direction, at penetrations of walls and floors, at **50 ft (15 m)** maximum intervals in straight runs, and at **25 ft (7.6 m)** maximum intervals in congested areas.
2. Identify system voltage[**and system or service type**] with black letters on orange field.

L. Vaults, Manholes, Handholes, and Pull and Junction Boxes, 1000 V or Less: For conductors in vaults, pull and junction boxes, manholes, and handholes, use [**vinyl wraparound labels**][**self-adhesive wraparound labels**][**snap-around labels**][**snap-around color-coding bands**][**self-adhesive vinyl tape**] to identify phase.

1. Locate identification at changes in direction, at penetrations of walls and floors, at **50 ft (15 m)** maximum intervals in straight runs, and at **25 ft (7.6 m)** maximum intervals in congested areas.
2. Identify system voltage[**and system or service type**] with [**black letters on orange field**]<**Insert color scheme**>.

M. Accessible Raceways and Metal-Clad Cables, 1000 V or Less, for Service, Feeder, and Branch Circuits, More Than [**30**]<**Insert number**> A and [**120**]<**Insert number**> V to Ground: Identify with self-adhesive [**raceway labels**][**vinyl tape applied in bands**].

1. Locate identification at changes in direction, at penetrations of walls and floors, at **50 ft (15 m)** maximum intervals in straight runs, and at **25 ft (7.6 m)** maximum intervals in congested areas.
2. Identify system voltage[**and system or service type**] with [**black letters on orange field**]<**Insert color scheme**>.

N. Conductors to Be Extended in Future: Attach [**write-on tags**][**marker tape**] to conductors[**and list source**].

O. Cover Plates: Label individual cover plates with self-adhesive labels. Place label at top of cover plate. Label cover plate with the following information, in the order listed:

1. Panelboard designation.
2. Colon or dash.
3. Branch circuit number.

P. Workspace Indication: Apply [**floor marking tape**][**or**][**tape and stencil**] to finished surfaces. Show working clearances in direction of access to live parts. Workspace must comply with NFPA 70 and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.

Q. Equipment Identification Labels:

1. Black letters on white field.
2. Indoor Equipment: [**Self-adhesive label**][**Baked-enamel signs**][**Metal-backed butyrate signs**][**Laminated acrylic or melamine plastic sign**].
3. Outdoor Equipment: [**Laminated acrylic or melamine sign**][**Stenciled legend 4 inch (100 mm) high**].
4. Equipment to Be Labeled:

    a. Racks, Frames, and Enclosures: Identify front and rear of each with self-adhesive labels[**containing equipment designation**].
    b. Panelboards: Typewritten directory of circuits in location provided by panelboard manufacturer. Panelboard identification must be in form of [**self-adhesive,**

engraved,][**engraved,**] laminated acrylic or melamine label.
c. Enclosures and electrical cabinets.
d. Access doors and panels for concealed electrical items.
e. Switchgear.
f. Switchboards.
g. Transformers: Label that includes tag designation indicated on Drawings for transformer, feeder, and panelboards or equipment supplied by secondary.
h. Substations.
i. Emergency system boxes and enclosures.
j. Motor-control centers.
k. Enclosed switches.
l. Enclosed circuit breakers.
m. Enclosed controllers.
n. Variable-speed controllers.
o. Push-button stations.
p. Power-transfer equipment.
q. Contactors.
r. Remote-controlled switches, dimmer modules, and control devices.
s. Uninterruptible power supplies.
t. Battery-inverter units.
u. Battery racks.
v. Power-generating units.
w. Monitoring and control equipment.
x. <**Insert equipment**>.

R. Cable Ties: General purpose, for attaching tags, except as listed below:

1. Outdoors: UV-stabilized nylon.
2. In Spaces Handling Environmental Air: Plenum rated.

3.3 SELECTION OF SIGNS AND HAZARD MARKINGS

A. Comply with 29 CFR 1910.145 for danger, caution, warning, and safety instruction signs.

B. Signs, labels, and tags required for personnel safety must comply with the following standards:

1. Safety Colors: NEMA Z535.1.
2. Facility Safety Signs: NEMA Z535.2.
3. Safety Symbols: NEMA Z535.3.
4. Product Safety Signs and Labels: NEMA Z535.4.
5. Safety Tags and Barricade Tapes for Temporary Hazards: NEMA Z535.5.

C. Electrical Hazard Warnings:

1. Arc-Flash Hazard Warning: Self-adhesive labels. Comply with [**NFPA 70E**][**and**][**Section 260573 "Power System Studies"**] requirements for arc-flash hazard warning labels.
2. Raceways and Cables Carrying Circuits at More Than 1000 V:

a. Black letters on orange field.
b. Legend: "DANGER - CONCEALED HIGH VOLTAGE WIRING."

3. Multiple Power Sources Warning Legend: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
4. OSHA Workspace Clearance Warning Legend: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 3 FEET MINIMUM."

5. <**Insert names and wording of warning signs or labels (for example, multiple services and voltages, and others**>.

D. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: [**Self-adhesive labels**][**Baked-enamel warning signs**][**Metal-backed, butyrate warning signs**].

1. Apply to exterior of door, cover, or other access.
2. For equipment with multiple power or control sources, apply to door or cover of equipment, including, but not limited to, the following:

   a. Power-transfer switches.
   b. Controls with external control power connections.
   c. <**Insert items**>.

E. Operating Instruction Signs: [**Self-adhesive labels**][**Baked-enamel warning signs**][**Metal-backed, butyrate warning signs**][**Laminated acrylic or melamine plastic signs**].

F. Emergency Operating Instruction Signs: [**Self-adhesive labels**][**Baked-enamel warning signs**][**Metal-backed, butyrate warning signs**][**Laminated acrylic or melamine plastic signs**] with white legend on red background with minimum **3/8 inch (10 mm)** high letters for emergency instructions at equipment used for [**power transfer**][**load shedding**]<**Insert emergency operations**>.

3.4 SELECTION OF IDENTIFICATION PRODUCTS FOR COMMUNICATIONS, CONTROL, AUXILIARY, AND LIFE SAFETY SYSTEMS

A. Comply with Section 270528 "Pathways for Communications Systems" and Section 271100 "Communications Equipment Room Fittings."

3.5 INSTALLATION

A. Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment. Install access doors or panels to provide view of identifying devices.

B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes typical for electrical equipment environments specified in Section 018116 "Facility Environmental Requirements" and Section 260010 "Supplemental Requirements for Electrical."

C. Paint: Comply with requirements in painting Sections for paint materials and application requirements. Retain paint system applicable for surface material and location (exterior or interior).

D. Fasteners for Labels and Signs: Self-tapping, stainless steel screws or stainless steel machine screws with nuts and flat and lock washers.

E. Verify and coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and operation and maintenance manual. Use consistent designations throughout Project.

F. Install identifying devices before installing acoustical ceilings and similar concealment.

G. Verify identity of item before installing identification products.

H. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and operation and maintenance manual.

I. Apply identification devices to surfaces that require finish after completing finish work.

J. Install signs with approved legend to facilitate proper identification, operation, and maintenance of electrical systems and connected items.

K. Elevated Components: Increase sizes of labels, signs, and letters to those appropriate for viewing from floor.

L. Vinyl Wraparound Labels:

1. Secure tight to surface of raceway or cable at location with high visibility and accessibility.
2. Attach labels that are not self-adhesive type with clear vinyl tape, with adhesive appropriate to location and substrate.

M. Snap-Around Labels: Secure tight to surface at location with high visibility and accessibility.

N. Self-Adhesive Wraparound Labels: Secure tight to surface at location with high visibility and accessibility.

O. Snap-Around Color-Coding Bands: Secure tight to surface at location with high visibility and accessibility.

P. Heat-Shrink, Preprinted Tubes: Secure tight to surface at location with high visibility and accessibility.

Q. Marker Tapes: Secure tight to surface at location with high visibility and accessibility.

R. Self-Adhesive Vinyl Tape: Secure tight to surface at location with high visibility and accessibility.

1. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for minimum distance of **6 inch (150 mm)** where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding.

S. Tape and Stencil: Comply with requirements in painting Sections for surface preparation and paint application.

T. Floor Marking Tape: Apply stripes to finished surfaces following manufacturer's instructions.

U. Underground Line Warning Tape:

1. During backfilling of trenches, install continuous underground-line warning tape not less than **12 inch (300 mm)** directly above cables or raceways buried **18 inch (450 mm)** or more below grade. Use multiple tapes where width of multiple lines installed in common trench [**or concrete envelope**]exceeds **16 inch (400 mm)** overall.
2. Limit use of underground-line warning tape to direct-buried cables.
3. Install underground-line warning tape for direct-buried cables and cables in raceways.

V. Concrete Cable Route Markers: [**As indicated on Drawings**]<**Insert Project-specific requirements**>.

W. Metal Tags:

1. Place in location with high visibility and accessibility.
2. Secure using [**general-purpose**][**UV-stabilized**][**plenum-rated**] cable ties.

X. Nonmetallic Preprinted Tags:

1. Place in location with high visibility and accessibility.
2. Secure using [**general-purpose**][**UV-stabilized**][**plenum-rated**] cable ties.

Y. Write-on Tags:

1. Place in location with high visibility and accessibility.
2. Secure using [**general-purpose**][**UV-stabilized**][**plenum-rated**] cable ties.

Z. Baked-Enamel Signs: Attach signs that are not self-adhesive type with mechanical fasteners appropriate to location and substrate.

AA. Metal-Backed Butyrate Signs: Attach signs that are not self-adhesive type with mechanical fasteners appropriate to location and substrate.

BB. Laminated Acrylic or Melamine Plastic Signs: Attach signs that are not self-adhesive type with mechanical fasteners appropriate to location and substrate.

END OF SECTION 26 05 53 00

Task	Specification	Specification Description
26 05 53 00	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling
26 05 83 00	26 05 13 00	Medium-Voltage Cables
26 05 83 00	26 05 19 00	Low-Voltage Electrical Power Conductors and Cables
26 05 83 00	26 05 00 00	Sleeves and Sleeve Seals for Electrical Raceways and Cabling

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 08 00 00 - COMMISSIONING OF ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Electrical equipment connected to Normal electrical systems, including the following:

   a. Motor-control centers.
   b. Transformers.
   c. [**Primary**][**and**][**secondary**] service electrical systems.
   d. [**Distribution**][**and**][**branch-circuit**] panelboards.
   e. Lightning protection systems.
   f. Grounding systems.

2. Electrical equipment connected to Essential electrical systems that provide an alternative source of power in the absence of power from the Normal electrical system, including the following:

   a. Motor-control centers.
   b. [**Primary**][**and**][**secondary**] service electrical systems.
   c. [**Distribution**][**and**][**branch-circuit**] panelboards.
   d. Lighting protection systems.
   e. Grounding systems.
   f. Generators.
   g. UPS.

3. Controls and instrumentation, including the following:

   a. Equipment monitoring systems.
   b. Energy monitoring and control systems.
   c. Electrical metering and metering system.
   d. Demand response systems.
   e. Lighting control systems.
   f. Security systems.
   g. Fire-alarm systems.
   h. <**Insert systems**>.

4. Systems testing and verification, including [**Normal**][**and**][**Essential**] electrical systems[**, and transitions from Normal to Essential electrical systems and back**].
5. <**Insert electrical systems**>.

B. Related Requirements:

1. Section 019113 "General Commissioning Requirements" for general Cx process requirements and CxA responsibilities.
2. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
3. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 DEFINITIONS

A. BoD: Basis-of-Design Document, as defined in Section 019113 "General Commissioning Requirements."

B. Cx: Commissioning, as defined in Section 019113 "General Commissioning Requirements."

C. CxA: Commissioning Authority, as defined in Section 019113 "General Commissioning Requirements."

D. OPR: Owner's Project Requirements, as defined in Section 019113 "General Commissioning Requirements."

E. "Systems," "Assemblies," "Subsystems," "Equipment," and "Components": Where these terms are used together or separately, they mean "as-built" systems, assemblies, subsystems, equipment, and components.

1.3 INFORMATIONAL SUBMITTALS

A. Construction Checklists by CxA: Draft construction checklists will be created by CxA for Contractor review.

B. Construction Checklists by Contractor: Include the following and comply with requirements in Section 019113 "General Commissioning Requirements" for construction checklists:

1. Instrumentation and control for electrical systems.
2. Instrumentation and control for lighting control systems.
3. Low-voltage power cables.
4. Control voltage power cables.
5. Electrical feeders and branch circuits.
6. Liquid-filled transformers.
7. Dry-type transformers.
8. Instrument transformers.
9. Switchgear and switchboard assemblies rated 1200 A or greater.
10. Metal-enclosed bus duct.
11. Busway.
12. Motor-control centers.
13. Low-voltage motor starters.
14. Low-voltage air circuit breakers.
15. Low-voltage insulated case circuit breakers.
16. Low-voltage network protectors.
17. Low-voltage air switches.
18. Low-voltage surge protective devices.
19. Medium-voltage power cables.
20. Medium-voltage circuit breakers.
21. Medium-voltage motor starters.
22. Medium-voltage air circuit breakers.
23. Medium-voltage vacuum circuit breakers.
24. Medium-voltage SF6 (sulfur hexafluoride) circuit breakers.
25. Medium-voltage air switches.
26. Medium-voltage surge protective devices.
27. Protective relays.
28. Metering devices.
29. Molded-case circuit breakers.
30. Low-voltage power circuit breakers.

31. Grounding systems.
32. Ground-fault protection systems.
33. Panelboards.
34. Receptacles and devices.
35. Engine generators.
36. Automatic transfer switches.
37. Variable-frequency drives.
38. AC synchronous motors and generators.
39. AC induction motors and generators.
40. DC motors and generators.
41. Battery systems.
42. Battery chargers.
43. Flooded lead-acid batteries.
44. Flooded lead-calcium batteries.
45. VRLA batteries.
46. UPS systems.
47. Power factor correction equipment, including capacitors, dry-type reactors (both shunt and current-limiting), and liquid-filled reactors (both shunt and current-limiting).
48. Lighting.
49. Vehicle charging equipment.
50. <**Insert equipment**>.

1.4 QUALITY ASSURANCE

A. Testing Equipment and Instrumentation Quality and Calibration: For test equipment and instrumentation required to perform electrical Cx work, perform the following:

1. Submit test equipment and instrumentation list. For each equipment or instrument, identify the following:

a. Equipment/instrument identification number.
b. Planned Cx application or use.
c. Manufacturer, make, model, and serial number.
d. Calibration history, including certificates from agencies that calibrate the equipment and instrumentation.

2. Test equipment and instrumentation must meet the following criteria:

a. Capable of testing and measuring performance within the specified acceptance criteria.
b. Be calibrated at manufacturer's recommended intervals with current calibration tags permanently affixed to the instrument being used.
c. Be maintained in good repair and operating condition throughout duration of use on Project.
d. Be recalibrated/repaired if dropped or damaged in any way since last calibrated.

B. Proprietary Test Instrumentation and Tools:

1. Equipment Manufacturer's Proprietary Instrumentation and Tools: For installed equipment included in the Cx process, test instrumentation and tools manufactured or prescribed by equipment manufacturer to service, calibrate, adjust, repair, or otherwise work on its equipment or required as a condition of equipment warranty, perform the following:

a. Submit proprietary instrumentation and tools list. For each instrument or tool, identify the following:

1) Instrument or tool identification number.
2) Equipment schedule designation of equipment for which the instrument or tool is required.
3) Manufacturer, make, model, and serial number.
4) Calibration history, including certificates from agencies that calibrate the instrument or tool, where appropriate.

b. Include a separate list of proprietary test instrumentation and tools in operation and maintenance manuals.
c. Electrical proprietary test instrumentation and tools become property of Owner at the time of Substantial Completion.

PART 2 - PRODUCTS (Not Used)
PART 3 - EXECUTION

3.1 CONSTRUCTION CHECKLISTS

A. Prepare detailed construction checklists for electrical systems, subsystems, equipment, and components. Complete and submit construction checklists.

3.2 CONSTRUCTION CHECKLIST REVIEW

A. Review and provide written comments on draft construction checklists. CxA will create required draft construction checklists and provide them to Contractor.

B. Return draft Construction Checklist review comments within [**10**]<**Insert number**> days of receipt.

C. When review comments have been resolved, CxA will provide final construction checklists, marked "Approved for Use, (date)."

D. Use only construction checklists, marked "Approved for Use, (date)."

3.3 GENERAL TESTING REQUIREMENTS

A. Certify that electrical systems, subsystems, and equipment have been installed, calibrated, and started and that they are operating according to the Contract Documents and approved Shop Drawings and submittals.

B. Certify that electrical instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents and approved Shop Drawings and submittals, and that pretest set points have been recorded.

C. Set systems, subsystems, and equipment into operating mode to be tested according to approved test procedures (for example, normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).

D. Measure capacities and effectiveness of systems, assemblies, subsystems, equipment, and components, including operational and control functions to verify compliance with acceptance criteria.

E. Test systems, assemblies, subsystems, equipment, and components operating modes, interlocks,

control responses, and responses to abnormal or emergency conditions, and response according to acceptance criteria.

F. Construction Checklists: Prepare and submit detailed construction checklists for electrical systems, subsystems, equipment, and components.

1. Contributors to development of construction checklists must include, but are not limited to, the following:

a. Electrical systems and equipment installers.
b. Electrical instrumentation and controls installers.

G. Perform tests using design conditions, whenever possible.

1. Simulated conditions may, with approval of Architect, be imposed using an artificial load when it is impractical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by CxA, and document simulated conditions and methods of simulation. After tests, return configurations and settings to normal operating conditions.
2. Cx test procedures may direct that set points be altered when simulating conditions is impractical.
3. Cx test procedures may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are impractical.

H. If tests cannot be completed because of a deficiency outside the scope of the electrical system, document the deficiency and report it to Owner. After deficiencies are resolved, reschedule tests.

I. If seasonal testing is specified, complete appropriate initial performance tests and documentation and schedule seasonal tests.

J. Coordinate schedule with, and perform Cx activities at the direction of the CxA.

K. Comply with Construction Checklist requirements, including material verification, installation checks, startup, and performance tests requirements specified in Sections specifying electrical systems and equipment.

L. Provide qualified testing and inspecting agency personnel in accordance with Section 260010 "Supplemental Requirements for Electrical," instrumentation, tools, and equipment to complete and document the following:

1. Performance tests.
2. Demonstration of a sample of performance tests.
3. Cx tests.
4. Cx test demonstrations.

3.4 Cx TESTS FOR ELECTRICAL SYSTEMS

A. Verification of Normal Electrical System Operation:

1. Prerequisites: Acceptance of results for construction checklists for Division 26 electrical components associated with Normal electrical system.
2. Equipment and Systems to Be Tested: Division 26 electrical equipment.
3. Test Purpose: Verify operation of Normal electrical system.
4. Test Conditions: Energize components of Normal electrical system, one at a time.
5. Acceptance Criteria: Proper operation of Normal electrical system over a [**24**][**48**]<**Insert number**>-hour period.

B. Verification of Essential Electrical System Operation:

1. Prerequisites:

a. Acceptance of results for construction checklists for Division 26 electrical components associated with Essential electrical system.
b. Completion of "Verification of Normal Electrical System Operation" tests.

2. Equipment and Systems to Be Tested: Division 26 electrical equipment.
3. Test Purpose: Verify operation of Essential electrical system.
4. Test Conditions:

a. Energize components of Normal electrical system.
b. Simulate a failure of Normal electrical system.

5. Acceptance Criteria: Transfer of power from Normal to Essential electrical system within OPR.

C. Verification of Control and Instrumentation:

1. Prerequisites: Acceptance of results for construction checklists.

a. Section 260913 "Electrical Power Monitoring and Control."
b. Section 260926 "Lighting Control Panelboards."
c. Section 260936 "Modular Dimming Controls."
d. Section 260943.16 "Addressable-Luminaire Lighting Controls."
e. Section 260943.23 "Relay-Based Lighting Controls."
f. Section 262713 "Electricity Metering."
g. Section 263533 "Power Factor Correction Equipment."

D. Test Purpose: Verify operation of control and monitoring systems for Normal and Essential electrical systems.

E. Test Conditions:

1. Energize components of Normal electrical system.
2. Test operation of equipment.

F. Acceptance Criteria: Operation of equipment according to OPR.

END OF SECTION 26 08 00 00

SECTION 26 09 00 00 - ADDRESSABLE LUMINAIRE LIGHTING CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Bus power supply.
2. Controller/gateways.
3. User interface.
4. Lighting control system management software.
5. Luminaire switching and dimming modules.
6. Ballast switching and dimming modules.
7. Sensors.
8. Relays.
9. Manual switches and plates.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 DEFINITIONS

A. DALI: Digital addressable lighting interface.

B. Data Bus: Two wires used to communicate with bus connected devices.

C. Device: A collective term for DALI-compliant bus connected devices, including fluorescent ballasts, incandescent luminaires, manual switches, switching relays, and similar. Sometimes also called "slave unit."

D. Group: A set of devices that respond at the same time to messages on the data bus.

E. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.

F. Scene: Digital light level associated with a preset; stored in the luminaire ballast.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control modules, power distribution components, relays, manual switches

and plates, and conductors and cables.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
3. Sound data including results of operational tests of central dimming controls.
4. Operational documentation for software and firmware.

B. Shop Drawings:

1. Floor Plans: Location, orientation, and coverage area of each sensor; group designations; and other specific design symbols and designations as required to define the installation, location, and configuration of all control devices.
2. Address Drawing: Reflected ceiling plan and floor plans, showing data-bus-connected devices, address for each device, and device groups. The plans must be based on construction plans, using the same legend, symbols, and schedules.
3. Point List and Data Bus Load: Summary list of all control devices, sensors, ballasts, and other loads connected to each data bus and total connected load for each data bus. Include percentage of rated connected load and device addresses.
4. Wire Termination Diagrams and Schedules: Coordinate nomenclature and presentation with Drawings and block diagram. Differentiate between manufacturer-installed and field-installed wiring.
5. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices used. Describe characteristics of network and other data communication lines.
6. Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems specified in [**Section 230923 "Direct Digital Control (DDC) System for HVAC."**]<**Insert Section number and title.**>

    a. Show interconnecting signal and control wiring, and interface devices that show compatibility of inputs and outputs.
    b. For control interfaces and adapters, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of the protocol.

1.4 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

B. Sample Warranty: For manufacturer's special warranty.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Bus Power Supplies: Equal to [**two**]<**Insert number**> percent of amount installed, but no fewer than [**two**]<**Insert number**>.
2. Controller/Gateways: Equal to [**two**]<**Insert number**> percent of amount installed, but no fewer than [**two**]<**Insert number**>.
3. Incandescent Switching and Dimming Modules: Equal to [**two**]<**Insert number**> percent of amount installed, but no fewer than [**two**]<**Insert number**>.
4. Fluorescent Ballasts: Equal to [**two**]<**Insert number**> percent of amount installed, but no fewer than [**two**]<**Insert number**>.

5. Lighting Control Relays: Equal to [**two**]<**Insert number**> percent of amount installed, but no fewer than [**two**]<**Insert number**>.

1.6 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace components of lighting controls that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Software: Failure of input and output to execute switching or dimming commands.
b. Failure of modular relays to operate under manual or software commands.
c. Ballast failure.
d. Damage of electronic components due to transient voltage surges.

2. Warranty Periods:

a. For DALI Ballasts: [**Three**]<**Insert number**> years from date of Substantial Completion.
b. For Control Components That Are Not Part of Ballasts: [**Three**]<**Insert number**> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. DALI:

1. Components: Individually addressable devices (such as ballasts, relays, dimmers, and switches) that are operated from digital signals received through a DALI-compliant bus, from data-entry and -retrieval devices (such as computers, Internet portals, hand-held IR programming devices, wired Ethernet hubs, wireless IEEE 802.11 hubs[**, and**]<**Insert digital communications device**>). Devices also report status to data-entry and -retrieval devices though the bus.
2. Digital Control: Use peer-to-peer communication and distributed logic, where the failure of any single component must be automatically isolated and not affect global system functions.

B. Ethernet LAN:

1. Provide an Ethernet LAN to connect controller/gateways to a PC running a Microsoft Windows operating system. Comply with requirements in Section 271513 "Communications Copper Horizontal Cabling."
2. Ethernet Protocols: Comply with and be compatible with 10/100 BaseT TCP/IP routers and networks.
3. TCP/IP Modem: Capable of maintaining a secure Internet connection using VPN or equivalent protocol.

C. Interface with HVAC DDC System: Hardware and software must interface with HVAC DDC system to monitor, control, display, and record data for use in processing reports. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."

1. Hardwired Points:

a. Monitoring: On-off status, <**Insert monitoring point**>.

b. Control: On-off operation, <**Insert control point**>.

2. Communication Interface: Comply with [**ASHRAE 135**]<**Insert type of interface**>. Communication must interface with HVAC DDC system to remotely control and monitor lighting from HVAC DDC system operator workstation. Control features and monitoring points displayed locally at lighting panel must be available through DDC system for HVAC. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."

D. Surge Protective Device: Factory installed as an integral part of control components or field-mounted surge protective device complying with UL 1449, SPD Type 2.

E. Operation: Input signal from digital signal sources switches or dims DALI devices associated with ballasts or luminaires, or switches field-deployed, DALI-compliant, control relays.

1. Each device and relay is connected to a digital data bus.
2. Each DALI device and relay has a digital address and can be operated by a digital signal.
3. Each device or relay can be assigned to any or all of 16 available groups connected to a single data bus.
4. Each dimming ballast may have as many as 16 preset lighting levels or scenes. Scenes can be programmed to ballasts and may be applied to groups.

F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

G. Comply with 47 CFR 15, Subparts A and B, for Class A digital devices.

H. Comply with protocol described in IEC 60929, Annexes E and G, for DALI lighting control devices, wiring, and computer hardware and software.

I. Comply with UL 916.

2.2 BUS POWER SUPPLY

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Leviton Manufacturing Co., Inc.**]
2. [**Lutron Electronics Co., Inc**]
3. [**nLight; Acuity Brands Lighting, Inc.**]
4. [**Philips; Signify North America; Signify Holding**]
5. [**Starfield Controls, Inc.**]
6. [**Tridonic**]
7. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Leviton Manufacturing Co., Inc.**]
2. [**Lutron Electronics Co., Inc**]
3. [**nLight; Acuity Brands Lighting, Inc.**]
4. [**Philips; Signify North America; Signify Holding**]
5. [**Starfield Controls, Inc.**]
6. [**Tridonic**]

7. <**Insert manufacturer's name**>

C. Description: Supply power to data bus for 64 addressable devices, suitable for use with NFPA 70, Class 2 control circuit.

1. Primary Power: Field selectable, 120 and 277 V.
2. Power Supply: Regulated to maintain the operating voltage above 15 V(dc) under full load, and rated for full charging load of 250 mA and a minimum maintained connected load of 190 mA.
3. Pilot Lights: Indicate data bus ground-fault and data bus traffic.

2.3 CONTROLLER/GATEWAYS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Leviton Manufacturing Co., Inc.**]
2. [**Lutron Electronics Co., Inc**]
3. [**Philips; Signify North America; Signify Holding**]
4. [**RAB Lighting**]
5. [**Starfield Controls, Inc.**]
6. [**Tridonic**]
7. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Leviton Manufacturing Co., Inc.**]
2. [**Lutron Electronics Co., Inc**]
3. [**Philips; Signify North America; Signify Holding**]
4. [**RAB Lighting**]
5. [**Starfield Controls, Inc.**]
6. [**Tridonic**]
7. <**Insert manufacturer's name**>

C. Description: DALI controller/gateways link the distributed data buses with an Ethernet network to provide computer configuration, control, analysis, and maintenance. Controller/gateways operate independently and continue to process local inputs and schedules when disconnected from the LAN. Controller/gateways must provide local intelligence and features including the following:

1. Integrated real-time clock with automatic daylight savings adjustment and leap-year correction.
2. Integrated sunrise/sunset support based on the site location (latitude and longitude).
3. Automatic time schedules, to control groups for scheduled occupancy with support for holiday exceptions.
4. Two digital outputs for additional control and interlocking with external equipment such as fans, valves, and security panels.
5. Support [**one**][**two**] data bus(es).
6. Computer Monitoring and Configuration: The controller/gateway must allow configuration, monitoring, and analysis from PCs on the Ethernet LAN.

D. Each data bus must have the capacity to control 64 addressable devices, using NFPA 70, Class 2 control circuit.

1. Each data bus must have the capacity to control up to 16 groups and scenes.
2. 10 BaseT Ethernet port for DDC system for HVAC connection.

3. LED indicator lights for Ethernet status (link, send, and receive), power-on, and LAN failure.
4. Linking of switch and sensor inputs to relay and ballast outputs.
5. Viewing relay and ballast output status.
6. Controlling relay and ballast outputs.
7. Setting device addresses.
8. Assigning switch and sensor inputs and relay and ballast output modes.

E. Allow connection of the following DALI-compliant addressable devices:

1. Fluorescent luminaire switching and dimming, for linear and compact lamps.
2. Incandescent luminaire switching and dimming.
3. HID and HPS luminaire switching and dimming.
4. LED luminaire switching and dimming.
5. Occupancy and photoelectric sensors.
6. Emergency lighting interface complying with UL 924.

F. Stores system programming in nonvolatile memory.

1. Switch to enable or disable software programming.

2.4 USER INTERFACE

A. Workstations: A laptop PC, with Microsoft Windows operating system and lighting control system management software installed. With automatic backup.

1. Include documentation, storage media, and licensing for a minimum of five concurrent users.

B. Tablet Computer: Handheld, with custom graphical user-interface software, supplied by the controller/gateway supplier. The software must provide for all DALI-protocol programming commands to be applied to the controller/gateway via a tethered connection.

C. Web Interface: Internet portal, with [**one**][**10**]<**Insert number**> unique username and password(s), and a custom graphical user interface, allowing DALI-protocol programming commands to be applied to the controller gateway via [**LAN**][**the Internet**].

D. IR Programming Assistant: Handheld, with custom graphical user-interface software, supplied by the controller/gateway supplier to program the manual switches.

2.5 LIGHTING CONTROL SYSTEM MANAGEMENT SOFTWARE

A. The software must provide for programming, configuring, and monitoring all devices connected to all data buses of the lighting control system, using application-specific software with Microsoft Windows-based, user-friendly software with graphical user-interface designed screens.

1. The software must be object oriented with pop-up menus and built-in help screens. All specified features of the data-bus-connected devices and those associated with controller/gateways must be included in the software.

2.6 LUMINAIRE SWITCHING AND DIMMING MODULES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide**

products by one of the following][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Leviton Manufacturing Co., Inc.**]
2. [**Lutron Electronics Co., Inc**]
3. [**Philips; Signify North America; Signify Holding**]
4. [**Starfield Controls, Inc.**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Leviton Manufacturing Co., Inc.**]
2. [**Lutron Electronics Co., Inc**]
3. [**Philips; Signify North America; Signify Holding**]
4. [**Starfield Controls, Inc.**]
5. <**Insert manufacturer's name**>

C. Description: Comply with DALI exponential dimming curve calibrated for the connected lamp type, group, and scene settings, and with DALI light-level and configuration commands. Dimmer rise time must be not less than 15 microseconds.

2.7 BALLAST SWITCHING AND DIMMING MODULES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Lutron Electronics Co., Inc**]
2. [**OSRAM SYLVANIA**]
3. [**Philips; Signify North America; Signify Holding**]
4. [**Tridonic**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Lutron Electronics Co., Inc**]
2. [**OSRAM SYLVANIA**]
3. [**Philips; Signify North America; Signify Holding**]
4. [**Tridonic**]
5. <**Insert manufacturer's name**>

C. Each ballast or group must be addressable and must include on-off, fade, dimming, scene settings, and other standard DALI control functions and as required to meet the sequence of operation.

D. Ballasts: Comply with requirements in [**Section 265116 "Fluorescent Interior Lighting" for ballasts for linear fluorescent lamps**][**and**][**Section 265123 "HID Interior Lighting" for ballasts for HID lamps**]; electronic programmed-start; and the following:

1. Starting Method: Programmed rapid start with antiflash (turns on at previously set light level).
2. Dimming Range: 100 to 10 percent of rated lumens unless otherwise indicated.
3. Ballast Factor: 1.0 at full output; 0.01 at full dim.
4. Input Voltage Range: 108 to 305 V.

2.8 SENSORS

A. Comply with requirements in Section 260923 "Lighting Control Devices." All sensors must be DALI-protocol compliant.

B. Daylight Harvesting Switching and Dimming Controls:

1. Adjustments and Set Points: All adjustments with exception of sensor range must be made via the communication network.
2. Remote Monitoring and Reporting: Sensor value must be displayed when queried by lighting management software or must automatically report based on a change of value or change of time period setting.

C. Indoor Occupancy Sensors: May be powered directly from the lighting control network or with a standalone power supply. Units powered with a standalone power supply must interface with the lighting control system through an electrically isolated digital input.

2.9 RELAYS

A. Relays: Electrically operated, mechanically held single-pole switch, rated at 20 A at 277 V. Short-circuit current rating must be not less than 5 kA. Pilot light indicates when relay is closed and latched. Control must be by DALI digital data bus. Relay status must be displayed when queried by lighting management software.

B. Relay Panel: A single enclosure with incoming lighting branch circuits, relays, and connection to the DALI digital control network.

1. Enclosure: NEMA 250, Type 1 unless otherwise indicated.
2. Barriers to separate control-voltage and low-voltage components.
3. Directory: Cover mounted, identifying each relay with its device address and naming the load controlled.

C. Individually Mounted Relays:

1. Enclosure: Standard outlet box or NEMA 250, Type 1 unless otherwise indicated.
2. Directory: Cover mounted, identifying each relay with its device address.

2.10 MANUAL SWITCHES AND PLATES

A. Connection Type: RS-485 protocol, [**Category 5**][**Category 5e**] UTP cable, using 8PSJ connectors. Power must be from the control unit.

B. Push-Button Switches: Modular, operating over the DALI digital data bus.

1. Each switch must control the following functions, in coordination with programmed sequence of operation and related sensors:

a. On.
b. Off.
c. Dimming, increase light level.
d. Dimming, decrease light level.
e. Return to preset light level.

2. LED Pilot Lights: On to indicate that the control is active, or when the manual control is operated.
3. Match color and style specified in Section 262726 "Wiring Devices."
4. Integral IR receiver for programming.

C. Wall Plates: Single and multigang plates as specified in Section 262726 "Wiring Devices."

D. Legend: Engraved or permanently silk-screened on wall plate where indicated. Use designations indicated on Drawings.

2.11 CONDUCTORS AND CABLES

A. Power Wiring to Supply Side of Class 2 Power Source: Not smaller than No. 12 AWG, complying with Section 260523 "Control-Voltage Electrical Power Cables."

B. Class 2 Control Cables: Multiconductor cable with copper conductors not smaller than [**No. 18**][**No. 22**][**No. 24**] AWG, complying with Section 260523 "Control-Voltage Electrical Power Cables."

C. Class 1 Control Cables: Multiconductor cable with copper conductors not smaller than [**No. 14**][**No. 16**][**No. 18**] AWG, complying with Section 260523 "Control-Voltage Electrical Power Cables."

D. Digital and Multiplexed Signal Cables: UTP cable with copper conductors, complying with [**Category 5e**][**Category 6**] for horizontal copper cable and with Section 271513 "Communications Copper Horizontal Cabling."

PART 3 - EXECUTION

3.1 INSTALLATION OF WIRING

A. Wiring Method: Comply with Section 260523 "Control-Voltage Electrical Power Cables" and Section 260523 "Control-Voltage Electrical Power Cables."

1. Comply with requirements for cable trays specified in Section 260536 "Cable Trays for Electrical Systems."
2. Comply with requirements for raceways specified in Section 260533.13 "Conduits for Electrical Systems."

B. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

3.2 IDENTIFICATION

A. Identify system components, wiring, cabling, boxes, cabinets, and terminals. Comply with identification requirements specified in Section 260553 "Identification for Electrical Systems."

B. Identify field-installed conductors, interconnecting wiring, and components; install warning signs complying with Section 260553 "Identification for Electrical Systems."

C. Identify all ceiling-mounted controls with data bus number and device address.

D. Label each device cable within **6 inch (152 mm)** of connection to bus power supply or termination block.

3.3 FIELD QUALITY CONTROL

A. Acceptance Testing Preparation:

1. Test continuity of each circuit.

B. Field tests must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

C. Tests and Inspections:

1. Test each bus controller using local and remote controls.
2. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters.

D. Nonconforming Work:

1. Lighting controls will be considered defective if they do not pass tests and inspections.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

E. Field Test Reports:

1. Prepare test and inspection reports, including a certified report that identifies bus controllers included and describes query results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.
2. Printed list of all points created from actual queries of all addressed control points to include lamps, ballasts, manual controls, and sensors.
3. Event log verifying the performance of all devices generating event messages to include occupancy sensors, control buttons, alarm messages, and any other change of value messages.

3.4 STARTUP SERVICE

A. [**Engage a factory-authorized service representative to perform**][**Perform**] startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Activate luminaires and verify that all lamps are operating at 100 percent.
3. Burn-in fluorescent lamps at 100 percent for 100 hours.
4. Confirm correct communications wiring, initiate communications between DALI devices and controller/gateways, and program the lighting control system according to approved configuration schedules, time-of-day schedules, and input override assignments.
5. <**Insert startup steps if any**>.

3.5 ADJUSTING

A. Occupancy Adjustments: When requested within [**12**]<**Insert number**> months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two**]<**Insert number**> visits to Project during other-than-normal occupancy hours for this purpose.

3.6 SOFTWARE SERVICE AGREEMENT

A. Technical Support: Beginning at Substantial Completion, service agreement must include software support for [**two**]<**Insert number**> years.

B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within [**two**]<**Insert number**> years from date of Substantial Completion. Upgrading software must include operating system and new or revised licenses for using software.

1. Upgrade Notice: At least [**30**]<**Insert number**> days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

END OF SECTION 26 09 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 09 00 00A - RELAY-BASED LIGHTING CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Lighting control relay panels.
2. Networked lighting control panels.
3. Manual switches and cover plates.
4. Field-mounted signal sources.
5. Conductors and cables.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 DEFINITIONS

A. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control modules, power distribution components, relays, manual switches and cover plates, and conductors and cables.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
3. Sound data including results of operational tests of central dimming controls.
4. Operational documentation for software and firmware.

B. Shop Drawings: For each relay panel and related equipment.

1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
2. Detail enclosure types and details for types other than Type 1.
3. Detail wiring partition configuration, current, and voltage ratings.
4. Short-circuit current rating of relays.
5. Address Drawing: Reflected ceiling plan and floor plans, showing connected luminaires, address for each luminaire, and luminaire groups. Base plans on construction plans, using the same legend, symbols, and schedules.

6. Point List and Data Bus Load: Summary list of all control devices, sensors, ballasts, and other loads. Include percentage of rated connected load and device addresses.
7. Wire Termination Diagrams and Schedules: Coordinate nomenclature and presentation with Drawings and block diagram. Differentiate between manufacturer-installed and field-installed wiring.
8. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.
9. Submit evidence that lighting controls are compatible with connected monitoring and control devices and systems specified in [**Section 230923 "Direct Digital Control (DDC) System for HVAC."**]<**Insert Section number and title.**>

    a. Show interconnecting signal and control wiring, and interface devices that show compatibility of inputs and outputs.
    b. For control interfaces and adapters, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of the protocol.

C. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Sample warranties.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Lighting Control Relays: Equal to <**Insert number**> percent of amount installed[**for each size indicated**], but no fewer than <**Insert number**>.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Handle and prepare panels for installation in accordance with NECA 407.

1.7 WARRANTY

A. Special Manufacturer Extended Warranty: Manufacturer warrants that components of standalone multipreset modular dimming controls perform in accordance with specified requirements and agrees to provide repair or replacement of components that fail to perform as specified within extended warranty period.

1. Initial Extended Warranty Period: [**Two**][**Three**][**Four**]<**Insert number**> year(s) from date of Substantial Completion, for labor, materials, and equipment.
2. Follow-on Extended Warranty Period: [**Eight**]<**Insert number**> year(s) from date of Substantial Completion, for materials that failed because of transient voltage surges only, f.o.b. the nearest shipping point to Project site.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Sequence of Operations: Input signal from field-mounted manual switches, or digital signal sources, must open or close one or more lighting control relays in the lighting control panels. Any combination of inputs must be programmable to any number of control relays.

B. Interface with HVAC DDC System: Hardware and software must interface with HVAC DDC system to monitor, control, display, and record data for use in processing reports. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."

1. Hardwired Points:

a. Monitoring: On-off status, <**Insert monitoring point**>.
b. Control: On-off operation, <**Insert control point**>.

2. Communication Interface: Comply with [**ASHRAE 135**][**ISO/IEC 14908-1**][**"MODBUS Application Protocol Specification"**]<**Insert type of interface**>. The communication interface must enable the HVAC DDC system operator to remotely control and monitor lighting from a HVAC DDC system operator workstation. Control features and monitoring points displayed locally at lighting panel must be available through the HVAC DDC system. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."

C. Surge Protective Device: Factory installed as an integral part of control components or field-mounted surge suppressors complying with UL 1449, SPD Type 2.

D. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.

E. Comply with 47 CFR 15, Subparts A and B, for Class A digital devices.

F. Comply with UL 916.

2.2 LIGHTING CONTROL RELAY PANELS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**Intermatic, Inc**]
3. [**Leviton Manufacturing Co., Inc.**]
4. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
5. [**Lutron Electronics Co., Inc**]
6. [**Philips; Signify North America; Signify Holding**]
7. [**Siemens Industry, Inc., Energy Management Division**]
8. [**Touch-Plate Technologies**]
9. [**WattStopper; Legrand North America, LLC**]
10. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**Intermatic, Inc**]
3. [**Leviton Manufacturing Co., Inc.**]
4. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
5. [**Lutron Electronics Co., Inc**]
6. [**Philips; Signify North America; Signify Holding**]
7. [**Siemens Industry, Inc., Energy Management Division**]
8. [**Touch-Plate Technologies**]
9. [**WattStopper; Legrand North America, LLC**]
10. <**Insert manufacturer's name**>

C. Description: Standalone lighting control panel using mechanically latched relays to control lighting and appliances.

D. Lighting Control Panel:

1. A single enclosure with incoming lighting branch circuits, control circuits, switching relays, and on-board timing and control unit.
2. A vertical barrier separating branch circuits from control wiring.

E. Control Unit: Contain the power supply and electronic control for operating and monitoring individual relays.

1. Timing Unit:

a. 365-day calendar, astronomical clock, and automatic adjustments for daylight savings and leap year.
b. Clock configurable for 12-hour (A.M./P.M.) or 24-hour format.
c. [**Four**]<**Insert number**> independent schedules, each having [**24**]<**Insert number**> time periods.
d. Schedule periods settable to the minute.
e. Day-of-week, day-of-month, day-of-year with one-time or repeating capability.
f. [**10**]<**Insert number**> special date periods.

2. Sequencing Control with Override:

a. Automatic sequenced on and off switching of selected relays at times set at the timing unit, allowing timed overrides from external switches.
b. Sequencing control must operate relays one at a time, completing the operation of all connected relays in not more than 10 seconds.
c. Override control must allow any relay connected to it to be switched on or off by a field-deployed manual switch or by an automatic switch, such as an occupancy sensor.
d. Override control "blink warning" must warn occupants approximately [**five minutes**]<**Insert time**> before actuating the off sequence.

3. Nonvolatile memory must retain all setup configurations. After a power failure, the controller must automatically reboot and return to normal system operation, including accurate time of day and date.

F. Relays:

1. Electrically operated, mechanically held single-pole switch, rated at 20 A at 277 V. Short-circuit current rating must be not less than 5 kA. Control must be three-wire, 24 V(ac).
2. Electrically operated, mechanically held single-pole switch, rated at 20 A at 120 V for tungsten, 30 A at 277 V for ballast, 1.5 hp at 120 V, and 3 hp at 277 V. Short-circuit current rating must be not

less than 14 kA. Control must be three-wire, 24 V(ac).

G. Power Supply: NFPA 70, Class 2, sized for connected equipment, plus 20 percent spare capacity. Powered from a dedicated branch circuit of the panelboard that supplies power to the line side of the relays, sized to provide control power for the local panel-mounted relays, bus system, control-voltage inputs, field-installed occupancy sensors, and photo sensors.

H. Operator Interface:

1. Integral alphanumeric keypad and digital display, and intuitive drop-down menus to assist in programming.
2. Log and display relay on-time.
3. Connect relays to one or more time and sequencing schemes.

2.3 NETWORKED LIGHTING CONTROL PANELS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**Intermatic, Inc**]
3. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
4. [**Lutron Electronics Co., Inc**]
5. [**Touch-Plate Technologies**]
6. [**WattStopper; Legrand North America, LLC**]
7. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**Intermatic, Inc**]
3. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
4. [**Lutron Electronics Co., Inc**]
5. [**Touch-Plate Technologies**]
6. [**WattStopper; Legrand North America, LLC**]
7. <**Insert manufacturer's name**>

C. Description: Lighting control panels using mechanically latched relays to control lighting and appliances. The panels must be capable of being interconnected with digital communications to appear to the operator as a single lighting control system.

D. Lighting Control Panels:

1. A single enclosure with incoming lighting branch circuits, control circuits, switching relays, and on-board timing and control unit.
2. A vertical barrier separating branch circuits from control wiring.

E. Main Control Unit: Installed in the main lighting control panel only; powered from the branch circuit of the standard control unit.

1. Ethernet Communications: Comply with [**TCP/IP**]<**Insert network protocol**> protocol. The main control unit must provide for programming of all control functions of the main and all networked slave lighting control panels including timing, sequencing, and overriding.

2. Protocol: Controllers must support serial MS/TP and Ethernet IP communications in accordance with [**ASHRAE 135**][**ISO/IEC 14908-1**][**"MODBUS Application Protocol Specification"**], and must be able to communicate directly via DDC system for HVAC TIA-485 serial networks and Ethernet 10Base-T networks as a native device.
3. Web Server: Display information listed below over a standard Web-enabled server for displaying information over a standard browser.

    a. A secure, password-protected login screen for modifying operational parameters, accessible to authorized users via Web page interface.
    b. Panel summary showing the master and slave panels connected to the controller.
    c. Controller diagnostic information.
    d. Show front panel mimic screens for setting up controller parameters, input types, zones, and operating schedules. These mimic screens must also allow direct breaker control and zone overrides.

4. Timing Unit:

    a. 365-day calendar, astronomical clock, and automatic adjustments for daylight savings and leap year.
    b. Clock configurable for 12-hour (A.M./P.M.) or 24-hour format.
    c. [**Four**]<**Insert number**> independent schedules, each having [**24**]<**Insert number**> time periods.
    d. Schedule periods settable to the minute.
    e. Day-of-week, day-of-month, day-of-year with one-time or repeating capability.
    f. [**16**]<**Insert number**> special date periods.

5. Time Synchronization: The timing unit must be updated not less than every <**Insert number**> hour(s) with the network time server.
6. Sequencing Control with Override:

    a. Automatic sequenced on and off switching of selected relays at times set at the timing unit, allowing timed overrides from external switches.
    b. Sequencing control must operate relays one at a time, completing the operation of all connected relays in not more than 10 seconds.
    c. Override control must allow any relay connected to it to be switched on or off by a field-deployed manual switch or by an automatic switch, such as an occupancy sensor.
    d. Override control "blinking warning" must warn occupants approximately [**five minutes**]<**Insert time**> before actuating the off sequence.
    e. Activity log, storing previous relay operation, including the time and cause of the change of status.
    f. Download firmware to the latest version offered by manufacturer.

F. Standard Control Unit, Installed in All Lighting Control Panels: Contain electronic controls for programming the operation of the relays in the control panel, contain the status of relays, and contain communications link to enable the digital functions of the main control unit. Comply with UL 916.

1. Electronic control for operating and monitoring individual relays, and display relay on-time.
2. Nonvolatile memory must retain all setup configurations. After a power failure, the controller must automatically reboot and return to normal system operation.
3. Integral keypad and digital-display front panel for local setup, including the following:

    a. Blink notice, time adjustable from software.
    b. Ability to log and display relay on-time.
    c. Capability for accepting downloadable firmware so that the latest production features may be added in the future without replacing the module.

G. Relays:

1. Electrically operated, mechanically held single-pole switch, rated at 20 A at 277 V. Short-circuit current rating must be not less than 5 kA. Control must be [**three-wire, 24 V(ac)**][**digital control network**].
2. Electrically operated, mechanically held single-pole switch, rated at 20 A at 120 V for tungsten, 30 A at 277 V for ballast, 1.5 hp at 120 V, and 3 hp at 277 V. Short-circuit current rating must be not less than 14 kA. Control must be [**three-wire, 24 V(ac)**][**digital control network**].

H. Power Supply: NFPA 70, Class 2, UL listed, sized for connected equipment, plus not less than 20 percent spare capacity. Powered from a dedicated branch circuit of the panelboard that supplies power to the line side of the relays, sized to provide control power for the local panel-mounted relays, bus system, control-voltage inputs, field-installed occupancy sensors, and control-voltage photo sensors.

I. Operator Interface: At the main control unit, provide interface for a tethered connection of [**a portable PC running MS Windows**]<**Insert digital device and operating system**> for configuring all networked lighting control panels using setup software designed for the specified operating system. Include one portable device for initial programming of the system and training of Owner's personnel. That device must remain the property of Owner.

J. Software:

1. Menu-driven data entry.
2. Online and offline programming and editing.
3. Provide for entry of the room or space designation for the load side of each relay.
4. Monitor and control all relays, showing actual relay state and the name of the automatic actuating control, if any.
5. Size the software appropriate to the system.

2.4 MANUAL SWITCHES AND COVER PLATES

A. Push-Button Switches: Modular, momentary contact, three wire, for operating one or more relays and to override automatic controls.

1. Match color and style specified in Section 262726 "Wiring Devices."
2. Integral green LED pilot light to indicate when circuit is on.
3. Internal white LED locator light to illuminate when circuit is off.

B. Cover Plates: Single and multigang cover plates as specified in Section 262726 "Wiring Devices."

C. Legend: Engraved or permanently silk-screened on cover plate where indicated. Use designations indicated on Drawings.

2.5 FIELD-MOUNTED SIGNAL SOURCES

A. Daylight Harvesting Switching Controls: Comply with Section 260923 "Lighting Control Devices." Control power may be taken from the lighting control panel, and signal must be compatible with the relays.

B. Indoor Occupancy Sensors and Extreme-Temperature Occupancy Sensors: Comply with Section 260923 "Lighting Control Devices." Control power may be taken from the lighting control panel, and signal must be compatible with the relays.

2.6 CONDUCTORS AND CABLES

A. Power Wiring to Supply Side of Class 2 Power Source: Not smaller than No. 12 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Classes 2 and 3 Control Cables: Multiconductor cable with copper conductors not smaller than [**No. 18**][**No. 22**][**No. 24**] AWG. Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."

C. Class 1 Control Cables: Multiconductor cable with copper conductors not smaller than [**No. 14**][**No. 16**][**No. 18**] AWG. Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."

D. Twisted-Pair Data Cable: [**Category 5e**][**Category 6**][**Category 6a**].

1. Comply with requirements for twisted pair cabling in Section 260523 "Control-Voltage Electrical Power Cables."
2. Comply with requirements in Section 271513 "Communications Copper Horizontal Cabling."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Receive, inspect, handle, and store panels in accordance with NECA 407.

B. Examine panels before installation. Reject panels that are damaged or rusted or have been subjected to water saturation.

C. Examine elements and surfaces to receive panels for compliance with installation tolerances and other conditions affecting performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF WIRING

A. Wiring Methods:

1. Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters.
2. Install cables in raceways and cable trays except within consoles, cabinets, desks, counters, accessible ceiling spaces, and gypsum board partitions where unenclosed wiring method may be used.
3. Install conductors and cables concealed in accessible ceilings, walls, and floors where possible.
4. Conceal raceway and cables except in unfinished spaces.
5. Provide plenum-rated cable, where installed exposed or in open cable tray, within environmental airspaces, including plenum ceilings.
6. Comply with requirements for cable trays specified in Section 260536 "Cable Trays for Electrical Systems."
7. Comply with requirements for raceways specified in Section 260533.13 "Conduits for Electrical Systems."

B. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and

without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

3.3 INSTALLATION OF PANELS

A. Install panels and accessories in accordance with NECA 407.

B. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."

C. Mount top of trim [**90 inch (2286 mm)**]<**Insert dimension**> above finished floor unless otherwise indicated.

D. Mount panel cabinet plumb and rigid without distortion of box.

E. Install filler plates in unused spaces.

3.4 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Section 260553 "Identification for Electrical Systems."

C. Create a directory to indicate loads served by each relay; incorporate Owner's final room designations. Obtain approval before installing. Use a PC or typewriter to create directory; handwritten directories are unacceptable.

D. Lighting Control Panel Nameplates: Label each panel with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

A. Field tests must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

B. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test for low-voltage air circuit breakers described below[**and low-voltage surge arrestors**]. Certify compliance with manufacturer's test parameters.

a. Circuit-Breaker Tests:

1) Compare nameplate with Drawings and Specifications.
2) Inspect physical and mechanical conditions.
3) Inspect anchorage and alignment.
4) Verify that the units are clean.
5) Operate the circuit breaker to ensure smooth operation.
6) Inspect bolted electrical connections for high resistance using one or more of the following methods:

a) A low-resistance ohmmeter.
b) Verify tightness of bolted electrical connections by calibrated torque wrench.
c) Thermographic survey.

7) Inspect operating mechanism, contacts, and arc chutes in unsealed units.
8) Perform adjustments for final protective device settings in accordance with the overcurrent protective device coordination study. Comply with requirements in Section 260573.16 "Coordination Studies."
9) Perform insulation resistance tests for one minute on each pole, phase-to-phase, and phase-to-ground with the circuit breaker closed and across each pole using manufacturer's published data.
10) Perform a contact/pole-resistance test.
11) Perform insulation-resistance tests on control wiring with respect to ground. Applied potential must be 500 V(dc) for 300 V rated cable and 1000 V(dc) for 600 V rated cable. Test duration must be for one minute. Follow manufacturer's instructions for solid-state units.
12) Determine long-time pickup and delay by primary current injection.
13) Determine short-time pickup and delay by primary current injection.
14) Determine ground-fault pickup and time delay by primary current injection.
15) Determine instantaneous pickup by primary current injection.
16) Test functions of the trip unit by means of secondary injection.
17) Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data.
18) Verify correct operation of auxiliary features such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free, anti-pump function, and trip unit battery condition. Reset trip logs and indicators.
19) Verify operation of charging mechanism.

b. Surge Arrestor Tests:

1) Compare nameplate with the Contract Documents.
2) Inspect physical and mechanical conditions.
3) Inspect anchorage, alignment, grounding, and clearances.
4) Verify that the units are clean.
5) Inspect bolted electrical connections for high resistance using one or more of the following methods:

a) Low-resistance ohmmeter.
b) Verify tightness of bolted electrical connections by calibrated torque wrench.

6) Verify that the ground lead on each device is individually attached to a ground bus or ground electrode.
7) Perform an insulation-resistance test on each arrestor, phase terminal-to-ground using voltage in accordance with manufacturer instructions.
8) Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems" for grounding tests.

C. Nonconforming Work:

1. Lighting control panel will be considered defective if it does not pass tests and inspections.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

D. Prepare test and inspection reports, including a certified report that identifies lighting control panels and describes scanning results. Include notation of deficiencies detected, remedial action taken, and

observations made after remedial action.

E. Manufacturer Services:

1. Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

3.6 SYSTEM STARTUP

A. [**Engage a factory-authorized service representative to perform**][**Perform**] startup service.

1. Complete installation and startup checks in accordance with manufacturer's instructions.
2. Confirm correct communications wiring, initiate communications between panels, and program the lighting control system in accordance with approved configuration schedules, time-of-day schedules, and input override assignments.
3. <**Insert startup steps if any**>.

3.7 ADJUSTING

A. Occupancy Adjustments: When requested within [**12**]<**Insert number**> months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two**]<**Insert number**> visits to Project during other-than-normal occupancy hours for this purpose.

3.8 MAINTENANCE

A. Software and Firmware Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software support for [**two**]<**Insert number**> years.
2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software upgrades that become available within [**two**]<**Insert number**> years from date of Substantial Completion. Verify upgrading software includes operating system and new or revised licenses for using software.

a. Upgrade Notice: No fewer than [**30**]<**Insert number**> days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3. Upgrade Reports: Prepare written report after each update, documenting upgrades installed.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 09 23 00 - ELECTRICAL POWER MONITORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Multifunction energy meters.
2. Power meters.
3. Circuit meters and monitors.
4. Circuit meter and explorer.
5. PC operating system software.
6. Networked PC operating system software.
7. Power monitoring and control software.
8. Network configuration software.
9. Monitoring and control of power distribution equipment.
10. System operator interfaces.
11. Desktop workstations.
12. Portable workstations.
13. Raceways and boxes.
14. Wires and cables.
15. Surge protection devices.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. Section 230923.13 "Energy Meters" for electricity meters for HVAC equipment.
4. Section 262713 "Electricity Metering" for equipment to meter electricity consumption and demand for tenant submetering.

1.2 DEFINITIONS

A. Active Power: The average power consumed by a unit. Also known as "real power."

B. Analog: A continuously varying signal value, such as current, flow, pressure, or temperature.

C. Apparent (Phasor) Power: "S = VI" where "S" is the apparent power, "V" is the RMS value of the voltage, and "I" is the RMS value of the current.

D. Firmware: Software (programs or data) that has been written onto read-only memory (ROM). Firmware is a combination of software and hardware. Storage media with ROMs that have data or programs recorded on them are firmware.

E. KY Pulse: A method of measuring consumption of electricity that is based on a relay operating like a SPST switch.

F. KYZ Pulse: A method of measuring consumption of electricity based on a relay operating like a SPDT switch.

G. L-G: Line to ground.

H. L-L: Line to line.

I. L-N: Line to neutral.

J. MODBUS TCP/IP: An open protocol for exchange of process data.

K. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.

L. N-G: Neutral to ground.

M. Power Factor: The ratio of active power to apparent power, sometimes expressed in percentage.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Multifunction energy meters.
2. Power meters.
3. Circuit meters and monitors.
4. Circuit meter and explorer.
5. PC operating system software.
6. Networked PC operating system software.
7. Power monitoring and control software.
8. Network configuration software.
9. Monitoring and control of power distribution equipment.
10. System operator interfaces.
11. Desktop workstations.
12. Portable workstations.
13. Raceways and boxes.
14. Wires and cables.
15. Surge protection devices.

B. Sustainable Design Submittals:

1. Product Data: Indicating that computers used by the system are certified by ENERGY STAR.

C. Shop Drawings: For power monitoring and control equipment.

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, method of field assembly, components, and location and size of each field connection.

a. Attach copies of approved Product Data submittals for products (such as switchboards, switchgear, and motor-control centers) that describe the following:

1) Location of the meters and gateways, and routing of the connecting wiring.

2) Details of power monitoring and control features to illustrate coordination among related equipment and power monitoring and control.

3. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.
4. Network naming and numbering scheme.
5. Include diagrams for power, signal, and control wiring. Coordinate nomenclature and presentation with a block diagram.
6. Specifications for workstations.
7. UPS sizing calculations for workstation.
8. Surge Suppressors: Data for each device used and where applied.

1.4 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

B. Design Data:

1. Manufacturer's system installation and setup guides, with data forms to plan and record options and setup decisions.

a. Project Record Drawings of as-built versions of submittal Shop Drawings provided in electronic PDF format on compact disk or portable storage device with a USB interface.
b. Testing and commissioning reports and checklists of completed final versions of reports, checklists, and trend logs.
c. As-built versions of submittal Product Data.
d. Names, addresses, e-mail addresses, and 24-hour telephone numbers of Installer and service representatives for the system and products.
e. Operator's manual with procedures for operating control systems including logging on and off, handling alarms, producing point reports, trending data, overriding computer control, and changing set points and variables.
f. Programming manuals with description of programming language and syntax, of statements for algorithms and calculations used, of point database creation and modification, of program creation and modification, and of editor use.
g. Engineering, installation, and maintenance manuals that explain how to do the following:

1) Design and install new points, panels, and other hardware.
2) Perform preventive maintenance and calibration.
3) Debug hardware problems.
4) Repair or replace hardware.

h. Documentation of programs created using custom programming language including set points, tuning parameters, and object database.
i. Backup copy of graphic files, programs, and database on compact disk or portable storage device with a USB interface.
j. Complete original-issue documentation, installation, and maintenance information for furnished third-party hardware including computer equipment and sensors.
k. Complete original-issue copies of furnished software, including operating systems, custom programming language, workstation software, and graphics software on compact disk or portable storage device with a USB interface.
l. Recommended preventive maintenance procedures for system components, including schedule of tasks such as inspection, cleaning, and calibration; time between tasks; and task descriptions.

m. Owner training materials.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Addressable Relays: One for every [**10**]<**Insert number**> installed. Furnish at least one of each type.
2. Data Line Surge Suppressors: One for every [**10**]<**Insert number**> of each type installed. Furnish at least one of each type.
3. <**Insert material**>.

1.6 COORDINATION

A. Coordinate features of distribution equipment and power monitoring and control components to form an integrated interconnection of compatible components.

1. Match components and interconnections for optimum performance of specified functions.

B. Coordinate Work of this Section with those in Sections specifying distribution components that are monitored or controlled by power monitoring and control equipment.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Microprocessor-based monitoring and control of electrical power distribution system(s) that includes the following:

1. Electrical meters that monitor, control, and connect to the data transmission network.
2. LAN: High-speed, multi-access, open, nonproprietary, industry-standard communication protocols.
3. Include [**PC-based workstation**][**multiple PC-based workstations**][**with web access**], with its operating system and application software, connected to data transmission network.

B. The electrical power monitoring and control system must be Internet based.

1. System software must be based on server thin-client architecture, designed around open standards of internet technology.
2. Intent of thin-client architecture is to provide operators complete access to power monitoring and control system via an Internet browser. No special software other than an Internet browser must be required to access graphics, point displays, and trends; to configure trends, points, and controllers; and to edit programming.
3. Internet access must be password protected.

C. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with UL 61010-1 and marked for intended location and application.

2.2 PERFORMANCE REQUIREMENTS

A. Surge Protection: For external wiring of each conductor entry connection to components to protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads.

1. Minimum Protection for Power Lines 120 V and More: [**SPDs complying with UL 1449, listed and labeled for intended use by an NRTL acceptable to authorities having jurisdiction.**][**Auxiliary panel suppressors complying with requirements in Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."**]
2. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Lines: Comply with requirements as recommended by manufacturer for type of line being protected.

B. Addressable Devices: Transmitters and receivers must communicate unique device identification and status reports to monitoring and control clients.

C. Interface with DDC System for HVAC: Provide factory-installed hardware and software to enable the DDC system for HVAC to monitor, display, and record data for use in processing reports.

1. Hardwired Monitoring Points: Electrical power demand (kilowatts), electrical power consumption (kilowatt-hours)[**, power factor**]<**Insert monitoring point**>.
2. [**ASHRAE 135 (BACnet)**][**ISO/IEC 14908-1 (LonTalk)**][**MODBUS Application Protocol Specification**][**Industry-accepted, open-protocol**]<**Insert type of interface**> communication interface with the DDC system for HVAC must enable the DDC system for HVAC operator to remotely monitor meter information from a DDC system for HVAC workstation. Control features and monitoring points displayed locally at metering panel must be available through the DDC system for HVAC.

D. Backup Power Source:

1. Electrical power distribution equipment served by a backup power source for controls must have associated power monitoring and control system products that monitor and control such systems and equipment also served from a backup power source.

2.3 MULTIFUNCTION ENERGY METERS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Eaton**]
2. [**GE Power; General Electric Company**]
3. [**Leviton Manufacturing Co., Inc.**]
4. [**Schneider Electric USA, Inc.**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Eaton**]
2. [**GE Power; General Electric Company**]
3. [**Leviton Manufacturing Co., Inc.**]
4. [**Schneider Electric USA, Inc.**]
5. <**Insert manufacturer's name**>

C. Multifunction Energy Meter: Separately mounted, modular, permanently installed, solid-state, digital I/O instrument for power and energy metering and monitoring; complying with UL 61010-1.

1. Capable of metering four-wire wye, three-wire wye, three-wire delta, and single-phase power systems.
2. Equipped with security lock to protect revenue related metering from unauthorized and accidental changes.

D. Comply with IEC 60529 degree of protection code of IP65 for the front of the meter, and code of IP30 for the body.

E. Overvoltage: Comply with UL 61010-1 overvoltage withstand rating for CAT III.

F. Accuracy:

1. Comply with ANSI C12.20, Class 0.5.
2. Neutral Current Measurement: Not more than 0.65 percent.
3. Power Factor: 1.0 percent.
4. Frequency: 0.1 percent.
5. THD: 1.0 percent.
6. Waveform Sampling: 64 per cycle.

G. Data Link:

1. MODBUS TIA-485, RTU protocol, [**2**][**4**]-wire connection to host devices with a compatible port.
2. <**Insert protocol**>.

H. Meter Physical Characteristics:

1. Display: Backlit LCD with antiglare and scratch-resistant lens.
2. Display of Metered Values:

a. One screen to show at least [**three**]<**Insert number**> user-selected values displayed at the same time. Selections available to display must include the following:

1) Meters.
2) Measurements.
3) THD.
4) Energy.
5) Demand.
6) Minimum and maximum values.
7) Power demand.

I. Sampling Rate: Continuously sample and record voltage and current at a rate not less than [**64**]<**Insert number**> samples per cycle, simultaneously on voltage and current channels of the meter.

J. Meters:

1. Instantaneous, RMS:

a. Current: Each phase, [**neutral**]and three-phase average.
b. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
c. Active Power (kW): [**Each phase and**]three-phase total.
d. Reactive Power (kVAR): [**Each phase and**]three-phase total.

e. Apparent Power (kVA): [**Each phase and**]three-phase total.
f. Power Factor: [**Each phase and**]three-phase total.

2. Energy:

a. Active Energy (kWh): Three-phase total.

3. Demand, Derived from Instantaneous RMS Meters:

a. Current: Present and maximum.
b. Active: Present and maximum.
c. Reactive: Present and maximum.
d. Apparent: Present and maximum.

4. Power Quality Measurements:

a. THD: Current and voltage from measurements simultaneously from the same cycle, as can be calculated from the specified sampling rate.

K. I/O: Two optically isolated digital outputs for KY pulsing or control. Output signal characteristics must be 150 mA at 200 V.

1. KY Pulse: Generate standard KY pulses for a user-defined increment of metered active energy as follows:

a. User-defined pulse output, associated with kWh.
b. User-defined pulse output, associated with kVARh.

2. <**Insert control function**>.

L. Capacities and Characteristics:

1. Power Supply: [**120 V(ac), 60 Hz**]<**Insert text**>.
2. Circuit Connections:

a. Voltage: Measurement autoranging, 60 to 400 V(ac) L-N.[**Connect directly to low-voltage (600 V and less) without using voltage transformers.**][**Connect to instrument grade potential transformers secondary at 120 V.**] Meter impedance must be 2 megohm L-L or greater. Overload Tolerance: 1500 V(ac), RMS, continuously.
b. Current: Connect to instrument grade current transformer with a metering range of 5 mA to 6 A. Overcurrent tolerance of the instrument must be 10 A continuous, 50 A for 10 seconds once per hour, and 120 A for one second per hour.
c. Frequency: 45 to 65 Hz.
d. Time: Input from a GPS receiver to synchronize the internal clock of the instrument and to time-synchronize this instrument with the network to a deviation of not greater than 1 ms.

2.4 POWER METERS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Eaton**]
2. [**GE Power; General Electric Company**]

3. [**Leviton Manufacturing Co., Inc.**]
4. [**Schneider Electric USA, Inc.**]
5. [**Siemens Industry, Inc., Energy Management Division**]
6. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Eaton**]
2. [**GE Power; General Electric Company**]
3. [**Leviton Manufacturing Co., Inc.**]
4. [**Schneider Electric USA, Inc.**]
5. [**Siemens Industry, Inc., Energy Management Division**]
6. <**Insert manufacturer's name**>

C. Description: Separately mounted, modular, permanently installed, solid-state, digital I/O instrument for power monitoring and control; complying with UL 61010-1.

1. Capable of metering four-wire wye, three-wire wye, three-wire delta, and single-phase power systems.
2. Equipped with security lock to protect revenue related metering from unauthorized and accidental changes.

D. Comply with IEC 60529 degree of protection code of IP51 for the front of the meter, and code of IP30 for the body.

E. Overvoltage: Comply with UL 61010-1 overvoltage withstand rating for CAT III.

F. Accuracy:

1. Comply with ANSI C12.20, Class 0.5.
2. Neutral Current Measurement: Not more than 0.65 percent.
3. Power: 0.6 percent.
4. Power Factor: 0.5 percent.
5. Active Energy: 0.6 percent.
6. Reactive Energy: 2.5 percent.
7. Frequency: 0.05 percent.
8. THD: 1.0 percent.
9. Waveform Sampling: 32 per cycle.

G. Data Link:

1. MODBUS TIA-485 RTU protocol, [**2**][**4**]-wire connection.

    a. Provide for firmware and software updates through the communications port.

2. <**Insert protocol**>.

H. Meter Physical Characteristics:

1. Display: Backlit LCD with antiglare and scratch-resistant lens.
2. Display of Metered Values: One screen to show at least [**four**]<**Insert number**> lines of user-selected values on one screen at the same time. Provide graphical representation of user-selected values. The screen selections available at the display must include the following:

a. Meters, including those listed under the following:

1) Measurements.
2) THD.
3) Energy.
4) Demand.
5) Minimum and maximum values.
6) Power demand.

I. Sampling Rate: Continuously sample and record voltage and current at a rate not less than [**32 samples per cycle**]<**Insert number**>, simultaneously on voltage and current channels of the meter.

J. Meters:

1. Measurements: Instantaneous, in real time, RMS to the 15th harmonic.

a. Voltage: L-L each phase, L-N each phase, and three-phase average.
b. Current: Each phase, three-phase average, and neutral.
c. Unbalanced current, L-L V(ac) and L-N V(ac).
d. Active Power (+/- kW): Each phase and three-phase total.
e. Reactive Power (+/- kVAR): Each phase and three-phase total.
f. Apparent Power (+/- kVA): Each phase and three-phase total.
g. Displacement Power Factor: Each phase and three-phase total.
h. Distortion Power Factor: Each phase and three-phase total.
i. Frequency.

2. THD from measurements simultaneously from the same cycle, through [**15th**]<**Insert number**> harmonic.

a. Voltage THD: L-L each phase, L-N each phase, and three-phase average.
b. Current THD: Each phase and three-phase average.
c. Total demand distortion.

3. Energy: Accumulated, indicate whether in-flow or out-flow, net and absolute values. Store the values in instrument's nonvolatile memory.

a. Active kWh.
b. Reactive kVARh.
c. Apparent kVAh.

4. Demand: Present, last, predicted, peak.

a. Three-phase average current.
b. Three-phase total active power (kW).
c. Reactive power (kVAR).
d. Apparent power (kVA).

5. Minimum and Maximum Values:

a. L-L and L-N voltages.
b. Current in each phase.
c. Power factor.
d. Active power total.
e. Reactive power total.
f. Apparent power total.
g. THD L-L and L-N voltages.

h. THD current in each phase.
i. Frequency.

K. Power Demand, User Selectable:

1. Thermal Demand: Sliding window updated every second for the present demand and at end of the interval for the last interval. Adjustable window that can be set in 1-minute intervals, from 1 to 60 minutes.
2. Block Interval with Optional Subintervals: Adjustable for 1-minute intervals, from 1 to 60 minutes. User-defined parameters for the following block intervals:

    a. Sliding block that calculates demand every second, with intervals less than 15 minutes, and every 15 seconds with an interval between 15 and 60 minutes.
    b. Fixed block that calculates demand at end of the interval.
    c. Rolling block subinterval that calculates demand at end of each subinterval and displays it at end of the interval.

3. Demand Calculation Initiated by a Synchronization Signal:

    a. Signal is a pulse from an external source. Demand period begins with every pulse. Calculation must be configurable as either a block or rolling block calculation.
    b. Signal is a communication signal. Calculation must be configurable as either a block or rolling block calculation.
    c. Provide for synchronizing the demand with the internal of this instrument.

L. Data Recording: Store the listed values in instrument's nonvolatile memory, indicate which of the three phases relates to the value. Attach a date and time stamp to the peak values and the alarms.

1. Minimum and maximum of real-time RMS measurement.
2. Energy.
3. Demand values.
4. Alarms, store the last 40 events.

M. Alarms: Transmit a digital output and show on display when alarmed. Provide for no fewer than [**15**]<**Insert number**> metered items. Each alarm must be user configured, by using the following options:

1. Date and time stamp.
2. Enable-disable (default) or enable.
3. Pickup magnitude.
4. Pickup time delay.
5. Dropout magnitude.
6. Dropout time delay.
7. Alarm type.
8. Alarm label.

N. Output Signals: Provide two mechanical relays, rated not less than 250 V(ac), 2 A resistive, and rated for 200,000 cycles or more. The relays must be user configurable in one of the following listed modes:

1. Normal contact closure where the contacts change state for as long as the signal exists.
2. Latched mode when the contacts change state when a pickup signal is received and are held until a dropout signal is received.
3. Timed mode when the contacts change state when a pickup signal is received and are held for a preprogrammed duration.

O. Meter Face:

1. Display: Backlit LCD display, six lines, with antiglare and scratch-resistant lens.
2. Display of Metered Values: One screen to show at least [**four**]<**Insert number**> user-selected values on one screen at the same time.
3. Provide for the reset of metered peak values.

P. Capacities and Characteristics:

1. Power Supply: [**120 V(ac), 60 Hz**]<**Insert text**>.
2. Circuit Connections:

a. Voltage: Measurements autoranging, 60 to 400 V(ac) L-N.[**Connect directly to low-voltage (600 V and less) without using voltage transformers.**][**Connect to instrument grade potential transformers secondary at 120 V.**] Meter impedance must be 2 megohm L-L or greater. Overload Tolerance: 1500 V(ac), RMS, continuously.
b. Current: Connect to instrument grade current transformer with a metering range of 5 mA to 6 A. Overcurrent tolerance of the instrument must be 10 A continuous, 50 A for 10 seconds once per hour, and 120 A for one second per hour.
c. Frequency: 45 to 65 Hz.
d. Time: Input from a GPS receiver to synchronize the internal clock of the instrument and to time-synchronize this instrument with the network to a deviation of not greater than 1 ms.

2.5 CIRCUIT METERS AND MONITORS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Eaton**]
2. [**GE Power; General Electric Company**]
3. [**Schneider Electric USA, Inc.**]
4. [**Siemens Industry, Inc., Energy Management Division**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Eaton**]
2. [**GE Power; General Electric Company**]
3. [**Schneider Electric USA, Inc.**]
4. [**Siemens Industry, Inc., Energy Management Division**]
5. <**Insert manufacturer's name**>

C. Description: Separately mounted, modular, permanently installed, solid-state, digital I/O instrument for power monitoring and control; complying with UL 61010-1. Capable of metering four-wire wye, three-wire wye, three-wire delta, and single-phase power systems.

1. Equipped with security lock to protect revenue related metering from unauthorized and accidental changes.

D. Comply with IEC 60529 degree of protection code of IP52 for the front of the meter, and code of IP30 for the back.

E. Overvoltage: Comply with UL 61010-1 overvoltage withstand rating for CAT III.

F. Accuracy:

1. Comply with ANSI C12.20, Class 0.5.
2. For Voltage and Current: 0.5 percent of reading.
3. For Active Power: 0.2 percent.
4. For Active and Reactive Energy: ANSI 12.20, Class 0.2.
5. For Frequency: 0.01 Hz in the range of 45 to 65 Hz.
6. For Power Factor: 0.2 percent from 0.5 leading to 0.5 lagging.

G. Data Links:

1. MODBUS TIA-485 RTU protocol, [**2**][**4**]-wire connection.
2. MODBUS TIA-232/TIA-485 RTU/ASCII protocol, [**2**][**4**]-wire connection.
3. MODBUS TCP:

    a. 10/100BaseTX balanced twisted pair cabling. 8PSJ connector, 100 m link.
    b. Optical fiber 100BaseFX, LC duplex connector, 1300 m link. Multimode 62.5/125 microsecond, 2000 m link.

4. Provide for firmware and software updates through the communications port.
5. Ethernet 10/100BaseTX balanced twisted pair cabling and MODBUS TIA-485 serial master port.
6. Ethernet 10/100BaseTX balanced twisted pair cabling and MODBUS TIA-485 serial master port, Ethernet to serial line gateway, and embedded web server.
7. <**Insert protocol**>.

H. Meter Physical Characteristics:

1. Display: Backlit LCD screen with antiglare and scratch-resistant lens.
2. Display of Metered Values: One screen to show at least [**four**]<**Insert number**> lines of user-selected values on one screen at the same time. Provide graphical representation of user-selected values.
3. Allow user to select a date/time format and the ability to create additional screens for user-specified views and custom quantities without overwriting existing standard screens.

I. Sampling Rate:

1. Continuously sample and record voltage and current at a rate not less than [**128 samples per cycle**]<**Insert number**>, simultaneously on voltage and current channels of the meter.

J. Meters must measure, record with time stamp, calculate, and on request display the following:

1. Measurements: Instantaneous, in real time, RMS to the [**31st**][**63rd**] harmonic:

    a. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
    b. Current: Each phase, three-phase average, and neutral.
    c. Active Power (kW): Each phase and three-phase total.
    d. Reactive Power (kVAR): Each phase and three-phase total.
    e. Apparent Power (kVA): Each phase and three-phase total.
    f. Displacement Power Factor: Each phase and three-phase total.
    g. Distortion Power Factor: Each phase and three-phase total.
    h. Frequency.

2. THD from measurements simultaneously from the same cycle, through [**31st**][**63rd**]<**insert number**> harmonic:

a. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
b. Current: Each phase, three-phase average, and neutral.

3. Energy: Accumulated, indicate in-flow or out-flow, net and absolute values. Store the values in instrument's nonvolatile memory. Provide for storing accumulated energy at user-defined intervals, up to three intervals per day.

a. Active kWh.
b. Reactive kVARh.
c. Apparent kVAh.

4. Demand: Three-phase totals, present, predicted, peak.

a. Average current.
b. Active power (kW).
c. Reactive power (kVAR).
d. Apparent power (kVA).

5. Average, Minimum and Maximum Values:

a. Record, date and time stamp, and save the minimum and maximum values of RMS metered values since the last reset.
b. <**Insert values**>.

K. Power Demand, User Selectable:

1. Thermal Demand: Sliding window updated every second for the present demand and at end of the interval for the last interval. Adjustable window that can be set in 1-minute intervals, from 1 to 60 minutes.
2. Block Interval with Optional Subintervals: Adjustable for 1-minute intervals, from 1 to 60 minutes. User-defined parameters for the following block intervals:

a. Sliding block that calculates demand every second, with intervals less than 15 minutes, and every 15 seconds with an interval between 15 and 60 minutes.
b. Fixed block that calculates demand at end of the interval.
c. Rolling block subinterval that calculates demand at end of each subinterval and displays it at end of the interval.

3. Demand Calculation Initiated by a Synchronization Signal:

a. Synchronize demand with receipt of a signal pulse from an external source. Demand period begins with every pulse. Calculation must be configurable as either a block or rolling block calculation.
b. Synchronize demand with receipt of a communication signal. Calculation must be configurable as either a block or rolling block calculation.
c. Provide for synchronization to the clock in the instrument.

L. Trend Curves: Provide for recording four trend curves at intervals of one minute, one hour, one day, or one month; and forecast values for the trended parameters.

1. Record minimum, maximum, and average values of eight user-selected parameters as follows:

a. Every second for one minute for the one-minute curve.
b. Every minute for one hour for the one-hour curve.
c. Every hour for one day for the one-day curve.

d. Every day for one month for the one-month curve.

2. Forecast the trended parameters for the following:

a. The next four hours.
b. The next four days.

M. Waveform Capture:

1. Steady State Waveform Capture: Manually initiated.

a. Capture, record with time stamp, and store voltage and current waveforms for two cycles.
b. Capture, record with time stamp, and store 128 digitally sampled data points for each cycle of each phase voltage. The number of waveform captures stored onboard must be user configurable.
c. Harmonic analysis performed on the captured waveforms must resolve harmonics through the 63rd.
d. Captured waveforms must be recorded from actual circuit performance.

2. Disturbance Waveform Capture:

a. Capture, record with time stamp, and store 128 digitally sampled data points for each cycle of each phase voltage. Disturbance waveform capture may be initiated manually, by an external contact closure, or by an alarm. The waveform captures must be user configurable from 185 cycles on 1 channel at 16 points per cycle, to 3 cycles on 6 channels at 128 points per cycle.

N. Disturbance Detection and Alarm:

1. Detect and initiate alarm when detecting voltage or current sag and swell.

a. Detect disturbance events of less than half-cycle in length, by monitoring and calculating RMS magnitude of each half-cycle.
b. Event detection must be with user-defined parameters of threshold and delay. The threshold must be user defined as a fixed or relative set point. With relative set point, the instrument will alarm based on the nominal current or voltage equal to its present average value. The instrument must automatically adjust the nominal current and voltage values to avoid nuisance alarms caused by gradual daily variations of currents and voltages.
c. When detecting an alarm condition:

1) Initiate disturbance waveform capture.
2) Record the disturbance parameters into an onboard alarm log with a date and time stamp to the millisecond.
3) Alarm on must be visible on the display and be transmitted over the data link.
4) Display the voltage sag/swell events on ITIC or SEMI graphs to quantify the event for accepted industry standards.

O. Harmonics Information:

1. Calculate the harmonic magnitudes and angles for each phase voltage and current through the 63rd harmonic. Provide harmonic power flows up to the 41st harmonic for active, reactive, and apparent power.
2. The current and voltage information for phases must be obtained simultaneously from the same cycle.
3. Report harmonic information as a percentage of the fundamental or as a percentage of the RMS

values, as selected by the user.

P. Alarms: Alarm events must be user definable. Provide a minimum of 40 user-defined alarm conditions.

1. User Configuration Options:

   a. Date and time stamp.
   b. Enable-disable (default) or enable.
   c. Pickup magnitude.
   d. Pickup time delay.
   e. Dropout magnitude.
   f. Dropout time delay.
   g. Alarm type.
   h. Alarm label.

2. The following classes of events must be available to be programmed as alarm events:

   a. Over/under current.
   b. Over/undervoltage.
   c. Current imbalance.
   d. Phase loss, current.
   e. Phase loss, voltage.
   f. Voltage imbalance.
   g. Over kVA.
   h. Over kW or kVAR into/out of load.
   i. Over/under frequency.
   j. Under power factor, true or displacement.
   k. Over THD.
   l. Over demand, current or power.
   m. Reverse power.
   n. Phase reversal.
   o. Status input change.
   p. End of incremental energy interval.
   q. End of demand interval.
   r. Over/under analog inputs.
   s. Current sag/swell.
   t. Voltage sag/swell.

3. For each over/under metered alarm value, provide for the user to define a pickup, dropout, and delay.
4. The circuit meter and monitor alarms response time must be not less than one second.
5. Provide for up to four alarms to be combined to give a single result using Boolean algebra operations.

Q. EN 50160 Evaluation: Report EN 50160 evaluation data in the following formats: summary of active evaluations, summary of evaluation status, detailed information for each evaluated parameter, and detailed information for each abnormal event.

R. I/O Module: Modular, with multiple I/O options to accomplish specified performance and one or more spare positions for future.

1. KY Pulse: Generate a standard KY pulses for a user-defined increment of metered active energy as follows:

   a. User-defined pulse output, associated with kWh.
   b. Alarm pulse output, which turns on the pulsing at user-defined point.

2. Digital Inputs: As follows:

    a. One input connection rated 24 to 125 V(ac) or V(dc), +/- 10 percent, less than 5 mA burden, 1350 V RMS isolation.
    b. Six input connections rated 19 to 30 V(dc), 5 mA maximum at 24 V(dc). Provide an onboard 24 V(dc) power supply.
    c. Two input connections rated 20 to 150 V(dc) or V(ac), 2 mA maximum.

3. Analog inputs, no fewer than two, adjustable from zero to 5 V(dc) or 4 to 20 mA.
4. Outputs to operate field-installed relays, no fewer than two, providing 6 to 240 V(ac) or 6 to 30 V(dc), 2 A RMS. 5 A maximum for 10 seconds per hour.
5. Analog outputs, no fewer than two, 4 to 20 mA(dc) into 600 ohms maximum.

S. Data Recording: Store the listed values in instrument's nonvolatile memory, indicate which of the three phases relates to the value. Attach a date and time stamp to the peak values and the alarms.

1. Data Logs, General: User configurable. Automatically stamp each entry to the millisecond with date and time.

    a. Each log entry must hold data of up to 96 parameters each.
    b. Each log must be user configurable to log data at a different user-defined schedule interval.
    c. Provide each log with user-defined event or a minimum/maximum condition that will trigger log file entries.
    d. Configure log entries to be recorded as Fill & Hold or Circular (First in, First out, or FIFO), as defined by the user.

2. Minimum/Maximum Logs:

    a. Minimum/Maximum/Average interval log also logs minimum/maximum/average of selected parameters on a selected interval from a user-selected interval length from 1 to 1440 seconds.
    b. Minimum/Maximum log must include the time, date, and value for the minimum and maximum of each of the real-time metered values.

3. Alarm Log: Record time, date, event information, and coincident information for each user-defined and automatically initiated alarm or event. Record selected parameters at 100 ms intervals during events and alarms. Automatically stamp each entry to the millisecond with date and time.
4. Waveform Logs: Capture and store waveforms, from 185 cycles on one channel at 16 samples per cycle, up to 3 cycles on six channels at 128 samples per cycle as defined by the user. Waveform log entries must be externally triggered or forced in response to a user-defined event. Configure log entries to be recorded as Fill & Hold or Circular (FIFO), as defined by the user.

T. Capacities and Characteristics:

1. Power Supply: [**120 V(ac), 60 Hz**]<**Insert text**>.
2. Circuit Connections:

    a. Voltage: Measurement autoranging, zero to 600 V(ac) L-L, zero to 347 V(ac) L-N.[**Connect directly to low-voltage (600 V and less) without using voltage transformers.**][**Connect to instrument grade potential transformers secondary at 120 V.**] Meter impedance must be 2 megohm L-L or greater. Overload Tolerance: 1500 V(ac), RMS, continuously.
    b. Current: Connect to instrument grade current transformer with a metering range of 5 mA to 6 A. Overcurrent tolerance of the instrument must be 10 A continuous, 50 A for 10 seconds

once per hour, and 120 A for one second per hour.
c. Frequency: 45 to 65 Hz.
d. Time: Input from a GPS receiver to synchronize the internal clock of the instrument and to time-synchronize this instrument with the network to a deviation of not greater than 1 ms.

2.6 CIRCUIT METER AND EXPLORER

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Eaton**]
2. [**GE Power; General Electric Company**]
3. [**Schneider Electric USA, Inc.**]
4. [**Siemens Industry, Inc., Energy Management Division**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Eaton**]
2. [**GE Power; General Electric Company**]
3. [**Schneider Electric USA, Inc.**]
4. [**Siemens Industry, Inc., Energy Management Division**]
5. <**Insert manufacturer's name**>

C. Description: Separately mounted, modular, permanently installed, solid-state, digital I/O instrument for power monitoring, control, and power quality explorer; complying with UL 61010-1.

1. Provide for metering four-wire wye, three-wire wye, and three-wire delta power systems.
2. Equip the instrument with security lock to protect revenue related metering from unauthorized and accidental changes.

D. Comply with IEC 60529 degree of protection code of IP52.

E. The circuit meter and monitor must meet UL 61010-1 overvoltage withstand rating of CAT IV.

F. Accuracy to the following plus/minus values:

1. Voltage and Current Meter: 0.04 percent of reading plus 0.025 percent of full scale.
2. Power and Energy Meter: 0.075 percent of reading plus 0.025 percent of full scale.
3. Energy Meter: Comply with ANSI C12.20, Class 0.20.
4. Frequency Meter: 0.01 Hz in the range of 45 to 67 Hz and accurate to 0.1 Hz in the range of 350 to 450 Hz.
5. Power Factor: 0.002 from 0.5 leading to 0.5 lagging.

G. Data Links:

1. TIA-232 port.
2. MODBUS TIA-485 RTU protocol, [**2**][**4**]-wire connection.
3. MODBUS Ethernet TCP/IP protocol:

a. 10/100BaseTX balanced twisted pair cabling. 8PSJ connector, 100 m link.
b. Optical fiber 100BaseFX, LC duplex connector, 1300 m link. Multimode 62.5/125 microsecond, 2000 m link.

c. HTML server, with standard home page and five customizable pages.

4. Firmware and software updates must be accessible through the communications port.
5. <**Insert protocol**>.

H. Physical Characteristics:

1. Display: Backlit LCD screen with antiglare and scratch-resistant lens.
2. Display of Metered Values: One screen to show at least [**four**]<**Insert number**> lines of user-selected values on one screen at the same time. Provide graphical representation of user-selected values.
3. Allow user to select a date/time format and the ability to create additional screens for user-specified views and custom quantities without overwriting existing standard screens.

I. Sampling Rate:

1. Sample current and voltage to provide RMS accuracy to 255th harmonic of the fundamental frequency of 60 Hz.
2. Continuously sample and record voltage and current at a rate not less than [**512 samples per cycle**][**83,333 points per cycle**]<**Insert rate**>, simultaneously on voltage and current channels of the meter.

J. Measure, record with time stamp, and calculate; and, on request, display the following:

1. Measurements: Instantaneous, in real time, RMS to the 63rd harmonic:

a. Voltage: L-L each phase, L-L three-phase average, L-N each phase, L-N three-phase average, and percent unbalanced.
b. Current: Each phase, neutral, ground, three-phase average, apparent RMS, and percent unbalanced.
c. Active Power (kW): Each phase and three-phase total.
d. Reactive Power (kVAR): Each phase and three-phase total.
e. Apparent Power (kVA): Each phase and three-phase total.
f. Displacement Power Factor: Each phase and three-phase total.
g. Distortion Power Factor: Each phase and three-phase total.
h. Frequency.
i. K-factor for each phase.

2. THD from measurements simultaneously from the same cycle, through [**255th**]<**Insert number**> harmonic:

a. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
b. Current: Each phase, three-phase average, and neutral.
c. Power: Active, reactive, and apparent power including power of up to [**41st**]<**Insert number**>.

3. Energy: Accumulated, indicate whether in-flow or out-flow, net and absolute values. Store the values in instrument's nonvolatile memory. Provide for storing accumulated energy at user-defined intervals, up to three intervals per day.

a. Active kWh.
b. Reactive kVARh.
c. Apparent kVAh.

4. Demand:

   a. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.

      1) Present.
      2) Running average.
      3) Last completed interval.
      4) Peak.

   b. Current: Each phase, three-phase average, and neutral.

      1) Present.
      2) Last completed interval.
      3) Minimum.
      4) Peak.

   c. Active Power (kW): Three-phase totals.

      1) Last completed interval.
      2) Predicted.
      3) Peak.
      4) Coincident with peak kVA demand.
      5) Coincident with peal kVAR demand.

   d. Reactive Power (kVAR): Three-phase totals.

      1) Last completed interval.
      2) Predicted.
      3) Peak.
      4) Coincident with peak kW demand.
      5) Coincident with peal kVA demand.

   e. Apparent Power (kVA): Three-phase totals.

      1) Last completed interval.
      2) Predicted.
      3) Peak.
      4) Coincident with peak kW demand.
      5) Coincident with peak kVA demand.

   f. Distortion Power Factor: Three-phase totals.

      1) Last completed interval.
      2) Predicted.
      3) Peak.
      4) Coincident with peak kVA demand.
      5) Coincident with peal kVAR demand.

K. Average, Minimum and Maximum Values:

   1. Record, date and time stamp, and save the minimum and maximum values of RMS metered values since the last reset.
   2. Record, date and time stamp, and save maximum, minimum and average over a user-defined interval for the following metered values:

a. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
b. Voltage Unbalance: L-L each phase and L-N each phase.
c. Current:

1) RMS each phase, three-phase average, and calculated neutral current.
2) Apparent, RMS average.
3) Active Power (kW): Each phase and three-phase total.

d. Demand Current: RMS each phase and three-phase average.
e. Reactive Power (kVAR): Each phase and three-phase total.
f. Apparent Power (kVA): Each phase and three-phase total.
g. Demand Active Power: Each phase and three-phase total.
h. Demand Reactive Power: Each phase and three-phase total.
i. Demand Apparent Power: Each phase and three-phase total.
j. Accumulated Energy: MWh, MVAh, and MVARh.
k. Reactive energy (MVARh) by quadrant.
l. Power Factor: Three-phase displacement and distortion power factors.
m. K-factor for each phase.
n. THD L-L and L-N voltages.
o. THD current in each phase and neutral.
p. Frequency.

L. Power Demand, User Selectable:

1. Thermal Demand: Sliding window updated every second for the present demand and at end of the interval for the last interval. Adjustable window that can be set in 1-minute intervals, from 1 to 60 minutes.
2. Block Interval with Optional Subintervals: Adjustable for 1-minute intervals, from 1 to 60 minutes. User-defined parameters for the following block intervals:

a. Sliding block that calculates demand every second, with intervals less than 15 minutes, and every 15 seconds with an interval between 15 and 60 minutes. The default setting must be the 15-minute continuous sliding block.
b. Fixed block that calculates demand at end of the interval.
c. Rolling block subinterval that calculates demand at end of each subinterval and displays it at end of the interval.

3. Demand Calculation Initiated by a synchronization signal. Synchronize demand with clock in the circuit meter and monitor.

a. Synchronize demand with receipt of a signal pulse from an external source. Demand period begins with every pulse. Calculation must be configurable as either a block or rolling block calculation.
b. Synchronize demand with receipt of a communication signal. Calculation must be configurable as either a block or rolling block calculation.
c. Provide for synchronization to the clock in the instrument.

4. Record, date and time stamp, and save the following demand values of RMS metered values since the last reset, including the following:

a. Average demand current, per phase.
b. Peak demand current, per phase.
c. Average demand for active power, reactive power, and apparent power.
d. Predicted demand for active power, reactive power, and apparent power.

e. Peak demand for active power, reactive power, and apparent power.

M. Trend Curves: Provide for recording four trend curves at intervals of one minute, one hour, one day, or one month; and forecast values for the trended parameters:

1. Record minimum, maximum, and average values of eight user-selected parameters as follows:

a. Every second for one minute for the one-minute curve.
b. Every minute for one hour for the one-hour curve.
c. Every hour for one day for the one-day curve.
d. Every day for one month for the one-month curve.

2. Forecast the trended parameters for the following:

a. The next four hours.
b. The next four days.

N. Power Analysis Values:

1. THD Voltage: L-L each phase, L-N each phase, and L-N three-phase average.
2. THD Current: Each phase, three-phase average, and neutral current.
3. Total demand distortion.
4. K-factor for each phase.
5. Crest factor, each phase.
6. Displacement power factor.
7. Fundamental voltage, magnitude and angle, each phase.
8. Fundamental currents, magnitude and angle, each phase.
9. Fundamental active power, each phase and three-phase total.
10. Fundamental reactive power, each phase and three-phase total.
11. Harmonic power, each phase and three-phase total.
12. Phase rotation.
13. Voltage and current unbalances.
14. Harmonic magnitudes and angles, each phase.
15. Distortion power.
16. Distortion power factor.

O. Waveform Capture:

1. Steady State Waveform Capture: Manually initiated over the communications network.

a. Capture, record with time stamp, and store voltage and current waveforms at a user-defined resolution of 16 to 512 samples/cycle for up to 30 seconds.
b. Capture, record with time stamp, and store 512 digitally sampled data points for each cycle of each phase voltage. The number of waveform captures stored onboard must be user configurable.
c. Harmonic analysis performed on the captured waveforms must resolve harmonics through the 255th for the following:

1) Voltage: L-N and L-G each phase.
2) Current: Of each phase and neutral current.

d. Captured waveforms must be recorded from actual circuit performance.

2. Disturbance Waveform Capture:

a. Capture, record with time stamp, and store digitally sampled data points for each cycle of

each phase voltage. Disturbance waveform capture may be initiated manually, by an external contact closure, or by an alarm. The captured waveform must be at a user-defined resolution of 16 to 512 samples/cycle per second. The number of pre-alarm cycles must be adjustable.

3. Waveform samples must be available for transmission over the communications network, for display, archival, and analysis at computer workstations.

P. Transient Detection:

1. Detect and capture transient voltage surge events up to 10 kV L-L with a duration as short as 200 ns.

Q. Flicker Detection:

1. Detect and capture flicker events, defined by IEEE 1453, at three levels: instantaneous, short term, and long term.
2. Display the flicker event as plots of magnitude versus time on semi-log graph background.

R. Sag and Swell Detection and Alarm:

1. Detect and initiate alarm when detecting voltage or current sag and swell.

    a. Detect disturbance events of less than half-cycle in length, by monitoring and calculating RMS magnitude of each half-cycle.
    b. Event detection must be with user-defined parameters of threshold and delay. The threshold must be user defined as a fixed or relative set point. With relative set point, the instrument will alarm based on the nominal current or voltage equal to its present average value. The instrument must automatically adjust the nominal current and voltage values to avoid nuisance alarms caused by gradual daily variations of currents and voltages.
    c. When detecting an alarm condition:

        1) Initiate disturbance waveform capture.
        2) Initiate 100 ms event recording.
        3) Recording the disturbance parameters into an onboard alarm log with a date and time stamp to the millisecond.
        4) Causing an alarm on the display and transmit the alarm over the data link.
        5) The user must have the ability to display the voltage sag/swell events on ITIC or SEMI graphs to quantify the event for accepted industry standards.

S. 100 ms Event Recording: Capture, record with time stamp, and store.

1. Initiate recording by an alarm or external contact closure.
2. User-configured recording, to record for the duration of the alarm up to 300 seconds and can be delayed for 1 to 10 seconds.
3. Records current per-phase and neutral, voltage L-L each phase and L-N each phase, active power per-phase and three-phase total, reactive power each phase and three-phase total, apparent power each phase and three-phase total, and true power factor three-phase total.
4. Operate an output relay in the I/O module of the instrument.

T. Harmonics Information:

1. Calculate the harmonic magnitudes and angles for each phase voltage and current in each phase and neutral, through the 255th harmonic. Provide harmonic power flows up to the 41st harmonic for active, reactive, and apparent power.

2. The current and voltage information for phases must be obtained simultaneously from the same cycle.
3. Report harmonic information as a percentage of the fundamental or as a percentage of the RMS values, as selected by the user.

U. Alarms:

1. Alarm events may be either user defined or preconfigured by manufacturer from the applicable standards. Provide for multiple levels for each alarm that is based on metered data.
2. The instrument must calculate the listed key electrical parameters at not less than 100 ms intervals to initiate and record an alarm event. Provide for user-selected range of 1 to 10 seconds of pre-event and up to five minutes of post-event data recording.
3. The following classes of events must be available to be programmed as alarm events:

    a. Over/under current.
    b. Over/undervoltage.
    c. Current imbalance.
    d. Phase loss, current.
    e. Phase loss, voltage.
    f. Voltage imbalance.
    g. Wave shape alarm.
    h. Over kVA.
    i. Over kW or kVAR into/out of load.
    j. Over/under frequency.
    k. Under power factor, true or displacement.
    l. Over THD.
    m. Over K-factor.
    n. Over demand, current or power.
    o. Reverse power.
    p. Phase reversal.
    q. Status input change.
    r. End of incremental energy interval.
    s. End of demand interval.
    t. Over/under analog inputs.
    u. Current sag/swell.
    v. Voltage sag/swell.
    w. Transient events.

4. For each over/under metered alarm value, the user must define a pickup, dropout, and delay.
5. Waveform Alarms:

    a. The instrument must detect anomalous waveform events that are less than half-cycle in length.
    b. Provide for the user to set a threshold value and an upper limit to determine whether the waveform triggers an alarm. The threshold value and upper limit must be a value between 1 and 100. The threshold value is the limit at which a waveform triggers the alarm. The upper limit defines the highest waveform value that triggers a waveform alarm. The settable values are as follows:

        1) Phase voltages.
        2) N-G voltages.
        3) Phase currents.
        4) Neutral currents.

    c. In response to a waveform alarm, the instrument must:

1) Log the event and record phase currents and voltages as defined in the 100 ms event recording.
2) Determine the source of the disturbance (upstream or downstream from the meter) and a statistical level of confidence (low, medium, or high) of the accuracy of the source location.

6. Provide four alarm severity levels to allow the user to respond to the most important events first.
7. Indicate an alarm condition on the front panel of the instrument, as well as reported over the data link to designated workstations.
8. The circuit meter and monitor alarms response time must be not less than the following:

a. Standard, one second.
b. High speed, 100 ms.
c. Disturbance, half-cycle.

9. Up to four alarms may be combined to give a single result using Boolean algebra operations.
10. Provide e-mail notification of alarm conditions.
11. Automatic Alarm Set-Point Adjustment:

a. The instrument software must provide for recognizing and learning the characteristics of the normal operation of the electrical power system it is connected to, and to select and adjust alarm set points based on that recognition.
b. The metered data to be recognized and learned, and the period of time for learning for alarms, disturbances, and waveform alarms, must be set by the user by selection one of the following two modes:

1) Fixed Learning: Initially configured user set points are used during the entire learning period.
2) Dynamic Learning: Initially configured user set points are temporarily replaced by learned set points at the interval specified by the user in the learning setup. The set points continue to be updated at the specified interval until the learning period expires.

c. The learning period must be user configurable. If the learned set points do not change over a predefined period, the learning process can be stopped and the set points either installed or held for review.

V. EN 50160 Evaluation: Report EN 50160 evaluation data in the following formats: summary of active evaluations, summary of evaluation status, detailed information for each evaluated parameter, and detailed information for each abnormal event.

W. I/O Module: Modular, with multiple I/O options, programmable to accomplish specified performance and one or more spare positions for future. At minimum, the instrument must provide the following:

1. KYZ Pulse: Solid-state output relay, programmed to generate a standard KYZ pulses for a user-defined increment of metered active energy as follows:

a. User-defined pulse output, associated with kWh.
b. Alarm pulse output, which turns on the pulsing at user-defined point.

2. Digital inputs, each having the following operating modes:

a. Normal: Simple on/off digital inputs.
b. Demand Interval Synch Pulse Accept a demand synch pulse from a utility demand meter.
c. Conditional Energy Control input to control conditional energy accumulation.

3. Output Relays and Control: Output relays must have normally open and normally closed contacts and must operate in response to a user sent command over the data link, or automatically responding to an alarm event. The relays must be user configured in one of the following listed modes:

    a. Normal contact closure where the contacts change state for as long as the signal exists.
    b. Latched mode when the contacts change state when a pickup signal is received and are held until a dropout signal is received.
    c. Timed mode when the contacts change state when a pickup signal is received and are held for a preprogrammed duration.
    d. End of Power Demand Interval: When the relay operates as a synch pulse for other devices.
    e. Energy Pulse Output: Relay will pulse quantities used for Absolute kWh, Absolute kVARh, kVAh, kWh In, kVARh In, kWh Out, and kVARh Out.
    f. Programmed Output: Relay will operate in response to multiple alarms that are arranged to give a single result using Boolean algebra operations.

X. Onboard Data Logs:

1. Log data, alarms and events, and waveforms in onboard solid-state nonvolatile memory.
2. Onboard data logs must be available for transmission over the communications network for display, archival, and analysis at computer workstations on demand.
3. Data Logs, General: User configurable. Automatically stamp each entry to the millisecond with date and time.

    a. Each log entry must hold data of up to 96 parameters each.
    b. Each log must be user configurable to log data at a different user-defined schedule interval.
    c. Provide each log with user-defined event or a minimum/maximum condition that will trigger log file entries.
    d. Configure log entries to be recorded as Fill & Hold or Circular (FIFO), as defined by the user.

4. Minimum/Maximum Logs:

    a. Minimum/Maximum/Average interval log also logs minimum/maximum/average of selected parameters on a selected interval from a user-selected interval length from 1 to 1440 seconds.
    b. Minimum/Maximum log must include the time, date, and value for the minimum and maximum of each of the active-time metered values.

5. Alarm Log: Record time, date, event information, and coincident information for each user-defined and automatically initiated alarm or event. The log capacity must be not less than 1000 events. Record selected parameters at 100 ms intervals during events and alarms. Automatically stamp each entry to the millisecond with date and time.
6. Waveform Logs: Capture and store waveforms as follows:

    a. One cycle, 512 samples, to the 255th harmonic. Manually triggered.
    b. Adjustable from 8 seconds at 18 samples per cycle, to 264 seconds at 16 samples per cycle. Triggered manually or by a user set alarm.
    c. Voltage sampling at 5 MHz (83,333 samples per cycle) more than 2 ms to capture transient peaks of less than 1 microsecond.

Y. Programming: Programming of instrument functions must be similar to BASIC syntax. Provide for initial programming and changes to programs through the communications links.

1. Programming language must include the following capabilities:

    a. Scheduled tasks.
    b. Event tasks.
    c. Math functions including add, subtract, multiple, divide, sine, cosine, and square root.
    d. Logical functions including: AND, OR, XOR, NOT, shift, and so forth.
    e. Loop commands.
    f. Compare statements.
    g. Counters and timers.

2. Manufacturer must provide custom programs to meet Project requirements that are described in "Capacities and Characteristics" Paragraph below.
3. Metering of specialized utility rate structures, including real-time pricing and curtailable rates.
4. Data reduction using smart data logging.
5. Automatic monthly logging/reset of kWh and peak demand.
6. Statistical profile analysis of metered quantities.
7. ITIC/SEMI power quality analysis.
8. Calculations for IEEE 519 verification.
9. Metering of combined utilities: gas, water, steam, and electric.
10. Non-critical control schemes, such as load control or power factor correction, based on multiple conditions, for example, time of day and input status.

Z. Capacities and Characteristics:

1. Power Supply: [**120 V(ac), 60 Hz**]<**Insert text**>.
2. Circuit Connections:

    a. Voltage: Measurements autoranging, zero to 600 V(ac) L-L, zero to 347 V(ac) L-N.[**Connect directly to low-voltage (600 V and less) without using voltage transformers.**][**Connect to instrument grade potential transformers secondary at 120 V.**] Meter impedance must be 2 megohm L-L or greater.
    b. Current: Connect to instrument grade current transformer with a metering range of 5 mA to 6 A. Overcurrent tolerance of the instrument must be 15 A continuous, 50 A for 10 seconds once per hour, and 120 A for one second per hour.
    c. Frequency: 45 to 67 Hz, and 350 to 450 Hz.
    d. Time: Input from a GPS receiver to synchronize the internal clock of the instrument and to time-synchronize this instrument with the network to a deviation of not greater than 1 ms.

3. Onboard, Field-Upgradeable, Solid-State Nonvolatile Memory: [**8**]<**Insert number**> MB.
4. Number of Onboard Data Logs: [**14**]<**Insert number**>.
5. Number of Minimum/Maximum Log Files: [**Two**]<**Insert number**>.
6. Alarm Log Capacity: Not less than 1000 events.
7. Custom Programs: Provide the following programs with the instrument:

    a. Metering of specialized utility rate structures, including real-time pricing and curtailable rates.
    b. Data reduction using smart data logging.
    c. Automatic monthly logging/reset of kWh and peak demand.
    d. Statistical profile analysis of metered quantities.
    e. Calculations for IEEE 519 verification.
    f. Metering of combined utilities: gas, water, steam, and electric.
    g. Non-critical control schemes, such as load control or power factor correction, based on multiple conditions such as time of day and input status.
    h. <**Insert requirements**>.

2.7 PC OPERATING SYSTEM SOFTWARE

A. Description: System software must monitor, analyze, display, control, and save the parameters and features available at the connected meter.

B. Software: Configured to run on a portable laptop computer, a single PC, or a tablet computer, with capability for accessing a single meter at a time, at the location of the meter. System is not connected to LAN.

C. Minimum Requirements:

1. Real-time multitasking and multiuser [**32-**][**or**][**64-**]bit operating system that allows execution of multiple real-time programs and custom program development.
2. Operating system must be capable of operating Microsoft Windows applications.
3. Scheduling software must schedule centrally based time and event, temporary, and exception day programs.

2.8 NETWORKED PC OPERATING SYSTEM SOFTWARE

A. Description: System software must monitor, analyze, display, control, and save parameters and features available at each of the connected meters.

B. Software: Configured to run on a single PC, with capability for accessing multiple devices simultaneously. Software must include interactive graphics client and must be web enabled.

C. System Software Minimum Requirements:

1. Real-time multitasking and multiuser [**32-**][**or**][**64-**]bit operating system that allows concurrent multiple workstations operating and concurrent execution of multiple real-time programs and custom program development.
2. Operating system must be capable of operating Microsoft Windows applications.
3. Database management software must manage data on an integrated and non-redundant basis. Additions and deletions to database must be without detriment to existing data. Include cross linkages so no data required by a program can be deleted by an operator until that data have been deleted from respective programs.
4. Scheduling software must schedule centrally based time and event, temporary, and exception day programs.

D. Operator Interface Software:

1. Minimize operator training through use of English language prorating and English language point identification.
2. Minimize use of a typewriter-style keyboard through use of a pointing device, touchscreen, or mouse.
3. Operator sign-off must be a manual operation or, if no keyboard or mouse activity takes place, an automatic sign-off.
4. Automatic sign-off period must be programmable from 1 to 60 minutes in 1-minute increments on a per operator basis.
5. Record operator sign-on and sign-off activity.
6. Security Access:

a. Operator access to electrical monitoring and control system must be under password control.
b. An alphanumeric password must be user assignable to each operator.
c. Software must have at least five access levels.

1) View - View information. No change privileges allowed.
2) User - Same as View, but is able to initiate control functions.
3) Controller - Same as User, but is able to initiate communications.
4) Operator - Same as Controller, but is able to modify configurations.
5) Supervisor - Same as Operator, but is able to administer security privileges.

d. Each menu item must be assigned an access level so that a one-for-one correspondence between operator-assigned access level(s) and menu-item access level(s) is required to gain access to menu item.
e. Display menu items to operator with those menu items capable of access highlighted. Menu and operator access level assignments must be online programmable and under password control.

E. Graphic Interface Software:

1. Include a full interactive graphical selection means of accessing and displaying system data to operator.
2. Descriptors for graphics, points, alarms, and such must be modified through workstation under password control.
3. Display operator accessed data on the monitor.
4. Help Features: On-line context-sensitive help utility to facilitate operator training and understanding.

2.9 POWER MONITORING AND CONTROL SOFTWARE

A. Data Storage and Data Sharing:

1. Query and download logs of interval data stored on metering devices.
2. Query and download logs of alarm and event data stored on metering devices.
3. Query and download logs of waveform capture data stored on metering devices.
4. Query and download logs of interval data generated by the software and calculated by the meters.
5. Query and download logs of alarm and event data generated by the software and calculated by the meters.
6. Automatically re-arm the waveform recorders, on upload of information.
7. Provide a facility to archive, trim, and back up the database on demand, or on a schedule.
8. Provide a facility to view historical data from archived databases.
9. Support user changes to the database.

a. Support on-line changes while the data storage/retrieval application is running.
b. Suffer no interruption to its operation while changes are being made.
c. Require no restart once the configuration has been performed.

B. Project-Specific Graphics: Graphics documentation including, but not limited to, the following:

1. Site plan showing each building, and additional site elements, which are being controlled or monitored by the electrical power monitoring and control system.
2. Plan for each building floor, showing the following:

a. Locations and identification of monitored and controlled electrical equipment.
b. <**Insert requirements**>.

3. Control schematic for each device that is controlled by the meters of this Section, including a graphic system schematic representation[**, similar to that indicated on Drawings,**] with device

identification.

4. Graphic display for each piece of equipment connected to the electrical monitoring and control system through a data link.
5. Electrical power monitoring and control system network riser diagram that shows schematic layout for entire system including meters, [**gateways**][**and**][**other network devices**].

2.10 NETWORK CONFIGURATION SOFTWARE

A. Network Management Graphical Interface Features:

1. Add and remove devices in the power monitoring and control network.
2. Application for naming devices based on a user-defined naming scheme.
3. Add and remove I/O servers in the power monitoring and control network.
4. Edit communication properties for devices including timeouts and delays.
5. Display mandatory fields when adding a new device.
6. Allow to manually connect and disconnect serial, Ethernet, modem, and Ethernet gateway sites.
7. Enable and disable devices and sites in the power monitoring and control network without interruption to other devices or sites.
8. Pool modem resources so that the software uses any available modem.
9. Monitor the following diagnostics:

    a. Communication request/response and error rates, and timeouts.
    b. Log acquisition services.

B. Database Maintenance Features:

1. Backup, archive, and trim data, event, and waveform logs.

    a. Record start and end date for operation.
    b. Allow copying data to another database.
    c. Be capable of selecting logs specified for the meters that are Work of this Section.

        1) Data logs.
        2) Event logs.
        3) Waveform logs.

C. Web Reporter: Allow viewing historical data in preformatted report templates via a web browser.

1. Features:

    a. User-configurable report generator to trigger on event, based on a schedule, or manual initiation.
    b. Format reports in HTML, PDF, TIF, Excel, XML, or user-selected printer, or network folder.
    c. Distribution of reports via email.

2. Report on power and demand profiles.
3. Power quality report with CBEMA evaluation.
4. EN 50160 compliance report.
5. 100 ms PQ report.
6. Energy over Period Report:

    a. User-defined rollup interval by day, week, month, or year.
    b. Compare daily energy to the following:

        1) Previous day.

2) Same day, previous week.
3) Same day, previous month.
4) User-defined specific day.

c. Compare weekly energy to the following:

1) Previous week.
2) Same week from previous month.
3) Same week from previous year.
4) User-defined specific week.

d. Compare monthly energy to the following:

1) Previous month.
2) Same month from previous year.
3) User-defined specific month.

e. Compare annual energy to the following:

1) Previous year.
2) User-defined specific year.

7. Energy by daily period report for the user-defined periods. Aggregate consumption of the periods by the day, week, and year.
8. Tabular Report: Show values for multiple measurements and measurements from multiple devices in tabular format.
9. Trend Report:

a. Show values for multiple measurements and measurements from multiple devices in the following graphical formats:

1) Line chart.
2) Pie graph.
3) Bar chart.
4) Column chart.
5) Smooth line chart.
6) Stacked column chart.
7) Stacked bar chart.

10. Alarm and Event History: User formatted, based on the meters and priority; and with user-defined alarm and event reports.
11. System Configuration Report:

a. Device name.
b. Device type.
c. Device address.
d. Connection status.
e. Device protocol.
f. Device description.

12. Each default report must include the following:

a. Summary aggregation of data from the selected devices.
b. Individual device information.
c. Raw data.

13. The reporting tool must provide a graphical interface to create and manage multiple Time of Use schedules:

    a. Tariffs including energy cost rates per kWh, kVARh, and kVAh, and demand charges per kW, kVAR, and kVA.
    b. Off-peak and on-peak times.

2.11 MONITORING AND CONTROL OF POWER DISTRIBUTION EQUIPMENT

A. Power Distribution Equipment: Web-enabled, direct connected to the LAN or intranet.

B. Instrument Transformers: Comply with IEEE C57.13.

1. Potential Transformers: Secondary voltage rating of 120 V and NEMA C12.11 accuracy class of 0.3 with burdens of W, X, and Y.
2. Current Transformers: Burden and accuracy class suitable for connected relays, meters, and instruments.

C. Ethernet Connectivity:

1. A multipoint, MODBUS TIA-485 serial communications network must be included within the equipment to interconnect breaker trip units, protective relays, drives, and metering devices equipped with communications.
2. Serial communications network must be wired to an Ethernet server in the incoming section of the equipment. Hardware and cabling required for the connection to the network must be included within the power distribution equipment.
3. Serial communications devices within the equipment must be factory addressed and tested to verify reliable communications to the equipment's Ethernet Server.

D. Ethernet Gateways:

1. User configurable; complying with UL 60950-1, and IEEE 802.3, Class 3 PoE.
2. Include provisions to set initial Ethernet parameters via a local operator interface, or standard (8PSJ) Ethernet port, that is accessible from the front of the equipment. Initial setup must be limited to basic Ethernet addressing parameters, as assigned by Owner.
3. Common Gateway Features:

    a. User configurable, with secure password-protected login process.
    b. Include communications diagnostic information for serial and Ethernet ports as well as internal health status and memory management information through embedded HTML web pages for viewing using a standard web browser.
    c. Include embedded HTML pages providing real-time information from devices connected to the Ethernet gateway's TIA-485 port(s) through a standard web browser.
    d. Allow firmware upgrades through the communications port.

4. Include a "Quick-Start" guide with the equipment to describe the commissioning process for setting the equipment's Ethernet network address and for ensuring trouble-free data access from any PC on the network, using a standard web browser.
5. Implement a common user interface ("look and feel") across different styles of power equipment.

E. Distribution Equipment Monitoring:

1. Main menu and summary pages, factory configured, to display data for each communicating device within the power equipment lineup.
2. Display Data:

a. Circuit summary page to display circuit name, three-phase average RMS current, real power (kW), power factor, and breaker status (if applicable).
b. Load current summary page to display circuit name, and phase a, b, and c RMS current values.
c. Demand current summary page to display circuit name, and phase a, b, and c average demand current values.
d. Power summary page to display circuit name, present demand power (kW), peak demand power (kW), and recorded time and date.
e. Energy summary page to display circuit name, real energy (kWh), reactive energy (kVARh), and time/date of last reset.
f. For unit substations equipped with dry-type transformer(s) and microbased temperature controller(s), the circuit summary web page listed above must be augmented with transformer coil temperatures, phase a, b and c current values, and cooling fan status (on/off).
g. For motor-control centers, the circuit summary web page must be tailored specifically for this application, to display circuit name, three-phase average RMS current, thermal capacity (percentage), drive output frequency (in Hertz, where applicable), and contactor status.

2.12 SYSTEM OPERATOR INTERFACES

A. Operator means of system access must be through the following:

1. Desktop workstation with hardwired connection through LAN port.
2. Portable terminal with hardwired connection through LAN port at each meter.
3. Remote connection using outside of system PC, tablet, or phone using an internet portal.

2.13 DESKTOP WORKSTATIONS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Dell Technologies Inc.**]
2. [**HP Inc.**]
3. [**Lenovo Holding Co., Inc.; Lenovo Group Ltd.**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Dell Technologies Inc.**]
2. [**HP Inc.**]
3. [**Lenovo Holding Co., Inc.; Lenovo Group Ltd.**]
4. <**Insert manufacturer's name**>

C. Performance Requirements:

1. Performance requirements may dictate equipment exceeding minimum requirements indicated.
2. Capable of running [**Microsoft Windows**]<**Insert operating system name**>.
3. ENERGY STAR compliant.

D. Personal Computer:

1. Minimum Processor Speed: <**Insert gigahertz**>, [**Core i3**][**Core i5**][**Core i7**].
2. RAM:

    a. Capacity: [**2**][**4**][**8**]<**Insert value**>[**GB**].
    b. Speed and Type: [**1333**]<**Insert value**> MHz, <**Insert type**>.

3. Primary Hard Drive:

    a. Media: [**Solid state**][**Rotating disc, nominal rotational speed of 7200 rpm**][**Hybrid solid-state and rotating disc**].
    b. Number of Hard Drives: [**One**][**Two**]<**Insert number**>.
    c. Capacity: <**Insert number and measurement unit**>.
    d. Minimum Average Seek Time: <**Insert number and measurement unit**>.
    e. Cache Buffer Size: <**Insert number and measurement unit**>.
    f. <**Insert requirements**>.

4. Second Hard Drive:

    a. Media: [**Solid state**][**Rotating disc, nominal rotational speed of 7200 rpm**][**Hybrid solid-state and rotating disc**].
    b. Capacity: <**Insert number and measurement unit**>.
    c. Minimum Average Seek Time: <**Insert number and measurement unit**>.
    d. Cache Buffer Size: <**Insert number and measurement unit**>.
    e. <**Insert requirements**>.

5. Optical Drive:

    a. Type: <**Insert type**>.
    b. Minimum Average Access Time: <**Insert number**> ms.
    c. Data Transfer Speed: <**Insert number**>[**MB**][**TB**]/s.
    d. Reading Formats: Data, audio, recordable, <**Insert other**> and rewritable.

6. Optical Read and Write Drive:

    a. Include with at least 2 MB of data buffer.
    b. Type: <**Insert type**>.
    c. Minimum Data Buffer Capacity: <**Insert number and measurement unit**>.
    d. Minimum Average Access Time: <**Insert number**> ms.
    e. Nominal Data Transfer Rates:

        1) Reading: <**Insert number**>[**MB**][**TB**]/s.
        2) Writing: <**Insert number**>[**MB**][**TB**]/s.

    f. Average access time of 150 ms or less.
    g. MTBF of at least 100,000 power-on hours.

7. Expansion Slots: Minimum of 4, [**32**][**64**]<**Insert number**> bit.
8. Video Card:

    a. Capable of supporting [**one**][**two**][**three**][**four**] monitors.
    b. Resolution: [**1920 by 1200**]<**Insert values**> pixels minimum for each monitor.
    c. RAM: <**Insert number**>[**GB**][**TB**].
    d. Controller Speed: <**Insert number**>[**MHz**][**GHz**].
    e. On-Board Memory Speed: <**Insert number**>[**MHz**][**GHz**].
    f. On-Board Memory Data Width: <**Insert number**> bit.

9. Sound Card:

    a. At least 128 voice wavetable synthesis.
    b. Capable of delivering three-dimensional sound effects.
    c. High-resolution 16-bit stereo digital audio recording and playback with user-selectable sample rates up to 48,000 Hz.

10. Network Interface Card: Include card with connection, as applicable.

    a. 10-100-1000 base TX Ethernet with 8PSJ connector port.
    b. 100 base FX Ethernet with SC or ST port.

11. Wireless Ethernet, 802.11 a/b/g/n.
12. Optical Modem: Full duplex link for connection to optical fiber cable provided.
13. I/O Ports:

    a. Two USB 3.0 ports on front panel, six on back panel, and three internal on motherboard.
    b. One serial port.
    c. One parallel port.
    d. Two PS/2 ports.
    e. One 8PSJ.
    f. One stereo line-in and line-out on back panel.
    g. One microphone and headphone connector on front panel.
    h. One IEEE 1394 on front and back panel with PCI-e card.
    i. One ESATA port on back panel.

14. Battery: Life of at least three years to maintain system clock/calendar and ROM, as a minimum.

E. Keyboard:

1. 101-key enhanced keyboard.
2. Full upper- and lowercase ASCII keyset, numeric keypad, dedicated cursor control keypad, and 12 programmable function keys.
3. Wireless operation within up to **72 inch (1800 mm)** in front of workstation.

F. Pointing Device:

1. Either a two- or three-button mouse.
2. Wireless operation within up to **72 inch (1800 mm)** in front of workstation.

G. Flat Panel Display Monitor:

1. Number of Displays: [**One**][**Two**]<**Insert number**>.

    a. Display Support: [**Individual tilt adjustable base.**][**Desk mounted, adjustable bracket capable of supporting number of monitors specified above with integral power and display cable organization.**][**Wall mounted, adjustable bracket capable of supporting number of monitors specified above with integral power and display cable organization.**]<**Insert description.**>

2. Color display with <**Insert inch (mm)**> diagonal viewable area.
3. Aspect Ratio: [**16 to 9**]<**Insert value**>.
4. Resolution: [**1920 by 1080**]<**Insert value**> pixels at 60 Hz with pixel size of [**0.277**]<**Insert number**> mm or smaller.
5. [**Digital**][**or**][**analog**] input signal.

6. Response Time: <**Insert number**> ms.
7. Dynamic Contrast Ratio: [**50000 to 1**]<**Insert ratio**>.
8. Brightness: [**250 cd/sq. m**]<**Insert value**>.
9. ENERGY STAR compliant.
10. Antiglare display.

H. Speakers:

1. Two, with individual controls for volume, bass, and treble.
2. Signal to Noise Ratio: At least 65 dB.
3. Power: At least 4 W per speaker/channel.
4. Magnetic shielding to prevent distortion on the video monitor.

I. I/O Cabling: Include applicable cabling to connect I/O devices.

J. Software:

1. Factory-installed operating system.

2.14 PORTABLE WORKSTATIONS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Dell Technologies Inc.**]
2. [**HP Inc.**]
3. [**Lenovo Holding Co., Inc.; Lenovo Group Ltd.**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Dell Technologies Inc.**]
2. [**HP Inc.**]
3. [**Lenovo Holding Co., Inc.; Lenovo Group Ltd.**]
4. <**Insert manufacturer's name**>

C. Performance Requirements:

1. Performance requirements may dictate equipment exceeding minimum requirements indicated.
2. ENERGY STAR compliant.
3. Hardware and software must support local downloading to DDC controllers.
4. Data transfer rate to DDC controller must be at network speed.

D. Processor:

1. Minimum Processor Speed: <**Insert gigahertz**>.
2. RAM:

    a. Capacity: <**Insert value**>[**GB**][**TB**].
    b. Speed and Type: <**Insert value**> MHz, <**Insert type**>.

3. Hard Drive:

a. Media: [**Solid state**][**Rotating disc, nominal rotational speed of 7200 rpm**][**Hybrid solid-state and rotating disc**].
b. Number of Hard Drives: [**One**][**Two**]<**Insert number**>.
c. Capacity: <**Insert number and measurement unit**>.
d. Minimum Average Seek Time: <**Insert number and measurement unit**>.
e. Cache Buffer Size: <**Insert number and measurement unit**>.
f. <**Insert requirements**>.

4. Video Card: <**Insert number and measurement unit**> of RAM.

E. Input and Output Ports:

1. Serial port.
2. Shared port for external keyboard or mouse.
3. Four USB 3.0 ports.
4. Ethernet port.
5. HDMI port.
6. IEEE 1394 port.

F. Battery:

1. Capable of supporting operation of portable workstation for a minimum of [**8**]<**Insert number**> hours.
2. Battery life of at least three years.
3. Battery charge time of less than three hours.
4. Spare Batteries: [**One**][**Two**].

G. Keyboard:

1. 85-key [**backlit**]keyboard.
2. Full upper- and lowercase ASCII keyset.

H. Integral Pointing Device: Touchpad with two buttons. Gesture enabled.

I. Display:

1. <**Insert inch (mm)**> diagonal or larger high-definition WLED color display.
2. Antiglare screen.
3. [**1920 by 1080**]<**Insert value**> pixel resolution.
4. Brightness: 300 nits.

J. Network Interfaces:

1. Network Interface Card: Include card with connection, as application.

a. 10-100-1000 base TX Ethernet with 8PSJ connector port.
b. 100 base FX Ethernet with SC or ST port.

2. Wireless:

a. Internal with integrated antenna, capable of supporting 802.11 a/b/g/n.

K. Digital Video Disc Rewrite Recorder (DVD+/-RW):

1. Compatible with DVD disks and data, audio, recordable and rewritable compact disks.
2. Nominal Data Transfer Rates:

    a. Reading: <**Insert number**>[**MB**][**TB**]/s.
    b. Writing: <**Insert number**>[**MB**][**TB**]/s.

3. 160 ms access time.

L. Accessories:

1. Nylon carrying case.
2. Docking station.
3. Mobile broadband card.
4. Wireless optical mouse.
5. <**Insert value**>[**GB**][**TB**] portable hard drive.
6. Light-sensitive web cam and noise-cancelling digital array microphone.
7. Category 6a patch cable. Minimum cable length must be <**Insert length**>.
8. HDMI cable. Minimum cable length must be <**Insert length**>.

2.15 RACEWAYS AND BOXES

A. Comply with requirements in Section 260533.13 "Conduits for Electrical Systems" for raceways for electrical power wiring and NFPA 70 Class 1 remote-control and signaling circuits.

B. Comply with requirements in Section 270528 "Pathways for Communications Systems" for control wiring, TIA-232 cable, and NFPA 70 Class 2 remote-control and signaling circuits.

2.16 WIRES AND CABLES

A. Electrical Power Wiring: Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

1. Copper conductors are Type THHN/THWN-2.

B. Control Wiring: Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."

1. Optical-Fiber Cable: Multimode, 50/125 micrometer OM3, six-fiber, [**nonconductive,**]tight-buffer, optical-fiber cable, with aqua jacket.
2. Balanced Twisted Pair Cable: 100 ohm, four-pair [**Category 5e**][**Category 6**].
3. Workstation Outlets: Four-port-connector assemblies mounted in single or multigang faceplate. Coordinate color and labels with Section 262726 "Wiring Devices."
4. TIA-485 Cable: Paired, [**one pair**][**two pairs**], twisted, No. 22 AWG, stranded (7x30) tinned-copper conductors.
5. Control-Voltage Cable: Multiple conductor, color-coded, No. 20 AWG copper, minimum.

    a. Sheath: PVC; except in plenum-type spaces, use sheath listed for plenums.
    b. Ordinary Switching Circuits: Three conductors unless otherwise indicated.
    c. Switching Circuits with Pilot Lights or Locator Feature: Five conductors unless otherwise indicated.

C. TIA-232 Cable:

1. PVC-Jacketed, TIA-232 Cable: Paired, two pairs, No. 22 AWG, stranded (7x30) tinned copper

conductors, polypropylene insulation, and individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage; PVC jacket. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.

a. Type CM.
b. Flame Resistance: UL 1581, vertical tray.

2. Plenum-Type, TIA-232 Cable: Paired, two pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, plastic insulation, and individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage; plastic jacket. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.

a. Type CMP.
b. Flame Resistance: NFPA 262, flame test.

2.17 SURGE PROTECTION DEVICES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**Advanced Protection Technologies Inc. (APT)**]
3. [**ALLTEC LLC**]
4. [**Eaton**]
5. [**Emerson Electric Co., Automation Solutions**]
6. [**LEA International**]
7. [**Leviton Manufacturing Co., Inc.**]
8. [**Mersen USA**]
9. [**PowerLogics, Inc./PQ Protection**]
10. [**Schneider Electric USA, Inc.**]
11. [**Siemens Industry, Inc., Energy Management Division**]
12. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**Advanced Protection Technologies Inc. (APT)**]
3. [**ALLTEC LLC**]
4. [**Eaton**]
5. [**Emerson Electric Co., Automation Solutions**]
6. [**LEA International**]
7. [**Leviton Manufacturing Co., Inc.**]
8. [**Mersen USA**]
9. [**PowerLogics, Inc./PQ Protection**]
10. [**Schneider Electric USA, Inc.**]
11. [**Siemens Industry, Inc., Energy Management Division**]
12. <**Insert manufacturer's name**>

C. SPDs: Comply with UL 1449, [**Type 1**][**Type 2**].

1. Include LED indicator lights for power and protection status.
2. Internal thermal protection that disconnects the SPD before damaging internal suppressor

components.

3. Include Form-C contacts rated at 5 A and 250 V(ac), one normally open and one normally closed, for remote monitoring of protection status.[**Contacts must reverse on failure of surge diversion module or on opening of current-limiting device. Coordinate with building power monitoring and control system.**]

D. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase must not be less than [**100 kA**]<**Insert value**>. The peak surge current rating must be the arithmetic sum of the ratings of the individual metal-oxide varistors in a given mode.

E. Comply with UL 1283.

F. Protection modes and UL 1449 SPD for grounded wye circuits with [**480Y/277 V**][**208Y/120 V**], three-phase, four-wire circuits must not exceed the following:

1. L-N: [**1200 V for 480Y/277 V**][**700 V for 208Y/120 V**].
2. L-G: [**1200 V for 480Y/277 V**][**700 V for 208Y/120 V**].
3. N-G: [**1200 V for 480Y/277 V**][**700 V for 208Y/120 V**].
4. L-L: [**2000 V for 480Y/277 V**][**1200 V for 208Y/120 V**].

G. Protection modes and UL 1449 SPD for 240/120 V, single-phase, three-wire circuits must not exceed the following:

1. L-N: 700 V.
2. L-G: 700 V.
3. N-G: 700 V.
4. L-L: 1200 V.

H. SCCR: Equal or exceed [**100**][**200**]<**Insert value**> kA.

I. Nominal Rating: [**20**][**10**] kA.

J. Indoor Enclosures: NEMA 250, Type 1.

K. Outdoor Enclosures: NEMA 250, [**Type 3R**][**Type 4**][**Type 4X**].

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine pathway elements intended for cables. Check raceways, cable trays, and other elements for compliance with space allocations, installation tolerances, hazards to cable installation, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF POWER MONITORING AND CONTROL SYSTEMS

A. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters. Conceal raceway and cables except in unfinished spaces.

B. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and

without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

C. Wiring and Cabling Installation:

1. Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power wiring.
2. Comply with Section 260523 "Control-Voltage Electrical Power Cables" for control wiring.

D. Raceways Installation:

1. Comply with Section 260533.13 "Conduits for Electrical Systems" for electrical power wiring and NFPA 70 Class 1 remote-control and signaling circuits.
2. Comply with Section 270528 "Pathways for Communications Systems" for control wiring, TIA-232 cable, and NFPA 70 Class 2 remote-control and signaling circuits.

E. Identification Installation:

1. Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power wiring.
2. Comply with Section 271513 "Communications Copper Horizontal Cabling" for identification products and cable management system requirements for twisted pair cable, TIA-485 cable, control-voltage cable, and TIA-232 cable.
3. Comply with Section 271523 "Communications Optical Fiber Horizontal Cabling" for identification products and cable management system requirements for optical-fiber cable.

3.3 INSTALLATION OF WORKSTATIONS

A. Desktop Workstations Installation:

1. Install workstation(s) at location(s) directed by Owner.
2. Install multiple-receptacle power strip with cord for use in connecting multiple workstation components to a single, duplex electrical power receptacle.
3. Install software on workstation(s) and verify that software functions properly.
4. Develop Project-specific graphics, trends, reports, logs, and historical database.
5. Power workstation through a UPS unit. Locate UPS adjacent to workstation.

B. Portable Workstations Installation:

1. Turn over portable workstations to Owner at Substantial Completion.
2. Install software on workstation(s) and verify that software functions properly.

C. Graphics Application:

1. Use system schematics indicated as starting point to create graphics.
2. Develop Project-specific library of symbols for representing system equipment and products.
3. Incorporate digital images of Project-completed installation into graphics where beneficial to enhance effect.
4. Submit sketch of graphic layout with description of text for each graphic for Owner's[**and Architect's**] review before creating graphic using graphics software.
5. Seek Owner input in graphics development once using graphics software.
6. Final editing must be done on-site with Owner's review and feedback.
7. Refine graphics as necessary for Owner acceptance.
8. On receiving Owner acceptance, print a hard copy to include in operation and maintenance manual. Prepare a scanned copy PDF file of each graphic and include with softcopy of the

system operation and maintenance manual.

3.4 NETWORK NAMING AND NUMBERING

A. Coordinate with Owner and provide unique naming and addressing for networks and devices.

3.5 GROUNDING

A. For data communication wiring, comply with BICSI N1.

B. For control-voltage wiring and cabling, comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.6 FIELD QUALITY CONTROL

A. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

B. Tests and Inspections:

1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
2. Visually inspect balanced twisted pair cabling and optical-fiber cable jacket materials for UL or third-party certification markings. Inspect cabling terminations to confirm color-coding for pin assignments, and inspect cabling connections to confirm compliance with TIA-568-C.1.
3. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of components.
4. Test balanced twisted pair cabling for direct-current loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination, but not after cross-connection.

    a. Test instruments must meet or exceed applicable requirements in TIA-568-C.2. Perform tests with a tester that complies with performance requirements in its "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in its "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
    b. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.

5. Optical-Fiber Cable Tests:

    a. Test instruments must meet or exceed applicable requirements in TIA-568-C.0. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
    b. Link End-to-End Attenuation Tests:

        1) Multimode Link Measurements: Test at 850 or 1300 nm in one direction according to IEC 61280-4-1.
        2) Attenuation test results for links must be less than [**2.0 dB**][**that calculated according to equation in TIA-568-C.0**].

c. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.

6. Power Monitoring and Control System Tests.

a. Test Analog Signals:

1) Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
2) Check analog current signals using a precision current meter at zero, 50, and 100 percent.
3) Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistant source.

b. Test Digital Signals:

1) Check digital signals using a jumper wire.
2) Check digital signals using an ohmmeter to test for contact making or breaking.

c. I/O Control Loop Tests:

1) Test every I/O point to verify that safety and operating control set points are as indicated and as required to operate controlled system safely and at optimum performance.
2) Test every I/O point throughout its full operating range.
3) Test every control loop to verify that operation is stable and accurate.
4) Adjust control loop proportional, integral, and derivative settings to achieve optimum performance while complying with performance requirements indicated. Document testing of each control loop's precision and stability via trend logs.
5) Test and adjust every control loop for proper operation according to sequence of operation.
6) Test software and hardware interlocks for proper operation.
7) Operate each analog point at the following:

a) Upper quarter of range.
b) Lower quarter of range.
c) At midpoint of range.

8) Exercise each binary point.
9) For every I/O point in the system, read and record each value at workstation, at controller, and at field instrument simultaneously. Value displayed at workstation and at field instrument must match.
10) Prepare and submit a report documenting results for each I/O point in the system, and include in each I/O point a description of corrective measures and adjustments made to achieve desire results.

C. Nonconforming Work:

1. Wiring and cabling will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.7 FINAL REVIEW

A. Submit written request to Architect [**and**][**Construction Manager**] when the power monitoring and control system is ready for final review. Written request must state the following:

1. The system has been thoroughly inspected for compliance with Contract Documents and found to be in full compliance.
2. The system has been calibrated, adjusted, and tested and found to comply with requirements of operational stability, accuracy, speed, and other performance requirements indicated.
3. The system monitoring and control of electrical distribution systems results in operation according to sequences of operation indicated.
4. The system is complete and ready for final review.

B. Review by [**Architect**][**and**][**Construction Manager**] will be made after receipt of written request. A field report must be issued to document observations and deficiencies.

C. Take prompt action to remedy deficiencies indicated in field report and submit a second written request when deficiencies have been corrected. Repeat process until no deficiencies are reported.

D. Final review must include a demonstration to parties participating in final review.

3.8 MAINTENANCE SERVICE

A. Beginning at Substantial Completion, maintenance service must include [**three**][**six**][**nine**][**12**] months' full maintenance by manufacturer's authorized service representative. Include [**quarterly**][**semiannual**][**annual**] preventive maintenance, repair or replacement of defective components, cleaning, and adjusting as required for proper system operation. Parts and supplies must be manufacturer's authorized replacement parts and supplies.

3.9 SOFTWARE SERVICE AGREEMENT

A. Technical Support: Beginning at Substantial Completion, service agreement must include software support for [**two**]<**Insert number**> years.

B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within [**two**]<**Insert number**> years from date of Substantial Completion. Upgrading software must include operating system and new or revised licenses for using software.

1. Upgrade Notice: At least [**30**]<**Insert number**> days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3.10 TRAINING

A. Attendee Training Manuals:

1. Provide each attendee with a color hard copy of training materials and visual presentations.
2. Hard-copy materials must be organized in a three-ring binder with table of contents and individual divider tabs marked for each logical grouping of subject matter. Organize material to provide space for attendees to take handwritten notes within training manuals.
3. In addition to hard-copy materials included in training manual, provide each binder with a sleeve or pocket that includes a DVD or flash drive with PDF copy of hard-copy materials.

B. On-Site Training:

1. Owner will provide conditioned classroom or workspace with ample desks or tables, chairs, power, and data connectivity for instructor and each attendee.
2. Instructor must provide training materials, projector, and other audiovisual equipment used in training.
3. Provide as much of training located on-site as deemed feasible and practical by Owner.
4. On-site training must include regular walk-through tours, as required, to observe each unique product type installed with hands-on review of operation, calibration, and service requirements.
5. The workstation provided with the system must be used in training. If workstation is not indicated, provide a temporary workstation to convey training content.

C. Off-Site Training:

1. Provide conditioned training rooms and workspace with ample tables, chairs, power, and data connectivity for each attendee.
2. Provide capability to remotely access to Project monitoring and control system for use in training.
3. Provide a workstation for use by each attendee.

D. At Completion of Training: Staff familiar with the system installed are capable of demonstrating operation of the system during final review.

E. Demonstration must include, but not be limited to, the following:

1. Accuracy and calibration of [**10**]<**Insert number**> I/O points randomly selected by reviewers. If review finds that some I/O points are not properly calibrated and not satisfying performance requirements indicated, additional I/O points may be selected by reviewers until total I/O points being reviewed that satisfy requirements equals quantity indicated.
2. Reporting of alarm conditions for randomly selected alarms, including different classes of alarms, to ensure that alarms are properly received by operators and workstations.
3. Trends, summaries, logs, and reports set-up for Project.
4. Software's ability to communicate with controllers, workstations, and uploading and downloading of control programs.
5. Software's ability to edit control programs off-line.
6. Data entry to show Project-specific customizing capability including parameter changes.
7. Step through penetration tree, display graphics, demonstrate dynamic update, and direct access to graphics.
8. Execution of digital and analog commands in graphic mode.
9. Spreadsheet and curve plot software and its integration with database.
10. Online user guide and help functions.
11. For Each Meter:

    a. Memory: Programmed data, parameters, trend, and alarm history collected during normal operation is not lost during power failure.
    b. Operator Interface: Ability to connect directly to each meter with a portable workstation.
    c. Wiring Labels: Match control drawings.
    d. Network Communication: Ability to locate a meter on the network. Communication architecture matches Shop Drawings.
    e. Nameplates and Tags: Accurate and permanently attached to control panel doors, instrument, actuators, and devices.

12. For Each Workstation:

    a. I/O point lists agree with naming conventions.
    b. Graphics are complete.

c. UPS unit, if applicable, operates.

END OF SECTION 26 09 23 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 09 23 00A - LIGHTING CONTROL DEVICES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Time switches.
2. Outdoor photoelectric switches.
3. Daylight-harvesting controls.
4. Business occupancy and vacancy sensors.
5. Storage occupancy sensors.
6. Outdoor motion sensors.
7. Industrial control switches.
8. Emergency lighting controls.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies temperature, humidity, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies seismic hazard, wind hazard, other structural design conditions applicable to the Work specified in this Section.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
4. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding of lighting control devices referenced by this Section.
5. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers and supports referenced by this Section.
6. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
7. [**Section 262726 "Wiring Devices"**][**Section 262726.11 "General-Use Switches, Dimmer Switches, and Fan-Speed Controller Switches"**] for wall-box dimmers and manual light switches.

1.2 DEFINITIONS

A. BCELTS: Branch circuit emergency lighting transfer switch.

B. DPDT: Double pole double throw.

C. DPST: Double pole single throw.

D. N.C.: Normally closed.

E. N.O.: Normally open.

F. PIR: Passive infrared.

G. SPDT: Single pole double throw.

H. SPST: Single pole single throw.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.

a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for submitted product.

2. Include manufacturer's sample extended warranty language.

B. Shop Drawings: Prepare and submit the following:

1. Show installation details for the following:

a. Occupancy sensors.
b. Vacancy sensors.

2. Interconnection diagrams showing field-installed wiring.
3. Diagrams for power, signal, and control wiring.

C. Sustainable Design Submittals:

1. ASHRAE/IES 90.1 LPD Compliance Documentation: Prepare plans and calculations demonstrating that as-constructed lighting power density complies with mandatory provisions of ASHRAE/IES 90.1 and that as-constructed lighting, including daylighting and controls, improves on baseline energy performance. If included with Project, indicate locations of energy meters for lighting loads.
2. Lighting Control Documentation: Floor plans indicating the following information:

a. As-installed locations of switches and dimmers.
b. Lighting zones and control strategy for each switch or dimmer, including unoccupied time-delay setting for shut-off and override time-delay setting for shut-off.
c. Multilevel or dimming range capability for each switch or dimmer.
d. Which switches or dimmers are operated by occupancy sensors, vacancy sensors, daylighting sensors, or time clocks.

D. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

B. Field Reports:

1. Manufacturer's field reports for field quality-control support.
2. Field reports for software and firmware upgrades.

1.5 CLOSEOUT SUBMITTALS

A. Warranty documentation.

B. Software and firmware service agreement.

1.6 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, conduct tests of complex equipment, analyze test and equipment data, plan a job, and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multiteam projects.

C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

D. Lighting Testing and Inspecting Agency: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience with testing and inspecting lighting installations in accordance with applicable IES standards.

1.7 WARRANTY

A. Special Installer Extended Warranty: Installer warrants that installed lighting control devices perform in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.

1. Extended-Warranty Period: [**Two**][**Three**][**Four**]<**Insert number**> years from date of Substantial Completion; full coverage for labor, materials, and equipment.

B. Special Manufacturer Extended Warranty: Manufacturer warrants that lighting control devices perform in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.

1. Failures include, but are not limited to, the following:

    a. Faulty operation of lighting control software.
    b. Faulty operation of lighting control devices.
    c. <**Insert failure modes**>.

2. Initial Extended-Warranty Period: [**Three**][**Four**][**Five**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.
3. Follow-On Extended-Warranty Period: [**Eight**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for materials only, free on board [**origin**][**destination**], freight prepaid.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements:

1. Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
2. Must comply with CCR Title 24.

2.2 TIME SWITCHES

A. UL WGZR - Electronic Time Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Eaton**]
    b. [**Intermatic, Inc**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**nLight; Acuity Brands Lighting, Inc.**]
    e. [**NSi Industries LLC**]
    f. [**Schneider Electric USA, Inc.**]
    g. [**TE Connectivity Ltd.**]
    h. [**Touché Lighting Control**]
    i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Eaton**]
    b. [**Intermatic, Inc**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**nLight; Acuity Brands Lighting, Inc.**]
    e. [**NSi Industries LLC**]
    f. [**Schneider Electric USA, Inc.**]

g. [**TE Connectivity Ltd.**]
h. [**Touché Lighting Control**]
i. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Clock-Operated Switches: UL CCN WGZR, including UL 917.

5. Standard Features:

   a. Contact Configuration: [**SPST**][**DPST**][**DPDT**]<**Insert configuration**>.
   b. Contact Rating: [**30 A inductive or resistive, 240 V(ac)**][**20 A driver load, 120/240 V(ac)**]<**Insert rating**>.
   c. Programs:

      1) Eight on-off set points on a 24-hour schedule[**and an annual holiday schedule that overrides the weekly operation on holidays**].
      2) Two on-off set points on a 24-hour schedule, allowing different set points for each day of the week[**and an annual holiday schedule that overrides the weekly operation on holidays**].
      3) <**Insert number**> channels; each channel is individually programmable with eight on-off set points on a 24-hour schedule.
      4) <**Insert number**> channels; each channel is individually programmable with two on-off set points on a 24-hour schedule with a skip-a-day weekly schedule.
      5) <**Insert number**> channels; each channel is individually programmable with two on-off set points on a 24-hour schedule, allowing different set points for each day of the week.
      6) <**Insert number**> channels; each channel is individually programmable with 40 on-off operations per week and an annual holiday schedule that overrides the weekly operation on holidays.
      7) <**Insert number**> channels; each channel is individually programmable with 40 on-off operations per week, plus four seasonal schedules that modify the basic program and an annual holiday schedule that overrides the weekly operation on holidays.
      8) <**Insert configuration**>[**and an annual holiday schedule that overrides the weekly operation on holidays**].

   d. Circuitry: Allow connection of a photoelectric relay as substitute for on-off function of a program[**on selected channels**].
   e. Astronomic Time: [**All**][**Selected**] channels.
   f. Automatic daylight savings time changeover.
   g. Battery Backup: Not less than seven days' reserve, to maintain schedules and time clock.

B. UL WGZR - Electromechanical-Dial Time Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Eaton**]
   b. [**Intermatic, Inc**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**NSi Industries LLC**]

e. [**Schneider Electric USA, Inc.**]
f. [**TE Connectivity Ltd.**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Eaton**]
b. [**Intermatic, Inc**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**NSi Industries LLC**]
e. [**Schneider Electric USA, Inc.**]
f. [**TE Connectivity Ltd.**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Clock-Operated Switches: UL CCN WGZR, including UL 917.

5. Standard Features:

a. Contact Configuration: [**SPST**][**DPST**][**SPDT**][**DPDT**]<**Insert configuration**>.
b. Contact Rating: [**30 A inductive or resistive, 240 V(ac)**][**20 A driver load, 120/240 V(ac)**]<**Insert rating**>.
c. Circuitry: Allows connection of a photoelectric relay as a substitute for the on-off function of a program.
d. Astronomic time dial.
e. Eight-Day Program: Uniquely programmable for each weekday and holidays.
f. Skip-a-day mode.
g. Wound-spring reserve carryover mechanism to keep time during power failures, minimum of [**16**]<**Insert number**> hours.

C. UL WGZR - Digital Timer Light Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Eaton**]
b. [**Intermatic, Inc**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**nLight; Acuity Brands Lighting, Inc.**]
e. [**NSi Industries LLC**]
f. [**Schneider Electric USA, Inc.**]
g. [**TE Connectivity Ltd.**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Eaton**]
b. [**Intermatic, Inc**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**nLight; Acuity Brands Lighting, Inc.**]
e. [**NSi Industries LLC**]
f. [**Schneider Electric USA, Inc.**]
g. [**TE Connectivity Ltd.**]
h. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Clock-Operated Switches: UL CCN WGZR, including UL 917.

5. Standard Features:

   a. Combination digital timer and conventional switch lighting control unit. Switchbox-mounted, backlit LCD display, with selectable time interval in [**10**][**20**]-minute increments.
   b. Rated 960 W at 120 V(ac) for tungsten lighting, 10 A at 120 V(ac) or 10 A at 277 V(ac) for fluorescent or LED lighting, and 1/4 hp at 120 V(ac).
   c. Standards: Comply with UL 20.
   d. Integral relay for connection to BAS.
   e. Voltage: [**Match the circuit voltage**][**120 V**][**277 V**][**Dual voltage - 120 and 277 V**].
   f. Color: [**White**][**Black**]<**Insert color**>.
   g. Faceplate: Color matched to switch.

2.3 OUTDOOR PHOTOELECTRIC SWITCHES

A. UL WJFX - Solid-State Outdoor Photoelectric Switch, Flexible Mounting :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Eaton**]
   b. [**Intermatic, Inc**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**nLight; Acuity Brands Lighting, Inc.**]
   e. [**NSi Industries LLC**]
   f. [**TE Connectivity Ltd.**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Eaton**]
   b. [**Intermatic, Inc**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**nLight; Acuity Brands Lighting, Inc.**]
   e. [**NSi Industries LLC**]
   f. [**TE Connectivity Ltd.**]

g. **<Insert manufacturer's name>**

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Plug-in, Locking-Type Photocontrols: UL CCN WJFX, including UL 773.

5. Standard Features:

   a. Solid state, with [**SPST**][**DPST**]<**Insert configuration**> dry contacts rated for [**1000 W incandescent**][**or**][**1800 VA inductive**]<**Insert value**>, to operate connected relay, contactor coils, or microprocessor input; and compatible with drivers and LED lamps.
   b. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
   c. Light-Level Monitoring Range: **1.5 to 10 fc (16.14 to 108 lx)**, with an adjustment for turn-on and turn-off levels within that range[**, and a directional lens in front of the photocell to prevent fixed light sources from causing turn-off**].
   d. Time Delay: Fifteen-second minimum, to prevent false operation.
   e. Surge Protection: Metal-oxide varistor.
   f. Mounting: Twist lock complies with ANSI C136.10, with base-and-stem mounting or stem-and-swivel mounting accessories as required to direct sensor to the north sky exposure[**from same source and manufacturer as switch**].
   g. Failure Mode: Luminaire stays ON.

B. UL WJFX - Solid-State Outdoor Photoelectric Switch, Luminaire-Mounted :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Eaton**]
   b. [**Intermatic, Inc**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**nLight; Acuity Brands Lighting, Inc.**]
   e. [**NSi Industries LLC**]
   f. [**TE Connectivity Ltd.**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Eaton**]
   b. [**Intermatic, Inc**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**nLight; Acuity Brands Lighting, Inc.**]
   e. [**NSi Industries LLC**]
   f. [**TE Connectivity Ltd.**]
   g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.

4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Plug-in, Locking-Type Photocontrols: UL CCN WJFX, including UL 773.

5. Standard Features:

    a. Solid state, with [**SPST**][**DPST**] dry contacts rated for [**1000 W incandescent**][**or**][**1800 VA inductive**], to operate connected load, and compatible with CFL and LED lamps.
    b. Light-Level Monitoring Range: **1.5 to 10 fc (16.14 to 108 lx)**, with an adjustment for turn-on and turn-off levels within that range.
    c. Time Delay: Thirty-second minimum, to prevent false operation.
    d. Lightning Arrester: Air-gap type.
    e. Mounting: Twist lock complying with ANSI C136.10, with base[**from same source and manufacturer as switch**].
    f. Failure Mode: Luminaire stays ON.

C. UL WJFX - Solid-State, Low-Voltage, Outdoor Photoelectric Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Eaton**]
    b. [**Intermatic, Inc**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**nLight; Acuity Brands Lighting, Inc.**]
    e. [**NSi Industries LLC**]
    f. [**TE Connectivity Ltd.**]
    g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Eaton**]
    b. [**Intermatic, Inc**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**nLight; Acuity Brands Lighting, Inc.**]
    e. [**NSi Industries LLC**]
    f. [**TE Connectivity Ltd.**]
    g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Plug-in, Locking-Type Photocontrols: UL CCN WJFX, including UL 773.

5. Standard Features:

    a. Solid state; one set of N.O. dry contacts rated for [**24 V(dc) at 1 A**][**24 V(ac) at 1 A**], to operate connected load, and compatible with [**luminaire**][**power pack**][**lighting control**

panelboard].

b. Light-Level Monitoring Range: **1.5 to 10 fc (16.14 to 108 lx)**, with an adjustment for turn-on and turn-off levels within that range.
c. Time Delay: Thirty-second minimum, to prevent false operation.
d. Mounting: **1/2 inch (13 mm)** threaded male conduit.
e. Failure Mode: Luminaire stays ON.
f. Power Pack:

1) Dry contacts rated for [**20 A**]<**Insert value**>[**driver**][**or**][**LED**] load at 120 and 277 V(ac), for [**13 A**]<**Insert value**> tungsten at 120 V(ac), and for [**1 hp**]<**Insert value**> at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.

a) LED status lights to indicate load status.
b) Plenum rated.

2) Digital controller capable of accepting [**three**][**four**]<**Insert number**> 8PSJ inputs with [**one**][**two**] outputs rated for [**20 A**]<**Insert value**> incandescent[**or LED**] load at 120 and 277 V(ac), for [**13 A**][**16 A**]<**Insert value**>[**driver**][**or**][**LED**] at 120 and 277 V(ac), and for [**1 hp**]<**Insert value**> at 120 V(ac). Sensor has 24 V(dc), Class 2 power source.

a) With integral current monitoring.
b) Compatible with digital addressable lighting interface.
c) Plenum rated.

2.4 DAYLIGHT-HARVESTING CONTROLS

A. UL WJCT - Daylight-Harvesting Control Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Eaton**]
b. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
e. [**nLight; Acuity Brands Lighting, Inc.**]
f. [**NSi Industries LLC**]
g. [**Sensor Switch, Inc**]
h. [**TE Connectivity Ltd.**]
i. [**WattStopper; Legrand North America, LLC**]
j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Eaton**]
b. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]

d. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
e. [**nLight; Acuity Brands Lighting, Inc.**]
f. [**NSi Industries LLC**]
g. [**Sensor Switch, Inc**]
h. [**TE Connectivity Ltd.**]
i. [**WattStopper; Legrand North America, LLC**]
j. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Photoelectric Switches: UL CCN WJCT, including UL 773A.

5. Standard Features:

   a. System operates indoor lighting.
   b. Ceiling-Mounted Switching Controls:

      1) Solid-state, light-level sensor unit, with [**integrated**]power pack, that detects changes in indoor lighting levels that are perceived by the eye.
      2) Solid-state, light-level sensor unit, with separate power pack[**mounted on luminaire**], that detects changes in indoor lighting levels that are perceived by the eye.

   c. Operating Ambient Conditions: Dry interior conditions, **32 to 120 deg F (0 to 49 deg C)**.
   d. Sensor Output:

      1) Contacts rated to operate the associated power pack, complying with UL 773A. Sensor must be powered by the power pack.
      2) Digital signal compatible with power pack.

   e. Sensor Type: [**Open loop**][**Closed loop**].
   f. Zone: [**Single**][**Multi**].
   g. Power Pack:

      1) Dry contacts rated for [**20 A**]<**Insert value**>[**driver**][**or**][**LED**] load at 120 and 277 V(ac), for [**13 A**]<**Insert value**> tungsten at 120 V(ac), and for [**1 hp**]<**Insert value**> at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.

         a) LED status lights to indicate load status.
         b) Plenum rated.

      2) Digital controller capable of accepting [**three**][**four**]<**Insert number**> 8PSJ inputs with [**one**][**two**] outputs rated for [**20 A**]<**Insert value**> incandescent [**or**][**LED**] load at 120 and 277 V(ac), for [**13 A**][**16 A**]<**Insert value**>[**driver**][**or LED**] at 120 and 277 V(ac), and for [**1 hp**]<**Insert value**> at 120 V(ac). Sensor has 24 V(dc) Class 2 power source.

         a) With integral current monitoring
         b) Compatible with digital addressable lighting interface.
         c) Plenum rated.

   h. General Space Sensors Light-Level Monitoring Range: **10 to 200 fc (108 to 2152 lx)**, with an adjustment for turn-on and turn-off levels within that range.

i. Atrium Space Sensors Light-Level Monitoring Range: **100 to 1000 fc (1080 to 10 800 lx)**, with an adjustment for turn-on and turn-off levels within that range.
j. Skylight Sensors Light-Level Monitoring Range: **1000 to 10 000 fc (10 800 to 108 000 lx)**, with an adjustment for turn-on and turn-off levels within that range.
k. Time Delay: Adjustable from 5 to 300 seconds to prevent cycling.
l. Set-Point Adjustment: Equip with deadband adjustment of 25, 50, and 75 percent above the "on" set point, or provide with separate adjustable "on" and "off" set points.
m. Test Mode: User selectable, overriding programmed time delay to allow settings check.
n. Control Load Status: User selectable to confirm that load wiring is correct.
o. Indicator: Two digital displays to indicate the beginning of on-off cycles.

6. Sequence of Operation: As daylight increases, the lights are turned off at a predetermined level. As daylight decreases, the lights are turned on at a predetermined level.

a. Lighting control set point is based on two lighting conditions:

1) When no daylight is present.
2) When significant daylight is present (target level).

b. System programming is done with two handheld, remote-control tools.

B. UL WJCT - Daylight-Harvesting Analog Control Dimmer :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Deep Roof Lighting**]
b. [**Eaton**]
c. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Leviton Manufacturing Co., Inc.**]
e. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
f. [**WattStopper; Legrand North America, LLC**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Deep Roof Lighting**]
b. [**Eaton**]
c. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Leviton Manufacturing Co., Inc.**]
e. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
f. [**WattStopper; Legrand North America, LLC**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Photoelectric Switches: UL CCN WJCT, including UL 773A.

5. Standard Features:

a. Sensing daylight and electrical lighting levels, the system adjusts the indoor electrical lighting levels. As daylight increases, the lights are dimmed.
b. System programming is done with two handheld, remote-control tools.

1) Initial setup tool.
2) Tool for occupants to adjust the target levels by increasing the set point up to 25 percent, or by minimizing the electric lighting level.

c. Ceiling-Mounted Dimming Controls: Solid-state, light-level sensor unit, with [**integrated**][**separate**] power pack[**mounted on luminaire**], to detect changes in indoor lighting levels that are perceived by the eye.
d. Sensor Output: 0-10 V(dc) to operate luminaires. Sensor is powered by controller unit.
e. Light-Level Sensor Set-Point Adjustment Range: **20 to 60 fc (120 to 640 lx)**.
f. Power Pack: Dry contacts rated for [**20 A**]<**Insert value**>[**driver**][**or**][**LED**] load at 120 and 277 V(ac), for [**13 A**]<**Insert value**> tungsten at 120 V(ac), and for [**1 hp**]<**Insert value**> at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.

1) LED status lights to indicate load status.
2) Plenum rated.

6. Sequence of Operation: Lighting control set point is based on two lighting conditions:

a. When no daylight is present (target level).
b. When significant daylight is present.

C. UL WJCT - Daylight-Harvesting Digital Control Dimmer :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Deep Roof Lighting**]
b. [**Eaton**]
c. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Leviton Manufacturing Co., Inc.**]
e. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
f. [**nLight; Acuity Brands Lighting, Inc.**]
g. [**WattStopper; Legrand North America, LLC**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Deep Roof Lighting**]
b. [**Eaton**]
c. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Leviton Manufacturing Co., Inc.**]
e. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]

f. [**nLight; Acuity Brands Lighting, Inc.**]
g. [**WattStopper; Legrand North America, LLC**]
h. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Photoelectric Switches: UL CCN WJCT, including UL 773A.

5. Standard Features:

   a. Sensing daylight and electrical lighting levels, the system adjusts the indoor electrical lighting levels. As daylight increases, lights are dimmed.
   b. System programming is done with two handheld, remote-control tools.

      1) Initial setup tool.
      2) Tool for occupants to adjust the target levels by increasing the set point up to 25 percent, or by minimizing the electric lighting level.

   c. Ceiling-Mounted Dimming Controls: Solid-state, light-level sensor unit, with [**integrated**][**separate**] power pack[**mounted on luminaire**], to detect changes in indoor lighting levels that are perceived by the eye.
   d. Sensor Output: 0-10 V(dc) to operate luminaires. Sensor is powered by controller unit.
   e. Light-Level Sensor Set-Point Adjustment Range: **20 to 60 fc (120 to 640 lx)**.
   f. Power Pack: Digital controller capable of accepting [**three**][**four**]<**Insert number**> 8PSJ inputs with [**one**][**two**] output(s) rated for [**20 A**]<**Insert value**> incandescent [**or**][**LED**] load at 120 and 277 V(ac), for [**13 A**][**16 A**]<**Insert value**>[**driver load**][**or**][**LED**] at 120 and 277 V(ac), and for [**1 hp**]<**Insert value**> at 120 V(ac). Sensor has 24 V(dc) Class 2 power source.

      1) With integral current monitoring.
      2) Compatible with digital addressable lighting interface.
      3) Plenum rated.

6. Sequence of Operation: Lighting control set point is based on the following two lighting conditions:

   a. When no daylight is present (target level).
   b. When significant daylight is present.

2.5 BUSINESS OCCUPANCY AND VACANCY SENSORS

A. Passive-Infrared (PIR) Occupancy or Vacancy Sensor :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Ademco; Honeywell**]
   b. [**ADT Security Services, Inc**]
   c. [**Cooper Lighting Solutions; Signify North America Corp.**]

d. [**Crestron Electronics, Inc.**]
e. [**Honeywell Security Group**]
f. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
g. [**Leviton Manufacturing Co., Inc.**]
h. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
i. [**Lutron Electronics Co., Inc**]
j. [**Napco Security Technologies, Inc.**]
k. [**Pass & Seymour; Legrand North America, LLC**]
l. [**RAB Lighting**]
m. [**WattStopper; Legrand North America, LLC**]
n. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Ademco; Honeywell**]
b. [**ADT Security Services, Inc**]
c. [**Cooper Lighting Solutions; Signify North America Corp.**]
d. [**Crestron Electronics, Inc.**]
e. [**Honeywell Security Group**]
f. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
g. [**Leviton Manufacturing Co., Inc.**]
h. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
i. [**Lutron Electronics Co., Inc**]
j. [**Napco Security Technologies, Inc.**]
k. [**Pass & Seymour; Legrand North America, LLC**]
l. [**RAB Lighting**]
m. [**WattStopper; Legrand North America, LLC**]
n. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for one of the following UL product categories:

a. Photoelectric Controls: UL CCN WJCT, including UL 773A.
b. Energy Management Equipment: UL CCN PAZX, including UL 916 or UL 60730-1.
c. Intrusion Detection Units: UL CCN ANSR, including UL 639.

5. Standard Features:

a. [**Wall**][**Ceiling**]-mounted, solid-state indoor [**occupancy**][**and**][**vacancy**] sensors.
b. [**Integrated**][**Separate**] power pack.
c. [**Hardwired**][**Wireless**] connection to switch[**and BAS**][**; and BAS and lighting control system**].
d. Sensor Output: [**Contacts rated to operate the connected relay, complying with UL 773A**][**Sensor is powered from the power pack**][**Wireless**].
e. Power: [**Line voltage**][**Integral photovoltaic collector**].
f. Power Pack: Dry contacts rated for 20 A [**driver**][**or**][**LED**] load at 120 and 277 V(ac), for 13 A tungsten at 120 V(ac), and for 1 hp at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.
g. Mounting:

1) Sensor: Suitable for mounting in any position in a standard device box or outlet box.
2) Relay: Externally mounted through a 1/2 inch (13 mm) knockout in a standard electrical enclosure.
3) Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.

h. Indicator: Digital display, to show when motion is detected during testing and normal operation of sensor.
i. Bypass Switch: Override the "on" function in case of sensor failure.
j. Automatic Light-Level Sensor: Adjustable from 2 to 200 fc (21.5 to 2152 lx); turn lights off when selected lighting level is present.
k. Detector Sensitivity: Detect occurrences of 6 inch (150 mm) minimum movement of any portion of a human body that presents a target of not less than 36 sq. inch (23 200 sq. mm).

1) Detection Coverage (Room, Ceiling Mounted): Detect occupancy anywhere in a circular area of 1000 sq. ft (93 sq. m) when mounted on a 96 inch (2440 mm) high ceiling.
2) Detection Coverage (Corridor, Ceiling Mounted): Detect occupancy within 90 ft (27.4 m) when mounted on a 10 ft (3 m) high ceiling.
3) Detection Coverage (Room, Wall Mounted): Detect occupancy anywhere within a 180-degree pattern centered on the sensor over an area of [1000 sq. ft (110 sq. m)][2000 sq. ft (220 sq. m)][3000 sq. ft (330 sq. m)] when mounted 48 inch (1200 mm) above finished floor.

6. Operation:

a. Occupancy Sensor: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
b. Vacancy Sensor: Unless otherwise indicated, lights are manually turned on and sensor turns lights off when the room is unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
c. Combination Sensor: Unless otherwise indicated, sensor must be programmed to turn lights on when coverage area is occupied and turn them off when unoccupied, or to turn off lights that have been manually turned on; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.

B. Ultrasonic Occupancy or Vacancy Sensor :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Cooper Lighting Solutions; Signify North America Corp.**]
b. [**Eaton**]
c. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Lutron Electronics Co., Inc**]
e. [**WattStopper; Legrand North America, LLC**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the

following:

a. [**Cooper Lighting Solutions; Signify North America Corp.**]
b. [**Eaton**]
c. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Lutron Electronics Co., Inc**]
e. [**WattStopper; Legrand North America, LLC**]
f. **<Insert manufacturer's name>**

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for one of the following UL product categories:

a. Appliance Controls: UL CCN ATNZ, including UL 60730-1.
b. Energy Management Equipment: UL CCN PAZX, including UL 916 or UL 60730-1.
c. Intrusion Detection Units: UL CCN ANSR, including UL 639.

5. Standard Features:

a. [**Wall**][**Ceiling**]-mounted, solid-state indoor [**occupancy**][**and**][**vacancy**] sensors.
b. [**Integrated**][**Separate**] power pack.
c. [**Hardwired**][**Wireless**] connection to switch[**and BAS**][**; and BAS and lighting control system**].
d. Power: Line voltage.
e. Power Pack: Dry contacts rated for 20 A [**driver**][**or**][**LED**] load at 120 and 277 V(ac), for 13 A tungsten at 120 V(ac), and for 1 hp at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.
f. Mounting:

1) Sensor: Suitable for mounting in any position in a standard device box or outlet box.
2) Relay: Externally mounted through a **1/2 inch (13 mm)** knockout in a standard electrical enclosure.
3) Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.

g. Indicator: Digital display, to show when motion is detected during testing and normal operation of sensor.
h. Bypass Switch: Override the "on" function in case of sensor failure.
i. Automatic Light-Level Sensor: Adjustable from **2 to 200 fc (21.5 to 2152 lx)**; turn lights off when selected lighting level is present.
j. Detector Sensitivity: Detect a person of average size and weight moving not less than **12 inch (305 mm)** in either a horizontal or a vertical manner at an approximate speed of **12 inch/s (305 mm/s)**.

1) Detection Coverage (Small Room): Detect occupancy anywhere within a circular area of **600 sq. ft (56 sq. m)** when mounted on a **96 inch (2440 mm)** high ceiling.
2) Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of **1000 sq. ft (93 sq. m)** when mounted on a **96 inch (2440 mm)** high ceiling.
3) Detection Coverage (Large Room): Detect occupancy anywhere within a circular area of **2000 sq. ft (186 sq. m)** when mounted on a **96 inch (2440 mm)** high ceiling.
4) Detection Coverage (Corridor): Detect occupancy anywhere within **90 ft (27.4 m)** when mounted on a **10 ft (3 m)** high ceiling in a corridor not wider than **14 ft (4.3 m)**.
5) Detection Coverage (Room, Wall Mounted): Detect occupancy anywhere within a 180-degree pattern centered on the sensor over an area of [**1000 sq. ft**

(110 sq. m)][2000 sq. ft (220 sq. m)][3000 sq. ft (330 sq. m)] when mounted 84 inch (2100 mm) above finished floor.

6. Operation:

   a. Occupancy Sensor: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
   b. Vacancy Sensor: Unless otherwise indicated, lights are manually turned on and sensor turns lights off when the room is unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
   c. Combination Sensor: Unless otherwise indicated, sensor must be programmed to turn lights on when coverage area is occupied and turn them off when unoccupied, or to turn off lights that have been manually turned on; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.

C. Dual-Technology, Passive-Infrared (PIR) and Ultrasonic, Occupancy or Vacancy Sensor :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Cooper Lighting Solutions; Signify North America Corp.**]
   b. [**HLI Solutions; brand of GE Current, a Daintree Company**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Cooper Lighting Solutions; Signify North America Corp.**]
   b. [**HLI Solutions; brand of GE Current, a Daintree Company**]
   c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for one of the following UL product categories:

   a. Energy Management Equipment: UL CCN PAZX, including UL 916 or UL 60730-1.
   b. Appliance Controls: UL CCN ATNZ, including UL 60730-1.
   c. Intrusion Detection Units: UL CCN ANSR, including UL 639.

5. Standard Features:

   a. [**Wall**][**Ceiling**]-mounted, solid-state indoor [**occupancy**][**and**][**vacancy**] sensors.
   b. [**Integrated**][**Separate**] power pack.
   c. [**Hardwired**][**Wireless**] connection to switch[**and BAS**][**; and BAS and lighting control system**].
   d. Sensitivity Adjustment: Separate for each sensing technology.
   e. Detector Sensitivity: Detect occurrences of 6 inch (150 mm) minimum movement of any portion of a human body that presents a target of not less than 36 sq. inch (23 200 sq. mm), and detect a person of average size and weight moving not less than 12 inch (305 mm) in either a horizontal or a vertical manner at an approximate speed of

12 inch/s (305 mm/s).

1) Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft (93 sq. m) when mounted on a 96 inch (2440 mm) high ceiling.
2) Detection Coverage (Room, Wall Mounted): Detect occupancy anywhere within a 180-degree pattern centered on the sensor over an area of [1000 sq. ft (110 sq. m)][2000 sq. ft (220 sq. m)][3000 sq. ft (330 sq. m)] when mounted 48 inch (1200 mm) above finished floor.

6. Operation:

a. Occupancy Sensor: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
b. Vacancy Sensor: Unless otherwise indicated, lights are manually turned on and sensor turns lights off when the room is unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
c. Combination Sensor: Unless otherwise indicated, sensor must be programmed to turn lights on when coverage area is occupied and turn them off when unoccupied, or to turn off lights that have been manually turned on; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.

D. Dual-Technology, Passive-Infrared (PIR) and Passive-Acoustic, Occupancy or Vacancy Sensor :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**HLI Solutions; brand of GE Current, a Daintree Company**]
b. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
c. [**SensorWorx; brand of BLP Technologies, Inc.**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**HLI Solutions; brand of GE Current, a Daintree Company**]
b. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
c. [**SensorWorx; brand of BLP Technologies, Inc.**]
d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for one of the following UL product categories:

a. Energy Management Equipment: UL CCN PAZX, including UL 916 or UL 60730-1.
b. Appliance Controls: UL CCN ATNZ, including UL 60730-1.
c. Intrusion Detection Units: UL CCN ANSR, including UL 639.

5. Standard Features:

a. [**Wall**][**Ceiling**]-mounted, solid-state indoor [**occupancy**][**and**][**vacancy**] sensors.
b. [**Integrated**][**Separate**] power pack.

c. [**Hardwired**][**Wireless**] connection to switch[**and BAS**][**; and BAS and lighting control system**].
d. Sensitivity Adjustment: Separate for each sensing technology.
e. Detector Sensitivity: Detect occurrences of **6 inch (150 mm)** minimum movement of any portion of a human body that presents a target of not less than **36 sq. inch (23 200 sq. mm)**, and detect a person of average size and weight moving not less than **12 inch (305 mm)** in either a horizontal or a vertical manner at an approximate speed of **12 inch/s (305 mm/s)**.

1) Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of **1000 sq. ft (93 sq. m)** when mounted on a **96 inch (2440 mm)** high ceiling.
2) Detection Coverage (Room, Wall Mounted): Detect occupancy anywhere within a 180-degree pattern centered on the sensor over an area of [**1000 sq. ft (110 sq. m)**][**2000 sq. ft (220 sq. m)**][**3000 sq. ft (330 sq. m)**] when mounted **48 inch (1200 mm)** above finished floor.

6. Operation:

a. Occupancy Sensor: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
b. Vacancy Sensor: Unless otherwise indicated, lights are manually turned on and sensor turns lights off when the room is unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
c. Combination Sensor: Unless otherwise indicated, sensor must be programmed to turn lights on when coverage area is occupied and turn them off when unoccupied, or to turn off lights that have been manually turned on; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.

E. Wall-Switch Occupancy Sensor :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Bryant; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Douglas Lighting Controls**]
c. [**Eaton**]
d. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
e. [**Intermatic, Inc**]
f. [**Leviton Manufacturing Co., Inc.**]
g. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
h. [**Lutron Electronics Co., Inc**]
i. [**nLight; Acuity Brands Lighting, Inc.**]
j. [**NSi Industries LLC**]
k. [**Philips; Signify North America; Signify Holding**]
l. [**RAB Lighting**]
m. [**Sensor Switch, Inc**]
n. [**Square D; Schneider Electric USA**]
o. [**WattStopper; Legrand North America, LLC**]
p. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

a. [**Bryant; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Douglas Lighting Controls**]
c. [**Eaton**]
d. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
e. [**Intermatic, Inc**]
f. [**Leviton Manufacturing Co., Inc.**]
g. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
h. [**Lutron Electronics Co., Inc**]
i. [**nLight; Acuity Brands Lighting, Inc.**]
j. [**NSi Industries LLC**]
k. [**Philips; Signify North America; Signify Holding**]
l. [**RAB Lighting**]
m. [**Sensor Switch, Inc**]
n. [**Square D; Schneider Electric USA**]
o. [**WattStopper; Legrand North America, LLC**]
p. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for one of the following UL product categories:

a. Photoelectric Controls: UL CCN WJCT, including UL 773A.
b. Energy Management Equipment: UL CCN PAZX, including UL 916 or UL 60730-1.
c. Intrusion Detection Units: UL CCN ANSR, including UL 639.

5. Standard Features:

a. Automatic-wall-switch occupancy sensor with manual on-off switch, suitable for mounting in single gang switchbox[**, with provisions for connection to BAS**][**using hardwired connection**][**using wireless connection**].

1) Occupancy Sensor Operation: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn lights off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
2) Operating Ambient Conditions: Dry interior conditions, **32 to 120 deg F (0 to 49 deg C)**.
3) Switch Rating: Not less than 800 VA [**driver**][**or**][**LED**] load at 120 V, 1200 VA [**driver**][**or**][**LED**] load at 277 V, and 800 W incandescent.

b. Standard Range: [**180-degree field of view, field adjustable from 180 to 40 degrees**][**210-degree field of view**]; with a minimum coverage area of [**900 sq. ft (84 sq. m)**][**2100 sq. ft (196 sq. m)**].
c. Sensing Technology: [**PIR**][**Dual technology - PIR and ultrasonic**].
d. Switch Type: [**Single pole.**][**Single pole, dual circuit.**][**Single pole, manual "on," automatic "off."**][**Single pole, field-selectable automatic "on," or manual "on," automatic "off."**]
e. Capable of controlling load in three-way application.
f. Voltage: [**Match circuit voltage**][**120 V**][**277 V**][**Dual voltage - 120 and 277 V**].
g. Ambient-Light Override: Concealed, field-adjustable, light-level sensor from **10 to 150 fc (108 to 1600 lx)**. Switch prevents lights from turning on when light level is higher than set point of sensor.

h. Time Delay:

1) Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.
2) Concealed, "off" time-delay selector at 30 seconds and 5, 10, and 20 minutes.

i. Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and helps eliminate false "off" switching.
j. Color: [**White**][**Black**]<**Insert color**>.
k. Faceplate: Color matched to switch.

2.6 STORAGE OCCUPANCY SENSORS

A. High-Bay Occupancy Sensor :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**nLight; Acuity Brands Lighting, Inc.**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**nLight; Acuity Brands Lighting, Inc.**]
c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Photoelectric Controls: UL CCN WJCT, including UL 773A.

5. Standard Features:

a. Solid-State Unit: Designed to operate with the lamp and ballasts or drivers indicated.
b. Power: Line voltage.

1) Operating Ambient Conditions: **32 to 149 deg F (0 to 65 deg C)**.
2) Mounting: Threaded pipe.
3) Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
4) Detector Technology: PIR.

c. Detector Coverage: User selectable by interchangeable PIR lenses, suitable for mounting heights from **12 to 50 ft (3.7 to 15.2 m)**.

6. Other Available Features Required for the Project:

    a. HID Continuous Lamp Monitoring: When lamps are dimmed continuously for 24 hours, automatically turn lamps on to full power for 15 minutes for every 24 hours of continuous dimming.
    b. HID Dimming Adapter: Power and dimming control from the luminaire ballast that has been modified to include the dimming capacitor[**and MyzerPORT option**].

7. Operation: Turn lights on when coverage area is occupied, and to half-power when unoccupied; with a time delay for turning lights to half-power that is adjustable over a minimum range of 1 to 16 minutes.
8. Accessories: Obtain manufacturer's installation and maintenance kit with laser alignment tool for sensor positioning and power port connectors.

B. Ceiling-Mounted, Solid-State, Extreme-Temperature Occupancy Sensor :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Eaton**]
    b. [**nLight; Acuity Brands Lighting, Inc.**]
    c. [**Sensor Switch, Inc**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Eaton**]
    b. [**nLight; Acuity Brands Lighting, Inc.**]
    c. [**Sensor Switch, Inc**]
    d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Photoelectric Controls: UL CCN WJCT, including UL 773A.

5. Standard Features:

    a. Operating Ambient Conditions: From **minus 40 to plus 125 deg F (minus 40 to plus 52 deg C)**.
    b. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor is powered from the power pack.
    c. Separate Power Pack: Dry contacts rated for 20 A [**driver**][**or**][**LED**] load at 120 and 277 V(ac), for 13 A tungsten at 120 V(ac), and for 1 hp at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.
    d. Mounting:

        1) Sensor: Suitable for mounting in any position in a standard device box or outlet box.
        2) Relay: Externally mounted through a **1/2 inch (13 mm)** knockout in a standard electrical enclosure.

3) Time-Delay and Sensitivity Adjustments: Recessed and concealed behind cover.

e. Bypass Switch: Override the "on" function in case of sensor failure.
f. Automatic Light-Level Sensor: Adjustable from **2 to 10 fc (21.5 to 108 lx)**; keep lighting off when selected lighting level is present.
g. Detector Technology: PIR. Ceiling mounted; detect occupants in coverage area by their heat and movement.

1) Detector Sensitivity: Detect occurrences of **6 inch (150 mm)** minimum movement of any portion of a human body that presents a target of not less than **36 sq. inch (23 200 sq. mm)**.
2) Detection Coverage (Room): Detect occupancy anywhere in a circular area of **1500 sq. ft (139 sq. m)** when mounted on a **96 inch (2440 mm)** high ceiling.
3) Detection Coverage (High Bay): Detect occupancy within **25 ft (7.6 m)** when mounted on a **25 ft (7.6 m)** high ceiling.

6. Operation: Turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 30 minutes.

2.7 OUTDOOR MOTION SENSORS

A. Solid-State Outdoor Motion Sensor :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Bryant; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Eaton**]
c. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Leviton Manufacturing Co., Inc.**]
e. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
f. [**nLight; Acuity Brands Lighting, Inc.**]
g. [**NSi Industries LLC**]
h. [**RAB Lighting**]
i. [**Sensor Switch, Inc**]
j. [**WattStopper; Legrand North America, LLC**]
k. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Bryant; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Eaton**]
c. [**Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Leviton Manufacturing Co., Inc.**]
e. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
f. [**nLight; Acuity Brands Lighting, Inc.**]
g. [**NSi Industries LLC**]
h. [**RAB Lighting**]

i. [**Sensor Switch, Inc**]
j. [**WattStopper; Legrand North America, LLC**]
k. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for one of the following UL product categories:

a. Plug-in, Locking-Type Photocontrols: UL CCN WJFX, including UL 773.
b. Energy Management Equipment: UL CCN PAZX, including UL 916 or UL 60730-1.
c. Intrusion Detection Units: UL CCN ANSR, including UL 639.

5. Standard Features:

a. [**PIR**][**Dual-technology (PIR and ultrasonic)**] type, weatherproof. Detect occurrences of **6 inch (150 mm)** minimum movement of any portion of a human body that presents a target of not less than **36 sq. inch (23 200 sq. mm)**.
b. Switch Rating:

1) Luminaire-Mounted Sensor: [**1000 W incandescent, 500 VA fluorescent/LED**]<**Insert rating**>.
2) Separately Mounted Sensor: Dry contacts rated for 20 A [**driver**][**or**][**LED**] load at 120 and 277 V(ac), for 13 A tungsten at 120 V(ac), and for 1 hp at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.
3) Switch Type: [**Single pole.**][**Single pole, dual circuit.**][**Single pole, manual "on," automatic "off."**][**Single pole, field-selectable automatic "on," or manual "on," automatic "off."**][**With bypass switch to override the "on" function in case of sensor failure.**]

c. Voltage: [**Match the circuit voltage**][**120 V**][**277 V**][**Dual voltage, 120 and 277 V**] type.
d. Detector Coverage:

1) Standard Range: 210-degree field of view, with a minimum coverage area of **900 sq. ft (84 sq. m)**.
2) Long Range: 180-degree field of view and **110 ft (34 m)** detection range.
3) <**Insert coverage area**>.

e. Ambient-Light Override: Concealed, field-adjustable, light-level sensor from **10 to 150 fc (108 to 1600 lx)**. The switch prevents the lights from turning on when the light level is higher than the set point of the sensor.
f. Time Delay:

1) Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.
2) Concealed, "off" time-delay selector at 30 seconds and 5, 10, and 20 minutes.

g. Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and help eliminate false "off" switching.
h. Operating Ambient Conditions: Suitable for operation in ambient temperatures ranging from **minus 40 to plus 130 deg F (minus 40 to plus 54 deg C)**, rated as "raintight" in accordance with UL 773A.

2.8 INDUSTRIAL CONTROL SWITCHES

A. Lighting Contactor :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB, Electrification Business**]
    b. [**Allen-Bradley/Rockwell Automation**]
    c. [**ASCO Power Technologies**]
    d. [**Eaton**]
    e. [**Leviton Manufacturing Co., Inc.**]
    f. [**Square D; Schneider Electric USA**]
    g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. [**Allen-Bradley/Rockwell Automation**]
    c. [**ASCO Power Technologies**]
    d. [**Eaton**]
    e. [**Leviton Manufacturing Co., Inc.**]
    f. [**Square D; Schneider Electric USA**]
    g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Industrial Control Switches: UL CCN NRNT, including UL 508.

5. Standard Features:

    a. Electrically operated and [**mechanically**][**electrically**] held, combination-type lighting contactors with [**fusible switch**][**nonfused disconnect**], complying with NEMA ICS 2.
    b. Current Rating for Switching: Listing or rating consistent with type of load served, including tungsten filament, inductive, and high-inrush driver (driver with 15 percent or less THD of normal load current).
    c. Fault Current Withstand Rating: Equal to or exceeding the available fault current at the point of installation.
    d. Enclosure Rating: Comply with UL 50E.
    e. Provide with control and pilot devices as [**indicated on the Drawings**][**scheduled**], matching the enclosure rating specified for the enclosure.
    f. Interface with DDC System for HVAC: Provide hardware interface to enable the DDC system for HVAC to monitor and control lighting contactors.

        1) Monitoring: On-off status, <**Insert monitoring point**>.
        2) Control: On-off operation, <**Insert control point**>.

2.9 EMERGENCY LIGHTING CONTROLS

A. UL FTBR - Automatic Load Control Relay :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Bodine; Signify North America; Signify Holding**]
    b. [**Chloride; Signify North America; Signify Holding**]
    c. [**HLI Solutions; brand of GE Current, a Daintree Company**]
    d. [**Intelligent Lighting Controls Inc.**]
    e. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
    f. [**nLight; Acuity Brands Lighting, Inc.**]
    g. [**WattStopper; Legrand North America, LLC**]
    h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Bodine; Signify North America; Signify Holding**]
    b. [**Chloride; Signify North America; Signify Holding**]
    c. [**HLI Solutions; brand of GE Current, a Daintree Company**]
    d. [**Intelligent Lighting Controls Inc.**]
    e. [**Lithonia Lighting; Acuity Brands Lighting, Inc.**]
    f. [**nLight; Acuity Brands Lighting, Inc.**]
    g. [**WattStopper; Legrand North America, LLC**]
    h. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Emergency Lighting and Power Equipment: UL CCN FTBR, including UL 924.

5. Standard Features:

    a. N.C., electrically held relay.
    b. Coil Rating: [**120**][**277**] V.

B. UL WPWR - Branch Circuit Emergency Lighting Transfer Switch (BCELTS) :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Bodine; Signify North America; Signify Holding**]
    b. [**Chloride; Signify North America; Signify Holding**]
    c. [**HLI Solutions; brand of GE Current, a Daintree Company**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Bodine; Signify North America; Signify Holding**]

b. [**Chloride; Signify North America; Signify Holding**]
c. [**HLI Solutions; brand of GE Current, a Daintree Company**]
d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Automatic Transfer Switches: UL CCN WPWR, including UL 1008.

5. Standard Features:

   a. Automatically transfers emergency lighting load from normal branch circuit to emergency branch circuit in accordance with Article 700 of NFPA 70.
   b. Rating: [**120**][**277**] V, not exceeding 20 A.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine lighting control devices before installation. Reject lighting control devices that are wet, moisture damaged, or mold damaged.

B. Examine walls and ceilings for suitable conditions where lighting control devices will be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SELECTION OF CONDUCTORS AND CABLES

A. Power Wiring to Supply Side of Remote-Control Power Sources: Not smaller than 12 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Classes 2 and 3 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than [**18 AWG**][**22 AWG**][**24 AWG**]. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

C. Class 1 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than [**14 AWG**][**16 AWG**][**18 AWG**]. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 INSTALLATION OF LIGHTING CONTROL DEVICES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.

3. Electrical Safety: NFPA 70E.
4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
5. Communications Work: BICSI N1.
6. Life Safety and Means of Egress Work: NFPA 101.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
8. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression systems, and partition assemblies.
2. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's instructions.
3. Installation of Industrial Control Switches: Mount electrically held lighting contactors with elastomeric isolator pads to eliminate structure-borne vibration unless contactors are installed in an enclosure with factory-installed vibration isolators.
4. Installation of Wiring:

   a. Conduit: Minimum conduit size is **1/2 inch (13 mm)**.
   b. Wiring within Enclosures: Separate power-limited and nonpower-limited conductors in accordance with conductor manufacturer's published instructions.
   c. Size conductors in accordance with lighting control device manufacturer's published instructions unless otherwise indicated.
   d. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, device, and outlet boxes; terminal cabinets; and equipment enclosures.

D. Interfaces with Other Work:

1. Identification: Provide labels for lighting control devices and associated electrical equipment.

   a. Identify field-installed conductors, interconnecting wiring, and components.
   b. Label each enclosure with engraved metal or laminated-plastic nameplate.
   c. Identify controlled circuits in lighting contactors.
   d. Identify circuits or luminaires controlled by photoelectric and occupancy sensors at each sensor.
   e. Label time switches and contactors with a unique designation.

3.4 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Administrant for Lighting Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified lighting testing and inspecting agency to administer and perform tests and inspections.

2. Engage qualified lighting testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

C. Field tests must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

D. Tests and Inspections:

1. Operational Test: After installing time switches and sensors, and after electrical circuitry has been energized, start units to confirm proper unit operation.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Nonconforming Work:

1. Lighting control devices will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

G. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.5 ADJUSTING

A. Occupancy Adjustments: When requested within [**12**]<**Insert number**> months from date of Substantial Completion, provide on-site assistance in adjusting lighting control devices to suit actual occupied conditions. Provide up to [**two**]<**Insert number**> visits to the Project site during other-than-normal occupancy hours for this purpose. Some of the Work may be required during hours of darkness.

1. For occupancy and motion sensors, verify operation at outer limits of detector range. Set time delay to suit Owner's operations.
2. For daylighting controls, adjust set points and deadband controls to suit Owner's operations.
3. Align high-bay occupancy sensors using manufacturer's laser aiming tool.

3.6 CLOSEOUT ACTIVITIES

A. Demonstration:

1. [**With assistance from factory-authorized service representatives, demonstrate**][**Demonstrate**] to Owner's maintenance and clerical personnel[**and building occupants**] how to operate the following systems and equipment:

a. Lighting control devices.

B. Training:

1. [**With assistance from factory-authorized service representatives, train**][**Train**] Owner's maintenance personnel on the following topics:

a. How to adjust, operate, and maintain lighting control devices.

3.7 MAINTENANCE

A. Software and Firmware Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software support for [**two**]<**Insert number**> years.
2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software upgrades that become available within [**two**]<**Insert number**> years from date of Substantial Completion. Verify upgrading software includes operating system and new or revised licenses for using software.

a. Upgrade Notice: Not less than [**30 days**]<**Insert duration**>; to allow Owner to schedule and access the system[**and to upgrade computer equipment if necessary**].

3. Field Reports for Software and Firmware Upgrades: Prepare and submit report after each update, documenting upgrades installed.

END OF SECTION 26 09 23 00A

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
26 09 23 00	02 84 16 00	Handling of Lighting Ballasts and Lamps Containing PCBs and Mercury
26 09 23 00	26 09 00 00	Addressable Luminaire Lighting Controls
26 09 23 00	26 09 00 00a	Relay-Based Lighting Controls
26 09 23 00	26 24 19 00	Motor-Control Centers

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 11 16 00 - SECONDARY UNIT SUBSTATIONS WITH SWITCHBOARD SECONDARY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Secondary unit substation equipment.

B. Products Installed, but Not Furnished, under This Section:

1. <**Insert products identified in "Existing Products to be Modified" Article or "Existing Products to be Removed and Re-Installed" Article**>.

C. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 078413 "Penetration Firestopping" specifies materials and methods for sealing penetrations of rated walls and partitions referenced by this Section.
5. Section 260513 "Medium-Voltage Cables" for requirements for terminating cables in incoming section of substation.
6. Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for requirements for connecting wires.
7. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
8. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
9. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration isolation and seismic-[**and wind-**] control devices referenced by this Section.
10. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
11. Section 260573 "Power System Studies" specifies short-circuit current studies, overcurrent protective device coordination studies, arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.
12. Section 260913 "Electrical Power Monitoring" specifies remote monitoring of metering instruments and for remote control of circuit breakers and switches.
13. Section 264313 "Surge Protective Devices for Low-Voltage Electrical Power Circuits" specifies field-mounted surge-suppression devices referenced in this Section.

1.2 DEFINITIONS

A. ICCB: Insulated-case circuit breaker.

B. MCCB: Molded-case circuit breaker.

C. PCB: Polychlorinated biphenyl.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
2. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.

    a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
    b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
    c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for submitted product.

3. Include manufacturer's sample extended warranty language.
4. Include product certificates for secondary unit substations, signed by manufacturer.

B. Shop Drawings: Prepare and submit the following:

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: Power, signal, and control wiring.
3. Dimensioned plans and elevations showing major components and features.

    a. Include a plan view and cross section of equipment base, showing clearances, manufacturer's recommended workspace that accounts for breaker service and removal, and locations of penetrations for grounding and conduits.

4. One-line diagram.
5. List of materials.
6. Nameplate legends.
7. The material, size and number of bus bars, and current rating for each bus, including mains and branches of phase, neutral, and ground buses.
8. Short-time and short-circuit current ratings of secondary unit substations and components.
9. Ratings of individual protective devices.
10. Design Data:

    a. Time-Current Characteristic Curves: For overcurrent protective devices.
    b. Primary Fuses: Submit recommendations and size calculations.
    c. Utility company's metering provisions with indication of approval by utility company.

C. Factory test reports.

D. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

B. Field Reports:

1. Manufacturer's field reports for field quality-control support.
2. Manufacturer's field reports for system startup support.
3. Field reports for voltage monitoring and adjusting.
4. Field reports for infrared scanning.

1.5 CLOSEOUT SUBMITTALS

A. Warranty documentation.

B. Maintenance service agreement.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Spare parts.

B. Special tools.

C. Consumable items.

1.7 REGULATORY AGENCY APPROVALS

A. Submittals for secondary unit substations requiring approval by <**Insert name of electrical utility**> must be signed by qualified electrical professional engineer responsible for their preparation. [**Obtain approval by electrical utility prior to submitting for action by Architect**][**Submit for action by Architect prior to submitting for approval by electrical utility**].

1.8 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician I: Possessing active NICET EPT Level I certification. Able to work safely around electrical power equipment and cabling under supervision.

B. Electrical Power Testing (EPT) Technician II: Possessing active NICET EPT Level II certification. Able to isolate and ground electrical power equipment, to connect test equipment, and to conduct and document standard tests of basic equipment.

C. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, to conduct tests of complex equipment, to analyze test and equipment data, to plan a job, and to lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

D. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; to evaluate tests, test equipment, test results, and power system performance; to recommend actions to maintain or improve system performance; and to lead multi-team projects.

E. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

F. Electrical Professional Engineer: Professional engineer possessing active qualifications specified in Section 014000 "Quality Requirements," with expertise in electrical engineering, including electrical power system modeling and analysis of electrical safety in accordance with NFPA 70E.

G. Medium-Voltage Cable Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with training and manufacturer certification to install, splice, and terminate medium-voltage cable[**in accordance with electrical utility service provider's requirements**].

1. Medium-voltage cable Installer must be approved by <**Insert name of electrical utility service provider**>.

H. Medium-Voltage Duct Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience with installation of medium-voltage duct banks[**in accordance with electrical utility service provider's requirements**].

1. Medium-voltage duct Installer must be approved by <**Insert name of electrical utility service provider**>.

I. Medium-Voltage Equipment Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience with hazards and safety requirements associated with installation and operation of medium-voltage equipment[**in accordance with electrical utility service provider requirements**].

1. Medium-voltage equipment Installer must be approved by <**Insert name of electrical utility service provider**>.

J. Electrical Power Monitoring Installers: Installer possessing active qualifications specified in Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by manufacturer prior to starting installation.

K. Power Quality Specialist: Recognized experts possessing active NICET Electrical Power Testing (EPT) Technician IV certification and documented experience in power quality testing for installations similar in complexity to the Project.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver in shipping splits in sizes that can be moved past obstructions in delivery path.

B. Coordinate delivery of secondary unit substations to allow movement into designated space.

C. Store secondary unit substation components[**protected from weather and**] so condensation will not form on or in units. Provide temporary heating in accordance with manufacturer's instructions.

D. Handle secondary unit substation components in accordance with manufacturer's instructions. Use factory-installed lifting provisions.

1.10 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

A. Modeling, analysis, product selection, installation, and quality control for all electrical Work on the Project must comply with service condition requirements specified in Section 018116 "Facility Environmental Requirements" and Section 018123 "Facility Seismic and Wind Criteria."

B. Usual Service Conditions: Unless unusual service conditions have been specified in "General Equipment Service Conditions," "Outdoor Equipment Service Conditions," and "Indoor Equipment Services Conditions" articles of Section 018116 "Facility Environmental Requirements," electrical service and distribution equipment must be suitable for operation under usual service conditions specified in applicable IEEE C37 series and IEEE C57 series standards.

1.11 WARRANTY FOR SECONDARY UNIT SUBSTATIONS

A. Special Installer Extended Warranty: Installer warrants that assembled and installed secondary unit substation performs in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.

1. Extended-Warranty Period: [**Two**][**Three**][**Four**]<**Insert number**> years from date of Substantial Completion; full coverage for labor, materials, and equipment.

B. Special Manufacturer Extended Warranty: Manufacturer warrants that secondary unit substations performs in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.

1. Initial Extended-Warranty Period: [**Three**][**Four**][**Five**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.
2. Follow-On Extended-Warranty Period: [**Eight**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for materials only, free on board [**origin**][**destination**], freight prepaid.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact the Work**>.

C. Accessories: <**Insert accessories included with existing product**>.

2.2 EXISTING PRODUCTS TO BE REMOVED AND RE-INSTALLED

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact the Work**>.

C. Accessories: <**Insert accessories included with existing product**>.

2.3 PERFORMANCE REQUIREMENTS

A. Description: Medium-voltage, primary incoming section; transformer section; and low-voltage secondary switchgear section; and including coordinated circuit breakers, fusible switches, and metering components.

B. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

C. General Characteristics:

1. Referenced Standards: IEEE C2 and IEEE C37.121.
2. Indoor Unit Arrangement: Single assembly.
3. Outdoor Unit Arrangement: Single assembly.

    a. Weatherproof, listed for installation outdoors, complying with IEEE C37.20.1.
    b. Aisleless Construction: Full-height doors in front of basic weatherproof equipment.

4. Connections between the primary device and transformer must be [**cable**][**bus**], and between the transformer and secondary must be flexible bus braid unless noted otherwise.
5. Indoor Enclosure: Steel.
6. Outdoor Enclosure: Weatherproof, galvanized steel, listed for installation outdoors, complying with IEEE C37.20.1. Aisleless, full-height doors, with provisions for padlocking, in front of basic weatherproof equipment. Integral structural-steel base frame with factory-applied asphaltic undercoating.
7. Each compartment must have the following features:

    a. Structural design and anchorage adequate to resist loads imposed by [**125 mile/h (200 km/h)**]<**Insert wind speed**> wind.
    b. Space heater operating at one-half or less of rated voltage, sized to prevent condensation, controlled by thermostats to maintain temperature of each section above expected dew point.
    c. Louvers equipped with insect and rodent screens and filters, and arranged to permit air circulation while excluding rodents and exterior dust.
    d. Weatherproof ground-fault circuit interrupter duplex receptacle.
    e. Power for heaters and receptacles must be provided [**by control power transformer**][**as indicated**].
    f. Skid Mounted: Mount each shipping group on an integral base frame as a complete weatherproof unit.

8. Enclosure Finish:

    a. Outdoor Finish: Provide factory-applied finish in manufacturer's standard color, including under surfaces treated with corrosion-resistant undercoating.
    b. Indoor Finish: Provide factory-applied finish in manufacturer's standard gray over a rust-inhibiting primer on treated metal surface.
    c. Severe Environment Finish: Provide factory-applied corrosion-resistant finish in manufacturer's standard color that withstands [**120**][**480**] hours of exposure to the salt spray test specified in ASTM B117 without loss of paint or release of adhesion of the paint primer coat to the metal surface in excess of **1/16 inch (1.6 mm)** from the test mark. The

scribed test mark and test evaluation must be conducted in accordance with ASTM D1654, with a rating of not less than 7 arrived at in accordance with Table 1 (procedure A). Cut edges or otherwise damaged surfaces of hot-dip galvanized sheet steel or mill-galvanized sheet steel must be coated with a manufacturer's standard zinc-rich paint.

2.4 SECONDARY UNIT SUBSTATION EQUIPMENT

A. Source Quality Control:

1. Factory Tests:

a. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.
b. Testing Administrant: [**Owner will engage**][**Engage**] qualified electrical testing agency to evaluate secondary unit substation equipment.
c. Factory Tests and Inspections: Perform the following tests and inspections on secondary unit substation equipment, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with the following standards before delivering to site. Affix label with name and date of [**manufacturer's**][**qualified electrical testing laboratory's**] certification of system compliance.

1) Conduct transformer tests in accordance with IEEE C57.12.90.
2) Conduct primary switchgear tests in accordance with NEMA C37.51.
3) Conduct routine tests of completely assembled switchboard.
4) Resistance measurements of windings on rated voltage connection and on tap extreme connections.
5) Ratios on rated voltage connection and on tap extreme connections.
6) Polarity and phase relation on rated voltage connection.
7) No-load loss at rated voltage on rated voltage connection.
8) Exciting current at rated voltage on rated voltage connection.
9) Impedance and load loss at rated current on rated voltage connection and on tap extreme connections.
10) Applied potential.
11) Induced potential.

2. Temperature Test: If transformer is supplied with auxiliary cooling equipment to provide more than one rating, test at lowest kVA Class ONAN or Class AA rating and highest kVA Class ONAF or Class AFA rating.

a. Temperature test is not required if record of temperature test on essentially duplicate unit is available.
b. Nonconforming Work:

1) Equipment that does not pass tests and inspections will be considered defective.

c. Factory Test Reports: Compile and submit factory test and inspection reports.

B. UL YEFV or DLAH or WVGN - Medium-Voltage Terminal Compartment Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]

b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Unit Substation Over 600 V: UL CCN YEFV, including the following referenced standards:

1) Articulated Unit Substations: IEEE C37.121.
2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.

b. Metal-Clad Switchgear Over 1000 V: UL CCN DLAH, including IEEE C37.20.2 and NEMA C37.55.
c. Metal-Enclosed Arc-Resistant Switchgear Over 1000 V: UL CCN WVGN, including IEEE C37.20.3 and IEEE C37.20.7.

4. Standard Features:

a. Primary Incoming Section: Terminal assembly with adequate space for incoming-cable terminations and surge arresters, complying with NEMA SG 4 and meeting thermal, mechanical, and dielectric requirements specified for the transformer section.
b. Ratings: Suitable for application in three-phase, 60 Hz, solidly grounded-neutral system.
c. System Voltage: [**4.16 kV nominal; 4.76 kV maximum**][**7.2 kV nominal; 15 kV maximum**][**13.8 kV nominal; 15 kV maximum**][**34.5 kV nominal; 38 kV maximum**]<**Insert other voltage**>.
d. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, connected in each phase of incoming circuit and ahead of disconnecting device.

C. UL YEFV or DLAH or WVGN - Medium-Voltage Metal-Enclosed Switchgear Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. [**Eaton**]
    c. [**Siemens Industry, Inc., Energy Management Division**]
    d. [**Square D; Schneider Electric USA**]
    e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Unit Substation Over 600 V: UL CCN YEFV, including the following referenced standards:

        1) Articulated Unit Substations: IEEE C37.121.
        2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.

    b. Metal-Clad Switchgear Over 1000 V: UL CCN DLAH, including IEEE C37.20.2 and NEMA C37.55.
    c. Metal-Enclosed Arc-Resistant Switchgear Over 1000 V: UL CCN WVGN, including IEEE C37.20.3 and IEEE C37.20.7.

4. Standard Features:

    a. Metal-enclosed, air-interrupter switchgear, [**with**][**without**] fuses, complying with IEEE C37.20.3.

        1) Switchgear must be arc-resistant, complying with IEEE C37.20.7, [**Type 1A**][**Type 2A**][**Type 1C**][**Type 2C**].

    b. Ratings: Comply with IEEE C37.04; and suitable for application in three-phase, 60 Hz, solidly grounded-neutral system.

        1) System Voltage: [**4.16 kV nominal; 4.76 kV maximum**][**7.2 kV nominal; 15 kV maximum**][**13.8 kV nominal; 15 kV maximum**][**34.5 kV nominal; 38 kV maximum**]<**Insert other voltage**>.
        2) Design Level of Available-Source Fault Current: Integrated short-circuit rating consistent with value of fault current indicated.
        3) Main-Bus Rating: [**600**][**1200**][**2000**] A, continuous.

    c. Interrupter Switches: Stationary, gang operated, and suitable for application at maximum short-circuit rating of integrated switchgear assembly.

        1) Rating: [**600**][**1200**] A continuous duty and load break.
        2) Two-Time Duty-Cycle Fault Closing: [**25 000**][**40 000**] A, asymmetrical.
        3) Switch Action: No external arc and no significant quantities of ionized gas released into the enclosure.
        4) Switch Construction: Supported entirely by interior framework of structure, with copper switchblades and stored-energy operating mechanism.
        5) Phase Barriers: Full length of switchblades and fuses for each pole; designed for easy removal; allow visual inspection of switch components if barrier is in place.
        6) Protective Shields: Cover live components and terminals.

a) Fuse Mounts: Single-frame mounted and de-energized when switch is open.

7) Mechanical Interlock: Prevent opening switch compartment door unless switchblades are open, and prevent closing switch if door is open.[**Interlock air-interrupter switch with transformer secondary main circuit breaker, preventing switch from being opened or closed unless secondary main circuit breaker is open.**]
8) Window: Permits viewing switch-blade positions when door is closed.
9) Accessory Set: Tools and miscellaneous items required for interrupter switchgear test, inspection, maintenance, and operation. Include fuse-handling tool as recommended by switchgear manufacturer.

d. Fuses: Sizes recommended by secondary unit substation manufacturer, considering fan cooling, temperature-rise specification, and cycle loading.

1) Current-Limiting Fuses: Full-range, fast-replaceable, current-limiting type that will operate without explosive noise or expulsion of gas, vapor, or foreign matter from tube.
2) Expulsion Fuses: Furnished in disconnect-type mountings and renewable with replacement fuse units. Gases emitted on interruption are controlled and silenced by chambers designed for that purpose.
3) Indicator integral with each fuse to show when it has blown.
4) Spares: Include three fuses in use and three spare fuses in storage clips in each switch.

e. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, with ratings as indicated, connected in each phase of incoming circuit and ahead of disconnecting device.

D. UL YEFV or DLAH or WVGN - Medium-Voltage Instruments Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product

categories:

a. Unit Substation Over 600 V: UL CCN YEFV, including the following referenced standards:

1) Articulated Unit Substations: IEEE C37.121.
2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.

b. Metal-Clad Switchgear Over 1000 V: UL CCN DLAH, including IEEE C37.20.2 and NEMA C37.55.

c. Metal-Enclosed Arc-Resistant Switchgear Over 1000 V: UL CCN WVGN, including IEEE C37.20.3 and IEEE C37.20.7.

4. Standard Features:

a. Instrument Transformers: Comply with IEEE C57.13.

1) Potential and Current Transformers: Burden and Accuracy Class suitable for connected meters.

b. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems.

1) Inputs from sensors or 5 A current-transformer secondaries, and potential terminals rated to 600 V.
2) Switch-selectable digital display with the following features:

a) Phase Currents, Each Phase: Plus or minus 1 percent.
b) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
c) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
d) Three-Phase Real Power: Plus or minus 2 percent.
e) Three-Phase Reactive Power: Plus or minus 2 percent.
f) Power Factor: Plus or minus 2 percent.
g) Frequency: Plus or minus 0.5 percent.
h) Integrated Demand, with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.
i) Accumulated energy, in **MWh (MJ)**, plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.

3) Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering.
4) Mounting: Display and control unit that is flush or semiflush mounted in instrument compartment door.

c. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, 1 percent accuracy, semiflush mounting, with antiparallax 250-degree scale and external zero adjustment.

1) Voltmeters: Cover an expanded scale range of normal voltage plus 10 percent.
2) Voltmeter Selector Switch: Rotary type with off position to provide readings of phase-to-phase[**and phase-to-neutral**] voltages.
3) Ammeters: Cover an expanded scale range of bus rating plus 10 percent.
4) Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in off position.
5) Locate meter and selector switch on circuit-breaker compartment door for indicated feeder circuits only.
6) Watt-Hour Meters: Flush- or semiflush-mounting type, 5 A, 120 V, three phase, three

wire; with three elements, [**15 min**]<**Insert value**> indicating demand register, and provision for testing and adding pulse initiation.

7) Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with [**15 min**]<**Insert value**> interval.

a) Operation: Counts and records a succession of pulses entering two channels.
b) Housing: Drawout, back-connected case arranged for semiflush mounting.

E. UL YEFV or XPLH - Liquid-Filled Transformer Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Siemens Industry, Inc., Energy Management Division**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Siemens Industry, Inc., Energy Management Division**]
c. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Unit Substation Over 600 V: UL CCN YEFV, including the following referenced standards:

1) Articulated Unit Substations: IEEE C37.121.
2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
3) Liquid-Immersed Transformers: IEEE C57.12.00.

b. Liquid-Filled Distribution Transformers Over 600 V: UL CCN XPLH, including IEEE C57.12.00 and IEEE C57.12.28.

4. Standard Features:

a. Insulating Liquid:

1) Mineral oil complying with ASTM D3487, Type II, and tested in accordance with ASTM D117.
2) Less flammable, edible-seed-oil based, and listed and labeled by a qualified electrical testing laboratory as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic.
3) Less flammable, dielectric, and listed and labeled by a qualified electrical testing laboratory as complying with NFPA 70 requirements for fire point of not less than

300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic.

4) Less flammable, silicone-based dielectric, and listed and labeled by a qualified electrical testing laboratory as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must have low toxicity and be nonhazardous.

b. Insulation Temperature Rise:

1) 55 deg C, based on an average ambient temperature of **86 deg F (30 deg C)** over 24 hours with a maximum ambient temperature of **104 deg F (40 deg C)**. Insulation system must be rated to continuously allow an additional 12-percent kVA output, at 65 deg C temperature rise, without decreasing rated transformer life.
2) 65 deg C, based on an average ambient temperature of **86 deg F (30 deg C)** over 24 hours with a maximum ambient temperature of **104 deg F (40 deg C)**.

c. BIL: [**60**][**75**][**95**][**110**] kV.
d. Full-Capacity Voltage Taps: Four nominal 2.5 percent taps[**, two above and two**] below rated primary voltage; with externally operable tap changer for de-energized use and with position indicator and padlock hasp.
e. Cooling System: [**Class ONAN, liquid cooled**][**Class ONAN/ONAF, liquid cooled, and with forced-air rating**][**Class ONAN/ONAF/ONAF, liquid cooled, and with provisions for future forced-air rating**]. Cooling systems must include auxiliary cooling equipment, automatic controls, and status indicating lights.
f. Impedance: <**Insert number**> percent.
g. Accessories: Grounding pads, lifting lugs, and provisions for jacking under base. Transformers must have a steel base and frame allowing use of pipe rollers in any direction, and an insulated, low-voltage, neutral bushing with removable ground strap.[**Include the following additional accessories:**]

1) Liquid-level gage.
2) Pressure-vacuum gage.
3) Liquid temperature indicator.
4) Drain and filter valves.
5) Pressure-relief device.

F. UL YEFV - Dry-Type Transformer Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Eaton**]
b. [**Square D; Schneider Electric USA**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Eaton**]
b. [**Square D; Schneider Electric USA**]
c. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in

accordance with guide information and standards specified for the following UL product categories:

a. Unit Substation Over 600 V: UL CCN YEFV, including the following referenced standards:

1) Articulated Unit Substations: IEEE C37.121.
2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
3) Dry-Type Transformers: UL 1562.

4. Standard Features:

a. Primary Incoming Section: Transformer cover-mounted bushings. The bushings must meet thermal, mechanical, and dielectric requirements as specified for the transformer section.
b. Style:

1) [**Indoor, ventilated**][**Outdoor, ventilated**][**Totally enclosed, nonventilated**], cast coil/encapsulated coil, with primary and secondary windings individually cast in epoxy; with insulation system rated at 185 deg C with an 80 deg C average winding temperature rise above a maximum ambient temperature of **104 deg F (40 deg C)**.
2) [**Indoor, ventilated**][**Outdoor, ventilated**][**Totally enclosed, nonventilated**], vacuum-pressure, impregnated type, and with insulation system rated at 220 deg C with an 80 deg C average winding temperature rise above a maximum ambient temperature of **104 deg F (40 deg C)**.

c. Cooling System:

1) Class AA, air cooled, complying with IEEE C57.12.01.
2) Class AFA, air cooled with forced-air rating, complying with IEEE C57.12.01.

a) Manual forced-air cooling system controls, including manual switch for fans, fan controller and associated power and control wiring, and power panel with current-limiting fuses.
b) Include mounting provision for fans.

3) Class AA/FA, air cooled with provisions for future forced-air rating, complying with IEEE C57.12.01.

a) Automatic forced-air cooling system controls, including thermal sensors, fans, control wiring, temperature controller with test switch, power panel with current-limiting fuses, indicating lights, alarm, and alarm-silencing relay.
b) Include mounting provision for fans.

4) Class AFA, forced-air cooling, complying with IEEE C57.12.01.

a) Automatic forced-air cooling system controls, including thermal sensors, fans, control wiring, temperature controller with test switch, power panel with current-limiting fuses, indicating lights, alarm, and alarm-silencing relay.
b) Include cooling fans.

d. Insulation Materials: IEEE C57.12.01, rated [**220**]<**Insert number**> deg C.

1) Insulation Temperature Rise: [**80**][**115**][**150**] deg C, maximum rise above **104 deg F**

(40 deg C).

e. BIL: [**60**][**75**][**95**][**110**] kV.
f. Full-Capacity Voltage Taps: Four nominal 2.5 percent taps[**, two above and two**] below rated primary voltage.
g. Impedance: <**Insert number**> percent.
h. High-Temperature Alarm: Sensor at transformer with local audible and visual alarm and contacts for remote alarm.

G. UL WEVC - Secondary Distribution Section Switchboard :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Eaton**]
   c. [**Siemens Industry, Inc., Energy Management Division**]
   d. [**Square D; Schneider Electric USA**]
   e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Eaton**]
   c. [**Siemens Industry, Inc., Energy Management Division**]
   d. [**Square D; Schneider Electric USA**]
   e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Dead-Front Switchboards: UL CCN WEVZ, including UL 891.

      1) Arc Resistance: Annex J of IEEE C37.20.7.

4. Standard Features:

   a. The secondary distribution section must be drawout, [**fused**][**fused where indicated**], low-voltage switchgear, complying with NEMA PB 2.
   b. Switchboard Structure: Front and rear accessible.

      1) Match and align the [**front**][**front and rear**] of the switchgear.
      2) Comply with UL requirements for service entrance equipment.

   c. Switchboard Bus:

      1) Use bus bars to connect compartments and vertical sections. Cable connections are not permitted.
      2) Main Phase Bus: Uniform capacity the entire length of section.
      3) Neutral Bus: [**50**][**100**] percent of phase-bus ampacity, except as indicated. Equip bus with pressure-connector terminations for outgoing circuit neutral conductors.

Include braces for neutral-bus extensions for busway feeders.

4) Vertical Section Bus: Extend to spaces for future circuit breakers.
5) Phase- and Neutral-Bus Material:

   a) Hard-drawn copper of 98 percent minimum conductivity, with copper feeder circuit-breaker line connections.
   b) Hard-drawn copper of 98 percent minimum conductivity or tin-plated, high-strength, electrical-grade aluminum alloy.

6) Ground Bus: Hard-drawn copper of 98 percent minimum conductivity, with pressure connector for feeder and branch-circuit ground conductors, minimum size **1/4-by-2 inch (6 by 50 mm)**.
7) Neutral bus equipped with pressure-connector terminations for outgoing circuit neutral conductors. Neutral-bus extensions for busway feeders are braced.
8) Neutral Disconnect Link: Bolted, uninsulated, **1/4-by-2 inch (6-by-50 mm)** copper bus, arranged to connect neutral bus to ground bus.

d. Switchboard Arrangement:

1) Main Disconnect Device(s): [**Power circuit breakers**][**Bolted pressure switches**][**ICCBs**][**MCCBs**][**Fusible switches**].
2) Feeder Protective Devices: [**Bolted pressure switches**][**ICCBs**][**MCCBs**][**Fusible switches**].

e. Power Circuit Breakers: [**Fixed**][**Drawout**] mounted, electrically operated air-circuit breakers, complying with UL 1066.

1) With "close" and "open" push buttons and red and green lighted breaker position indicators. Charging time of the motor operator must not exceed 8 seconds. Operator power must be from a control power transformer internal to the switchboard.
2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
4) LED indicators or display, with manual reset, to show cause of automatic trip.
5) Display panel to indicate that the status of the system circuitry is fully operational, or give fault location based on automatic diagnosis.
6) Trip the circuit breaker when closing on a fault.
7) Time-current adjustments to achieve protective-device coordination as follows:

   a) Adjustable long-delay pickup and time.
   b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
   c) Adjustable instantaneous pickup.
   d) Individually adjustable ground-fault pickup and time, with [**I-squared-t setting**][**ground alarm**].

8) One test kit to test each trip function.
9) Battery backup for informational displays after automatic trip, with battery status indicator LED.

f. Bolted Pressure Switches: Fixed-mounted, manually operated, [**electrically tripped,**][**fusible,**]bolted pressure contact switch. Comply with UL 977.

1) Stored energy deadfront mechanism, compressed and released by the operating handle; switching action must be independent of the speed of the operating handle.
2) Indication whether the switch is open or closed, and provisions for padlocking the operating handle.
3) With fuse clips and fuses for UL 248 Class L time-delay fuses.
4) Electrically tripped switches must include:

    a) Ground-fault protection, with adjustable time delay and test panel.
    b) Single-phase protection, tripping the switch on loss of a source phase.
    c) Blown fuse protection, tripping the switch on a blown fuse, with blown fuse indication.

g. ICCBs: [**Fixed**][**Drawout**]-mounted, [**manually**][**electrically**] operated air-circuit breakers. Comply with UL 1066.

1) With "close" and "open" push buttons and red and green lighted breaker position indicators. Charging time of the motor operator must not exceed 8 seconds. Operator power must be from a control power transformer internal to the switchboard.
2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
4) LED indicators or display, with manual reset, to show cause of automatic trip.
5) Display panel to indicate that the status of the system circuitry is fully operational, or give fault location based on automatic diagnosis.
6) Trip the circuit breaker when closing on a fault.
7) Time-current adjustments to achieve protective-device coordination as follows:

    a) Adjustable long-delay pickup and time.
    b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
    c) Adjustable instantaneous pickup.
    d) Individually adjustable ground-fault pickup and time, with [**I-squared-t setting**][**ground alarm**].

8) With built-in connector to test the breaker settings. Provide one test set.
9) Battery backup for informational displays after automatic trip, with battery status indicator.

h. MCCBs (to 2500 A): Fixed-mounted, manually operated air-circuit breakers. Comply with UL 489.

1) With quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, and its position is shown by the position of the handle. With manual push-to-trip push button.
2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
4) With trip-setting dials or interchangeable plugs to establish the continuous trip of the circuit breaker. Plugs must not be interchangeable between frames, and the breaker may not be closed without the plug. With neutral ground-fault sensor.
5) Time-current adjustments to achieve protective-device coordination as follows:

    a) Adjustable long-time delay.
    b) Adjustable short-time setting and delay to shape the time-current curve.

c) Adjustable instantaneous setting.
d) Individually adjustable ground-fault setting and time delay.

6) With built-in connector to test the long-time delay, instantaneous, and ground-fault functions of the breaker.[**Provide one test set for testing installed circuit breakers with 225 A frame and higher.**]
7) With built-in digital ammeter display, showing load current and tripping cause.

i. MCCBs (1600 to 2500 A): Fixed-mounted, manually operated air-circuit breakers. Comply with UL 489.

1) With quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, and its position is shown by the position of the handle. With manual push-to-trip push button.
2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
4) LED indicators or display, with manual reset, to show reasons of automatic trip.
5) Display panel to indicate that the status of the system circuitry is fully operational, or give fault location based on automatic diagnosis.
6) Trip the circuit breaker when closing on a fault.
7) Time-current adjustments to achieve protective-device coordination as follows:

a) Adjustable long-delay pickup and time.
b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
c) Adjustable instantaneous pickup.
d) Individually adjustable ground-fault pickup and time, with [**I-squared-t setting**][**ground alarm**].

8) One test kit to test each trip function.
9) Battery backup for informational displays after automatic trip, with battery status indicator.

j. Fusible Switches: Fixed-mounted, manually operated, [**electrically tripped,**]fusible, quick-make, quick-break switch. Comply with UL 98.

1) Indication whether the switch is open or closed, and provisions for padlocking the operating handle.
2) With fuse clips and fuses.
3) Electrically tripped switches must include:

a) Shunt trip.
b) Ground-fault protection, with adjustable time delay and test panel.
c) Single-phase protection, tripping the switch on loss of a source phase.
d) Blown fuse protection, tripping the switch on a blown fuse, with blown fuse indication.

H. UL YEFV or YEFR - Low-Voltage Instruments Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Unit Substation Over 600 V: UL CCN YEFV, including the following referenced standards:

1) Articulated Unit Substations: IEEE C37.121.
2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.

b. Unit Substation Rated 600 V or Less: UL CCN YEFR, including UL 1062.

4. Standard Features:

a. Instrument Transformers: Comply with IEEE C57.13.

1) Potential Transformers: Secondary voltage rating of 120 V and NEMA C 12.11 Accuracy Class of 0.3 with burdens of W, X, and Y.
2) Current Transformers: Burden and Accuracy Class suitable for connected relays, meters, and instruments.

b. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems.

1) Inputs from sensors or 5 A current-transformer secondaries, and potential terminals rated to 600 V.
2) Switch-selectable digital display with the following features:

a) Phase Currents, Each Phase: Plus or minus 1 percent.
b) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
c) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
d) Three-Phase Real Power: Plus or minus 2 percent.
e) Three-Phase Reactive Power: Plus or minus 2 percent.
f) Power Factor: Plus or minus 2 percent.
g) Frequency: Plus or minus 0.5 percent.
h) Integrated Demand, with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.
i) Accumulated energy, in **MWh** **(MJ)**, plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.

3) Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering.
4) Mounting: Display and control unit that is flush or semiflush mounted in instrument compartment door.

c. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, 1 percent accuracy, semiflush mounting, with antiparallax 250-degree scale and external zero adjustment.

1) Voltmeters: Cover an expanded scale range of normal voltage plus 10 percent.
2) Voltmeter Selector Switch: Rotary type with "off" position to provide readings of phase-to-phase[**and phase-to-neutral**] voltages.
3) Ammeters: Cover an expanded scale range of bus rating plus 10 percent.
4) Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in "off" position.
5) Locate meter and selector switch on circuit-breaker compartment door for indicated feeder circuits only.
6) Watt-Hour Meters: Flush- or semiflush-mounting type, 5 A, 120 V, three phase, three wire; with three elements, 15-minute indicating demand register, and provision for testing and adding pulse initiation.
7) Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with 15-minute interval.

a) Operation: Counts and records a succession of pulses entering two channels.
b) Housing: Drawout, back-connected case arranged for semiflush mounting.

d. Relays: Comply with IEEE C37.90, types and settings as indicated; with test blocks and plugs.
e. Surge Suppression: Factory installed as an integral part of the low-voltage switchgear, complying with UL 1449 SPD, Type 1, with the following features and accessories:

1) Integral disconnect switch.
2) Internal thermal protection that disconnects the SPD before damaging internal suppressor components.
3) Indicator light display for protection status.
4) Form-C contacts rated at 5 A and 250 V(ac), one N.O. and one N.C., for remote monitoring of protection status.[**Contacts must reverse on failure of surge diversion module or on opening of current-limiting device. Coordinate with building power monitoring and control system.**]
5) Surge counter.

f. Control Power Supply: Control power transformer supplying 120 V control circuits through secondary disconnect devices.
g. Control Wiring: Factory installed, complete with bundling, lacing, and protection; and complying with the following:

1) Flexible conductors for 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
2) Conductors sized in accordance with NFPA 70 for duty required.

2.5 MAINTENANCE MATERIAL ITEMS

A. Spare Parts: Furnish to Owner spare parts, for repairing unit substation equipment, that are packaged with protective covering for storage on-site and identified with labels describing contents.[**Include the**

following:]

1. Spare Fuses: [**Six**]<**Insert number**> of each type and rating of fuse and fusible device used, except for medium-voltage fuses. Include spares for the following:

    a. Primary disconnect fuses.
    b. Potential transformer fuses.
    c. Control power fuses.
    d. Fuses and fusible devices for fused circuit breakers.
    e. Fuses for secondary fusible devices.

2. Spare Indicating Lights: Six of each type installed.
3. Spare Mounting Gaskets: [**One**]<**Insert number**> set(s) for bushings, handholes, and the gasket between relief cover and flange of pressure-relief device.

B. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to secondary unit substation equipment, that are packaged with protective covering for storage on-site and identified with labels describing contents.[**Include the following:**]

1. Racking handle, to manually move circuit breaker between "connected" and "disconnected" positions.
2. Portable test set for testing functions of circuit-breaker, solid-state trip devices without removal from switchboard.
3. Relay and meter test plugs suitable for testing switchgear meters and switchgear class relays.
4. Circuit-Breaker Removal Apparatus: Portable, floor-supported, roller-base, elevating carriage arranged for moving circuit breakers in and out of compartments.
5. Spare-Fuse Cabinet: Identified and compartmented steel box or cabinet with lockable door.
6. Storage for Manual: Include rack or holder, near operating instructions, for copy of maintenance manual.

C. Consumable Items: Furnish to Owner extra consumable items for storage on-site, identified with labels describing contents.[**Include the following:**]

1. Touchup Paint: [**Three**]<**Insert number**> half-pint containers of paint matching enclosure's exterior finish.
2. Primary Switch Contact Lubricant: [**One**]<**Insert number**> container(s).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and space conditions for compliance with requirements for secondary unit substations and other conditions affecting performance of the Work.

B. Examine roughing-in of conduits and grounding systems to verify the following:

1. Wiring entries comply with layout requirements.
2. Entries are within conduit-entry tolerances specified by manufacturer, and no feeders will have to cross section barriers to reach load or line lugs.

C. Examine walls, floors, roofs, and concrete bases for suitable conditions for secondary unit substation installation.

D. Verify that ground connections are in place. Maximum ground resistance must be 5 Ω at secondary unit substation location.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF SECONDARY UNIT SUBSTATION EQUIPMENT

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Temporary Electric Power Work: NECA NEIS 200.
5. Commissioning of Electrical Systems: NECA NEIS 90.
6. Hot Work: NFPA 51B.
7. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
8. Life Safety and Means of Egress Work: NFPA 101.
9. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
10. Work in Confined Spaces: NFPA 350.
11. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
12. Evaluation of Unlabeled Electrical Equipment: NFPA 791.
13. Installation of Switchboards: NECA NEIS 400.
14. Installation of Liquid-Filled Transformers: NECA NEIS 410.
15. Installation of Medium-Voltage Switchgear: NECA NEIS 430.
16. AC Outdoor High-Voltage Circuit Breakers: NEMA SG 11.
17. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Install secondary unit substations on cast-in-place concrete equipment base(s).
2. Comply with requirements for vibration isolation and seismic control devices.

D. Interfaces with Other Work:

1. Identification: Provide labels for secondary unit substation equipment and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure with engraved metal or laminated-plastic nameplate.
c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.
d. Install the number of signs required to be readable from each accessible side, but space the signs a maximum of **30 ft (9 m)** apart.
e. Operating Instructions: Place printed operating instructions for secondary unit substations, including key interlocking, control sequences, elementary single-line diagram, and emergency procedures with the maintenance materials.

2. Grounding and Bonding:

a. At Interior Locations: For grounding to grounding electrodes, use bare copper cable not

smaller than 4/0 AWG. Bond surge arrester and neutrals directly to the transformer enclosure and then to the grounding electrode system with bare copper conductors. Keep leads as short as practicable with no kinks or sharp bends. Make joints in grounding conductors and loops by exothermic weld or compression connector.

b. At Exterior Locations:

c. For counterpoise, use tinned bare copper cable not smaller than 4/0 AWG, buried not less than **30 inch (765 mm)** below grade interconnecting the grounding electrodes. Bond surge arrester and neutrals directly to the transformer enclosure and then to the grounding electrode system with bare copper conductors, sized as shown. Keep lead lengths as short as practicable with no kinks or sharp bends.

1) Fence and equipment connections must not be smaller than 4 AWG. Ground fence at each gate post and corner post and at intervals not exceeding **10 ft (3050 mm)**. Bond each gate section to the fence post using **1/8 by 1 inch (3 by 25 mm)** [**tinned**]flexible braided copper strap and clamps.

2) Make joints in grounding conductors and loops by exothermic weld or compression connector.

3.3 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

1. <**Insert requirements**>.

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

D. Tests and Inspections:

1. Comply with the provisions of NFPA 70B Ch. 11, "Testing and Test Methods."
2. Perform each visual and mechanical inspection and electrical test. Certify compliance with test parameters.
3. After installing secondary unit substation but before primary is energized, verify that grounding system at the substation is tested at the specified value or less.
4. After installing secondary unit substation and after electrical circuitry has been energized, test for compliance with requirements.
5. Visual and Mechanical Inspection:

a. Verify equipment nameplate data complies with the Contract Documents.

b. Inspect bolted electrical connections for high resistance using one of the following two methods:

1) Use a low-resistance ohmmeter to compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar

bolted connections by more than 50 percent of the lowest value.

2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, use NETA ATS, Table 100.12.

E. Switchgear Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, grounding, and required area clearances.
c. Verify the unit is clean and shipping bracing, loose parts, and documentation shipped inside cubicles have been removed.
d. Verify that fuse and circuit-breaker sizes and types correspond to the Drawings and coordination study as well as the address of the circuit breaker that is used to identify it in microprocessor-communication software.
e. Verify that current and voltage-transformer ratios correspond to the Drawings.
f. Confirm correct operation and sequencing of electrical and mechanical interlock systems.

1) Attempt closure on locked-open devices. Attempt to open locked-closed devices.
2) Make key exchange with devices operated in off-normal positions.

g. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
h. Inspect insulators for evidence of physical damage or contaminated surfaces.
i. Verify correct barrier and shutter installation and operation.
j. Exercise active components.
k. Inspect mechanical indicating devices for correct operation.
l. Verify that filters are in place and vents are clear.
m. Inspect control power transformers as follows:

1) Inspect for physical damage, cracked insulation, broken leads, connection tightness, defective wiring, and overall general condition.
2) Verify that primary- and secondary-use or circuit-breaker ratings match the Drawings and comply with manufacturer's published instructions.
3) Verify correct functioning of drawout disconnecting and grounding contacts and interlocks.

2. Electrical Tests:

a. Perform dc voltage insulation-resistance tests on each bus section, phase-to-phase and phase-to-ground, for one minute. If the temperature of the bus is other than plus or minus 20 deg C, adjust the resulting resistance as provided in NETA ATS Table 100.11.

1) Insulation-resistance values of bus insulation must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than manufacturer's published instructions or NETA ATS, Table 100.1.
2) Do not proceed to the dielectric-withstand-voltage tests until insulation-resistance levels are raised above minimum values.

b. Perform a dielectric-withstand-voltage test on each bus section, each phase-to-ground with phases not under test grounded, in accordance with manufacturer's published data. If manufacturer has no recommendation for this test, it must be conducted in accordance with NETA ATS, Table 100.2. Apply the test voltage for one minute.

1) If no evidence of distress or insulation failure is observed by the end of the total time of voltage application during the dielectric-withstand-voltage test, the test specimen is considered to have passed the test.

c. Voltage Transformers:

1) Perform secondary wiring integrity test. Verify correct potential at devices.
2) Verify secondary voltages by energizing the primary winding with system voltage.

d. Perform current-injection tests on the entire current circuit in each section of switchgear.

1) Perform current tests by secondary injection with magnitudes such that a minimum current of 1.0 A flows in the secondary circuit. Verify correct magnitude of current at each device in the circuit.
2) Perform current tests by primary injection with magnitudes such that a minimum of 1.0 A flows in the secondary circuit. Verify correct magnitude of current at each device in the circuit.

e. Verify operation of space heaters.
f. Perform phasing checks on double-ended or dual-source switchgear to ensure correct bus phasing from each source.

F. Medium-Voltage Surge Arrester Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, grounding, and clearances.
c. Verify the arresters are clean.
d. Verify that the ground lead on each device is individually attached to a ground bus or ground electrode.
e. Verify that the stroke counter is correctly mounted and electrically connected if applicable. Record the stroke counter reading.

2. Electrical Test:

a. Perform an insulation-resistance test on each arrester, phase terminal-to-ground. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Replace units that fail to meet recommended minimum insulation resistance listed in the table.
b. Perform a watts-loss test. Evaluate watts-loss values by comparison with similar units and test equipment manufacturer's published data.

G. Instrument Transformer Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Verify correct connection of transformers with system requirements.
c. Verify that adequate clearances exist between primary and secondary circuit wiring.
d. Verify the unit is clean.

e. Verify that required grounding and shorting connections provide contact.
f. Verify correct operation of transformer withdrawal mechanism and grounding operation.
g. Verify correct primary- and secondary-fuse sizes for voltage transformers.
h. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.

2. Electrical Tests of Current Transformers:

a. Perform insulation-resistance test of each current transformer and its secondary wiring with respect to ground at 1000 V(dc) for one minute. For units with solid-state components that cannot tolerate the applied voltage, comply with manufacturer's published instructions. Insulation-resistance values of instrument transformers must not be less than values shown in NETA ATS, Table 100.5.
b. Perform a polarity test of each current transformer in accordance with IEEE C57.13.1. Polarity results must agree with transformer markings.
c. Perform a ratio-verification test using the voltage or current method in accordance with IEEE C57.13.1. Ratio errors must comply with IEEE C57.13.
d. Perform an excitation test on transformers used for relaying applications in accordance with IEEE C57.13.1. Excitation results must match the curve supplied by the manufacturer or must comply with IEEE C57.13.1.
e. Measure current circuit burdens at transformer terminals in accordance with IEEE C57.13.1. The measured burdens must match the instrument transformer Accuracy Class rating.
f. Perform insulation-resistance tests on the primary winding with the secondary grounded. Test voltages must comply with NETA ATS, Table 100.5. The insulation-resistance value must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.5.
g. Perform dielectric-withstand-voltage tests on the primary winding with the secondary grounded. Test voltages must comply with NETA ATS, Table 100.9. If no evidence of distress or insulation failure is observed by the end of the total time of voltage application, the primary winding is considered to have passed the test.
h. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data. Power-factor or dissipation-factor values must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with test equipment manufacturer's published data.
i. Verify that current-transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3.

3. Electrical Tests of Voltage and Potential Transformers:

a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply the test voltage for one minute in accordance with NETA ATS, Table 100.5. For units with solid-state components that cannot tolerate the applied voltage, follow manufacturer's published instructions. Insulation-resistance values of instrument transformers must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.5.
b. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Test voltages must be applied for one minute in accordance with NETA ATS, Table 100.5. Insulation-resistance values of the transformers must not be less than values shown in NETA ATS, Table 100.5.
c. Perform a polarity test on each transformer to verify the polarity marks or H(1)- X(1) relationship. Polarity results must agree with transformer markings.
d. Perform a turns-ratio test on tap positions. Ratio errors must not exceed the tolerances specified in IEEE C57.13.

e. Measure voltage circuit burdens at transformer terminals. Measured burdens must be compared to instrument transformer ratings. The measured burdens must match the instrument transformer Accuracy Class rating.
f. Perform a dielectric-withstand-voltage test on the primary windings with the secondary windings connected to ground. The dielectric voltage must comply with NETA ATS, Table 100.9. The test voltage must be applied for one minute. If no evidence of distress or insulation failure is observed by the end of the total time of voltage application during the dielectric-withstand-voltage test, the primary windings are considered to have passed the test.
g. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data. Power-factor or dissipation-factor values must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with test equipment manufacturer's published data.
h. Verify that voltage-transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3.

H. Microprocessor-Based Protective Relay Field Tests:

1. Visual and Mechanical Inspection:

a. Record model number, style number, serial number, firmware revision, software revision, and rated control voltage.
b. Verify operation of light-emitting diodes, display, and targets.
c. Record passwords for each access level.
d. Clean the front panel and remove foreign material from the case.
e. Check tightness of connections.
f. Verify that the frame is grounded in accordance with manufacturer's instructions.
g. Set the relay in accordance with results in Section 260573 "Power System Studies."
h. Download settings from the relays. Print a copy of the settings for the report and compare the settings to those specified in the coordination study.

2. Electrical Tests:

a. Perform insulation-resistance tests from each circuit to the grounded frame in accordance with manufacturer's published data.
b. Apply voltage or current to analog inputs, and verify correct registration of the relay meter functions.
c. Functional Operation: Check functional operation of each element used in the protection scheme.

I. Liquid-Filled Transformer Section Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect impact recorder prior to unloading.
c. Test dew point of tank gases if applicable.
d. Inspect anchorage, alignment, and grounding.
e. Verify the presence of PCB content labeling.
f. Verify removal of shipping bracing after placement.
g. Verify the bushings are clean.
h. Verify that alarm, control, and trip settings on temperature and level indicators are set and operate within manufacturer's recommended settings.
i. Verify that cooling fans and pumps operate correctly and have appropriate overcurrent protection.
j. Verify that liquid level in tanks and bushings is within manufacturer's published tolerances.

k. Perform specific inspections and mechanical tests recommended by the manufacturer.
l. Verify presence of transformer surge arresters and that their ratings are as specified.
m. Verify that as-left tap connections are as specified.
n. Verify the presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; the value of the index must not be less than 1.0.
b. Perform power-factor or dissipation-factor tests on windings in accordance with test equipment manufacturer's published data. Maximum winding insulation power-factor/dissipation-factor values must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.3.
c. Measure core insulation resistance at 500 V(dc) if the core is insulated and the core ground strap is removable. Core insulation-resistance values must not be less than 1 MΩ at 500 V(dc).
d. Perform a power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV.
e. Perform turns-ratio tests at tap positions. Turns-ratio test results must not deviate by more than one-half percent from either the adjacent coils or the calculated ratio. If the test fails, replace the transformer.
f. Perform an excitation-current test on each phase. The typical excitation-current test data pattern for a three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if the test shows a different pattern.
g. Measure the resistance of each winding at each tap connection, and record temperature-corrected winding-resistance values in the Operations and Maintenance Manual.
h. Perform an applied-voltage test on high- and low-voltage windings-to-ground. Comply with IEEE C57.12.91, Sections 10.2 and 10.9.
i. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.
j. Remove a sample of insulating liquid in accordance with ASTM D923. Insulating liquid values must comply with NETA ATS, Table 100.4. Sample must be tested for the following:

1) Dielectric Breakdown Voltage: ASTM D877 or ASTM D1816.
2) Acid Neutralization Number: ASTM D974.
3) Specific Gravity: ASTM D1298.
4) Interfacial Tension: ASTM D971.
5) Color: ASTM D1500.
6) Visual Condition: ASTM D1524.
7) Water in Insulating Liquids: ASTM D1533.
8) Power Factor or Dissipation Factor: ASTM D924.

k. Remove a sample of insulating liquid in accordance with ASTM D923 and perform dissolved-gas analysis in accordance with IEEE C57.104 or ASTM D3612.

J. Small Dry-Type Transformer Section Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, and grounding.
c. Verify that resilient mounts are free and that shipping brackets have been removed.
d. Verify the unit is clean.

e. Perform specific inspections and mechanical tests recommended by the manufacturer.
f. Verify that as-left tap connections are as specified.
g. Verify the presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; the value of the index must not be less than 1.0.
b. Perform turns-ratio tests at tap positions. The test results must not deviate by more than one-half percent from either the adjacent coils or the calculated ratio. If the test fails, replace the transformer.
c. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

K. Large Dry-Type Transformer Section Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, and grounding.
c. Verify that resilient mounts are free and that shipping brackets have been removed.
d. Verify the unit is clean.
e. Verify that alarm, control, and trip settings on temperature and level indicators are set and operate within manufacturer's recommended settings.
f. Verify that cooling fans operate and that fan motors have correct overcurrent protection.
g. Perform specific inspections and mechanical tests recommended by the manufacturer.
h. Verify that as-left tap connections are as specified.
i. Verify the presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; the value of the index must not be less than 1.0.
b. Perform power-factor or dissipation-factor tests on windings in accordance with the test equipment manufacturer's published data. Investigate and correct power-factor values that exceed:

1) 2.0 percent for power transformers.
2) 5.0 percent for distribution transformers.
3) Measure core insulation resistance at 500 V dc if the core is insulated and the core ground strap is removable. Core insulation-resistance values must not be less than 1 MΩ at 500 V(dc).

c. Perform a power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV. Tip-up test result exceeding 1.0 percent must be investigated.
d. Perform turns-ratio tests at tap positions. The test results must not deviate by more than one-half percent from either the adjacent coils or the calculated ratio. If the test fails, replace the transformer.
e. Perform an excitation-current test on each phase. The typical excitation-current test data pattern for a three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if the test shows a different pattern.
f. Measure the resistance of each winding at each tap connection.

g. Perform an applied-voltage test on high- and low-voltage windings-to-ground. See IEEE C57.12.91, Sections 10.2 and 10.9. The AC dielectric-withstand-voltage test result must not exceed 75 percent of factory test voltage for one-minute duration. The dc dielectric-withstand-voltage test result must not exceed 100 percent of the AC RMS test voltage specified in IEEE C57.12.91, Section 10.2, for one-minute duration. If no evidence of distress or insulation failure is observed by the end of the total time of voltage application during the dielectric-withstand-voltage test, the test specimen is considered to have passed the test.
h. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

L. Low-Voltage Power Circuit-Breaker Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, and grounding.
c. Verify that maintenance devices are available for servicing and operating the breaker.
d. Verify the unit is clean.
e. Verify that the arc chutes are intact.
f. Inspect moving and stationary contacts for condition and alignment.
g. Verify that primary and secondary contact wipe and other dimensions vital to satisfactory operation of the breaker are correct.
h. Perform mechanical operator and contact alignment tests on both the breaker and its operating mechanism in accordance with manufacturer's published data.
i. Verify cell fit and element alignment.
j. Verify racking mechanism operation.
k. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
l. Perform adjustments for final protective-device settings in accordance with coordination study provided by end user.
m. Record as-found and as-left operation counter readings.

2. Electrical Tests:

a. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with switch closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Values of insulation resistance less than this table or manufacturer's published instructions must be investigated.
b. Measure contact resistance across each power contact of the circuit breaker. Drop values for μΩ or mV(dc) must not exceed the high levels of the normal range as indicated in the manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of the lowest value.
c. Determine long-time pickup and delay by primary current injection. Long-time pickup values must be as specified, and the trip characteristic must not exceed manufacturer's published time-current characteristic tolerance band, including adjustment factors. If manufacturer's curves are not available, trip times must not exceed the value shown in NETA ATS, Table 100.7.
d. Determine short-time pickup and delay by primary current injection. Short-time pickup values must be as specified, and the trip characteristic must not exceed manufacturer's

published time-current tolerance band.

e. Determine ground-fault pickup and delay by primary current injection. Ground-fault pickup values must be as specified, and the trip characteristic must not exceed manufacturer's published time-current tolerance band.
f. Determine instantaneous pickup value by primary current injection. Instantaneous pickup values must be as specified and within manufacturer's published tolerances. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.8.
g. Test functions of the trip unit by means of secondary injection. Pickup values and trip characteristic must be as specified and within manufacturer's published tolerances.
h. Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of the shunt trip and close coils must conform to the manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.20.
i. Measure fuse resistance. Investigate fuse-resistance values that deviate from each other by more than 15 percent.
j. Verify correct operation of auxiliary features, such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free operation, antipump function, and trip unit battery condition. Reset trip logs and indicators. Auxiliary features must operate in accordance with manufacturer's published data.
k. Verify operation of charging mechanism. The charging mechanism must operate in accordance with manufacturer's published data.

M. Insulated-Case/Molded-Case Air-Circuit-Breaker Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage and alignment.
c. Verify the unit is clean.
d. Operate the circuit breaker to ensure smooth operation.
e. Inspect operating mechanism, contacts, and arc chutes in unsealed units.
f. Perform adjustments for final protective-device settings in accordance with the coordination study. Set the protective devices in accordance with coordination study report.

2. Electrical Tests:

a. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to ground with the circuit breaker closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Values of insulation resistance less than this table or manufacturer's published instructions must be investigated.
b. Perform a contact/pole-resistance test. Drop values for μΩ or mV(dc) must not exceed the high levels of the normal range as indicated in the manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of the lowest value.
c. Determine long-time pickup and delay by primary current injection. Ground-fault pickup values must be as specified, and the trip characteristic must not exceed manufacturer's published time-current tolerance band, including adjustment factors.
d. Determine short-time pickup and delay by primary current injection. Short-time pickup values must be as specified, and the trip characteristic must not exceed manufacturer's published time-current tolerance band.
e. Determine ground-fault pickup and time delay by primary current injection. Ground-fault pickup values must be as specified, and the trip characteristic must not exceed manufacturer's published time-current tolerance band.

f. Determine instantaneous pickup by primary current injection. Instantaneous pickup values must be as specified and within manufacturer's published tolerances. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.8.
g. Test functions of the trip unit by means of secondary injection. Pickup values and trip characteristic must be as specified and within manufacturer's published tolerances.
h. Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of the shunt trip and close coils must conform to the manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.20.
i. Verify correct operation of auxiliary features, such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free operation, anti-pump function, and trip unit battery condition. Reset trip logs and indicators. Auxiliary features must operate in accordance with manufacturer's published data.
j. Verify operation of charging mechanism. The charging mechanism must operate in accordance with manufacturer's published data.

N. Low-Voltage Ground-Fault Protection System Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect the components for damage and errors in polarity or conductor routing.

1) Verify that ground connection is made on the source side of the neutral disconnect link and on the source side of ground-fault sensor.
2) Verify that the neutral sensors are connected with correct polarity on both primary and secondary.
3) Verify that phase conductors and the neutral pass through the sensor in the same direction for zero sequence systems.
4) Verify that grounding conductors do not pass through zero sequence sensors.
5) Verify that grounded conductor is solidly grounded.

b. Verify the unit is clean.
c. Operate the circuit breaker to ensure smooth operation.
d. Verify correct operation of functions of the self-test panel if provided.
e. Verify that the control power transformer has adequate capacity for the system.
f. Set pickup and time-delay settings. Record appropriate operation and test sequences in accordance with Section 230.95 "Ground-Fault Protection of Equipment" of NFPA 70.

2. Electrical Tests:

a. Measure the system neutral-to-ground insulation resistance with the neutral disconnect link temporarily removed. Replace the neutral disconnect link after testing. System neutral-to-ground insulation resistance must be a minimum of 1 MΩ. Correct wiring until the minimum is achieved.
b. Perform ground-fault protective-device pickup tests using primary injection. Results of pickup test must be greater than 90 percent of the ground-fault protective-device pickup setting and less than 1200 A or 125 percent of the pickup setting, whichever is smaller. Adjust or replace the device until these parameters are achieved.
c. For summation-type systems utilizing phase and neutral current transformers, verify correct polarities by applying current to each phase-neutral current-transformer pair. This test also applies to MCCBs utilizing an external neutral current transformer. The ground-fault protective device must operate when current direction is the same relative to polarity marks in the two current transformers. The ground-fault protective device must not operate when current direction is opposite relative to polarity marks in the two current transformers.

d. Measure time delay of the ground-fault protective device at a value equal to or greater than 150 percent of the pickup value. Relay timing must be in accordance with manufacturer's published data but must be no longer than one second at 3000 A in accordance with Section 230.95 "Ground-Fault Protection of Equipment" of NFPA 70.
e. Verify reduced control voltage tripping capability is 55 percent for AC systems and 80 percent for DC systems. Replace the ground-fault system if the reduced control voltage tripping requirement is not achieved, and retest.
f. Verify blocking capability of zone interlock systems. Results of zone-blocking tests must be in accordance with manufacturer's published data and design specifications.

O. Metering Device Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect cover gasket, cover glass, condition of spiral spring, disk clearance, contacts, and case shorting contacts, as applicable.
c. Verify the unit is clean.
d. Verify freedom of movement, end play, and alignment of rotating disk(s).

2. Electrical Tests:

a. Verify accuracy of meters at cardinal points. Meter accuracy must be in accordance with manufacturer's published data.
b. Calibrate meters in accordance with manufacturer's published data. Calibration results must be within manufacturer's published tolerances.
c. Verify instrument multipliers. Instrument multipliers must be in accordance with system design specifications.
d. Verify that current-transformer and voltage-transformer secondary circuits are intact. Test results must confirm the integrity of the secondary circuits of current and voltage transformers.

P. Nonconforming Work:

1. Equipment and devices will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

Q. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports. Record as-left set points of adjustable devices.

R. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.4 SYSTEM STARTUP

A. Perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's published instructions.
2. <**Insert startup steps if any**>.

B. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] system startup.

1. Manufacturer's Field Reports for System Startup Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.5 CLEANING

A. After completing equipment installation and before energizing, inspect unit components. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish. Vacuum interiors of secondary unit substation sections.

3.6 CLOSEOUT ACTIVITIES

A. Training:

1. [**With assistance from factory-authorized service representatives, train**][**Train**] Owner's maintenance personnel on the following topics:

a. How to adjust, operate, and maintain secondary unit substation equipment.

2. [**Provide video recordings of training sessions to Owner**][**Allow Owner to record training sessions**].

3.7 PROTECTION

A. After installation, protect secondary unit substation equipment from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

3.8 MAINTENANCE

A. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:

1. During a period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at the outgoing section of each secondary unit substation. Use voltmeters with calibration traceable to the National Institute of Science and Technology standards and with a chart speed of not less than **1 inch (25 mm)** per hour. Voltage unbalance greater than 1 percent between phases, or deviation of phase voltage from the nominal value by more than plus or minus 5 percent during the test period, is unacceptable.
2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:

a. Adjust transformer taps.
b. Rebalance loads.
c. Prepare written request for voltage adjustment by electric utility.

3. Retests: Repeat monitoring, after corrective action has been performed, until satisfactory results are obtained.
4. Field Reports for Voltage Monitoring and Adjusting:

    a. Prepare a written report covering monitoring performed and corrective action taken.
    b. For each relay and adjustable circuit breaker, tag the device with adjusting technician's initials and the date of the adjustment. Record the settings and file with test records specified in "Field Quality Control" Article.

B. Infrared Scanning of Secondary Unit Substation Equipment: Perform the survey during periods of maximum possible loading. Remove covers prior to the inspection. Take visible light photographs at same locations and orientations as infrared scans for documentation to ensure follow-on scans match same conditions for valid comparison.

1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of the electrical power connections of the unit substation.
2. Follow-On Infrared Scanning: Perform an additional follow-up infrared scan of each switchgear 11 months after date of Substantial Completion.
3. Instrument: Inspect distribution systems with imaging equipment capable of detecting a minimum temperature difference of 1 deg C at 30 deg C. Provide documentation of device calibration.
4. Field Reports for Infrared Scanning: Prepare a certified report that identifies the testing technician and equipment used, and lists the results as follows:

    a. Description of equipment to be tested.
    b. Discrepancies.
    c. Temperature difference between the area of concern and the reference area.
    d. Probable cause of temperature difference.
    e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
    f. Identify load conditions at time of inspection.
    g. Provide photographs and thermograms of the deficient area.

5. Act on inspection results in accordance with the recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.

C. Maintenance Service Agreement: Beginning at Substantial Completion, verify that maintenance service agreement includes [**one year**]<**Insert duration**> period for full maintenance by [**skilled employees of secondary unit substation equipment Installer**][**manufacturer's authorized service representative**]. Include annual preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper secondary unit substation equipment operation. Verify that parts and supplies are manufacturer's authorized replacement parts and supplies.

END OF SECTION 26 11 16 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 11 16 00A - SECONDARY UNIT SUBSTATIONS WITH MOTOR CONTROL CENTER SECONDARY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Secondary unit substation equipment.

B. Products Installed, but Not Furnished, under This Section:

1. <**Insert products identified in "Existing Products to be Modified" Article or "Existing Products to be Removed and Re-Installed" Article**>.

C. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. [**Section 013100 "Project Management and Coordination"**]<**Insert Section number and title**> for preinstallation conference procedures.
5. Section 078413 "Penetration Firestopping" specifies materials and methods for sealing penetrations of rated walls and partitions referenced by this Section.
6. Section 260513 "Medium-Voltage Cables" for requirements for terminating cables in incoming section of substation.
7. Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for requirements for connecting wires.
8. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
9. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
10. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration isolation and seismic[**and wind**] control devices referenced by this Section.
11. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
12. Section 260573 "Power System Studies" specifies short-circuit current studies, overcurrent protective device coordination studies, arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.
13. Section 260913 "Electrical Power Monitoring" specifies remote monitoring of metering instruments and for remote control of circuit breakers and switches.
14. Section 264313 "Surge Protective Devices for Low-Voltage Electrical Power Circuits" specifies field-mounted surge-suppression devices referenced in this Section.

1.2 DEFINITIONS

A. Combination Motor Controller: A combination motor-control unit that includes externally operable circuit-disconnecting means, branch-circuit overcurrent protection, and a motor controller with associated auxiliary devices when used.

B. CPT: Control power transformer.

C. ICCB: Insulated-case circuit breaker.

D. MCCB: Molded-case circuit breaker.

E. MCP: Motor-circuit protector.

F. PCB: Polychlorinated biphenyl.

G. SCR: Silicon controlled rectifier.

H. SPD: Surge protection device.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

B. Preinstallation Coordination Meeting(s): For unit substation. Conduct meeting(s) [**as videoconference**][**or**][**at Project site**]<**Insert location**> before <**Insert construction activity**>.

1. Attendees: Installers, fabricators, representatives of manufacturers, and administrants for field tests and inspections. Notify Architect[**, Construction Manager**][**, and Owner's Commissioning Authority**] of scheduled meeting dates.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
2. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.

    a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
    b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
    c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for submitted product.

3. Include manufacturer's sample extended warranty language.
4. Include product certificates for secondary unit substations, signed by manufacturer.

B. Shop Drawings: Prepare and submit the following:

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of field connections.
2. Wiring Diagrams: Power, signal, and control wiring.
3. Dimensioned plans and elevations showing major components and features.

    a. Include plan view and cross section of equipment base, showing clearances, manufacturer's published instructions for minimum workspace clearances that account for breaker service and removal, and locations of penetrations for grounding and conduits.

4. One-line diagram.
5. List of materials.
6. Nameplate legends.
7. Material, size and number of bus bars, and current rating for buses, including mains and branches of phase, neutral, and ground buses.
8. Short-time and short-circuit current ratings of secondary unit substations and components.
9. Ratings of individual protective devices.
10. For motor-control secondary section, submit manufacturer's standard drawings complying with requirements of UL 845.

    a. Manufacturer's production drawings as defined in UL 845.
    b. Schematic and Connection Wiring Diagrams: For power, signal, and control wiring for installed controllers.
    c. Nameplate legends.
    d. Vertical and horizontal bus capacities.
    e. Features, characteristics, ratings, and factory settings of installed units.
    f. <**Insert required information**>.

11. Design Data:

    a. Time-Current Characteristic Curves: For overcurrent protective devices.
    b. Primary Fuses: Submit recommendations and size calculations.
    c. Utility company's metering provisions with indication of approval by utility company.

C. Factory test reports.

D. Field quality-control reports.

1.5 INFORMATIONAL SUBMITTALS

A. For motor-control secondary section, submit the following:

1. Manufacturer's approval drawings as defined in UL 845.
2. Manufacturer's custom drawings as defined in UL 845.
3. Manufacturer's production drawings as defined in UL 845.

B. Manufacturer's published instructions.

C. Field Reports:

1. Manufacturer's field reports for field quality-control support.
2. Manufacturer's field reports for system startup support.

3. Field reports for voltage monitoring and adjusting.
4. Field reports for infrared scanning.

1.6 CLOSEOUT SUBMITTALS

A. Warranty documentation.

B. Maintenance service agreement.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Spare parts.

B. Special tools.

C. Consumable items.

1.8 REGULATORY AGENCY APPROVALS

A. Submittals for secondary unit substations requiring approval by <**Insert name of electrical utility**> must be signed by qualified electrical professional engineer responsible for their preparation. [**Obtain approval by electrical utility prior to submitting for action by Architect**][**Submit for action by Architect prior to submitting for approval by electrical utility**].

1.9 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician I: Possessing active NICET EPT Level I certification. Able to work safely around electrical power equipment and cabling under supervision.

B. Electrical Power Testing (EPT) Technician II: Possessing active NICET EPT Level II certification. Able to isolate and ground electrical power equipment, to connect test equipment, and to conduct and document standard tests of basic equipment.

C. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, to conduct tests of complex equipment, to analyze test and equipment data, to plan a job, and to lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

D. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; to evaluate tests, test equipment, test results, and power system performance; to recommend actions to maintain or improve system performance; and to lead multi-team projects.

E. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

F. Electrical Professional Engineer: Professional engineer possessing active qualifications specified in Section 014000 "Quality Requirements," with expertise in electrical engineering, including electrical power system modeling and analysis of electrical safety in accordance with NFPA 70E.

G. Medium-Voltage Cable Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with training and manufacturer certification to install, splice, and terminate medium-voltage cable[**in accordance with electrical utility service provider's requirements**].

1. Medium-voltage cable Installer must be approved by <**Insert name of electrical utility service provider**>.

H. Medium-Voltage Duct Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience with installation of medium-voltage duct banks[**in accordance with electrical utility service provider's requirements**].

1. Medium-voltage duct Installer must be approved by <**Insert name of electrical utility service provider**>.

I. Medium-Voltage Equipment Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience with hazards and safety requirements associated with installation and operation of medium-voltage equipment[**in accordance with electrical utility service provider requirements**].

1. Medium-voltage equipment Installer must be approved by <**Insert name of electrical utility service provider**>.

J. Electrical Power Monitoring Installers: Installer possessing active qualifications specified in Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by manufacturer prior to starting installation.

K. Power Quality Specialist: Recognized experts possessing active NICET Electrical Power Testing (EPT) Technician IV certification and documented experience in power quality testing for installations similar in complexity to the Project.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver in shipping splits in sizes that can be moved past obstructions in delivery path.

B. Coordinate delivery of secondary unit substations to allow movement into designated space.

C. Store secondary unit substation components[**protected from weather and**] so condensation will not form on or in units. Provide temporary heating in accordance with manufacturer's written instructions.

D. Handle secondary unit substation components in accordance with manufacturer's written instructions. Use factory-installed lifting provisions.

1. Handle MCCs in accordance with NEMA ICS 2.3 and NECA NEIS 402.

1.11 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

A. Modeling, analysis, product selection, installation, and quality control for all electrical Work on the Project must comply with service condition requirements specified in Section 018116 "Facility

Environmental Requirements" and Section 018123 "Facility Seismic and Wind Criteria."

B. Usual Service Conditions: Unless unusual service conditions have been specified in "General Equipment Service Conditions," "Outdoor Equipment Service Conditions," and "Indoor Equipment Services Conditions" articles of Section 018116 "Facility Environmental Requirements," electrical service and distribution equipment must be suitable for operation under usual service conditions specified in applicable IEEE C37 series and IEEE C57 series standards.

1.12 WARRANTY FOR SECONDARY UNIT SUBSTATIONS

A. Special Installer Extended Warranty: Installer warrants that assembled and installed secondary unit substation performs in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.

1. Extended-Warranty Period: [**Two**][**Three**][**Four**]<**Insert number**> years from date of Substantial Completion; full coverage for labor, materials, and equipment.

B. Special Manufacturer Extended Warranty: Manufacturer warrants that secondary unit substation performs in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.

1. Initial Extended-Warranty Period: [**Three**][**Four**][**Five**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.
2. Follow-On Extended-Warranty Period: [**Eight**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for materials only, free on board [**origin**][**destination**], freight prepaid.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

A. Basis for Pricing: <**Insert name of manufacturer and model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact Work**>.

C. Accessories: <**Insert accessories included with existing product**>.

2.2 EXISTING PRODUCTS TO BE REMOVED AND RE-INSTALLED

A. Basis for Pricing: <**Insert name of manufacturer and model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact Work**>.

C. Accessories: <**Insert accessories included with existing product**>.

2.3 PERFORMANCE REQUIREMENTS

A. Description: Medium-voltage, primary incoming section; transformer section; and low-voltage MCC section; and including coordinated circuit breakers, fusible switches, and metering components.

B. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

C. General Characteristics:

1. Referenced Standards: IEEE C2 and IEEE C37.121.
2. Indoor Unit Arrangement: Single assembly, with secondary section MCC complying with [**UL 50E, Type 1**][**UL 50E, Type 1 (gasketed)**][**UL 50E, Type 12**] construction.
3. Outdoor Unit Arrangement: Single assembly.

    a. Weatherproof, listed for installation outdoors, with primary and transformer sections complying with IEEE C37.20.1, and MCC section complying with UL 50E, Type 3R.
    b. Aisleless Construction: Full-height doors in front of basic weatherproof equipment.

4. Connections between primary device and transformer must be [**cable**][**bus**], and between transformer and secondary must be flexible bus braid unless noted otherwise.
5. Indoor Enclosure: Steel.
6. Outdoor Enclosure: Weatherproof, galvanized steel, listed for installation outdoors, complying with IEEE C37.20.1. Aisleless, full-height doors, with provisions for padlocking, in front of basic weatherproof equipment. Integral structural-steel base frame with factory-applied asphaltic undercoating.

    a. Compartments must have the following features:

        1) Structural design and anchorage adequate to resist loads imposed by [**125 mph (200 km/h)**]<**Insert wind speed**> wind.
        2) Space heater operating at one-half or less of rated voltage, sized to prevent condensation, controlled by thermostats to maintain temperature of section above expected dew point.
        3) Louvers equipped with insect and rodent screens and filters, and arranged to permit air circulation while excluding rodents and exterior dust.
        4) Weatherproof ground-fault circuit interrupter (GFCI) duplex receptacle.
        5) Power for heaters and receptacles must be provided [**by control power transformer**][**as indicated on the Drawings**].
        6) Skid Mounted: Mount shipping group on integral base frame as complete weatherproof unit.

7. Unit Substation Enclosures Finish:

    a. Factory-applied finish in manufacturer's standard color, including under surfaces treated with corrosion-resistant undercoating.
    b. Factory-applied finish in manufacturer's standard gray over rust-inhibiting primer on treated metal surface.
    c. Factory-applied corrosion-resistant finish in manufacturer's standard color that withstands [**120 h**][**480 h**] of exposure to salt spray test specified in ASTM B117 without loss of paint or release of adhesion of paint primer coat to metal surface in excess of **1/16 inch (1.6 mm)** from test mark. Scribed test mark and test evaluation must be in accordance with ASTM D1654, with rating of not less than 7, in accordance with Table 1 (procedure A). Cut edges or otherwise damaged surfaces of hot-dip galvanized sheet steel or mill-galvanized

sheet steel must be coated with manufacturer's standard zinc-rich paint.

2.4 SECONDARY UNIT SUBSTATION EQUIPMENT

A. Source Quality Control:

1. Factory Tests:

a. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.
b. Testing Administrant: [**Owner will engage**][**Engage**] qualified electrical testing agency to evaluate secondary unit substation equipment.
c. Factory Tests and Inspections: Perform the following tests and inspections on secondary unit substation equipment, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with the following standards before delivering to site. Affix label with name and date of [**manufacturer's**][**qualified electrical testing laboratory's**] certification of system compliance.

1) Conduct transformer tests in accordance with IEEE C57.12.90.
2) Conduct primary switchgear tests in accordance with NEMA C37.51.
3) Conduct routine tests of completely assembled MCC, including the following:

a) Dielectric Tests: Comply with NEMA ICS 1.
b) Verify correct operation of circuit breaker,[**motor circuit protector,**] magnetic contactor, and control devices, accessories and indicating lamps. Verification checks must be made at rated voltage with power supplies to main buses.
c) Verify correct operation of magnetic contactors with power at 90 percent of rated voltage.

4) Resistance measurements of windings on rated voltage connection and on tap extreme connections.
5) Ratios on rated voltage connection and on tap extreme connections.
6) Polarity and phase relation on rated voltage connection.
7) No-load loss at rated voltage on rated voltage connection.
8) Exciting current at rated voltage on rated voltage connection.
9) Impedance and load loss at rated current on rated voltage connection and on tap extreme connections.
10) Applied potential.
11) Induced potential.

2. Temperature Test: If transformer is supplied with auxiliary cooling equipment to provide more than one rating, test at lowest kVA Class ONAN or Class AA rating and highest kVA Class ONAF or Class AFA rating.

a. Temperature test is not required if record of temperature test on essentially duplicate unit is available.
b. Nonconforming Work:

1) Equipment that does not pass tests and inspections will be considered defective.

c. Factory Test Reports: Compile and submit factory test and inspection reports.

B. UL YEFV or DLAH or WVGN - Medium-Voltage Terminal Compartment Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Eaton**]
   c. [**Siemens Industry, Inc., Energy Management Division**]
   d. [**Square D; Schneider Electric USA**]
   e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Eaton**]
   c. [**Siemens Industry, Inc., Energy Management Division**]
   d. [**Square D; Schneider Electric USA**]
   e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Unit Substation over 600 V: UL CCN YEFV, including the following referenced standards:

      1) Articulated Unit Substations: IEEE C37.121.
      2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.

   b. Metal-Clad Switchgear over 1000 V: UL CCN DLAH, including IEEE C37.20.2 and NEMA C37.55.
   c. Metal-Enclosed Arc-Resistant Switchgear over 1000 V: UL CCN WVGN, including IEEE C37.20.3 and IEEE C37.20.7.

4. Standard Features:

   a. Primary Incoming Section: Terminal assembly with adequate space for incoming-cable terminations and surge arresters, complying with NEMA SG 4 and meeting thermal, mechanical, and dielectric requirements specified for transformer section.
   b. Ratings: Suitable for application in three-phase, 60 Hz, solidly grounded-neutral system.
   c. System Voltage: [**4.16 kV nominal; 4.76 kV maximum**][**7.2 kV nominal; 15 kV maximum**][**13.8 kV nominal; 15 kV maximum**][**34.5 kV nominal; 38 kV maximum**]<**Insert other voltage**>.
   d. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, connected in each phase of incoming circuit and ahead of disconnecting device.

C. UL YEFV or DLAH or WVGN - Medium-Voltage Metal-Enclosed Switchgear Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Unit Substation over 600 V: UL CCN YEFV, including the following referenced standards:

1) Articulated Unit Substations: IEEE C37.121.
2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.

b. Metal-Clad Switchgear over 1000 V: UL CCN DLAH, including IEEE C37.20.2 and NEMA C37.55.
c. Metal-Enclosed Arc-Resistant Switchgear over 1000 V: UL CCN WVGN, including IEEE C37.20.3 and IEEE C37.20.7.

4. Standard Features:

a. Metal-enclosed, air-interrupter switchgear, [**with**][**without**] fuses, complying with IEEE C37.20.3.

1) Switchgear must be arc-resistant, complying with IEEE C37.20.7, [**Type 1A**][**Type 2A**][**Type 1C**][**Type 2C**].

b. Ratings: Comply with IEEE C37.04; and suitable for application in three-phase, 60 Hz, solidly grounded-neutral system.

1) System Voltage: [**4.16 kV nominal; 4.76 kV maximum**][**7.2 kV nominal; 15 kV maximum**][**13.8 kV nominal; 15 kV maximum**][**34.5 kV nominal; 38 kV maximum**]<**Insert other voltage**>.
2) Design Level of Available-Source Fault Current: Integrated short-circuit rating consistent with value of fault current indicated.
3) Main-Bus Rating: [**600 A**][**1200 A**][**2000 A**], continuous.

c. Interrupter Switches: Stationary, gang operated, and suitable for application at maximum short-circuit rating of integrated switchgear assembly.

1) Rating: [**600 A**][**1200 A**] continuous duty and load break.
2) Two-Time Duty-Cycle Fault Closing: [**25 000 A(asym)**][**40 000 A(asym)**].
3) Switch Action: No external arc and no significant quantities of ionized gas released into enclosure.
4) Switch Construction: Supported entirely by interior framework of structure, with copper switchblades and stored-energy operating mechanism.
5) Phase Barriers: Full length of switchblades and fuses for each pole; designed for easy removal; allow visual inspection of switch components if barrier is in place.
6) Protective Shields: Cover live components and terminals.

    a) Fuse Mounts: Single-frame mounted and de-energized when switch is open.

7) Mechanical Interlock: Prevent opening switch compartment door unless switchblades are open, and prevent closing switch if door is open.[**Interlock air-interrupter switch with transformer secondary main circuit breaker, preventing switch from being opened or closed unless secondary main circuit breaker is open.**]
8) Window: Permits viewing switch-blade positions when door is closed.
9) Accessory Set: Tools and miscellaneous items required for interrupter switchgear test, inspection, maintenance, and operation. Include fuse-handling tool as recommended by switchgear manufacturer.

d. Fuses: Sizes recommended by secondary unit substation manufacturer, considering fan cooling, temperature-rise specification, and cycle loading.

1) Current-Limiting Fuses: Full-range, fast-replaceable, current-limiting type that will operate without explosive noise or expulsion of gas, vapor, or foreign matter from tube.
2) Expulsion Fuses: Furnished in disconnect-type mountings and renewable with replacement fuse units. Gases emitted on interruption are controlled and silenced by chambers designed for that purpose.
3) Indicator integral with fuse to show when it has blown.
4) Spares: Include three fuses in use and three spare fuses in storage clips in switch.

e. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, with ratings as indicated, connected in each phase of incoming circuit and ahead of disconnecting device.

D. UL YEFV or DLAH or WVGN - Medium-Voltage Instruments Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB, Electrification Business**]
    b. [**Eaton**]
    c. [**Siemens Industry, Inc., Energy Management Division**]
    d. [**Square D; Schneider Electric USA**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Unit Substation over 600 V: UL CCN YEFV, including the following referenced standards:

      1) Articulated Unit Substations: IEEE C37.121.
      2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.

   b. Metal-Clad Switchgear over 1000 V: UL CCN DLAH, including IEEE C37.20.2 and NEMA C37.55.
   c. Metal-Enclosed Arc-Resistant Switchgear over 1000 V: UL CCN WVGN, including IEEE C37.20.3 and IEEE C37.20.7.

4. Standard Features:

   a. Instrument Transformers: Comply with IEEE C57.13.

      1) Potential and Current Transformers: Burden and Accuracy Class suitable for connected meters.

   b. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems.

      1) Inputs from sensors or 5 A current-transformer secondaries, and potential terminals rated to 600 V.
      2) Switch-selectable digital display with the following features:

         a) Phase Currents, Each Phase: Plus or minus 1 percent.
         b) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
         c) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
         d) Three-Phase Real Power: Plus or minus 2 percent.
         e) Three-Phase Reactive Power: Plus or minus 2 percent.
         f) Power Factor: Plus or minus 2 percent.
         g) Frequency: Plus or minus 0.5 percent.
         h) Integrated Demand: Demand interval selectable from 5 to 60 min; plus or minus 2 percent.
         i) Accumulated Energy in MWh (MJ): Plus or minus 2 percent; stored values unaffected by power outages for up to 72 h.

      3) Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering.
      4) Mounting: Display and control unit that is flush or semiflush mounted in instrument compartment door.

   c. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, 1 percent accuracy, semiflush mounting, with antiparallax 250-degree scale and external zero adjustment.

1) Voltmeters: Cover expanded scale range of normal voltage plus 10 percent.
2) Voltmeter Selector Switch: Rotary type with off position to provide readings of phase-to-phase[**and phase-to-neutral**] voltages.
3) Ammeters: Cover expanded scale range of bus rating plus 10 percent.
4) Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in off position.
5) Locate meter and selector switch on circuit-breaker compartment door for indicated feeder circuits only.
6) Watt-Hour Meters: Flush- or semiflush-mounting type, 5 A, 120 V, three phase, three wire; with three elements, [**15 min**]<**Insert duration**> indicating demand register, and provision for testing and adding pulse initiation.
7) Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with [**15 min**]<**Insert duration**> interval.

d. Operation: Counts and records succession of pulses entering two channels.
e. Housing: Drawout, back-connected case arranged for semiflush mounting.

E. UL YEFV or XPLH - Liquid-Filled Transformer Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Siemens Industry, Inc., Energy Management Division**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Siemens Industry, Inc., Energy Management Division**]
   c. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Unit Substation over 600 V: UL CCN YEFV, including the following referenced standards:

      1) Articulated Unit Substations: IEEE C37.121.
      2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
      3) Liquid-Immersed Transformers: IEEE C57.12.00.

   b. Liquid-Filled Distribution Transformers over 600 V: UL CCN XPLH, including IEEE C57.12.00 and IEEE C57.12.28.

4. Standard Features:

   a. Insulating Liquid:

      1) Mineral oil complying with ASTM D3487, Type II, and tested in accordance with

ASTM D117.

2) Less flammable, edible-seed-oil based, listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic.
3) Less flammable, dielectric, listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic.
4) Less flammable, silicone-based dielectric, listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must have low toxicity and be nonhazardous.

b. Insulation Temperature Rise:

1) 55 deg C, based on average ambient temperature of 30 deg C over 24 h with maximum ambient temperature of 40 deg C. Insulation system must be rated to continuously allow additional 12 percent kVA output, at 65 deg C temperature rise, without decreasing rated transformer life.
2) 65 deg C, based on average ambient temperature of 30 deg C over 24 h with maximum ambient temperature of 40 deg C.

c. BIL: [**60 kV**][**75 kV**][**95 kV**][**110 kV**].
d. Full-Capacity Voltage Taps:

1) Four nominal 2.5 percent taps, two above and two below rated primary voltage, with externally operable tap changer for de-energized use and with position indicator and padlock hasp.
2) Four nominal 2.5 percent taps below rated primary voltage, with externally operable tap changer for de-energized use and with position indicator and padlock hasp.

e. Cooling System: [**Class ONAN, liquid cooled**][**Class ONAN/ONAF, liquid cooled, and with forced-air rating**][**Class ONAN/ONAF/ONAF, liquid cooled, and with provisions for future forced-air rating**]. Cooling systems must include auxiliary cooling equipment, automatic controls, and status indicating lights.
f. Impedance: <**Insert number**> percent.
g. Accessories: Grounding pads, lifting lugs, and provisions for jacking under base. Transformers must have steel base and frame allowing use of pipe rollers in any direction, and insulated, low-voltage, neutral bushing with removable ground strap.[**Include the following additional accessories:**]

1) Liquid-level gauge.
2) Pressure-vacuum gauge.
3) Liquid temperature indicator.
4) Drain and filter valves.
5) Pressure-relief device.

F. UL YEFV - Dry-Type Transformer Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Eaton**]
b. [**Square D; Schneider Electric USA**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Eaton**]
b. [**Square D; Schneider Electric USA**]
c. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Unit Substation over 600 V: UL CCN YEFV, including the following referenced standards:

1) Articulated Unit Substations: IEEE C37.121.
2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.
3) Dry-Type Transformers: UL 1562.

4. Standard Features:

a. Primary Incoming Section: Transformer cover-mounted bushings. Bushings must meet thermal, mechanical, and dielectric requirements as specified for transformer section.
b. Style:

1) [**Indoor, ventilated**][**Outdoor, ventilated**][**Totally enclosed, nonventilated**], cast coil/encapsulated coil, with primary and secondary windings individually cast in epoxy; with insulation system rated at 185 deg C with 80 deg C average winding temperature rise above maximum ambient temperature of 40 deg C.
2) [**Indoor, ventilated**][**Outdoor, ventilated**][**Totally enclosed, nonventilated**], vacuum-pressure, impregnated type, and with insulation system rated at 220 deg C with 80 deg C average winding temperature rise above maximum ambient temperature of 40 deg C.

c. Cooling System:

1) Class AA: air cooled, complying with IEEE C57.12.01.
2) Class AFA: air cooled with forced-air rating, complying with IEEE C57.12.01.

a) Manual forced-air cooling system controls, including manual switch for fans, fan controller and associated power and control wiring, and power panel with current-limiting fuses.
b) Include[**mounting provisions for**] cooling fans.

3) Class AA/FA: air cooled with provisions for future forced-air rating, complying with IEEE C57.12.01.

a) Automatic forced-air cooling system controls, including thermal sensors, fans, control wiring, temperature controller with test switch, power panel with current-limiting fuses, indicating lights, alarm, and alarm-silencing relay.
b) Include mounting provisions for fans.

d. Insulation Materials: IEEE C57.12.01, rated [**220 deg C**]<**Insert deg C**>.

1) Insulation Temperature Rise: [**80 deg C**][**115 deg C**][**150 deg C**] maximum rise above 40 deg C.

e. BIL: [**60 kV**][**75 kV**][**95 kV**][**110 kV**].
f. Full-Capacity Voltage Taps:

1) Four nominal 2.5 percent taps, two above and two below rated primary voltage.
2) Four nominal 2.5 percent taps below rated primary voltage.

g. Impedance: <**Insert number**> percent.

5. High-Temperature Alarm: Sensor at transformer with local audible and visual alarm and contacts for remote alarm.

G. UL NJAV - Secondary Distribution Section MCC :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Motor Control Center: UL CCN NJAV, including UL 845.

4. Standard Features:

a. MCC: Combination motor controllers, complying with NEMA ICS 18.

1) Wiring:

a) NEMA ICS 18, [**Class I**][**Class I-S**], [**Type A**][**Type B, for starters larger than Size 3**][**Type B-D, for starter Size 3 and smaller**][**Type B-T, for starter**

Size 3 and smaller][**Type C**].

b) NEMA ICS 18, [**Class II**][**Class II-S**], [**Type B, for starters larger than Size 3**][**Type B-D, for starter Size 3 and smaller**][**Type B-T, for starter Size 3 and smaller**][**Type C**].

2) Short-Circuit Current Rating for Each Unit: [**Combination series rated**][**Fully rated**]; [**22 kA**][**42 kA**][**65 kA**][**100 kA**]<**Insert kA**>.

3) Short-Circuit Current Rating of MCC: [**Combination series rated**][**Fully rated**] with its main overcurrent device; [**22 kA**][**42 kA**][**65 kA**][**100 kA**]<**Insert kA**>.

b. MCC Structure: Front and rear accessible.

1) Match and align front[**and rear**] of MCC.
2) Comply with UL requirements for service entrance equipment.

c. MCC Bus:

1) Use bus bars to connect compartments and vertical sections. Cable connections are prohibited.
2) Main Phase Bus: Uniform capacity entire length of section.
3) Neutral Bus: [**50**][**100**] percent of phase-bus ampacity, except as indicated on the Drawings. Equip bus with pressure-connector terminations for outgoing circuit neutral conductors.
4) Vertical Section Bus: Extend to spaces for future controllers.
5) Phase- and Neutral-Bus Material:

a) Hard-drawn copper of 98 percent minimum conductivity, with copper feeder circuit-breaker line connections.
b) Hard-drawn copper of 98 percent minimum conductivity or tin-plated, high-strength, electrical-grade aluminum alloy.

6) Ground Bus: Hard-drawn copper of 98 percent minimum conductivity, with pressure connector for ground conductors, minimum size **1/4 by 2 inch (6 by 50 mm)**.
7) Neutral Disconnect Link: Bolted, uninsulated, **1/4 by 2 inch (6 by 50 mm)** copper bus, arranged to connect neutral bus to ground bus.

d. Power Circuit Breaker: [**Fixed**][**Drawout**] mounted, electrically operated air-circuit breaker. Comply with UL 1066.

1) With "close" and "open" push-buttons and red and green lighted breaker position indicators. Charging time of motor operator must not exceed 8 s. Operator power must be from supply internal to MCC.
2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
4) LED indicators or display, with manual reset, to show cause of automatic trip.
5) Display panel to indicate that status of system circuitry is fully operational, or give fault location based on automatic diagnosis.
6) Trip circuit breaker when closing on fault.
7) Time-current adjustments to achieve protective-device coordination as follows:

a) Adjustable long-delay pickup and time.
b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
c) Adjustable instantaneous pickup.

d) Individually adjustable ground-fault pickup and time, with [**I-squared-t setting**][**ground alarm**].

8) One test kit to test trip function.
9) Battery backup for informational displays after automatic trip, with battery status indicator LED.

e. Bolted Pressure Switch: Fixed mounted, manually operated, [**electrically tripped,**][**fusible,**]bolted pressure contact switch. Comply with UL 977.

1) Stored energy deadfront mechanism, compressed and released by operating handle; switching action must be independent of speed of operating handle.
2) Indication whether switch is open or closed, and provisions for padlocking operating handle.
3) With fuse clips and fuses for UL 248 Class L time-delay fuses.
4) Electrically tripped switches must include:

a) Ground-fault protection, with adjustable time delay and test panel.
b) Single-phase protection, tripping switch on loss of source phase.
c) Blown fuse protection, tripping switch on blown fuse, with blown fuse indication.
d) Operator power must be from supply internal to MCC.

f. Insulated Case Circuit Breaker: [**Fixed**][**Drawout**] mounted, [**manually**][**electrically**] operated air-circuit breaker. Comply with UL 1066.

1) With "close" and "open" push-buttons and red and green lighted breaker position indicators. Charging time of motor operator must not exceed 8 s. Operator power must be from supply internal to MCC.
2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
4) LED indicators or display, with manual reset, to show cause of automatic trip.
5) Display panel to indicate that status of system circuitry is fully operational, or give fault location based on automatic diagnosis.
6) Trip circuit breaker when closing on fault.
7) Time-current adjustments to achieve protective-device coordination as follows:

a) Adjustable long-delay pickup and time.
b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
c) Adjustable instantaneous pickup.
d) Individually adjustable ground-fault pickup and time, with [**I-squared-t setting**][**ground alarm**].

8) With built-in connector to test breaker settings. Provide one test set.
9) Battery backup for informational displays after automatic trip, with battery status indicator.

g. MCCB (to 2500 A): Fixed mounted, manually operated air-circuit breaker. Comply with UL 489.

1) With quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, and its position is shown by position of handle. With manual

push-to-trip push-button.

2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
4) With trip-setting dials or interchangeable plugs to establish continuous trip of circuit breaker. Plugs must not be interchangeable between frames, and breaker may not be closed without plug. With neutral ground-fault sensor.
5) Time-current adjustments to achieve protective-device coordination as follows:

    a) Adjustable long-time delay.
    b) Adjustable short-time setting and delay to shape time-current curve.
    c) Adjustable instantaneous setting.
    d) Individually adjustable ground-fault setting and time delay.

6) With built-in connector to test long-time delay, instantaneous, and ground-fault functions of breaker.[**Provide one test set for testing installed circuit breakers 225 A frame and higher.**]
7) With built-in digital ammeter display, showing load current and tripping cause.

h. MCCB (1600 to 2500 A): Fixed mounted, manually operated air-circuit breaker. Comply with UL 489.

1) With quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, and its position is shown by position of handle. With manual push-to-trip push-button.
2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
4) LED indicators or display, with manual reset, to show reasons of automatic trip.
5) Display panel to indicate that status of system circuitry is fully operational, or give fault location based on automatic diagnosis.
6) Trip circuit breaker when closing on fault.
7) Time-current adjustments to achieve protective-device coordination as follows:

    a) Adjustable long-delay pickup and time.
    b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
    c) Adjustable instantaneous pickup.
    d) Individually adjustable ground-fault pickup and time, with [**I-squared-t setting**][**ground alarm**].

8) One test kit to test trip function.
9) Battery backup for informational displays after automatic trip, with battery status indicator.

i. Fusible Switch: Fixed-mounted, manually operated, [**electrically tripped,**]quick-make, quick-break switch. Comply with UL 98.

1) Indication whether switch is open or closed, and provisions for padlocking operating handle.
2) With fuse clips and fuses.
3) Electrically tripped switches must include:

    a) Shunt trip.

b) Ground-fault protection, with adjustable time delay and test panel.
c) Single-phase protection, tripping switch on loss of source phase.
d) Blown fuse protection, tripping switch on blown fuse, with blown fuse indication.
e) Operator power must be from supply internal to MCC.

j. Full-Voltage Magnetic Controllers: Electrically held, full voltage, NEMA ICS 2, general purpose, Class A.

1) Configurations: [**Nonreversing**][**and**][**reversing**]<**Insert configuration**>.

k. Reduced-Voltage Magnetic Controllers: Electrically held, NEMA ICS 2, general purpose, Class A; closed transition; adjustable time delay on transition.

1) Configurations: Reduced voltage, electrically held.

a) Wye-Delta Controller: Four contactors, with three-phase starting resistor/reactor bank.
b) Part-Winding Controller: Separate START and RUN contactors, field selectable for one-half or two-thirds winding start mode, with either six- or nine-lead motors; with separate overload relays for starting and running sequences.
c) Autotransformer Reduced-Voltage Controller: Medium-duty service, with integral overtemperature protection; taps for starting at 50, 65, and 80 percent of line voltage; one RUN and two START contactors.

l. Reduced-Voltage, Solid-State Controllers: Comply with UL 508.

1) Description: Integrated unit with power SCRs, heat sink, microprocessor logic board, door-mounted digital display and keypad, bypass contactor, and overload relays.
2) Application: Suitable for use with NEMA MG 1 Design B, polyphase induction motors.
3) Configuration: [**Standard duty**][**Severe duty**]; [**nonreversible**][**reversible**].
4) Starting Mode: [**Voltage ramping**][**Current limit**][**Torque control**][**Torque control with voltage boost**][**; field selectable**].
5) Stopping Mode: [**Coast to stop**][**Adjustable torque deceleration**][**Adjustable braking**][**; field selectable**].
6) Surge Suppression: Factory installed as integral part of controller, SPD complying with UL 1449 as Type 2, or SPD complying with UL 1449, Type 4, suitable for use in Type 2 application.
7) Bypass Contactor: Operates automatically to bypass SCRs when motor has reached rated speed and full voltage is applied to motor. Solid-state controller protective features must remain active when bypass relay is in bypass mode.

a) Manufacturer's standard product.
b) NEMA ICS 2, general-purpose, Class A contactor, rated to start load across the line.

8) Bypass Contactor Coils: Pressure-encapsulated type; manufacturer's standard operating voltage, matching control power or line voltage, depending on contactor size and line-voltage rating.[**Provide coil with SPD.**]
9) Adjustable acceleration-rate control using voltage or current ramp, and adjustable starting torque control with up to [**400**]<**Insert number**> percent current limitation for 20 s.

10) SCR Bridge: At least two SCRs per phase, for stable and smooth acceleration [**with**][**without**] external feedback from motor or driven equipment.
11) Keypad: Front accessible; for programming controller parameters, functions, and features; must be manufacturer's standard and include not less than the following functions:

    a) Adjusting motor full-load amperes, as percentage of controller's rating.
    b) Adjusting current limitation on starting, as percentage of motor full-load current rating.
    c) Adjusting linear acceleration and deceleration ramps, in seconds.
    d) Setting initial torque, as percentage of nominal motor torque.
    e) Adjusting torque limit, as percentage of nominal motor torque.
    f) Adjusting maximum start time, in seconds.
    g) Adjusting voltage boost, as percentage of nominal supply voltage.
    h) Selecting stopping mode and adjusting parameters.
    i) Selecting motor thermal-overload protection class between 5 and 30.
    j) Activating and deactivating protection modes.
    k) Selecting or activating communications modes.
    l) <**Insert function**>.

12) Digital display, front accessible; for showing motor, controller, and fault status; must be manufacturer's standard and include not less than the following:

    a) Controller Condition: Ready, starting, running, stopping.
    b) Motor Condition: Amperes, voltage, power factor, power, and thermal state.
    c) Fault Conditions: Controller thermal fault, motor overload alarm and trip, motor underload, overcurrent, shorted SCRs, line or phase loss, phase reversal, and line frequency over or under normal.
    d) <**Insert items**>.

13) Controller Diagnostics and Protection:

    a) Microprocessor-based thermal protection system for monitoring SCR and motor thermal characteristics, and providing controller overtemperature and motor overload alarm and trip; settings selectable via keypad.
    b) Protection from line-side reverse phasing; line-side and motor-side phase loss; motor jam, stall, and underload conditions; and line frequency over or under normal.
    c) Input isolation contactor that opens when controller diagnostics detect faulted solid-state component, or when motor is stopped.
    d) Shunt trip that opens disconnecting means when controller diagnostics detect faulted solid-state component.
    e) <**Insert items**>.

14) Remote Output Features:

    a) All outputs prewired to terminal blocks.
    b) Form C status contacts that change state when controller is running.
    c) Form C alarm contacts that change state when fault condition occurs.
    d) <**Insert items**>.

15) Optional Features:

    a) Analog output for field-selectable assignment of motor operating characteristics; [**Zero to 10 V(dc)**][**4 to 20 mA(dc)**].

b) [**Two**]<**Insert number**> additional field-assignable Form C contacts for alarm outputs.
c) Full-voltage/BYPASS selector switch. Power contacts must be totally enclosed, double break, and made of silver-cadmium oxide; and assembled to allow inspection and replacement without disturbing line or load wiring.

m. Multispeed Magnetic Controllers: Electrically held, full voltage, NEMA ICS 2, general purpose, Class A.

1) Nonreversing Configuration: [**Consequent pole**][**Two winding**].

a) Two speed, with compelling relays to ensure that motor will start only at low speed.
b) Accelerating timer relays, for properly timed acceleration through speeds lower than that selected.
c) Decelerating timer relays, for automatically timed deceleration through each speed.

2) Reversing Configuration: [**Consequent pole**][**Two winding**].

a) Two speed, with compelling relay to ensure that motor will start only at low speed.
b) Compelling relays must ensure that motor starts only at low speed.
c) Accelerating timer relays, for properly timed acceleration through speeds lower than that selected.
d) Decelerating timer relays, for automatically timed deceleration through each speed.
e) Antiplugging timer relays, for time delay when transferring from FORWARD to REVERSE and back.

n. Controller Disconnect and OCPD:

1) Fusible Disconnecting Means:

a) NEMA KS 1, heavy-duty, horsepower-rated fusible switch, with clips or bolt pads to accommodate [**Class J**][**Class L**]<**Insert class**> fuses.
b) Lockable Handle: For three padlocks and interlocks with cover in closed position.
c) Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.

2) MCP Disconnecting Means:

a) UL 489, with interrupting capacity complying with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
b) Lockable Handle: For three padlocks and interlocks with cover in closed position.
c) Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
d) [**N.C.**][**N.O.**] alarm contact that operates only when MCP has tripped.
e) Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.

3) MCCB Disconnecting Means:

a) UL 489, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
b) Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
c) Lockable Handle: For three padlocks and interlocks with cover in closed position.
d) Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
e) [**N.C.**][**N.O.**] alarm contact that operates only when MCCB has tripped.

4) Molded-Case Switch Disconnecting Means:

a) UL 489, with in-line fuse block for Class J or Class L power fuses (depending on ampere rating), providing interrupting capacity to comply with available fault currents; MCCB with fixed, high-set instantaneous trip only.
b) Lockable Handle: For three padlocks and interlocks with cover in closed position.
c) Auxiliary contacts "a" and "b" arranged to activate with molded-case switch handle.
d) [**N.C.**][**N.O.**] alarm contact that operates only when molded-case switch has tripped.

o. Overload Relays:

1) Melting-Alloy Overload Relays:

a) Inverse-time-current characteristic.
b) [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
c) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.

2) Bimetallic Overload Relays:

a) Inverse-time-current characteristic.
b) [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
c) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
d) Ambient compensated.
e) Automatic resetting.

3) Solid-State Overload Relays:

a) Switch or dial selectable for motor-running overload protection.
b) Sensors in each phase.
c) [**Class 10**][**Class 20**][**Class 10/20 selectable**] tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
d) Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
e) Analog communication module.

4) [**N.C.**][**N.O.**] isolated overload alarm contact.
5) External overload reset push-button.

p. Control Power:

1) Control Circuits: [**24 V(ac)**][**120 V(ac)**]<**Insert voltage**>; obtained from [**integral CPT, with primary and secondary fuses**]<**Insert source of control power**>, with [**CPT**][**control power source**] of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.
2) CPT Spare Capacity: [**50 VA**][**100 VA**][**200 VA**]<**Insert VA**>.

q. Control Wiring: Factory installed, complete with bundling, lacing, and protection; and complying with the following:

1) Flexible conductors for 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
2) Conductors sized in accordance with NFPA 70 for duty required.

r. ICCB Feeder Tap Units: [**Fixed**][**Drawout**]-mounted, [**manually**][**electrically**] operated air-circuit breakers. Comply with UL 1066.

1) With "close" and "open" push-buttons and red and green lighted breaker position indicators. Charging time of motor operator must not exceed 8 s. Operator power must be from control power transformer internal to switchboard.
2) Solid-state monitoring and tripping system must provide system status monitoring, adjustable time-current protection, and shunt trip.
3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
4) LED indicators or display, with manual reset, to show cause of automatic trip.
5) Display panel to indicate that status of system circuitry is fully operational, or give fault location based on automatic diagnosis.
6) Trip circuit breaker when closing on fault.
7) Time-current adjustments to achieve protective-device coordination as follows:

a) Adjustable long-delay pickup and time.
b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
c) Adjustable instantaneous pickup.
d) Individually adjustable ground-fault pickup and time, with [**I-squared-t setting**][**ground alarm**].

8) Built-in connector tests breaker settings. Provide one test set.
9) Battery backup for informational displays after automatic trip, with battery status indicator.

s. MCCB Feeder Tap Units (to 2500 A): Fixed-mounted, manually operated air-circuit breakers, complying with UL 489.

1) Include quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, and its position is shown by position of handle. Include manual push-to-trip push-button.
2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
4) Include trip-setting dials or interchangeable plugs to establish continuous trip of circuit breaker. Plugs must not be interchangeable between frames, and circuit breaker may not be closed without plug. With neutral ground-fault sensor.
5) Time-current adjustments to achieve protective-device coordination as follows:

a) Adjustable long-time delay.
b) Adjustable short-time setting and delay to shape time-current curve.
c) Adjustable instantaneous setting.
d) Individually adjustable ground-fault setting and time delay.

6) With built-in connector to test long-time delay, instantaneous, and ground-fault functions of breaker.[**Provide one test set for testing installed circuit breakers 225 A frame and higher.**]
7) With built-in digital ammeter and digital display, showing tripping cause.

t. MCCB Feeder Tap Units (1600 to 2500 A): Fixed-mounted, manually operated air-circuit breakers, complying with UL 489.

1) With quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, and its position is shown by position of handle. With manual push-to-trip push-button.
2) Solid-state monitoring and tripping system to provide system status monitoring, adjustable time-current protection, and shunt trip.
3) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
4) LED indicators or display, with manual reset, to show reasons of automatic trip.
5) Display panel indicates that status of system circuitry is fully operational or gives fault location based on automatic diagnosis.
6) Trip circuit breaker when closing on fault.
7) Time-current adjustments to achieve protective-device coordination as follows:

a) Adjustable long-delay pickup and time.
b) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
c) Adjustable instantaneous pickup.
d) Individually adjustable ground-fault pickup and time, with [**I-squared-t setting**][**ground alarm**].

8) One test kit to test trip function.
9) Battery backup for informational displays after automatic trip, with battery status indicator.

u. Fusible Switch Feeder Tap Units: Fixed-mounted, manually operated, [**electrically tripped,**]fusible, quick-make, quick-break switch. Comply with UL 98.

1) Indication whether switch is open or closed, and provisions for padlocking operating handle.
2) Include fuse clips and fuses.
3) Electrically tripped switches must include:

a) Shunt trip.
b) Ground-fault protection, with adjustable time delay and test panel.
c) Single-phase protection, tripping switch on loss of source phase.
d) Blown fuse protection, tripping switch on blown fuse, with blown fuse indication.

v. Compartments: Modular; individual [**lift-off**]doors with concealed hinges and quick-captive screw fasteners. Interlocks on units require disconnecting means in off position before door can be opened or closed, except by operating permissive release device.
w. Interchangeability: Compartments constructed to allow for removal of units without opening adjacent doors, disconnecting adjacent compartments, or disturbing operation of other

units in MCC. Same-size compartments permit interchangeability and ready rearrangement of units, such as replacing three single units with unit requiring three spaces, without cutting or welding.

x. Wiring Spaces:

1) Vertical wireways in vertical section for vertical wiring to unit compartments; supports to hold wiring in place.
2) Horizontal wireways in [**bottom**][**and**][**top**] of vertical section for horizontal wiring between vertical sections; supports to hold wiring in place.

y. General Requirements for Control-Circuit and Pilot Devices: NEMA ICS 5; factory installed in controller enclosure cover unless otherwise indicated.

1) Push-Buttons, Pilot Lights, and Selector Switches: [**Heavy**][**Standard**]-duty[**, oiltight**] type.

a) Push-Buttons: [**Covered**][**Lockable**][**Recessed**][**Shielded**][**Shrouded**][**Unguarded**] types; [**maintained**][**momentary**] contact unless otherwise indicated.
b) Pilot Lights: [**Incandescent**][**LED**][**Neon**][**Resistor**][**Transformer**] types; <**Insert color(s)**>[**; push to test**].
c) Selector Switches: [**Rotary**]<**Insert description**> type.

2) Elapsed-Time Meters: Heavy duty with digital readout in hours[**; nonresettable**][**; resettable**].

z. Meters: Panel type, **2 1/2 inch (64 mm)** minimum size with 90- or 120-degree scale and plus or minus 2 percent accuracy, with selector switches having off position.
aa. [**N.C.**][**N.O.**][**Reversible N.C./N.O.**] contactor auxiliary contact(s).
bb. Control Relays: Auxiliary and adjustable [**pneumatic**][**solid-state**] time-delay relays.
cc. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections and adjustable undervoltage, overvoltage, and time-delay settings.
dd. Space heaters, with N.C. auxiliary contacts, to mitigate condensation in enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.
ee. Sun shields, installed on fronts, sides, and tops of enclosures installed outdoors and subject to direct and extended sun exposure.
ff. Cover gaskets, for UL 50E, Type 1 enclosures.
gg. Terminals, for connecting power-factor correction capacitors to [**line**][**load**] side of overload relays.
hh. Spare control-wiring terminal blocks[**; unwired**][**; wired**].
ii. <**Insert auxiliary device**>.

H. UL YEFV or YEFR - Low-Voltage Instruments Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]

d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Unit Substation over 600 V: UL CCN YEFV, including the following referenced standards:

1) Articulated Unit Substations: IEEE C37.121.
2) Integral Unit Substations: IEEE C37.20.2, IEEE C37.20.3, NEMA C37.55, and NEMA C37.57.

b. Unit Substation Rated 600 V or Less: UL CCN YEFR, including UL 1062.

4. Standard Features:

a. Instrument Transformers: Comply with IEEE C57.13.

1) Potential Transformers: Secondary voltage rating of 120 V and NEMA C12.11 Accuracy Class 0.3 with burdens of W, X, and Y.
2) Current Transformers: Burden and Accuracy Class suitable for connected relays, meters, and instruments.

b. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems.

1) Inputs from sensors or 5 A current-transformer secondaries, and potential terminals rated to 600 V.
2) Switch-selectable digital display with the following features:

a) Phase Currents, Each Phase: Plus or minus 1 percent.
b) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
c) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
d) Three-Phase Real Power: Plus or minus 2 percent.
e) Three-Phase Reactive Power: Plus or minus 2 percent.
f) Power Factor: Plus or minus 2 percent.
g) Frequency: Plus or minus 0.5 percent.
h) Integrated Demand, with Demand Interval: Selectable from 5 to 60 min, plus or minus 2 percent.
i) Accumulated energy, in **MWh** **(MJ)**, plus or minus 2 percent; stored values unaffected by power outages for up to 72 h.

3) Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering.

4) Mounting: Display and control unit that is flush or semiflush mounted in instrument compartment door.

c. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, 1 percent accuracy, semiflush mounting, with antiparallax 250-degree scale and external zero adjustment.

1) Voltmeters: Cover expanded scale range of normal voltage plus 10 percent.
2) Voltmeter Selector Switch: Rotary type with "off" position to provide readings of phase-to-phase[**and phase-to-neutral**] voltages.
3) Ammeters: Cover expanded scale range of bus rating plus 10 percent.
4) Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in "off" position.
5) Locate meter and selector switch on circuit-breaker compartment door for indicated feeder circuits only.
6) Watt-Hour Meters: Flush- or semiflush-mounting type, 5 A, 120 V, three phase, three wire; with three elements, 15 min indicating demand register, and provision for testing and adding pulse initiation.
7) Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with 15 min interval.

a) Operation: Counts and records succession of pulses entering two channels.
b) Housing: Drawout, back-connected case arranged for semiflush mounting.

d. Surge Suppression: Factory installed as integral part of low-voltage switchgear, complying with UL 1449 SPD, Type 1, with the following features and accessories:

1) Integral disconnect switch.
2) Internal thermal protection that disconnects SPD before damaging internal suppressor components.
3) Indicator light display for protection status.
4) Form-C contacts rated at 5 A and 250 V(ac), one N.O. and one N.C., for remote monitoring of protection status.[**Contacts must reverse on failure of surge diversion module or on opening of current-limiting device. Coordinate with building power monitoring and control system.**]
5) Surge counter.

2.5 MAINTENANCE MATERIAL ITEMS

A. Spare Parts: Furnish to Owner spare parts, for repairing unit substation equipment, that are packaged with protective covering for storage on-site and identified with labels describing contents.[**Include the following:**]

1. Spare Fuses: [**Six**]<**Insert number**> of each type and rating of fuse and fusible device used, except for medium-voltage fuses. Include spares for the following:

a. Primary disconnect fuses.
b. Potential transformer fuses.
c. Control power fuses.
d. Fuses for secondary fusible devices.

B. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to secondary unit substation equipment, that are packaged with protective covering for storage on-site and identified with labels describing contents.[

Include the following:]

1. Racking handle, to manually move circuit breaker between "connected" and "disconnected" positions.
2. Spare-Fuse Cabinet: Identified and compartmented steel box or cabinet with lockable door.
3. Storage for Manual: Include rack or holder, near operating instructions, for copy of maintenance manual.

C. Consumable Items: Furnish to Owner extra consumable items for storage on-site, identified with labels describing contents.[**Include the following:**]

1. Touchup Paint: [**Three**]<**Insert number**> half-pint containers of paint matching enclosure's exterior finish.
2. Primary Switch Contact Lubricant: [**One**]<**Insert number**> container(s).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and space conditions for compliance with requirements for secondary unit substations and other conditions affecting performance of the Work.

B. Examine roughing-in of conduits and grounding systems to verify the following:

1. Wiring entries comply with layout requirements.
2. Entries are within conduit-entry tolerances specified by manufacturer, and no feeders will have to cross section barriers to reach load or line lugs.

C. Examine walls, floors, roofs, and concrete bases for suitable conditions for secondary unit substation installation.

D. Verify that ground connections are in place. Maximum ground resistance must be 5 Ω at secondary unit substation location.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF SECONDARY UNIT SUBSTATION EQUIPMENT

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Temporary Electric Power Work: NECA NEIS 200.
5. Commissioning of Electrical Systems: NECA NEIS 90.
6. Hot Work: NFPA 51B.
7. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
8. Life Safety and Means of Egress Work: NFPA 101.

9. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
10. Work in Confined Spaces: NFPA 350.
11. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
12. Evaluation of Unlabeled Electrical Equipment: NFPA 791.
13. Installation of Liquid-Filled Transformers: NECA NEIS 410.
14. Installation of Medium-Voltage Switchgear: NECA NEIS 430.
15. Installation of Motor Control Centers: NEMA ICS 2.3.
16. AC Outdoor High-Voltage Circuit Breakers: NEMA SG 11.
17. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Install secondary unit substations on cast-in-place concrete equipment base(s).
2. Comply with requirements for vibration isolation and seismic control devices.

D. Interfaces with Other Work:

1. Identification: Provide labels for secondary unit substation equipment and associated electrical equipment.

   a. Identify field-installed conductors, interconnecting wiring, and components.
   b. Label each enclosure with engraved metal or laminated-plastic nameplate.
   c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.
   d. Install number of signs required to be readable from accessible side, but space signs maximum of **30 ft (9 m)** apart.
   e. Operating Instructions: Place printed operating instructions for secondary unit substations, including key interlocking, control sequences, elementary single-line diagram, and emergency procedures with maintenance materials.

2. Grounding and Bonding:

   a. At Interior Locations: For grounding to grounding electrodes, use bare copper cable not smaller than 4/0 AWG. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors. Keep leads as short as practicable with no kinks or sharp bends. Make joints in grounding conductors and loops by exothermic weld or compression connector.
   b. At Exterior Locations:

      1) For counterpoise use tinned bare copper cable not smaller than 4/0 AWG, buried not less than **24 inch (610 mm)** below grade interconnecting grounding electrodes. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors, sized as shown. Keep lead lengths as short as practicable with no kinks or sharp bends.
      2) Fence and equipment connections must not be smaller than 4 AWG. Ground fence at gate post and corner post and at intervals not exceeding **10 ft (3 m)**. Bond gate section to fence post using **1/8 by 1 inch (3 by 25 mm)** [**tinned**]flexible braided copper strap and clamps.
      3) Make joints in grounding conductors and loops by exothermic weld or compression connector.

3.3 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

1. <**Insert requirements**>.

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

D. Tests and Inspections:

1. Comply with provisions of "Testing and Test Methods" Chapter in NFPA 70B.
2. Perform visual and mechanical inspections and electrical tests. Certify compliance with test parameters.
3. After installing secondary unit substation but before primary is energized, verify that grounding system measurement at substation does not exceed specified value.
4. After installing secondary unit substation and after electrical circuitry has been energized, test for compliance with requirements.
5. Visual and Mechanical Inspection:

    a. Verify equipment nameplate data complies with Contract Documents.
    b. Inspect bolted electrical connections for high resistance using one of the following two methods:

        1) Use low-resistance ohmmeter to compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
        2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.

E. Switchgear and MCC Field Tests:

1. Visual and Mechanical Inspection:

    a. Inspect physical and mechanical condition.
    b. Inspect anchorage, alignment, grounding, and required area clearances.
    c. Verify unit is clean and shipping bracing, loose parts, and documentation shipped inside cubicles have been removed.
    d. Verify that fuse and circuit-breaker sizes and types correspond to Drawings and coordination study as well as address of circuit breaker that is used to identify it in microprocessor-communication software.
    e. Verify that current and voltage-transformer ratios correspond to Drawings.
    f. Confirm correct operation and sequencing of electrical and mechanical interlock systems.

        1) Attempt closure on locked-open devices. Attempt to open locked-closed devices.

2) Make key exchange with devices operated in off-normal positions.

g. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
h. Inspect insulators for evidence of physical damage or contaminated surfaces.
i. Verify correct barrier and shutter installation and operation.
j. Exercise active components.
k. Inspect mechanical indicating devices for correct operation.
l. Verify that filters are in place and vents are clear.
m. Inspect control power transformers as follows:

1) Inspect for physical damage, cracked insulation, broken leads, connection tightness, defective wiring, and overall general condition.
2) Verify that primary- and secondary-fuse or circuit-breaker ratings match Drawings and comply with manufacturer's published instructions.
3) Verify correct functioning of drawout disconnecting and grounding contacts and interlocks.

2. Electrical Tests:

a. Perform DC voltage insulation-resistance tests on bus section, phase-to-phase and phase-to-ground, for 1 min. If temperature of bus is other than plus or minus 20 deg C, adjust resulting resistance as provided in NETA ATS, Table 100.11.

1) Insulation-resistance values of bus insulation must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than manufacturer's published recommendations or NETA ATS, Table 100.1.
2) Do not proceed to dielectric withstand-voltage tests until insulation-resistance levels are raised above minimum values.

b. Perform dielectric withstand-voltage test on bus section, phase-to-ground with phases not under test grounded, in accordance with manufacturer's published data. If manufacturer has no published recommendation for this test, it must be conducted to in accordance with NETA ATS, Table 100.2. Apply test voltage for 1 min.

1) If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric withstand-voltage test, test specimen is considered to have passed test.

c. Voltage Transformers:

1) Perform secondary wiring integrity test. Verify correct potential at devices.
2) Verify secondary voltages by energizing primary winding with system voltage.

d. Perform current-injection tests on entire current circuit in section of switchgear.

1) Perform current tests by secondary injection with magnitudes such that minimum current of 1.0 A flows in secondary circuit. Verify correct magnitude of current at device in circuit.
2) Perform current tests by primary injection with magnitudes such that minimum of 1.0 A flows in secondary circuit. Verify correct magnitude of current at device in circuit.

e. Verify operation of space heaters.

f. Perform phasing checks on double-ended or dual-source switchgear to ensure correct bus phasing from every source.

F. Medium-Voltage Surge Arrester Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, grounding, and clearances.
c. Verify that arresters are clean.
d. Verify that ground lead on device is individually attached to ground bus or ground electrode.
e. Verify that stroke counter is correctly mounted and electrically connected if applicable. Record stroke counter reading.

2. Electrical Test:

a. Perform insulation-resistance test on arrester, phase terminal-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Replace units that fail to meet recommended minimum insulation resistance listed in table.
b. Perform watts loss test. Evaluate watts loss values by comparison with similar units and test equipment manufacturer's published data.

G. Instrument Transformer Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Verify correct connection of transformers with system requirements.
c. Verify that adequate clearances exist between primary and secondary circuit wiring.
d. Verify that unit is clean.
e. Verify that required grounding and shorting connections provide contact.
f. Verify correct operation of transformer withdrawal mechanism and grounding operation.
g. Verify correct primary- and secondary-fuse sizes for voltage transformers.
h. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.

2. Electrical Tests of Current Transformers:

a. Perform insulation-resistance test of current transformer and its secondary wiring with respect to ground at 1000 V(dc) for 1 min. For units with solid-state components that cannot tolerate applied voltage, comply with manufacturer's published instructions. Insulation-resistance values of instrument transformers must not be less than values shown in NETA ATS, Table 100.5.
b. Perform polarity test of current transformer in accordance with IEEE C57.13.1. Polarity results must agree with transformer markings.
c. Perform ratio-verification test using voltage or current method in accordance with IEEE C57.13.1. Ratio errors must comply with IEEE C57.13.
d. Perform excitation test on transformers used for relaying applications in accordance with IEEE C57.13.1. Excitation results must match curve supplied by manufacturer or must comply with IEEE C57.13.1.
e. Measure current circuit burdens at transformer terminals in accordance with IEEE C57.13.1. Measured burdens must match instrument transformer Accuracy Class rating.
f. Perform insulation-resistance tests on primary winding with secondary grounded. Test

voltages must comply with NETA ATS, Table 100.5. Insulation-resistance value must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5.

g. Perform dielectric withstand-voltage tests on primary winding with secondary grounded. Test voltages must comply with NETA ATS, Table 100.9. If no evidence of distress or insulation failure is observed by end of total time of voltage application, primary winding is considered to have passed test.
h. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data. Power-factor or dissipation-factor values must be in accordance with substation equipment manufacturer's published data. In absence of substation equipment manufacturer's published data, comply with test equipment manufacturer's published data.
i. Verify that current-transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3.

3. Electrical Tests of Voltage and Potential Transformers:

a. Perform insulation-resistance tests winding-to-winding and winding-to-ground. Apply test voltage for 1 min in accordance with NETA ATS, Table 100.5. For units with solid-state components that cannot tolerate applied voltage, follow manufacturer's published instructions. Insulation-resistance values of instrument transformers must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5.
b. Perform insulation-resistance tests winding-to-winding and winding-to-ground. Test voltages must be applied for 1 min in accordance with NETA ATS, Table 100.5. Insulation-resistance values of transformers must not be less than values shown in NETA ATS, Table 100.5.
c. Perform polarity test on transformer to verify polarity marks or H(1) to X(1) relationship. Polarity results must agree with transformer markings.
d. Perform turns-ratio test on tap positions. Ratio errors must not exceed tolerances specified in IEEE C57.13.
e. Measure voltage circuit burdens at transformer terminals. Measured burdens must be compared to instrument transformer ratings. Measured burdens must match instrument transformer Accuracy Class rating.
f. Perform dielectric withstand-voltage test on primary windings with secondary windings connected to ground. Dielectric voltage must comply with NETA ATS, Table 100.9. Test voltage must be applied for 1 min. If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric withstand-voltage test, primary windings are considered to have passed test.
g. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data. Power-factor or dissipation-factor values must be in accordance with substation equipment manufacturer's published data. In absence of substation equipment manufacturer's published data, comply with test equipment manufacturer's published data.
h. Verify that voltage-transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3.

H. Liquid-Filled Transformer Section Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect impact recorder prior to unloading.
c. Test dew point of tank gases if applicable.

d. Inspect anchorage, alignment, and grounding.
e. Verify presence of PCB content labeling.
f. Verify removal of shipping bracing after placement.
g. Verify that bushings are clean.
h. Verify that alarm, control, and trip settings on temperature and level indicators are set and operate within manufacturer's recommended settings.
i. Verify that cooling fans and pumps operate correctly and have appropriate overcurrent protection.
j. Verify that liquid level in tanks and bushings is within manufacturer's published tolerances.
k. Perform specific inspections and mechanical tests recommended by manufacturer.
l. Verify presence of transformer surge arresters and that their ratings are as specified.
m. Verify that as-left tap connections are as specified.
n. Verify presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

a. Perform insulation-resistance tests winding-to-winding and winding-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index must not be less than 1.0.
b. Perform power-factor or dissipation-factor tests on windings in accordance with test equipment manufacturer's published data. Maximum winding insulation power-factor/dissipation-factor values must be in accordance with substation equipment manufacturer's published data. In absence of substation equipment manufacturer's published data, comply with NETA ATS, Table 100.3.
c. Measure core insulation resistance at 500 V(dc) if core is insulated and core ground strap is removable. Core insulation-resistance values must not be less than 1 MΩ at 500 V(dc).
d. Perform power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV.
e. Perform turns-ratio tests at tap positions. Turns-ratio test results must not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
f. Perform excitation-current test on each phase. Typical excitation-current test data pattern for three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if test shows different pattern.
g. Measure resistance of winding at tap connection, and record temperature-corrected winding-resistance values in Operations and Maintenance Manual.
h. Perform applied-voltage test on high- and low-voltage windings-to-ground. Comply with IEEE C57.12.91, Sections 10.2 and 10.9.
i. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.
j. Remove sample of insulating liquid in accordance with ASTM D923. Insulating liquid values must comply with NETA ATS, Table 100.4. Sample must be tested for the following:

1) Dielectric Breakdown Voltage: ASTM D877 or ASTM D1816.
2) Acid Neutralization Number: ASTM D974.
3) Specific Gravity: ASTM D1298.
4) Interfacial Tension: ASTM D971.
5) Color: ASTM D1500.
6) Visual Condition: ASTM D1524.
7) Water in Insulating Liquids: ASTM D1533.
8) Power Factor or Dissipation Factor: ASTM D924.

k. Remove sample of insulating liquid in accordance with ASTM D923 and perform dissolved-gas analysis in accordance with IEEE C57.104 or ASTM D3612.

I. Small Dry-Type Transformer Section Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, and grounding.
c. Verify that resilient mounts are free and that shipping brackets have been removed.
d. Verify that unit is clean.
e. Perform specific inspections and mechanical tests recommended by manufacturer.
f. Verify that as-left tap connections are as specified.
g. Verify presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

a. Perform insulation-resistance tests winding-to-winding and winding-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index must not be less than 1.0.
b. Perform turns-ratio tests at tap positions. Test results must not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
c. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

J. Large Dry-Type Transformer Section Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, and grounding.
c. Verify that resilient mounts are free and that shipping brackets have been removed.
d. Verify that unit is clean.
e. Verify that alarm, control, and trip settings on temperature and level indicators are set and operate within manufacturer's recommended settings.
f. Verify that cooling fans operate and that fan motors have correct overcurrent protection.
g. Perform specific inspections and mechanical tests recommended by manufacturer.
h. Verify that as-left tap connections are as specified.
i. Verify presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

a. Perform insulation-resistance tests winding-to-winding and winding-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index must not be less than 1.0.
b. Perform power-factor or dissipation-factor tests on windings in accordance with test equipment manufacturer's published data. Investigate and correct power-factor values that exceed:

1) 2 percent for power transformers.
2) 5 percent for distribution transformers.

c. Measure core insulation resistance at 500 V(dc) if core is insulated and core ground strap is removable. Core insulation-resistance values must not be less than 1 MΩ at 500 V(dc).
d. Perform power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV. Tip-

up test result exceeding 1 percent must be investigated.

e. Perform turns-ratio tests at tap positions. Test results must not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.

f. Perform excitation-current test on each phase. Typical excitation-current test data pattern for three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if test shows different pattern.

g. Measure resistance of winding at tap connection.

h. Perform applied-voltage test on high- and low-voltage windings-to-ground. See IEEE C57.12.91, Sections 10.2 and 10.9. AC dielectric-withstand-voltage test result must not exceed 75 percent of factory test voltage for 1 min duration. DC dielectric-withstand-voltage test result must not exceed 100 percent of AC RMS test voltage specified in IEEE 57.12.91, Section 10.2, for 1 min duration. If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric-withstand-voltage test, test specimen is considered to have passed test.

i. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

K. Low-Voltage Motor Controller Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect anchorage, alignment, grounding, and clearances.

b. Verify that unit is clean.

c. Inspect contactors:

1) Verify mechanical operation.

2) Verify contact gap, wipe, alignment, and pressure are in accordance with manufacturer's published data.

d. Motor-Running Protection:

1) Verify that overload element rating is correct for its application.

2) If motor-running protection is provided by fuses, verify correct fuse rating.

e. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.

2. Electrical Tests:

a. [**For contactor and circuit breaker, perform**][**Perform**]insulation-resistance tests for 1 min on each pole, phase-to-phase and phase-to ground with switch closed, and across each open pole. Insulation-resistance values must comply with manufacturer's published data or NETA ATS, Table 100.1. In absence of manufacturer's published data, comply with Table 100.5. Investigate and correct values of insulation resistance less than this table or manufacturer's published instructions.

b. Test circuit breakers as follows:

1) Operate circuit breaker to ensure smooth operation.

2) Perform contact/pole-resistance test. Drop values for μΩ or mV(dc) must not exceed high levels of normal range as indicated in manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.

c. Perform operational tests by initiating control devices. Control devices must perform in accordance with system design requirements.

L. Low-Voltage Power Circuit-Breaker Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, and grounding.
c. Verify that maintenance devices are available for servicing and operating breaker.
d. Verify that unit is clean.
e. Verify that arc chutes are intact.
f. Inspect moving and stationary contacts for condition and alignment.
g. Verify that primary and secondary contact wipe and other dimensions vital to satisfactory operation of breaker are correct.
h. Perform mechanical operator and contact alignment tests on both breaker and its operating mechanism in accordance with manufacturer's published data.
i. Verify cell fit and element alignment.
j. Verify racking mechanism operation.
k. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
l. Perform adjustments for final protective-device settings in accordance with coordination study provided by end user.
m. Record as-found and as-left operation counter readings.

2. Electrical Tests:

a. Perform insulation-resistance tests for 1 min on each pole, phase-to-phase and phase-to-ground with switch closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Values of insulation resistance less than this table or manufacturer's published recommendations must be investigated.
b. Measure contact resistance across power contact of circuit breaker. Drop values for μΩ or mV(dc) must not exceed high levels of normal range as indicated in manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
c. Determine long-time pickup and delay by primary current injection. Long-time pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current characteristic tolerance band, including adjustment factors. If manufacturer's curves are not available, trip times must not exceed value shown in NETA ATS, Table 100.7.
d. Determine short-time pickup and delay by primary current injection. Short-time pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current tolerance band.
e. Determine ground-fault pickup and delay by primary current injection. Ground-fault pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current tolerance band.
f. Determine instantaneous pickup value by primary current injection. Instantaneous pickup values must be as specified and within manufacturer's published tolerances. In absence of manufacturer's published data, comply with NETA ATS, Table 100.8.
g. Test functions of trip unit by means of secondary injection. Pickup values and trip characteristic must be as specified and within manufacturer's published tolerances.
h. Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of shunt trip and close coils must conform to manufacturer's published data. In absence of manufacturer's published data,

comply with NETA ATS, Table 100.20.

i. Measure fuse resistance. Investigate fuse-resistance values that deviate from others by more than 15 percent.

j. Verify correct operation of auxiliary features, such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free operation, antipump function, and trip unit battery condition. Reset trip logs and indicators. Auxiliary features must operate in accordance with manufacturer's published data.

k. Verify operation of charging mechanism. Charging mechanism must operate in accordance with manufacturer's published data.

M. Insulated-Case/Molded-Case Air-Circuit-Breaker Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage and alignment.
c. Verify that unit is clean.
d. Operate circuit breaker to ensure smooth operation.
e. Inspect operating mechanism, contacts, and arc chutes in unsealed units.
f. Perform adjustments for final protective-device settings in accordance with coordination study. Set protective devices in accordance with coordination study report.

2. Electrical Tests:

a. Perform insulation-resistance tests for 1 min on each pole, phase-to-phase and phase-to ground with circuit breaker closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Values of insulation resistance less than this table or manufacturer's published recommendations must be investigated.
b. Perform contact/pole-resistance test. Drop values for μΩ or mV(dc) must not exceed high levels of normal range as indicated in manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
c. Determine long-time pickup and delay by primary current injection. Ground-fault pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current tolerance band, including adjustment factors.
d. Determine short-time pickup and delay by primary current injection. Short-time pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current tolerance band.
e. Determine ground-fault pickup and time delay by primary current injection. Ground-fault pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current tolerance band.
f. Determine instantaneous pickup by primary current injection. Instantaneous pickup values must be as specified and within manufacturer's published tolerances. In absence of manufacturer's published data, comply with NETA ATS, Table 100.8.
g. Test functions of trip unit by means of secondary injection. Pickup values and trip characteristic must be as specified and within manufacturer's published tolerances.
h. Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of shunt trip and close coils must conform to manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.20.
i. Verify correct operation of auxiliary features, such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free operation, anti-pump function, and

trip unit battery condition. Reset trip logs and indicators. Auxiliary features must operate in accordance with manufacturer's published data.

j. Verify operation of charging mechanism. Charging mechanism must operate in accordance with manufacturer's published data.

N. Low-Voltage Ground-Fault Protection System Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect components for damage and errors in polarity or conductor routing.

1) Verify that ground connection is made on source side of neutral disconnect link and on source side of ground-fault sensor.
2) Verify that neutral sensors are connected with correct polarity on both primary and secondary.
3) Verify that phase conductors and neutral pass through sensor in same direction for zero sequence systems.
4) Verify that grounding conductors do not pass through zero sequence sensors.
5) Verify that grounded conductor is solidly grounded.

b. Verify that unit is clean.
c. Operate circuit breaker to ensure smooth operation.
d. Verify correct operation of functions of self-test panel if provided.
e. Verify that control power transformer has adequate capacity for system.
f. Set pickup and time-delay settings. Record appropriate operation and test sequences in accordance with Section 230.95 "Ground-Fault Protection Equipment" of NFPA 70.

2. Electrical Tests:

a. Measure system neutral-to-ground insulation resistance with neutral disconnect link temporarily removed. Replace neutral disconnect link after testing. System neutral-to-ground insulation resistance must be minimum of 1 MΩ. Correct wiring until minimum is achieved.
b. Perform ground-fault protective-device pickup tests using primary injection. Results of pickup test must be greater than 90 percent of ground-fault protective-device pickup setting and less than 1200 A or 125 percent of pickup setting, whichever is smaller. Adjust or replace device until these parameters are achieved.
c. For summation-type systems utilizing phase and neutral current transformers, verify correct polarities by applying current to phase-neutral current-transformer pair. This test also applies to MCCBs utilizing external neutral current transformer. Ground-fault protective device must operate when current direction is same relative to polarity marks in two current transformers. Ground-fault protective device must not operate when current direction is opposite relative to polarity marks in two current transformers.
d. Measure time delay of ground-fault protective device at value equal to or greater than 150 percent of pickup value. Relay timing must be in accordance with manufacturer's published data but must be no longer than 1 s at 3000 A in accordance with Section 230.95 "Ground-Fault Protection Equipment" of NFPA 70.
e. Verify that reduced control voltage tripping capability is 55 percent for AC systems and 80 percent for DC systems. Replace ground-fault system if reduced control voltage tripping requirement is not achieved, and retest.
f. Verify blocking capability of zone interlock systems. Results of zone-blocking tests must be in accordance with manufacturer's published data and design specifications.

O. Metering Device Field Tests:

1. Visual and Mechanical Inspection:

    a. Inspect physical and mechanical condition.
    b. Inspect cover gasket, cover glass, condition of spiral spring, disk clearance, contacts, and case shorting contacts, as applicable.
    c. Verify that unit is clean.
    d. Verify freedom of movement, end play, and alignment of rotating disk(s).

2. Electrical Tests:

    a. Verify accuracy of meters at cardinal points. Meter accuracy must be in accordance with manufacturer's published data.
    b. Calibrate meters in accordance with manufacturer's published data. Calibration results must be within manufacturer's published tolerances.
    c. Verify instrument multipliers. Instrument multipliers must be in accordance with system design specifications.
    d. Verify that current-transformer and voltage-transformer secondary circuits are intact. Test results must confirm integrity of secondary circuits of current and voltage transformers.

P. Nonconforming Work:

1. Equipment and devices will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

Q. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports. Record as-left set points of adjustable devices.

R. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.4 SYSTEM STARTUP

A. Perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's published instructions.
2. <**Insert startup steps if any**>.

B. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] system startup.

1. Manufacturer's Field Reports for System Startup Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.5 CLEANING

A. After completing equipment installation and before energizing, inspect unit components. Remove paint

splatters and other spots, dirt, and debris. Repair damaged finish to match original finish. Vacuum interiors of secondary unit substation sections.

3.6 CLOSEOUT ACTIVITIES

A. Training:

1. [**With assistance from factory-authorized service representatives, train**][**Train**] Owner's maintenance personnel on the following topics:

   a. How to adjust, operate, and maintain secondary unit substation equipment.

2. [**Provide video recordings of training sessions to Owner**][**Allow Owner to record training sessions**].

3.7 PROTECTION

A. After installation, protect secondary unit substation equipment from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

3.8 MAINTENANCE

A. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:

1. During period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at outgoing section of secondary unit substation. Use voltmeters with calibration traceable to National Institute of Science and Technology standards and with chart speed of not less than **1 inch/h (25 mm/h)**. Voltage unbalance greater than 1 percent between phases, or deviation of phase voltage from nominal value by more than plus or minus 5 percent during test period, is unacceptable.
2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:

   a. Adjust transformer taps.
   b. Rebalance loads.
   c. Prepare written request for voltage adjustment by electric utility.

3. Retests: Repeat monitoring, after corrective action has been performed, until satisfactory results are obtained.
4. Field Reports for Voltage Monitoring and Adjusting:

   a. Prepare written report covering monitoring performed and corrective action taken.
   b. For relay and adjustable circuit breaker, tag device with adjusting technician's initials and date of adjustment. Record settings and file with test records specified in "Field Quality Control" Article.

B. Infrared Scanning of Secondary Unit Substation Equipment: Perform survey during periods of maximum possible loading. Remove necessary covers prior to inspection. Take visible light photographs at same

locations and orientations as infrared scans for documentation to ensure follow-on scans match same conditions for valid comparison.

1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of electrical power connections of unit substation.
2. Follow-On Infrared Scanning: Perform additional follow-up infrared scan of switchgear 11 months after date of Substantial Completion.
3. Instrument: Inspect distribution systems with imaging equipment capable of detecting minimum temperature difference of 1 deg C at 30 deg C. Provide documentation of device calibration.
4. Field Reports for Infrared Scanning: Prepare certified report that identifies testing technician and equipment used, and lists results as follows:

    a. Description of equipment to be tested.
    b. Discrepancies.
    c. Temperature difference between area of concern and reference area.
    d. Probable cause of temperature difference.
    e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
    f. Identify load conditions at time of inspection.
    g. Provide photographs and thermograms of deficient area.

5. Act on inspection results in accordance with recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.

C. Maintenance Service Agreement: Beginning at Substantial Completion, verify that maintenance service agreement includes [**one year**]<**Insert duration**> period for full maintenance by [**skilled employees of substation equipment Installer**][**manufacturer's authorized service representative**]. Include annual preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper substation equipment operation. Verify that parts and supplies are manufacturer's authorized replacement parts and supplies.

END OF SECTION 26 11 16 00A

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 11 16 11 - SECONDARY UNIT SUBSTATIONS WITH SWITCHGEAR SECONDARY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Articulated secondary unit substations with switchgear secondary.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 260513 "Medium-Voltage Cables" for requirements for terminating cables in substation medium-voltage sections.
5. Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for requirements for terminating cables in substation low-voltage sections.
6. Section 260523 "Control-Voltage Electrical Power Cables" for requirements for terminating cables in substation instrumentation sections.
7. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
8. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
9. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration isolation and seismic[**and wind**] control devices referenced by this Section.
10. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
11. Section 260573 "Power System Studies" specifies coordination studies, arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.
12. Section 262300 "Low-Voltage Switchgear" specifies low-voltage distribution sections referenced by this Section.

1.2 DEFINITIONS

A. NETA ATS: Acceptance testing specification.

B. PCB: Polychlorinated biphenyl.

C. RTD: Resistance temperature detector (IEEE C37.2 Device No. 26).

D. SCR: Silicon-controlled rectifier.

E. SPD: Surge protective device.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
2. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.

    a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
    b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
    c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for submitted product.

3. Include manufacturer's sample extended warranty language.

B. Factory test reports.

C. Shop Drawings: Prepare and submit the following:

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: Power, signal, and control wiring.
3. Dimensioned plans and elevations showing major components and features.

    a. Include a plan view and cross section of equipment base, showing clearances, workspace that accounts for breaker service and removal, and locations of penetrations for grounding and conduits in accordance with manufacturer's published instructions.

4. One-line diagram.
5. List of materials.
6. Nameplate legends.
7. The material, size and number of bus bars, and current rating for each bus, including mains and branches of phase, neutral, and ground buses.
8. Short-time and short-circuit current ratings of secondary unit substations and components.
9. Ratings of individual protective devices.
10. Mimic-bus diagram.
11. Utility company's metering provisions with indication of approval by utility company.

D. Time-Current Characteristic Curves: For overcurrent protective devices.

E. Primary Fuses: Submit recommendations and size calculations.

F. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

B. Field Reports:

1. Manufacturer's field reports for field quality-control support.
2. Manufacturer's field reports for system startup support.
3. Field reports for voltage monitoring and adjusting.
4. Field reports for infrared scanning.
5. Field reports for software and firmware upgrades.

1.5 CLOSEOUT SUBMITTALS

A. Warranty documentation.

B. Maintenance service agreement.

C. Software and firmware service agreement.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Spare parts.

B. Special tools.

C. Consumable items.

1.7 REGULATORY AGENCY APPROVALS

A. Submittals for secondary unit substations requiring approval by authorities having jurisdiction must be signed by qualified electrical professional engineer responsible for their preparation. [**Obtain approval by authorities having jurisdiction prior to submitting for action by Architect.**][**Submit for action by Architect prior to submitting for approval by authorities having jurisdiction.**]

1.8 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, conduct tests of complex equipment, analyze test and equipment data, plan a job, and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.

C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

D. Electrical Professional Engineer: Professional engineer possessing active qualifications specified in Section 014000 "Quality Requirements," with expertise in electrical engineering, including electrical

power system modeling and analysis of electrical safety in accordance with NFPA 70E.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver in shipping splits in sizes that can be moved past obstructions in delivery path.

B. Coordinate delivery of secondary unit substations to allow movement into designated space.

C. Store secondary unit substation components[**protected from weather and**] so condensation does not form on or in units. Provide temporary heating in accordance with manufacturer's published instructions.

D. Handle secondary unit substation components in accordance with manufacturer's published instructions. Use factory-installed lifting provisions.

1.10 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

A. Modeling, analysis, product selection, installation, and quality control for all electrical Work on the Project must comply with service condition requirements specified in Section 018116 "Facility Environmental Requirements" and Section 018123 "Facility Seismic and Wind Criteria."

B. Usual Service Conditions: Unless unusual service conditions have been specified in "General Environmental Conditions," "Outdoor Conditions," and "Indoor Conditions" articles of Section 018116 "Facility Environmental Requirements," electrical service and distribution equipment must be suitable for operation under usual service conditions specified in applicable IEEE C37 series and IEEE C57 series standards.

1.11 WARRANTY FOR SECONDARY UNIT SUBSTATIONS

A. Special Installer Extended Warranty: Installer warrants that assembled and installed secondary unit substation performs in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.

1. Extended-Warranty Period: [**Two**][**Three**][**Four**]<**Insert number**> years from date of Substantial Completion; full coverage for labor, materials, and equipment.

B. Special Manufacturer Extended Warranty: Manufacturer warrants that secondary unit substation performs in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within extended-warranty period. Warranty must convey to Owner upon acceptance of the Work.

1. Initial Extended-Warranty Period: [**Three**][**Four**][**Five**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.
2. Follow-On Extended-Warranty Period: [**Eight**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for materials only, free on board [**origin**][**destination**], freight prepaid.

1.12 WARRANTY FOR BATTERIES

A. Special DC Control System Manufacturer Extended Warranty: Manufacturer warrants that components

of DC control system perform in accordance with specified requirements and agrees to provide repair or replacement of batteries that fail to perform as specified within extended warranty period.

1. DC Control System Equipment (Excluding Batteries) Extended Warranty Period: [**Two**]<**Insert number**> year(s) from date of Substantial Completion, for labor, materials, and equipment.
2. Standard VRLA Batteries:

    a. Initial Extended Warranty Period: [**Two**]<**Insert number**> year(s) from date of Substantial Completion, full coverage for materials only.
    b. Follow-on Extended Warranty Period: [**Nine**]<**Insert number**> year(s) from date of Substantial Completion, pro-rated coverage for materials only.

3. Premium VRLA Batteries:

    a. Initial Extended Warranty Period: [**Two**]<**Insert number**> year(s) from date of Substantial Completion, full coverage for materials only.
    b. Follow-on Extended Warranty Period: [**19**]<**Insert number**> year(s) from date of Substantial Completion, pro-rated coverage for materials only.

4. Vented Ni-Cd Batteries:

    a. Initial Extended Warranty Period: [**Five**]<**Insert number**> year(s) from date of Substantial Completion, full coverage for materials only.
    b. Follow-on Extended Warranty Period: [**15**]<**Insert number**> year(s) from date of Substantial Completion, pro-rated coverage for materials only.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

B. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

1. Unit Substations over 600 V: UL CCN YEFV, including IEEE C37.121 and the following:

    a. Metal-Clad Switchgear: IEEE C37.20.2 and NEMA C 37.55.
    b. Metal-Enclosed Switchgear: IEEE C37.20.3 and NEMA C 37.57.
    c. Liquid-Filled Transformer: IEEE C57.12.00.
    d. Dry-Type Transformer: UL 1562.

C. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

1. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events[**and unit must be fully operational after seismic events**].
2. Component Importance Factor (Ip): [**1.0**][**1.5**].
3. Component Amplification Factor (ap):

a. Batteries: [**1.0**]<**Insert value**>.
b. Transformers: [**1.0**]<**Insert value**>.
c. Sheet Metal Enclosed Electrical Equipment: [**2.5**]<**Insert value**>.
d. Cabling and Bus Ducts: [**2.5**]<**Insert value**>.

4. Component Response Modification Factor (Rp):

a. Batteries: [**2.5**]<**Insert value**>.
b. Transformers: [**2.5**]<**Insert value**>.
c. Sheet Metal Enclosed Electrical Equipment: [**6.0**]<**Insert value**>.
d. Cabling and Bus Ducts: [**6.0**]<**Insert value**>.

5. Component Overstrength Factor (Ωo): [**1.5**][**2.5**]<**Insert value**>.

a. Batteries: [**2.5**]<**Insert value**>.
b. Transformers: [**2.5**]<**Insert value**>.
c. Sheet Metal Enclosed Electrical Equipment: [**2.5**]<**Insert value**>.
d. Cabling and Bus Ducts: [**1.5**]<**Insert value**>.

2.2 ARTICULATED SECONDARY UNIT SUBSTATIONS WITH SWITCHGEAR SECONDARY

A. Description: [**Medium-voltage, primary incoming section; transformer section; and low-voltage secondary switchgear section; and including coordinated circuit breakers, fusible switches, and metering components**]<**Insert brief description of desired system, assembly, or equipment**>.

B. Indoor Unit Arrangement: [**Single assembly**][**Separate secondary distribution equipment connected with busway**].

C. Outdoor Unit Arrangement: [**Single assembly**][**Separate secondary distribution equipment connected with busway**].

1. Weatherproof, listed for installation outdoors, complying with IEEE C37.20.1.
2. Aisle-less Construction: Full-height doors in front of basic weatherproof equipment.

D. Selection of Components for Secondary Unit Substation:

1. Source Limitations: Obtain components for secondary unit substation from sources approved by [**manufacturer**][**fabricator**] warranting performance of entire [**system**][**assembly**].
2. Provide the following specified products with the secondary unit substation:

a. Secondary Unit Substation No. 1 :

1) Medium-voltage terminal compartment section .
2) Medium-voltage metal-clad switchgear section .
3) Medium-voltage metal-enclosed switchgear section .
4) Medium-voltage instruments section .
5) Liquid-filled medium-voltage transformer section .
6) Dry-type medium-voltage transformer section .
7) Secondary distribution terminal compartment section .
8) Secondary distribution network protectors section .
9) Secondary distribution low-voltage instrument section .
10) Secondary distribution switchgear section .
11) Secondary Distribution Low-Voltage Distribution Section : As specified in Section 262300 "Low-Voltage Switchgear."

E. General Criteria:

1. Connections between primary device and transformer must be [**cable**][**bus**], and between transformer and secondary must be flexible bus braid unless noted otherwise.
2. Indoor Enclosure: Steel.
3. Outdoor Enclosure: [**Weatherproof, aisle-less construction**][**Weatherproof, sheltered-aisle construction, with interior-lighted walk-in aisle**] for outdoor service. Galvanized-steel, weatherproof construction; integral structural-steel base frame with factory-applied asphaltic undercoating.

    a. Enclosure: [**Flat**][**Downward, rearward sloping**] roof; [**bolt-on rear covers**][**rear hinged doors**] for each section, with provisions for padlocking.
    b. Each compartment must have the following features:

        1) Structural design and anchorage adequate to resist loads imposed by [**125 mph (200 km/h)**]<**Insert wind speed**> wind.
        2) Space heater operating at one-half or less of rated voltage, sized to prevent condensation, controlled by [**thermostats to maintain temperature of each section above expected dew point**][**manual switching of branch-circuit protective device**].
        3) Louvers equipped with insect and rodent screens and filters, and arranged to permit air circulation while excluding rodents and exterior dust.
        4) LED lighting fixtures, ceiling mounted; wired to a three-way light switch at each end of aisle
        5) Weatherproof ground-fault circuit interrupter (GFCI) duplex receptacle.
        6) Power for heaters, lights, and receptacles must be provided [**by control power transformer**][**as indicated**].

    c. Weatherproof internal-aisle construction must have the following features:

        1) Common internal aisle of sufficient width to permit protective device withdrawal, disassembly, and servicing in aisle.
        2) Doors: Personnel door at each end of aisle, minimum width of [**30 inch (762 mm)**]<**Insert dimension**>; opening outwards; with panic hardware and provisions for [**padlocking**][**cylinder lock**].
        3) Aisle space heaters operating at one-half or less of rated voltage and thermostatically controlled.
        4) Vapor-proof fluorescent aisle lights with low-temperature ballasts and controlled by wall switch at each entrance.
        5) Emergency battery pack lighting fixture installed on wall of aisle midway between personnel doors
        6) GFCI duplex receptacles, a minimum of two, located in aisle.
        7) Factory-installed electric unit heater(s), wall or ceiling mounted, with integral thermostat and disconnect and with capacities to maintain switchboard interior temperature of [**plus 10 deg F (minus 12 deg C)**]<**Insert temperature**> with outside design temperature of [**minus 20 deg F (minus 29 deg C)**]<**Insert temperature**>.
        8) Factory-installed exhaust fan with capacities to maintain switchboard interior temperature of [**85 deg F (29 deg C)**]<**Insert temperature**> with outside design temperature of [**104 deg F (40 deg C)**]<**Insert temperature**>.
        9) Ventilating openings[**complete with replaceable fiberglass air filters**].
        10) Thermostat: Single stage; wired to control heat and exhaust fan.

4. Skid Mounted: Mount each shipping group on an integral base frame as a complete weatherproof unit.
5. Unit Substation Enclosures Finish:

a. Factory-applied finish in manufacturer's standard color, including under surfaces treated with corrosion-resistant undercoating.
b. Factory-applied finish in manufacturer's standard gray over a rust-inhibiting primer on treated metal surface.
c. Factory-applied corrosion-resistant finish in manufacturer's standard color that withstands [**120**][**480**] hours of exposure to salt spray test specified in ASTM B117 without loss of paint or release of adhesion of paint primer coat to metal surface in excess of **1/16 inch (1.6 mm)** from test mark. The scribed test mark and test evaluation must be conducted in accordance with ASTM D1654, with a rating of not less than 7 arrived at in accordance with Table 1 (procedure A). Cut edges or otherwise damaged surfaces of hot-dip galvanized sheet steel or mill-galvanized sheet steel must be coated with a manufacturer's standard zinc-rich paint.

F. Source Quality Control:

1. Factory Tests:

a. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.
b. Testing Administrant: [**Owner will engage**][**Engage**] qualified electrical testing agency to evaluate secondary unit substation components.
c. Factory Tests and Inspections: Perform the following tests and inspections on secondary unit substation components, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction before delivering to site. Affix label with name and date of [**manufacturer's**][**qualified electrical testing laboratory's**] certification of system compliance.

1) Perform design and routine tests in accordance with standards specified for components. Conduct transformer tests in accordance with IEEE C57.12.90. Conduct switchgear and switchboard tests in accordance with NEMA C 37.51.
2) Perform the following factory-certified tests on each secondary unit substation:

a) Resistance measurements of all windings on rated voltage connection and on tap extreme connections.
b) Ratios on rated voltage connection and on tap extreme connections.
c) Polarity and phase relation on rated voltage connection.
d) No-load loss at rated voltage on rated voltage connection.
e) Exciting current at rated voltage on rated voltage connection.
f) Impedance and load loss at rated current on rated voltage connection and on tap extreme connections.
g) Applied potential.
h) Induced potential.
i) Temperature Test: If a transformer is supplied with auxiliary cooling equipment to provide more than one rating, test at lowest kVA Class ONAN or Class AA rating and highest kVA Class ONAF or Class AFA rating. Temperature test is not required if a record of a temperature test on an essentially duplicate unit is available.

d. Nonconforming Work:

1) Equipment that does not pass tests and inspections will be considered defective.

e. Factory Test Reports: Compile and submit factory test and inspection reports.

G. Medium-Voltage Terminal Compartment Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB, Electrification Business**]
    b. [**Eaton**]
    c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
    d. [**Siemens Industry, Inc., Energy Management Division**]
    e. [**Square D; Schneider Electric USA**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. [**Eaton**]
    c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
    d. [**Siemens Industry, Inc., Energy Management Division**]
    e. [**Square D; Schneider Electric USA**]
    f. <**Insert manufacturer's name**>

3. Standard Features:

    a. Primary Incoming Section: Terminal assembly with adequate space for incoming-cable terminations and surge arresters, complying with NEMA SG 4 and meeting thermal, mechanical, and dielectric requirements specified for transformer section.
    b. Ratings: Suitable for application in three-phase, 60 Hz, solidly grounded-neutral system.
    c. System Voltage: [**4.16 kV nominal; 4.76 kV maximum**][**7.2 kV nominal; 15 kV maximum**][**13.8 kV nominal; 15 kV maximum**][**34.5 kV nominal; 38 kV maximum**]<**Insert other voltage**>.
    d. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, connected in each phase of incoming circuit and ahead of any disconnecting device.

H. Medium-Voltage Metal-Clad Switchgear Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB, Electrification Business**]
    b. [**Eaton**]
    c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
    d. [**Siemens Industry, Inc., Energy Management Division**]
    e. [**Square D; Schneider Electric USA**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. [**Eaton**]
    c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]

d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

3. Standard Features:

a. Metal-clad, circuit-breaker switchgear, complying with IEEE C37.20.2 and NEMA SG 4 and tested for compliance in accordance with NEMA C 37.55.

1) Arc Resistant: Comply with IEEE C37.20.7, [**Type 1**][**Type 2**][**Type 1C**][**Type 2C**].

b. Ratings must comply with IEEE C37.04, suitable for application in three-phase, 60 Hz, solidly grounded-neutral system.

1) System Voltage: [**4.16 kV nominal; 4.76 kV maximum**][**7.2 kV nominal; 15 kV maximum**][**13.8 kV nominal; 15 kV maximum**][**34.5 kV nominal; 38 kV maximum**]<**Insert other voltage**>.
2) Nominal Interrupting-Capacity Class: [**250**][**350**][**500**][**750**][**1000**] MVA.
3) Main-Bus Rating: [**1200**][**2000**][**3000**] A, continuous.

c. Circuit Breakers: Electrically operated, drawout mounting; using three individual vacuum-sealed interrupter modules, and including the following features:

1) Designed to operate at rated voltage to interrupt fault current within its rating within [**three**][**five**] cycles of trip initiation. For systems with X/R ratio of 17 or less, transient voltage during interruption must not exceed twice rated line-to-ground voltage of system.
2) Contact-Wear Indicator: Readily accessible to field maintenance personnel.
3) Minimum of six Type A and six Type B spare contacts.
4) Interchangeability: Interchangeable with vacuum circuit breakers of same current and interrupting ratings.
5) Operating Mechanism: Electrically charged, mechanically and electrically trip-free, stored-energy operation.

d. Control Power:

1) [**48**][**125**]<**Insert voltage**> V(dc) for closing and tripping.
2) [**120**][**240**]<**Insert voltage**> V(ac) for closing and tripping.

e. Low-DC-Voltage Alarm: Monitor DC control power voltage with a remote alarm. Alarm must sound if voltage falls to an adjustable value to indicate an impending battery failure. Factory set alarm value at 80 percent of full-charge voltage.
f. Remote-Tripping Device: Wall-mounting emergency control station to open circuit breakers; located in red cast-metal box with break-glass operation.
g. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, connected in each phase of incoming circuit and ahead of any disconnecting device.

I. Medium-Voltage Metal-Enclosed Switchgear Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]

b. [**Eaton**]
c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

3. Standard Features:

a. Metal-enclosed, air-interrupter switchgear, [**with**][**without**] fuses, complying with IEEE C37.20.3.

1) Switchgear must be arc resistant, complying with IEEE C37.20.7, [**Type 1**][**Type 2**][**Type 1C**][**Type 2C**].

b. Ratings: Comply with IEEE C37.04; and suitable for application in three-phase, 60 Hz, solidly grounded-neutral system.

1) System Voltage: [**4.16 kV nominal; 4.76 kV maximum**][**7.2 kV nominal; 15 kV maximum**][**13.8 kV nominal; 15 kV maximum**][**34.5 kV nominal; 38 kV maximum**]<**Insert other voltage**>.
2) Design Level of Available-Source Fault Current: Integrated short-circuit rating consistent with value of fault current indicated.
3) Main-Bus Rating: [**600**][**1200**][**2000**] A, continuous.

c. Interrupter Switches: Stationary, gang operated, and suitable for application at maximum short-circuit rating of integrated switchgear assembly.

1) Rating: [**600**][**1200**] A continuous duty and load break.
2) Two-Time Duty-Cycle Fault Closing: [**25 000**][**40 000**] A, asymmetrical.
3) Switch Action: No external arc and no significant quantities of ionized gas released into enclosure.
4) Switch Construction: Supported entirely by interior framework of structure, with copper switchblades and stored-energy operating mechanism.
5) Phase Barriers: Full length of switchblades and fuses for each pole; designed for easy removal; allow visual inspection of switch components if barrier is in place.
6) Protective Shields: Cover live components and terminals.
7) Fuse Mounts: Single-frame mounted and de-energized when switch is open.
8) Mechanical Interlock: Prevent opening of switch compartment door unless switchblades are open, and prevent closing switch if door is open.[**Interlock air-interrupter switch with transformer secondary main circuit breaker, preventing switch from being opened or closed unless secondary main circuit breaker is open.**]
9) Window: Permits viewing switchblade positions when door is closed.

4. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, with

ratings as indicated, connected in each phase of incoming circuit and ahead of any disconnecting device.

J. Medium-Voltage Instruments Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Eaton**]
   c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
   d. [**Siemens Industry, Inc., Energy Management Division**]
   e. [**Square D; Schneider Electric USA**]
   f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Eaton**]
   c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
   d. [**Siemens Industry, Inc., Energy Management Division**]
   e. [**Square D; Schneider Electric USA**]
   f. <**Insert manufacturer's name**>

3. Standard Features:

   a. Instrument Transformers: Comply with IEEE C57.13.

      1) Potential Transformers: Secondary voltage rating of 120 V and NEMA C 12.11 Accuracy Class of 0.3 with burdens of W, X, and Y.
      2) Current Transformers: Burden and Accuracy Class suitable for connected relays, meters, and instruments.

   b. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems.

      1) Inputs from sensors or 5 A current-transformer secondaries, and potential terminals rated to 600 V.
      2) Switch-selectable digital display with the following features:

         a) Phase Currents, Each Phase: Plus or minus 1 percent.
         b) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
         c) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
         d) Three-Phase Real Power: Plus or minus 2 percent.
         e) Three-Phase Reactive Power: Plus or minus 2 percent.
         f) Power Factor: Plus or minus 2 percent.
         g) Frequency: Plus or minus 0.5 percent.
         h) Integrated Demand, with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.
         i) Accumulated energy, in **MWh** **(MJ)**, plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.

3) Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering requirements in accordance with Section 260913 "Electrical Power Monitoring."
4) Mounting: Display and control unit that is flush or semiflush mounted in instrument compartment door.

c. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, 1 percent accuracy, semiflush mounting, with antiparallax 250-degree scale and external zero adjustment.

1) Voltmeters: Cover an expanded scale range of normal voltage plus 10 percent.
2) Voltmeter Selector Switch: Rotary type with off position to provide readings of phase-to-phase[**and phase-to-neutral**] voltages.
3) Ammeters: Cover an expanded scale range of bus rating plus 10 percent.
4) Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in off position.
5) Locate meter and selector switch on circuit-breaker compartment door for indicated feeder circuits only.
6) Watt-Hour Meters: Flush- or semiflush-mounting type, 5 A, 120 V, three phase, three wire; with three elements, [**15-minute**]<**Insert value**> indicating demand register, and provision for testing and adding pulse initiation.
7) Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with [**15-minute**]<**Insert value**> interval.

a) Operation: Counts and records a succession of pulses entering two channels.
b) Housing: Drawout, back-connected case arranged for semiflush mounting.

d. Overcurrent and Ground-Fault Protective Relays: Multifunctional, solid-state microprocessor-based, medium-voltage relay, for operation from specified control power. Comply with IEEE C37.90.

1) Field-Selectable Relay Settings: Required by overcurrent protective device coordination study and arc-flash study.
2) Primary Current-Transformer Ratings: Programmable from 5 to 5000 A.
3) Phase and Ground Protection: Field-selectable curves from IEEE moderately inverse, very inverse, or extremely inverse.
4) Phase Instantaneous Overcurrent Trip Pickup Point: Field selectable as "none" or from 1.0 to 25 times current-transformer primary rating. Include discriminator circuit with "on" and "off" switch, so that when phase instantaneous overcurrent has been programmed to "none," discriminator circuit protects against currents exceeding 11 times current-transformer primary rating when breaker is being closed and must be deactivated after approximately eight cycles.
5) Contacts: Two Form A contacts, field selectable into contact pairs as follows and as required by overcurrent protective device coordination study and arc-flash study:

a) One contact assigned IEEE Device No. 51 phase and IEEE Device No. 51 ground, and other contact assigned IEEE Device No. 50 phase and IEEE Device No. 50 ground.
b) One contact assigned IEEE Device No. 51/50 phase, and other contact assigned 51/50 ground.

6) Alphameric display to show the following parameters with metering accuracy not to exceed 2 percent of full scale:

a) Individual phase currents.
b) Ground current.
c) Cause of trip.

d) Magnitude and phase of current causing trip.
e) Phase or ground indication.
f) Peak current demand for each phase and ground since last reset.
g) Current-transformer primary rating.
h) Programmed phase and ground set points.

7) Communications module to transmit the following data in accordance with Section 260913 "Electrical Power Monitoring."

a) Relay's metered and target data, such as currents, set points, cause of trip, magnitude of trip current, and open-close trip status.
b) Ability to close and open associated breaker with proper access code from remote location over communication network when relay is configured in remote open-close mode.

8) Relay alarm and trip contacts must not change state if power is lost or an undervoltage occurs. These contacts must only cause a trip on detection of an overcurrent or fault condition based on programmed settings. Provide a "protection off" alarm, which must be normally energized when relay is powered and self-diagnostics indicates unit is functional. On loss of power or relay failure, this alarm relay must be de-energized providing a fail-safe protection off alarm.
9) The relay must operate reliably solely from breaker main current transformers during a fault condition, if normally connected auxiliary AC voltage is not available, even after an extended power outage.
10) Mount relay in a drawout case with a two-stage quick-release operation. The removal of relay from case must disconnect trip circuits and short current-transformer secondaries before unit control power is disconnected. When relay is inserted into case, control power connections must be made before trip circuits are activated. Include a self-shorting contact on case terminal block to provide alarm indication and tripping of circuit breaker upon removal of relay from case.

e. <**Insert other relay types**>.
f. Control Power Supply Transformer:

1) Control power transformer supplies 120 V control circuits through secondary disconnect devices.

a) Dry-type transformers, in separate compartments for units larger than 3 kVA, including primary and secondary fuses.
b) Two control power transformers in separate compartments with necessary interlocking relays; each transformer connected to line side of associated main circuit breaker.
c) Secondary windings connected through relay(s) to control bus to affect an automatic transfer scheme.
d) Secondary windings connected through an internal automatic transfer switch to switchgear control power bus.
e) Control Power Fuses: Primary and secondary fuses provide current-limiting and overload protection.

g. Control Power Supply DC Battery System:

1) System Requirements: Battery must have number of cells and ampere-hour capacity based on an initial specific gravity of 1.210 at **77 deg F (25 deg C)** with electrolyte at normal level and minimum ambient temperature of **55 deg F (13 deg C)**. Cycle battery before shipment to guarantee rated capacity on installation. Arrange battery

to operate ungrounded. Battery system capacity must be in accordance with switchgear manufacturer's published instructions to operate circuit breakers for intended duty.

2) Battery: [**Standard VRLA**][**Premium VRLA**][**Vented Ni-Cd**] batteries, with battery disconnect and overcurrent protective device.

3) Rack: Two-step rack with electrical connections between battery cells and between rows of cells; include two flexible connectors with bolted-type terminals for output leads.[**Rate battery rack, cell supports, and anchorage for seismic requirements.**]

   a) Thermometers with specific-gravity correction scales.
   b) Hydrometer syringes.
   c) Set of cell numerals.

4) Charger: Static-type silicon rectifier equipped with automatic regulation and provision for manual and automatic adjustment of charging rate. Unit must automatically maintain output voltage within 0.5 percent from no load to rated charger output current, with AC input-voltage variation of plus or minus 10 percent and input-frequency variation of plus or minus 3 Hz.

   a) DC ammeter.
   b) DC Voltmeter: Maximum error of 5 percent at full-charge voltage, with toggle switch to select between battery and charger voltages.
   c) Ground Indication: Two appropriately labeled lights to indicate circuit ground, connected in series between negative and positive terminals, with midpoint junction connected to ground by N.O. push-button contact.
   d) Capacity: Sufficient to supply steady load, float-charge battery between 2.20 and 2.25 V per cell and equalizing charge at 2.33 V per cell.
   e) Charging-Rate Switch: Manually operated switch to transfer to higher charging rate. Charger operation must be automatic until manually reset.
   f) AC Power Supply: 120 V, 60 Hz, subject to plus or minus 10 percent variation in voltage and plus or minus 3 Hz variation in frequency. Automatic charger operation must resume after loss of AC power supply for any interval.
   g) Charging Regulator: Protect charger from damage due to overload, including short circuit on output terminals. The device must regulate charging current, but must not disconnect charger from either battery or AC supply.
   h) Charger's Audible Noise: Less than 26 dB(A-weighted).

5) Control Wiring: Factory installed, complete with bundling, lacing, and protection.

   a) Conductors across Hinges and for Interconnections between Shipping Units: Flexible conductors for 8 AWG and smaller.
   b) Conductors: Sized in accordance with NFPA 70 for duty required.

K. Liquid-Filled Medium-Voltage Transformer Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Eaton**]
   c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
   d. [**Siemens Industry, Inc., Energy Management Division**]
   e. [**Square D; Schneider Electric USA**]

f. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Eaton**]
   c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
   d. [**Siemens Industry, Inc., Energy Management Division**]
   e. [**Square D; Schneider Electric USA**]
   f. **<Insert manufacturer's name>**

3. Standard Features:

   a. IEEE C57.12.00 [**and UL 1062,**]liquid-filled, two-winding, secondary unit substation transformer.
   b. Primary Incoming Section: Transformer cover-mounted bushings. The bushings must meet thermal, mechanical, and dielectric requirements as specified for transformer section.
   c. Insulating Liquid:

      1) Mineral oil complying with ASTM D3487, Type II, and tested in accordance with ASTM D117.
      2) Less flammable, edible-seed-oil based, and listed and labeled for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic.
      3) Less flammable, dielectric, and listed and labeled for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic.
      4) Less flammable, silicone-based dielectric, and listed and labeled for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must have low toxicity and be nonhazardous.

   d. Insulation Temperature Rise:

      1) 55 deg C, based on an average ambient temperature of **86 deg F (30 deg C)** over 24 hours with a maximum ambient temperature of **104 deg F (40 deg C)**. Insulation system must be rated to continuously allow an additional 12 percent kVA output, at 65 deg C temperature rise, without decreasing rated transformer life.
      2) 65 deg C, based on an average ambient temperature of **86 deg F (30 deg C)** over 24 hours with a maximum ambient temperature of **104 deg F (40 deg C)**.

   e. BIL: [**60**][**75**][**95**][**110**][**150**][**200**] kV.
   f. Full-Capacity Voltage Taps:

      1) Four nominal 2.5 percent taps, two above and two below rated primary voltage; with externally operable tap changer for de-energized use and with position indicator and padlock hasp.
      2) Four nominal 2.5 percent taps below rated primary voltage, with externally operable tap changer for de-energized use and with position indicator and padlock hasp.

   g. Cooling System: [**Class ONAN, liquid cooled**][**Class ONAN/ONAF, liquid cooled, and with forced-air rating**][**Class ONAN/OFAF, liquid cooled, and with provisions for future forced-air rating**]. Cooling systems must include auxiliary cooling equipment, automatic controls, and status indicating lights.

h. Impedance: <**Insert number**> percent.

L. Dry-Type Medium-Voltage Transformer Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Eaton**]
   c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
   d. [**Siemens Industry, Inc., Energy Management Division**]
   e. [**Square D; Schneider Electric USA**]
   f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Eaton**]
   c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
   d. [**Siemens Industry, Inc., Energy Management Division**]
   e. [**Square D; Schneider Electric USA**]
   f. <**Insert manufacturer's name**>

3. Standard Features:

   a. IEEE C57.12.01 and IEEE C57.12.51, dry-type, two-winding, secondary unit substation transformer.
   b. Primary Incoming Section: Transformer cover-mounted bushings. The bushings must meet thermal, mechanical, and dielectric requirements as specified for transformer section.
   c. Style:

      1) [**Indoor, ventilated**][**Outdoor, ventilated**][**Totally enclosed, nonventilated**], cast coil/encapsulated coil, with primary and secondary windings individually cast in epoxy; with insulation system rated at 185 deg C with an 80 deg C average winding temperature rise above a maximum ambient temperature of **104 deg F (40 deg C)**.
      2) [**Indoor, ventilated**][**Outdoor, ventilated**][**Totally enclosed, nonventilated**], vacuum-pressure, impregnated type, and with insulation system rated at 220 deg C with an 80 deg C average winding temperature rise above a maximum ambient temperature of **104 deg F (40 deg C)**.

   d. Cooling System:

      1) Class AA, air cooled, complying with IEEE C57.12.01.
      2) Class AFA, air cooled with forced-air rating, complying with IEEE C57.12.01.

         a) Manual forced-air cooling system controls, including manual switch for fans, fan controller and associated power and control wiring, and power panel with current-limiting fuses.
         b) Include mounting provision for fans.

      3) Class AA/AFA, air cooled with provisions for future forced-air rating, complying with IEEE C57.12.01.

a) Automatic forced-air cooling system controls, including thermal sensors, fans, control wiring, temperature controller with test switch, power panel with current-limiting fuses, indicating lights, alarm, and alarm-silencing relay.
b) Include mounting provision for fans.

4) Class AFA, forced-air cooling, complying with IEEE C57.12.01.

a) Automatic forced-air cooling system controls, including thermal sensors, fans, control wiring, temperature controller with test switch, power panel with current-limiting fuses, indicating lights, alarm, and alarm-silencing relay.
b) Include cooling fans.

e. Insulation Materials: IEEE C57.12.01, rated [**220**]<**Insert number**> deg C.

1) Insulation Temperature Rise: [**80**][**115**][**150**] deg C maximum rise above **104 deg F (40 deg C)**.

f. BIL: [**60**][**75**][**95**][**110**][**150**][**200**] kV.
g. Full-Capacity Voltage Taps:

1) Four nominal 2.5 percent taps, two above and two below rated primary voltage.
2) Four nominal 2.5 percent taps below rated primary voltage.

h. Impedance: <**Insert number**> percent.
i. High-Temperature Alarm: Sensor at transformer with local audible and visual alarm and contacts for remote alarm.

M. Secondary Distribution Terminal Compartment Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

3. Standard Features:

a. Low-Voltage Terminal Compartment: Bus [**bars mounted on standoff insulators**][**duct**

flange for close coupling with busway].

N. Secondary Distribution Switchgear Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Eaton**]
   c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
   d. [**Siemens Industry, Inc., Energy Management Division**]
   e. [**Square D; Schneider Electric USA**]
   f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Eaton**]
   c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
   d. [**Siemens Industry, Inc., Energy Management Division**]
   e. [**Square D; Schneider Electric USA**]
   f. <**Insert manufacturer's name**>

3. Standard Features:

   a. The secondary distribution section must be drawout, [**fused**][**fused where indicated**], low-voltage switchgear, complying with IEEE C37.20.1 and UL 1558.

      1) Section barriers between main and tie circuit-breaker compartments must be extended to rear of section.

   b. Switchgear Structure:

      1) Match and align front and back of switchgear.
      2) Isolate line bus from load bus at each main and tie circuit breaker with bus isolation barriers.
      3) Allow the following circuit-breaker functions to be performed when compartment door is closed:

         a) Operate manual charging system.
         b) Open and close circuit breaker.
         c) Examine and adjust trip unit.
         d) Read breaker nameplate.

      4) Locate instrumentation transformers within breaker cell, and make front accessible and removable.

   c. Switchgear Bus:

      1) Use bus bars to connect compartments and vertical sections. Cable connections are not permitted.
      2) Main Phase Bus: Uniform capacity the entire length of section.

3) Neutral Bus: [**50**][**100**] percent of phase-bus ampacity, except as indicated. Equip bus with pressure-connector terminations for outgoing circuit neutral conductors. Include braces for neutral-bus extensions for busway feeders.
4) Vertical Section Bus Size: Comply with IEEE C37.20.1, including allowance for spare circuit breakers and spaces for future circuit breakers.
5) Phase- and Neutral-Bus Material:

   a) Hard-drawn copper of 98 percent minimum conductivity, with copper feeder circuit-breaker line connections.
   b) Silver- or tin-plated, high-strength, electrical-grade aluminum alloy, with copper or tin-plated aluminum circuit-breaker line connections.
   c) Hard-drawn copper of 98 percent minimum conductivity or tin-plated, high-strength, electrical-grade aluminum alloy.

6) Use silver-plated copper or tin-plated aluminum for connecting circuit-breaker line to aluminum bus.
7) Use copper for connecting circuit-breaker line to copper bus.
8) Contact Surfaces of Buses: Silver plated.
9) Feeder Circuit-Breaker Load Terminals: Silver-plated copper bus extensions equipped with pressure connectors for outgoing circuit conductors.
10) Ground Bus: Hard-drawn copper of 98 percent minimum conductivity, with pressure connector for feeder and branch-circuit ground conductors, minimum size **1/4 by 2 inch (6 by 50 mm)**.
11) Neutral bus equipped with pressure-connector terminations for outgoing circuit neutral conductors. Neutral-bus extensions for busway feeders are braced.
12) Neutral Disconnect Link: Bolted, uninsulated, **1/4 by 2 inch (6 by 50 mm)** copper bus, arranged to connect neutral bus to ground bus.
13) Provide for future extensions from either end of main phase, neutral, and ground bus by means of predrilled bolt-holes and connecting links.
14) Bus-Bar Insulation: Individual bus bars wrapped with factory-applied, flame-retardant tape or spray-applied, flame-retardant insulation.
15) Sprayed Insulation Thickness: **3 mils (0.08 mm)**, minimum.
16) Bolted Bus Joints: Insulate with secure joint covers that can easily be removed and reinstalled.

d. Circuit-Breaker Compartment:

1) Drawout Features: Circuit-breaker mounting assembly equipped with a racking mechanism to position circuit breaker and hold it rigidly in "connected," "test," and "disconnected" positions. Include the following features:

   a) Interlocks: Prevent movement of circuit breaker to or from "connected" position when it is closed, and prevent closure of circuit breaker unless it is in "connected," "test," or "disconnected" position.
   b) Primary Disconnect: Mount on stationary part of compartment. The disconnect must consist of a set of contacts extending to rear through an insulating support barrier, and of corresponding moving finger contacts on power circuit-breaker studs, which engage in only "connected" position. The assembly must provide multiple silver-to-silver full floating, spring-loaded, high-pressure-point contacts with uniform pressure on each finger. Load studs must connect to bus extensions that terminate in solderless terminals in rear cable compartment.
   c) Secondary Disconnect: Floating terminals mounted on stationary part of compartment that engage mating contacts at front of breaker. Disconnecting devices must be gold plated, and engagement must be maintained in

"connected" and "test" positions.

e. Circuit-Breaker Positioning: Permit racking of an open circuit breaker to or from "connected," "test," and "disconnected" positions only when compartment door is closed unless live parts are covered by a full dead-front shield. Permit manual withdrawal of an open circuit breaker to a position for removal from structure. When compartment door is open, status for connection devices for different positions includes the following:

1) Test Position: Primary disconnects disengaged, and secondary disconnect devices and ground contact engaged.
2) Disconnected Position: Primary and secondary devices and ground contact disengaged.

f. Circuit Breakers:

1) Comply with IEEE C37.13 and UL 1066.
2) Ratings: Continuous, interrupting, and short-time current ratings for each circuit breaker must match voltage and frequency ratings for switchgear.
3) Operating Mechanism: Mechanically and electrically trip-free, stored-energy operating mechanism with the following features:

a) Normal Closing Speed: Independent of both control and operator.
b) Slow Closing Speed: Optional with operator for inspection and adjustment.
c) Stored-Energy Mechanism: [**Manually charged**][**Electrically charged**][**Electrically charged, and operator's choice of manual charging**].
d) Operating Handle: One for each circuit breaker capable of manual operation.
e) Electric Close Button: One for each electrically operated circuit breaker.
f) Operation counter.

4) Trip Devices: Solid-state, overcurrent trip-device system consisting of one or two current transformers or sensors per phase, a release mechanism, and the following features:

a) Functions: Long-time-delay, short-time-delay, and instantaneous-trip functions, independent of each other in both action and adjustment.
b) Temperature compensation that ensures accuracy and calibration stability from **plus 23 to 104 deg F (minus 5 to plus 40 deg C)**.
c) Field-adjustable, time-current characteristics.
d) Current Adjustability: Dial settings and rating plugs on trip units, or sensors on circuit breakers, or a combination of these methods.
e) Three bands, minimum, for long-time- and short-time-delay functions; marked "minimum," "intermediate," and "maximum."

5) Pickup Points:

a) Five minimum, for long-time- and short-time-trip functions. Equip short-time-trip function for switchable I-squared-t operation.
b) Five minimum, for instantaneous-trip functions.

6) Ground-fault protection with at least three short-time-delay settings and three trip-time-delay bands; adjustable current pickup.

a) Arrange to provide protection for three-wire circuit or system.
b) Arrange to provide protection for four-wire circuit or system.
c) Arrange to provide protection for four-wire, double-ended substation.

7) Trip Indication: Labeled, battery-powered lights or mechanical targets on trip device to indicate type of fault.
8) Auxiliary Contacts:

a) Contacts and switches required for normal circuit-breaker operation, sufficient for interlocking and remote indication of circuit-breaker position.
b) Spare auxiliary switches, at least two, unless other quantity is indicated. Each switch must consist of two Type A and two Type B contacts wired through secondary disconnect devices to a terminal block in stationary circuit-breaker compartment.

9) Arc Chutes: Readily removable from associated circuit breaker when it is in "disconnected" position, and arranged to permit inspection of contacts without removing circuit breaker from switchgear.
10) Padlocking Provisions: For installing at least three padlocks on each circuit breaker to secure its enclosure and prevent movement of drawout mechanism.

g. Mechanical Interlocking of Circuit Breakers: Uses a mechanical tripping lever or equivalent design and electrical interlocks.
h. Key Interlocks: Arranged to prevent opening or closing interlocked circuit breakers, except in a specified sequence. Include mountings and hardware for future installation of key interlocks.
i. Undervoltage Trip Devices:

1) Instantaneous, with adjustable pickup voltage.
2) Adjustable time-delay and pickup voltage.

j. Shunt-trip devices.
k. Fused Circuit Breakers: Circuit-breaker and fuse combinations complying with requirements for circuit breakers and trip devices.

1) Fuses: NEMA FU 1, Class L current limiting, sized to coordinate with and protect associated circuit breaker.
2) Circuit Breakers with Frame Size [**1600**]<**Insert number**> A and Smaller: Mount fuses on line side of associated circuit breaker[**, on a common drawout carriage**], arranged so fuses are accessible only when circuit breaker is in "disconnected" position.
3) Circuit Breakers with Frame Sizes More than [**1600**]<**Insert number**> A: Fuses and circuit breakers [**may**][**must**] be installed in separate compartments on separate drawout mountings. Interlock fuse drawout element with associated power circuit breaker to prevent drawing out fuse element unless circuit breaker is in "open" position.
4) Open-Fuse Trip Device: Provide for a positive means of tripping and holding circuit breaker in "open" position when a fuse opens. Indicate open-fuse status [**at front of circuit breaker**][**or**][**fuse drawout element**].

l. Indicating Lights: To indicate circuit breaker is open or closed, for main and bus tie circuit breakers interlocked either with each other or with external devices.

O. Secondary Distribution Network Protectors Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

3. Standard Features:

a. The secondary distribution section must be composed of drawout, fused, low-voltage network protectors, complying with IEEE C57.12.44 and IEEE C37.20.1. The switch must comply with UL 1066.

1) Rated for continuous service in an ambient temperature of up to **104 deg F (40 deg C)**, applied to three-phase, four-wire, solidly grounded wye secondary networks. Comply with IEEE C57.12.44.
2) Dead-front, drawout design with externally mounted fuses, using hand-cranked rail system. Include mechanical interlocks to prevent racking in and racking out when protector is closed.
3) Locate relay and control panel on a separate drawout module.
4) Protector Operator: [**Spring-close**][**and**][**or**][**stored-energy**] mechanism, rated to close on a [**25 000**][**40 000**] A RMS symmetrical load.
5) Control Voltage: 125 V.
6) Program relay with factory default values. Provide one hand-held pendant to field adjust these values using relay calibration procedures. Include an anti-pumping program to lock protector open under abnormal conditions.
7) Include current-limiting fuses on network side of protector for protection against switchboard bus faults.

b. Coordinate and comply with requirements of low-voltage switchgear supplied by network.
c. Controls: Microprocessor-based, three-phase network relay, with features and functions as follows:

1) The protector control must use a positive and negative sequence-based algorithm for current and voltage.
2) Close protector if positive sequence power flows into network. Adjustable closing range must be from 0.5 to 3.5 V in phase difference between network and transformer voltages.
3) Trip protector if there is a net, three-phase, reverse power flow through protector. Trip protectors must be adjustable from 0.05 to 5 percent of continuous-current rating of current transformers within protector.
4) Trip protector if there is a flow of reverse magnetizing current to its associated transformer.
5) Relay parameters and watt or watt-var trip values must be field adjustable.
6) Protector must not open under any fault on network side of protector.

7) Include auxiliary contacts and control wiring for use with remote pilot devices that provide remote trip and lockout functions in low-voltage switchgear. Include [**two**]<**Insert number**> spare auxiliary contacts and an equal number of N.O. and N.C. types.

d. Network Communications: Data and digital data-transmission interface must be compatible with system specified in Section 260913 "Electrical Power Monitoring." Communicate the following network relay parameters:

1) Current in each phase.
2) Phase-to-phase and phase-to-neutral voltages.
3) Three-phase watts, VARs, and VA.
4) Frequency.
5) Power factor.
6) Network relay set points.

e. Enclosure:

1) With top-mounted transition to connect to low-voltage power network.
2) Network Switchgear-Mounted Disconnect Switch:

a) Supply each network-protector circuit with a switchgear-mounted fuse truck, with Class L fuses rated for 200 kA interrupting capacity and key interlocked with each associated protector.
b) Supply each network-protector circuit with a switchgear-mounted main circuit breaker rated for fault current that can be delivered by network transformers, less one. Use drawout type to provide a means of isolating load side of each protector from network bus.

P. Secondary Distribution Low-Voltage Instrument Section :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

3. Standard Features:

a. Instrument Transformers: Comply with IEEE C57.13.

1) Potential Transformers: Secondary voltage rating of 120 V and NEMA C 12.11 Accuracy Class of 0.3 with burdens of W, X, and Y.
2) Current Transformers: Burden and Accuracy Class suitable for connected relays, meters, and instruments.

b. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems.

1) Inputs from sensors or 5 A current-transformer secondaries, and potential terminals rated to 600 V.
2) Switch-selectable digital display with the following features:

a) Phase Currents, Each Phase: Plus or minus 1 percent.
b) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
c) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
d) Three-Phase Real Power: Plus or minus 2 percent.
e) Three-Phase Reactive Power: Plus or minus 2 percent.
f) Power Factor: Plus or minus 2 percent.
g) Frequency: Plus or minus 0.5 percent.
h) Integrated Demand, with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.
i) Accumulated energy, in **MWh (MJ)**, plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.

3) Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering requirements in accordance with Section 260913 "Electrical Power Monitoring."
4) Mounting: Display and control unit that is flush or semiflush mounted in instrument compartment door.

c. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, 1 percent accuracy, semiflush mounting, with antiparallax 250-degree scale and external zero adjustment.

1) Voltmeters: Cover an expanded scale range of normal voltage plus 10 percent.
2) Voltmeter Selector Switch: Rotary type with "off" position to provide readings of phase-to-phase[**and phase-to-neutral**] voltages.
3) Ammeters: Cover an expanded scale range of bus rating plus 10 percent.
4) Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in "off" position.
5) Locate meter and selector switch on circuit-breaker compartment door for indicated feeder circuits only.
6) Watt-Hour Meters: Flush- or semiflush-mounting type, 5 A, 120 V, three phase, three wire; with three elements, 15-minute indicating demand register, and provision for testing and adding pulse initiation.
7) Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with 15-minute interval.

a) Operation: Counts and records a succession of pulses entering two channels.
b) Housing: Drawout, back-connected case arranged for semiflush mounting.

d. Relays: Comply with IEEE C37.90, types and settings as indicated; with test blocks and plugs.
e. Surge Suppression:

1) Factory installed as an integral part of low-voltage switchgear, complying with UL 1449 SPD, Type 1, with the following features and accessories:

a) Integral disconnect switch.
b) Internal thermal protection that disconnects SPD before damaging internal suppressor components.
c) Indicator light display for protection status.
d) Form-C contacts rated at 5 A 250 V(ac), one N.O. and one N.C., for remote monitoring of protection status.[**Contacts must reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.**]
e) Surge counter.

2) Field-mounted surge suppressors complying with Section 264313 "Surge Protective Devices for Low-Voltage Electrical Power Circuits." Include the following features and accessories:

a) Integral disconnect switch.
b) Internal thermal protection that disconnects SPD before damaging internal suppressor components.
c) Indicator light display for protection status.
d) Form-C contacts rated at 5 A 250 V(ac), one N.O. and one N.C., for remote monitoring of protection status.[**Contacts must reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.**]
e) Surge counter.

f. Control Power Supply:

1) From medium-voltage instruments section.
2) Control power transformer supplying 120 V control circuits through secondary disconnect devices.

g. Control Wiring: Factory installed, complete with bundling, lacing, and protection; and complying with the following:

1) Flexible conductors for 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
2) Conductors sized in accordance with NFPA 70 for duty required.

2.3 MAINTENANCE MATERIAL ITEMS

A. Spare Parts: Furnish to Owner spare parts, for repairing secondary unit substation, that are packaged with protective covering for storage on-site and identified with labels describing contents.[**Include the following:**]

1. Spare Fuses: [**Six**]<**Insert number**> of each type and rating of fuse and fusible device used, except for medium-voltage fuses[**and fuses associated with network protector**]. Include spares for the following:

a. Fuses: Sizes recommended by secondary unit substation manufacturer, considering fan cooling, temperature-rise specification, and cycle loading.

1) Current-Limiting Fuses: Full-range, fast-replaceable, current-limiting type that will

operate without explosive noise or expulsion of gas, vapor, or foreign matter from tube.

2) Expulsion Fuses: Furnished in disconnect-type mountings and renewable with replacement fuse units. Gases emitted on interruption are controlled and silenced by chambers designed for that purpose.
3) Indicator integral with each fuse to show when it has blown.
4) Spares: Include three fuses in use and three spare fuses in storage clips in each switch.

2. Spare Indicating Lights: Six of each type installed.
3. [**One**]<**Insert number**> set(s) of spare mounting gaskets for bushings, handholes, and gasket between relief cover and flange of pressure-relief device.

B. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to secondary unit substation, that are packaged with protective covering for storage on-site and identified with labels describing contents.[**Include the following:**]

1. Control-power battery hoist.
2. Switchgear Circuit-Breaker Test Cabinet:

a. Separately mounted.
b. Containing push buttons for circuit-breaker closing and tripping, control relay, fuses, and secondary coupler with cable approximately **108 inch (2740 mm)** long.
c. Include secondary devices for operating circuit breaker if removed from switchgear and moved near test cabinet.
d. Include provision for storage of test and maintenance accessories in cabinet.

3. Switchgear Maintenance Tools: Furnish tools and miscellaneous items required for switchgear test, inspection, maintenance, and operation.

a. Fuse-handling tool.
b. Relay and meter test plugs.
c. Extension rails, lifting device, transport or dockable dolly or mobile lift, and all other items necessary to remove circuit breaker from housing and transport to remote location.
d. Racking handle to move circuit breaker manually between "connected" and "disconnected" positions, and a secondary test coupler to permit testing of circuit breaker without removal from switchgear.

4. Transformer Accessories Set: Grounding pads, lifting lugs, and provisions for jacking under base. Transformers must have a steel base and frame allowing use of pipe rollers in any direction, and an insulated, low-voltage, neutral bushing with removable ground strap.[**Include the following additional accessories:**]

a. Liquid-level gauge.
b. Pressure-vacuum gauge.
c. Liquid temperature indicator.
d. Drain and filter valves.
e. Pressure-relief device.

5. Low-Voltage Instruments Maintenance Tools: Furnish tools and miscellaneous items required for circuit-breaker and switchgear test, inspection, maintenance, and operation.

a. Racking handle to manually move circuit breaker between "connected" and "disconnected" positions.
b. Portable test set for testing all functions of circuit-breaker, solid-state trip devices without

removal from switchgear.

c. Relay and meter test plugs suitable for testing switchgear meters and switchgear class relays.

d. Circuit-Breaker Removal Apparatus:

1) Portable, floor-supported, roller-base, elevating carriage arranged for moving circuit breakers in and out of compartments.

2) Overhead-circuit-breaker lifting device, track mounted at top front of switchgear and complete with hoist and lifting yokes matching each size of drawout circuit breaker installed.

e. Spare-Fuse Cabinet: Identified and compartmented steel box or cabinet with lockable door.

f. Storage for Manual: Include a rack or holder, near operating instructions, for a copy of maintenance manual.

C. Consumable Items:

1. After completion of field quality control, startup, commissioning, adjusting, and closeout activities, replace air filters and refill fuel tanks and fluid reservoirs.

2. Furnish to Owner extra consumable items for storage on-site, identified with labels describing contents.[**Include the following:**]

a. Touchup Paint: [**Three**]<**Insert number**> half-pint containers of paint matching enclosure's exterior finish.

b. Primary Switch Contact Lubricant: [**One**]<**Insert number**> container(s).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and space conditions for compliance with requirements for secondary unit substations and other conditions affecting performance of the Work.

B. Examine roughing-in of conduits and grounding systems to verify the following:

1. Wiring entries comply with layout requirements.

2. Entries are within conduit-entry tolerances specified by manufacturer, and no feeders will have to cross section barriers to reach load or line lugs.

C. Examine walls, floors, roofs, and concrete bases for suitable conditions for secondary unit substation installation.

D. Verify that ground connections are in place and that requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance must be 5 Ω at secondary unit substation location.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF SECONDARY UNIT SUBSTATIONS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Commissioning of Electrical Systems: NECA NEIS 90.
5. Hot Work: NFPA 51B.
6. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
7. Communications Work: BICSI N1.
8. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
9. Work in Confined Spaces: NFPA 350.
10. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
11. Evaluation of Unlabeled Electrical Equipment: NFPA 791.
12. Installation of Switchboards: NECA NEIS 400.
13. Installation of Liquid-Filled Transformers: NECA NEIS 410.
14. Installation of Medium-Voltage Metal-Clad Switchgear: NECA NEIS 430.
15. Installation and Maintenance of AC Outdoor High-Voltage Circuit Breakers: NEMA SG 11.
16. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Maintain minimum clearances and workspace at equipment in accordance with manufacturer's instructions and NFPA 70.

D. Interfaces with Other Work:

1. Identification: Provide signs and labels for secondary unit substation and associated electrical equipment.

    a. Identify field-installed conductors, interconnecting wiring, and components.
    b. Label each enclosure with engraved metal or laminated-plastic nameplate.
    c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.
    d. Install number of signs required to be readable from each accessible side, but space signs a maximum of **30 ft (9 m)** apart.
    e. Operating Instructions: Place printed operating instructions for secondary unit substations, including key interlocking, control sequences, elementary single-line diagram, and emergency procedures with maintenance materials.

2. Install secondary unit substations on concrete equipment base(s).
3. Provide vibration isolation and seismic control devices.
4. Grounding and Bonding:

    a. At Interior Locations: For grounding to grounding electrodes, use bare copper cable not smaller than 4/0 AWG. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors. Keep leads as short as practicable with no kinks or sharp bends. Make joints in grounding conductors and loops by exothermic weld or compression connector.
    b. At Exterior Locations:

        1) For counterpoise, use tinned bare copper cable not smaller than 4/0 AWG, buried not less than **30 inch (765 mm)** below grade interconnecting grounding electrodes. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors, sized as indicated. Keep lead lengths as short as practicable with no kinks or sharp bends.
        2) Fence and equipment connections must not be smaller than 4 AWG. Ground fence

at each gate post and corner post and at intervals not exceeding **10 ft (3 m)**. Bond each gate section to fence post using **1/8 by 1 inch (3 by 25 mm)** [**tinned**]flexible braided copper strap and clamps.

3) Make joints in grounding conductors and loops by exothermic weld or compression connector.

5. Connect feeder, branch-circuit, and instrumentation wiring.

3.3 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Field tests must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

C. General Field Testing Requirements:

1. Comply with provisions of NFPA 70B, "Testing and Test Methods" Chapter.
2. Perform each visual and mechanical inspection and electrical test. Certify compliance with test parameters.
3. After installing secondary unit substation but before primary is energized, verify that grounding system at substation is tested at specified value or less.
4. After installing secondary unit substation and after electrical circuitry has been energized, test for compliance with requirements.
5. Visual and Mechanical Inspection:

a. Verify equipment nameplate data complies with Contract Documents.
b. Inspect bolted electrical connections for high resistance using one of the following two methods:

1) Use a low-resistance ohmmeter to compare bolted-connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.

6. Remove and replace malfunctioning units and retest.
7. Prepare test and inspection reports. Record as-left set points of all adjustable devices.

D. Switchgear Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, grounding, and required area clearances.
c. Verify unit is clean and shipping bracing, loose parts, and documentation shipped inside cubicles have been removed.
d. Verify that fuse and circuit-breaker sizes and types correspond to Drawings and coordination study as well as to address of circuit breaker that is used to identify it in microprocessor-communication software.
e. Verify that current and voltage-transformer ratios correspond to Drawings.
f. Confirm correct operation and sequencing of electrical and mechanical interlock systems.

1) Attempt closure on locked-open devices. Attempt to open locked-closed devices.
2) Make key exchange with devices operated in off-normal positions.

g. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
h. Inspect insulators for evidence of physical damage or contaminated surfaces.
i. Verify correct barrier and shutter installation and operation.
j. Exercise all active components.
k. Inspect mechanical indicating devices for correct operation.
l. Verify that filters are in place and vents are clear.
m. Inspect control power transformers as follows:

1) Inspect for physical damage, cracked insulation, broken leads, connection tightness, defective wiring, and overall general condition.
2) Verify that primary- and secondary-fuse or circuit-breaker ratings match Drawings and comply with manufacturer's published instructions.
3) Verify correct functioning of drawout disconnecting and grounding contacts and interlocks.

2. Electrical Tests:

a. Perform DC voltage insulation-resistance tests on each bus section, phase-to-phase and phase-to-ground, for one minute. If temperature of bus is other than plus or minus 20 deg C, adjust resulting resistance as provided in NETA ATS, Table 100.11.

1) Insulation-resistance values of bus insulation must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than manufacturer's published instructions or NETA ATS, Table 100.1.
2) Do not proceed to dielectric-withstand-voltage tests until insulation-resistance levels are raised above minimum values.

b. Perform a dielectric-withstand-voltage test on each bus section, each phase-to-ground with phases not under test grounded, in accordance with manufacturer's published data. If manufacturer has no recommendation for this test, conduct it in accordance with NETA ATS, Table 100.2. Apply test voltage for one minute.

1) If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric-withstand-voltage test, test specimen is considered to have passed test.

c. Perform insulation-resistance tests on control wiring with respect to ground. Applied potential must be 500 V(dc) for 300 V rated cable and 1000 V(dc) for 600 V rated cable. Test duration must be one minute. For units with solid-state components or control devices that cannot tolerate applied voltage, follow manufacturer's published instructions.

1) Minimum insulation-resistance values of control wiring must not be less than 2 MΩ.

d. Voltage Transformers:

1) Perform secondary wiring integrity test. Verify correct potential at all devices.
2) Verify secondary voltages by energizing primary winding with system voltage.

e. Perform current-injection tests on entire current circuit in each section of switchgear.

1) Perform current tests by secondary injection with magnitudes such that a minimum current of 1.0 A flows in secondary circuit. Verify correct magnitude of current at each device in circuit.
2) Perform current tests by primary injection with magnitudes such that a minimum of 1.0 A flows in secondary circuit. Verify correct magnitude of current at each device in circuit.

f. Verify operation of space heaters.
g. Perform phasing checks on double-ended or dual-source switchgear to ensure correct bus phasing from each source.

E. Medium-Voltage Surge Arrester Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, grounding, and clearances.
c. Verify arresters are clean.
d. Verify that ground lead on each device is individually attached to a ground bus or ground electrode.
e. Verify that stroke counter is correctly mounted and electrically connected if applicable. Record stroke counter reading.

2. Electrical Tests:

a. Perform an insulation-resistance test on each arrester, phase terminal-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Replace units that fail to meet recommended minimum insulation resistance listed in table.
b. Perform a watts-loss test. Evaluate watts-loss values by comparison with similar units and test equipment manufacturer's published data.

F. Medium-Voltage Vacuum Circuit Breaker Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, grounding, and required clearances.
c. Verify that maintenance devices such as special tools and gauges specified by manufacturer are available for servicing and operating breaker.
d. Verify unit is clean.
e. Perform mechanical operation tests on operating mechanism in accordance with manufacturer's published data.
f. Measure critical distances on operating mechanism in accordance with manufacturer's published instructions. Critical distances of operating mechanism must be in accordance with manufacturer's published data.

g. Verify cell fit and element alignment.
h. Verify racking mechanism operation.
i. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
j. Perform time-travel analysis. Travel and velocity values must be in accordance with manufacturer's published data.
k. Record as-found and as-left operation counter reading. Operation counter must advance one digit per close-open cycle.

2. Electrical Tests:

a. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to ground with switch closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than this table or manufacturer's published instructions. Dielectric-withstand-voltage tests must not proceed until insulation-resistance levels are raised above minimum values.
b. Perform a contact/pole-resistance test. Compare bolted-connection resistance values to values of similar connections. Investigate values which deviate from those of similar bolted connections by more than 50 percent of lowest value. Microhm or DC millivolt drop values must not exceed high levels of normal range as indicated in manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
c. Perform minimum pickup voltage tests on trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of trip and close coils must comply with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.20.
d. Verify correct operation of any auxiliary features, such as electrical close and trip operation, trip-free operation, and anti-pump function. Auxiliary features must operate in accordance with manufacturer' published data.
e. Trip circuit breaker by operation of each protective device. Reset all trip logs and indicators.
f. Perform power-factor or dissipation-factor tests on each pole with breaker open and each phase with breaker closed. Power-factor or dissipation-factor values must meet manufacturer's published data.
g. Perform vacuum bottle integrity (dielectric-withstand-voltage) test across each vacuum bottle, with contacts in "open" position in accordance with manufacturer's published data. If no evidence of distress or insulation failure is observed by end of total time of voltage application during vacuum bottle integrity test, test specimen is considered to have passed test.
h. Perform a dielectric-withstand-voltage test in accordance with manufacturer's published data. If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric-withstand-voltage test, test specimen is considered to have passed test.
i. Verify operation of heaters.

G. Instrument Transformer Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Verify correct connection of transformers with system requirements.
c. Verify that adequate clearances exist between primary and secondary circuit wiring.

d. Verify unit is clean.
e. Verify that required grounding and shorting connections provide contact.
f. Verify correct operation of transformer withdrawal mechanism and grounding operation.
g. Verify correct primary- and secondary-fuse sizes for voltage transformers.
h. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.

2. Electrical Tests of Current Transformers:

a. Perform insulation-resistance test of each current transformer and its secondary wiring with respect to ground at 1000 V(dc) for one minute. For units with solid-state components that cannot tolerate applied voltage, comply with manufacturer's published instructions. Insulation-resistance values of instrument transformers must not be less than values shown in NETA ATS, Table 100.5.
b. Perform a polarity test of each current transformer in accordance with IEEE C57.13.1. Polarity results must agree with transformer markings.
c. Perform a ratio-verification test using voltage or current method in accordance with IEEE C57.13.1. Ratio errors must comply with IEEE C57.13.
d. Perform an excitation test on transformers used for relaying applications in accordance with IEEE C57.13.1. Excitation results must match curve supplied by manufacturer or must comply with IEEE C57.13.1.
e. Measure current circuit burdens at transformer terminals in accordance with IEEE C57.13.1. The measured burdens must match instrument transformer Accuracy Class rating.
f. Perform insulation-resistance tests on primary winding with secondary grounded. Test voltages must comply with NETA ATS, Table 100.5. The insulation-resistance value must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5.
g. Perform dielectric-withstand-voltage tests on primary winding with secondary grounded. Test voltages must comply with NETA ATS, Table 100.9. If no evidence of distress or insulation failure is observed by end of total time of voltage application, primary winding is considered to have passed test.
h. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data. Power-factor or dissipation-factor values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with test equipment manufacturer's published data.
i. Verify that current-transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3.

3. Electrical Tests of Voltage and Potential Transformers:

a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply test voltage for one minute in accordance with NETA ATS, Table 100.5. For units with solid-state components that cannot tolerate applied voltage, follow manufacturer's published instructions. Insulation-resistance values of instrument transformers must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5.
b. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Test voltages must be applied for one minute in accordance with NETA ATS, Table 100.5. Insulation-resistance values of transformers must not be less than values shown in NETA ATS, Table 100.5.
c. Perform a polarity test on each transformer to verify polarity marks or H(1)-X(1) relationship. Polarity results must agree with transformer markings.
d. Perform a turns-ratio test on all tap positions. Ratio errors must not exceed tolerances specified in IEEE C57.13.

e. Measure voltage circuit burdens at transformer terminals. Measured burdens must be compared to instrument transformer ratings. The measured burdens must match instrument transformer Accuracy Class rating.
f. Perform a dielectric-withstand-voltage test on primary windings with secondary windings connected to ground. The dielectric voltage must comply with NETA ATS, Table 100.9. The test voltage must be applied for one minute. If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric-withstand-voltage test, primary windings are considered to have passed test.
g. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data. Power-factor or dissipation-factor values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with test equipment manufacturer's published data.
h. Verify that voltage-transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3.

H. Microprocessor-Based Protective Relay Field Tests:

1. Visual and Mechanical Inspection:

a. Record model number, style number, serial number, firmware revision, software revision, and rated control voltage.
b. Verify operation of light-emitting diodes, display, and targets.
c. Record passwords for each access level.
d. Clean front panel and remove foreign material from case.
e. Check tightness of connections.
f. Verify that frame is grounded in accordance with manufacturer's published instructions.
g. Set relay in accordance with results in Section 260573 "Power System Studies."
h. Download settings from relay. Print a copy of settings for report and compare settings to those specified in coordination study.

2. Electrical Tests:

a. Perform insulation-resistance tests from each circuit to grounded frame in accordance with manufacturer's published data.
b. Apply voltage or current to analog inputs, and verify correct registration of relay meter functions.
c. Functional Operation: Check functional operation of each element used in protection scheme as follows:

1) Timing Relay (IEEE C37.2 Device No. 2):

a) Determine time delay.
b) Verify operation of instantaneous contacts.

2) Volts Per Hertz Relay (IEEE C37.2 Device No. 24):

a) Determine pickup frequency at rated voltage.
b) Determine pickup frequency at a second voltage level.
c) Determine time delay.

3) Sync Check Relay (IEEE C37.2 Device No. 25):

a) Determine closing zone at rated voltage.
b) Determine maximum voltage differential that permits closing at zero degrees.
c) Determine live line, live bus, dead line, and dead bus set points.
d) Determine time delay.

e) Verify dead bus/live line, dead line/live bus, and dead bus/dead line control functions.

4) Undervoltage Relay (IEEE C37.2 Device No. 27):

a) Determine dropout voltage.
b) Determine time delay.
c) Determine time delay at a second point on timing curve for inverse time relays.

5) Directional Power Relay (IEEE C37.2 Device No. 32):

a) Determine minimum pickup at maximum torque angle.
b) Determine closing zone.
c) Determine maximum torque angle.
d) Determine time delay.
e) Verify time delay at a second point on timing curve for inverse time relays.
f) Plot operating characteristic.

6) Loss of Excitation/Field Relay (IEEE C37.2 Device No. 40):

a) Determine maximum reach.
b) Determine maximum torque angle.
c) Determine offset.
d) Plot impedance circle.

7) Phase Balance Current Relay (IEEE C37.2 Device No. 46):

a) Determine pickup of each unit.
b) Determine percent slope.
c) Determine time delay.

8) Negative Sequence Current Relay (IEEE C37.2 Device No. 46):

a) Determine negative sequence alarm level.
b) Determine negative sequence minimum trip level.
c) Determine maximum time delay.
d) Verify two points on I-two-squared-t curve.

9) Phase Sequence or Phase Balance Voltage Relay (IEEE C37.2 Device No. 47):

a) Determine positive sequence voltage to close N.O. contact.
b) Determine positive sequence voltage to open N.C. contact (undervoltage trip).
c) Verify negative sequence trip.
d) Determine time delay to close N.O. contact with sudden application of 120 percent of pickup.
e) Determine time delay to close N.C. contact upon removal of voltage when previously set to rated system voltage.

10) Thermal Replica Relay (IEEE C37.2 Device No. 49):

a) Determine time delay at 300 percent of setting.
b) Determine a second point on operating curve.
c) Determine pickup.

11) RTD Biased Thermal Overload Relay (IEEE C37.2 Device No. 49RTD):

a) Determine RTD resistance trip setting.
b) Determine RTD resistance reset setting.

12) Instantaneous Overcurrent Relay (IEEE C37.2 Device No. 50):

a) Determine pickup.
b) Determine dropout.
c) Determine time delay.

13) Time Overcurrent Relay (IEEE C37.2 Device No. 51):

a) Determine minimum pickup.
b) Determine time delay at two points on time current curve.

14) Power-Factor Relay (IEEE C37.2 Device No. 55):

a) Determine tripping angle.
b) Determine time delay.

15) Overvoltage Relay (IEEE C37.2 Device No. 59):

a) Determine overvoltage pickup.
b) Determine time delay to close contact with sudden application of 120 percent of pickup.

16) Voltage Balance Relay (IEEE C37.2 Device No. 60):

a) Determine voltage difference to close contacts with one source at rated voltage.
b) Plot operating curve for relay.

17) Sudden Pressure Relay (IEEE C37.2 Device No. 63):

a) Determine rate-of-rise or pickup level of suddenly applied pressure in accordance with manufacturer's published data.
b) Verify operation of auxiliary relay (IEEE C37.2 Device No. 63X) seal-in circuit.
c) Verify trip circuit to remote operating device.

18) Ground Detector Relay (IEEE C37.2 Device No. 64):

a) Determine maximum impedance to ground causing relay pickup.

19) Directional Overcurrent Relay (IEEE C37.2 Device No. 67):

a) Determine directional unit minimum pickup at maximum torque angle.
b) Determine closing zone.
c) Determine maximum torque angle.
d) Plot operating characteristics.
e) Determine overcurrent unit pickup.
f) Determine overcurrent unit time delay at two points on time current curve.

20) Reclosing Relay (IEEE C37.2 Device No. 79):

a) Determine time delay for each programmed reclosing interval.
b) Verify lockout for unsuccessful reclosing.
c) Determine reset time.
d) Determine close pulse duration.
e) Verify instantaneous overcurrent lockout.

21) Frequency Relay (IEEE C37.2 Device No. 81):

a) Verify frequency set points.
b) Determine time delay.
c) Determine undervoltage cutoff.

22) Pilot Wire Monitor (IEEE C37.2 Device No. 85):

a) Determine overcurrent pickup.
b) Determine undercurrent pickup.
c) Determine pilot wire ground pickup level.

23) Differential Protective Relay (IEEE C37.2 Device No. 87):

a) Determine operating unit pickup.
b) Determine operation of each restraint unit.
c) Determine slope.
d) Determine harmonic restraint.
e) Determine instantaneous pickup.
f) Plot operating characteristics for each restraint.

d. Control Verification:

1) Functional Tests:

a) Check operation of all active digital inputs.
b) Check output contacts or SCRs, preferably by operating controlled device, such as circuit breaker, auxiliary relay, or alarm.
c) Check internal logic functions used in protection scheme.
d) For pilot schemes, perform a loop-back test to check receive and transmit communication circuits.
e) For pilot schemes, perform satellite synchronized end-to-end tests.
f) For pilot schemes with direct transfer trip (DTT), perform transmit and received DTT at each terminal.
g) Upon completion of testing, reset min/max recorders, communications statistics, fault counters, sequence-of-events recorder, and event records.

2) In-Service Monitoring: After equipment is initially energized, measure magnitude and phase angle of inputs and verify expected values.

I. DC System VRLA Batteries Field Tests:

1. Visual and Mechanical Inspection:

a. Verify that batteries are adequately located.
b. Verify that battery area ventilation system is operable.
c. Verify existence of suitable eyewash equipment.
d. Verify equipment nameplate data complies with Contract Documents.
e. Inspect physical and mechanical condition.

f. Verify adequacy of battery support racks, mounting, anchorage, alignment, grounding, and clearances.
g. Verify units are clean.
h. Inspect spill containment installation.
i. Verify application of an oxide inhibitor on battery terminal connections.

2. Electrical Tests:

a. Measure charger float and equalizing voltage levels. Adjust voltage in accordance with battery manufacturer's published instructions.
b. Verify charger functions and that alarms comply with system manufacturer's published instructions.
c. Measure negative post temperature. Negative post temperature must comply with manufacturer's published data or IEEE 1188.
d. Measure charger float and equalizing voltage levels. Charger float and equalizing voltage levels must be in accordance with battery manufacturer's published data.
e. Measure each monoblock/cell voltage and total battery voltage with charger energized and in float mode of operation. Monoblock/cell voltages must be in accordance with manufacturer's published data.
f. Measure intercell connection resistances.
g. Perform internal ohmic measurement tests. Cell internal ohmic values (resistance, impedance, or conductance) must not vary by more than 25 percent between identical cells that are in a fully charged state. Monoblock/cell internal ohmic values (resistance, impedance, or conductance) must not vary by more than 25 percent between identical monoblocks/cells in a fully charged state.
h. Perform a load test in accordance with manufacturer's published data or IEEE 1188. Replace units that fail to pass test.
i. Measure battery system voltage from positive-to-ground and negative-to-ground. Voltage measured from positive-to-ground must be equal in magnitude to voltage measured from negative-to-ground.

J. DC System Vented Ni-Cd Batteries Field Tests:

1. Visual and Mechanical Inspection:

a. Verify that batteries are adequately located.
b. Verify that battery area ventilation system is operable.
c. Verify existence of suitable eyewash equipment.
d. Verify equipment nameplate data complies with Contract Documents.
e. Inspect physical and mechanical condition.
f. Verify adequacy of battery support racks, mounting, anchorage, alignment, grounding, and clearances.
g. Verify electrolyte level. Measure pilot-cell electrolyte temperature, and correct in accordance with manufacturer's maintenance procedures to bring temperature and electrolyte level to within normal limits.
h. Verify units are clean.
i. Inspect spill containment installation.
j. Verify application of an oxide inhibitor on battery terminal connections.

2. Electrical Tests:

a. Measure charger float and equalizing voltage levels. Adjust voltage in accordance with battery manufacturer's published instructions.
b. Verify charger functions and that alarms comply with system manufacturer's published instructions.
c. Measure each cell voltage and total battery voltage with charger energized and in float

mode of operation. Cell voltages must be within 0.05 volt of each other or in accordance with manufacturer's published data.

d. Measure intercell connection resistances.
e. Perform internal ohmic measurement tests. Cell internal ohmic values (resistance, impedance, or conductance) must not vary by more than 25 percent between identical cells that are in a fully charged state.
f. Perform a load test in accordance with manufacturer's published data or IEEE 1106. Replace units that fail to pass test.
g. Measure battery system voltage from positive-to-ground and negative-to-ground. Voltage measured from positive-to-ground must be equal in magnitude to voltage measured from negative-to-ground.

K. DC System Charger Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect for physical and mechanical condition.
b. Inspect anchorage, alignment, and grounding.
c. Verify unit is clean.
d. Inspect filter and tank capacitors.
e. Verify operation of cooling fans and presence of filters.

2. Electrical Tests:

a. Verify float voltage, equalizing voltage, and overvoltage shutdown settings. Float and equalizing voltage settings must be in accordance with battery manufacturer's published data.
b. Verify current limit. Current limit must be set in accordance with manufacturer's published instructions.
c. Verify operation of alarms. Results of alarm operation must be in accordance with manufacturer's published data and system design.
d. Measure and record input and output voltage and current. Input and output voltage must be in accordance with manufacturer's published data.
e. Measure and record AC ripple current and voltage imposed on battery. AC ripple current and voltage imposed on battery must be in accordance with manufacturer's published data.
f. Perform full-load testing of charger. Charger must be capable of manufacturer's specified full load.

L. Liquid-Filled Transformer Section Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect impact recorder prior to unloading.
c. Test dew point of tank gases if applicable.
d. Inspect anchorage, alignment, and grounding.
e. Verify presence of PCB content labeling.
f. Verify removal of any shipping bracing after placement.
g. Verify bushings are clean.
h. Verify that alarm, control, and trip settings on temperature and level indicators are set and operate in accordance with manufacturer's published instructions.
i. Verify that cooling fans and pumps operate correctly and have appropriate overcurrent protection.
j. Verify that liquid level in tanks and bushings is within manufacturer's published tolerances.
k. Perform specific inspections and mechanical tests recommended by manufacturer's

published instructions.
l. Verify presence of transformer surge arresters and that their ratings are as specified.
m. Verify that as-left tap connections are as specified.
n. Verify presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index must not be less than 1.0.
b. Perform power-factor or dissipation-factor tests on all windings in accordance with test equipment manufacturer's published data. Maximum winding insulation power-factor/dissipation-factor values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.3.
c. Measure core insulation resistance at 500 V(dc) if core is insulated and core ground strap is removable. Core insulation-resistance values must not be less than 1 MΩ at 500 V(dc).
d. Perform a power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV.
e. Perform turns-ratio tests at tap positions. Turns-ratio test results must not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
f. Perform an excitation-current test on each phase. The typical excitation-current test data pattern for a three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if test shows a different pattern.
g. Measure resistance of each winding at each tap connection, and record temperature-corrected winding-resistance values in Operations and Maintenance Manual.
h. Perform an applied-voltage test on primary and secondary windings-to-ground. Comply with IEEE C57.12.91, Sections 10.2 and 10.9.
i. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.
j. Remove a sample of insulating liquid in accordance with ASTM D923. Insulating liquid values must comply with NETA ATS, Table 100.4. Sample must be tested for the following:

1) Dielectric Breakdown Voltage: ASTM D877/D877M or ASTM D1816.
2) Acid Neutralization Number: ASTM D974.
3) Specific Gravity: ASTM D1298.
4) Interfacial Tension: ASTM D971.
5) Color: ASTM D1500.
6) Visual Condition: ASTM D1524.
7) Water in Insulating Liquids: ASTM D1533.
8) Power Factor or Dissipation Factor: ASTM D924.

k. Remove a sample of insulating liquid in accordance with ASTM D923 and perform dissolved-gas analysis in accordance with IEEE C57.104 or ASTM D3612.

M. Small Dry-Type Transformer Section Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, and grounding.
c. Verify that resilient mounts are free and that any shipping brackets have been removed.
d. Verify unit is clean.
e. Perform specific inspections and mechanical tests recommended by manufacturer's published instructions.
f. Verify that as-left tap connections are as specified.

g. Verify presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index must not be less than 1.0.
b. Perform turns-ratio tests at all tap positions. The test results must not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
c. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

N. Large Dry-Type Transformer Section Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, and grounding.
c. Verify that resilient mounts are free and that any shipping brackets have been removed.
d. Verify unit is clean.
e. Verify that alarm, control, and trip settings on temperature and level indicators are set and operate in accordance with manufacturer's published instructions.
f. Verify that cooling fans operate and that fan motors have correct overcurrent protection.
g. Perform specific inspections and mechanical tests recommended by manufacturer's published instructions.
h. Verify that as-left tap connections are as specified.
i. Verify presence of surge arresters and that their ratings are as specified.

2. Electrical Tests:

a. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index must not be less than 1.0.
b. Perform power-factor or dissipation-factor tests on windings in accordance with test equipment manufacturer's published data. Investigate and correct power-factor values that exceed:

1) 2.0 percent for power transformers.
2) 5.0 percent for distribution transformers.

c. Measure core insulation resistance at 500 V(dc) if core is insulated and core ground strap is removable. Core insulation-resistance values must not be less than 1 MΩ at 500 V(dc).
d. Perform a power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV. Tip-up test result exceeding 1.0 percent must be investigated.
e. Perform turns-ratio tests at all tap positions. The test results must not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
f. Perform an excitation-current test on each phase. The typical excitation-current test data pattern for a three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if test shows a different pattern.
g. Measure resistance of each winding at each tap connection.
h. Perform an applied-voltage test on all primary and secondary windings-to-ground. See

IEEE C57.12.91, Sections 10.2 and 10.9. The AC dielectric-withstand-voltage test result must not exceed 75 percent of factory test voltage for one-minute duration. The DC dielectric-withstand-voltage test result must not exceed 100 percent of AC RMS test voltage specified in IEEE C57.12.91, Section 10.2, for one-minute duration. If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric-withstand-voltage test, test specimen is considered to have passed test.

i. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

O. Secondary Distribution Section Network Protector Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, and grounding.
c. Verify unit is clean.
d. Verify arc chutes are intact.
e. Inspect moving and stationary contacts for condition and alignment.
f. Verify that maintenance devices are available for servicing and operating network protector.
g. Verify that primary and secondary contact wipe and other dimensions vital to satisfactory operation of network protector are correct.
h. Perform mechanical operator and contact alignment tests on both network protector and its operating mechanism. Operations counter must advance one digit per close-open cycle.
i. Verify cell fit and element alignment.
j. Verify racking mechanism operation.
k. Verify compliance with manufacturer's published instructions for lubrication on moving current-carrying parts and on moving and sliding surfaces.
l. Record as-found and as-left operation counter readings.
m. Perform a leak test on submersible enclosure in accordance with manufacturer's published data.

2. Electrical Tests:

a. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with network protector closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1.

1) Insulation-resistance values of bus insulation must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than manufacturer's published instructions or Table 100.1.
2) Do not conduct insulation-resistance tests of control wiring until insulation-resistance levels of power circuits are raised above minimum values.

b. Perform a contact/pole-resistance test. Microhm or DC millivolt drop values must not exceed high levels of normal range as indicated in manufacturer's published data. In absence of manufacturer's published data, investigate values that deviate from adjacent poles or similar protectors by more than 50 percent of lowest value.

3. Perform insulation-resistance tests on all control wiring with respect to ground. Applied potential must be 500 V(dc) for 300 V rated cable and 1000 V(dc) for 600 V rated cable. Test duration must be one minute. For units with solid-state components or control devices that cannot tolerate applied voltage, follow manufacturer's published instructions.

a. Minimum insulation-resistance values of control wiring must not be less than 2 MΩ.
b. Verify current-transformer ratios in accordance with IEEE C57.13.
c. Measure resistance of each network protector power fuse. Investigate and correct fuse-resistance values that deviate from each other by more than 15 percent.
d. Measure minimum pickup voltage of motor-control relay. Minimum pickup voltage of motor-control relay must be in accordance with manufacturer's published data, but not more than 75 percent of rated control circuit voltage.
e. Verify that motor can charge closing mechanism at minimum voltage specified by manufacturer. Minimum operating voltage of motor on closing mechanism must not exceed 75 percent of rated control circuit voltage.
f. Measure minimum pickup voltage of trip actuator. Trip actuator minimum pickup voltage must not exceed 7.5 percent of rated control circuit voltage. Verify that actuator resets correctly.
g. Calibrate network protector relays in accordance with "Medium-Voltage Instruments Section" Paragraph, "Overcurrent and Ground-Fault Protective Relays" Subparagraph, specifying microprocessor-based protective relays.
h. Perform the following operational tests:

1) Verify correct operation of all mechanical and electrical interlocks.
2) Verify trip-free operation.
3) Verify correct operation of auto-open-close control handle.
4) Verify protector will close with voltage on transformer side only.
5) Verify protector will open when source feeder breaker is opened.

i. Verify phase rotation, phasing, and synchronized operation.

P. Low-Voltage Power Circuit-Breaker Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, and grounding.
c. Verify that all maintenance devices are available for servicing and operating breaker.
d. Verify unit is clean.
e. Verify that arc chutes are intact.
f. Inspect moving and stationary contacts for condition and alignment.
g. Verify that primary and secondary contact wipe and other dimensions vital to satisfactory operation of breaker are correct.
h. Perform mechanical operator and contact alignment tests on both breaker and its operating mechanism in accordance with manufacturer's published data.
i. Verify cell fit and element alignment.
j. Verify racking mechanism operation.
k. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
l. Perform adjustments for final protective-device settings in accordance with coordination study provided by end user.
m. Record as-found and as-left operation counter readings.

2. Electrical Tests:

a. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to ground with switch closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply

with NETA ATS, Table 100.1. Values of insulation resistance less than this table or manufacturer's published instructions must be investigated.

b. Measure contact resistance across each power contact of circuit breaker. Microhm or DC millivolt drop values must not exceed high levels of normal range as indicated in manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.

c. Determine long-time pickup and delay by primary current injection. Long-time pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current characteristic tolerance band, including adjustment factors. If manufacturer's curves are not available, trip times must not exceed value shown in NETA ATS, Table 100.7.

d. Determine short-time pickup and delay by primary current injection. Short-time pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current tolerance band.

e. Determine ground-fault pickup and delay by primary current injection. Ground-fault pickup values must be as specified, and trip characteristic must not exceed manufacturer's published time-current tolerance band.

f. Determine instantaneous pickup value by primary current injection. Instantaneous pickup values must be as specified and within manufacturer's published tolerances. In absence of manufacturer's published data, comply with NETA ATS, Table 100.8.

g. Test functions of trip unit by means of secondary injection. Pickup values and trip characteristic must be as specified and within manufacturer's published tolerances.

h. Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of shunt trip and close coils must conform to manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.20.

i. Measure fuse resistance. Investigate fuse-resistance values that deviate from each other by more than 15 percent.

j. Verify correct operation of any auxiliary features, such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free operation, anti-pump function, and trip unit battery condition. Reset trip logs and indicators. Auxiliary features must operate in accordance with manufacturer's published data.

k. Verify operation of charging mechanism. The charging mechanism must operate in accordance with manufacturer's published data.

Q. Metering Device Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.

b. Inspect cover gasket, cover glass, condition of spiral spring, disk clearance, contacts, and case shorting contacts, as applicable.

c. Verify unit is clean.

d. Verify freedom of movement, end play, and alignment of rotating disk(s).

2. Electrical Tests:

a. Verify accuracy of meters at cardinal points. Meter accuracy must be in accordance with manufacturer's published data.

b. Calibrate meters in accordance with manufacturer's published data. Calibration results must be within manufacturer's published tolerances.

c. Verify instrument multipliers. Instrument multipliers must be in accordance with system design specifications.

d. Verify that current-transformer and voltage-transformer secondary circuits are intact. Test results must confirm integrity of secondary circuits of current and voltage transformers.

R. Nonconforming Work:

1. Equipment will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

S. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

T. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.4 SYSTEM STARTUP

A. Perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's published instructions.
2. Complete installation and startup checks required by electric utility provider.
3. <**Insert startup steps if any**>.

B. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] system startup.

1. Manufacturer's Field Reports for System Startup Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.5 ADJUSTING

A. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:

1. During a period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at outgoing section of each secondary unit substation. Use voltmeters with calibration traceable to National Institute of Science and Technology standards and with a chart speed of not less than **1 inch (25 mm)** per hour. Voltage unbalance greater than 1 percent between phases, or deviation of any phase voltage from nominal value by more than plus or minus 5 percent during test period, is unacceptable.
2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:

   a. Adjust transformer taps.
   b. Rebalance loads.
   c. Prepare written request for voltage adjustment by electric utility.

3. Retests: Repeat monitoring, after corrective action has been performed, until satisfactory results are obtained.
4. Report:

a. Prepare a written report covering monitoring performed and corrective action taken.
b. For each relay and adjustable circuit breaker, tag device with adjusting technician's initials and date of adjustment. Record settings and file with test records specified in "Field Quality Control" Article.

B. Infrared Inspection and Adjusting: Perform survey during periods of maximum possible loading. Remove all necessary covers prior to inspection.

1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of electrical power connections of unit substation.
2. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switchgear 11 months after date of Substantial Completion.
3. Instrument: Inspect distribution systems with imaging equipment capable of detecting a minimum temperature difference of **1.8 deg F (1 deg C)** at **104 deg F (30 deg C)**.
4. Record of Infrared Inspection: Prepare a certified report that identifies testing technician and equipment used, and lists the following results:

a. Description of equipment to be tested.
b. Discrepancies.
c. Temperature difference between area of concern and reference area.
d. Probable cause of temperature difference.
e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
f. Identify load conditions at time of inspection.
g. Provide photographs and thermograms of deficient area.

5. Act on inspection results in accordance with recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.

3.6 CLEANING

A. After completing equipment installation and before energizing, inspect unit components. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish. Vacuum interiors of secondary unit substation sections.

3.7 CLOSEOUT ACTIVITIES

A. Training:

1. [**With assistance from factory-authorized service representatives, train**][**Train**] Owner's maintenance personnel on the following topics:

a. How to operate normal and emergency electrical systems, including justifications for, and limitations of, protective device settings recommended in coordination study report.
b. How to adjust, operate, and maintain secondary unit substation equipment.

2. [**Provide video recordings of training sessions to Owner.**][**Allow Owner to record training sessions.**]

3.8 MAINTENANCE

A. Maintenance Service Agreement: Beginning at Substantial Completion, verify that maintenance service agreement includes [**three month**][**six month**][**nine year**][**one year**]<**Insert duration**> period for full

maintenance by [**skilled employees of secondary unit substation Installer**][**manufacturer's authorized service representative**]. Include periodic preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper secondary unit substation equipment operation. Verify that parts and supplies are manufacturer's authorized replacement parts and supplies.

B. Software and Firmware Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes secondary unit substation equipment software and firmware support for [**two years**]<**Insert duration**>.
2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software and firmware upgrades that become available within [**two years**]<**Insert duration**> from date of Substantial Completion.[**Verify that upgrading software includes operating system and new or revised licenses for using software.**]

    a. Upgrade Notice: Not less than [**30 days**]<**Insert duration**>; to allow Owner to schedule and access the system[**and to upgrade computer equipment if necessary**].

3. Field Reports for Software and Firmware Upgrades: Prepare and submit report after each update, documenting upgrades installed.

SECTION 26 12 13 00 - LIQUID-FILLED, MEDIUM-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Liquid-filled, medium-voltage substation transformers, with primary and secondary bushings within or without air-terminal enclosures.
2. Control network.
3. Warning labels and signs.

B. Products Furnished, but Not Installed, under This Section:

1. <**Insert products furnished, but not installed**>.

C. Products Installed, but Not Furnished, under This Section:

1. <**Insert products installed, but not furnished**>.

D. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. [**Section 013100 "Project Management and Coordination"**]<**Insert Section number and title**> for preinstallation conference procedures.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

B. Preinstallation Coordination Meeting(s): For liquid-filled, medium-voltage transformers. Conduct meeting(s) [**as videoconference**][**or**][**at Project site**]<**Insert location**> before <**Insert construction activity**>.

1. Attendees: Installers, fabricators, representatives of manufacturers, and administrants for field tests and inspections. Notify Architect[**, Construction Manager**][**, and Owner's Commissioning Authority**] of scheduled meeting dates.

1.3 ACTION SUBMITTALS

A. Product Data:

1. For each type of product.

a. Include rated capacities, operating characteristics, and furnished specialties and

accessories.

B. Shop Drawings:

1. For liquid-filled, medium-voltage transformers.

a. Include plans and elevations showing major components and features.

1) Include plan view and cross section of equipment base, showing clearances, manufacturer's recommended workspace, and locations of penetrations for grounding and conduits.

b. Include details of equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of field connections.
c. Include single-line diagram.
d. Include list of materials.
e. Include nameplate legends.

C. Field Quality-Control Submittals:

1. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Product Certificates: For transformers, signed by product manufacturer.

B. Source quality-control reports.

PART 2 - PRODUCTS

2.1 OWNER-FURNISHED PRODUCTS

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for product that Owner intends to furnish to Contractor**>.

B. Description: <**Insert description of product, including special features, options, and finishes for Owner-furnished product that may impact Contractor's installation**>.

C. Accessories: <**Insert accessories that will be provided with product**>.

2.2 EXISTING PRODUCTS TO BE MODIFIED

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact Work**>.

C. Accessories: <**Insert accessories included with existing product**>.

2.3 EXISTING PRODUCTS TO BE REMOVED AND RE-INSTALLED

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact Work**>.

C. Accessories: <**Insert accessories included with existing product**>.

2.4 LIQUID-FILLED, MEDIUM-VOLTAGE TRANSFORMERS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Eaton**]
2. [**GE Power; General Electric Company**]
3. [**Prolec GE; A Xignux and General Electric Company Joint Venture**]
4. [**Siemens Industry, Inc., Energy Management Division**]
5. [**Square D; Schneider Electric USA**]
6. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Eaton**]
2. [**GE Power; General Electric Company**]
3. [**Prolec GE; A Xignux and General Electric Company Joint Venture**]
4. [**Siemens Industry, Inc., Energy Management Division**]
5. [**Square D; Schneider Electric USA**]
6. <**Insert manufacturer's name**>

2.5 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

B. Comply with IEEE C2.

C. Comply with IEEE C57.12.00.

2.6 PERFORMANCE REQUIREMENTS

A. Windings Material: [**Aluminum**][**Copper**].

B. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, connected in each phase of incoming circuit and ahead of disconnecting device.

C. Winding Connections: Connection of windings and terminal markings must comply with IEEE C57.12.70.

D. Efficiency: Comply with 10 CFR 431, Subpart K.

E. Insulation:

1. Transformer kVA Rating[**, when Indicated at 65 deg C Rise,**] Must Be as Follows: Average winding temperature rise above ambient temperature must not exceed 65 deg C and 80 deg C hottest-spot temperature rise at rated kVA when tested in accordance with IEEE C57.12.90, using combination of connections and taps that give highest average winding temperature rise.
2. Transformer kVA Rating[**, when Indicated at 55/65 deg C Rise,**] Must Be as Follows: Average winding temperature rise above ambient temperature must not exceed 55 deg C, based on average ambient temperature of 30 deg C over 24 hours with maximum ambient temperature of 40 deg C. Insulation system must be rated to continuously allow additional 12-percent kVA output, at 65 deg C temperature rise, without decreasing rated transformer life. Rating must conform to requirements of IEEE C57.12.90.

F. Bushings must comply with IEEE C57.19.01 requirements for impulse and low-frequency insulation levels.

G. Tap Changer: External, for de-energized operation.

H. Tank: Sealed, with welded-on cover.[**Designed to withstand internal pressure of not less than 7 psi (50 kPa) without permanent distortion and 15 psig (104 kPa) without rupture. Comply with IEEE C57.12.36.**]

I. Mounting: Integral skid mounting frame, suitable to allow skidding or rolling of transformer in any direction, and with provision for anchoring frame to pad.

J. Insulating Liquids:

1. Mineral Oil: ASTM D3487, Type II, and tested for compliance with ASTM D117.
2. Less-Flammable Liquids:

a. Edible-Seed-Oil-Based Dielectric: Listed and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic, having passed Organisation for Economic Co-operation and Development G.L.203 with zero mortality, and must be certified by U.S. Environmental Protection Agency as biodegradable, meeting Environmental Technology Verification requirements.
b. Biodegradable and Nontoxic Dielectric: Listed and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92.
c. Silicone-Based Dielectric: Listed and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must have low toxicity and be nonhazardous.

K. Sound level must comply with NEMA TR 1 requirements.

L. Capacities and Characteristics:

1. Location: [**Indoors**][**Outdoors**].
2. Additional Standards: Comply with [**IEEE C57.12.10**][**IEEE C57.12.36**].

a. Comply with [**IEEE C57.12.10**][**IEEE C57.12.36**].
b. Comply with UL 1062 listing requirements.
c. Comply with FM Global Class No. 3990.
d. Comply with UL listing requirements for combination classification and listing for transformer and less-flammable insulating liquid.

3. Connections:

a. Primary: [**Air-filled terminal cabinet for cable connection**][**Throat for busway connection**][**Terminals for close connection to primary switch**][**Open wire**].
b. Secondary: [**Air-filled terminal cabinet for cable connection**][**Throat for busway connection**][**Open wire**].

4. Transformer Ratings. Comply with IEEE C57.12.00 for cooling class.

a. Self-Cooled Rating, Class <**Insert letters**>: <**Insert number**> kVA.
b. Future Forced-Air-Cooled Rating, Class <**Insert letters**>:

1) Self-Cooled: <**Insert number**> kVA.
2) Forced-Air Cooled: <**Insert number**> kVA.
3) Make provision for future addition of forced-air-cooling equipment. Transformer bushings, leads, and related components must be sized for future equipment. Provide fan mounts, conduit supports, and terminal boxes.

c. Forced-Air-Cooled Rating, Class <**Insert letters**>:

1) Self-Cooled: <**Insert number**> kVA.
2) Forced-Air Cooled: <**Insert number**> kVA.
3) Equip with forced-air-cooling equipment, including fans, conduit, wiring, motor controllers, and top liquid thermometer for fan control.

d. Impedance: Not less than [**5.75**]<**Insert number**> percent.
e. Temperature Rise: [**65 deg C**][**55/65 deg C**].
f. Coils Connection:

1) Line-Side Winding: [**Delta**]<**Insert connection**>.
2) Load-Side Winding: [**Wye**]<**Insert connection**>.

g. Voltage and BIL Ratings:

1) Nominal primary phase-to-phase voltage and BIL: [**4160 V, 60 kV**][**13 800 V, 95 kV**][**34 500 V, 125 kV**]<**Insert requirements**>.
2) Nominal secondary voltage and BIL: [**208Y/120 V, 45 kV**][**480Y/277 V, 45 kV**]<**Insert requirements**>.

h. K-Factor: <**Insert number**>, complying with UL 1561.

5. Finish:

a. Outdoor Transformer Enclosure Finish: Factory-applied finish in manufacturer's standard color, corrosion resistance complying with IEEE C57.12.28.
b. Indoor Transformer Enclosure Finish: Factory-applied finish in manufacturer's standard gray over rust-inhibiting primer on treated metal surface.
c. Special Corrosion-Resistant Enclosure Finish: Factory-applied, corrosion-resistant finish in manufacturer's standard color that withstands [**120**][**480**] hours of exposure to salt-spray test specified in ASTM B117 without loss of paint or release of adhesion of paint primer

coat to metal surface in excess of 1/16 inch (2 mm) from test mark. Scribed test mark and test evaluation must be in accordance with ASTM D1654 with rating of not less than 7, in accordance with Table 1 (Procedure A). Cut edges or otherwise damaged surfaces of hot-dip galvanized sheet steel, or mill-galvanized sheet steel must be coated with manufacturer's standard zinc-rich paint.

6. Taps: Two 2-1/2 percent, full-capacity taps above, and two 2-1/2 percent, full-capacity taps below rated voltage. Comply with IEEE C57.12.36 requirements.
7. Transformer Accessories:

   a. Drain and filter connection.
   b. Filling and top filter press connections.
   c. Pressure-vacuum gauge.
   d. Dial-type analog thermometer with alarm contacts.
   e. Magnetic liquid level indicator with high and low alarm contacts.
   f. Pressure-relief device set to operate at 10 psig, plus or minus 2 psig, and then automatically reseal when pressure drops to 6 psig minimum. Device flow must be as recommended by manufacturer. With alarm contacts and manual bleeder.
   g. At least four stainless steel ground connection pads.
   h. Provisions for jacking, lifting, and towing.
   i. Machine-engraved nameplate made of anodized aluminum or stainless steel.
   j. Sudden pressure relay for remote alarm or trip when internal transformer pressure rises at field-set rate. Provide [**with**][**without**] seal-in delay.

2.7 CONTROL NETWORK

A. Controllers: Support serial MS/TP and Ethernet IP communications, and able to communicate directly via RS-485 serial networks and Ethernet 10Base-T networks as native device.

2.8 WARNING LABELS AND SIGNS

A. Comply with requirements for labels and signs specified in Section 260553 "Identification for Electrical Systems."

1. Warning signs must be made of baked enamel.
2. Equipment Identification Labels: [**Engraved, laminated-acrylic or -melamine label**][**Stenciled legend 4 inch (100 mm) high**].

2.9 SOURCE QUALITY CONTROL

A. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.

B. Testing Administrant: [**Owner will engage**][**Engage**] qualified testing agency to evaluate liquid-filled, medium-voltage transformer.

C. Testing: Test and inspect liquid-filled, medium-voltage transformer in accordance with IEEE C57.12.90.

D. Factory Tests and Inspections: Perform the following tests and inspections on liquid-filled, medium-voltage transformer, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, before delivering to site. Affix label with name and date of [**manufacturer's**][**qualified electrical testing laboratory's**] certification of system compliance on

control units.

1. Resistance.
2. Turns ratio, polarity, and phase relation.
3. Transformer no-load losses and excitation current at 100 percent of ratings.
4. Transformer impedance voltage and load loss.
5. Operation of devices.
6. Control (auxiliary) and consumption losses.
7. Lightning impulse.
8. Low frequency.
9. Leak.
10. Transformer no-load losses and excitation current at 110 percent of ratings.
11. Insulation power factor.
12. Applied potential.
13. Induced potential.
14. Resistance measurements of windings on rated voltage connection and at tap extreme connections.
15. Ratios on rated voltage connection and at tap extreme connections.
16. Polarity and phase relation on rated voltage connection.
17. No-load loss at rated voltage on rated voltage connection.
18. Exciting current at rated voltage on rated voltage connection.
19. Impedance.

E. Nonconforming Work:

1. System equipment that does not pass tests and inspections will be considered defective.

F. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine liquid-filled, medium-voltage transformers upon delivery.

1. Upon delivery of transformers and prior to unloading, inspect equipment for damage that may have occurred during shipment or storage.
2. Verify that tie rods and chains are undamaged and tight, and that blocking and bracing is tight. Verify that there is no evidence of load shifting in transit, and that readings from transportation shock recorders, if equipped, are within manufacturer's recommendations.
3. Verify that there is no indication of external damage and no dents or scratches in doors and sill, tank walls, radiators and fins, or termination provisions.
4. Verify that there is no evidence of insulating-liquid leakage on transformer surfaces, at weld seams, on line- or load-side bushing parts, and at transformer base.
5. Verify that there is positive pressure or vacuum on tank. Check pressure gauge; it is required to read other than zero.
6. Compare transformers and accessories received with bill of materials to verify that shipment is complete. Verify that transformers and accessories conform with manufacturer's quotation and shop drawings. If shipment is incomplete or does not comply with Project requirements, notify manufacturer in writing immediately.
7. Verify presence of polychlorinated biphenyl content labeling.
8. Unload transformers carefully, observing packing label warnings and handling instructions.
9. Open termination compartment doors and inspect components for damage or displaced parts, loose or broken connections, cracked or chipped insulators, bent mounting flanges, dirt or foreign

material, and water or moisture.

B. Handling:

1. Handle transformers carefully, in accordance with manufacturer recommendations, to avoid damage to enclosure, termination compartments, base, frame, tank, and internal components. Do not subject transformers to impact, jolting, jarring, or rough handling.
2. Protect transformer termination compartments against entrance of dust, rain, and snow.
3. Transport transformers upright, to avoid internal stresses on core and coil mounting assembly and to prevent trapping air in windings. Do not tilt or tip transformers.
4. Verify that transformer weights are within rated capacity of handling equipment.
5. Use only manufacturer-recommended points for lifting, jacking, and pulling. Use lifting lugs when lifting transformers.
6. Use jacks only at corners of tank base plate.
7. Use nylon straps of same length to balance and distribute weight when handling transformers with crane.
8. Use spreaders or lifting beam to obtain vertical lift and to protect transformer from straps bearing against enclosure. Lifting cable pull angles may not be greater than 15 degrees from vertical.
9. Exercise care not to damage tank base structure when handling transformer using skids or rollers. Use skids to distribute stresses over tank base when using rollers under large transformers.

C. Storage:

1. Store transformers in accordance with manufacturer's recommendations.
2. Transformers may be stored outdoors. If possible, store transformers at final installation locations on concrete pads. If dry concrete surfaces are unavailable, use pallets of adequate strength to protect transformers from direct contact with ground. Ensure transformer is level.
3. Ensure that transformer storage location is clean and protected from severe conditions. Protect transformers from dirt, water, contamination, and physical damage. Do not store transformers in presence of corrosive or explosive gases. Protect transformers from weather when stored for more than three months.
4. Store transformers with compartment doors closed.
5. Regularly inspect transformers while in storage and maintain documentation of storage conditions, noting discrepancies or adverse conditions. Verify that effective pressure seal is maintained using pressure gauges. Visually check for insulating-liquid leaks and rust spots.

D. Examine areas and space conditions for compliance with requirements for liquid-filled, medium-voltage transformers and other conditions affecting performance of the Work.

E. Examine roughing-in of conduits and grounding systems to verify the following:

1. Wiring entries comply with layout requirements.
2. Entries are within conduit-entry tolerances specified by manufacturer, and no feeders will cross section barriers to reach load or line lugs.

F. Examine walls, floors, roofs, and concrete bases for suitable conditions for transformer installation.

G. Pre-Installation Checks:

1. Verify removal of shipping bracing after placement.
2. Remove sample of insulating liquid in accordance with ASTM D923. Insulating-liquid values must comply with NETA ATS, Table 100.4. Sample must be tested for the following:

    a. Dielectric Breakdown Voltage: ASTM D877 or ASTM D1816.

b. Acid Neutralization Number: ASTM D974.
c. Specific Gravity: ASTM D1298.
d. Interfacial Tension: ASTM D971.
e. Color: ASTM D1500.
f. Visual Condition: ASTM D1524.
g. Water in Insulating Liquids: ASTM D1533.
h. Power Factor or Dissipation Factor: ASTM D924.

H. Verify that ground connections are in place and that requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance must be 5Ω at transformer location.

I. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install transformers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 260529 "Hangers and Supports for Electrical Systems."

B. Transformer must be installed level and plumb and must tilt less than 1.5 degrees while energized.

C. Comply with requirements for vibration isolation and seismic control devices specified in Section 260529 "Hangers and Supports for Electrical Systems" and [**Section 260548 "Vibration and Seismic Controls for Electrical Systems."**][**Section 260548.16 "Seismic Controls for Electrical Systems."**]

D. Maintain minimum clearances and workspace at equipment in accordance with manufacturer's written instructions and NFPA 70.

3.3 CONNECTIONS

A. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

1. At Interior Locations: For grounding to grounding electrodes, use bare copper cable not smaller than 4/0 AWG. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors. Keep leads as short as practicable, with no kinks or sharp bends. Make joints in grounding conductors and loops by exothermic weld or compression connector.
2. At Exterior Locations:

    a. For counterpoise, use tinned bare copper cable not smaller than 4/0 AWG, buried not less than **30 inch (765 mm)** below grade interconnecting grounding electrodes. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors. Keep lead lengths as short as practicable, with no kinks or sharp bends.
    b. Fence and equipment connections must not be smaller than 4 AWG. Ground fence at gate post and corner post and at intervals not exceeding **10 ft (3 m)**. Bond gate section to fence post using **1/8 by 1 inch (3 by 25 mm)** [**tinned**]flexible braided copper strap and clamps.
    c. Make joints in grounding conductors and loops by exothermic weld or compression connector.

3. Terminate grounding and bonding conductors on common equipment grounding terminal on transformer enclosure. Install supplemental terminal bars, lugs, and bonding jumpers as required to accommodate number of conductors for termination.

4. Complete transformer tank grounding and lightning arrester connections prior to making other electrical connections.

B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

1. Maintain air clearances between energized live parts and between live parts and ground for exposed connections in accordance with manufacturer recommendations.
2. Bundle associated phase, neutral, and equipment grounding conductors together within transformer enclosure. Arrange conductors such that there is not excessive strain that could cause loose connections. Allow adequate slack for expansion and contraction of conductors.

C. Terminate medium-voltage cables in incoming section of substations in accordance with Section 260513 "Medium-Voltage Cables."

3.4 SIGNS AND LABELS

A. Comply with installation requirements for labels and signs specified in Section 260553 "Identification for Electrical Systems."

B. Install warning signs as required to comply with 29 CFR 1910.269.

3.5 FIELD QUALITY CONTROL

A. [**Acceptance**]Testing Preparation:

1. <**Insert requirements**>.

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

C. Tests and Inspections:

1. General Field-Testing Requirements:

a. Comply with provisions of "Testing and Test Methods" Chapter in NFPA 70B.
b. Perform visual and mechanical inspection and electrical test. Certify compliance with test parameters.
c. After installing transformer but before primary is energized, verify that grounding system at substation is tested at specified value or less.
d. After installing transformer and after electrical circuitry has been energized, test for compliance with requirements.
e. Visual and Mechanical Inspection:

1) Verify equipment nameplate data complies with Contract Documents.
2) Inspect bolted electrical connections for high resistance using one of the following two methods:

a) Use low-resistance ohmmeter to compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
b) Verify tightness of accessible bolted electrical connections by calibrated

torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.

2. Medium-Voltage Surge Arrester Field Tests:

   a. Visual and Mechanical Inspection:

      1) Inspect physical and mechanical condition.
      2) Inspect anchorage, alignment, grounding, and clearances.
      3) Verify arresters are clean.
      4) Verify that ground lead on device is individually attached to ground bus or ground electrode.
      5) Verify that stroke counter is correctly mounted and electrically connected if applicable. Record stroke counter reading.

   b. Electrical Test:

      1) Perform insulation-resistance test on arrester, phase terminal-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Replace units that fail to comply with recommended minimum insulation resistance listed in that table.
      2) Perform watts-loss test. Evaluate watts-loss values by comparison with similar units and test equipment manufacturer's published data.

3. Liquid-Filled Transformer Field Tests:

   a. Visual and Mechanical Inspection:

      1) Test dew point of tank gases if applicable.
      2) Inspect anchorage, alignment, and grounding.
      3) Verify bushings are clean.
      4) Verify that alarm, control, and trip settings on temperature and level indicators are set and operate within manufacturer's recommended settings.
      5) Verify that cooling fans and pumps operate correctly and have appropriate overcurrent protection.
      6) Verify that liquid level in tanks and bushings is within manufacturer's published tolerances.
      7) Perform specific inspections and mechanical tests recommended by manufacturer.
      8) Verify presence of transformer surge arresters and that their ratings are as specified.
      9) Verify that as-left tap connections are as specified.
      10) Verify presence of surge arresters and that their ratings are as specified.

   b. Electrical Tests:

      1) Perform insulation-resistance tests winding-to-winding and winding-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index must not be less than 1.0.
      2) Perform power-factor or dissipation-factor tests on windings in accordance with test equipment manufacturer's published data. Maximum winding insulation power-factor/dissipation-factor values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.3.

3) Measure core insulation resistance at 500 V(dc) if core is insulated and core ground strap is removable. Core insulation-resistance values must not be less than 1 M Ω at 500 V(dc).
4) Perform power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV.
5) Perform turns-ratio tests at tap positions. Turns-ratio test results must not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
6) Perform excitation-current test on each phase. Typical excitation-current test data pattern for three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if test shows different pattern.
7) Measure resistance of winding at tap connection, and record temperature-corrected winding-resistance values in Operations and Maintenance Manual.
8) Perform applied-voltage test on high- and low-voltage windings-to-ground. Comply with IEEE C57.12.91, Sections 10.2 and 10.9.
9) Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.
10) Remove sample of insulating liquid in accordance with ASTM D923, and perform dissolved-gas analysis in accordance with IEEE C57.104 or ASTM D3612.

D. Nonconforming Work:

1. Equipment and devices will be considered defective if they do not pass tests and inspections.
2. Remove and replace malfunctioning units and retest.

E. Assemble and submit test and inspection reports. Record as-left set points of adjustable devices.

F. Manufacturer Services:

1. Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

3.6 MAINTENANCE

A. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:

1. During period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at outgoing section of transformer. Use voltmeters with calibration traceable to National Institute of Science and Technology standards and with chart speed of not less than **1 inch (25 mm)** per hour. Voltage unbalance greater than 1 percent between phases, or deviation of phase voltage from nominal value by more than plus or minus 5 percent during test period, is unacceptable.
2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:

a. Adjust transformer taps.
b. Prepare written request for voltage adjustment by electric utility.

3. Retests: Repeat monitoring, after corrective action is performed, until satisfactory results are obtained.
4. Report:

a. Prepare written report covering monitoring performed and corrective action taken.

B. Infrared Inspection: Perform survey during periods of maximum possible loading. Remove necessary covers prior to inspection.

1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of transformer's electrical power connections.
2. Instrument: Inspect distribution systems with imaging equipment capable of detecting minimum temperature difference of 1 deg C at 30 deg C.
3. Record of Infrared Inspection: Prepare certified report that identifies testing technician and equipment used, and lists results as follows:

    a. Description of equipment to be tested.
    b. Discrepancies.
    c. Temperature difference between area of concern and reference area.
    d. Probable cause of temperature difference.
    e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
    f. Identify load conditions at time of inspection.
    g. Provide photographs and thermograms of deficient area.

4. Act on inspection results in accordance with recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.

Task	Specification	Specification Description
26 12 13 00	26 22 13 00	Low-Voltage Distribution Transformers

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 12 16 00 - DRY-TYPE, MEDIUM-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Dry-type, medium-voltage transformers.

B. Products Installed, but Not Furnished, under This Section:

1. <**Insert products identified in "Existing Products to be Modified" or "Existing Products to be Removed and Reinstalled" Article**>.

C. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. [**Section 013100 "Project Management and Coordination"**]<**Insert Section number and title**> for preinstallation conference procedures.
5. Section 260513 "Medium-Voltage Cables" specifies installation of medium-voltage cables.
6. Section 260519 "Low-Voltage Electrical Power Conductors and Cables" specifies installation of low-voltage wiring.
7. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
8. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
9. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration isolation and seismic control devices referenced by this Section.
10. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
11. Section 260573 "Power System Studies" specifies arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.

1.2 DEFINITIONS

A. VPE: Vacuum Pressure Encapsulation.

B. VPI: Vacuum Pressure Impregnation.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

B. Preinstallation Coordination Meeting(s): For dry-type, medium-voltage transformers. Conduct meeting(s) [**as videoconference**][**or**][**at Project site**]<**Insert location**> before <**Insert construction activity**>.

1. Attendees: Installers, fabricators, representatives of manufacturers, and administrants for field tests and inspections. Notify Architect[**, Construction Manager**][**, and Owner's Commissioning Authority**] of scheduled meeting dates.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.

a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for submitted product.

2. Product Certificates: Include product certificate stating compliance with IEEE C57.16, signed by manufacturer or fabricator.

B. Factory test reports.

C. Shop Drawings: Prepare and submit the following:

1. Include plans and elevations showing major components and features.

a. Include plan view and cross section of equipment base, showing clearances, manufacturer's recommended workspace, and locations of penetrations for grounding and conduits.

2. Include details of equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of field connections.
3. Include single-line diagram.
4. Include list of materials.
5. Include nameplate legends.

D. Sustainable Design Submittals:

1. Product data for sustainable design features for each type of product.

E. Field quality-control reports.

1.5 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

B. Field Reports:

1. Manufacturer's field reports for field quality-control support.
2. Field reports for voltage monitoring and adjusting.
3. Field reports for infrared scanning.

1.6 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, conduct tests of complex equipment, analyze test and equipment data, plan a job, and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.

C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Delivery:

1. Upon delivery of transformers and prior to unloading, inspect equipment for damage that may have occurred during shipment or storage.
2. Verify that tie rods and chains are undamaged and tight, and that blocking and bracing is tight. Verify that there is no evidence of load shifting in transit, and that readings from transportation shock recorders, if equipped, are within manufacturer's recommendations.
3. Verify that there is no indication of external damage and no dents or scratches in doors and sill, tank walls, radiators and fins, or termination provisions.
4. Compare transformers and accessories received with bill of materials to verify that shipment is complete. Verify that transformers and accessories conform with manufacturer's quotation and shop drawings. If shipment is incomplete or does not comply with Project requirements, notify manufacturer in writing immediately.
5. Unload transformers carefully, observing packing label warnings and handling instructions.
6. Open termination compartment doors and inspect components for damage or displaced parts, loose or broken connections, cracked or chipped insulators, bent mounting flanges, dirt or foreign material, and water or moisture.

B. Storage:

1. Store transformers in accordance with manufacturer's recommendations.
2. Transformers may be stored outdoors. If possible, store transformers at final installation locations on concrete pads. If dry concrete surfaces are unavailable, use pallets of adequate strength to protect transformers from direct contact with ground. Ensure transformer is level.
3. Ensure that transformer storage location is clean and protected from severe conditions. Protect transformers from dirt, water, contamination, and physical damage. Do not store transformers in presence of corrosive or explosive gases. Protect transformers from weather when stored for more than three months.

4. Store transformers with compartment doors closed.
5. Regularly inspect transformers while in storage and maintain documentation of storage conditions, noting discrepancies or adverse conditions. Visually check for rust spots.

C. Handling:

1. Handle transformers carefully, in accordance with manufacturer recommendations, to avoid damage to enclosure, termination compartments, base, frame, and internal components. Do not subject transformers to impact, jolting, jarring, or rough handling.
2. Protect transformer against entrance of dust, rain, and snow.
3. Transport transformers upright, to avoid internal stresses on core and coil mounting assembly and transformer case.
4. Verify that transformer weights are within rated capacity of handling equipment.
5. Use only manufacturer-recommended points for lifting, jacking, and pulling. Use lifting lugs when lifting transformers.
6. Use jacks only at corners of base plate of transformer case.
7. Use nylon straps of same length to balance and distribute weight when handling transformers with crane.
8. Use spreaders or lifting beam to obtain vertical lift and to protect transformer from straps bearing against enclosure. Lifting cable pull angles may not be greater than 15 degrees from vertical.
9. Exercise care not to damage base structure of case when handling transformer using skids or rollers. Use skids to distribute stresses over case base when using rollers under large transformers.

1.8 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

A. Modeling, analysis, product selection, installation, and quality control for all electrical Work on the Project must comply with service condition requirements specified in Section 018116 "Facility Environmental Requirements" and Section 018123 "Facility Seismic and Wind Criteria."

B. Usual Service Conditions: Unless unusual service conditions have been specified in "General Environmental Conditions," "Outdoor Conditions," and "Indoor Conditions" articles of Section 018116 "Facility Environmental Requirements," electrical service and distribution equipment must be suitable for operation under usual service conditions specified in applicable IEEE C57 series standards.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

A. Basis for Pricing: <**Insert name of manufacturer and model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact the Work**>.

1. Sustainable Design Features:

a. Material Reuse: Product is salvaged, refurbished, or reused.

C. Accessories: <**Insert accessories included with existing product**>.

2.2 EXISTING PRODUCTS TO BE REMOVED AND REINSTALLED

A. Basis for Pricing: <**Insert name of manufacturer and model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact the Work**>.

1. Sustainable Design Features:

a. Material Reuse: Product is salvaged, refurbished, or reused.

C. Accessories: <**Insert accessories included with existing product**>.

2.3 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2.4 MEDIUM-VOLTAGE TRANSFORMERS

A. Source Quality Control:

1. Factory Tests:

a. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.
b. Testing Administrant: [**Owner will engage**][**Engage**] qualified electrical testing agency to evaluate transformer.
c. Factory Tests and Inspections: Perform the following tests and inspections on transformer by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with IEEE C57.16 before delivering to site. Affix label with name and date of [**manufacturer's**][**qualified electrical testing laboratory's**] certification of system compliance.

1) Tests for Transformers 500 kVA and Smaller:

a) Turns ratio, polarity, and phase relation on rated voltage connection.
b) Transformer no-load losses and excitation current at 100 percent of ratings. This test may be based on a statistical sample.
c) Applied voltage and induced voltage.
d) Partial discharge.
e) Impedance voltage and load loss at rated current and rated frequency on rated voltage connection and at tap extremes.
f) Temperature rise at minimum and maximum ratings.
g) Impulse.
h) Insulation power factor.
i) Insulation resistance.
j) Audible sound level.
k) Short-circuit capability.
l) Operation of devices.
m) Control (auxiliary) and consumption loss data values.

2) Tests for Transformers 501 kVA and Larger:

a) Resistance measurements of windings on rated voltage tap and at tap extremes.
b) Turns ratio, polarity, and phase relation on rated voltage connection.
c) Transformer no-load losses and excitation current at 100 percent of ratings.
d) Impedance voltage and load loss at rated current and rated frequency on rated voltage connection and at tap extremes.
e) Applied voltage and induced voltage.
f) Partial discharge.
g) Leak test.
h) Temperature rise at minimum and maximum ratings.
i) Impulse.
j) Insulation power factor.
k) Insulation resistance.
l) Audible sound level.
m) Short-circuit capability.
n) Operation of devices.
o) Control (auxiliary) and consumption loss data values.

d. Nonconforming Work:

1) Equipment that does not pass tests and inspections will be considered defective.

e. Factory Test Reports: Compile and submit factory test and inspection reports.

B. Dry-Type, Medium-Voltage Transformers :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**GE Power; General Electric Company**]
d. [**Hammond Power Solutions Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]
f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**GE Power; General Electric Company**]
d. [**Hammond Power Solutions Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]
f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Transformers, Distribution, Dry Type, Over 600 V: UL CCN XPFS; including UL 1562 or IEEE C57.16.

4. Standard Features:

a. Referenced Standards: IEEE C2 and IEEE C57.16.
b. Windings Material: [**Aluminum**][**Copper**].
c. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, connected in each phase of incoming circuit and ahead of disconnecting device.
d. Cooling Systems: Comply with IEEE C57.12.01 for cooling class.

1) Self-Cooled Rating, Class <**Insert letters**>: <**Insert number**> kVA.
2) Future Forced-Air-Cooled Rating, Class <**Insert letters**>:

a) Self-Cooled: <**Insert number**> kVA.
b) Forced-Air Cooled: <**Insert number**> kVA.
c) Make provision for future addition of forced-air-cooling equipment. Transformer bushings, leads, and related components must be sized for future equipment. Provide fan mounts, conduit supports, and terminal boxes.

3) Forced-Air-Cooled Rating, Class <**Insert letters**>:

a) Self-Cooled: <**Insert number**> kVA.
b) Forced-Air Cooled: <**Insert number**> kVA.
c) Equip with forced-air-cooling equipment, including fans, conduit, wiring, motor controllers, and thermometer with alarm contacts for fan control.
d) Forced-air cooling must be regulated automatically by sensors placed in load-side winding's air ducts. Forced-air cooling must include three-phase electronic digital temperature monitor, fans, control wiring, control panel with test switch, indicating lights, alarm, and alarm silencing switch.[**Connect to control network.**]

e. Coils Insulation Systems:

1) Primary and secondary coil assemblies must be manufactured using polyester VPI system.
2) Primary and secondary coil assemblies must be manufactured using silicone resin VPE system.
3) Primary coil assembly must be manufactured using <**Insert system description**>. Secondary coil assembly must be manufactured using <**Insert system description**>.

f. Winding Connections: Connection of windings and terminal markings must comply with IEEE C57.12.70.
g. Efficiency: Comply with 10 CFR 431, Subpart K.
h. Bushings must comply with IEEE C57.19.01 requirements for impulse and low-frequency insulation levels.
i. Tap Changer: External, for de-energized operation.

1) Taps: Two 2-1/2 percent, full-capacity taps above and two 2-1/2 percent, full-capacity taps below rated voltage. Comply with IEEE C57.12.36 requirements.

j. Enclosure:

1) Provide with provisions for lifting and anchoring frame to concrete pad.
2) With integral skid-mounting frame, suitable to allow skidding or rolling of transformer

in any direction.

3) Enclosure Finish:

a) Outdoor Transformer Enclosure Finish: Factory-applied finish in manufacturer's standard color, corrosion resistant complying with IEEE C57.12.28.
b) Indoor Transformer Enclosure Finish: Factory-applied finish in manufacturer's standard gray over rust-inhibiting primer on treated metal surface.
c) Special Corrosion-Resistant Enclosure Finish: Factory-applied, corrosion-resistant finish in manufacturer's standard color that withstands [**120**][**480**] hours of exposure to salt-spray test specified in ASTM B117 without loss of paint or release of adhesion of paint primer coat to metal surface in excess of **1/16 inch (1.6 mm)** from test mark. Scribed test mark and test evaluation must be in accordance with ASTM D1654 with rating of not less than 7 in accordance with Table 1 (Procedure A). Cut edges or otherwise damaged surfaces of hot-dip galvanized sheet steel, or mill-galvanized sheet steel must be coated with manufacturer's standard zinc-rich paint.

k. Sound level must comply with requirements of NEMA TR 1.
l. Capacities and Characteristics:

1) Enclosure: [**Ventilated**][**Nonventilated**] power transformer, UL 50E [**Type 1**][**Type 2**][**Type 3R**] enclosure.
2) Additional IEEE Standards: Comply with IEEE C57.12.51.
3) Connections:

a) Primary: [**Air-filled terminal cabinet for cable connection**][**Throat for busway connection**][**Terminals for close connection to primary switch**].
b) Secondary: [**Air-filled terminal cabinet for cable connection**][**Throat for busway connection**].

4) Transformer Ratings.

a) Impedance: Not less than [**5.75**]<**Insert number**> percent.
b) Temperature Rise: [**150 deg C**]<**Insert deg C**>.

5) Coils Connection:

a) Line-Side Winding: [**Delta**]<**Insert connection**>.
b) Load-Side Winding: [**Wye**]<**Insert connection**>.

6) Voltage and BIL Ratings:

a) Nominal primary phase-to-phase voltage and BIL: [**4160 V, 30 kV**][**13 800 V, 60 kV**][**34 500 V, 150 kV**]<**Insert requirements**>.
b) Nominal secondary voltage and BIL: [**208Y/120 V, 10 kV**][**480Y/277 V, 10 kV**]<**Insert requirements**>.
c) K-Factor: <**Insert number**>, complying with UL 1562.

7) Taps: Two 2-1/2 percent, full-capacity taps above and two 2-1/2 percent, full-capacity taps below rated voltage. Comply with IEEE C57.12.51 requirements.
8) Transformer Accessories:

a) Dial-type analog thermometer with alarm contacts.
b) At least four stainless steel ground connection pads.

c) Provisions for jacking, lifting, and towing.
d) Machine-engraved nameplate made of anodized aluminum or stainless steel.

9) Heaters: Where outdoor cast-coil transformers are indicated on Drawings, they must include thermostatically controlled space heaters powered from [**external source that remains energized when transformer is de-energized**][**a fused control power transformer connected to primary side of substation transformer**].

m. Control Network: Support serial MS/TP and Ethernet IP communications, and able to communicate directly via TIA-485 serial networks and Ethernet 10Base-T networks as native device.

5. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

a. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events[**and unit must be fully operational after seismic events**].
b. Component Importance Factor (Ip): [**1.0**][**1.5**].
c. Component Amplification Factor (ap): [**1.0**]<**Insert value**>.
d. Component Response Modification Factor (Rp): [**2.5**]<**Insert value**>.
e. Component Overstrength Factor (Ωo): [**2.5**]<**Insert value**>.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and space conditions for compliance with requirements for dry-type, medium-voltage transformers and other conditions affecting performance of the Work.

B. Examine roughing-in of conduits and grounding systems to verify the following:

1. Wiring entries comply with layout requirements.
2. Entries are within conduit-entry tolerances specified by manufacturer, and no feeders may cross section barriers to reach load or line lugs.

C. Examine walls, floors, roofs, and concrete bases for suitable conditions for transformer installation.

D. Pre-Installation Checks:

1. Verify removal of shipping bracing after placement.

E. Verify that grounding and bonding connections are in place. Ground (earth) resistance at transformer location may not be greater than [**5 Ω**]<**Insert resistance in ohms**>.

F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF TRANSFORMERS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the

Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Commissioning of Electrical Systems: NECA NEIS 90.
5. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
6. Communications Work: BICSI N1.
7. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
8. Work in Confined Spaces: NFPA 350.
9. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
10. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Transformer must be installed level and plumb and must tilt less than 1.5 degrees while energized.
2. Maintain minimum clearances and workspace at equipment in accordance with manufacturer's published instructions and NFPA 70.
3. Grounding and Bonding:

    a. At Interior Locations: For grounding to grounding electrodes, provide bare copper cable not smaller than 4/0 AWG. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors. Keep leads as short as practicable, with no kinks or sharp bends. Make joints in grounding conductors and loops by exothermic weld or compression connector.
    b. At Exterior Locations:

        1) For counterpoise, provide tinned bare copper cable not smaller than 4/0 AWG, buried not less than **30 inch (765 mm)** below grade interconnecting grounding electrodes. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors. Keep lead lengths as short as practicable, with no kinks or sharp bends.
        2) Fence and equipment connections may not be smaller than 4 AWG. Ground fence at gate posts and corner post and at intervals not exceeding **10 ft (3 m)**. Bond gate sections to fence posts using **1/8 by 1 inch (3 by 25 mm)** [**tinned**]flexible braided copper strap and clamps.
        3) Make joints in grounding conductors and loops by exothermic weld or compression connector.

    c. Terminate grounding and bonding conductors on common equipment grounding terminal on transformer enclosure. Install supplemental terminal bars, lugs, and bonding jumpers as required to accommodate number of conductors for termination.
    d. Complete transformer tank grounding and lightning arrester connections prior to making other electrical connections.

4. Connect low-voltage wiring.

    a. Maintain air clearances between energized live parts and between live parts and ground for exposed connections in accordance with manufacturer's published instructions.
    b. Bundle associated phase, neutral, and equipment grounding conductors together within transformer enclosure. Arrange conductors such that there is not excessive strain that could cause loose connections. Allow adequate slack for expansion and contraction of conductors.

5. Terminate medium-voltage cables in incoming section of substations.

D. Interfaces with Other Work:

1. Identification: Provide labels for transformers and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure with engraved metal or laminated-plastic nameplate.
c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

2. Install transformers on cast-in-place concrete equipment base(s).
3. Provide vibration isolation and seismic control devices.

3.3 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

1. <**Insert requirements**>.

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

D. Tests and Inspections:

1. General Field-Testing Requirements:

a. Comply with provisions of "Testing and Test Methods" Chapter in NFPA 70B.
b. Perform visual and mechanical inspections and electrical tests. Certify compliance with test parameters.
c. After installing transformer but before primary is energized, verify that grounding system at substation is tested at specified value or less.
d. After installing transformer and after electrical circuitry has been energized, test for compliance with requirements.
e. Visual and Mechanical Inspection:

1) Verify equipment nameplate data complies with Contract Documents.
2) Inspect bolted electrical connections for high resistance using one of the following two methods:

a) Use low-resistance ohmmeter to compare bolted-connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
b) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or

NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.

2. Medium-Voltage Surge Arrester Field Tests:

   a. Visual and Mechanical Inspection:

      1) Inspect physical and mechanical condition.
      2) Inspect anchorage, alignment, grounding, and clearances.
      3) Verify arresters are clean.
      4) Verify that ground leads on devices are individually attached to ground bus or ground electrode.
      5) Verify that stroke counter is correctly mounted and electrically connected if applicable. Record stroke counter reading.

   b. Electrical Test:

      1) Perform insulation-resistance test on arresters, phase terminal-to-ground. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Replace units that fail to meet recommended minimum insulation resistance listed in that table.
      2) Perform watts-loss test. Evaluate watts-loss values by comparison with similar units and test equipment manufacturer's published data.

3. Dry-Type Transformer Field Tests:

   a. Visual and Mechanical Inspection:

      1) Test dew point of tank gases if applicable.
      2) Inspect anchorage, alignment, and grounding.
      3) Verify that resilient mounts are free and that shipping brackets have been removed.
      4) Verify bushings are clean.
      5) Verify that alarm, control, and trip settings on temperature and level indicators are set and operate within manufacturer's recommended settings.
      6) Verify that cooling fans operate correctly and have appropriate overcurrent protection.
      7) Perform specific inspections and mechanical tests recommended by manufacturer.
      8) Verify that as-left tap connections are as specified.

   b. Electrical Tests:

      1) Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index may not be less than 1.0.
      2) Perform power-factor or dissipation-factor tests on windings in accordance with test equipment manufacturer's published data.
      3) Perform power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV.
      4) Perform turns-ratio tests at tap positions. Turns-ratio test results may not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
      5) Perform excitation-current test on each phase. The typical excitation-current test data pattern for three-legged core transformer is two similar current readings and

one lower current reading. Investigate and correct if test shows different pattern.

6) Measure resistance of windings at tap connections, and record temperature-corrected winding-resistance values in Operations and Maintenance Manual.
7) Perform applied-voltage test on high- and load-side windings-to-ground. Comply with IEEE C57.12.91 provisions for field-deployed dielectric tests. Measurements must be made only when voltage and current have reached stable value. Test must be discontinued immediately in the event current begins to increase without stabilizing. Record test values in Operations and Maintenance Manual.
8) Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

E. Nonconforming Work:

1. Equipment and devices will be considered defective if they do not pass tests and inspections.
2. Remove and replace malfunctioning units and retest.

F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports. Record as-left set points of adjustable devices.

G. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.4 CLOSEOUT ACTIVITIES

A. Training:

1. [**With assistance from factory-authorized service representatives, train**][**Train**] Owner's maintenance personnel on the following topics:

a. How to adjust, operate, and maintain transformer equipment.

2. [**Provide video recordings of training sessions to Owner.**][**Allow Owner to record training sessions.**]

3.5 PROTECTION

A. After installation, protect transformer from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

3.6 MAINTENANCE

A. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:

1. During period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at outgoing section of transformers. Use voltmeters with calibration traceable to National Institute of Science and Technology standards and with chart speed of not less than **1 inch (25 mm)** per hour. Voltage unbalance greater than 1 percent between phases, or

deviation of phase voltage from nominal value by more than plus or minus 5 percent during test period, is unacceptable.

2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:

    a. Adjust transformer taps.
    b. Prepare written request for voltage adjustment by electric utility.

3. Retests: Repeat monitoring, after corrective action is performed, until satisfactory results are obtained.
4. Field Reports for Voltage Monitoring and Adjusting: Prepare written report covering monitoring performed and corrective action taken.

B. Infrared Scanning of Transformers: Perform survey during periods of maximum possible loading. Remove necessary covers prior to inspection.

1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of transformer's electrical power connections. Remove covers so joints and connections are accessible to portable scanner. Take visible light photographs at same locations and orientations as infrared scans for documentation to ensure follow-on scans match same conditions for valid comparison.
2. Instrument: Inspect distribution systems with imaging equipment capable of detecting a minimum temperature difference of 1 deg C at 30 deg C. Provide documentation of device calibration.
3. Field Reports for Infrared Scanning: Prepare certified report that identifies transformer equipment checked, testing technician, equipment used, and that describes scanning results. Include notation of deficiencies detected, remedial actions taken, and scanning observations after remedial action. List results as follows:

    a. Description of equipment to be tested.
    b. Discrepancies.
    c. Temperature difference between area of concern and reference area.
    d. Probable cause of temperature difference.
    e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
    f. Identify load conditions at time of inspection.
    g. Provide photographs and thermograms of deficient area.

4. Act on inspection results in accordance with recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.

END OF SECTION 26 12 16 00

Task	Specification	Specification Description
26 12 16 00	26 22 13 00	Low-Voltage Distribution Transformers

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 12 19 00 - PAD-MOUNTED, LIQUID-FILLED, MEDIUM-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Pad-mounted, liquid-filled, medium-voltage transformers.

B. Products Installed, but Not Furnished, under This Section:

1. <**Insert products identified in "Existing Products to be Modified" Article or "Existing Products to be Removed and Reinstalled" Article**>.

C. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. [**Section 013100 "Project Management and Coordination"**]<**Insert Section number and title**> for preinstallation conference procedures.
5. Section 260513 "Medium-Voltage Cables" specifies installation of medium-voltage cables.
6. Section 260519 "Low-Voltage Electrical Power Conductors and Cables" specifies installation of low-voltage wiring.
7. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
8. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
9. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration isolation and seismic control devices referenced by this Section.
10. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
11. Section 260573 "Power System Studies" specifies arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.

1.2 DEFINITIONS

A. Bushing: An insulating structure including a central conductor, or providing a central passage for a conductor, with provision for mounting on a barrier, conducting or otherwise, for the purpose of insulating the conductor from the barrier and conducting current from one side of the barrier to the other.

B. Bushing Elbow: An insulated device used to connect insulated conductors to separable insulated connectors on dead-front, pad-mounted transformers and to provide a fully insulated connection. This is also called an "elbow connector."

C. Bushing Insert: That component of a separable insulated connector that is inserted into a bushing well to complete a dead-front, load break or nonload break, separable insulated connector (bushing).

D. Bushing Well: A component of a separable insulated connector, either permanently welded or clamped to an enclosure wall or barrier, having a cavity that receives a replaceable component (bushing insert) to complete the separable insulated connector (bushing).

E. Elbow Connector: See "bushing elbow" above.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

B. Preinstallation Coordination Meeting(s): For {Insert system or product}. Conduct meeting(s) [**as videoconference**][**or**][**at Project site**]<**Insert location**> before <**Insert construction activity**>.

1. Attendees: Installers, fabricators, representatives of manufacturers, and administrants for field tests and inspections. Notify Architect[**, Construction Manager**][**, and Owner's Commissioning Authority**] of scheduled meeting dates.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.

a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for submitted product.

2. Product Certificates: Include product certificate stating compliance with IEEE C57.12.00, signed by manufacturer or fabricator.

B. Factory test reports.

C. Shop Drawings: Prepare and submit the following:

1. Plans and elevations showing major components and features.

a. Plan view and cross section of equipment base, showing clearances, required workspace, and locations of penetrations for grounding and conduits.

2. Details of equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of field connections.
3. Single-line diagram.
4. List of materials.
5. Nameplate data.

6. Manufacturer's published time-current curves of transformer line-side fuses, with transformer damage curve, inrush curve, and thru fault current indicated.

D. Sustainable Design Submittals:

1. Product data for sustainable design features for each type of product.

E. Field quality-control reports.

1.5 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

B. Manufacturer's field reports for field quality-control support.

C. Field reports for voltage monitoring and adjusting.

D. Field reports for infrared scanning.

1.6 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, conduct tests of complex equipment, analyze test and equipment data, plan a job, and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.

C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Delivery:

1. Upon delivery of transformers and prior to unloading, inspect equipment for damage that may have occurred during shipment or storage.
2. Verify that tie rods and chains are undamaged and tight, and that blocking and bracing is tight. Verify that there is no evidence of load shifting in transit, and that readings from transportation shock recorders, if equipped, are within manufacturer's recommendations.
3. Verify that there is no indication of external damage and no dents or scratches in doors and sill, tank walls, radiators and fins, or termination provisions.
4. Verify that there is no evidence of insulating-liquid leakage on transformer surfaces, at weld seams, on line- or load-side bushing parts, and at transformer base.
5. Verify that there is positive pressure or vacuum on tank. Check pressure gauge; it is required to read other than zero.

6. Compare transformers and accessories received with bill of materials to verify that shipment is complete. Verify that transformers and accessories conform with manufacturer's quotation and shop drawings. If shipment is incomplete or does not comply with Project requirements, notify manufacturer in writing immediately.
7. Verify presence of polychlorinated biphenyl content labeling.
8. Unload transformers carefully, observing packing label warnings and handling instructions.
9. Open termination compartment doors and inspect components for damage or displaced parts, loose or broken connections, cracked or chipped insulators, bent mounting flanges, dirt or foreign material, and water or moisture.

B. Storage:

1. Store transformers in accordance with manufacturer's recommendations.
2. Transformers may be stored outdoors. If possible, store transformers at final installation locations on concrete pads. If dry concrete surfaces are unavailable, use pallets of adequate strength to protect transformers from direct contact with ground. Ensure that transformer is level.
3. Ensure that transformer storage location is clean and protected from severe conditions. Protect transformers from dirt, water, contamination, and physical damage. Do not store transformers in the presence of corrosive or explosive gases. Protect transformers from weather when stored for more than three months.
4. Store transformers with compartment doors closed.
5. Regularly inspect transformers while in storage and maintain documentation of storage conditions, noting discrepancies or adverse conditions. Verify that effective pressure seal is maintained using pressure gauges. Visually check for insulating-liquid leaks and rust spots.

C. Handling:

1. Handle transformers carefully, in accordance with manufacturer's recommendations, to avoid damage to enclosure, termination compartments, base, frame, tank, and internal components. Do not subject transformers to impact, jolting, jarring, or rough handling.
2. Protect transformer termination compartments against entrance of dust, rain, and snow.
3. Transport transformers upright, to avoid internal stresses on core and coil mounting assembly and to prevent trapping air in windings. Do not tilt or tip transformers.
4. Verify that transformer weights are within rated capacity of handling equipment.
5. Use only manufacturer-recommended points for lifting, jacking, and pulling. Use lifting lugs when lifting transformers.
6. Use jacks only at corners of tank base plate.
7. Use nylon straps of same length to balance and distribute weight when handling transformers with crane.
8. Use spreaders or lifting beam to obtain vertical lift and to protect transformer from straps bearing against enclosure. Lifting cable pull angles may not be greater than 15 degrees from vertical.
9. Exercise care not to damage tank base structure when handling transformer using skids or rollers. Use skids to distribute stresses over tank base when using rollers under large transformers.

1.8 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

A. Modeling, analysis, product selection, installation, and quality control for all electrical Work on the Project must comply with service condition requirements specified in Section 018116 "Facility Environmental Requirements" and Section 018123 "Facility Seismic and Wind Criteria."

B. Usual Service Conditions: Unless unusual service conditions have been specified in "General Environmental Conditions," "Outdoor Conditions," and "Indoor Conditions" articles of Section 018116

"Facility Environmental Requirements," electrical service and distribution equipment must be suitable for operation under usual service conditions specified in applicable IEEE C57 series standards.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact the Work**>.

1. Sustainable Design Features:

a. Material Reuse: Product is salvaged, refurbished, or reused.

C. Accessories: <**Insert accessories included with existing product**>.

2.2 EXISTING PRODUCTS TO BE REMOVED AND REINSTALLED

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact the Work**>.

1. Sustainable Design Features:

a. Material Reuse: Product is salvaged, refurbished, or reused.

C. Accessories: <**Insert accessories included with existing product**>.

2.3 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2.4 PAD-MOUNTED, LIQUID-FILLED, MEDIUM-VOLTAGE TRANSFORMERS

A. Source Quality Control:

1. Factory Tests:

a. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.
b. Testing Administrant: [**Owner will engage**][**Engage**] qualified electrical testing agency to evaluate transformer.
c. Factory Tests and Inspections: Perform the following tests and inspections on transformer, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with IEEE C57.12.00 before delivering to site. Affix label

with name and date of [**manufacturer's**][**qualified electrical testing laboratory's**] certification of system compliance.

1) Resistance.
2) Turns ratio, polarity, and phase relation.
3) Transformer no-load losses and excitation current at 100 percent of ratings.
4) Transformer impedance voltage and load loss.
5) Operation of devices.
6) Lightning impulse.
7) Low frequency.
8) Leak.
9) Perform Optional Tests:

a) Transformer no-load losses and excitation current at 110 percent of ratings.
b) Insulation power factor.
c) Applied potential, except that this test is not required for single-phase transformers or for three-phase Y-Y-connected transformers.
d) Induced potential.
e) Resistance measurements of windings on rated voltage connection and at tap extreme connections.
f) Ratios on rated voltage connection and at tap extreme connections.
g) Polarity and phase relation on rated voltage connection.
h) No-load loss at rated voltage on rated voltage connection.
i) Exciting current at rated voltage on rated voltage connection.
j) Impedance.

d. Nonconforming Work:

1) Equipment that does not pass tests and inspections will be considered defective.

e. Factory Test Reports: Compile and submit factory test and inspection reports.

B. Single-Phase, Pad-Mounted Transformers :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Eaton**]
b. [**ERMCO-ECI**]
c. [**GE Power; General Electric Company**]
d. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
e. [**Howard Industries, Inc**]
f. [**Prolec GE; A Xignux and General Electric Company Joint Venture**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Eaton**]
b. [**ERMCO-ECI**]
c. [**GE Power; General Electric Company**]

d. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
e. [**Howard Industries, Inc**]
f. [**Prolec GE; A Xignux and General Electric Company Joint Venture**]
g. **<Insert manufacturer's name>**

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Transformers, Distribution, Liquid-Filled Type, Over 600 V: UL CCN XPLH; including IEEE C57.12.00 and IEEE C57.12.28.

4. Standard Features:

   a. [**Oil-filled**][**Less-flammable-liquid-filled**], two-winding, 60 Hz, 65 deg C rise above 30 deg C average ambient, self-cooled transformer.
   b. Reference Standards: IEEE C2 and IEEE C57.12.38.
   c. Windings Material: [**Aluminum**][**Copper**].
   d. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, fully shielded, separable-elbow type, suitable for plugging into inserts provided in line-side section of transformer. Connected in each phase of incoming circuit and ahead of disconnecting device.
   e. Winding Connections: Connection of windings and terminal markings must comply with IEEE C57.12.70.
   f. Efficiency: Comply with 10 CFR 431, Subpart K.
   g. Insulation: Transformer kVA rating must be as follows: Average winding temperature rise above 30 deg C ambient temperature must not exceed 65 deg C and 80 deg C hottest-spot temperature rise at rated kVA when tested in accordance with IEEE C57.12.90, using combination of connections and taps that give highest average winding temperature rise.
   h. Tap Changer: External handle, for de-energized operation.
   i. Tank: Sealed, with welded-on cover.[**Designed to withstand internal pressure of not less than 7 psi (50 kPa) without permanent distortion and 15 psig (104 kPa) without rupture. Comply with IEEE C57.12.36.**]
   j. Enclosure Integrity: Comply with IEEE C57.12.28 for pad-mounted enclosures that contain energized electrical equipment in excess of 600 V that may be exposed to public.
   k. Mounting: Integral skid mounting frame, suitable to allow skidding or rolling of transformer in any direction, and with provision for anchoring frame to pad.
   l. Insulating Liquids:

      1) Mineral Oil: ASTM D3487, Type II, and tested for compliance with ASTM D117.
      2) Less-Flammable Liquids:

         a) Edible-Seed-Oil-Based Dielectric: Listed and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic, having passed Organisation for Economic Co-operation and Development G.L.203 with zero mortality, and must be certified by U.S. Environmental Protection Agency as biodegradable, meeting Environmental Technology Verification requirements.
         b) Biodegradable and Nontoxic Dielectric: Listed and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92.

   m. Sound level must comply with NEMA TR 1 requirements.

n. Corrosion Protection:

1) Transformer coating system must be factory applied, complying with requirements of [**IEEE C57.12.28**][**IEEE C57.12.29**], in manufacturer's standard color [**green**]<**Insert color**>.
2) Fabricate front sill, hood, and tank base of single-compartment transformers from stainless steel in accordance with ASTM A167, Type 304 or 304L, not less than No. 13 U.S. gage, complying with requirements of [**IEEE C57.12.28**][**IEEE C57.12.29**], standard color [**green**]<**Insert color**>.
3) Base and Cabinets of Two Compartment Transformers: Fabricate from stainless steel in accordance with ASTM A167, Type 304 or 304L, not less than No. 13 U.S. gage. Coat transformer with manufacturer's standard green color coating complying with requirements of [**IEEE C57.12.28**][**IEEE C57.12.29**], in manufacturer's standard color [**green**]<**Insert color**>.

o. Compartment Construction:

1) Single compartment for line- and load-side sections, clamshell style, with provision for padlocking hinged cover and single-point latching.
2) Individual compartments for line- and load-side sections, formed by steel isolating barriers that extend full height and depth of compartments. With hinged, lift-off doors, with stop in open position, three-point latching, and provision for padlocking.
3) Provide [**Type 1**][**Type 2**] terminal arrangement.

p. Primary Fusing: Designed and rated to provide thermal protection of transformer by sensing overcurrent and high liquid temperature.

1) 150 kV BIL current-limiting fuses, conforming to requirements of IEEE C37.42.
2) Interrupting Rating: 50 000 A(rms sym) at system voltage.
3) Fuse Assembly: Bayonet-type, liquid-immersed, expulsion fuses in series with liquid-immersed, partial-range, current-limiting fuses. Bayonet fuse must sense both high currents and high oil temperatures to provide transformer with thermal protection.
4) Provide bayonet fuse assembly with oil retention valve and external drip shield inside housing to eliminate or minimize oil spills. Valve must close when fuse holder is removed.
5) Provide conspicuously displayed warning adjacent to bayonet fuse(s), cautioning against removing or inserting fuses unless transformer has been de-energized and tank pressure has been released.

q. Line-Side Section: Dead-front design.

1) To connect primary cable, use separable insulated connectors. Bushings must be one-piece units, with ampere and BIL ratings same as connectors.
2) Bushing inserts[**and feed-through inserts**]:

a) Conform to requirements of IEEE 386.
b) Rated at 200 A, with voltage class matching connectors. Provide parking stand near bushing wells.[**Parking stands must be with insulated standoff bushings for parking of energized load-break elbow connectors on parking stands.**]
c) Provide insulated protective caps for insulating and sealing out moisture from unused bushing inserts[**and insulated standoff bushings**].

3) Bushing wells configured for loop-feed application.

4) Access to liquid-immersed fuses.
5) Dead-front surge arrester(s).
6) Tap-changer operator.
7) Ground pad.

r. Load-Side Section:

1) Bushings with spade terminals drilled for terminating number of conductors indicated on the Drawings, and lugs that comply with requirements of Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
2) Metering: Coordinated with and complying with requirements of Section 262713 "Electricity Metering." [**Install**][**Make provision for installation by providing mounting space, brackets, and cable and conduit routing as well as**] the following:

a) Sensors.
b) BAS interface.
c) Kilowatt-hour meter.
d) Kilowatt-hour demand meter.

s. Capacities and Characteristics:

1) Power Rating: <**Insert number**> kVA.
2) Voltage Ratings: <**Insert primary voltage**> V - [**240/120**][**480/240**] V.
3) Taps: [**Four 2.5 percent, full-capacity taps below rated primary voltage**]<**Insert description**>.
4) Transformer BIL (kV): [**Comply with IEEE C57.12.38 requirements**]<**Insert number**>.
5) Minimum Tested Impedance (Percent) at 85 deg C: [**1.25**][**2.1**][**3.0**][**3.2**]<**Insert number**>.

t. Transformer Accessories:

1) Drain and filter connection.
2) Filling and top filter press connections.
3) Pressure-vacuum gauge.
4) Dial-type analog thermometer with alarm contacts.
5) Magnetic liquid level indicator with high and low alarm contacts.
6) Automatically resetting pressure-relief device. Device flow must be as recommended by manufacturer.[**With alarm contacts and manual bleeder.**]
7) Stainless steel ground connection pads.
8) Machine-engraved nameplate made of anodized aluminum or stainless steel.
9) Sudden pressure relay for remote alarm or trip when internal transformer pressure rises at field-set rate. Provide [**with**][**without**] seal-in delay.

u. Control Network: Support serial MS/TP and Ethernet IP communications, and able to communicate directly via TIA-485 serial networks and Ethernet 10Base-T networks as native device.

5. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

a. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events[**and unit must be fully operational after seismic events**].
b. Component Importance Factor (Ip): [**1.0**][**1.5**].

c. Component Amplification Factor (ap): [**1.0**]<**Insert value**>.
d. Component Response Modification Factor (Rp): [**2.5**]<**Insert value**>.
e. Component Overstrength Factor (Ωo): [**2.5**]<**Insert value**>.

C. Three-Phase, Pad-Mounted Transformers :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Eaton**]
   b. [**ERMCO-ECI**]
   c. [**GE Power; General Electric Company**]
   d. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
   e. [**Howard Industries, Inc**]
   f. [**Prolec GE; A Xignux and General Electric Company Joint Venture**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Eaton**]
   b. [**ERMCO-ECI**]
   c. [**GE Power; General Electric Company**]
   d. [**Hitachi Energy USA Inc.; business of Hitachi, Ltd.**]
   e. [**Howard Industries, Inc**]
   f. [**Prolec GE; A Xignux and General Electric Company Joint Venture**]
   g. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Transformers, Distribution, Liquid-Filled Type, Over 600 V: UL CCN XPLH; including IEEE C57.12.00 and IEEE C57.12.28.

4. Standard Features:

   a. [**Oil-filled**][**Less-flammable-liquid-filled**], two-winding, 60 Hz, 65 deg C rise above 30 deg C average ambient, self-cooled transformer.
   b. Reference Standards: IEEE C2 and IEEE C57.12.26.
   c. Windings Material: [**Aluminum**][**Copper**].
   d. Surge Arresters: Comply with IEEE C62.11, Distribution Class; metal-oxide-varistor type, fully shielded, separable-elbow type, suitable for plugging into inserts provided in line-side section of transformer. Connected in each phase of incoming circuit and ahead of disconnecting device.
   e. Winding Connections: Connection of windings and terminal markings must comply with IEEE C57.12.70.
   f. Efficiency: Comply with 10 CFR 431, Subpart K.
   g. Insulation: Transformer kVA rating must be as follows: Average winding temperature rise above 30 deg C ambient temperature must not exceed 65 deg C and 80 deg C hottest-spot temperature rise at rated kVA when tested in accordance with IEEE C57.12.90, using

combination of connections and taps that give highest average winding temperature rise.

h. Tap Changer: External handle, for de-energized operation.

i. Tank: Sealed, with welded-on cover.[**Designed to withstand internal pressure of not less than 7 psi (50 kPa) without permanent distortion and 15 psig (104 kPa) without rupture. Comply with IEEE C57.12.36.**]

j. Enclosure Integrity: Comply with IEEE C57.12.28 for pad-mounted enclosures that contain energized electrical equipment in excess of 600 V that may be exposed to public.

k. Mounting: Integral skid mounting frame, suitable to allow skidding or rolling of transformer in any direction, and with provision for anchoring frame to pad.

l. Insulating Liquids:

1) Mineral Oil: ASTM D3487, Type II, and tested for compliance with ASTM D117.

2) Less-Flammable Liquids:

a) Edible-Seed-Oil-Based Dielectric: Listed and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92. Liquid must be biodegradable and nontoxic, having passed Organisation for Economic Co-operation and Development G.L.203 with zero mortality, and must be certified by U.S. Environmental Protection Agency as biodegradable, meeting Environmental Technology Verification requirements.

b) Biodegradable and Nontoxic Dielectric: Listed and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction as complying with NFPA 70 requirements for fire point of not less than 300 deg C when tested in accordance with ASTM D92.

m. Sound level must comply with NEMA TR 1 requirements.

n. Corrosion Protection:

1) Transformer coating system must be factory applied, complying with requirements of [**IEEE C57.12.28**][**IEEE C57.12.29**], in manufacturer's standard color [**green**]<**Insert color**>.

2) Fabricate front sill, hood, and tank base of single-compartment transformers from stainless steel in accordance with ASTM A167, Type 304 or 304L, not less than No. 13 U.S. gage, complying with requirements of [**IEEE C57.12.28**][**IEEE C57.12.29**], standard color [**green**]<**Insert color**>.

3) Base and Cabinets of Two Compartment Transformers: Fabricate from stainless steel in accordance with ASTM A167, Type 304 or 304L, not less than No. 13 U.S. gage. Coat transformer with manufacturer's standard green color coating complying with requirements of [**IEEE C57.12.28**][**IEEE C57.12.29**], in manufacturer's standard color [**green**]<**Insert color**>.

o. Compartment Construction:

1) Single-Compartment Construction: Clamshell style, with provision for padlocking, hinged cover, and single-point latching.

2) Double-Compartment Construction: Individual compartments for line- and load-side sections, formed by steel isolating barriers that extend full height and depth of compartments, with hinged, lift-off doors and three-point latching, with stop in open position and provision for padlocking.

p. Primary Fusing: Designed and rated to provide thermal protection of transformer by sensing overcurrent and high liquid temperature.

1) 150 kV BIL current-limiting fuses, conforming to requirements of IEEE C37.42.

2) Interrupting Rating: 50 000 A(rms sym) at system voltage.
3) Fuse Assembly: Bayonet-type, liquid-immersed, expulsion fuses in series with liquid-immersed, partial-range, current-limiting fuses. Bayonet fuse must sense both high currents and high oil temperature to provide thermal protection to transformer.[**Connect current-limiting fuses ahead of radial-feed load-break switch.**]
4) Provide bayonet fuse assembly with oil retention valve and external drip shield inside housing to eliminate or minimize oil spills. Valve must close when fuse holder is removed and external drip shield is installed.
5) Provide conspicuously displayed warning adjacent to bayonet fuse(s), cautioning against removing or inserting fuses unless transformer has been de-energized and tank pressure has been released.

q. Line-Side Section: Dead-front design.

1) To connect primary cable, use separable insulated connectors; coordinated with and complying with requirements of Section 260513 "Medium-Voltage Cables." Bushings must be one-piece units, with ampere and BIL ratings same as connectors.
2) Bushing inserts[**and feed-through inserts**]:

a) Conform to requirements of IEEE 386.
b) Rated at 200 A, with voltage class matching connectors. Provide parking stand near bushing wells.[**Parking stands must be equipped with insulated standoff bushings for parking of energized load-break elbow connectors on parking stands.**]
c) Provide insulated protective caps for insulating and sealing out moisture from unused bushing inserts[**and insulated standoff bushings**].

3) Bushing wells configured for loop-feed application.
4) Access to liquid-immersed fuses.
5) Dead-front surge arresters.
6) Tap-changer operator.
7) Ground pad.

r. Load-Break Switch:

1) Radial-feed, liquid-immersed type with voltage class and BIL matching that of separable connectors, with continuous current rating and load-break rating of [**200 A**][**300 A**]<**Insert amperage**>, and make-and-latch rating of 12 kA(rms sym).
2) Loop-feed sectionalizing switches, using three two-position, liquid-immersed-type switches for closed transition loop-feed and sectionalizing operation. Voltage class and BIL must match that of separable connectors, with continuous current rating and load-break rating of [**200 A**][**300 A**]<**Insert amperage**>, and make-and-latch rating of 12 kA(rms sym). Switch operation must be as follows:

a) Position I: Line A connected to line B and both lines connected to transformer.
b) Position II: Transformer connected to line A only.
c) Position III: Transformer connected to line B only.
d) Position IV: Transformer disconnected and line A not connected to line B.
e) Position V: Transformer disconnected and line A connected to line B.

s. Load-Side Section:

1) Bushings with spade terminals drilled for terminating number of conductors indicated on the Drawings, and lugs that comply with requirements of Section 260519 "Low-

Voltage Electrical Power Conductors and Cables."

2) Metering: Coordinated with and complying with requirements of Section 262713 "Electricity Metering." [**Install**][**Make provision for installation by providing mounting space, brackets, and cable and conduit routing as well as**] the following:

a) Sensors.
b) BAS interface.
c) Kilowatt-hour meter.
d) Kilowatt-hour demand meter.

t. Capacities and Characteristics:

1) Power Rating: <**Insert number**> kVA.
2) Voltage Ratings: <**Insert primary voltage**> V - [**208Y/120**][**480Y/277**] V.
3) Taps: [**Comply with IEEE C57.12.26 requirements**]<**Insert values**>.
4) Transformer BIL (kV): [**Comply with IEEE C57.12.26 requirements**]<**Insert number**>.
5) Minimum Tested Impedance (Percent) at 85 deg C: [**2.50**][**2.87**][**4.03**][**5.75**]<**Insert number**>.
6) K-factor: <**Insert number**>.
7) Comply with FM Global Class No. 3990.
8) Comply with UL listing requirements for combination classification and listing for transformer and less-flammable insulating liquid.

u. Transformer Accessories:

1) Drain and filter connection.
2) Filling and top filter press connections.
3) Pressure-vacuum gauge.
4) Dial-type analog thermometer with alarm contacts.
5) Magnetic liquid level indicator with high and low alarm contacts.
6) Automatically resetting pressure-relief device. Device flow must be as recommended by manufacturer.[**With alarm contacts and manual bleeder.**]
7) Stainless steel ground connection pads.
8) Machine-engraved nameplate, made of anodized aluminum or stainless steel.
9) Sudden pressure relay for remote alarm or trip when internal transformer pressure rises at field-set rate. Provide [**with**][**without**] seal-in delay.

v. Control Network: Support serial MS/TP and Ethernet IP communications, and able to communicate directly via TIA-485 serial networks and Ethernet 10Base-T networks as native device.

5. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

a. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events[**and unit must be fully operational after seismic events**].
b. Component Importance Factor (Ip): [**1.0**][**1.5**].
c. Component Amplification Factor (ap): [**1.0**]<**Insert value**>.
d. Component Response Modification Factor (Rp): [**2.5**]<**Insert value**>.
e. Component Overstrength Factor (Ωo): [**2.5**]<**Insert value**>.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and space conditions for compliance with requirements for pad-mounted, liquid-filled, medium-voltage transformers and other conditions affecting performance of the Work.

B. Examine roughing-in of conduits and grounding systems to verify the following:

1. Wiring entries comply with layout requirements.
2. Entries are within conduit-entry tolerances specified by manufacturer, and no feeders will cross section barriers to reach load or line lugs.

C. Examine concrete bases for suitable conditions for transformer installation.

D. Preinstallation Checks:

1. Verify removal of shipping bracing after placement.
2. Remove sample of insulating liquid in accordance with ASTM D923. Insulating-liquid values must comply with NETA ATS, Table 100.4. Sample must be tested for the following:

a. Dielectric Breakdown Voltage: ASTM D877 or ASTM D1816.
b. Acid Neutralization Number: ASTM D974.
c. Specific Gravity: ASTM D1298.
d. Interfacial Tension: ASTM D971.
e. Color: ASTM D1500.
f. Visual Condition: ASTM D1524.
g. Water in Insulating Liquids: Comply with ASTM D1533.
h. Power Factor or Dissipation Factor: ASTM D924.

E. Verify that grounding and bonding connections are in place. Ground (Earth) resistance may not exceed [**5 Ω**]<**Insert resistance in ohms**> at transformer location.

F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Commissioning of Electrical Systems: NECA NEIS 90.
5. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
6. Communications Work: BICSI N1.
7. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
8. Work in Confined Spaces: NFPA 350.
9. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.

10. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Install transformers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 260529 "Hangers and Supports for Electrical Systems."
2. Transformer must be installed level and plumb and must tilt less than 1.5 degrees while energized.
3. Maintain minimum clearances and workspace at equipment in accordance with manufacturer's published instructions and IEEE C2.

D. Grounding and Bonding:

1. For counterpoise, use tinned bare copper cable not smaller than 4/0 AWG, buried not less than **30 inch (765 mm)** below grade interconnecting grounding electrodes. Bond surge arrester and neutrals directly to transformer enclosure and then to grounding electrode system with bare copper conductors, sized as shown. Keep lead lengths as short as practicable, with no kinks or sharp bends.
2. Fence and equipment connections may not be smaller than 4 AWG. Ground fence at gate posts and corner posts and at intervals not exceeding **10 ft (3 m)**. Bond gate sections to fence posts using **1/8 by 1 inch (3 by 25 mm)** [**tinned**]flexible braided copper strap and clamps.
3. Make joints in grounding conductors and loops by exothermic weld or compression connector.
4. Terminate grounding and bonding conductors on common equipment grounding terminal on transformer enclosure.
5. Complete transformer tank grounding and lightning arrester connections prior to making other electrical connections.

E. Connect low-voltage wiring.

1. Maintain air clearances between energized live parts and between live parts and ground for exposed connections in accordance with manufacturer recommendations.
2. Bundle associated phase, neutral, and equipment grounding conductors together within transformer enclosure. Arrange conductors such that there is not excessive strain that could cause loose connections. Allow adequate slack for expansion and contraction of conductors.

F. Terminate medium-voltage cables in incoming section of transformers.

G. Interfaces with Other Work:

1. Identification: Provide labels for transformers and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure with engraved metal or laminated-plastic nameplate.
c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

2. Install transformers on cast-in-place concrete equipment base(s).
3. Provide vibration isolation and seismic control devices.

3.3 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.

2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

1. <**Insert requirements**>.

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

D. Tests and Inspections:

1. General Field-Testing Requirements:

a. Comply with provisions of "Testing and Test Methods" Chapter in NFPA 70B.
b. Perform visual and mechanical inspections and electrical tests. Certify compliance with test parameters.
c. After installing transformer but before primary is energized, verify that grounding system at transformer is tested at specified value or less.
d. After installing transformer and after electrical circuitry has been energized, test for compliance with requirements.
e. Visual and Mechanical Inspection:

1) Verify equipment nameplate data complies with the Contract Documents.
2) Inspect bolted electrical connections for high resistance using one of the following two methods:

a) Use low-resistance ohmmeter to compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
b) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.

2. Medium-Voltage Surge Arrester Field Tests:

a. Visual and Mechanical Inspection:

1) Inspect physical and mechanical condition.
2) Verify arresters are clean.
3) Verify that ground leads on devices are individually attached to ground bus or ground electrode.

b. Electrical Test:

1) Perform insulation-resistance test on arresters, phase terminal-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of

manufacturer's published data, comply with NETA ATS, Table 100.1. Replace units that fail to comply with recommended minimum insulation resistance listed in that table.

2) Perform watts-loss test. Evaluate watts-loss values by comparison with similar units and test equipment manufacturer's published data.

3. Liquid-Filled Transformer Field Tests:

a. Visual and Mechanical Inspection:

1) Test dew point of tank gases if applicable.
2) Inspect anchorage, alignment, and grounding.
3) Verify bushings are clean.
4) Verify that alarm, control, and trip settings on temperature and level indicators are set and operate within manufacturer's recommended settings.
5) Verify that liquid level in tanks is within manufacturer's published tolerances.
6) Perform specific inspections and mechanical tests recommended by manufacturer.
7) Verify presence of transformer surge arresters and that their ratings are as specified.
8) Verify that as-left tap connections are as specified.

b. Electrical Tests:

1) Perform insulation-resistance tests winding-to-winding and windings-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index; value of index may not be less than 1.0.
2) Perform power-factor or dissipation-factor tests on windings in accordance with test equipment manufacturer's published data. Maximum winding insulation power-factor/dissipation-factor values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.3.
3) Measure core insulation resistance at 500 V(dc) if core is insulated and core ground strap is removable. Core insulation-resistance values may not be less than 1 MΩ at 500 V(dc).
4) Perform power-factor or dissipation-factor tip-up test on windings greater than 2.5 kV.
5) Perform Optional Field Tests:

a) Perform turns-ratio tests at tap positions. Turns-ratio test results may not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
b) Perform excitation-current test on each phase. Typical excitation-current test data pattern for three-legged core transformer is two similar current readings and one lower current reading. Investigate and correct if test shows different pattern.
c) Measure resistance of windings at tap connections, and record temperature-corrected winding-resistance values in Operations and Maintenance Manual.
d) Perform applied-voltage test on line- and load-side windings-to-ground. Comply with IEEE C57.12.91, Sections 10.2 and 10.9. This test is not required for single-phase transformers and for three-phase wye-wye-connected transformers.

6) Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.
7) Remove sample of insulating liquid in accordance with ASTM D923, and perform dissolved-gas analysis in accordance with IEEE C57.104 or ASTM D3612.

E. Nonconforming Work:

1. Equipment and devices will be considered defective if they do not pass tests and inspections.
2. Remove and replace malfunctioning units and retest.

F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports. Record as-left set points of adjustable devices.

G. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.4 CLOSEOUT ACTIVITIES

A. Training:

1. [**With assistance from factory-authorized service representatives, train**][**Train**] Owner's maintenance personnel on the following topics:

a. How to adjust, operate, and maintain transformer equipment.

2. [**Provide video recordings of training sessions to Owner**][**Allow Owner to record training sessions**].

3.5 PROTECTION

A. After installation, protect transformer from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

3.6 MAINTENANCE

A. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:

1. During period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at outgoing section of transformers. Use voltmeters with calibration traceable to National Institute of Science and Technology standards and with chart speed of not less than **1 inch (25 mm)** per hour. Voltage unbalance greater than 1 percent between phases, or deviation of phase voltage from nominal value by more than plus or minus 5 percent during test period, is unacceptable.
2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:

a. Adjust transformer taps.
b. Prepare written request for voltage adjustment by electric utility.

3. Retests: Repeat monitoring, after corrective action is performed, until satisfactory results are

obtained.

4. Field Reports for Voltage Monitoring and Adjusting: Prepare written report covering monitoring performed and corrective action taken.

B. Infrared Scanning of Transformers: Perform survey during periods of maximum possible loading. Remove necessary covers prior to inspection.

1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of transformer's electrical power connections. Remove covers so joints and connections are accessible to portable scanner. Take visible light photographs at same locations and orientations as infrared scans for documentation to ensure follow-on scans match same conditions for valid comparison.
2. Instrument: Inspect distribution systems with imaging equipment capable of detecting minimum temperature difference of 1 deg C at 30 deg C. Provide documentation of device calibration.
3. Field Reports for Infrared Scanning: Prepare certified report that identifies transformer equipment checked, testing technician, and equipment used, and that describes scanning results. Include notation of deficiencies detected, remedial actions taken, and scanning observations after remedial action. List results as follows:

    a. Description of equipment to be tested.
    b. Discrepancies.
    c. Temperature difference between area of concern and reference area.
    d. Probable cause of temperature difference.
    e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
    f. Identify load conditions at time of inspection.
    g. Provide photographs and thermograms of deficient area.

4. Act on inspection results in accordance with recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.

END OF SECTION 26 12 19 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 12 19 00A - LOW-VOLTAGE SWITCHGEAR

PART 1 - GENERAL

1.1 SUMMARY

A. The Work of This Section Includes:

1. Metal-enclosed, low-voltage switchgear, with drawout power circuit breakers and metering and control accessories.

a. Switchgear structure.
b. Additional requirements for indoor switchgear.
c. Additional requirements for outdoor switchgear.
d. Circuit breakers.
e. Arc-flash limiting feeder circuit breakers.
f. Zone-selective interlocking.
g. Network protectors.
h. Surge suppression.
i. Control power supply, 120 V(ac).
j. Control power supply, 24 V(dc).
k. Instrumentation and control.

B. Products Furnished, but Not Installed, under This Section:

1. <**Insert products furnished, but not installed**>.

C. Products Installed, but Not Furnished, under This Section:

1. <**Insert products installed, but not furnished**>.

D. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. [**Section 013100 "Project Management and Coordination"**]<**Insert Section number and title**> for preinstallation conference procedures.
4. Section 230923.13 "Energy Meters" for electricity meters for HVAC equipment.
5. Section 262713 "Electricity Metering" for equipment to meter electricity consumption and demand for submetering.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

B. Preinstallation Coordination Meeting(s): For switchgear. Conduct meeting(s) [**as videoconference**][**or**][**at Project site**]<**Insert location**> before <**Insert construction activity**>.

1. Attendees: Installers, fabricators, representatives of manufacturers, and administrants for field tests and inspections. Notify Architect[**, Construction Manager**][**, and Owner's Commissioning Authority**] of scheduled meeting dates.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for switchgear.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings:

1. For low-voltage switchgear.

a. System Power One-Line Diagrams: Depict power sources, feeders, distribution components, and major loads. Include as-built data for low-voltage power switchgear and connections as follows:

1) Frame size of circuit breakers.
2) Trip rating for circuit breakers.
3) Conduit and wire size for feeders.

b. Include plans, elevations, sections, shipping splits, and mounting details.
c. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of field connections.
d. Wire Termination Diagrams and Schedules: Include diagrams for power, signal, and control wiring. Identify terminals and wiring designations and color-codes to facilitate installation, operation, and maintenance. Indicate recommended types, wire sizes, and circuiting arrangements for field-installed wiring, and show circuit protection features. Differentiate between manufacturer-installed and field-installed wiring.
e. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices used. Describe characteristics of network and other data communication lines.
f. Indicate short-time and short-circuit current rating of switchgear assembly.
g. Include features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
h. Include mimic-bus diagram.

C. Delegated Design Submittals: For low-voltage switchgear.

1. Comply with Section 260572 "Overcurrent Protective Device Short-Circuit Study" and Section 260573.16 "Coordination Studies."
2. For differential ground-fault protection scheme. Include wiring diagram of differential system along with test procedure recommended by UL 1558, using high-current injection equipment.

D. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Product Test Reports: Submit evidence that switchgear is compatible with connected monitoring and control devices and systems specified in [**Section 260913 "Electrical Power Monitoring"**]<**Insert Section number and title for integrated controls**>.

1. Show interconnecting signal and control wiring, and interface devices to show compatibility of meters.
2. For reporting and billing interfaces and adapters, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of protocol.

B. Manufacturers' Published Instructions: Record copy of official installation[**and testing**] instructions issued to Installer by manufacturer for the following:

1. For unloading and inspection, clearances, torque values, insulation-resistance testing, dielectric withstand-voltage testing, breaker testing, power factor testing, grounding, ground-fault protection testing, batteries and chargers testing, and system functional testing.

C. Source quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. System Power Riser Diagram: For switchgear, using non-fugitive ink on high-quality paper. Post on wall at switchgear location.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Spare Parts: Furnish to Owner the following spare parts for repairing switchgear that are packaged with protective covering for storage on-site and identified with labels describing contents:

1. Drawout Circuit Breakers: One of each type and rating used for circuit breaker in switchgear.
2. Fuses: [**One**]<**Insert number**> for every [**three**]<**Insert number**> of each type and rating, but no fewer than three of each for the following:

a. Potential transformers.
b. Control power circuits.

B. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to switchgear, packaged with protective covering for storage on-site and identified with labels describing contents. Include the following:

1. Portable test set for testing functions of circuit-breaker, solid-state trip devices without removal from switchgear.
2. Relay and meter test plugs suitable for testing switchgear meters and switchgear class relays.
3. Racking handle to move circuit breaker manually between connected and disconnected positions.
4. Circuit-Breaker Removal Apparatus:

a. Floor Type: Portable, floor-supported, roller-base, elevating carriage arranged for moving circuit breakers in and out of compartments.
b. Overhead Type: Overhead-circuit-breaker lifting device, track mounted at top front of switchgear and complete with hoist and lifting yokes matching each size of drawout circuit breaker installed.

5. Spare-Fuse Cabinet: Identified and compartmented steel box or cabinet with lockable door.
6. Storage for Manual: Include rack or holder, near operating instructions, for copy of maintenance manual.

C. Consumable Items:

1. After completion of field quality control, startup, commissioning, adjusting, and closeout activities, replace air filters and refill fluid reservoirs.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Indoor Switchgear Storage: Store in dry, clean location, placed on level surface to prevent strain and possible distortion. During construction period, provide protection against dust, dirt, falling objects, dripping water, water, excessive moisture, and other possible causes of damage to equipment. Temporary covering may not restrict ventilation and may not be removed until equipment is ready for installation.[**Store indoor equipment within heated building.**][**Take special precaution to keep equipment sufficiently warm with adequate ventilation to prevent condensation during storage period. Install temporary heating if necessary.**]

B. When provisions for temporary power connection are provided as part of switchgear assembly, provisions must be included to prevent energization of primary buses or connections by means of backfeed through fuses or control power transformers connected to primary buses or connections.

C. If outdoor switchgear cannot be installed and energized, temporary power must be provided for operation of space heaters provided so as to prevent condensation of moisture within housing.

D. Ventilation openings must be left open to permit proper air circulation.

PART 2 - PRODUCTS

2.1 OWNER-FURNISHED PRODUCTS

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for product that Owner intends to furnish to Contractor**>.

B. Description: <**Insert description of product, including special features, options, and finishes for Owner-furnished product that may impact Contractor's installation**>.

C. Accessories: <**Insert accessories that will be provided with product**>.

2.2 EXISTING PRODUCTS TO BE MODIFIED

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact Work**>.

C. Accessories: <**Insert accessories included with existing product**>.

2.3 EXISTING PRODUCTS TO BE REMOVED AND RE-INSTALLED

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact Work**>.

C. Accessories: <**Insert accessories included with existing product**>.

2.4 LOW-VOLTAGE SWITCHGEAR

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**SAI Advanced Power Solutions/Switchboard Apparatus Inc.**]
4. [**Siemens Industry, Inc., Energy Management Division**]
5. [**Square D; Schneider Electric USA**]
6. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**SAI Advanced Power Solutions/Switchboard Apparatus Inc.**]
4. [**Siemens Industry, Inc., Energy Management Division**]
5. [**Square D; Schneider Electric USA**]
6. <**Insert manufacturer's name**>

2.5 SYSTEM DESCRIPTION

A. Description: Metal-enclosed, low-voltage switchgear with drawout [**fused**][**fused, where indicated,**] power circuit breakers, with accessories and metering components.

1. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
2. Comply with IEEE C37.20.1.
3. Listed and labeled as complying with UL 1558.
4. Listed and labeled for use as service entrance equipment.

2.6 PERFORMANCE REQUIREMENTS

A. Capacities and Characteristics:

1. Nominal System Voltage: [**480 V, three**][**480/277 V, four**][**240 V, three**][**208/120 V, four**] wire, 60 Hz.
2. Rated Maximum Voltage: [**254 V**][**508 V**][**635 V**].
3. Rated Power Frequency: 60 Hz.

4. Rated Insulation Level: Power frequency withstand must be not less than 2.2 kV(rms).
5. Rated Continuous Current:

    a. Main-Bus Continuous: [**1600 A**][**2000 A**][**3000 A**][**3200 A**][**4000 A**][**5000 A**].
    b. Vertical Section Bus Riser: Equal to frame size of low-voltage power circuit breaker connected to that riser.

6. Rated Short-Circuit Withstand Current: [**42 000 A(sym)**][**65 000 A(sym)**][**85 000 A(sym)**][**100 000 A(sym)**][**200 000 A(sym)**].
7. Short-Time and Short-Circuit Current: Match rating of integrated short-circuit current rating.

2.7 SWITCHGEAR STRUCTURE

A. Bus isolation barriers must be arranged to isolate line bus from load bus at main and tie circuit breaker. Extend section barriers between main and tie circuit breakers to rear of section.

B. Allow the following circuit-breaker functions to be performed when compartment door is closed:

1. Operate manual charging system.
2. Open and close circuit breaker.
3. Examine and adjust trip unit.
4. Read breaker nameplate.

C. Install instrument compartments when additional space is required for metering and instrumentation. Allow for routing of instrumentation, control and communications wires, and cables.

D. Switchgear Bus:

1. Use bus bars to connect compartments and vertical sections. Cable connections are not permitted.
2. Main Phase Bus: Uniform capacity entire length of assembly.
3. Neutral Bus: [**50**][**100**] percent of phase-bus ampacity unless otherwise indicated. Equip bus with pressure-connector terminations for outgoing circuit neutral conductors. Include braces for neutral-bus extensions for busway feeders.
4. Ground Bus: Uniform capacity entire length of assembly, with pressure connector terminations for feeder and branch-circuit ground conductors, minimum size **1/4 by 2 inch (6 by 50 mm)**.
5. Vertical Section Bus Size: [**Comply with IEEE C37.20.1, including allowance for spare circuit breakers and spaces for future circuit breakers**][**Fully rated to system continuous current, equal to horizontal bus**].
6. Bus Material and Connections:

    a. Phase- and Neutral-Bus Material:

        1) Hard-drawn copper of 98 percent minimum conductivity, with copper feeder circuit-breaker line connections.
        2) Silver- or tin-plated, high-strength, electrical-grade aluminum alloy, with copper or tin-plated aluminum circuit-breaker line connections.
        3) Hard-drawn copper of 98 percent minimum conductivity or tin-plated, high-strength, electrical-grade aluminum alloy.

    b. Use silver-plated copper or tin-plated aluminum for connecting circuit-breaker line to aluminum bus.
    c. Use copper for connecting circuit-breaker line to copper bus.
    d. Contact Surfaces of Buses: Silver plated.

e. Feeder Circuit-Breaker Load Terminals: Silver-plated copper bus extensions equipped with pressure connectors for outgoing circuit conductors.

7. Neutral Disconnect Link: Bolted, uninsulated, bus, arranged to connect neutral bus to ground bus.
8. Provide for future extensions from either end of main phase, neutral, and ground bus by means of predrilled bolt-holes and connecting links.
9. Bus-Bar Insulation: Individual bus bars wrapped with factory-applied, flame-retardant tape or spray-applied, flame-retardant insulation.

   a. Sprayed Insulation Thickness: **3 mil (0.08 mm)**, minimum.
   b. Bolted Bus Joints: Insulate with secure joint covers that can easily be removed and reinstalled.

E. Circuit-Breaker Compartment:

1. Drawout Features: Circuit-breaker mounting assembly equipped with racking mechanism to position circuit breaker and hold it rigidly in connected, test, disconnected, and withdrawn positions. Include the following features:

   a. Provide circuit-breaker racking system with positive stops at connected, test, disconnected, and withdrawn positions.
   b. Interlocks: Prevent racking of circuit breaker to or from connected position when it is closed, and prevent closure of circuit breaker unless it is in connected, test, or disconnected position.
   c. Circuit-Breaker Positioning: Permit racking of open circuit breaker to or from connected, test, and disconnected positions only when compartment door is closed unless live parts are covered by full dead-front shield. Permit manual withdrawal of open circuit breaker to position for removal from structure. When compartment door is open, status for connection devices for different positions includes the following:

      1) Test Position: Primary disconnects disengaged, and secondary disconnect devices and ground contact engaged.
      2) Disconnected Position: Primary and secondary devices and ground contact disengaged.

   d. Primary Disconnect: Mount on stationary part of compartment. Disconnect must consist of set of contacts extending to rear through insulating support barrier, and of corresponding moving finger contacts on power circuit-breaker studs, which engage in only connected position. Assembly must provide multiple silver-to-silver full floating, spring-loaded, high-pressure-point contacts with uniform pressure on fingers. Load studs must connect to bus extensions that terminate in solderless terminals in rear cable compartment.
   e. Secondary Disconnect: Floating terminals mounted on stationary part of compartment that engage mating contacts at front of breaker.
   f. Provide verification of positive ground contact between circuit breaker and its compartment when accessory cover is removed while circuit breaker is in connected, test, disconnected, and withdrawn positions.
   g. Place 2400 A frame and larger circuit breakers at bottom of switchgear.

F. Auxiliary Compartments: Match and align with basic switchgear assembly. Include the following:

1. Utility metering compartment that complies with utility-company requirements.
2. Bus transition sections.
3. Incoming-line pull sections.
4. Hinged front panels for access to metering, accessory, and blank compartments.

G. Pull Boxes: Pull box on top of switchgear for extra room for pulling cable, with removable top, front, and

side covers and with ventilation provisions adequate to maintain air temperature in pull box within same limits as switchgear.

1. Set pull box back from front to clear circuit-breaker lifting mechanism.
2. Pull-Box Bottom: Insulating, fire-resistant material with separate holes for cable drops into switchgear.
3. Cable Supports: Arranged to ease cabling and adequate to support cables, including those for future installation.

2.8 ADDITIONAL REQUIREMENTS FOR INDOOR SWITCHGEAR

A. Enclosure Rating: Indoor.

B. Enclosure Material: Steel.

C. Enclosure Finish: IEEE C37.20.1, manufacturer's standard gray finish over rust-inhibiting primer on phosphatizing-treated metal surfaces.

D. Enclosure Rear Panels: Removable and hinged, to allow access to rear interior of switchgear.

2.9 ADDITIONAL REQUIREMENTS FOR OUTDOOR SWITCHGEAR

A. Outdoor Enclosure Rating: UL 1558.

B. Outdoor Enclosure Description: Weatherproof; integral structural-steel base frame with factory-applied asphaltic undercoating

C. Outdoor Enclosure Material: [**Steel**][**12 gage, ASTM A240, Type 304 or 304L stainless steel**].

D. Outdoor Enclosure Finish:

1. Factory-applied finish in manufacturer's standard color, including under surfaces treated with corrosion-resistant undercoating.
2. Factory-applied, corrosion-resistant finish in manufacturer's standard color that withstands [**120**][**480**] hours of exposure to salt-spray test specified in ASTM B117, without loss of paint or release of adhesion of paint primer coat to metal surface in excess of **1/16 inch (1.6 mm)** from test mark. Scribed test mark and test evaluation must be conducted in accordance with ASTM D1654, with rating of not less than 7 in accordance with Table 1 (Procedure A). Cut edges or otherwise damaged surfaces of hot-dip galvanized sheet steel or mill-galvanized sheet steel must be coated with manufacturer's standard zinc-rich paint.
3. Front and rear doors must be provided with stainless steel padlockable vault handles with three-point catch. Bases, frames, and channels of enclosure must be corrosion resistant, fabricated of ASTM A240 Type 304 or 304L stainless steel. Base must include part of enclosure that is within **3 inch (75 mm)** of concrete pad. Coat enclosure, including bases, must be ASTM D1535 light gray No. 61 or No. 49. Coating system must comply with IEEE C57.12.29 for stainless steel.

E. Features:

1. Structural design and anchorage adequate to resist seismic and wind loads specified in Section 260011 "Facility Performance Requirements for Electrical."
2. Sloping, standing-seam type, insulated roof panels.
3. Mount shipping group on integral base frame as complete weatherproof unit.

4. Aisle-Less Construction: Vertical sections must have the following:

    a. Hinged front door with padlocking provisions.
    b. Interior light with switch.
    c. Weatherproof duplex receptacle.
    d. With draft-stop where busway exits vertical section.
    e. Vertical Section Space Conditioning: Provide outside-air openings with insect and rodent screens and filters; arranged to permit air circulation while excluding insects, rodents, and exterior dust. Provide thermostatically controlled space heaters operating at one-half or less of rated voltage.

5. Common Internal Aisle-Type Construction:

    a. With aisle of sufficient width to permit protective-device withdrawal, disassembly, and servicing in aisle.
    b. Aisle access doors with outside padlocking provisions and interior panic latches.
    c. Vaporproof [**LED aisle lights**][**fluorescent aisle lights with low-temperature ballasts**], controlled by wall switches at entrances.
    d. GFCI duplex receptacles, minimum of two, located in aisle.
    e. Interior Space Conditioning:

        1) Forced-air aisle ventilation with thermostatically controlled vent fans, interlocked with aisle space heaters operating at one-half or less of rated voltage. Provide outside-air openings with insect and rodent screens and filters; arranged to permit air circulation while excluding insects, rodents, and exterior dust.
        2) Air conditioned.

2.10 CIRCUIT BREAKERS

A. Drawout type, unfused, power operated, with electromechanical or electronic trip devices. Comply with IEEE C37.13, IEEE C37.13a, and UL 1066.

B. Ratings: For continuous, interrupting, and short-time current ratings for circuit breakers; voltage and frequency ratings same as switchgear. Comply with IEEE C37.16.

1. Circuit breakers must have 30-cycle short-time withstand ratings equal to their symmetrical interrupting ratings through 85 000 A, whether or not equipped with instantaneous trip protection.

C. Operating Mechanism: Mechanically and electrically trip-free, stored-energy operating mechanism with the following features:

1. Normal Closing Speed: Independent of both control and operator.
2. Slow Closing Speed: Optional with operator for inspection and adjustment.
3. Stored-Energy Mechanism: [**Manually charged**][**Electrically charged**][**Electrically charged, and operator's choice of manual charging**].

    a. Operating Handle: One for each circuit breaker capable of manual operation.
    b. Electric Close Button: One for each electrically operated circuit breaker.

4. Provide interlock to discharge stored energy mechanism before circuit breaker can be withdrawn from its compartment.
5. Operation counter.

D. Operator Display: Located on face of circuit breaker.

1. Electrical operation buttons to open and close circuit breaker.[**Provide clear lockable cover over buttons.**]
2. Indicating Lights: To indicate circuit breaker is open or closed, for main and bus tie circuit breakers interlocked either with each other or with external devices. Energized or hot condition must be indicated by red light. De-energized, open, and safe condition must be indicated by green light.
3. Indicator to show position of circuit-breaker contacts, status of closing springs, and circuit-breaker position in its compartment.
4. Provide "Charged-not OK to close" indicator when closing springs are charged but circuit breaker is not ready to close.
5. Computer Display: One or more [**touchscreen**]computer displays with dedicated CPU, to display data that are generated for transmission via Ethernet connection. Display the following functions:

    a. Circuit-breaker status and circuit-breaker controls status.
    b. Onboard meters.
    c. User settings for overcurrent protection and undervoltage protection.
    d. <**Insert features**>.

E. Overcurrent Protective Tripping: Microprocessor-based, programmable, time-current shaping adjustments; complete with current transformers and sensors and the following features:

1. Programmable functions independent of each other in both action and adjustment.

    a. Long-time setting.
    b. Long-time-delay with selectable I2T or I4T curve shaping.
    c. Short-time setting.
    d. Short-time-delay with flat or selectable I2T curve shaping.
    e. Instantaneous trip.

2. Field-adjustable, time-current characteristics.
3. Current Adjustability: Dial settings and rating plugs on trip units, or sensors on circuit breakers, or combination of these methods.
4. Three bands, minimum, for long-time- and short-time-delay functions; marked "minimum," "intermediate," and "maximum."
5. Pickup Points:

    a. Five minimum, for long-time- and short-time-trip functions. Equip short-time-trip function for switchable I2T operation.
    b. Five minimum, for instantaneous-trip functions.

F. Ground-Fault Protection:

1. Ground-fault protection with at least three short-time-delay settings and three trip-time-delay bands; adjustable current pickup.
2. Trip Indication: Labeled, battery-powered lights or mechanical targets on trip device to indicate type of fault.
3. Test Form: Provide ground-fault relays with information sheets describing system-testing instructions, and with test form; comply with UL 1558.

G. Undervoltage Trip Devices:

1. Instantaneous, with adjustable pickup voltage.
2. Adjustable time-delay and pickup voltage.

H. Shunt-Trip Devices.

I. Metering:

1. Accuracy: [**0.5**][**1.0**] percent of reading, complying with ANSI C12.20.
2. Values must be RMS average over period of one second.

a. Current: Each phase, [**neutral**]and three-phase average.
b. Voltage: L-L for each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
c. Active Power (kW): [**Each phase and**]three-phase total.
d. Reactive Power (kVAR): [**Each phase and**]three-phase total.
e. Apparent Power (kVA): [**Each phase and**]three-phase total.
f. Power Factor: [**Each phase and**]three-phase total.
g. Active Energy (kWh): Three-phase total.

J. Auxiliary Contacts:

1. Contacts and switches required for normal circuit-breaker operation, sufficient for interlocking and remote indication of circuit-breaker position.
2. Spare auxiliary switches, at least two, unless otherwise indicated. Switches must consist of two Type A and two Type B contacts wired through secondary disconnect devices to terminal block in stationary circuit-breaker compartment.

K. Arc Chutes: Readily removable from associated circuit breaker when it is in disconnected position, and arranged to permit inspection of contacts without removing circuit breaker from switchgear.

L. Padlocking Provisions: For installing at least three padlocks on circuit breakers to secure its enclosure and prevent movement of drawout mechanism.

M. Mechanical Interlocking of Circuit Breakers: Uses mechanical tripping lever or equivalent design and electrical interlocks.

N. Key Interlocks: Arranged to prevent opening or closing of interlocked circuit breakers, except in specified sequence. Include mountings and hardware for future installation of key interlocks.

2.11 ARC-FLASH LIMITING FEEDER CIRCUIT BREAKERS

A. Feeder circuit breakers must be without current-limiting fuses, listed as complying with UL 1066.

B. Short-circuit withstand current rating must be 200 kA.

C. Equip arc-flash limiting feeder circuit breakers with Arc-Flash Maintenance Setting switch for use as temporary arc-flash incident energy-reduction device during maintenance activities on that feeder.

1. Provide manual switch on compartment door to switch circuit-breaker short-time tripping characteristics to instantaneous with minimum pickup setting, to reduce danger from potential arc-flash at downstream equipment.
2. Provide lock feature for switch so that it may be locked in either off or on maintenance-mode position.
3. Provide blue LED indicating light to indicate that switch is in maintenance mode.
4. Provide dry relay contacts on switches for annunciation of switch position.

2.12 ZONE-SELECTIVE INTERLOCKING

A. Trip units for indicated circuit breakers must include zone-interlocking capability for short-time delay and ground-fault delay trip functions for system coordination and arc energy reduction. Zone-interlocking system must restrain tripping of upstream circuit breaker and allow circuit breaker closest to fault to trip with no intentional time delay. In event that downstream breaker does not trip, upstream breaker must trip after preset time delay.[**Zone-interlock system must be factory wired and tested for circuit breakers within switchgear.**]

2.13 NETWORK PROTECTORS

A. Comply with IEEE 57.12.44 and IEEE C37.20.1. Switch must comply with UL 1066.

1. Dead-front, drawout design with externally mounted fuses, using hand-cranked rail system. Include mechanical interlocks to prevent racking in and racking out when protector is closed.
2. Locate relay and control panel on separate drawout module.
3. Protector Operator: [**Spring-close**][**and**][**or**][**stored-energy**] mechanism, rated to close on [**25 000 A(rms sym)**][**40 000 A(rms sym)**] load.
4. Program relay with factory-default values. Make provisions to field adjust these values using relay calibration procedures. Include antipumping program to lock protector open under abnormal conditions.
5. Include current-limiting fuses on network side of protector for protection against switchboard bus faults.

B. Controls must be via microprocessor-based, three-phase network relay, with the following features and functions:

1. Protector control must use positive and negative sequence-based algorithm for current and voltage.
2. Close protector if positive sequence power flows into network. Adjustable closing range must be from 0.5 to 3.5 V in phase difference between network and transformer voltages.
3. Trip protector if there is net, three-phase, reverse power flow through protector. Trip protectors must be adjustable from 0.05 to 5 percent of continuous-current rating of current transformers within protector.
4. Trip protector if there is flow of reverse magnetizing current to its associated transformer.
5. Relay parameters and W or VAR trip values must be field adjustable.
6. Protector may not open under fault on network side of protector.
7. Include auxiliary contacts and control wiring for use with remote pilot devices that provide remote trip and lockout functions in low-voltage switchgear. Include [**two**]**<Insert number>** spare auxiliary contacts and equal number of N.O. and N.C. types.

C. Communicate the following network relay parameters:

1. Current in each phase.
2. Phase-to-phase and phase-to-neutral voltages.
3. Three-phase W, VAR, and VA.
4. Frequency.
5. Power factor.
6. Network relay set points.

2.14 SURGE SUPPRESSION

A. Factory Installed: Integral part of low-voltage switchgear, complying with UL 1449 SPD, Type 1, with the

following features and accessories:

1. Integral disconnect switch.
2. Internal thermal protection that disconnects SPD before damaging internal suppressor components.
3. Indicator light display for protection status.
4. Form-C contacts rated at 5 A 250 V(ac), one N.O. and one N.C., for remote monitoring of protection status.[**Contacts must reverse on failure of surge diversion module or on opening of current-limiting device. Coordinate with building power monitoring and control system.**]
5. Surge counter.

B. Field Mounted: Complying with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits." Include the following features and accessories:

1. Integral disconnect switch.
2. Internal thermal protection that disconnects SPD before damaging internal suppressor components.
3. Indicator light display for protection status.
4. Form-C contacts rated at 5 A 250 V(ac), one N.O. and one N.C., for remote monitoring of protection status.[**Contacts must reverse on failure of surge diversion module or on opening of current-limiting device. Coordinate with building power monitoring and control system.**]
5. Surge counter.

2.15 CONTROL POWER SUPPLY, 120 V(ac)

A. Control Power Transformer: Supply 120 V control circuits through dry-type control power transformers, include secondary disconnect devices.

1. Place transformers larger than 3 kVA in separate compartments at bottom of vertical section, including related primary and secondary fuses.
2. Two control power transformers in separate compartments with necessary interlocking relays; transformers connected to line side of associated main circuit breaker.

    a. Secondary windings connected through relay(s) to control bus to affect automatic transfer scheme.
    b. Secondary windings connected through internal automatic transfer switch to switchgear control power bus.

3. Control Power Fuses: Primary and secondary fuses provide current-limiting and overload protection.

2.16 CONTROL POWER SUPPLY, 24 V(dc)

A. System Requirements: Battery must have number of cells and ampere-hour capacity based on initial specific gravity of 1.210 at 25 deg C with electrolyte at normal level and minimum ambient temperature of 13 deg C. Cycle battery before shipment to guarantee rated capacity on installation. Arrange battery to operate ungrounded. Battery system capacity must be as recommended by switchgear manufacturer to operate circuit breakers for intended duty.

B. Battery: [**Standard VRLA**][**Premium VRLA**][**Vented NiCd,**] batteries, with battery disconnect and overcurrent protective device.

C. Rack: Two-step rack with electrical connections between battery cells and between rows of cells; include two flexible connectors with bolted-type terminals for output leads.[**Rate battery rack, cell supports, and anchorage for seismic requirements.**]

D. Accessories:

1. Thermometers with specific-gravity correction scales.
2. Hydrometer syringes.
3. Set of cell numerals.

E. Charger: Static-type silicon rectifier equipped with automatic regulation and provision for manual and automatic adjustment of charging rate. Unit must automatically maintain output voltage within 0.5 percent from no load to rated charger output current, with AC input-voltage variation of plus or minus 10 percent and input-frequency variation of plus or minus 3 Hz.

1. DC ammeter.
2. DC Voltmeter: Maximum error of 5 percent at full-charge voltage, with toggle switch to select between battery and charger voltages.
3. Ground Indication: Two appropriately labeled lights to indicate circuit ground, connected in series between negative and positive terminals, with midpoint junction connected to ground by N.O. push-button contact.
4. Capacity: Sufficient to supply steady load, float-charge battery between 2.20 and 2.25 V per cell, and equalizing charge at 2.33 V per cell.
5. Charging-Rate Switch: Manually operated switch to transfer to higher charging rate. Charger operation must be automatic until manually reset.
6. AC Power Supply: 120 V, 60 Hz, subject to plus or minus 10 percent variation in voltage and plus or minus 3 Hz variation in frequency. Automatic charger operation must resume after loss of AC power supply for interval.
7. Charging Regulator: Protect charger from damage due to overload, including short circuit on output terminals. Device must regulate charging current but may not disconnect charger from either battery or AC supply.
8. Charger's Audible Noise: Less than 26 dB(A-weighted).

2.17 INSTRUMENTATION AND CONTROL

A. Power Distribution Equipment must be web enabled, direct connected to Local Area Network (LAN) or Intranet.

B. Ethernet Connectivity:

1. Install multipoint, TIA-485 MODBUS serial communications network within switchgear to interconnect breaker trip units, protective relays, drives, and metering devices equipped with communications.
2. Serial communications network must be wired to Ethernet gateway in switchgear. Gateway must be web enabled, with integral network port and embedded web server with factory-configured firmware and HTML-formatted web pages for viewing of power monitoring and equipment status information from switchgear devices equipped with digital communication ports.
3. LAN must consist of multipoint, TIA-485 MODBUS serial communication network to interconnect breaker trip units, protective relays, drives, and metering devices equipped with communications. Serial communication network must be connected to Ethernet server that functions as gateway and server, providing data access via [**10 Base-T**][**100 Base-T**][**100 Base-TX**][**100 Base FX**] LAN.
4. Server Configuration:

a. Initial network parameters set using standard web browser. Connect via local operator interface, or TIA-1096 Type 8P8C jack accessible from front of equipment.
b. Network server must be factory programmed with embedded HTML-formatted web pages that are user configurable and that provide detailed communication diagnostic information for serial and Ethernet ports as status of TIA-485 network; with internal memory management information pages for viewing using standard web browser.
c. Password-protected login, with password administration accessible from LAN using standard web browser.
d. Operating Software: Suitable for local access; firewall protected.

5. All serial communications devices within equipment must be addressed at factory and tested.

C. Instrument Transformers: Comply with IEEE C57.13. Instrument transformers may not be used to power space conditioning equipment associated with outdoor switchgear, of for power to convenience receptacles and lighting.

1. Potential Transformers: Secondary voltage rating of 120 V and NEMA C12.11 Accuracy class of 0.3 with burdens of W, X, and Y.
2. Current Transformers: Burden and Accuracy class suitable for connected relays, meters, and instruments.

D. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, 1 percent accuracy, semiflush mounting, with antiparallax 250-degree scale and external zero adjustment.

1. Voltmeters: Cover expanded scale range of normal voltage plus 10 percent.
2. Voltmeter Selector Switch: Rotary type with off position to provide readings of phase-to-phase[**and phase-to-neutral**] voltages.
3. Ammeters: Cover expanded scale range of bus rating plus 10 percent.
4. Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in off position.
5. Locate meter and selector switch on circuit-breaker compartment door for indicated feeder circuits only.
6. Watt-Hour Meters: Flush- or semiflush-mounting type, 5 A, 120 V, three phase, three wire; with three elements, 15-minute indicating demand register, and provision for testing and adding pulse initiation.
7. Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with 15-minute interval.

a. Operation: Counts and records succession of pulses entering two channels.
b. Housing: Drawout, back-connected case arranged for semiflush mounting.

E. Power Monitoring: Separately mounted, modular, permanently installed, solid-state, digital I/O multifunction metering instrument for power and energy metering and monitoring, complying with UL 61010-1.

1. Capable of metering four-wire wye, three-wire wye, three-wire delta, and single-phase power systems.
2. Equipped with security lock to protect revenue-related metering from unauthorized and accidental changes.
3. Comply with IEC 60529 degree of protection code of IP65 for front of meter, and code of IP30 for body.
4. Overvoltage: Comply with UL 61010-1 overvoltage withstand rating for CAT III.
5. Accuracy:

a. Comply with ANSI C12.20, Class 0.5.
b. Neutral Current Measurement: Not more than 0.65 percent.

c. Power Factor: 1.0 percent.
d. Frequency: 0.1 percent.
e. THD: 1.0 percent.
f. Waveform Sampling: 64 per cycle.

6. Data Link: Ethernet connectivity specified in this article.
7. Meter Physical Characteristics:

a. Display: Backlit LCD with antiglare and scratch-resistant lens.
b. Display of Metered Values: One screen to show at least [**three**]<**Insert number**> user-selected values displayed at same time. Selections available to display must include the following:

1) All meters.
2) Measurements.
3) THD.
4) Energy.
5) Demand.
6) Minimum and maximum values.
7) Power demand.

8. Sampling Rate: Continuously sample and record voltage and current at rate not less than [**64**]<**Insert number**> samples per cycle, simultaneously on voltage and current channels of meter.
9. Meters:

a. Instantaneous, RMS:

1) Current: Each phase, [**neutral**]and three-phase average.
2) Voltage: L-L for each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
3) Active Power (kW): [**Each phase and**]three-phase total.
4) Reactive Power (kVAR): [**Each phase and**]three-phase total.
5) Apparent Power (kVA): [**Each phase and**]three-phase total.
6) Power Factor: [**Each phase and**]three-phase total.

b. Energy:

1) Active Energy (kWh): Three-phase total.

c. Demand, Derived from Instantaneous RMS Meters:

1) Current: Present and maximum.
2) Active: Present and maximum.
3) Reactive: Present and maximum.
4) Apparent: Present and maximum/

d. Power Quality Measurements:

1) THD: Current and voltage from measurements simultaneously from same cycle, as can be calculated from specified sampling rate.

10. I/O: Two optically isolated digital outputs for KYZ pulsing or control. Output signal characteristics must be 150 mA at 200 V.

a. KYZ Pulse: Generate standard KYZ pulses for user-defined increment of metered active energy as follows:

1) User-defined pulse output, associated with kWh.
2) User-defined pulse output, associated with kVARh.

b. <**Insert control function**>.

11. Capacities and Characteristics:

a. Circuit Connections:

1) Voltage: Measurement autoranging, 60 to 400 V(ac rms) L-N.[**Connect directly to low-voltage (600 V and less) without using voltage transformers.**][**Connect to instrument-grade potential transformers secondary at 120 V.**] Meter impedance must be 2 MΩ L-L or greater.
2) Overload Tolerance: 1500 V(ac rms) continuously.
3) Current: Connect to instrument-grade current transformer with metering range of 5 mA to 6 A. Overcurrent tolerance of instrument must be 10 A continuous, 50 A for 10 seconds once per hour, and 120 A for one second per hour.
4) Frequency: 45 to 65 Hz.
5) Time: Input from GPS receiver to synchronize internal clock of instrument and to time-synchronize this instrument with network to deviation of not greater than 1 ms.

2.18 POWER TRANSFER CONFIGURATIONS

A. Factory-installed and -tested controls of circuit breakers to accomplish automatic transfer controls for switchgear having two power sources.

B. Relays: Comply with IEEE C37.90, types and settings as indicated; with test blocks and plugs.

C. Control Wiring:

1. Factory installed, complete with bundling, lacing, and protection.
2. Provide flexible conductors for 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
3. Install plugs in control wiring at shipping splits.

D. Two-Breaker Transfer Control:

1. Two-breaker transfer control must provide for switchgear assembly with common load bus and two normally energized medium-voltage power sources, designated "normal" and "standby," connected to load bus. Circuit breakers connecting two power sources to load bus must be controlled by microprocessor-based automatic transfer control. Power for transfer control must be from voltage sensing transformers.
2. In automatic mode, load bus is connected to normal power source. When normal source fails, control must automatically open normal power source and close standby source circuit breaker.
3. Sequence of Operation:

a. Default operation must be with normal source main breaker closed and standby main breaker open. On detection of undervoltage to line side of normal main breaker and after field-adjustable time delay, that main breaker must open and after additional field-adjustable time delay, standby breaker must close restoring power to facility.
b. On restoration of voltage to line side of normal main breaker and after field-adjustable time delay, standby main breaker must open and after field-adjustable time delay, normal main

breaker must close.

4. Field-Adjustable Transfer Parameters:

   a. Delay transfer from normal power source to standby power source and from standby power source to normal source. Time delay is to allow load voltage to decay before reconnecting to another power source. Delay range: zero seconds to 30 minutes.
   b. Delay initiation of transfer sequence. Time delay is recommended to override momentary power outage or voltage fluctuation. Delay range: zero seconds to 120 seconds.
   c. Delay transfer from standby power source to normal power source. Delay range: zero seconds to 30 minutes.
   d. A relay with contact that changes state when power is available on normal source and relay with contact that changes state when power is available on standby source.

5. Controls and Indicators: Besides delay setting controls, provide the following:

   a. Interlocks or relay control to prevent transfer when either of two controlled circuit breakers are tripped due to overcurrent or ground fault.
   b. Three-position selector switch to select normal source: Source 1, Source 2, or none.
   c. Transfer-control automatic and manual selector.

      1) Interlock must prevent paralleling of two power sources in manual mode.

   d. Open-close control switch for manual electrical operation of controlled circuit breakers.
   e. Selector to place control into programming mode.
   f. Circuit-breaker control switch for normal and standby source breakers, providing open and close operation.
   g. Push-button to initiate manual retransfer to normal source when transfer controller is in automatic mode.
   h. Meters and display to show the following:

      1) Voltage and frequency of both sources.
      2) A multiline display showing the following:

         a) Set points of timers, and voltage pickup and dropout set points.
         b) Date, time, and reason for at least last 10 transfers. Display may show information for one transfer at time using scrolling control, with others held in memory.
         c) When control system is in transferring process, display must show delay countdown in seconds.

   i. LED indicator lights to show the following:

      1) Normal source available.
      2) Standby source available.
      3) Normal source connected.
      4) Standby source connected.
      5) Load bus energized.

6. Voltage Transformers: Primary and secondary protection and disconnecting means for sensing functions and control power.
7. Voltage Sensing Relays: Microprocessor-based ANSI No. 27/47 voltage detection relays for three-phase undervoltage protection and negative sequence voltage protection.

E. Three-Breaker Transfer Control:

1. Switchgear assembly, with two normally energized, medium-voltage power sources designated "Main 1" and "Main 2" connected to load bus. N.O. bus tie circuit breaker can tie two load buses. Three circuit breakers must be controlled by microprocessor-based automatic-transfer control. Power for transfer control must be from voltage sensing transformers.
2. In automatic mode, on loss of voltage to line side of source, that main breaker must open and then bus tie must close. On restoration of power to previously failed main breaker, bus tie must open and open main must close.
3. Sequence of Operation:

    a. Default operation must be with main breakers closed and bus tie breaker open. On detection of undervoltage to line side of main breaker and after field-adjustable time delay, that main breaker must open and after additional field-adjustable time delay, bus tie breaker must close, restoring power to failed bus.
    b. On restoration of voltage to line side of previously failed main breaker and after field-adjustable time delay, tie breaker must open and after field-adjustable time delay, previously failed main breaker must close.

4. Field-Adjustable Transfer Parameters:

    a. Delay opening of failed main and closing of bus tie. Time delay is to allow load voltage to decay before reconnecting to another power source. Delay range: zero seconds to 30 minutes.
    b. Delay initiation of transfer sequence. Time delay is recommended to override momentary power outage or voltage fluctuation. Delay range: zero to 120 seconds.
    c. Delay opening of bus tie and closing of previously failed main. Time delay is to allow bus voltage to decay before reconnecting to another power source. Delay range: zero seconds to 30 minutes.

5. Controls and indicators must include the following in addition to delay setting controls:

    a. Interlocks or relay control to prevent transfer when any of three controlled circuit breakers trip due to overcurrent or ground fault.
    b. Transfer control automatic and manual selector.

        1) Interlock that prevents paralleling of two mains in manual or automatic mode.

    c. Open-close control switch for manual electrical operation of controlled circuit breakers.
    d. Selector must place control into programming mode.
    e. A relay with contact that changes state when power is available on both mains and relay with contact that changes state to indicate open main and when bus tie is closed.
    f. Push-button to initiate manual retransfer to previously failed source when transfer controller is in automatic mode.
    g. Meters and display must show the following:

        1) Voltage and frequency at line side of both mains.
        2) A multiline display must show following:

            a) Set points of timers, and voltage pickup and dropout set points.
            b) Date, time, and reason for at least last 10 transfers. Display may show information for one transfer at time using scrolling control, with others held in memory.
            c) When control system is in transferring process, display must show delay countdown in seconds.

    h. LED indicator lights must show the following:

1) Main source available.
2) Main source unavailable.
3) Main closed.
4) Main open.
5) Bus tie open or closed.

6. Voltage transformers must have primary and secondary protection and disconnecting means for sensing functions and control power.
7. Voltage Sensing Relays: Microprocessor-based ANSI No. 27/47 voltage detection relays for three-phase undervoltage protection and negative-sequence voltage protection.

2.19 DIFFERENTIAL GROUND-FAULT PROTECTION

A. Description: Ground-fault protection system for three-phase, four-wire switchgear having multiple sources must be devised by manufacturer to insure that proper main or tie breaker(s) operate properly in normal and emergency conditions. Switchgear must include additional current transformers, ground-fault relays, interlocks, wiring, and accessories to avoid nuisance tripping of circuit breakers connected to main bus of switchgear. Ensure that the following occurs on main bus:

1. A ground fault at location in switchgear must trip system.
2. Combination of normal current flow and ground-fault current flow must trip system.
3. Circulating currents through neutral due to multiple grounds and sources external to immediate low-voltage power sources may not trip system.
4. System may not trip if there is no ground fault, during normal current flow.
5. System may not trip due to large single-phase currents.

B. Relays: Comply with IEEE C37.90, with test blocks and plugs.

C. Control Wiring:

1. Factory installed, complete with bundling, lacing, and protection.
2. Provide flexible conductors for 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
3. Install plugs in control wiring at shipping splits.

2.20 SOURCE QUALITY CONTROL

A. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.

B. Testing Administrant: [**Owner will engage**][**Engage**] qualified testing agency to evaluate low-voltage switchgear.

C. Factory Tests and Inspections: Test and inspect low-voltage switchgear, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with IEEE C37.20.1 before delivering to site. Affix label with name and date of [**manufacturer's**][**qualified electrical testing laboratory's**] certification of system compliance on control units. Drawout circuit breakers need not be tested in assembly if they are tested separately.

1. Dielectric Tests: Perform power-frequency withstand tests to demonstrate ability of insulation system to withstand voltages listed in IEEE C37.20.1. Voltage must be increased gradually from zero to required test value within 5 to 10 seconds and must be held at that value for one minute.
2. Perform mechanical operation tests to ensure proper functioning of operating mechanism,

mechanical interlocks, and interchangeability of removable elements that are designed to be interchangeable.
3. Test effectiveness of grounding of metal-case instrument transformer frame or case.
4. Verify that control wiring is correct by verifying continuity. Perform electrical operation of component devices to ensure that they function properly and in intended sequence.
5. Perform control wiring insulation tests.
6. Verify correct polarity of connections between instrument transformers and meters and relays.

D. Serial communications devices within equipment must be addressed at factory and tested to verify reliable communications to equipment's Ethernet gateway.

E. Nonconforming Work:

1. Low-voltage switchgear assembly will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and space conditions for compliance with requirements for secondary unit substations and other conditions affecting performance of the Work.

B. Examine roughing-in of conduits and grounding systems to verify the following:

1. Wiring entries comply with layout requirements.
2. Entries are within conduit-entry tolerances specified by manufacturer, and no feeders will have to cross section barriers to reach load or line lugs.

C. Examine walls, floors, roofs, and concrete bases for suitable conditions where switchgear will be installed.

D. Verify that ground connections are in place and that requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance must be [**5 Ω**]<**Insert Ω**> at switchgear location.

E. On delivery of switchgear and prior to unloading, inspect equipment for damage.

1. Verify that tie rods and chains are undamaged and tight, and that blocking and bracing are tight.
2. Verify that there is no evidence of load shifting in transit, and that readings from transportation shock recorders, if equipped, are within manufacturer's published instructions.
3. Examine switchgear for external damage, including dents or scratches in doors and sill, and termination provisions.
4. Compare switchgear and accessories received with bill of materials to verify that shipment is complete. Verify that switchgear and accessories comply with manufacturer's published instructions and Shop Drawings. If shipment is incomplete or does not comply with Project requirements, notify manufacturer in writing immediately.
5. Unload switchgear, observing packing label warnings and handling instructions.
6. Open compartment doors and inspect components for damage or displaced parts, loose or broken connections, cracked or chipped insulators, bent mounting flanges, dirt or foreign material, and water or moisture.

F. Handling:

1. Handle switchgear, in accordance with manufacturer's published instructions; avoid damage to enclosure, termination compartments, base, frame, tank, and internal components. Do not subject switchgear to impact, jolting, jarring, or rough handling.
2. Protect switchgear compartments against entrance of dust, rain, and snow.
3. Transport switchgear upright, to avoid internal stresses on equipment mounting assemblies. Do not tilt or tip switchgear.
4. Use spreaders or lifting beam to obtain vertical lift and to protect switchgear from straps bearing against enclosure. Lifting cable pull angles may not be greater than 15 degrees from vertical.
5. Do not damage structure when handling switchgear.

G. Proceed with installation only after examinations are complete and unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install switchgear on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 260529 "Hangers and Supports for Electrical Systems."

B. Comply with requirements for vibration isolation and seismic-control devices specified in Section 260529 "Hangers and Supports for Electrical Systems" and [**Section 260548 "Vibration and Seismic Controls for Electrical Systems."**][**Section 260548.16 "Seismic Controls for Electrical Systems."**]

C. Maintain minimum clearances and workspace at equipment in accordance with manufacturer's published instructions and NFPA 70.

3.3 CONNECTIONS

A. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

B. Grounding Connections at Exterior Locations:

1. Install tinned bare copper conductors not smaller than 4/0 AWG, for ground conductors buried not less than **30 inch (765 mm)** below grade interconnecting grounding electrodes.
2. Bond surge arrester and neutrals directly to switchgear enclosure and then to grounding electrode system with bare copper conductors, sized as indicated.
3. Keep lead lengths as short as practicable with no kinks or sharp bends.
4. Make joints in grounding conductors and loops by exothermic weld or compression connector.
5. Fence and equipment connections may not be smaller than 4 AWG.
6. Ground fence at gate posts and corner posts and at intervals not exceeding **10 ft (3 m)**.
7. Bond gate sections to fence posts using **1/8 by 1 inch (3 by 25 mm)** [**tinned,**]flexible braided copper strap and clamps.

C. Terminate grounding and bonding conductors on common equipment grounding terminal on switchgear enclosure. Install supplemental terminal bars, lugs, and bonding jumpers as required to accommodate number of conductors for termination.

D. Complete switchgear grounding and surge-protector connections prior to making other electrical connections.

3.4 IDENTIFICATION

A. Comply with installation requirements for labels and signs specified in Section 260553 "Identification for Electrical Systems."

B. Install warning signs as required to comply with OSHA 29 CFR 1910.269.

C. Compartment Nameplates: [**Engraved, laminated-acrylic**][**Engraved, melamine plastic**][**Preprinted aluminum signs**], as described in Section 260553 "Identification for Electrical Systems," for compartments, mounted with corrosion-resistant screws.

D. Mimic Bus: Continuous mimic bus, arranged in single-line diagram format, using symbols and lettered designations consistent with approved mimic-bus diagram.

1. Mimic-bus segments coordinated with devices in switchgear sections to which applied, to produce concise visual presentation of principal switchgear components and connections.
2. Medium: Painted graphics, as selected by Architect.
3. Color: Contrasting with factory-finish background; as selected by Architect from manufacturer's full range.

E. Arc-Flash Warning Labels:

1. Comply with requirements in Section 260573.19 "Arc-Flash Hazard Analysis." Produce **3.5 by 5 inch (76 by 127 mm)** self-adhesive equipment label for work locations included in analysis.
2. Comply with requirements in Section 260553 "Identification for Electrical Systems." Produce **3.5 by 5 inch (76 by 127 mm)** self-adhesive equipment label for work locations included in analysis. Labels must be machine printed, with no field-applied markings.

a. Label must have orange header with wording, "WARNING, ARC-FLASH HAZARD," and must include the following information taken directly from arc-flash hazard analysis:

1) Location designation.
2) Nominal voltage.
3) Flash protection boundary.
4) Hazard risk category.
5) Incident energy.
6) Working distance.
7) Engineering report number, revision number, and issue date.

b. Labels must be machine printed, with no field-applied markings.

3.5 FIELD QUALITY CONTROL

A. Acceptance Testing Preparation:

1. <**Insert requirements**>.

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

C. Tests and Inspections:

1. Comply with provisions of "Testing and Test Methods" Chapter in NFPA 70B and NETA ATS.
2. After installing switchgear and after electrical circuitry has been energized, test for compliance

with requirements.

3. Perform visual and mechanical inspections and electrical tests stated in NETA ATS. Certify compliance with test parameters.
4. Visual and Mechanical Inspection:

    a. Verify that fuse and circuit-breaker sizes and types correspond to Drawings and coordination study[**, as well as to circuit breaker's address in control network**].
    b. Verify that current and voltage transformer ratios correspond to Drawings.
    c. Inspect bolted electrical connections for high resistance using one of the following two methods:

        1) Use low-resistance ohmmeter to compare bolted-connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
        2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.

    d. Confirm correct operation and sequencing of electrical and mechanical interlock systems.

        1) Attempt closure on locked-open devices. Attempt to open locked-closed devices.
        2) Make key exchange with devices operated in off-normal positions.

    e. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
    f. Inspect insulators for evidence of physical damage or contaminated surfaces.
    g. Verify correct barrier and shutter installation and operation.
    h. Exercise active components.
    i. Inspect mechanical indicating devices for correct operation.
    j. Verify that filters are in place and that vents are clear.
    k. Perform visual and mechanical inspection of instrument transformers in accordance with "Instrument Transformer Field Tests" Paragraph.
    l. Inspect control power transformers.

        1) Inspect for physical damage, cracked insulation, broken leads, tightness of connections, defective wiring, and overall general condition.
        2) Verify that primary and secondary fuse or circuit-breaker ratings match Drawings.
        3) Verify correct functioning of drawout disconnecting and grounding contacts and interlocks.

5. Electrical Tests:

    a. Perform DC voltage insulation-resistance tests on bus sections, phase-to-phase and phase-to-ground, for one minute. If bus temperature is other than plus or minus 20 deg C, adjust resulting resistance as provided in NETA ATS, Table 100.11.

        1) Insulation-resistance values of bus insulation must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than manufacturer's published instructions or NETA ATS, Table 100.1.
        2) Do not proceed to dielectric withstand voltage tests until insulation-resistance levels are raised above minimum values.

b. Perform dielectric withstand voltage test on bus sections, phase-to-ground with phases not under test grounded, in accordance with manufacturer's published data. If manufacturer has no recommendation for this test, it must be conducted in accordance with NETA ATS, Table 100.2. Apply test voltage for one minute.

1) If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric withstand test, test specimen is considered to have passed test.

c. Perform insulation-resistance tests on control wiring for ground. Applied potential must be 500 V(dc) for 300 V rated cable and 1000 V(dc) for 600 V rated cable. Test duration must be one minute. For units with solid-state components or control devices that cannot tolerate applied voltage, follow manufacturer's published instruction.

1) Minimum insulation-resistance values of control wiring may not be less than 2 MΩ.

d. Control Power Transformers:

1) Perform insulation-resistance tests. Perform measurements from winding-to-winding and windings-to-ground. Insulation-resistance values of winding insulation must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than manufacturer's published instructions or NETA ATS, Table 100.1.
2) Perform secondary wiring integrity test. Disconnect transformer at secondary terminals and connect secondary wiring to rated secondary voltage source. Verify correct potential at devices.
3) Verify correct secondary voltage by energizing primary winding with system voltage. Measure secondary voltage with secondary wiring disconnected.
4) Verify correct function of control transfer relays located in switchgear with multiple control power sources.

e. Voltage Transformers:

1) Perform secondary wiring integrity test. Verify correct potential at devices.
2) Verify secondary voltages by energizing primary winding with system voltage.

f. Perform current-injection tests on entire current circuit in switchgear sections.

1) Perform current tests by secondary injection with magnitudes such that minimum 1.0 A current flows in secondary circuit. Verify correct magnitude of current at devices in circuit.
2) Perform current tests by primary injection with magnitudes such that minimum 1.0 A current flows in secondary circuit. Verify correct magnitude of current at devices in circuit.

g. Perform system function tests in accordance with "System Function Tests" Paragraph.
h. Verify operation of space heaters.
i. Perform phasing checks on double-ended or dual-source switchgear to ensure correct bus phasing from sources.

D. Circuit-Breaker Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.

b. Inspect anchorage, alignment, and grounding.
c. Verify that maintenance devices are available for servicing and operating breaker.
d. Verify unit is clean.
e. Verify that arc chutes are intact.
f. Inspect moving and stationary contacts for condition and alignment.
g. Verify that primary and secondary contact wipe and other dimensions vital to satisfactory operation of breaker are correct.
h. Perform mechanical operator and contact alignment tests on both breaker and its operating mechanism in accordance with manufacturer's published data.
i. Verify cell fit and element alignment.
j. Verify racking mechanism operation.
k. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
l. Perform adjustments for final protective-device settings in accordance with coordination study provided by Owner.
m. Record as-found and as-left operation counter readings.

2. Electrical Tests:

a. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to ground with switch closed, and across open poles. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Values of insulation resistance less than Table 100.1 or manufacturer's published instructions must be investigated.
b. Measure contact resistance across power contacts of circuit breakers. Drop values for μΩ or mV(dc) may not exceed high levels of normal range as indicated in manufacturer's published data. In absence of manufacturer's published data, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
c. Determine long-time pickup and delay by primary current injection. Long-time pickup values must be as specified, and trip characteristic may not exceed manufacturer's published time-current characteristic tolerance band, including adjustment factors. If manufacturer's curves are unavailable, trip times may not exceed value shown in NETA ATS, Table 100.7.
d. Determine short-time pickup and delay by primary current injection. Short-time pickup values must be as specified, and trip characteristic may not exceed manufacturer's published time-current tolerance band.
e. Determine ground-fault pickup and delay by primary current injection. Ground-fault pickup values must be as specified, and trip characteristic may not exceed manufacturer's published time-current tolerance band.
f. Determine instantaneous pickup value by primary current injection. Instantaneous pickup values must be as specified and within manufacturer's published tolerances. In absence of manufacturer's published data, comply with NETA ATS, Table 100.8.
g. Test functions of trip unit by means of secondary injection. Pickup values and trip characteristic must be as specified and within manufacturer's published tolerances.
h. Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of shunt trip and close coils must comply with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.20.
i. Measure fuse resistance. Investigate fuse-resistance values that deviate from each other by more than 15 percent.
j. Verify correct operation of auxiliary features, such as trip and pickup indicators, zone interlocking, electrical close and trip operation, trip-free operation, antipump function, and trip-unit battery condition. Reset trip logs and indicators. Auxiliary features must operate in

accordance with manufacturer's published data.

k. Verify operation of charging mechanism. Charging mechanism must operate in accordance with manufacturer's published data.

E. Instrument Transformer Field Tests:

1. Visual and Mechanical Inspection:

a. Verify that equipment nameplate data complies with Contract Documents.
b. Inspect physical and mechanical condition.
c. Verify correct connection of transformers with system requirements.
d. Verify that adequate clearances exist between primary and secondary circuit wiring.
e. Verify that unit is clean.
f. Inspect bolted electrical connections for high resistance using one of the following two methods:

1) Use low-resistance ohmmeter to compare bolted-connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.

g. Verify that required grounding and shorting connections provide contact.
h. Verify correct operation of transformer withdrawal mechanism and grounding operation.
i. Verify correct primary and secondary fuse sizes for voltage transformers.
j. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.

2. Electrical Tests of Current Transformers:

a. Perform insulation-resistance test of current transformers and secondary wiring for ground at 1000 V(dc) for one minute. For units with solid-state components that cannot tolerate applied voltage, follow manufacturer's published instructions. Investigate and correct values of insulation resistance less than manufacturer's published instructions or NETA ATS, Table 100.5.
b. Perform polarity test on current transformers in accordance with IEEE C57.13.1. Polarity results must agree with transformer markings.
c. Perform ratio-verification test using voltage or current method in accordance with IEEE C57.13.1. Ratio errors must be in accordance with IEEE C57.13.
d. Perform excitation test on transformers used for relaying applications in accordance with IEEE C57.13.1. Excitation results must match curve supplied by manufacturer or be in accordance with IEEE C57.13.1.
e. Measure current circuit burdens at transformer terminals in accordance with IEEE C57.13.1. Measured burdens must be compared to, and must match, instrument transformer ratings.
f. Perform insulation-resistance tests on primary winding with secondary grounded. Test voltages must be in accordance with NETA ATS, Table 100.5.
g. Perform dielectric withstand tests on primary winding with secondary grounded. Test voltages must be in accordance with NETA ATS, Table 100.9.
h. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data.
i. Verify that current transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3. That grounding point should be located

as specified by Engineer in Project Drawings.

3. Electrical Tests of Voltage Transformers:

   a. Perform insulation-resistance tests, winding-to-winding and windings-to-ground. Test voltages must be applied for one minute in accordance with NETA ATS Table 100.5. For units with solid-state components that cannot tolerate applied voltage, follow manufacturer's published instructions. Investigate and correct values of insulation resistance less than manufacturer's published instructions or NETA ATS, Table 100.5.
   b. Perform polarity test on transformers to verify polarity marks or H1-X1 relationship as applicable. Polarity results must agree with transformer markings.
   c. Perform turns-ratio test on tap positions. Ratio errors must be in accordance with IEEE C57.13.
   d. Measure voltage circuit burdens at transformer terminals. Measured burdens must be compared to, and must match, instrument transformer ratings.
   e. Perform dielectric withstand test on primary windings with secondary windings connected to ground. Dielectric voltage must be in accordance with NETA ATS, Table 100.9. Test voltage must be applied for one minute. If no evidence of distress or insulation failure is observed by end of total time of voltage application during dielectric withstand test, primary windings are considered to have passed test.
   f. Perform power-factor or dissipation-factor tests in accordance with test equipment manufacturer's published data. Power-factor or dissipation-factor values must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use test equipment manufacturer's published data.
   g. Verify that voltage transformer secondary circuits are grounded and have only one grounding point in accordance with IEEE C57.13.3. Test results must indicate that circuits are grounded at only one point.

F. Ground-Resistance Test:

1. Visual and Mechanical Inspection:

   a. Verify that ground system complies with Contract Documents and with Article 250, "Grounding and Bonding," in NFPA 70.
   b. Inspect physical and mechanical condition. Grounding system electrical and mechanical connections must be free of corrosion.
   c. Inspect bolted electrical connections for high resistance using one of the following two methods:

      1) Use low-resistance ohmmeter to compare bolted-connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
      2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.

   d. Inspect anchorage.

2. Electrical Tests:

   a. Perform fall-of-potential or alternative test in accordance with IEEE 81 on main grounding electrode or system. Resistance between main grounding electrode and ground must be no more than [**5 Ω**][**maximum ground-resistance value specified in "Examination"**

Article].

b. Perform point-to-point tests to determine resistance between main grounding system and major electrical equipment frames, system neutral, and derived neutral points. Investigate point-to-point resistance values that exceed 0.5 Ω. Compare equipment nameplate data with the Contract Documents.
c. Inspect physical and mechanical condition.
d. Inspect bolted electrical connections for high resistance using one of the following two methods:

1) Use low-resistance ohmmeter to compare bolted-connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.

G. Metering Devices Field Tests:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect bolted electrical connections for high resistance using one of the following two methods:

1) Use low-resistance ohmmeter to compare bolted-connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.
2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS, Table 100.12.

c. Inspect cover gasket, cover glass, condition of spiral spring, disk clearance, contacts, and case shorting contacts, as applicable.
d. Verify that unit is clean.
e. Verify freedom of movement, end play, and alignment of rotating disk(s).

2. Electrical Tests:

a. Verify accuracy of meters at cardinal points. Meter accuracy must be in accordance with manufacturer's published data.
b. Calibrate meters in accordance with manufacturer's published data. Calibration results must be within manufacturer's published tolerances.
c. Verify instrument multipliers. Instrument multipliers must be in accordance with system design specifications.
d. Verify that current transformer and voltage transformer secondary circuits are intact. Test results must confirm integrity of secondary circuits of current and voltage transformers.

H. Microprocessor-Based Protective Relay Field Tests:

1. Visual and Mechanical Inspection:

a. Record model number, style number, serial number, firmware revision, software revision,

and rated control voltage.

b. Verify operation of LEDs, display, and targets.
c. Record passwords for each access level.
d. Clean front panel and remove foreign material from case.
e. Check tightness of connections.
f. Verify that frame is grounded in accordance with manufacturer's published instructions.
g. Set relay in accordance with results in Section 260573.16 "Coordination Studies" and in Section 260573.19 "Arc-Flash Hazard Analysis."
h. Download settings from relay. Print copy of settings for report and compare settings to those specified in coordination study.

2. Electrical Tests:

a. Perform insulation-resistance tests from circuits to grounded frame in accordance with manufacturer's published data.
b. Apply voltage or current to analog inputs, and verify correct registration of relay meter functions.
c. Check functional operation of elements used in protection scheme as follows:

1) ANSI No. 2/62, Timing Relay:

a) Determine time delay.
b) Verify operation of instantaneous contacts.

2) ANSI No. 24, Volts/Hertz Relay:

a) Determine pickup frequency at rated voltage.
b) Determine pickup frequency at second voltage level.
c) Determine time delay.

3) ANSI No. 25, Sync Check Relay:

a) Determine closing zone at rated voltage.
b) Determine maximum voltage differential that permits closing at zero degrees.
c) Determine set points of live line, live bus, dead line, and dead bus.
d) Determine time delay.
e) Verify control functions of dead bus/live line, dead line/live bus, and dead bus/dead line.

4) ANSI No. 27, Undervoltage Relay:

a) Determine dropout voltage.
b) Determine time delay.
c) Determine time delay at second point on timing curve for inverse time relays.

5) ANSI No. 32, Directional Power Relay:

a) Determine minimum pickup at maximum torque angle.
b) Determine closing zone.
c) Determine maximum torque angle.
d) Determine time delay.
e) Verify time delay at second point on timing curve for inverse time relays.
f) Plot operating characteristic.

6) ANSI No. 46, Current Balance Relay:

a) Determine pickup of unit.
b) Determine percent slope.
c) Determine time delay.

7) ANSI No. 46N, Negative Sequence Current Relay:

a) Determine negative sequence alarm level.
b) Determine negative sequence minimum trip level.
c) Determine maximum time delay.
d) Verify two points on I2T curve.

8) ANSI No. 47, Phase Sequence or Phase Balance Voltage Relay:

a) Determine positive sequence voltage to close N.O. contact.
b) Determine positive sequence voltage to open N.C. contact (undervoltage trip).
c) Verify negative sequence trip.
d) Determine time delay to close N.O. contact with sudden application of 120 percent of pickup.
e) Determine time delay to close N.C. contact on removal of voltage when previously set to rated system voltage.

9) ANSI No. 50, Instantaneous Overcurrent Relay:

a) Determine pickup.
b) Determine dropout.
c) Determine time delay.

10) ANSI No. 51, Time Overcurrent:

a) Determine minimum pickup.
b) Determine time delay at two points on time current curve.

11) ANSI No. 64, Ground Detector Relay:

a) Determine maximum impedance to ground causing relay pickup.

12) ANSI No. 67, Directional Overcurrent Relay:

a) Determine directional unit minimum pickup at maximum torque angle.
b) Determine closing zone.
c) Determine maximum torque angle.
d) Plot operating characteristics.
e) Determine overcurrent unit pickup.
f) Determine overcurrent unit time delay at two points on time current curve.

13) ANSI No. 87, Differential Relay:

a) Determine operating unit pickup.
b) Determine operation of restraint unit.
c) Determine slope.
d) Determine harmonic restraint.
e) Determine instantaneous pickup.
f) Plot operating characteristics for restraint.

d. Control Verification:

1) Functional Tests:

a) Check operation of active digital inputs.
b) Check output contacts or SCRs, preferably by operating controlled device, such as circuit breaker, auxiliary relay, or alarm.
c) Check internal logic functions used in protection scheme.
d) On completion of testing, reset minimum/maximum recorders, communications statistics, fault counters, sequence-of-events recorder, and event records.

2) In-Service Monitoring: After equipment is initially energized, measure magnitude and phase angle of inputs and verify expected values.

I. Ground-Fault Protection Field Tests: Evaluate interconnected system in accordance with switchgear manufacturer's published instructions.

1. Determine proper location of sensors around bus of circuit to be protected. This determination may be done visually, with knowledge of which bus is involved.
2. Verify grounding points of system to determine that ground paths do not exist that would bypass sensors. Use high-voltage testers and resistance bridges.
3. Test installed system for correct response by application of full-scale current into equipment to duplicate ground-fault condition, or by equivalent means such as by simulated fault current generated by the following:

a. A coil around sensors.
b. A separate test winding in sensors.

4. Record test results on test form provided with instructions provided by manufacturer.

J. DC System VRLA Batteries Field Test:

1. Visual and Mechanical Inspection:

a. Verify that batteries are adequately located.
b. Verify that battery area ventilation system is operable.
c. Verify existence of suitable eyewash equipment.
d. Verify that equipment nameplate data complies with the Contract Documents.
e. Inspect physical and mechanical condition.
f. Verify adequacy of battery support racks, mounting, anchorage, alignment, grounding, and clearances.
g. Verify that units are clean.
h. Inspect spill containment installation.
i. Verify application of oxide inhibitor on battery terminal connections.

2. Electrical Tests:

a. Measure charger float and equalizing voltage levels. Adjust to battery manufacturer's recommended levels.
b. Verify charger functions and verify that alarms comply with system manufacturer's published instructions.
c. Measure negative post temperature. This temperature must comply with manufacturer's published data or IEEE 1188.
d. Measure charger float and equalizing voltage levels. These levels must be in accordance with battery manufacturer's published data.
e. Measure monoblock/cell voltage and total battery voltage with charger energized and in

float mode of operation. Monoblock/cell voltages must be in accordance with manufacturer's published data.

f. Measure intercell connection resistances.

g. Perform internal ohmic measurement tests. Cell internal ohmic values (resistance, impedance, or conductance) may not vary by more than 25 percent between identical cells that are in fully charged state. Monoblock/cell internal ohmic values (resistance, impedance, or conductance) may not vary by more than 25 percent between identical monoblocks/cells in fully charged state.

h. Perform load test in accordance with manufacturer's published data or IEEE 1188. Replace units that fail to pass test.

i. Measure battery system voltage from positive-to-ground and negative-to-ground. Voltage measured from positive-to-ground must be equal in magnitude to voltage measured from negative-to-ground.

K. DC System Vented NiCd Batteries Field Test:

1. Visual and Mechanical Inspection:

a. Verify that batteries are adequately located.

b. Verify that battery area ventilation system is operable.

c. Verify existence of suitable eyewash equipment.

d. Verify that equipment nameplate data complies with the Contract Documents.

e. Inspect physical and mechanical condition.

f. Verify adequacy of battery support racks, mounting, anchorage, alignment, grounding, and clearances.

g. Verify electrolyte level. Measure pilot-cell electrolyte temperature, and correct as recommended by manufacturer's maintenance procedures to bring temperature and electrolyte level to within normal limits.

h. Verify that units are clean.

i. Inspect spill containment installation.

j. Verify application of oxide inhibitor on battery terminal connections.

2. Electrical Tests:

a. Measure charger float and equalizing voltage levels. Adjust to battery manufacturer's recommended levels.

b. Verify charger functions and verify that alarms comply with system manufacturer's published instructions.

c. Measure cell voltage and total battery voltage with charger energized and in float mode of operation. Cell voltages must be within 0.05 V of each other or in accordance with manufacturer's published data.

d. Measure intercell connection resistances.

e. Perform internal ohmic measurement tests. Cell internal ohmic values (resistance, impedance, or conductance) may not vary by more than 25 percent between identical cells that are in fully charged state.

f. Perform load test in accordance with manufacturer's published data or IEEE 1106. Replace units that fail to pass test.

g. Measure battery system voltage from positive-to-ground and negative-to-ground. Voltage measured from positive-to-ground must be equal in magnitude to voltage measured from negative-to-ground.

L. System Function Tests: Perform system function tests after other field quality-control tests have been completed and components have passed specified tests. Verify correct interaction of sensing, processing, and action devices.

1. Develop test parameters and perform tests for purpose of evaluating performance of integral

components and their functioning as complete unit within design requirements and manufacturer's published data.
2. Verify correct operation of interlock safety devices for fail-safe functions in addition to design function.
3. Verify correct operation of sensing devices, alarms, and indicating devices.

M. Nonconforming Work:

1. Switchgear components will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

N. Collect, assemble, and submit test and inspection reports. Record as-left set points of adjustable devices.

O. Manufacturer Services:

1. Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

3.6 MAINTENANCE

A. Voltage Monitoring and Adjusting: After Substantial Completion, but not more than six months after Final Acceptance, and if requested by Owner, perform the following voltage monitoring:

1. During period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at switchgear outgoing sections. Use voltmeters with calibration traceable to NIST standards and with chart speed of not less than **1 inch (25 mm)** per hour. Voltage unbalance greater than 1 percent between phases, or deviation of phase voltage from nominal value by more than plus or minus 5 percent during test period, is unacceptable.
2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:

a. Adjust switchgear taps.
b. Prepare published request for voltage adjustment by electric utility.

3. Retests: Repeat monitoring, after corrective action has been performed, until specified results are obtained.
4. Report:

a. Prepare published report covering monitoring performed and corrective action taken.

B. Infrared Inspection: Perform survey during periods of maximum possible loading. Remove covers prior to inspection.

1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of electrical power connections of switchgear.
2. Instrument: Inspect distribution systems with imaging equipment capable of detecting minimum temperature difference of 1 deg C at 30 deg C.
3. Record of Infrared Inspection: Prepare certified report that identifies testing technician and equipment used and that lists results as follows:

a. Description of equipment to be tested.
b. Discrepancies.
c. Temperature difference between area of concern and reference area.

d. Probable cause of temperature difference.
e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
f. Identify load conditions at time of inspection.
g. Provide photographs and thermograms of deficient area.

4. Act on inspection results in accordance with recommendations in NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.
5. [**Follow-up Infrared Scanning: Perform additional follow-up infrared scan of switches 11 months after date of Substantial Completion.**]

C. Software and Firmware Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software support for [**two**]<**Insert number**> years.
2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software upgrades that become available within [**two**]<**Insert number**> years from date of Substantial Completion. Verify that upgrading software includes operating system and new or revised licenses for using software.

a. Upgrade Notice: No fewer than [**30**]<**Insert number**> days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3. Upgrade Reports: Prepare report after each update, documenting upgrades installed.

END OF SECTION 26 12 19 00A

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
26 12 19 00	26 12 13 00	Liquid-Filled, Medium-Voltage Transformers
26 12 19 00	26 22 13 00	Low-Voltage Distribution Transformers

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 13 29 00 - MEDIUM-VOLTAGE COMPARTMENTALIZED SWITCHGEAR

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes dead-front, remotely controlled insulated vacuum load and fault interrupting switchgear.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 DEFINITIONS

A. Bushing: An insulating structure including a central conductor, or providing a central passage for a conductor, with provision for mounting on a barrier, conducting or otherwise, for insulating the conductor from the barrier and conducting current from one side of the barrier to the other.

B. Bushing Elbow: An insulated device used to connect insulated conductors to separable insulated connectors on dead-front, pad-mounted switchgear and to provide a fully insulated connection. Also called an "elbow connector."

C. Bushing Insert: That component of a separable insulated connector that is inserted into a bushing well to complete a dead-front, load break or non-load break, separable insulated connector (bushing).

D. Bushing Well: A component of a separable insulated connector, either permanently welded or clamped to an enclosure wall or barrier, having a cavity that receives a replaceable component (bushing insert) to complete the separable insulated connector (bushing).

E. Fault Interrupter: A self-controlled mechanical switching device capable of making, carrying, and automatically interrupting an alternating current. It includes an assembly of control elements to detect overcurrents and control the fault interrupter. A fault interrupter always consists of a switching device, a control unit, and sensors for current and/or voltage sensing.

F. Hotstick: An insulated stick, usually made of fiberglass, that is used to work energized overhead conductors and operate electrical equipment that is overhead, underground, and compartmentalized.

G. NETA ATS: InterNational Electrical Testing Association, Acceptance Testing Specification.

H. Way: A three-phase or single-phase circuit connection to the bus that may contain combinations of switches and protective devices or may be a solid bus.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
2. Time-current characteristic curves for overcurrent protective devices.

B. Shop Drawings: For pad-mounted switchgear.

1. Include a tabulation of installed devices with features and ratings.
2. Include dimensioned plans and elevations, showing dimensions, shipping sections, and weights of each assembled section. Elevations must show major components and features, and they will mimic bus diagram.
3. Include a plan view and cross section of equipment base showing clearances, manufacturer's recommended work space, and locations of penetrations for grounding and conduits. Show location of anchor bolts[**and leveling channels**].
4. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, and location and size of each field connection.
5. Include list of materials.
6. Locate accessory and spare equipment storage.
7. Include single-line diagram.
8. Include control power wiring diagrams.
9. Include battery, charger, and transfer switch ratings.
10. Include copy of nameplate.
11. Switchgear Ratings:

    a. Voltage.
    b. Continuous current.
    c. Short-circuit rating.
    d. BIL.

12. Design Calculations: Signed and sealed by a qualified professional structural engineer. Calculate requirements for selecting seismic restraints.
13. Relay settings.
14. Interface data with monitoring or control network.
15. Wiring Diagrams: For each switchgear assembly, include the following:

    a. Power, signal, and control wiring.
    b. Three-line diagrams of current and future secondary circuits, showing device terminal numbers and internal diagrams.
    c. Schematic control diagrams.
    d. Diagrams showing connections of component devices and equipment.
    e. Schematic diagrams showing connections to remote devices[**including SCADA remote terminal unit**].

1.4 INFORMATIONAL SUBMITTALS

A. Product Certificates: For pad-mounted switchgear.

1. Switch ratings as listed in IEEE C37.74.
2. Interrupter ratings as listed in IEEE C37.60.
3. Coating system compliance with the IEEE standard listed in "Switchgear Enclosure" Article.

B. Source quality-control reports.

C. Field quality-control reports.

1.5 WARRANTY

A. Special Battery Warranties: Manufacturer and Installer agree to repair or replace the switchgear control system storage batteries that fail in materials or workmanship within specified warranty period.

1. Warranted Cycle Life for VRLA Batteries: Equal to or greater than that represented in manufacturer's published table, including figures corresponding to the following, based on annual average battery temperature of **77 deg F (25 deg C)**:

a. For discharge rate not faster than eight hours, discharge duration not longer than eight hours, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than six discharge cycles.
b. For discharge rate not faster than 30 minutes, discharge duration not longer than 30 minutes, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than 20 discharge cycles.
c. For discharge rate not faster than 15 minutes, discharge duration not longer than 45 seconds, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than 120 discharge cycles.

2. Warranted Cycle Life for Premium VRLA Batteries: Equal to or greater than that represented in manufacturer's published table, including figures corresponding to the following, based on annual average battery temperature of **77 deg F (25 deg C)**:

a. For discharge rate not faster than eight hours, discharge duration not longer than eight hours, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than 40 discharge cycles.
b. For discharge rate not faster than 30 minutes, discharge duration not longer than 30 minutes, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than 20 discharge cycles.
c. For discharge rate not faster than 15 minutes, discharge duration not longer than 1.5 minutes, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than 750 discharge cycles.

PART 2 - PRODUCTS

2.1 MEDIUM-VOLTAGE COMPARTMENTALIZED SWITCHGEAR

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**S&C Electric Company**]
4. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**S&C Electric Company**]
4. <**Insert manufacturer's name**>

2.2 SYSTEM DESCRIPTION

A. Manufactured Unit: Pad-mounted switchgear, designed for application in [**solidly grounded neutral**][**ungrounded**][**impedance-grounded**] underground distribution systems.

B. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory, and marked for intended location and application.

C. Comply with IEEE C2.

D. Comply with IEEE C37.74.

2.3 RATINGS

A. Switchgear is applied to a nominal [**4.16**][**13.2**][**13.8**][**23**][**24.94**][**34.5**]<**Insert voltage**> kV (L-L) medium-voltage electrical power system. Minimum ratings of the switchgear must be as follows:

1. Rated Maximum Voltage and Rated BIL: [**15.5 kV and 95 kV BIL**][**27 kV and 125 kV BIL**][**38 kV and 150 kV BIL**]<**Insert voltage**>.
2. Continuous and Load Interrupting Current: 600 A.
3. Short-Time and Short-Circuit Interrupting Current: [**12.5 kA SYM RMS**][**16 kA SYM RMS**][**20 kA SYM RMS**][**25 kA SYM RMS**].

2.4 SWITCHGEAR ENCLOSURE

A. Weatherproof enclosure with an integral skid mounting frame, designed for mounting on a concrete pad, suitable to allow skidding or rolling of the switchgear in any direction, and with provision for anchoring the frame to the pad.

B. Enclosure Integrity: Comply with IEEE C57.12.28 for compartmentalized enclosures that contain energized electrical equipment in excess of 600 V that may be exposed to the public.

1. Each vertical section must have the following features:

a. Structural design and anchorage adequate to resist loads imposed by [**125 mph (200 km/h)**]<**Insert wind speed**> wind.
b. Space heater operating at one-half or less of rated voltage, sized to prevent condensation, controlled by thermostats to maintain temperature of each section above expected dew point.
c. Louvers equipped with insect and rodent screens and filters, and arranged to permit air circulation while excluding rodents and exterior dust.
d. Weatherproof ground-fault circuit interrupter duplex receptacles.
e. Power for heaters and receptacles must be provided [**by control power transformer**][**as indicated**].
f. Skid Mounted: Mount each shipping group on an integral base frame as a complete weatherproof unit.

C. Corrosion Protection:

1. Enclosure coating system must be factory applied, meeting the requirements of [**IEEE C57.12.28**][**IEEE C57.12.29**], in manufacturer's standard color [**green**]<**Insert color**>.
2. Fabricate the support frame, enclosure base, and the enclosure from stainless steel, ASTM A167,

Type 304 or 304L. Enclosure coating system must be factory applied, meeting the requirements of [**IEEE C57.12.28**][**IEEE C57.12.29**], standard color [**green**]<**Insert color**>.

2.5 SWITCHGEAR CONSTRUCTION

A. Dead-front, front and rear access switchgear.

B. Each disconnect switch in switched ways must be in a sealed, dielectric filled [**stainless**]steel tank, factory-filled with [**SF6 gas**][**mineral oil**][**or**][**less-flammable, high-firepoint fluid**].

1. SF6 Gas: Comply with ASTM D2472. Provide enclosure with pressure gauge and self-sealing fill valve.
2. Mineral Oil: Comply with ASTM D3487, Type II, and tested for compliance with ASTM D117. Provide enclosure with level gauge to monitor the dielectric level; automatic pressure relief valve; and fill, drain, and sampling valves.
3. Less-flammable, high-firepoint fluid must comply with ASTM D6871 and IEC 61099. The temperature rating of the fluid must be satisfactory for ambient air temperatures of **minus 22 and plus 104 deg F (minus 30 and plus 40 deg C)**. Provide enclosure with level gage to monitor the dielectric level; automatic pressure relief valve; and fill, drain, and sampling valves.

C. Construct switchgear assembly with switched ways that have front-accessible terminations for cables entering from below and with manual operating provisions with a lineman's hotstick.

D. Trapped Key Interlocks: Kirk key interlock system using a dowel pin design having no openings. Brass housing and 316 stainless steel key and lock bolts.

E. Viewing Windows: For each switch, located adjacent to manual operating devices, and positioned to show switch contact position.

F. Grounding: Provision to make grounding cable and wire connections at each way.

2.6 SWITCHED WAYS

A. Source Switch Ways: Non-fused, hotstick operated, ganged vacuum load interrupter switches[**, in series with a visible-break disconnect switch**].

1. Rated Continuous Current and Load Switching Current: 600 A.
2. Vacuum Load Interrupter:

    a. With 24 V(dc) motor operators to open or close the load interrupter.
    b. Trip-free switch mechanism. Closing the switch must be independent of the speed of the operating handle.

3. Visible-Break Disconnect Switch: [**Three positions, with open, closed, and ground positions**][**Two positions, with open and closed positions**]. The switch must be mechanically interlocked so that the vacuum interrupter opens and closes first.

    a. Switch position indicator, clearly labeled.
    b. Padlocking and tagging provisions.

B. Fault Interrupting Switched Ways: Non-fused, hotstick-operated, ganged vacuum fault interrupter switches[**, in series with a visible-break disconnect**]. With internally mounted current transformers and electronic overcurrent sensing for [**single-phase or**]three-phase ganged tripping of the interrupter.

Comply with IEEE C37.60.

1. Rated Continuous Current and Load Switching Current: 600 A.
2. Vacuum Fault Interrupter:

    a. Operated by a motor-charged stored energy mechanism, with provision to manually charge the mechanism. Charging motors must operate at 24 V(ac).
    b. Auxiliary Switches: Provide two auxiliary switches, each with field-selectable NC or NO switch position, for connection of remote indication of the position of the switched way. The switches must be rated at 15 A, 120 V(ac), and 1 A, 120 V(dc).
    c. Trip-free switch mechanism when manually operated. Closing the switch must be independent of the speed of the operating handle.
    d. Single operating handle and a clearly labeled switch position indicator; open, closed, tripped.
    e. Operations Counters: Mechanical type, linked to the operating handle of each switched way.
    f. Padlocking and tagging provisions.

3. Visible-Break Disconnect Switch: [**Three positions, with open, closed, and ground positions**][**Two positions, with open and closed positions**]. The switch must be mechanically interlocked so that the switch cannot be operated unless the vacuum fault interrupter is open.

    a. Switch position indicator, clearly labeled.
    b. Padlocking and tagging provisions.

C. Controls:

1. Motor Actuators: "Open," "close," and "stop" push buttons.
2. Switch Status LEDs: "Open" and "closed" lights. Show status of disconnect switch using its auxiliary contact.
3. Motor Actuator Process LEDs: "Opening" and "closing" lights indicating that the selected motor is operating the switch.
4. Power Switch: "On" and "off" toggle switch and circuit protector, to disconnect the dc supply to its motor and provide overload and short-circuit protection.
5. 120 V(ac) LED to display battery system power level.
6. Battery voltage meter to show battery condition.
7. Local and Remote Selector: In the "local" position remote operation of the switches is disabled and is possible only under the control of switchgear-mounted push buttons.

D. Overcurrent[**and Control**] Relays: Field-adjustable microprocessor electronic relays in each phase at indicated locations. Provide for current adjustment from 0 to 600 A.

1. Device Functions: [**51/50, 51N/50N, or 51G/50G in accordance with IEEE C37.2**]<**Insert values**>.

2.7 POWER SUPPLY

A. The power supply for instrumentation, communications, and switch operations must be for connection to two 120 V(ac) power sources, controlled by an automatic transfer switch to connect to the alternate supply when the primary supply has failed.

B. The power supply for instrumentation, communications, and switch operations must be from a potential transformer installed as part of the switchgear.

C. Control Power Supply: Dedicated [**48 V(dc)**][**120 V(dc)**][**240 V(dc)**] battery system.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**C&D Technologies, Inc.**]
   b. [**EnerSys**]
   c. [**Trojan Battery Company**]
   d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**C&D Technologies, Inc.**]
   b. [**EnerSys**]
   c. [**Trojan Battery Company**]
   d. <**Insert manufacturer's name**>

3. System Requirements: Battery must have number of cells and ampere-hour capacity based on an initial specific gravity of 1.210 at **77 deg F (25 deg C)** with electrolyte at normal level and minimum ambient temperature of **55 deg F (13 deg C)**. Cycle battery before shipment to guarantee rated capacity on installation. Arrange to operate ungrounded. Battery system capacity must be as recommended by switchgear manufacturer to operate the circuit breakers for intended duty.
4. Battery:

   a. [**Standard VRLA**][**Premium VRLA**]<**Insert type**> batteries, with system disconnect and overcurrent protective device.
   b. Rack: [**Two**]<**Insert number**>-step rack with electrical connections between battery cells and between rows of cells; include two flexible connectors with bolted-type terminals for output leads.[**Rate battery rack, cell supports, and anchorage for seismic requirements.**]
   c. Accessories:

      1) Set of cell numerals.
      2) Monitoring system.

   d. Charger: Static-type silicon rectifier equipped with automatic regulation and provision for manual and automatic adjustment of charging rate. Unit must automatically maintain output voltage within 0.5 percent from no load to rated charger output current, with ac input-voltage variation of plus or minus 10 percent and input-frequency variation of plus or minus 3 Hz.

      1) DC ammeter.
      2) DC Voltmeter: Maximum error of 5 percent at full-charge voltage, with toggle switch to select between battery and charger voltages.
      3) Ground Indication: Two appropriately labeled lights to indicate circuit ground, connected in series between negative and positive terminals, with midpoint junction connected to ground by NO push-button contact.
      4) Capacity: Sufficient to supply steady load, float-charge battery between 2.20 and 2.25 V per cell and equalizing charge at 2.33 V per cell.
      5) Charging-Rate Switch: Manually operated switch to transfer to higher charging rate. Charger operation must be automatic until manually reset.

6) AC Power Supply: 120 V, 60 Hz, subject to plus or minus 10 percent variation in voltage and plus or minus 3 Hz variation in frequency. Automatic charger operation must resume after loss of ac power supply for any interval.
7) Charging Regulator: Protect charger from damage due to overload, including short circuit on output terminals. The device must regulate charging current but must not disconnect charger from either battery or ac supply.
8) Charger's Audible Noise: Less than 26 dB.

5. Battery Ground-Fault Detector: Initiates alarm when resistance to ground of positive or negative bus of battery is less than 5000 ohms.
6. Control Wiring: Factory installed, complete with bundling, lacing, and protection.

    a. Conductors across Hinges and for Interconnections between Shipping Units: Flexible conductors for No. 8 AWG and smaller.
    b. Conductors: Sized in accordance with NFPA 70 for duty required.

7. An automatic transfer switch to connect the alternate power supply when the primary power supply has failed.

2.8 AUTOMATIC SOURCE TRANSFER CONTROLS

A. An automatic switch control system must execute manual, automatic source-transfer, and SCADA operation of the source and fault interrupting switch ways. The source-transfer controls must open an incoming switch way where voltage is lost and close the other incoming switch way if voltage is present. The controls must include an overcurrent lockout that prevents the closing of a switch way into a system fault.

B. The automatic switch control system must execute remote commands received from a SCADA master station and transmit switchgear operation information to a SCADA master station using DNP3 communications protocol. Execution of remote commands must include enabling of the source-transfer controls and transfer of switch ways to "close," "open," and "ground" positions. Transmission of switchgear information must include switch way positions and DC supply system status. Additional switchgear information that must be transmitted follows:

    1. Voltage.
    2. Current in load ways.
    3. <**Insert text**>.

C. The control must have communication port provisions for connection to a multi-mode serial fiber link.

2.9 CONTROL NETWORK

A. Compliance with ASHRAE 135: Controllers must support serial MS/TP and Ethernet IP communications and must be able to communicate directly via TIA-485 serial networks and Ethernet 10Base-T networks as a native device.

B. Support DNP3 protocol remote control commands received from the SCADA master stations that control switch operations. Comply with the requirements of IEEE 1815.

2.10 BUSHINGS

A. Separable insulated connectors must be used to connect primary cable. Comply with requirements in Section 260513 "Medium-Voltage Cables."

1. Bushings: One-piece, 600 A, BIL ratings the same as the connectors. Comply with IEEE 386.
2. Supply a standoff bracket or parking stand for each bushing, mounted horizontally adjacent to each bushing.

2.11 SURGE ARRESTERS

A. Distribution class; metal-oxide-varistor type, fully shielded, separable elbow type, suitable for plugging into the inserts. Comply with IEEE C62.11 and IEEE 386.

1. Nominal System Line-to-Line Voltage: <**Insert number**> kV RMS.
2. Maximum Continuous Operating Voltage: <**Insert number**> kV RMS.
3. Duty-Cycle Voltage: <**Insert number**> kV RMS.

2.12 WARNING LABELS AND SIGNS

A. Comply with requirements in Section 260553 "Identification for Electrical Systems" for labels and signs.

1. High-Voltage Warning Label: Self-adhesive labels on the outside of the high-voltage compartment door(s). Legend must be "DANGER HIGH VOLTAGE" printed in two lines of minimum **2 inch (50 mm)** high letters. The word "DANGER" must be in white letters on a red background and the words "HIGH VOLTAGE" must be in black letters on a white background.
2. Arc-Flash Warning Label: Self-adhesive labels on the outside of the high-voltage compartment door(s), warning of potential electrical arc-flash hazards and appropriate personal protective equipment required.

2.13 SOURCE QUALITY CONTROL

A. Factory Tests: Comply with requirements in IEEE C37.60 and IEEE C37.74 for testing procedures.

1. Circuit Resistance Test: Verify that switchgear contacts have been properly aligned and current transfer points have been properly assembled.
2. Power-frequency dry withstand voltage test.
3. Dielectric withstand test; one-minute dry power-frequency.
4. Calibrate overcurrent devices for conformance to published time-current characteristic curves.
5. Sealed Tank Leak Test:

a. Comply with IEC 62271-1 for test procedure for switchgear using SF6.
b. The test procedure for vacuum switchgear must be as follows:

1) Each vacuum tube must be identified by its serial number. Its vacuum pressure level must be tested by the manufacturer of the vacuum interrupter. Document the test results.
2) After assembly of the switchgear way, test the vacuum pressure level of the vacuum tubes by the routine dielectric test across the open contacts. The test voltage must be stated by the manufacturer. The dielectric test must be carried out after the mechanical routine test.

6. Operating tests must verify the following:

    a. Switch position indicators and contacts are in the correct position for both the open and closed positions.
    b. Insulating medium quantity indicator (if provided) is functioning properly.
    c. Circuit configuration is shown correctly.
    d. Mechanical interlocks are in place and operative.
    e. Position and polarity of current transformers meets requirements.
    f. Control, secondary wiring, and accessory devices are connected correctly.
    g. Devices and relays actually operate as intended. Circuits for which operation is not feasible must be checked for continuity.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Upon delivery of switchgear and prior to unloading, inspect equipment for damage.

1. Examine tie rods and chains to verify they are undamaged and tight and that blocking and bracing are tight.
2. Verify that there is no evidence of load shifting in transit and that readings from transportation shock recorders, if equipped, are within manufacturer's recommendations.
3. Examine switchgear for external damage, including dents or scratches in doors and sill, and termination provisions.
4. Compare switchgear and accessories received with the bill of materials to verify that the shipment is complete. Verify that switchgear and accessories conform to the manufacturer's quotation and Shop Drawings. If the shipment is not complete or does not comply with project requirements, notify the manufacturer in writing immediately.
5. Unload switchgear, observing packing label warnings and handling instructions.
6. Open compartment doors and inspect components for damage or displaced parts, loose or broken connections, cracked or chipped insulators, bent mounting flanges, dirt or foreign material, and water or moisture.

B. Handling:

1. Handle switchgear, in accordance with manufacturer's recommendations; avoid damage to the enclosure, termination compartments, base, frame, and internal components. Do not subject switchgear to impact, jolting, jarring, or rough handling.
2. Transport switchgear upright to avoid internal stresses on equipment mounting assemblies. Do not tilt or tip switchgear.
3. Use spreaders or a lifting beam to obtain a vertical lift and to protect switchgear from straps bearing against the enclosure. Lifting cable pull angles may not be greater than 15 degrees from vertical.
4. Do not damage structure when handling switchgear.

C. Storage:

1. Switchgear may be stored outdoors. If possible, store switchgear at final installation locations on concrete pads. If dry concrete surfaces are not available, use pallets of adequate strength to protect switchgear from direct contact with the ground. Ensure switchgear is level.
2. Protect switchgear from physical damage. Do not store switchgear in the presence of corrosive or explosive gases.
3. Store switchgear with compartment doors closed.

D. Examine roughing-in of conduits and grounding systems to verify the following:

1. Wiring entries comply with layout requirements.
2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders have to cross section barriers to reach load or line lugs.

E. Pre-Installation Checks:

1. Verify removal of shipping bracing after placement.

F. Verify that ground connections are in place and that requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance must be [**5 ohms**]<**Insert value**> at switchgear location.

G. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SWITCHGEAR INSTALLATION

A. Equipment Mounting:

1. Install switchgear on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 260548.16 "Seismic Controls for Electrical Systems."

B. Install level and plumb, tilting less than 1.5 degrees when energized.

C. Maintain minimum clearances and workspace at equipment in accordance with manufacturer's instructions and NFPA 70.

D. Maintain minimum clearances and workspace at equipment in accordance with manufacturer's instructions and IEEE C2.

3.3 CONNECTIONS

A. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

1. For counterpoise, use tinned bare copper cable not smaller than No. 4/0 AWG, buried not less than **30 inch (765 mm)** below grade interconnecting the grounding electrodes. Bond surge arrester and neutrals directly to the switchgear enclosure and then to the grounding electrode system with bare copper conductors, sized as shown. Keep lead lengths as short as practicable with no kinks or sharp bends.
2. Fence and equipment connections must not be smaller than No. 4 AWG. Ground fence at each gate post and corner post and at intervals not exceeding **10 ft. (3 m)**. Bond each gate section to the fence post using **1/8 by 1 inch (3 by 25 mm)** [**tinned**]flexible braided copper strap and clamps.
3. Make joints in grounding conductors and loops by exothermic weld or compression connector.
4. Terminate grounding and bonding conductors on a common equipment grounding terminal on the switchgear enclosure.
5. Complete the switchgear grounding and surge protector connections prior to making other electrical connections.

B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and

Cables."

1. Maintain air clearances between energized live parts and between live parts and ground for exposed connections in accordance with manufacturer recommendations.
2. Bundle associated phase, neutral, and equipment grounding conductors together within the switchgear enclosure. Arrange conductors such that there is not excessive strain on the connections that could cause loose connections. Allow adequate slack for expansion and contraction of conductors.

C. Terminate medium-voltage cables in incoming section of switchgear in accordance with Section 260513 "Medium-Voltage Cables."

3.4 SIGNS AND LABELS

A. Comply with the installation requirements for labels and signs specified in Section 260553 "Identification for Electrical Systems."

B. Install warning signs as required to comply with OSHA 29 CFR 1910.269.

3.5 FIELD QUALITY CONTROL

A. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

B. General Field Testing Requirements:

1. Comply with the provisions of NFPA 70B, "Testing and Test Methods" chapter.
2. Perform each visual and mechanical inspection and electrical test. Certify compliance with test parameters.
3. After installing switchgear but before primary is energized, verify that grounding system at the switchgear is tested at the specified value or less.
4. After installing switchgear and after electrical circuitry has been energized, test for compliance with requirements.

C. Medium-Voltage Switchgear Field Tests:

1. Visual and Mechanical Inspection:

a. Verify that current and voltage transformer ratios correspond to Drawings.
b. Inspect bolted electrical connections using calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, use NETA ATS, Table 100.12. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.
c. Confirm correct operation and sequencing of electrical and mechanical interlock systems.

1) Attempt closure on locked-open devices. Attempt to open locked-closed devices.
2) Make key exchange with devices operated in off-normal positions.

d. Inspect control power transformers.

1) Inspect for physical damage, cracked insulation, broken leads, tightness of

connections, defective wiring, and overall general condition.
2) Verify that primary and secondary fuse or circuit breaker ratings match Drawings.

2. Electrical Tests:

a. Inspect bolted electrical connections using a low-resistance ohmmeter to compare bolted resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.
b. Perform dc voltage insulation-resistance tests on each bus section, phase-to-phase and phase-to-ground, for one minute. If the temperature of the bus is other than plus or minus 20 deg C, adjust the resulting resistance as provided in NETA ATS, Table 100.11.

1) Insulation-resistance values of bus insulation must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than manufacturer's recommendations or NETA ATS, Table 100.1.
2) Do not proceed to the dielectric withstand voltage tests until insulation-resistance levels are raised above minimum values.

c. Perform a dielectric withstand voltage test on each bus section, each phase-to-ground with phases not under test grounded, in accordance with manufacturer's published data. If manufacturer has no recommendation for this test, it must be conducted in accordance with NETA ATS, Table 100.2. Apply the test voltage for one minute.

1) If no evidence of distress or insulation failure is observed by the end of the total time of voltage application during the dielectric withstand test, the test specimen is considered to have passed the test.

d. Perform insulation-resistance tests on control wiring with respect to ground. Applied potential must be 500 V(dc) for 300 V rated cable and 1000 V(dc) for 600 V rated cable. Test duration must be one minute. For units with solid-state components or control devices that cannot tolerate the applied voltage, follow the manufacturer's recommendation.

1) Minimum insulation-resistance values of control wiring must not be less than 2 megohms.

e. Voltage Transformers:

1) Perform secondary wiring integrity test. Verify correct potential at devices.
2) Verify secondary voltages by energizing the primary winding with system voltage.

f. Perform current-injection tests on the entire current circuit in each section of switchgear.

1) Perform current tests by secondary injection with magnitudes such that a minimum current of 1.0 A flows in the secondary circuit. Verify correct magnitude of current at each device in the circuit.
2) Perform current tests by primary injection with magnitudes such that a minimum of 1.0 A flows in the secondary circuit. Verify correct magnitude of current at each device in the circuit.

g. Perform system function tests in accordance with "System Function Tests" Article.
h. Verify operation of space heaters.
i. Perform phasing checks on double-ended or dual-source switchgear to ensure correct bus phasing from each source.

D. Medium-Voltage Vacuum Interrupter Field Tests:

1. Visual and Mechanical Inspection:

    a. Inspect physical and mechanical condition.
    b. Inspect anchorage, alignment, grounding, and required clearances.
    c. Verify that maintenance devices such as special tools and gages specified by the manufacturer are available for servicing and operating the breaker.
    d. Verify the unit is clean.
    e. Perform mechanical operation tests on operating mechanism in accordance with manufacturer's published data.
    f. Measure critical distances on operating mechanism as recommended by the manufacturer. Critical distances of the operating mechanism must be in accordance with manufacturer's published data.
    g. Verify cell fit and element alignment.
    h. Verify racking mechanism operation.
    i. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
    j. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
    k. Perform time-travel analysis. Travel and velocity values must be in accordance with manufacturer's published data.
    l. Record as-found and as-left operation counter reading. Operation counter must advance one digit per close-open cycle.

2. Electrical Tests:

    a. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to ground with switch closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Insulation-resistance values must be in accordance with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.1. Investigate and correct values of insulation resistance less than this table or manufacturer's recommendations. Dielectric-withstand-voltage tests must not proceed until insulation-resistance levels are raised above minimum values.
    b. Perform a contact/pole-resistance test. Compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value. Microhm or dc millivolt drop values must not exceed the high levels of the normal range in accordance with manufacturer's published data. If manufacturer's published data is not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of the lowest value.
    c. Perform minimum pickup voltage tests on trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of the trip and close coils must comply with manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.20.
    d. Verify correct operation of auxiliary features, such as electrical close and trip operation, trip-free operation, and anti-pump function. Auxiliary features must operate in accordance with manufacturer's published data.
    e. Trip circuit breaker by operation of each protective device. Reset trip logs and indicators.
    f. Perform power-factor or dissipation-factor tests on each pole with the breaker open and each phase with the breaker closed. Power-factor or dissipation-factor values must comply with manufacturer's published data.
    g. Perform vacuum bottle integrity (dielectric-withstand-voltage) test across each vacuum bottle, with the contacts in the "open" position in accordance with manufacturer's published data. If no evidence of distress or insulation failure is observed by the end of the total time

of voltage application during the vacuum bottle integrity test, the specimen is considered to have passed the test.

h. Perform a dielectric-withstand-voltage test in accordance with manufacturer's published data. If no evidence of distress or insulation failure is observed by the end of the total time of voltage application during the dielectric-withstand-voltage test, the specimen is considered to have passed the test.

E. Microprocessor-Based Protective Relay Field Tests:

1. Visual and Mechanical Inspection:

a. Record model number, style number, serial number, firmware revision, software revision, and rated control voltage.
b. Verify operation of light-emitting diodes, display, and targets.
c. Record passwords for each access level.
d. Clean the front panel and remove foreign material from the case.
e. Check tightness of connections.
f. Verify that the frame is grounded in accordance with manufacturer's instructions.
g. Set the relay in accordance with results in Section 260573.16 "Coordination Studies" and in Section 260573.19 "Arc-Flash Hazard Analysis."
h. Download settings from the relay. Print a copy of the settings for the report and compare the settings to those specified in the coordination study.

2. Electrical Tests:

a. Perform insulation-resistance tests from each circuit to the grounded frame in accordance with manufacturer's published data.
b. Apply voltage or current to analog inputs, and verify correct registration of the relay meter functions.
c. Functional Operation: Check functional operation of each element used in the protection scheme.
d. Control Verification:

1) Functional Tests:

a) Check operation of active digital inputs.
b) Check output contacts or silicone-controlled rectifiers, preferably by operating the controlled device, such as circuit breaker, auxiliary relay, or alarm.
c) Check internal logic functions used in protection scheme.
d) Upon completion of testing, reset min/max recorders, communications statistics, fault counters, sequence-of-events recorder, and event records.

2) In-Service Monitoring: After the equipment is initially energized, measure magnitude and phase angle of inputs and verify expected values.

F. Ground Resistance Test:

1. Visual and Mechanical Inspection:

a. Verify ground system complies with the Contract Documents and NFPA 70 "Grounding and Bonding" Article.
b. Inspect physical and mechanical condition. Grounding system electrical and mechanical connections must be free of corrosion.
c. Inspect bolted electrical connections using a calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12. Bolt-torque levels must be in accordance with manufacturer's published data. In the absence of

manufacturer's published data, use NETA ATS, Table 100.12. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.

d. Inspect anchorage.

2. Electrical Tests:

a. Perform fall-of-potential or alternative test in accordance with IEEE 81 on the main grounding electrode or system. The resistance between the main grounding electrode and ground must be no more than [**5 ohms**][**maximum ground resistance value specified in the "Examination" Article**].

b. Perform point-to-point tests to determine the resistance between the main grounding system and major electrical equipment frames, system neutral, and derived neutral points. Investigate point-to-point resistance values that exceed 0.5 ohms. Compare equipment nameplate data with Contract Documents.

c. Inspect bolted electrical connections for high resistance using a low-resistance ohmmeter to compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.

d. Inspect physical and mechanical condition.

e. Inspect anchorage.

G. Nonconforming Work:

1. Switchgear will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

H. Prepare test and inspection reports.

3.6 SYSTEM FUNCTION TESTS

A. System function tests must prove the correct interaction of sensing, processing, and action devices. Perform system function tests after "Field Quality Control" tests have been completed and components have passed specified tests.

1. Develop test parameters and perform tests for evaluating performance of integral components and their functioning as a complete unit within design requirements and manufacturer's published data.
2. Verify the correct operation of interlock safety devices for fail-safe functions in addition to design function.
3. Verify the correct operation of sensing devices, alarms, and indicating devices.

3.7 MAINTENANCE

A. Infrared Inspection: Perform the survey during periods of maximum possible loading. Remove necessary covers prior to the inspection.

1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of the electrical power connections of the switchgear.
2. Instrument: Inspect distribution systems with imaging equipment capable of detecting a minimum temperature difference of 1 deg C at **86 deg F (30 deg C)**.
3. Record of Infrared Inspection: Prepare a certified report that identifies the testing technician and equipment used, and lists the results as follows:

a. Description of equipment to be tested.
b. Discrepancies.
c. Temperature difference between the area of concern and the reference area.
d. Probable cause of temperature difference.
e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
f. Identify load conditions at time of inspection.
g. Provide photographs and thermograms of the deficient area.

4. Act on inspection results in accordance with the recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 21 16 00 - PARALLELING LOW-VOLTAGE SWITCHGEAR

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Multiple-generator paralleling monitoring and control system.
2. Single-generator paralleling monitoring and control system.
3. Metal-enclosed, circuit-breaker switchgear (600 V and less).

B. Products Furnished, but Not Installed, under This Section:

1. <**Insert products furnished, but not installed**>.

C. Products Installed, but Not Furnished, under This Section:

1. <**Insert products installed, but not furnished**>.

D. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. [**Section 013100 "Project Management and Coordination"**]<**Insert Section number and title**> for preinstallation conference procedures.
4. Section 260913 "Electrical Power Monitoring" for interfacing communication and metering requirements.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at [**Project site**]<**Insert location**>.

B. Preinstallation Coordination Meeting(s): For {Insert system or product}. Conduct meeting(s) [**as videoconference**][**or**][**at Project site**]<**Insert location**> before <**Insert construction activity**>.

1. Attendees: Installers, fabricators, representatives of manufacturers, and administrants for field tests and inspections. Notify Architect[**, Construction Manager**][**, and Owner's Commissioning Authority**] of scheduled meeting dates.

1.3 ACTION SUBMITTALS

A. Product Data:

1. For each type of paralleling low-voltage switchgear.

a. Include technical data on features, performance, electrical characteristics, ratings, and

finishes for programmable logic controllers, instrumentation, control devices, monitoring devices, [**SCADA interface devices,**][**Ethernet interface,**] and display components.

b. Include rated capacities, operating characteristics, furnished specialties, factory settings, and accessories for individual circuit breakers.

c. Include time-current characteristic curves for overcurrent protective devices.

B. Shop Drawings:

1. For each type of paralleling low-voltage switchgear.

a. Include dimensioned plans, elevations, sections, details, shipping sections, weights of assembled sections, and required clearances and service space around equipment.

b. Include tabulation of installed devices with features and ratings.

c. Include enclosure types and details.

d. Detail locations for anchor bolts[**and leveling channels**].

e. Show bus configuration with current rating, size, and number of conductors in bus run, including phase, neutral, and ground conductors of main and branch buses.

f. Indicate short-time and short-circuit current rating of switchgear assembly.

g. Include features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

h. Detail nameplate legends.

i. Include mimic-bus diagram.

j. Include three-line power wiring diagrams for paralleling low-voltage switchgear, generators, and related equipment showing device terminal numbers.

k. Include point-to-point schematic control, monitoring, and alarm wiring diagrams showing internal component terminal numbers.

l. Include point-to point schematic control, monitoring, and alarm wiring diagrams for external components indicating terminal numbers for the following:

1) Engine generators.
2) Transfer switches.
3) Other load-control devices.
4) Elevator controller in elevator bank.
5) DDC system for HVAC controller.
6) SCADA remote terminal unit.

2. Sequence of Operation: Description of sequence of operation for paralleling controls in automatic, manual, system test, and peak-shaving modes.

a. Include the following in description of automatic-mode sequence of operation:

1) Programmed sequence of initial generator starting and connection of generators to isolated paralleling bus, including description of how proposed design complies with requirements for redundancy.
2) Programmed sequence of transferring loads to isolated paralleling bus based on operator-adjustable preset priorities and preset loads. Include initial load settings.
3) Programmed sequence of starting and stopping generators based on actual real-time measured loads.
4) Programmed sequence of sending load-shed signal to transfer switches[**, and to other devices**] when generator frequency does not return to normal frequency within adjustable time period.
5) Programmed sequence of stopping generators based on no transfer switch or other device sending start signal.

b. Include the following in description of system testing mode sequence of operation:

1) Load.
2) No load.

c. Include in description, peak-shaving-mode sequence of operation.
d. Include in description, manual-mode sequence of operation showing that manual mode fulfills requirement to permit operator at paralleling low-voltage switchgear to accomplish automatic, system test, and peak-shaving functions.
e. Paralleling Low-Voltage Switchgear Redundancy: Identify single points of failure.

C. Samples:

1. Representative portion of mimic bus with specified finish. Manufacturer's color charts showing colors available for mimic bus.

D. Delegated Design Submittal: For seismic restraints for switchgear and wind-loading for outdoor enclosures, include analysis data signed and sealed by qualified structural professional engineer responsible for their preparation.

E. Field Quality-Control Submittals:

1. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Source quality-control reports.

B. Sample Warranty: For manufacturer's special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Record Documentation: Include updated mimic bus diagram reflecting field changes after final switchgear load connections have been made, for record.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Spare Parts: Furnish to Owner the following spare parts for repairing paralleling switchgear that are packaged with protective covering for storage on-site and identified with labels describing contents:

1. Control Power Fuses: [**Six**]<**Insert number**> of each type and rating used. Include spares for the following:

a. Potential transformers.
b. Control power circuits.

2. Indicating Lights: [**Six**]<**Insert number**> of each type installed.
3. Draw-out Circuit Breakers: One of each type and rating used for circuit breaker in paralleling low-voltage switchgear.

B. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to switchgear, packaged with protective covering for storage on-site and identified with labels describing contents. Include the following:

1. Racking handle to move circuit breaker manually between connected and disconnected positions.
2. Tools for circuit-breaker and switchgear tests, inspections, maintenance, and operation.
3. Portable test set for testing functions of circuit-breaker, solid-state trip devices without removal from switchgear.
4. Relay and meter test plugs suitable for testing switchgear meters and switchgear class relays.
5. Portable, floor-supported, roller-base, elevating carriage arranged for moving circuit breakers in and out of compartments.
6. Overhead-circuit-breaker lifting device, track mounted at top front of switchgear and complete with hoist and lifting yokes matching each size of draw-out circuit breaker installed.
7. Spare-Fuse Cabinet: Identified and compartmented steel box or cabinet with lockable door.
8. Storage for Manual: Rack or holder, near operating instructions, for copy of maintenance manual.

C. Consumable Items:

1. After completion of field quality control, startup, commissioning, adjusting, and closeout activities, replace air filters and refill fluid reservoirs.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver paralleling low-voltage switchgear in sections of lengths that can be moved past obstructions in delivery path.

B. Store paralleling low-voltage switchgear indoors in clean dry space with uniform temperature to prevent condensation.

1.8 WARRANTY

A. Special Installer Extended Warranty: Installer warrants that fabricated and installed paralleling switchgear perform in accordance with specified requirements and agrees to repair or replace components that fail to perform as specified within extended-warranty period.

1. Extended-Warranty Period: [**Two**][**Three**][**Four**]<**Insert number**> years from date of Substantial Completion; full coverage for labor, materials, and equipment.

B. Special Manufacturer Extended Warranty: Manufacturer warrants that components of paralleling switchgear perform in accordance with specified requirements and agrees to provide repair or replacement of components that fail to perform as specified within extended-warranty period.

1. [**Initial**]Extended-Warranty Period: [**Three**][**Four**][**Five**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.
2. Follow-On Extended-Warranty Period: [**Eight**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for materials[**that failed because of transient voltage surges**] only, free on board [**origin**][**destination**], freight prepaid.

PART 2 - PRODUCTS

2.1 OWNER-FURNISHED PRODUCTS

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for product that Owner intends to furnish to Contractor**>.

B. Description: <**Insert description of product, including special features, options, and finishes for Owner-furnished product that may impact Contractor's installation**>.

C. Accessories: <**Insert accessories that will be provided with product**>.

2.2 EXISTING PRODUCTS[**TO BE MODIFIED**][**TO BE REMOVED AND RE-INSTALLED**]

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact Work**>.

C. Accessories: <**Insert accessories included with existing product**>.

2.3 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

B. Multiple-generator paralleling monitoring and control panel in paralleling low-voltage switchgear must monitor and control the following standby power system components:

1. Paralleling low-voltage switchgear.
2. Single-generator monitoring and control system.
3. Single-generator paralleling monitoring and control systems that are [**part of paralleling low-voltage switchgear**][**located at individual engine generator**].
4. Engine generators.
5. Transfer switches.
6. Circuit breakers downstream of transfer switches.
7. Other load-control devices.
8. Distribution circuit breakers in paralleling low-voltage switchgear.

C. Redundant Standby Power System:

1. Single generator with associated single-generator paralleling monitoring and control system.
2. Black-start controller with no single point of failure.
3. Black-start controller with backup control in multiple-generator paralleling monitoring and control system.
4. Multiple-generator paralleling monitoring and control system must automatically be performed by backup system without degradation in the event that primary system fails to function (such as component failure or off-line maintenance).
5. Multiple-generator paralleling monitoring and control system must automatically be performed by backup system without degradation in the event that primary system fails to function (such as component failure or off-line maintenance), except for the following manually operated functions:

    a. Load management.
    b. Peak shaving.
    c. <**Insert exceptions**>.

D. Sequence of Operation for Normal Conditions:

1. Paralleling low-voltage switchgear, including controlled generators[**, controlled circuit breakers,**][**, other controlled devices,**] and transfer switches, must be in automatic position and

ready to operate on loss of power or other designated initiation conditions.

2. Single-generator monitoring and control system has not received "start" signal from the following:

    a. Transfer switch.
    b. Multiple-generator paralleling monitoring and control system.
    c. <**Insert device**>.

E. Sequence of Operation for Loss of Normal Power Conditions:

1. Single-generator monitoring and control system must receive start signal from redundant system.

    a. Start signal may come from transfer switch[**or other device**] directly wired to start engine generator.
    b. Start signal may come from multiple-generator paralleling monitoring and control system that monitors loss of normal source availability from one or more transfer switches[**or other device**].

2. On receiving start signal, single-generator monitoring and control system must start engine generators and achieve rated voltage and frequency.
3. If engine generator fails to start, after expiration of overcrank time delay, engine generator shuts down and alarm is initiated.
4. Transfer Inhibit Control: Multiple-generator paralleling monitoring and control system receives loss of normal source availability signal from transfer switch(es)[**or other device**] and sends transfer inhibit signals.

    a. Transfer switch(es) serving emergency loads may not be sent transfer-inhibit signal.
    b. Transfer switch(es) serving other than emergency loads that must transfer within required time must have transfer-inhibit signal end at such time as will permit transfer switch to operate within required time.
    c. Transfer switch(es) serving other than emergency loads that are not required to transfer within required time must be sent transfer-inhibit signal.
    d. Transfer switch(es) serving loads that are to be disconnected after detecting loss of normal source availability must signal associated circuit breakers and other load devices to de-energize these predetermined loads.
    e. Transfer switch(es) serving HVAC loads that need to operate at lower load by modifying HVAC sequence of operation after detecting loss of normal source availability must signal DDC system for HVAC to change to HVAC load-shed sequence of operation for associated equipment.
    f. Transfer switch(es) serving elevator loads after detecting loss of normal source availability must signal associated elevator controllers that elevators are connected to generator power and must initiate sequence of operation in elevator control system to protect elevators and to reduce elevator load demand.
    g. Distribution circuit breakers in paralleling low-voltage switchgear, which are indicated in priority-load schedule to transfer load by opening and closing circuit breaker, receive inhibit closing signal.

5. Black-Start Control: Prevent out-of-phase paralleling. After selecting first generator to achieve 90 percent rated voltage and frequency, inhibit connection of generator-controlled circuit breakers to isolated paralleling bus, then close circuit breaker connecting first generator to isolated paralleling bus.

    a. Comply with requirements in applicable engine generator Section for selection of first engine generator to connect to isolated paralleling bus.
    b. Redundant System: Multiple-generator paralleling monitoring and control system selects first engine generator to connect to isolated paralleling bus.

6. Single-generator paralleling monitoring and control system synchronizes its associated engine generator and allows closure of respective generator paralleling low-voltage circuit breakers to isolated paralleling bus. On closure to isolated paralleling bus, engine generator assumes its proportional share of total load.
7. Failure of Engine Generator to Synchronize: If engine generator fails to synchronize, sound alarm after preset time delay, but continue to attempt to synchronize engine generator until signaled to stop by manual operation.

F. Priority Controller Sequence of Operation:

1. Programming from Human-Machine Interface for Priority Controller:

   a. Set priority blocks of load that indicate priority number and scheduled size of load from Priority-Load Schedule. Set generator blocks of capacity that indicate individual engine generators and their capacity.
   b. Signal to transfer loads to engine generator source may be accomplished by one of the following:

      1) Signaling to transfer-inhibit enable transfer switch associated with priority load to transfer load.
      2) Signaling load-add relay at transfer switch to transfer priority load.
      3) Closing distribution-feeder circuit breaker associated with priority load.
      4) Enabling another device.

2. When generator has transferred Priority 1 emergency load, send signal to transfer loads that must be transferred within specific time in accordance with Priority-Load Schedule.
3. When generator capacity is adequate to support next priority load, send signal to transfer next priority load to generator source until priority loads have been transferred.

G. Overload Sequence of Operation:

1. Signal to shed loads from generator source may be accomplished by one of the following:

   a. Signaling load-shed relay in transfer switch associated with priority load.
   b. Opening distribution-feeder circuit breaker associated with priority load.
   c. Disabling another device.

2. Overload sequence of operation sends signal to shed lowest connected load priority when isolated paralleling bus frequency does not return to normal frequency within its adjustable time period.
3. If isolated paralleling bus does not return to normal frequency after shedding lowest connected priority load within adjustable time period, additional load continues to be shed by signaling to load shed in reverse priority until isolated paralleling bus returns to normal frequency.
4. Loads shed can be reconnected to isolated paralleling bus only by manual reset at human-machine interface.

H. Load-Demand Sequence of Operation:

1. With load-demand sequence of operation activated, controller continuously monitors total isolated paralleling bus load.
2. If isolated paralleling bus load is below preset limits and after preset time delay, demand controller shuts down engine generators in predetermined order until minimum number of sets are operating. Set preset limits, predetermined order, and preset time delay, as well as choose manual operation, from human-machine interface.
3. On sensing available isolated paralleling bus capacity diminished to set point, controller starts and closes engine generators to isolated paralleling bus to accommodate load.

I. Individual Transfer Switch Return to Normal Condition Sequence of Operation: Enable individual transfer switches to return to normal power when normal power is available at transfer switch.

J. Feeder Circuit Breakers in Paralleling Low-Voltage Switchgear Return to Normal Condition Sequence of Operation: When normal power is available at transfer switches served by feeder circuit breaker, open circuit breaker.

K. Individual Circuit Breaker or Other Load Device for Loads Controlled Downstream from Transfer Switch Sequence of Operation: Return circuit breaker or other load device to closed position when transfer switch serving circuit breaker has returned to normal power.

L. Return to Normal Condition Sequence of Operation:

1. Process starts on removal of start signals from system.
2. When no load remains on isolated paralleling bus, generator breakers open, go through cool-down period, and shut down.
3. If start signal is received during cool-down period, one engine generator is reconnected to isolated paralleling bus, and system operation follows that of "loss of normal power."

M. System Test Sequence of Operation:

1. Configure tests to comply with NFPA 110, Level 1 testing requirements for generator. Automatically generate NFPA 110, Level 1 reports.
2. Single-generator test.
3. Multiple-generator test.
4. Start generators manually, by generator exerciser on user-defined schedule, or by remote contact from [**DDC system for HVAC**][**SCADA system**].
5. Engine generator(s) start and achieve rated voltage and frequency.
6. Failure of Engine Generator to Start: After expiration of overcrank time delay, engine generator shuts down and alarm is initiated.
7. Black-Start Control: Prevent out-of-phase paralleling. After selecting first generator to achieve 90 percent rated voltage and frequency, inhibit connection of generator-controlled circuit breakers to isolated paralleling bus, then close circuit breaker connecting first generator to isolated paralleling bus. Single-generator paralleling monitoring and control system synchronizes its associated engine generator and allows closure of respective generator paralleling low-voltage circuit breakers to isolated paralleling bus. On closure to isolated paralleling bus, engine generator assumes its proportional share of total load.
8. Failure of Engine Generator to Synchronize: If engine generator fails to synchronize, sound alarm after preset time delay, but continue to attempt to synchronize engine generator until signaled to stop by manual operation.
9. Manually select or automatically preselect whether test is load or no-load test. If test is load test, manually select or automatically preselect loads to be transferred in accordance with schedule or by adjustable time delays at transfer switches. After generators are connected to isolated paralleling bus, transfer loads by sending signal to load-add relay that is connected to input for "remote transfer to generator source" of transfer switch controller or to other devices.[**If test is load-bank test, automatically operate load-bank breaker to connect load bank for testing generators based on number and configuration of generators.**]
10. After adjustable period of time system, allow engine generators to optimize down to only required number to be online to avoid wet stacking. Set stopping and starting sequences through human-machine interface panel device and allow settings based on manual priorities or by engine run time.
11. On sensing available bus capacity diminished to set point, controller starts and closes engine generators to isolated paralleling bus to accommodate load.
12. After system test is completed, transfer loads back to normal power with transfer switches. Shut down system using sequence in automatic mode.

13. If there is outage during this mode of operation, automatically change to requirements specified in "Sequence of Operation for Loss of Normal Power Conditions" Paragraph, send load-shed signals to lower-priority loads until load is below generator capacity, signal engine generator that is not currently operating to start, and cancel system test.

N. Peak-Shaving Sequence of Operation:

1. Start engine generators manually through human-machine interface or by remote contact initiated from peak-shaving command from [**DDC system for HVAC**][**SCADA system**].
2. Engine generator(s) start and achieve rated voltage and frequency.
3. Failure of Engine Generator to Start: After expiration of overcrank time delay, engine generator shuts down and alarm is initiated.
4. Black-Start Control: Prevent out-of-phase paralleling. After selecting first generator to achieve 90 percent rated voltage and frequency, inhibit connection of generator-controlled circuit breakers to isolated paralleling bus, then close circuit breaker connecting first generator to isolated paralleling bus.
5. Single-generator paralleling monitoring and control system synchronizes its associated engine generator and allows closure of respective generator paralleling low-voltage circuit breakers to isolated paralleling bus. On closure to isolated paralleling bus, engine generator assumes its proportional share of total load.
6. Failure of Engine Generator to Synchronize: If generator set fails to synchronize, sound alarm after preset time delay, but continue to attempt to synchronize engine generator until signaled to stop by manual operation.
7. Through human-machine interface manually select or on closure of contact from peak-shaving command preselected loads to be automatically transferred to isolated paralleling bus. After engine generators are connected to isolated paralleling bus, transfer loads by sending signal to corresponding load-add relays that are connected to remote transfer to generator source control input at transfer switch or similar control devices. Add loads until contact closure from [**DDC system for HVAC**][**SCADA system**] opens.
8. After adjustable period of time, allow engine generators to optimize down to only required number to be online to avoid wet stacking. Set stopping and starting sequences through human-machine interface panel device and allow settings based on manual priorities or by engine run time.
9. If isolated paralleling bus load is below preset limits and after preset time delay, demand controller shuts down engine generators in predetermined order until minimum number of sets are operating. Set preset limits, predetermined order, and preset time delay, as well as choose manual operation, from human-machine interface.
10. On sensing available isolated paralleling bus capacity diminished to set point, controller starts and closes engine generators to isolated paralleling bus to accommodate load.
11. After peak shaving is completed, transfer loads back to normal power. Shut down system using sequence in automatic mode.
12. If there is outage during this mode of operation, automatically change to requirements specified in "Sequence of Operation for Loss of Normal Power Conditions" Paragraph, send, send load-shed signals to lower-priority loads until load is below engine generator capacity, signal generators that are not currently operating to start, and cancel system peak-shaving operation.
13. Manual Sequence of Operation: Include functions indicated for automatic mode, except that operator must be able to monitor parameters and manually perform operations.

O. Comply with NFPA 110 for the following:

1. Legally Required Standby Systems: EPSS Level 1, Type 10.
2. Optional Standby Systems: EPSS [**Level 1**][**Level 2**], [**Type 10**][**Type 60**][**Type 120**][**Manual**].

P. Comply with NFPA 99 for healthcare applications.

2.4 MULTIPLE-GENERATOR PARALLELING MONITORING AND CONTROL SYSTEM

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**ASCO Power Technologies**]
3. [**Caterpillar, Inc.; Electric Power Division**]
4. [**Cummins Power Generation**]
5. [**Russelectric, Inc**]
6. [**SAI Advanced Power Solutions/Switchboard Apparatus Inc.**]
7. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**ASCO Power Technologies**]
3. [**Caterpillar, Inc.; Electric Power Division**]
4. [**Cummins Power Generation**]
5. [**Russelectric, Inc**]
6. [**SAI Advanced Power Solutions/Switchboard Apparatus Inc.**]
7. <**Insert manufacturer's name**>

C. Source Limitations: Obtain paralleling low-voltage switchgear from same manufacturer as required for [**engine generator**][**transfer switches**][**transfer switches and engine generators**].

D. Components and Devices: Factory mounted in [**metal-enclosed, paralleling low-voltage switchgear**][**separate switchboard**].

1. Paralleling Low-Voltage Switchgear Door-Mounted Control Devices: Industrial, oil-type devices.
2. Indicator Lamps: High-intensity digital display.

E. Control Power for Multiple-Generator Monitoring and Control System: Supplied from 24 V(dc) starting batteries of engine generators.

1. Isolate battery bank to prevent failure of one battery from disabling entire system.
2. Include, if necessary, separate control power battery system rated 24 V(dc) for equipment unable to accept voltage drop that occurs during engine cranking.

F. Redundant Multiple-Generator Monitoring and Control System Controller:

1. Fully equip with hot swappable programmable logic controller, power supplies, and I/O points.
2. Black-start control equipment specified in applicable engine generator Section.

G. Multiple-generator monitoring and control system auto/manual selector switch.

H. Control switch for circuit breaker that serves load bank.

I. Full-Color, Touch-Screen, Human-Machine Interface Device:

1. Minimum viewing area of [**60 sq. inch (387 sq. cm)**][**100 sq. inch (645 sq. cm)**] must be configurable in either U.S. Standard or SI (metric) units.
2. Main Menu: Include date, time, and system status messages. Configure screens so that no

screen is more than three touches from other screen.

a. Individual engine generator data must be accessed at paralleling low-voltage switchgear from [**main menu**][**main menu and single-generator paralleling monitoring and control system**].

3. One-Line Diagram: Depicting system configuration and system status by screen animation, screen colors, text messages, or pop-up indicators.

a. Conditions for Engine Generators, Buses, and Paralleling Circuit Breakers: Energized or de-energized.
b. Engine Generator Modes:

1) Auto.
2) Lockout.
3) Reset.
4) Off.
5) Cool down.
6) Test off line.
7) Test on load.

c. Engine Generator Status: Normal, warning, shutdown, or load-demand stop.
d. Paralleling Circuit-Breaker Status: Open, closed, or tripped.
e. Bus Conditions: Energized or de-energized.
f. Percent load.

4. AC metering screen for isolated paralleling bus must display the following:

a. Phase, volts, and amperes.
b. Kilowatts.
c. Kilovolt amperes.
d. Kilovolt-ampere rating.
e. Power factor.
f. Frequency.
g. Kilowatt hour.
h. Kilowatt demand.
i. Real-time trend chart for system kilowatts and volts updated on not less than one-second intervals.
j. A minimum of one historical trend chart for total system loads with intervals no shorter than five minutes and minimum duration of four hours.
k. Percent of available capacity of engine generators that are operating in parallel on bus.

5. Engine Generator Monitoring and Control Screen:

a. Control:

1) Engine generator manual start/stop control (functional only when paralleling low-voltage switchgear mounted control switch is in "Auto" position).
2) Engine generator alarm reset.
3) Manual paralleling and circuit-breaker enable/inhibit controls.
4) Engine function and timer settings.
5) System function, testing, and timer settings.
6) Engine generator optimization settings: automatically determine priority of engine generators based on engine run time and number of engine starts or manually assign engine priorities.

b. Status and Alarms:

1) Power Metering: Watts, volt-ampere reactive, power factor, frequency, amperes, and voltage.
2) Engine run hours.
3) Engine status.
4) Number of generator circuit-breaker operations.
5) Replicate status and alarms from single-generator paralleling monitoring and control panel.

6. Dual, Three-Phase, Metering Screen: Graphical analog (270 electrical degree) metering representation with digital display. Display two generators at same time or one generator and isolated paralleling bus at same time. Display graphical synchroscope when one generator and isolated paralleling bus are selected.

a. True RMS, three-phase voltage, amperes, kilowatts, kilovolt amperes, kilovolt-ampere reactive, power factor, and frequency parameters.
b. Engine battery voltage display.

7. Password-Protected System Control Screen:

a. System Test Modes: Test with load/test without load/normal/retransfer time-delay override.
b. Test with Load: Starts and synchronizes engine generators on isolated paralleling bus; loads are transferred to isolated paralleling bus.
c. Test without Load: Starts and synchronizes engine generators on isolated paralleling bus but does not transfer loads to isolated paralleling bus.
d. Time adjustments for retransfer time delay, transfer time delay, system time delay on stopping, and system time delay on starting.

8. Password-Protected, Peak-Shaving Control Screen:

a. Peak-Shaving Modes: Manual start and transfer of loads; automatic start and transfer of loads by DDC system for HVAC peak-shaving relay closure.
b. For automatic mode, set load priorities for peak-shaving function.
c. Time adjustments for retransfer time delay, transfer time delay, system time delay on stopping, and system time delay on starting.

9. Load-Demand Control Screen: Monitors total load on isolated paralleling bus and controls number of engine generators running so that capacity tracks load demand.

a. Load-Demand Control: Enable/disable.
b. Set engine generator shutdown sequence.
c. Load-Demand Pickup Set Point: Adjustable from 90 to 40 percent in 5 percent increments.
d. Load-Demand Dropout Set Point: Adjustable from 20 to 70 percent in 5 percent increments.

10. Manual Load Control Screen: Allows operator to manually add or delete engine generators from paralleled system in response to system load parameters.

a. Indication of system available in kilowatts and amperes.
b. Control functions allow manual addition/removal of engine generators on system, and activation of load-shed/load-restore functions.

11. Load-Add/Load-Shed Sequence Screen: Password protected and with the following minimum functions:

a. Display sequence.
b. Assigns "load-add sequence priority" to load-control relay with designation for relay operation after set number of engine generators are online.
c. Assigns "load-shed sequence priority" to load-control relay with designation for relay operation depending on number of engine generators online.

12. Alarm Summary and Run Report Screen:

a. Lists most recent alarm conditions and status changes.
b. Lists minimum of most recent 32 alarm conditions by name and time/date; acknowledges alarm conditions with time/date.
c. For start signal, lists start time and date, stop time and date, maximum kilowatt and ampere load on system during run time, and start and stop times of individual engine generators.
d. Lists generator circuit position and status.
e. Access to trend monitored automatic transfer switches.
f. [**16-gigabyte**]<**Insert value**> hard-disk space for storing database file for multiple-generator paralleling monitoring and control panel trending and event logging. Trend and log data at resolution of one second. If hard drive is full, overwrite in first-in-first-out procedure.

1) Trend up to eight monitored points simultaneously.

13. Load Status and Control Screen: Displays status of automatic transfer switches connected to system for [**32**][**64**] transfer switches, and other controlled devices.

a. Automatic transfer switch connected to normal.
b. Automatic transfer switch connected to emergency.
c. Controlled circuit breakers downstream from automatic transfer switch device enabled or disabled.
d. Engine start indication.
e. Load-shed indication.
f. Load-add indication.
g. Inhibit to emergency source.
h. Inhibit to normal source.
i. Transfer Switch Power Metering Function: Total kilowatt, three-phase current, and three-phase voltage.
j. Automatic Transfer Switch Load Priority: Ability to change priorities of automatic transfer switches (password protected).
k. Display name, status, and priority of load block (whether on or off) and total load of that block.
l. Allow for manually adding or shedding loads.

14. Automated email messages must be transmitted when shutdowns occur and must include time and date of alarm.
15. Based on either number operations or time since last maintenance, suggest maintenance period for generator (run hours), controlled circuit breaker (number of operations), and transfer switches (number of transfers).
16. Status and Alarm Screen:

a. Visual alarm status indicator and alarm horn with silence and acknowledge push-button.
b. Status, Light Only:

1) "SYSTEM NOT IN AUTO" (red).
2) Running Status: Display engine generator number and running-status light (green).
3) Load-demand mode (green).

4) Priority Load Status: Display load number with "LOAD ADD" (green) and "LOAD SHED" (red).
5) System test (green).
6) Remote system start (red).
7) Monitoring of Transfer Switch:

a) Normal source available (green).
b) Connected to normal (green).
c) Generator source available (green).
d) Connected to generator source (green).

c. Status Light and Alarm:

1) Isolated paralleling bus under frequency (red).
2) Isolated paralleling bus over frequency (red).
3) Auxiliary power failure (red).
4) Emergency start signal power failure (red).
5) Load-Shed Level Status: Displays load number and red load-shed, status light.
6) Generator Alarm Status: Displays generator number and red "Check Generator" status light.
7) Controller malfunction (red).
8) Check station battery (red).
9) Isolated paralleling bus overload (red).
10) System not in auto (red).
11) Main tank, low fuel (amber)
12) Main tank, high fuel (amber).
13) Main tank, fuel leak (red).

J. Remote Monitoring: Replicate human-machine interface monitoring functions [**at SCADA**][**at remote computer terminal**][**via communication bus**].

K. Remote Monitoring of Status and Alarms: Replicate human-machine interface status and alarms at DDC system for HVAC via isolated contacts.

2.5 SINGLE-GENERATOR PARALLELING MONITORING AND CONTROL SYSTEM

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**ASCO Power Technologies**]
3. [**Caterpillar, Inc.; Electric Power Division**]
4. [**Cummins Power Generation**]
5. [**Russelectric, Inc**]
6. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**ASCO Power Technologies**]
3. [**Caterpillar, Inc.; Electric Power Division**]
4. [**Cummins Power Generation**]

5. [**Russelectric, Inc**]
6. <**Insert manufacturer's name**>

C. Source Limitations: Obtain paralleling low-voltage switchgear from same manufacturer as required for [**engine generator**][**transfer switches**][**transfer switches and engine generators**].

D. Components and Devices: Factory mount in single-generator section of metal-enclosed, paralleling low-voltage switchgear.

1. Paralleling low-voltage switchgear door-mounted control devices must be industrial oil-type devices. Indicator lamps must be high-intensity digital display.

E. Control Power: Supply control power from 24 V(dc) starting batteries from controlled generator. Include separate control power battery system rated 24 V(dc) for equipment unable to accept voltage drop that occurs during engine cranking.

F. Programmable Logic Controller: Factory-mounted controller, separate from multiple-generator paralleling monitoring and control system in single-generator paralleling monitoring and control module of metal-enclosed, paralleling low-voltage switchgear.

G. Single-Generator Paralleling Low-Voltage Switchgear Circuit Breaker:

1. Factory mount circuit-breaker control switch.
2. Paralleling Circuit-Breaker Monitor and Control:

a. Monitors circuit-breaker auxiliary contacts.
b. Initiates fault signal if circuit breaker fails to close within adjustable time-delay period (0.5 to 15 seconds).
c. Trips open and locks out paralleling circuit breaker on paralleling circuit breaker failure to close, until manually reset.

H. Generator Mode Selector Switch: Factory mounted in single-generator paralleling monitoring and control system module of metal-enclosed, paralleling low-voltage switchgear.

1. "Lockout/Reset" mode prevents generator from starting or immediately shuts down generator if running.
2. "Off/Cool-Down" mode stops engine after cool-down period.
3. "Auto" mode allows generator to start on receipt of remote start signal. If generator is already running and there is not start signal, then "Auto" mode allows engine to run for predetermined cool-down period before stopping.
4. "Test Off-Line" allows engine to start and run as if start signal were received, except it does not allow generator to connect to isolated paralleling bus unless start signal is received.
5. "Test Online" allows engine to start, run, and connect to isolated paralleling bus as if start signal were received.

I. Engine Generator Controller: Woodward compatible.

1. Factory mount governor (speed control and load sharing) supplied in applicable engine generator Section in single-generator monitoring and control module.
2. Loading control interface to governor system.
3. Automatic synchronizer.

J. Automatic Synchronizer:

1. Include sync mode selector switch with RUN-OFF-CHECK-PERMISSIVE positions. In RUN mode, enable active synchronization and sync-check function. In CHECK mode, perform sync-

check function. In PERMISSIVE mode, annunciate when generator and bus are synchronized but do not allow breaker closure.

a. Include discrete inputs in synchronizer to switch to each mode.

2. Bias generator speed and voltage to match paralleling isolated bus.
3. If automatic synchronizer receives permissive signal to allow closure to paralleling isolated bus and generator is within synchronizing limits, send close signal to single-generator paralleling circuit breaker.

K. Sync-switch, removable, keyed T-handle.

L. "Engine Generator Synchronized" Indication: Indicator lamp or digital-display indication of synchronization.

M. Voltage and Frequency Raise and Lower Switches: Allow plus or minus 5 percent adjustment when engine generator is operating but is not connected to isolated paralleling bus.

N. Control and Reset Push-Button: Have flashing lamp to indicate generator is locked out due to fault condition.

O. Lamp Test Push-Button: Simultaneously tests lamps on panel.

P. Control Panel Illumination: DC lamps illuminate panel when lighting from surrounding environment is unavailable.

Q. Emergency Stop Push-Button: Red mushroom-head switch maintains its position until manually reset.

R. Alarm and Status Indicating Display:

1. Status and Alarm Indications:

a. Status, Light Only (Nonlatching):

1) Generator mode selector switch not in auto (red).
2) Generator mode selector switch in auto (green).
3) Start signal received (green).
4) Emergency stop activated (red).
5) Demand mode standby (green).
6) Timing for start (green).
7) Timing for shutdown (green).
8) Generator circuit breaker closed (red).
9) Generator circuit breaker open (green).

a) Generator circuit breaker locked out (white).
b) Generator circuit breaker racked out (white)

10) Remote generator breaker is open (red).
11) Engine stopped (green).
12) Time-delay start (green).
13) Engine running (red).
14) Engine cool-down (green).

b. Pre-Alarm, Light and Horn (Nonlatching):

1) Pre-high coolant temperature (amber).
2) Pre-low oil pressure (amber).
3) Low coolant temperature (amber).
4) Engine low battery (amber).
5) Battery charger failure (amber).
6) Auxiliary power failure (amber).
7) Low fuel-day tank (amber).
8) Paralleling low-voltage switchgear generator breaker failed to close (amber).
9) Paralleling low-voltage switchgear generator breaker failed to open (amber).
10) Overcurrent alarm (amber).
11) Day tank low-fuel alarm (amber).
12) Ground-fault alarm (amber).

c. Shutdown Alarm, Light and Horn (Latching):

1) Engine overcrank (red).
2) Engine overspeed (red).
3) Engine low oil pressure (red).
4) Engine high coolant temperature (red).
5) Engine low coolant level (red).
6) Engine remote emergency shutdown (red).
7) Generator fail to synchronize shutdown (red).
8) Generator circuit breaker tripped (red).
9) Generator circuit breaker failure (red).
10) Generator not in auto (red).
11) Generator loss of field (red).
12) Generator reverse power (red).
13) Generator undervoltage (red).
14) Generator overvoltage (red).
15) Generator underfrequency (red).
16) Generator overfrequency (red).
17) Phase rotation (red).
18) Generator short circuit (red)
19) Day tank low-fuel shutdown (red).
20) Air damper activated, shutdown (red).

S. Paralleling Controls and Protection:

1. Engine Generator Governor (Speed Control and Load Sharing): Comply with requirements in applicable engine generator Section. Components must be Woodward compatible.
2. Kilowatt Load Sharing Control and Interface:

a. Operates engine generator governors during synchronizing and provides isochronous load sharing when paralleled.
b. Allows engine generator to ramp up to kilowatt load level[**signaled by multiple-generator monitoring and control controller**].

3. Load-Demand Governing Control:

a. Causes engine generator to ramp down at operator-adjustable rate to zero load when signaled to shut down in load-demand mode.
b. Causes engine generator to ramp up at operator-adjustable rate to proportional share of total isolated paralleling bus load when signaled to restart.

4. Kilovolt-Ampere-Reactive Load Sharing Control:

a. Operates alternator excitation system while engine generator is paralleled.
b. Causes sharing of reactive load among engine generators to within 1 percent of equal levels without voltage drop.

5. Paralleling Monitor and Control:

a. Monitors and verifies that engine generator has reached 90 percent of nominal voltage and frequency before closing to isolated paralleling bus.
b. Prevents accidental closure of breaker with engine generator out of phase with bus.
c. Prevents out-of-phase closure to isolated paralleling bus due to errant manual or automatic operation of synchronizer.
d. System of diagnostic digital displays to assist in analyzing synchronization.

6. Synchronizer Control:

a. Adjusts engine governor to match voltage, frequency, and phase angle of isolated paralleling bus.
b. Maintains engine generator voltage within 1 percent of isolated paralleling bus voltage, and phase angle within 20 electrical degrees of isolated paralleling bus for 0.5 seconds before circuit-breaker closing.
c. Provides "fail-to-synchronize time delay" adjustable from 10 to 120 seconds; with field selectivity to either initiate alarm or shut down engine generator on failure condition.

7. Reverse Power Monitor and Control:

a. Prevents sustained reverse power flow in engine generator.
b. Trips generator paralleling circuit breaker and initiates engine generator shutdown when reverse power condition exceeds 10 percent of engine generator kilowatt for three seconds.
c. Trips generator paralleling circuit breaker and initiates engine generator shutdown when reverse kilovolt-ampere conditions exceeds 20 percent of generator kilovolt-ampere rating.

8. Phase Rotation Monitor and Control: Verifies engine generator and isolated paralleling bus phase rotation match prior to closing paralleling circuit breaker.
9. Electronic Alternator Overcurrent Alarm and Shutdown Control:

a. Monitors current flow at engine generator output terminals.
b. Initiates alarm when load current on engine generator is more than 110 percent of rated current for more than 60 seconds.
c. Overcurrent shutdown function matched to thermal damage curve of alternator.

10. Electronic Alternator Short-Circuit Protection: Shuts down generator, without instantaneous-trip function, when load current is more than 175 percent of rated current and combined time/current approaches thermal damage curve of alternator.
11. Loss of Excitation Monitor: Displays alarm on single-generator paralleling monitoring and control panel when generator controls sense loss of excitation to alternator while paralleled to isolated paralleling bus.
12. Cool-Down, Time-Delay Control: Adjustable, zero to 600 seconds.
13. Start Time-Delay Control: Adjustable, zero to 300 seconds.
14. Frequency Control: Initiate alarm condition when engine generator is below 90 percent of rated frequency for more than 20 seconds or is over frequency.
15. Under- and Overvoltage Control: Initiate alarm condition when engine generator is at 90 percent voltage for more than 20 seconds or is over voltage.

2.6 METAL-ENCLOSED, CIRCUIT-BREAKER SWITCHGEAR (600 V AND LESS)

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**Siemens Industry, Inc., Energy Management Division**]
4. [**Square D; Schneider Electric USA**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**Siemens Industry, Inc., Energy Management Division**]
4. [**Square D; Schneider Electric USA**]
5. <**Insert manufacturer's name**>

C. Source Limitations: Obtain paralleling low-voltage switchgear from same manufacturer as required for [**engine generator**][**transfer switches**][**transfer switches and engine generators**].

D. Description: Factory assembled and tested, and complying with IEEE C37.20.1 and UL 1558.

E. Ratings: Suitable for application in three-phase, 60 Hz, solidly grounded neutral system.

F. Nominal System Voltage: [**480 V, three**][**480/277 V, four**][**240 V, three**][**208/120 V, four**] wire, 60 Hz.

G. Isolated Paralleling Bus: [**5000 A**][**4000 A**][**3200 A**][**2000 A**][**1600 A**]<**Insert amperes**>.

1. Phase-, Neutral-, and Ground-Bus Materials:

   a. Phase[**and Neutral**] Bus: [**Copper, silver plated at connection points**][**Copper, tin plated**][**Aluminum, tin plated**].
   b. Ground Bus: Copper[**, silver**][**, tin**] plated; minimum size **1/4 by 2 inch (6 by 50 mm)**.

2. Bus bars connect between vertical sections and between compartments. Cable connections are not permitted.

   a. Uniform capacity for horizontal and vertical bus.
   b. Neutral Bus: [**50**][**100**] percent of phase-bus ampacity, except as indicated. [**Equip bus with pressure-connector terminations for outgoing neutral conductors**][**Include braces for neutral-bus extensions for busway feeders**].
   c. Supports and Bracing for Buses: Adequate strength for indicated short-circuit currents.

H. Short-Circuit Current: Match rating of highest-rated circuit breaker in switchgear assembly.

I. Switchgear Fabrication:

1. Bus isolation barriers must be arranged to isolate line bus from load bus at main and tie circuit breaker.
2. Circuit-breaker compartments must be equipped to house drawout-type circuit breakers and must be fitted with hinged outer doors.
3. Auxiliary Compartments: Match and align with basic switchgear assembly.

a. Bus transition sections.
b. Pull sections.
c. Hinged front panels for access to accessory and blank compartments.
d. Pull box on top of switchgear for extra room for pulling cable, with removable top, front, and side covers; and ventilation provisions adequate to maintain air temperature in pull box within same limits as switchgear.

1) Set pull box back from front to clear circuit-breaker lifting mechanism.
2) Bottom: Insulating, fire-resistive material with separate holes for cable drops into switchgear.
3) Cable Supports: Arranged to ease cabling and adequate to support cables indicated, including those for future installation.

e. Neutral Disconnect Link: Bolted, uninsulated, **1/4 by 2 inch (6 by 50 mm)** copper bus, arranged to connect neutral bus to ground bus.
f. Provide for future extensions from either end of main phase, neutral, and ground bus by means of predrilled bolt-holes and connecting links.
g. Bus-Bar Insulation: Individual bus bars wrapped with factory-applied, flame-retardant tape or spray-applied, flame-retardant insulation.

1) Sprayed Insulation Thickness: **3 mil (0.08 mm)**, minimum.
2) Bolted Bus Joints: Insulate with secure joint covers that can easily be removed and reinstalled.

4. Circuit-Breaker Terminals for Cable Connections: Silver-plated copper bus extensions equipped with pressure connectors for conductors.

J. Circuit Breakers: Comply with IEEE C37.13, IEEE C37.16, and IEEE C37.17.

1. Ratings: As indicated for continuous, interrupting, and short-time current ratings for circuit breaker; voltage and frequency ratings same as switchgear.
2. Operating Mechanism: Mechanically and electrically trip-free, stored-energy operating mechanism with the following features:

a. Normal Closing Speed: Independent of both control and operator.
b. Slow Closing Speed: Optional with operator for inspection and adjustment.

3. Stored-Energy Mechanism: Electrically charged, with optional manual charging[**and operation counter**].
4. Trip Devices:

a. Solid-state, overcurrent trip-device system consisting of one or two current transformers or sensors per phase, and release mechanism.
b. Functions: Long-time-delay, short-time-delay, and instantaneous-trip functions, independent of each other in both action and adjustment.
c. Temperature Compensation: Ensures accuracy and calibration stability from minus 5 to plus 40 deg C.
d. Time-Current Characteristics: Field adjustable.
e. Current Adjustability: Dial settings and rating plugs on trip units or sensors on circuit breakers, or combination of these methods.
f. Long-Time- and Short-Time-Delay Functions: Three bands, minimum; marked "minimum," "intermediate," and "maximum."
g. Pickup Points:

1) Five minimum, for long-time- and short-time-trip functions. Equip short-time-trip

function for switchable I-squared-t operation.
2) Five minimum, for instantaneous-trip functions.

h. Ground-fault protection[**alarm**] with at least three short-time-delay settings and three trip-time-delay bands; adjustable current pickup. Arrange to provide protection for the following:

1) Three-wire circuit or system.
2) Four-wire circuit or system.
3) Four-wire, double-ended substation.

i. Trip Indication: Labeled, battery-powered lights or mechanical targets on trip device to indicate type of fault.

5. Auxiliary Contacts: For interlocking or remote indication of circuit-breaker position, with spare auxiliary switches and other auxiliary switches required for normal circuit-breaker operation, quantity as indicated, consisting of two Type "a" and two Type "b" stages (contacts) wired through secondary disconnect devices to terminal block in stationary housing.
6. Drawout Features: Circuit-breaker mounting assembly equipped with racking mechanism to position circuit breaker and hold it rigidly in connected, test, and disconnected positions.

a. Interlocks: Prevent movement of circuit breaker to or from connected position when it is closed.
b. Circuit-Breaker Positioning:

1) An open circuit breaker may be racked to or from connected, test, and disconnected positions only with associated compartment door closed, unless live parts are covered by full dead-front shield.
2) An open circuit breaker may be manually withdrawn to position for removal from structure with door open.
3) Status for connection devices for different positions includes the following:

a) Test Position: Primary disconnect devices disengaged, and secondary disconnect devices and ground contact engaged.
b) Disconnected Position: Primary and secondary devices and ground contact disengaged.

7. Arc Chutes: Readily removable from associated circuit breaker when it is in disconnected position; arranged to permit inspection of contacts without removing circuit breaker from switchgear.
8. Padlocking Provisions: For installing at least three padlocks on circuit breaker to secure its enclosure and prevent movement of drawout mechanism.
9. Operating Handle: One for each circuit breaker capable of manual operation.

a. Generator Paralleling Circuit Breakers: Interlocked with system control so that circuit breaker does not close unless mode selector switch is in "Auto" position and engine generator is synchronized with isolated paralleling bus.

10. Electric Close Button: One for each electrically operated circuit breaker.

a. Generator Paralleling Circuit Breakers: Interlocked with system control so that circuit breaker does not close unless mode selector switch is in "Auto" position and engine generator is synchronized with isolated paralleling bus.

11. Mechanical Interlocking of Circuit Breakers: Uses mechanical tripping lever or equivalent design and electrical interlocks.
12. Key Interlocks: Arranged so keys are attached at devices indicated. Mountings and hardware are

included where future installation of key-interlock devices is indicated.

13. Undervoltage Trip Devices:

    a. Instantaneous, with adjustable pickup voltage.
    b. Adjustable time-delay and pickup voltage.

14. Shunt-Trip Devices:

    a. 24 V(dc) for generator paralleling circuit breakers and for distribution paralleling switchgear circuit breakers.
    b. Where indicated.

15. Indicating Lights: To indicate circuit breaker is open or closed, for main and bus tie circuit breakers interlocked either with each other or with external devices.

K. Metering:

1. Type and Locations:

    a. Isolated Paralleling Bus: [**Multifunction digital-metering monitor;**][**Analog metering for voltage, amperage, frequency, watt-hour, and recording demand;**] on door of separate metering compartment.
    b. Generator Circuit Breakers: [**Multifunction digital-metering monitor;**][**Analog metering for voltage, amperage, frequency, watt-hour, and recording demand;**] on circuit-breaker door.
    c. Distribution Circuit Breakers: [**Multifunction digital-metering monitor;**][**Analog metering for voltage, amperage, frequency, watt-hour, and recording demand;**] on circuit-breaker door.

2. Instrument Transformers:

    a. Comply with IEEE C57.13.
    b. Potential Transformers: Secondary-voltage rating of 120 V and NEMA accuracy class of 0.3 with burdens of W, X, and Y.
    c. Current Transformers:

        1) Burden and accuracy class suitable for connected relays, meters, and instruments.
        2) Size for maximum momentary current amperage based on calculation or momentary rating of circuit breaker protecting conductor.
        3) Include shorting-type terminal blocks.

3. Multifunction Digital-Metering Monitor:

    a. Microprocessor-based unit suitable for three- or four-wire systems.
    b. Inputs from sensors or 5 A current-transformer secondaries, and potential terminals rated to 600 V.
    c. Switch-selectable digital display with the following features:

        1) Phase Currents, Each Phase: Plus or minus 1 percent.
        2) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
        3) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
        4) Three-Phase Real Power: Plus or minus 2 percent.
        5) Three-Phase Reactive Power: Plus or minus 2 percent.
        6) Power Factor: Plus or minus 2 percent.
        7) Frequency: Plus or minus 0.5 percent.

8) Integrated Demand, with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.
9) Accumulated energy, in **MWh (MJ)**, plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.

d. Communications module suitable for remote monitoring of meter quantities and functions. Interface communication and metering requirements in accordance with Section 260913 "Electrical Power Monitoring."
e. Mounting: Display and control unit that is flush or semirecessed mounted in instrument compartment door.

4. Analog Instruments: Rectangular, **4-1/2 inch (115 mm)** square, accurate within 1 percent of full scale range; semirecessed mounting, with antiparallax 250-degree scale and external adjustment.

a. Voltmeters: Cover expanded scale range of normal voltage plus 10 percent.
b. Voltmeter Selector Switch: Rotary type with off position; provides readings of phase-to-phase[**and phase-to-neutral**] voltages.
c. Ammeters: Cover expanded scale range of bus rating plus 10 percent.
d. Ammeter Selector Switch: Permits current reading in each phase and keeps current-transformer secondary circuits closed in off position.
e. Watt-Hour Meters: Flush- or semirecessed-mounting type, [**5 A, 120 V, three phase, three wire; with three elements**]<**Insert characteristics**>, [**15-minute**]<**Insert value**> indicating demand register, and provision for testing and adding pulse initiation.
f. Recording Demand Meter: Usable as totalizing relay or indicating and recording maximum demand meter with [**15-minute**]<**Insert value**> interval.

1) Operation: Counts and records succession of pulses entering two channels.
2) Housing: Drawout type, back-connected case arranged for semirecessed mounting.

L. Relays: Comply with IEEE C37.90, integrated digital type; with test blocks and plugs.

1. Functions: <**Insert functions**>.
2. Characteristics: <**Insert characteristics**>.

M. Door-Mounted Control Components: Industrial-type oiltight devices and digital-display indicator lamps.

N. Control Power Supply:

1. Control power transformer must supply 120 V(ac) control circuits from generator source through secondary disconnect devices.
2. Include control power transformer for generator paralleling switchgear circuit breaker connected to generator side of circuit breaker.
3. Include control power transformer for distribution paralleling switchgear circuit breaker.
4. Dry-type transformers must be in separate compartments for units larger than 3 kVA, including primary and secondary fuses.
5. Two control power transformers in separate compartments with necessary interlocking relays; transformer must be connected to line side of associated main circuit breaker.

a. Secondary windings must be connected through relay(s) to control bus to effect automatic transfer scheme.
b. Secondary windings must be connected through internal automatic transfer switch to paralleling switchgear control power bus.

6. Control Power Fuses: Primary and secondary fuses must provide current-limiting and overload protection.

O. Control Wiring:

1. Factory installed, complete with bundling, lacing, and protection.
2. Provide flexible conductors for 8 AWG and smaller, for conductors across hinges and for conductors for interconnections between shipping units.
3. Conductors must be sized in accordance with NFPA 70 for duty required.

P. Provision for Future Devices: Equip compartments with rails, mounting brackets, supports, necessary appurtenances, and bus connections.

Q. Identification: Comply with requirements in Section 260553 "Identification for Electrical Systems" for electrical identification devices and installation.

1. Identify units, devices, controls, and wiring.
2. Mimic Bus: Continuous mimic bus, applied to front of paralleling low-voltage switchgear, arranged in one-line diagram format, using symbols and lettered designations consistent with approved mimic-bus diagram.

    a. Mimic-bus segments coordinated with devices in paralleling low-voltage switchgear sections to which applied, to produce concise visual presentation of principal paralleling switchgear components and connections.
    b. Medium: Painted graphics, as selected by Architect.
    c. Color: Contrasting with factory-finish background; as selected by Architect from manufacturer's full range.

R. Indoor Enclosure Material: Steel.

S. Outdoor Enclosure Fabrication Requirements: Galvanized steel, weatherproof; integral structural-steel base frame with factory-applied asphaltic undercoating.

1. Features for Compartment or Group of Compartments:

    a. Thermostatically controlled air-conditioning units sized to prevent temperatures exceeding [**80 deg F (27 deg C)**]<**Insert temperature**>.
    b. Space heater operating at one-half or less of rated voltage, sized to prevent condensation.
    c. Louvers equipped with insect and rodent screen and filter; arranged to permit air circulation while excluding insects, rodents, and exterior dust.
    d. Hinged front door with locking provisions.
    e. Interior light with switch.
    f. Weatherproof ground-fault circuit-interrupter duplex receptacle.
    g. Power for air conditioning, heaters, lights, and receptacles to be provided from control power transformer.

2. Features for Weatherproof Internal Aisle Construction:

    a. Common internal aisle of sufficient width to permit protective-device withdrawal, disassembly, and servicing in aisle.
    b. Aisle access doors with exterior padlocking provisions and interior panic latches.
    c. Thermostatically controlled aisle space heaters operating at one-half or less of rated voltage.
    d. Thermostatically controlled, aisle air-conditioning units sized to prevent temperatures exceeding **104 deg F (40 deg C)**.
    e. Vaporproof, fluorescent aisle lights with low-temperature ballasts, controlled by wall switch at entrance.
    f. At least two duplex, ground-fault circuit-interrupter receptacles, located in aisle.

g. Aisle ventilation louvers arranged with makeup air near floor level and exhaust air near roof level.

1) Louvers must have insect and rodent screen and filter, arranged to permit air circulation while excluding insects, rodents, and exterior dust.
2) Exhaust fans.

T. Access: Fabricate enclosure with hinged, rear cover panels to allow access to rear interior of paralleling low-voltage switchgear.

U. Finish: Manufacturer's standard gray finish over rust-inhibiting primer on phosphatizing-treated metal surfaces.

2.7 SOURCE QUALITY CONTROL

A. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.

1. Perform successfully tests prior to witness test.

B. Testing Administrant: [**Owner will engage**][**Engage**] qualified electrical testing agency to evaluate paralleling switchgear.

C. [**Factory**]Tests and Inspections: Test and inspect paralleling low-voltage switchgear, with [**generators**][**generators and transfer switches**], by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with {Insert standards} before delivering to site. Affix label with name and date of [**manufacturer's**][**qualified electrical testing laboratory's**] certification of system compliance on control units.

1. Paralleling Low-Voltage Switchgear:

a. NETA ATS, 7.6.1.2, "Circuit Breaker, Air, Low-Voltage Power Switchgear."
b. Factory test with simulated inputs. Test control and relay functions for proper operation.

2. Engine Generator:

a. NETA ATS, 7.22.1, "Emergency Systems, Engine Generator."
b. NETA ATS, 7.15.1, "Rotating Machinery, AC Motors & Generator."

3. Automatic Transfer Switches:

a. NETA ATS, 7.22.3, "Emergency System, Automatic Transfer Switches."

D. Verification of Performance: Rate paralleling low-voltage switchgear, with [**generators**][**generators and transfer switches**], in accordance with operation of functions and features specified.

E. Nonconforming Work:

1. Paralleling low-voltage switchgear, with [**generators**][**generators and transfer switches**], will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, where paralleling low-voltage switchgear will be installed for compliance with installation tolerances, required clearances, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SELECTION OF SWITCHGEAR COMPONENTS

A. Product Selection for Restricted Space: Drawings indicate maximum dimensions for paralleling low-voltage switchgear, including clearances between paralleling switchgear and adjacent surfaces and other items. Comply with indicated maximum dimensions.

3.3 INSTALLATION

A. Comply with applicable portions in NECA 400.

B. Equipment Mounting:

1. Install paralleling low-voltage switchgear on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 260529 "Hangers and Supports for Electrical Systems."
2. Comply with requirements for seismic control devices specified in [**Section 260548 "Vibration and Seismic Controls for Electrical Systems."**][**Section 260548.16 "Seismic Controls for Electrical Systems."**]

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, brackets, and temporary blocking of moving parts from paralleling low-voltage switchgear units and components.

3.4 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Section 260553 "Identification for Electrical Systems."

B. Diagrams and Instructions:

1. Frame and mount under clear acrylic plastic on front of paralleling low-voltage switchgear.

a. Operating Instructions: Printed basic instructions for paralleling low-voltage switchgear, including control and key-interlock sequences and emergency procedures.
b. System Power Riser Diagrams: Depict power sources, feeders, distribution components, and major loads.

2. Storage for Maintenance: Include rack or holder, near operating instructions, for copy of maintenance manual.

C. Compartment Nameplates: [**Engraved, laminated acrylic**][**Engraved, melamine plastic**][**Preprinted**

aluminum], as described in Section 260553 "Identification for Electrical Systems," for compartment, mounted with corrosion-resistant screws.

D. Mimic Bus: Continuous mimic bus, arranged in single-line diagram format, using symbols and lettered designations consistent with approved mimic-bus diagram.

1. Mimic-bus segments coordinated with devices in switchgear sections to which applied, to produce concise visual presentation of principal switchgear components and connections.
2. Medium: Painted graphics, as selected by Architect.
3. Color: Contrasting with factory-finish background; as selected by Architect from manufacturer's full range.

E. Arc-Flash Warning Labels:

1. Comply with requirements in Section 260573.19 "Arc-Flash Hazard Analysis." Produce **3.5-by-5-inch (76-by-127-mm)** self-adhesive equipment label for each work location included in analysis.
2. Comply with requirements in Section 260553 "Identification for Electrical Systems." Produce **3.5-by-5-inch (76-by-127-mm)** self-adhesive equipment label for each work location included in analysis. Labels must be machine printed, with no field-applied markings.

a. Label must have orange header with wording, "WARNING, ARC-FLASH HAZARD," and must include the following information taken directly from arc-flash hazard analysis:

1) Location designation.
2) Nominal voltage.
3) Flash protection boundary.
4) Hazard risk category.
5) Incident energy.
6) Working distance.
7) Engineering report number, revision number, and issue date.

b. Labels must be machine printed, with no field-applied markings.

3.5 CONNECTIONS

A. Comply with grounding and bonding requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

B. Comply with wire and cable requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.6 FIELD QUALITY CONTROL

A. [**Acceptance**]Testing Preparation: Prepare for acceptance tests as follows:

1. Test insulation resistance for switchgear bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of circuit.
3. Inspect paralleling switchgear installation, including wiring, components, connections, and equipment.[**Test and adjust components and equipment.**]
4. Verify that electrical control wiring installation complies with manufacturer's submittal by means of point-to-point continuity testing.
5. Complete installation and startup checks in accordance with manufacturer's written instructions.

B. Field tests must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

C. Tests and Inspections:

1. Perform visual and mechanical inspections and electrical tests stated in NETA ATS. Certify compliance with test parameters. Perform NETA tests and inspections for the following NETA categories:

a. AC generators and emergency systems.
b. Switchgear.
c. Circuit breakers.
d. Instrument transformers.
e. Metering and instrumentation.
f. Ground-fault systems.
g. Battery systems.
h. Surge arresters.
i. Capacitors.

2. Perform NFPA 110 tests for Type 1 essential power systems.
3. Test sequence of operation step by step for each mode.

D. Nonconforming Work:

1. Paralleling low-voltage switchgear will be considered defective if it does not pass tests and inspections.

E. Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services:

1. Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

3.7 ADJUSTING

A. Set field-adjustable, electronic circuit-breaker trip characteristics in accordance with results specified in Section 260573.16 "Coordination Studies."

B. Set field-adjustable, electronic circuit-breaker trip characteristics.

3.8 CLEANING

A. On completion of installation, inspect interior and exterior of paralleling low-voltage switchgear. Vacuum dirt and debris; do not use compressed air to assist in cleaning. Repair damaged finishes.

3.9 PROTECTION

A. Temporary Heating: Apply temporary heat to paralleling low-voltage switchgear, in accordance with manufacturer's written instructions, throughout periods when paralleling switchgear environment is not controlled for temperature and humidity within manufacturer's stipulated service conditions.

3.10 MAINTENANCE

A. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared scan of switchgear. Remove front and rear panels so joints and connections are accessible to portable scanner.

1. Follow-up Infrared Scanning: Perform additional follow-up infrared scan of switchgear 11 months after date of Substantial Completion.
2. Instrument: Use infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
3. Record of Infrared Scanning: Prepare certified report that identifies switchgear checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 22 13 00 - LOW-VOLTAGE DISTRIBUTION TRANSFORMERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Distribution, dry-type transformers with nominal primary and secondary rating of 600 V and less, with capacities up to 1500 kVA.

B. Products Furnished, but Not Installed, under This Section:

1. <**Insert products furnished, but not installed**>.

C. Products Installed, but Not Furnished, under This Section:

1. <**Insert products installed, but not furnished**>.

D. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 ACTION SUBMITTALS

A. Product Data:

1. For each type of product.

a. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type and size of transformer.
b. Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, and performance for each type and size of transformer.

B. Shop Drawings:

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of field connections.
2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment.
3. Include diagrams for power, signal, and control wiring.

C. Field Quality-Control Submittals:

1. Field quality-control reports.

1.3 INFORMATIONAL SUBMITTALS

A. Manufacturers' Published Instructions: Record copy of official installation[**and testing**] instructions issued to Installer by manufacturer for the following:

1. Transformer temporary heating, working clearances, anchoring, torque values, and insulation-resistance testing.

B. Source quality-control reports.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Inspection: On receipt, inspect for and note shipping damage to packaging and transformer.

1. If manufacturer packaging is removed for inspection, and transformer will be stored after inspection, re-package transformer using original or new packaging materials that provide protection equivalent to manufacturer's packaging.

B. Storage: Store in warm, dry, and temperature-stable location in original shipping packaging.

C. Temporary Heating: Apply temporary heat in accordance with manufacturer's published instructions within enclosure of ventilated-type units, throughout periods during which equipment is not energized and when transformer is not in space that is continuously under normal control of temperature and humidity.

D. Handling: Follow manufacturer's instructions for lifting and transporting transformers.

PART 2 - PRODUCTS

2.1 OWNER-FURNISHED PRODUCTS

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for product that Owner intends to furnish to Contractor**>.

B. Description: <**Insert description of product, including special features, options, and finishes for Owner-furnished product that may impact Contractor's installation**>.

C. Accessories: <**Insert accessories that will be provided with product**>.

2.2 EXISTING PRODUCTS[**TO BE MODIFIED**][**TO BE REMOVED AND RE-INSTALLED**]

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact Work**>.

C. Accessories: <**Insert accessories included with existing product**>.

2.3 LOW-VOLTAGE DISTRIBUTION TRANSFORMERS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**Acme Electric; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
3. [**Dongan Electric Manufacturing Company**]
4. [**Eaton**]
5. [**Federal Pacific**]
6. [**Hammond Power Solutions Inc.**]
7. [**Jefferson Electric, Inc.**]
8. [**Lincoln Electric Products Co., Inc.**]
9. [**Mag-Tran; a division of Quality Transformer & Electronics**]
10. [**Marcus Transformer LTD**]
11. [**MGM Transformer Company**]
12. [**Micron Industries Corporation**]
13. [**Mirus International Inc.**]
14. [**Powersmiths International Corp.; Socomec Group**]
15. [**Prolec GE; A Xignux and General Electric Company Joint Venture**]
16. [**Rex Power Magnetics**]
17. [**Siemens Industry, Inc., Energy Management Division**]
18. [**SolaHD; Emerson Electric Co., Automation Solutions**]
19. [**Square D; Schneider Electric USA**]
20. [**TEMCo Transformers**]
21. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**Acme Electric; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
3. [**Dongan Electric Manufacturing Company**]
4. [**Eaton**]
5. [**Federal Pacific**]
6. [**Hammond Power Solutions Inc.**]
7. [**Jefferson Electric, Inc.**]
8. [**Lincoln Electric Products Co., Inc.**]
9. [**Mag-Tran; a division of Quality Transformer & Electronics**]
10. [**Marcus Transformer LTD**]
11. [**MGM Transformer Company**]
12. [**Micron Industries Corporation**]
13. [**Mirus International Inc.**]
14. [**Powersmiths International Corp.; Socomec Group**]
15. [**Prolec GE; A Xignux and General Electric Company Joint Venture**]
16. [**Rex Power Magnetics**]
17. [**Siemens Industry, Inc., Energy Management Division**]
18. [**SolaHD; Emerson Electric Co., Automation Solutions**]
19. [**Square D; Schneider Electric USA**]
20. [**TEMCo Transformers**]
21. <**Insert manufacturer's name**>

C. Source Limitations: Obtain each type of transformer from single source from single manufacturer.

2.4 GENERAL TRANSFORMER REQUIREMENTS

A. Description: Factory-assembled and -tested, air-cooled units for 60 Hz service.

B. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

C. Transformers Rated 15 kVA and Larger:

1. Comply with 10 CFR 431 (DOE 2016) efficiency levels.
2. Marked as compliant with DOE 2016 efficiency levels by qualified electrical testing laboratory recognized by authorities having jurisdiction.

D. Shipping Restraints: Paint or otherwise color-code bolts, wedges, blocks, and other restraints that are to be removed after installation and before energizing. Use fluorescent colors that are easily identifiable inside transformer enclosure.

2.5 DISTRIBUTION TRANSFORMERS

A. Comply with NFPA 70[**, and list and label as complying with UL 1561**].

B. Cores: Electrical grade, non-aging silicon steel with high permeability and low hysteresis losses.

1. One leg per phase.
2. Core volume must allow efficient transformer operation at 10 percent above nominal tap voltage.
3. Grounded to enclosure.

C. Coils: Continuous windings[**without splices**] except for taps.

1. Coil Material: [**Aluminum**][**Copper**].
2. Internal Coil Connections: Brazed or pressure type.
3. Terminal Connections: [**Welded**][**Bolted**].

D. Encapsulation: Transformers smaller than 30 kVA must have core and coils completely resin encapsulated.

E. Enclosure: [**Ventilated**][**Totally enclosed, nonventilated**].

1. Core and coil must be encapsulated within resin compound[**using vacuum-pressure impregnation process**] to seal out moisture and air.
2. KVA Ratings: Based on convection cooling only and not relying on auxiliary fans.
3. Wiring Compartment: Sized for conduit entry and wiring installation.
4. Environmental Protection:

a. Indoor: UL 50E, [**Type 2**][**Type 3R**][**Type 4X, Stainless Steel**].
b. Outdoor: UL 50E, [**Type 3R**][**Type 4X**][**Type 4X, Stainless Steel**].

5. Finish Color: [**Gray**][**ANSI 49 gray**][**ANSI 61 gray**] weather-resistant enamel.

F. Taps for Transformers 3 kVA and Smaller: [**None**][**One 5 percent tap above normal full capacity**].

G. Taps for Transformers 7.5 to 24 kVA: [**One 5 percent tap above and one 5 percent tap below normal**

full capacity][**Two 5 percent taps below rated voltage**].

H. Taps for Transformers 25 kVA and Larger: [**Two 2.5 percent taps above and two 2.5 percent taps below normal full capacity**][**Two 2.5 percent taps above and four 2.5 percent taps below normal full capacity**].

I. Insulation Class, Smaller Than 30 kVA: 180 deg C, UL-component-recognized insulation system with maximum of 115 deg C rise above 40 deg C ambient temperature.

J. Insulation Class, 30 kVA and Larger: 220 deg C, UL-component-recognized insulation system with maximum of [**150 deg C**][**115 deg C**][**80 deg C**] rise above 40 deg C ambient temperature.

K. Grounding: Provide ground-bar kit or ground bar installed on inside of transformer enclosure.

L. K-Factor Rating: Transformers indicated to be K-factor rated must comply with UL 1561 requirements for nonsinusoidal load current-handling capability to degree defined by designated K-factor.

1. Unit may not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor, without exceeding indicated insulation class in 40 deg C maximum ambient and 24-hour average ambient of 30 deg C.
2. Indicate value of K-factor on transformer nameplate.
3. Unit must comply with requirements of DOE 2016 efficiency levels when tested in accordance with NEMA TP 2 with K-factor equal to one.

M. Electrostatic Shielding: Windings must have independent, single, full-width copper electrostatic shield arranged to minimize interwinding capacitance.

1. Arrange coil leads and terminal strips to minimize capacitive coupling between input and output terminals.
2. Include special terminal for grounding shield.

N. Neutral: Rated 200 percent of full load current for K-factor-rated transformers.

O. Wall Brackets: [**Manufacturer's standard brackets**][**Wall brackets fabricated from design drawings signed and sealed by qualified structural professional engineer**].

P. Low-Sound-Level Requirements: Maximum sound levels when factory tested in accordance with IEEE C57.12.91, as follows:

1. 9.00 kVA and Less: [**40 dB(A-weighted)**]<**Insert dB(A-weighted)**>.
2. 9.01 to 30.00 kVA: [**45 dB(A-weighted)**]<**Insert dB(A-weighted)**>.
3. 30.01 to 50.00 kVA: [**45 dB(A-weighted) for K-factors of 1, 4, and 9**][**48 dB(A-weighted) for K-factors of 13 and 20**]<**Insert dB(A-weighted)**>.
4. 50.01 to 150.00 kVA: [**50 dB(A-weighted) for K-factors of 1, 4, and 9**][**53 dB(A-weighted) for K-factors of 13 and 20**]<**Insert dB(A-weighted)**>.
5. 150.01 to 300.00 kVA: [**55 dB(A-weighted) for K-factors of 1, 4, and 9**][**58 dB(A-weighted) for K-factors of 13 and 20**]<**Insert dB(A-weighted)**>.
6. 300.01 to 500.00 kVA: [**60 dB(A-weighted) for K-factors of 1, 4, and 9**][**63 dB(A-weighted) for K-factors of 13 and 20**]<**Insert dB(A-weighted)**>.
7. 500.01 to 700.00 kVA: [**62 dB(A-weighted) for K-factors of 1, 4, and 9**][**65 dB(A-weighted) for K-factors of 13 and 20**]<**Insert dB(A-weighted)**>.
8. 700.01 to 1000.00 kVA: [**64 dB(A-weighted) for K-factors of 1, 4, and 9**][**67 dB(A-weighted) for K-factors of 13 and 20**]<**Insert dB(A-weighted)**>.
9. 1000.01 to 1500.00 kVA: <**Insert dB(A-weighted)**>.

2.6 IDENTIFICATION

A. Nameplates:

1. Engraved, laminated-acrylic or melamine plastic signs for distribution transformers, mounted with corrosion-resistant screws. Nameplates and label products are specified in Section 260553 "Identification for Electrical Systems."
2. Self-adhesive label for distribution transformers. Self-adhesive labels are specified in Section 260553 "Identification for Electrical Systems."

2.7 SOURCE QUALITY CONTROL

A. Testing Administrant: [**Owner will engage**][**Engage**] qualified electrical testing agency to evaluate transformer.

B. Factory Tests and Inspections: Test and inspect assembled system, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with IEEE C57.12.01 and IEEE C57.12.91 before delivering to site. Affix label with name and date of [**manufacturer's**][**qualified electrical testing laboratory's**] certification of system compliance on control units.

1. Resistance measurements of windings at rated voltage connections and at tap connections.
2. Ratio tests at rated voltage connections and at tap connections.
3. Phase relation and polarity tests at rated voltage connections.
4. No load losses, and excitation current and rated voltage at rated voltage connections.
5. Impedance and load losses at rated current and rated frequency at rated voltage connections.
6. Applied and induced tensile tests.
7. Regulation and efficiency at rated load and voltage.
8. Insulation-Resistance Tests:

    a. Line-side to ground.
    b. Load-side to ground.
    c. Line-side to load-side.

9. Temperature tests.
10. Factory Sound-Level Tests: [**Conduct sound-level tests on equipment for this Project**][**Conduct prototype sound-level tests on production-line products**].

C. Nonconforming Work:

1. System equipment that does not pass tests and inspections will be considered defective.

D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for transformers.

B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's published instructions.

C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.

D. Verify that ground connections are in place and requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance must be 5 Ω at location of transformer.

E. Environment: Enclosures must be rated for environment in which they are located. Covers for UL 50E, Type 4X enclosures may not cause accessibility problems.

F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install wall-mounted transformers level and plumb with wall brackets fabricated [**by transformer manufacturer**][**from design drawings signed and sealed by qualified structural professional engineer**].

1. Coordinate installation of wall-mounted and structure-hanging supports with actual transformer provided.
2. Brace wall-mounted transformers as specified in [**Section 260548 "Vibration and Seismic Controls for Electrical Systems."**][**Section 260548.16 "Seismic Controls for Electrical Systems."**]

B. Install transformers level and plumb on concrete base with vibration-dampening supports. Locate transformers away from corners and not parallel to adjacent wall surface.

C. Construct concrete bases and anchor floor-mounted transformers in accordance with manufacturer's published instructions[**, seismic requirements applicable to Project,**] and requirements in Section 260529 "Hangers and Supports for Electrical Systems."

1. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

D. Secure transformer to concrete base in accordance with manufacturer's published instructions.

E. Secure covers to enclosure and tighten bolts to manufacturer-recommended torques to reduce noise generation.

F. Remove shipping bolts, blocking, and wedges.

3.3 CONNECTIONS

A. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

C. Tighten electrical connectors and terminals in accordance with manufacturer's published torque-

tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

D. Provide flexible connections at conduit and conductor terminations and supports to eliminate sound and vibration transmission to building structure.

3.4 FIELD QUALITY CONTROL

A. [**Acceptance**]Testing Preparation:

1. <**Insert requirements**>.

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

C. Tests and Inspections:

1. Small (Up to 167 kVA Single-Phase or 500 kVA Three-Phase) Dry-Type Transformer Field Tests:

a. Visual and Mechanical Inspection.

1) Inspect physical and mechanical condition.
2) Inspect anchorage, alignment, and grounding.
3) Verify that resilient mounts are free and that shipping brackets have been removed.
4) Verify that unit is clean.
5) Perform specific inspections and mechanical tests recommended by manufacturer.
6) Verify that as-left tap connections are as specified.
7) Verify presence of surge arresters and that their ratings are as specified.

b. Electrical Tests:

1) Measure resistance at windings, taps, and bolted connections.
2) Perform insulation-resistance tests winding-to-winding and windings-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index: value of index may not be less than 1.0.
3) Perform turns-ratio tests at tap positions. Test results may not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
4) Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

2. Large (Larger Than 167 kVA Single Phase or 500 kVA Three Phase) Dry-Type Transformer Field Tests:

a. Visual and Mechanical Inspection:

1) Inspect physical and mechanical condition.
2) Inspect anchorage, alignment, and grounding.
3) Verify that resilient mounts are free and that shipping brackets have been removed.
4) Verify that unit is clean.
5) Perform specific inspections and mechanical tests recommended by manufacturer.
6) Verify that as-left tap connections are as specified.
7) Verify presence of surge arresters and that their ratings are as specified.

b. Electrical Tests:

1) Measure resistance at windings, taps, and bolted connections.
2) Perform insulation-resistance tests winding-to-winding and windings-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index: value of index may not be less than 1.0.
3) Perform power-factor or dissipation-factor tests on windings.
4) Perform turns-ratio tests at tap positions. Test results may not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
5) Perform excitation-current test on each phase.
6) Perform applied voltage test on line- and load-side windings to ground. See IEEE C57.12.91, Sections 10.2 and 10.9.
7) Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

D. Test Labeling: On completion of satisfactory testing of units, attach dated and signed "Satisfactory Test" label to tested components.

E. Nonconforming Work:

1. Transformer will be considered defective if it does not pass tests and inspections.
2. Remove and replace units that do not pass tests or inspections and retest as specified above.

F. Assemble and submit test and inspection reports.

G. Manufacturer Services:

1. Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

3.5 ADJUSTING

A. Record transformer secondary voltage at unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 5 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.

B. Output Settings Report: Prepare written report recording output voltages and tap settings.

3.6 CLEANING

A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

3.7 MAINTENANCE

A. Infrared Scanning: Two months after Substantial Completion, perform infrared scan of transformer connections.

1. Use infrared-scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.

2. Perform two follow-up infrared scans of transformers, one at four months and another at 11 months after Substantial Completion.
3. Prepare certified report identifying transformer checked and describing results of scanning. Include notation of deficiencies detected, remedial actions taken, and scanning observations after remedial action.

END OF SECTION 26 22 13 00

Task	Specification	Specification Description
26 22 13 00	26 12 19 00a	Low-Voltage Switchgear

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 24 13 00 - SWITCHBOARDS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Switchboards.
2. Surge protection devices.
3. Disconnecting and overcurrent protective devices.
4. Instrumentation.
5. Control power.
6. Accessory components and features.

B. Related Requirements

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. Section 260573.19 "Arc-Flash Hazard Analysis" for arc-flash analysis and arc-flash label requirements.

1.2 COORDINATION

A. Coordinate layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Switchboards.
2. Overcurrent protective devices.
3. Surge protection devices.
4. Groud-fault protection devices.
5. Accessories.
6. Other components.
7. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

B. Shop Drawings: For each switchboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details, including required clearances and

service space around equipment. Show tabulations of installed devices, equipment features, and ratings.
2. Detail enclosure types for types other than UL 50E, Type 1.
3. Detail bus configuration, current, and voltage ratings.
4. Detail short-circuit current rating of switchboards and overcurrent protective devices.
5. Include descriptive documentation of optional barriers specified for electrical insulation and isolation.
6. Detail utility company's metering provisions with indication of approval by utility company.
7. Include evidence of listing, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for series rating of installed devices.
8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
9. Include time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.
10. Include diagram and details of proposed mimic bus.
11. Include schematic and wiring diagrams for power, signal, and control wiring.

C. Samples: Representative portion of mimic bus with specified material and finish, for color selection.

D. Field Quality-Control Submittals:

1. Field Quality-Control Reports:

a. Test procedures used.
b. Test results that comply with requirements.
c. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturers' Published Instructions: Record copy of official installation[**and testing**] instructions issued to Installer by manufacturer for the following:

1. Handling, storing, and providing temporary heat.
2. Mounting accessories and anchoring devices.
3. Testing and adjusting overcurrent protective devices.

B. Sample warranties.

1.5 CLOSEOUT SUBMITTALS

A. Warranty documentation.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Spare Parts: Furnish to Owner spare parts, for repairing switchboards, that are packaged with protective covering for storage on-site and identified with labels describing contents.[**Include the following:**]

1. Potential Transformer Fuses: Equal to 10 percent of quantity installed for each size and type but no fewer than two of each size and type.

2. Control-Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.
3. Fuses and Fusible Devices for Fused Circuit Breakers: Equal to 10 percent of quantity installed for each size and type but no fewer than three of each size and type.
4. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type but no fewer than three of each size and type.
5. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type but no fewer than three of each size and type.
6. Indicating Lights: Equal to 10 percent of quantity installed for each size and type but no less than one of each size and type.

B. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to switchboards, that are packaged with protective covering for storage on-site and identified with labels describing contents.[**Include the following:**]

1. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.
2. Portable Test Set: For testing functions of solid-state trip devices without removing from switchboard. Include relay and meter test plugs suitable for testing switchboard meters and switchboard class relays.
3. Portable Circuit-Breaker Lifting Device: Floor-supported, roller-based, elevating carriage arranged for movement of circuit breakers in and out of compartments for present and future circuit breakers.
4. Overhead Circuit-Breaker Lifting Device: Mounted at top front of switchboard, with hoist and lifting yokes matching each drawout circuit breaker.
5. Spare-Fuse Cabinet: Suitably identified, wall-mounted, lockable, compartmented steel box or cabinet. Arrange for wall mounting.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path.

B. Remove loose packing and flammable materials from inside switchboards and [**install temporary electric heating (250 W per section)**][**connect factory-installed space heaters to temporary electrical service**] to prevent condensation.

C. Handle and prepare switchboards for installation in accordance with [**NECA 400**][**NEMA PB 2.1**].

1.8 WARRANTY

A. Special Installer Extended Warranty: Installer warrants that fabricated and installed switchboard perform in accordance with specified requirements and agrees to repair or replace components that fail to perform as specified within extended-warranty period.

1. Extended-Warranty Period: [**Two**]<**Insert number**> years from date of Substantial Completion; full coverage for labor, materials, and equipment.

B. Special Manufacturer Extended Warranty: Manufacturer warrants that switchboard performs in accordance with specified requirements and agrees to provide repair or replacement of components that fail to perform as specified within extended-warranty period.

1. [**Initial**]Extended-Warranty Period: [**Three**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.
2. Follow-On Extended-Warranty Period: [**Five**]<**Insert number**> years from date of Substantial

Completion; [**full**][**prorated**] coverage for materials[**that failed because of transient voltage surges**] only, free on board [**origin**][**destination**], freight prepaid.

PART 2 - PRODUCTS

2.1 SWITCHBOARDS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**Siemens Industry, Inc., Energy Management Division**]
4. [**Square D; Schneider Electric USA**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**Siemens Industry, Inc., Energy Management Division**]
4. [**Square D; Schneider Electric USA**]
5. <**Insert manufacturer's name**>

C. Source Limitations: Obtain switchboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

D. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchboards including clearances between switchboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

E. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

F. Comply with NEMA PB 2.

G. Comply with NFPA 70.

H. Comply with UL 891.

I. Front-Connected, Front-Accessible Switchboards:

1. Main Devices: [**Panel**][**Fixed, individually**] mounted.
2. Branch Devices: Panel mounted.
3. Sections front and rear aligned.

J. Front- and Side-Accessible Switchboards:

1. Main Devices: Fixed, individually mounted.

2. Branch Devices: Panel mounted.
3. Section Alignment: [**Front**][**and**][**Rear**] aligned.

K. Front- and Rear-Accessible Switchboards:

1. Main Devices: [**Fixed, individually**][**Drawout**] mounted.
2. Branch Devices: [**Panel**][**Fixed, individually**][**Panel and fixed, individually**][**Fixed and individually compartmented**][**Individually compartmented and drawout**] mounted.
3. Sections [**front and rear**][**rear**] aligned.

L. Nominal System Voltage: [**480Y/277 V**][**208Y/120 V**]<**Insert system voltage**>.

M. Main-Bus Continuous: [**5000**][**4000**][**3000**][**2500**][**2000**][**1600**][**1200**]<**Insert ampere rating**> A.

N. Indoor Enclosures: Steel, UL 50E, [**Type 1**][**Type 2**].

O. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's [**standard gray**][**custom color**] finish over rust-inhibiting primer on treated metal surface.

P. Outdoor Enclosures: [**Type 3R**][**Type 3R, with interior-lighted walk-in aisle**].

1. Finish: Factory-applied finish in manufacturer's [**standard**][**custom**] color; undersurfaces treated with corrosion-resistant undercoating.
2. Enclosure: [**Flat**][**Downward, rearward sloping**] roof; [**bolt-on rear covers**][**rear hinged doors**] for each section, with provisions for padlocking.
3. Doors: Personnel door at each end of aisle, minimum width of [**30 inch (762 mm)**]<**Insert value**>; opening outwards; with panic hardware and provisions for [**padlocking**][**cylinder lock**]. At least one door must be sized to permit largest single switchboard section to pass through without disassembling doors, hinges, or switchboard section.
4. Accessories: LED luminaires, ceiling mounted; wired to three-way light switch at each end of aisle; ground-fault circuit interrupter (GFCI) duplex receptacle; emergency battery pack luminaire installed on wall of aisle midway between personnel doors.
5. Walk-in Aisle Heating and Ventilating:

    a. Factory-installed electric unit heater(s), wall or ceiling mounted, with integral thermostat and disconnect and with capacities to maintain switchboard interior temperature of [**40 deg F (5 deg C)**]<**Insert temperature**> with outside design temperature of [**0 deg F (minus 18 deg C)**]<**Insert temperature**>.
    b. Factory-installed exhaust fan with capacities to maintain switchboard interior temperature of [**100 deg F (38 deg C)**]<**Insert temperature**> with outside design temperature of [**90 deg F (32 deg C)**]<**Insert temperature**>.
    c. Ventilating openings[**complete with replaceable fiberglass air filters**].
    d. Thermostat: Single stage; wired to control heat and exhaust fan.

6. Power for Space Heaters, Ventilation, Lighting, and Receptacle: Include control-power transformer, with spare capacity of 25 percent, within switchboard. Supply voltage must be [**120 V(ac)**][**120/240 V(ac)**][**120/208 V(ac)**].
7. Power for space heaters, ventilation, lighting, and receptacle provided by remote source.

Q. Barriers: Between adjacent switchboard sections.

R. Insulation and isolation for[**main bus of main section and**] main and vertical buses of feeder sections.

S. Space Heaters: Factory-installed electric space heaters of sufficient wattage in each vertical section to maintain enclosure temperature above expected dew point.

1. Space-Heater Control: [**Thermostats to maintain temperature of each section above expected dew point**][**Manual switching of branch-circuit protective device**].
2. Space-Heater Power Source: [**Transformer, factory installed in switchboard**][**120 V external branch circuit**].

T. Service Entrance Rating: Switchboards intended for use as service entrance equipment may contain from one to six service disconnecting means with overcurrent protection, neutral bus with disconnecting link, grounding electrode conductor terminal, and main bonding jumper.

U. Utility Metering Compartment: Barrier compartment and section complying with utility company's requirements; hinged sealable door; buses provisioned for mounting utility company's current transformers and potential transformers or potential taps as required by utility company. If separate vertical section is required for utility metering, match and align with basic switchboard. Provide service entrance label and necessary applicable service entrance features.

V. Customer Metering Compartment: Separate customer metering compartment[**and section with front hinged door,**] and section with front hinged door, for indicated metering, and current transformers for each meter. Current transformer secondary wiring must be terminated on shorting-type terminal blocks.[**Include potential transformers having primary and secondary fuses with disconnecting means and secondary wiring terminated on terminal blocks.**]

W. Bus Transition and Incoming Pull Sections: Matched and aligned with basic switchboard.

X. Removable, Hinged Rear Doors and Compartment Covers: Secured by [**captive thumb screws**][**standard bolts**], for access to rear interior of switchboard.

Y. Hinged Front Panels: Allow access to circuit breaker, metering, accessory, and blank compartments.

Z. Pull Box on Top of Switchboard:

1. Adequate ventilation to maintain temperature in pull box within same limits as switchboard.
2. Set back from front to clear circuit-breaker removal mechanism.
3. Removable covers may form top, front, and sides. Top covers at rear must be easily removable for drilling and cutting.
4. Bottom must be insulating, fire-resistive material with separate holes for cable drops into switchboard.
5. Cable supports must be arranged to facilitate cabling and adequate to support cables indicated, including those for future installation.

AA. Buses and Connections: Three phase, four wire unless otherwise indicated.

1. Provide phase bus arrangement A, B, C from front to back, top to bottom, and left to right when viewed from front of switchboard.
2. Phase- and Neutral-Bus Material:

    a. Hard-drawn copper of 98 percent conductivity[**, silver-plated**].
    b. Tin-plated, high-strength, electrical-grade aluminum alloy with tin-plated aluminum circuit-breaker line connections.

3. Copper feeder circuit-breaker line connections.
4. Tin-plated aluminum feeder circuit-breaker line connections.
5. Load Terminals: Insulated, rigidly braced, runback bus extensions, of same material as through buses, equipped with [**mechanical**][**compression**] connectors for outgoing circuit conductors. Provide load terminals for future circuit-breaker positions at full-ampere rating of circuit-breaker position.

6. Ground Bus: [1/4 by 2 inch (6 by 50 mm-)][1/4 by 1 inch (6 by 25 mm-)][**Minimum-size required by UL 891,**] hard-drawn copper of 98 percent conductivity, equipped with [**mechanical**][**compression**] connectors for feeder and branch-circuit ground conductors.
7. Main-Phase Buses and Equipment-Ground Buses: Uniform capacity for entire length of switchboard's main and distribution sections. Provide for future extensions from both ends.
8. Disconnect Links:

    a. Isolate neutral bus from incoming neutral conductors.
    b. Bond neutral bus to equipment-ground bus for switchboards utilized as service equipment or separately derived systems.

9. Neutral Buses: [**50**][**100**] percent of ampacity of phase buses unless otherwise indicated, equipped with [**mechanical**][**compression**] connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus.
10. Isolation Barrier Access Provisions: Permit checking of bus-bolt tightness.

BB. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of circuit-breaker compartment.

CC. Bus-Bar Insulation: Factory-applied, flame-retardant, tape wrapping of individual bus bars or flame-retardant, spray-applied insulation. Minimum insulation temperature rating of 105 deg C.

DD. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components including instruments and instrument transformers.

2.2 SURGE PROTECTION DEVICES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**Advanced Protection Technologies Inc. (APT)**]
3. [**Eaton**]
4. [**Siemens Industry, Inc., Energy Management Division**]
5. [**Square D; Schneider Electric USA**]
6. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**Advanced Protection Technologies Inc. (APT)**]
3. [**Eaton**]
4. [**Siemens Industry, Inc., Energy Management Division**]
5. [**Square D; Schneider Electric USA**]
6. <**Insert manufacturer's name**>

C. SPDs: Listed and labeled in accordance with UL 1449, [**Type 1**][**Type 2**].

D. Features and Accessories:

1. Integral disconnect switch.
2. Internal thermal protection that disconnects SPD before damaging internal suppressor components.

3. Indicator light display for protection status.
4. Form-C contacts rated at [**5 A and 250 V(ac)**][**2 A and 24 V(ac)**]<**Insert values**>, one normally open and one normally closed, for remote monitoring of protection status.[**Contacts must reverse on failure of surge diversion module or on opening of current-limiting device. Coordinate with building power monitoring and control system.**]
5. Surge counter.

E. Peak Surge Current Rating: Minimum single-pulse surge current withstand rating per phase may not be less than [**200 kA**][**250 kA**][**300 kA**]<**Insert amperes**>. Peak surge current rating must be arithmetic sum of ratings of individual MOVs in each mode.

F. Protection modes and UL 1449 VPR for grounded wye circuits with [**480Y/277 V**][**208Y/120 V**], three-phase, four-wire circuits may not exceed the following:

1. Line to Neutral: [**1200 V for 480Y/277 V**][**700 V for 208Y/120 V**].
2. Line to Ground: [**1200 V for 480Y/277 V**][**1200 V for 208Y/120 V**].
3. Line to Line: [**2000 V for 480Y/277 V**][**1000 V for 208Y/120 V**].

G. Protection modes and UL 1449 VPR for 240/120 V, single-phase, three-wire circuits may not exceed the following:

1. Line to Neutral: 700 V.
2. Line to Ground: [**700 V**][**1000 V**].
3. Line to Line: 1000 V.

H. SCCR: Equal or exceed [**100 kA**][**200 kA**]<**Insert amperes**>.

I. Nominal Rating: 20 kA.

2.3 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with [**series-connected rating**][**interrupting capacity**] to meet available fault currents.

1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
3. Electronic trip circuit breakers with RMS sensing; field-replaceable rating plug or field-replicable electronic trip; and the following field-adjustable settings:

    a. Instantaneous trip.
    b. Long- and short-time pickup levels.
    c. Long and short time adjustments.
    d. Ground-fault pickup level, time delay, and I squared t response.

4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
5. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker; trip activation on fuse opening or on opening of fuse compartment door.
6. GFCI Circuit Breakers: Single- and double-pole configurations with Class A ground-fault protection (6 mA trip).

7. Ground-Fault Equipment Protection (GFEP) Circuit Breakers: Class B ground-fault protection (30 mA trip).
8. MCCB Features and Accessories:

    a. Standard frame sizes, trip ratings, and number of poles.
    b. Lugs: [**Mechanical**][**Compression**] style, suitable for number, size, trip ratings, and conductor material.
    c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.
    d. Ground-Fault Protection: [**Integrally mounted**][**Remote-mounted**] relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
    e. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
    f. Communication Capability: [**Circuit-breaker-mounted**][**Universal-mounted**][**Integral**][**Din-rail-mounted**] communication module with functions and features compatible with power monitoring and control system specified in Section 260913 "Electrical Power Monitoring and Control."
    g. Shunt Trip: 120 V trip coil energized from separate circuit, set to trip at [**55**][**75**] percent of rated voltage.
    h. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
    i. Auxiliary Contacts: [**One SPDT switch**][**Two SPDT switches**] with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
    j. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key must be removable only when circuit breaker is in off position.

B. Insulated-Case Circuit Breaker (ICCB): [**80**][**100**] percent rated, sealed, insulated-case power circuit breaker with interrupting capacity rating to meet available fault current.

1. [**Fixed**][**Drawout**] circuit-breaker mounting.
2. Two-step, stored-energy closing.
3. [**Standard**][**Full**]-function, microprocessor-based trip units with interchangeable rating plug, trip indicators, and the following field-adjustable settings:

    a. Instantaneous trip.
    b. Time adjustments for long- and short-time pickup.
    c. Ground-fault pickup level, time delay, and I squared t response.
    d. <**Insert settings**>.

4. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
5. Remote trip indication and control.
6. Communication Capability: Web enabled integral Ethernet communication module and embedded Web server with factory-configured Web pages (HTML file format). Provide functions and features compatible with power monitoring and control system specified in Section 260913 "Electrical Power Monitoring and Control."
7. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key must be removable only when circuit breaker is in off position.
8. Control Voltage: [**40 V(dc)**][**125 V(dc)**][**250 V(dc)**][**120 V(ac)**].

C. Bolted-Pressure Contact Switch: Operating mechanism uses rotary-mechanical-bolting action to produce and maintain high clamping pressure on switch blade after it engages stationary contacts.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following]:

a. [**Boltswitch, Inc.**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Boltswitch, Inc.**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

3. Main-Contact Interrupting Capability: Minimum of 12 times switch current rating.
4. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.

a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.

5. Auxiliary Switches: Factory installed, SPDT, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.
6. Service-Rated Switches: Labeled for use as service equipment.
7. Ground-Fault Relay: Comply with UL 1053; self-powered type with mechanical ground-fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.

a. Configuration: [**Integrally mounted**][**Remote-mounted**] relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
b. Internal Memory: Integrates cumulative value of intermittent arcing ground-fault currents and uses effect to initiate tripping.
c. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no-trip" mode is selected).

8. Open-Fuse Trip Device: Arranged to trip switch open if phase fuse opens.

D. High-Pressure, Butt-Type Contact Switch: Operating mechanism uses butt-type contacts and spring-charged mechanism to produce and maintain high-pressure contact when switch is closed.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. <**Insert manufacturer's name**>

3. Main-Contact Interrupting Capability: Minimum of 12 times switch current rating.
4. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.

    a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
    b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.

5. Auxiliary Switches: Factory installed, SPDT, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.
6. Service-Rated Switches: Labeled for use as service equipment.
7. Ground-Fault Relay: Comply with UL 1053; self-powered type with mechanical ground-fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.

    a. Configuration: [**Integrally mounted**][**Remote-mounted**] relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
    b. Internal Memory: Integrates cumulative value of intermittent arcing ground-fault currents and uses effect to initiate tripping.
    c. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
    d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no-trip" mode is selected).

8. Open-Fuse Trip Device: Arranged to trip switch open if phase fuse opens.

E. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.

F. Fuses are specified in Section 262813 "Fuses."

2.4 INSTRUMENTATION

A. Instrument Transformers: NEMA EI 21.1, and the following:

1. Potential Transformers: NEMA EI 21.1; 120 V, 60 Hz, [**single**][**tapped**][**double**] secondary; disconnecting type with integral fuse mountings. Burden and accuracy must be consistent with connected metering and relay devices.
2. Current Transformers: NEMA EI 21.1; 5 A, 60 Hz, secondary; [**wound**][**bushing**][**bar or window**] type; [**single**][**double**] secondary winding and secondary shorting device. Burden and accuracy must be consistent with connected metering and relay devices.
3. Control-Power Transformers: Dry type, mounted in separate compartments for units larger than 3 kVA.
4. Current Transformers for Neutral and Ground-Fault Current Sensing: Connect secondary wiring to ground overcurrent relays, via shorting terminals, to provide selective tripping of main and tie circuit breaker. Coordinate with feeder circuit-breaker, ground-fault protection.

B. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:

1. Switch-selectable digital display of the following values with maximum accuracy tolerances as indicated:

    a. Phase Currents, Each Phase: Plus or minus 0.5 percent.
    b. Phase-to-Phase Voltages, Three Phase: Plus or minus 0.5 percent.
    c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 0.5 percent.
    d. Megawatts: Plus or minus 1 percent.
    e. Megavars: Plus or minus 1 percent.
    f. Power Factor: Plus or minus 1 percent.
    g. Frequency: Plus or minus 0.1 percent.
    h. Accumulated Energy, Megawatt Hours: Plus or minus 1 percent; accumulated values unaffected by power outages up to 72 hours.
    i. Megawatt Demand: Plus or minus 1 percent; demand interval programmable from five to 60 minutes.
    j. Contact devices to operate remote impulse-totalizing demand meter.

2. Mounting: Display and control unit flush or semiflush mounted in instrument compartment door.

C. Analog Meters:

1. Meters: **4 inch (100 mm)** diameter or **6 inch (150 mm)** square, flush or semiflush, with anti-parallax 250-degree scales and external zero adjustment.

D. Voltmeters: Cover expanded-scale range of nominal voltage plus 10 percent.

E. Instrument Switches: Rotary type with off position.

1. Voltmeter Switches: Permit reading of phase-to-phase voltages and, where neutral is indicated, phase-to-neutral voltages.
2. Ammeter Switches: Permit reading of current in each phase and maintain current-transformer secondaries in closed-circuit condition at all times.

F. Ammeters: **2-1/2 inch (64 mm)** minimum size with 90- or 120-degree scale. Meter and transfer device with off position, located on overcurrent device door for indicated feeder circuits only.

G. Watt-Hour Meters and Wattmeters:

1. Comply with ANSI C12.1.
2. Three-phase induction type with two stators, each with current and potential coil, rated 5 A, 120 V, 60 Hz.
3. Suitable for connection to three- and four-wire circuits.
4. Potential indicating lamps.
5. Adjustments for light and full load, phase balance, and power factor.
6. Four-dial clock register.
7. Integral demand indicator.
8. Contact devices to operate remote impulse-totalizing demand meter.
9. Ratchets to prevent reverse rotation.
10. Removable meter with drawout test plug.
11. Semiflush mounted case with matching cover.
12. Appropriate multiplier tag.

H. Impulse-Totalizing Demand Meter:

1. Comply with ANSI C12.1.
2. Suitable for use with switchboard watt-hour meter, including two-circuit totalizing relay.

3. Cyclometer.
4. Four-dial, totalizing kilowatt-hour register.
5. Positive chart drive mechanism.
6. Capillary pen holding minimum of one month's ink supply.
7. Roll chart with minimum 31-day capacity; appropriate multiplier tag.
8. Capable of indicating and recording [**five**][**15**][**30**]<**Insert time period**>-minute integrated demand of totalized system.

2.5 CONTROL POWER

A. Control Circuits:

1. 120 V(ac), supplied through secondary disconnecting devices from control-power transformer.
2. 120 V(ac), supplied from remote branch circuit.
3. <**Insert control voltage**> V(dc).

B. Electrically Interlocked Main and Tie Circuit Breakers: Two control-power transformers in separate compartments, with interlocking relays, connected to primary side of each control-power transformer at line side of associated main circuit breaker. 120 V secondaries connected through automatic transfer relays to ensure fail-safe automatic transfer scheme.

C. Control-Power Fuses: Primary and secondary fuses for current-limiting and overload protection of transformer and fuses for protection of control circuits.

D. Control Wiring: Factory installed, with bundling, lacing, and protection included. Provide flexible conductors for 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

2.6 ACCESSORY COMPONENTS AND FEATURES

A. Mounting Accessories: For anchors, mounting channels, bolts, washers, and other mounting accessories, comply with requirements in Section 260548.16 "Seismic Controls for Electrical Systems" or manufacturer's instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Receive, inspect, handle, and store switchboards in accordance with [**NECA 400**][**NEMA PB 2.1**].

1. Lift or move panelboards with spreader bars and manufacturer-supplied lifting straps following manufacturer's published instructions.
2. Use rollers, slings, or other manufacturer-approved methods if lifting straps are not furnished.
3. Protect from moisture, dust, dirt, and debris during storage and installation.
4. Install temporary heating during storage in accordance with manufacturer's published instructions.

B. Examine switchboards before installation. Reject switchboards that are moisture damaged or physically damaged.

C. Examine elements and surfaces to receive switchboards for compliance with installation tolerances and

other conditions affecting performance of the Work or that affect performance of equipment.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving switchboards into place.

3.3 INSTALLATION

A. Comply with manufacturer's published instructions.

B. Reference Standards:

1. Switchboards and Accessories: Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with [**NECA 400**][**NEMA PB 2.1**].
2. Consult Architect for resolution of conflicting requirements.

C. Special Techniques:

1. Equipment Mounting: Install switchboards on concrete base, **4 inch (100 mm)** nominal thickness. Comply with requirements for concrete base specified in Section 260529 "Hangers and Supports for Electrical Systems."

    a. Install conduits entering underneath switchboard, entering under vertical section where conductors will terminate. Install with couplings flush with concrete base. Extend **2 inch (50 mm)** above concrete base after switchboard is anchored in place.
    b. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on **18 inch (450 mm)** centers around full perimeter of concrete base.
    c. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
    d. Place and secure anchorage devices. Use setting drawings, templates, diagrams, published instructions, and directions furnished with items to be embedded.
    e. Install anchor bolts to elevations required for proper attachment to switchboards.
    f. Anchor switchboard to building structure at top of switchboard if required or recommended by manufacturer.

2. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, straps and brackets, and temporary blocking of moving parts from switchboard units and components.
3. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."
4. Operating Instructions: Frame and mount printed basic operating instructions for switchboards, including control and key interlocking sequences and emergency procedures. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of switchboards.
5. Install filler plates in unused spaces of panel-mounted sections.
6. Install overcurrent protective devices, surge protection devices, and instrumentation.

    a. Set field-adjustable switches and circuit-breaker trip ranges.

7. Install spare-fuse cabinet.

3.4 CONNECTIONS

A. Comply with requirements for terminating feeder bus specified in Section 262500 "Enclosed Bus Assemblies." Drawings indicate general arrangement of bus, fittings, and specialties.

B. Comply with requirements for terminating cable trays specified in Section 260536 "Cable Trays for Electrical Systems." Drawings indicate general arrangement of cable trays, fittings, and specialties.

C. Bond conduits entering underneath switchboard to equipment ground bus with bonding conductor sized in accordance with NFPA 70.

D. Support and secure conductors within switchboard in accordance with NFPA 70.

E. Extend insulated equipment grounding cable to busway ground connection and support cable at intervals in vertical run.

3.5 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. Switchboard Nameplates: Label each switchboard compartment with nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

C. Device Nameplates: Label each disconnecting and overcurrent protective device and each meter and control device mounted in compartment doors with nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

D. Mimic Bus:

1. Entire single-line switchboard bus work, as depicted on factory record drawing, on minimum **0.032 inch (0.813 mm)** thick anodized aluminum photoengraved nameplate, located at eye level on front cover of switchboard incoming service section.
2. Entire single-line switchboard bus work, as depicted on factory record drawing, on engraved minimum **0.0625 inch (1.588 mm)** thick laminated-plastic (Gravoply) nameplate, located at eye level on front cover of switchboard incoming service section.
3. Continuously integrated mimic bus factory applied to front of switchboard. Arrange in single-line diagram format, using symbols and letter designations consistent with final mimic-bus diagram.
4. Coordinate mimic-bus segments with devices in switchboard sections to which they are applied. Produce concise visual presentation of principal switchboard components and connections.
5. Presentation Media: Painted graphics in color contrasting with background color to represent bus and components, complete with lettered designations.

E. Service Equipment Label: Labeled, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for use as service equipment for switchboards with one or more service disconnecting and overcurrent protective devices.

3.6 FIELD QUALITY CONTROL

A. [**Acceptance**]Testing Preparation:

1. <**Insert requirements**>.

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

C. Tests and Inspections:

1. Acceptance Testing:

a. Test insulation resistance for each switchboard bus, component, connecting supply, feeder, and control circuit. Open control and metering circuits within switchboard, and remove neutral connection to surge protection and other electronic devices prior to insulation test. Reconnect after test.
b. Test continuity of each circuit.

2. Test ground-fault protection of equipment for service equipment in accordance with NFPA 70.
3. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
4. Correct malfunctioning units on-site where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
5. Perform the following infrared scan tests and inspections, and prepare reports:

a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared scan of each switchboard. Remove [**front**][**front and rear**] panels so joints and connections are accessible to portable scanner.
b. Follow-up Infrared Scanning: Perform additional follow-up infrared scan of each switchboard 11 months after date of Substantial Completion.
c. Instruments and Equipment:

1) Use infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

6. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

D. Nonconforming Work:

1. Switchboard will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Collect, assemble, and submit test and inspection reports, including certified report that identifies switchboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

F. Manufacturer Services:

1. Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

3.7 ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges [**as indicated.**][**as specified in Section 260573.16**

"Coordination Studies."]

3.8 PROTECTION

A. Temporary Heating: Apply temporary heat, to maintain temperature in accordance with manufacturer's published instructions, until switchboard is ready to be energized and placed into service.

END OF SECTION 26 24 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

Task	Specification	Specification Description
26 24 13 00	26 27 13 00	Electricity Metering
26 24 13 00	26 28 16 00	Enclosed Switches And Circuit Breakers

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 24 16 00 - PANELBOARDS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Panelboards.
2. Disconnecting and overcurrent protective devices.

B. Products Installed, but Not Furnished, under This Section:

1. <**Insert products identified in "Existing Products to be Modified" Article or "Existing Products to be Removed and Reinstalled" Article**> .

C. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies temperature, humidity, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies seismic hazard, wind hazard, and other structural design conditions applicable to the Work specified in this Section.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional abbreviations, definitions, submittals, qualifications, testing agencies, and other requirements applicable to the Work for electrical, communications, and electronic safety and security systems on Project, including wiring methods.
4. Section 260529 "Hangers and Supports for Electrical Systems" specifies concrete bases and supports for panelboards installed by this Section.
5. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies seismic control devices, mounting devices, and anchoring devices installed by this Section.
6. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs installed by this Section.
7. Section 260573 "Power System Studies" specifies short-circuit current studies, overcurrent protective device coordination studies, and arc-flash hazard analysis studies.
8. Section 260913 "Electrical Power Monitoring" specifies power monitoring and control systems installed by this Section.
9. Section 262813 "Fuses" specifies fuses and spare-fuse cabinets installed by this Section.
10. Section 264313 "Surge Protective Devices for Low-Voltage Electrical Power Circuits" specifies Type 1 and Type 2 surge protective devices installed by this Section.

1.2 DEFINITIONS

A. MCCB: Molded-case circuit breaker.

B. SPD: Surge protective device.

C. VPR: Voltage protection rating.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of specified product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Include operating characteristics, electrical characteristics, and furnished accessories.
3. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing laboratory, certifying that model number corresponding to specified product complies with specified listing criteria.
4. Include manufacturer's sample extended warranty language.

B. Shop Drawings: For each panelboard and related equipment.

1. Include plans, elevations, sections, details, and attachments to other Work.
2. Show tabulations of installed devices with nameplates, conductor termination sizes, equipment features, and ratings.
3. Detail enclosure types including mounting and anchorage, environmental protection, knockouts, corner treatments, covers and doors, gaskets, hinges, and locks.
4. Detail bus configuration, current, and voltage ratings.
5. Short-circuit current rating of panelboards and overcurrent protective devices.
6. Include evidence of listing, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for series rating of installed devices.
7. Include evidence of listing, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for SPD as installed in panelboard.
8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
9. Include wiring diagrams for power, signal, and control wiring.
10. Key interlock scheme drawing and sequence of operations.
11. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device. Include Internet link for electronic access to downloadable PDF of coordination curves.

C. Field Quality Control Reports: For specified tests and inspections.

1.4 INFORMATIONAL SUBMITTALS

A. Panelboard Schedules: For installation in panelboards. [**Submit final versions after load balancing.**]

B. Manufacturer's published instructions.

C. Field Reports:

1. Manufacturer's field reports for field quality-control support.
2. Field reports for voltage monitoring and adjusting.
3. Field reports for infrared scanning.

1.5 CLOSEOUT SUBMITTALS

A. Warranty documentation.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Spare parts.

B. Special tools.

1.7 QUALIFICATIONS

A. Low-Voltage Electrical Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must have documented certification and experience with testing electrical equipment in accordance with NETA testing standards.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Remove loose packing and flammable materials from inside panelboards; install temporary electric heating (250 W per panelboard) to prevent condensation.

B. Handle and prepare panelboards for installation in accordance with [**NECA 407**][**NEMA PB 1**] .

1.9 WARRANTY

A. Special Installer Extended Warranty: Installer warrants that fabricated and installed panelboards perform in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period.

1. Extended-Warranty Period: [**Two**]<**Insert number**> years from date of Substantial Completion; full coverage for labor, materials, and equipment.

B. Special Manufacturer Extended Warranty: Manufacturer warrants that panelboards perform in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within extended-warranty period.

1. Initial Extended-Warranty Period: [**Three**][**Four**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.
2. Follow-On Extended-Warranty Period: [**Five**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for materials [**that failed because of transient voltage surges**] only, free on board [**origin**][**destination**] , freight prepaid.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**> .

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact the Work**> .

1. Sustainable Design Features:

a. Material Reuse: Product is salvaged, refurbished, or reused.

C. Accessories: <**Insert accessories included with existing product**> .

2.2 EXISTING PRODUCTS TO BE REMOVED AND REINSTALLED

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**> .

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact the Work**> .

1. Sustainable Design Features:

a. Material Reuse: Product is salvaged, refurbished, or reused.

C. Accessories: <**Insert accessories included with existing product**> .

2.3 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

B. Fabricate and test panelboards in accordance with IEEE 344 to withstand seismic forces specified in Section 018123 "Facility Seismic and Wind Criteria."

C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for panelboards including clearances between panelboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

D. Comply with NEMA PB 1.

E. Enclosures: [**Flush**][**and**][**Surface**] -mounted, dead-front cabinets.

1. Rated for environmental conditions at installed location.

a. Indoor Dry and Clean Locations: UL 50E, [**Type 1**]<**Insert type**> .
b. Outdoor Locations: UL 50E, [**Type 3R**]<**Insert type**> .
c. Kitchen and Wash-Down Areas: UL 50E, [**Type 4X**]<**Insert type**> , [**stainless steel**]<**Insert material**> .
d. Other Wet or Damp Indoor Locations: UL 50E, [**Type 4**]<**Insert type**> .
e. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: UL 50E, [**Type 5**][**Type 12**] .

2. Height: **7 ft (2.13 m)** maximum.
3. Front: Secured to box with concealed trim clamps. For surface-mounted fronts, match box dimensions; for flush-mounted fronts, overlap box. Trims must cover live parts and may have no exposed hardware.
4. Hinged Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover. Trims must cover live parts and may have no exposed hardware.
5. Skirt for Surface-Mounted Panelboards: Same gage and finish as panelboard front with flanges for attachment to panelboard, wall, and ceiling or floor.

6. Gutter Extension and Barrier: Same gage and finish as panelboard enclosure; integral with enclosure body. Arrange to isolate individual panel sections.
7. Finishes:

    a. Panels and Trim: [**Steel**][**and**][**galvanized steel**] , factory finished immediately after cleaning and pretreating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
    b. Back Boxes: [**Galvanized steel**][**Same finish as panels and trim**] .
    c. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components.

F. Phase, Neutral, and Ground Buses:

1. Material: [**Tin-plated aluminum**][**Hard-drawn copper, 98 percent conductivity**] .

    a. Plating must run entire length of bus.
    b. Bus must be fully rated for entire length.

2. Interiors must be factory assembled into unit. Replacing switching and protective devices may not disturb adjacent units or require removing main bus connectors.
3. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment grounding conductors; bonded to box.

G. Conductor Connectors: Suitable for use with conductor material and sizes.

1. Material: [**Tin-plated aluminum**][**Hard-drawn copper, 98 percent conductivity**] .
2. Terminations must allow use of 75 deg C rated conductors without derating.
3. Size: Lugs suitable for indicated conductor sizes, with additional gutter space, if required, for larger conductors.
4. Main and Neutral Lugs: [**Compression**][**Mechanical**] type, with lug on neutral bar for each pole in panelboard.
5. Ground Lugs and Bus-Configured Terminators: [**Compression**][**Mechanical**] type, with lug on bar for each pole in panelboard.

H. Quality-Control Label: Panelboards or load centers must be labeled, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for use as service equipment with one or more main service disconnecting and overcurrent protective devices. Panelboards or load centers must have meter enclosures, wiring, connections, and other provisions for utility metering. Coordinate with utility company for exact requirements.

I. Future Devices: Panelboards or load centers must have mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.

1. Percentage of Future Space Capacity: [**5**][**10**][**20**]<**Insert number**> percent.

J. Panelboard Short-Circuit Current Rating:

1. Rated for series-connected system with integral or remote upstream overcurrent protective devices and labeled by qualified electrical testing laboratory recognized by authorities having jurisdiction. Include label or manual with size and type of allowable upstream and branch devices listed and labeled, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for series-connected short-circuit rating.

    a. Panelboards rated 240 V or less must have short-circuit ratings as shown on Drawings, but not less than 10 000 A(rms) symmetrical.
    b. Panelboards rated above 240 V and less than 600 V must have short-circuit ratings as

shown on Drawings, but not less than 14 000 A(rms) symmetrical.

2. Fully rated to interrupt symmetrical short-circuit current available at terminals. Assembly listed, by qualified electrical testing laboratory recognized by authorities having jurisdiction, for 100 percent interrupting capacity.

   a. Panelboards and overcurrent protective devices rated 240 V or less must have short-circuit ratings as shown on Drawings, but not less than 10 000 A(rms) symmetrical.
   b. Panelboards and overcurrent protective devices rated above 240 V and less than 600 V must have short-circuit ratings as shown on Drawings, but not less than 14 000 A(rms) symmetrical.

2.4 PANELBOARDS

A. UL QEUY - Distribution Panelboard :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**ABB Electrification Installations Products**]
   b. [**Eaton**]
   c. [**ESL Power Systems, Inc.**]
   d. [**Mersen USA**]
   e. [**Siemens Industry, Inc., Energy Management Division**]
   f. [**Square D; Schneider Electric USA**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB Electrification Installations Products**]
   b. [**Eaton**]
   c. [**ESL Power Systems, Inc.**]
   d. [**Mersen USA**]
   e. [**Siemens Industry, Inc., Energy Management Division**]
   f. [**Square D; Schneider Electric USA**]
   g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Distribution Type Panelboards: UL CCN QEUY; including UL 67 and NEMA PB 1.

5. Standard Features:

   a. Doors: Secured with vault-type latch with tumbler lock; keyed alike.

      1) For doors more than [**36 inch (914 mm)**]<**Insert dimension**> high, provide two latches, keyed alike.

b. Mains: [**Circuit breaker**][**Fused switch**][**Lugs only**] .

1) Location: [**Top**][**Bottom**][**Convertible between top and bottom**] .
2) Main Breaker: Main lug interiors up to 400 A must be field convertible to main breaker.

c. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes 125 A and Smaller: [**Plug-in circuit breakers**][**Bolt-on circuit breakers**][**Plug-in circuit breakers where individual positive-locking device requires mechanical release for removal**] .
d. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes Larger Than 125 A: [**Bolt-on circuit breakers**][**Plug-in circuit breakers where individual positive-locking device requires mechanical release for removal**] .
e. Branch Overcurrent Protective Devices: Fused switches.

6. Other Available Features Required by Project:

a. Surge Suppression: Factory installed as integral part of indicated panelboards, complying with UL 1449 SPD [**Type 1**][**Type 2**] .
b. Isolated Ground Bus: Adequate for branch-circuit isolated ground conductors; insulated from box.
c. Full-Sized Neutral: Equipped with full-capacity bonding strap for service entrance applications. Mount electrically isolated from enclosure.
d. Extra-Capacity Neutral Bus: Neutral bus rated 200 percent of phase bus and listed and labeled, by qualified electrical testing laboratory recognized by authorities having jurisdiction, as suitable for nonlinear loads in electronic-grade panelboards and others designated on Drawings. Connectors must be sized for double-sized or parallel conductors as indicated on Drawings.
e. Do not mount neutral bus in gutter.
f. Feed-Through Lugs: [**Compression**][**Mechanical**] type, suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
g. Subfeed (Double) Lugs: [**Compression**][**Mechanical**] type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.
h. Gutter-Tap Lugs: [**Compression**][**Mechanical**] type suitable for use with conductor material and with matching insulating covers. Locate at same end of bus as incoming lugs or main device.
i. Extra-Capacity Neutral Lugs: Rated 200 percent of phase lugs mounted on extra-capacity neutral bus.
j. Split Bus: Vertical buses divided into individual vertical sections.

1) Contactors in Main Bus: NEMA ICS 2, Class A, [**electrically**][**mechanically**] held, general-purpose controller, with same short-circuit interrupting rating as panelboard.

a) Internal Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.
b) External Control-Power Source: [**120 V branch circuit**][**24 V control circuit**]<**Insert requirement**> .

B. UL QEUY - Lighting and Appliance Branch-Circuit Panelboard :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**ABB Electrification Installations Products**]

b. [**Bender Inc.; Bender GmbH & Co. KG**]
c. [**Eaton**]
d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB Electrification Installations Products**]
b. [**Bender Inc.; Bender GmbH & Co. KG**]
c. [**Eaton**]
d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Lighting and Appliance Branch-Circuit Type Panelboards: UL CCN QEUY; including UL 67 and NEMA PB 1.

5. Standard Features:

a. Mains: [**Circuit breaker**][**or**][**lugs only**] .

1) Location: [**Top**][**Bottom**][**Convertible between top and bottom**] .
2) Main Breaker: Main lug interiors up to 400 A must be field convertible to main breaker.

b. Branch Overcurrent Protective Devices: [**Plug-in**][**Bolt-on**] circuit breakers, replaceable without disturbing adjacent units.

6. Other Available Features Required by Project:

a. Surge Suppression: Factory installed as integral part of indicated panelboards, complying with UL 1449 SPD [**Type 1**][**Type 2**] .
b. Isolated Ground Bus: Adequate for branch-circuit isolated ground conductors; insulated from box.
c. Full-Sized Neutral: Equipped with full-capacity bonding strap for service entrance applications. Mount electrically isolated from enclosure.
d. Extra-Capacity Neutral Bus: Neutral bus rated 200 percent of phase bus and listed and labeled, by qualified electrical testing laboratory recognized by authorities having jurisdiction, as suitable for nonlinear loads in electronic-grade panelboards and others designated on Drawings. Connectors must be sized for double-sized or parallel conductors as indicated on Drawings.
e. Do not mount neutral bus in gutter.
f. Feed-Through Lugs: [**Compression**][**Mechanical**] type, suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
g. Subfeed (Double) Lugs: [**Compression**][**Mechanical**] type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.
h. Gutter-Tap Lugs: [**Compression**][**Mechanical**] type suitable for use with conductor

material and with matching insulating covers. Locate at same end of bus as incoming lugs or main device.

i. Extra-Capacity Neutral Lugs: Rated 200 percent of phase lugs mounted on extra-capacity neutral bus.

j. Split Bus: Vertical buses divided into individual vertical sections.

1) Contactors in Main Bus: NEMA ICS 2, Class A, [**electrically**][**mechanically**] held, general-purpose controller, with same short-circuit interrupting rating as panelboard.

a) Internal Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.

b) External Control-Power Source: [**120 V branch circuit**][**24 V control circuit**]<**Insert requirement**> .

k. Doors: Door-in-door construction with concealed hinges; secured with [**flush**][**or**][**multipoint**] latch with tumbler lock; keyed alike. [**Outer door must permit full access to panel interior. Inner door must permit access to breaker operating handles and labeling, but current carrying terminals and bus must remain concealed.**]

l. Column-Type Panelboards: Single row of overcurrent devices [**with narrow gutter extension**][**and**][**overhead junction box equipped with ground and neutral terminal buses**] .

1) Column-Type Panelboard Doors: Concealed hinges secured with multipoint latch with tumbler lock; keyed alike.

C. UL QEUY - Electronic-Grade Panelboard :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**ABB Electrification Installations Products**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB Electrification Installations Products**]
b. [**Eaton**]
c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Electronic-Grade Type Panelboards: UL CCN QEUY; including UL 67 and NEMA PB 1.

5. Standard Features:

    a. Main Overcurrent Protective Devices: Bolt-on thermal-magnetic circuit breakers.
    b. Branch Overcurrent Protective Devices: Bolt-on thermal-magnetic circuit breakers.
    c. Factory-Installed, Integral SPD:

        1) Peak Surge Current Rating: Minimum single-pulse surge current withstand rating per phase may not be less than [**100 kA**]<**Insert value**> . Peak surge current rating must be arithmetic sum of ratings of individual MOVs in given mode.
        2) Protection modes and UL 1449 VPR for grounded wye circuits with 480Y/277 V or 208Y/120 V, three-phase, four-wire circuits may not exceed the following:

            a) Line to Neutral: [**1200 V for 480Y/277 V**][**700 V for 208Y/120 V**] .
            b) Line to Ground: [**1200 V for 480Y/277 V**][**700 V for 208Y/120 V**] .
            c) Neutral to Ground: [**1200 V for 480Y/277 V**][**700 V for 208Y/120 V**] .
            d) Line to Line: [**2000 V for 480Y/277 V**][**1200 V for 208Y/120 V**] .

        3) Protection modes and UL 1449 VPR for 240/120 V, single-phase, three-wire circuits may not exceed the following:

            a) Line to Neutral: 700 V.
            b) Line to Ground: 700 V.
            c) Neutral to Ground: 700 V.
            d) Line to Line: 1200 V.

        4) SCCR: Equal to [**SCCR of panelboard in which installed**][**or exceed 100 kA**][**or exceed 200 kA**][**or exceed**]<**Insert value**> .
        5) Inominal Rating: [**20 kA**][**10 kA**] .

    d. Buses:

        1) Copper phase and neutral buses; 200 percent capacity neutral bus and lugs.
        2) Copper equipment and isolated ground buses.

    e. Doors: Secured with vault-type latch with tumbler lock; keyed alike.

D. UL QEUY - Load Center :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**ABB Electrification Installations Products**]
    b. [**Eaton**]
    c. [**Siemens Industry, Inc., Energy Management Division**]
    d. [**Square D; Schneider Electric USA**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB Electrification Installations Products**]
    b. [**Eaton**]

c. [**Siemens Industry, Inc., Energy Management Division**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Electronic-Grade Type Panelboards: UL CCN QEUY; including UL 67.

5. Standard Features:

   a. Mains: [**Circuit breaker**][**or**][**lugs only**] .
   b. Branch Overcurrent Protective Devices: Plug-in circuit breakers, replaceable without disturbing adjacent units.
   c. Doors: Concealed hinges secured with flush latch with tumbler lock; keyed alike.
   d. Conductor Connectors: Mechanical type for main, neutral, and ground lugs and buses.

2.5 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

1. [**ABB Electrification Installations Products**]
2. [**Eaton**]
3. [**Siemens Industry, Inc., Energy Management Division**]
4. [**Square D; Schneider Electric USA**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB Electrification Installations Products**]
2. [**Eaton**]
3. [**Siemens Industry, Inc., Energy Management Division**]
4. [**Square D; Schneider Electric USA**]
5. <**Insert manufacturer's name**>

C. MCCB: Comply with UL 489, with [**series-connected rating**][**interrupting capacity**] to meet available fault currents.

1. Thermal-Magnetic Circuit Breakers:

   a. Inverse time-current element for low-level overloads.
   b. Instantaneous magnetic trip element for short circuits.
   c. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.

2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
3. Electronic Trip Circuit Breakers:

   a. RMS sensing.
   b. Field-replaceable rating plug or electronic trip.

c. Digital display of settings, trip targets, and indicated metering displays.
d. Multi-button keypad to access programmable functions and monitored data.
e. Ten-event, trip-history log. Each trip event must be recorded with type, phase, and magnitude of fault that caused trip.
f. Integral test jack for connection to portable test set or laptop computer.
g. Field-Adjustable Settings:

1) Instantaneous trip.
2) Long- and short-time pickup levels.
3) Long- and short-time adjustments.
4) Ground-fault pickup level, time delay, and I squared T response.

4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
5. GFCI Circuit Breakers: Single- and double-pole configurations with Class A ground-fault protection (6 mA trip).
6. GFPE Circuit Breakers: Class B ground-fault protection (30 mA trip).
7. Arc-Fault Circuit Interrupter Circuit Breakers: Comply with UL 1699; 120/240 V, single-pole configuration.
8. Subfeed Circuit Breakers: Vertically mounted.
9. MCCB Features and Accessories:

a. Standard frame sizes, trip ratings, and number of poles.
b. Breaker handle indicates tripped status.
c. UL listed for reverse connection without restrictive line or load ratings.
d. Lugs: [**Compression**][**Mechanical**] style, suitable for number, size, trip ratings, and conductor materials.
e. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and HID lighting circuits.
f. Ground-Fault Protection: [**Integrally mounted**][**Remote-mounted**] relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
g. Communication Capability: [**Circuit-breaker-mounted**][**Universal-mounted**][**Integral**][**Din-rail-mounted**] communication module with functions and features compatible with power monitoring and control system.
h. Shunt Trip: [**120 V**][**24 V**]<**Insert voltage**> trip coil energized from separate circuit, set to trip at [**55**][**75**] percent of rated voltage.
i. Handle Padlocking Device: Fixed attachment, for locking circuit-breaker handle in [**on**][**off**][**on or off**] position.
j. Handle Clamp: Loose attachment, for holding circuit-breaker handle in on position.
k. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage [**without intentional**][**with field-adjustable 0.1- to 0.6-second**] time delay.
l. Rating Plugs: Three-pole breakers with ampere ratings greater than [**150**]<**Insert value**> A must have interchangeable rating plugs or electronic adjustable trip units.
m. Auxiliary Contacts: [**One, SPDT switch**][**Two, SPDT switches**] with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts and "b" contacts operate in reverse of circuit-breaker contacts.
n. Alarm Switch: Single-pole, normally open contact that actuates only when circuit breaker trips.
o. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key must be removable only when circuit breaker is in off position.
p. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function with other upstream or downstream devices.
q. Multipole units enclosed in [**single housing with single handle**][**or**][**factory assembled to operate as single unit**] .

D. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.

1. Provide fuses and spare fuse cabinet.
2. Fused Switch Features and Accessories:

a. Standard ampere ratings and number of poles.
b. Mechanical cover interlock with manual interlock override, to prevent opening of cover when switch is in on position. Interlock must prevent switch from being turned on with cover open. Operating handle must have lock-off means with provisions for three padlocks.
c. Auxiliary Contacts: [**One**][**Two**] normally open and normally closed contact(s) that operate with switch handle operation.

2.6 MAINTENANCE MATERIAL ITEMS

A. Spare Parts: Furnish to Owner spare parts, for repairing panelboards and related equipment, that are packaged with protective covering for storage on-site and identified with labels describing contents. [**Include the following:**]

1. Keys: [**Two**]<**Insert number**> spares for each type of panelboard cabinet lock.
2. Circuit Breakers Including GFCI and GFPE Types: [**Two**]<**Insert number**> spares for each panelboard.
3. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
4. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.

B. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to panelboards and related equipment, that are packaged with protective covering for storage on-site and identified with labels describing contents. [**Include the following:**]

1. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.
2. Portable Test Set: For testing functions of solid-state trip devices without removing from panelboard. Include relay and meter test plugs suitable for testing panelboard meters and switchboard class relays.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify actual conditions with field measurements prior to ordering panelboards to verify that equipment fits in allocated space in, and comply with, minimum required clearances specified in NFPA 70.

B. Receive, inspect, handle, and store panelboards in accordance with [**NECA 407**][**NEMA PB 1.1**] .

C. Examine panelboards before installation. Reject panelboards that are damaged, rusted, or have been subjected to water saturation.

D. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF PANELBOARDS

A. Comply with manufacturer's published instructions.

B. Reference Standards:

1. Panelboards: Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with [**NECA 407**][**NEMA PB 1.1**] .
2. Consult Architect for resolution of conflicting requirements.

C. Special Techniques:

1. Equipment Mounting:

   a. Install floor-mounted panelboards on cast-in-place concrete equipment base(s).
   b. Attach panelboard to vertical finished or structural surface behind panelboard.
   c. Mount surface-mounted panelboards to steel slotted supports [**5/8 inch (16 mm)**][**1-1/4 inch (32 mm)**] in depth. Orient steel slotted supports vertically.
   d. Provide seismic control devices.

2. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.
3. Provide mounting and anchoring devices.
4. Mount top of trim [**7.5 ft (2.3 m)**]<**Insert height**> above finished floor unless otherwise indicated.
5. Mount panelboard cabinet plumb and rigid without distortion of box.
6. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.
7. Install overcurrent protective devices and controllers not already factory installed.

   a. Set field-adjustable, circuit-breaker trip ranges.
   b. Tighten bolted connections and circuit breaker connections using calibrated torque wrench or torque screwdriver in accordance with manufacturer's published instructions.

8. Make grounding connections and bond neutral for services and separately derived systems to ground. Make connections to grounding electrodes, separate grounds for isolated ground bars, and connections to separate ground bars.
9. Install filler plates in unused spaces.
10. Stub four **1 inch (25 mm)** empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in future. Stub four **1 inch (25 mm)** empty conduits into raised floor space or below slab not on grade.
11. Arrange conductors in gutters into groups and bundle and wrap with wire ties [**after completing load balancing**] .
12. Mount spare fuse cabinet in accessible location.

D. Interfaces with Other Work:

1. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

3.3 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components.

B. Install warning signs.

C. Panelboard Nameplates: Label each panelboard with nameplate.

D. Device Nameplates: Label each branch circuit device in power panelboards with nameplate.

E. Panelboard Label: Manufacturer's name and trademark, voltage, amperage, number of phases, and number of poles must be located on interior of panelboard door.

F. Breaker Labels: Faceplate must list current rating, UL and IEC certification standards, and AIC rating.

G. Circuit Directory:

1. Provide directory card inside panelboard door, mounted in [**transparent card holder**][**metal frame with transparent protective cover**] .

    a. Circuit directory must identify specific purpose with detail sufficient to distinguish it from other circuits.

2. Provide computer-generated circuit directory mounted inside panelboard door with transparent plastic protective cover.

    a. Circuit directory must identify specific purpose with detail sufficient to distinguish it from other circuits.

3. Create directory to indicate installed circuit loads [**after balancing panelboard loads**] ; incorporate Owner's final room designations. Obtain approval before installing. Handwritten directories are not acceptable. Install directory inside panelboard door.

3.4 FIELD QUALITY CONTROL

A. Administrant for Low-Voltage Electrical Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified low-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified low-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections [**with assistance of factory-authorized service representative**] .

B. Acceptance Testing Preparation:

1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**> .

D. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test for low-voltage air circuit breakers [**and low-voltage surge arrestors**] stated in NETA ATS, Paragraph 7.6 Circuit Breakers [**and Paragraph 7.19.1 Surge Arrestors, Low-Voltage**] . [**Do not perform**][**Perform**] optional tests. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
3. Perform the following infrared scan tests and inspections and prepare reports:

    a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.
    b. Follow-up Infrared Scanning: Perform additional follow-up infrared scan of each panelboard 11 months after date of Substantial Completion.
    c. Instruments and Equipment:

        1) Use infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

E. Nonconforming Work:

1. Panelboards will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Field Quality Control Reports: Collect, assemble, and submit test and inspection reports.

1. Include certified report that identifies panelboards included and that describes scanning results, with comparisons of two scans. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

G. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

3.5 ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended in writing by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges.

C. Load Balancing: After Substantial Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes. Prior to making circuit changes to achieve load balancing, inform Architect of effect on phase color coding.

1. Measure loads during period of normal facility operations.
2. Perform circuit changes to achieve load balancing outside normal facility operation schedule or at times directed by Architect. Avoid disrupting services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.
3. After changing circuits to achieve load balancing, recheck loads during normal facility operations. Record load readings before and after changing circuits to achieve load balancing.
4. Tolerance: Maximum difference between phase loads, within panelboard, may not exceed 20 percent.

3.6 PROTECTION

A. Temporary Heating: Prior to energizing panelboards, apply temporary heat to maintain temperature in accordance with manufacturer's published instructions.

END OF SECTION 26 24 16 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 24 16 00A - ELECTRONICALLY OPERATED CIRCUIT-BREAKER PANELBOARDS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Panelboards.
2. Circuit breakers.
3. Main controllers.
4. Slave panel controllers.
5. Control network.
6. Manual switches and cover plates.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 DEFINITIONS

A. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for control modules, power distribution components, manual switches and cover plates, and conductors and cables.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings: For each electronically operated, circuit-breaker panelboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
2. Detail enclosure types and details for types other than Type 1.
3. Detail bus configuration, current, and voltage ratings.
4. Short-circuit current rating of panelboards and overcurrent protective devices.
5. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
6. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Submit on translucent log-log graph paper; include selectable ranges for

each type of overcurrent protective device.

7. Include diagrams for power, signal, and control wiring.
8. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.
9. Submit evidence that electronic controls are compatible with connected monitoring and control devices and systems specified in other Sections.

    a. Show interconnecting signal and control wiring and interfacing devices that prove compatibility of inputs and outputs.
    b. For networked controls, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of network protocol.

C. Field quality-control reports.

D. Sample Warranty: For manufacturer's special warranty.

1.4 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Electrically Operated, Molded-Case Circuit Breakers: Equal to <**Insert number**> percent of amount installed[**for each size indicated**], but no fewer than <**Insert number**>.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Handle and prepare panelboards for installation according to [**NECA 407**][**NEMA PB 1.1**].

1.6 WARRANTY

A. Special Manufacturer Extended Warranty: Manufacturer warrants that components of panelboards perform in accordance with specified requirements and agrees to provide repair or replacement of components that fail to perform as specified within extended warranty period.

1. Initial Extended Warranty Period: [**Two**]<**Insert number**> year(s) from date of Substantial Completion, for labor, materials, and equipment.
2. Follow-on Extended Warranty Period: [**Five**]<**Insert number**> year(s) from date of Substantial Completion, for materials that failed because of transient voltage surges only, f.o.b. the nearest shipping point to Project site.

PART 2 - PRODUCTS

2.1 ELECTRICALLY OPERATED CIRCUIT-BREAKER PANELBOARDS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**Siemens Industry, Inc., Energy Management Division**]
4. [**Square D; Schneider Electric USA**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**Siemens Industry, Inc., Energy Management Division**]
4. [**Square D; Schneider Electric USA**]
5. <**Insert manufacturer's name**>

C. Source Limitations: Obtain electrically operated circuit breakers and power distribution components from single manufacturer.

2.2 SYSTEM DESCRIPTION

A. Input signal from field-mounted or on-board signal source must open or close one or more electrically operated circuit breakers in electronically operated, circuit-breaker panelboards. Any combination of inputs must be programmable to any combination outputs.

B. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by the authorities having jurisdiction, and marked for intended location and application.

C. Comply with 47 CFR Part 15, Subpart A and Subpart B, for Class A digital devices.

2.3 PERFORMANCE REQUIREMENTS

A. Expansion Requirements: Capacity for future expansion of number of control functions by 25 percent of current capacity; to include equipment ratings, housing capacities, spare spaces for circuit breakers, terminals, number of conductors in control cables, and control software.

B. Interface with DDC System for HVAC: Provide hardware and software to enable DDC system for HVAC to monitor, control, display, and record data for use in processing reports.

1. Hardwired Points:

   a. Monitoring: On-off status, <**Insert monitoring point**>.
   b. Control: On-off operation, <**Insert control point**>.

2. Communication Interface: Comply with [**ASHRAE 135**][**ISO/IEC 14908-1**][**"MODBUS Application Protocol Specification"**]<**Insert type of interface**> communication interface with DDC system for HVAC must enable DDC system for HVAC operator to remotely control and monitor electronically operated circuit breakers from a DDC system for HVAC operator workstation. Control features and monitoring points displayed locally at panelboard controller must be available through DDC system for HVAC.

2.4 PANELBOARDS

A. Electronically operated, circuit-breaker panelboards may contain remotely operated circuit breakers and standard branch circuit breakers specified in Section 262416 "Panelboards."

B. Assemblies: Comply with UL 67 and NEMA PB 1.

C. Surge Protective Device:

1. Field mounted, complying with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."
2. Integrally mounted, complying with UL 1449 Type 1.

a. Comply with IEEE C62.41, Category C, 200 kA short-circuit current rating.
b. Non-modular type with the following features and accessories:

1) Digital-display indicator lights for power and protection status.
2) <**Insert features and accessories**>.

D. Enclosures: Comply with UL 50.

E. Future Devices: Mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.

F. Panelboard Short-Circuit Current Rating:

1. Rated for series-connected system with integral or remote upstream overcurrent protective devices and labeled by a qualified electrical testing laboratory. Include size and type of allowable upstream and branch devices, listed and labeled for series-connected, short-circuit rating by a qualified electrical testing laboratory.
2. Fully rated to interrupt [**10 kA**]symmetrical short-circuit current available at terminals.

2.5 CIRCUIT BREAKERS

A. Remotely operated branch circuit breakers must provide branch circuit overcurrent protection.

B. Labeled with SWD and HID Ratings: Comply with UL 489 for 15 and 20 A, single-pole branch devices.[**15 and 20 A circuit breakers, if scheduled, must be a product of same manufacturer, and be of same class as rated circuit breakers.**]

C. Switching Endurance Rating: Not less than [**50,000**][**200,000**]<**Insert number**> full-load open/close/open remote operations.

D. Remotely Operated Circuit Breakers: Manual override switch or handle position must enable or disable remote operation of device and allow breaker handle to manually control breaker's on-off status.

2.6 MAIN CONTROLLERS

A. Description: Controllers must contain power supply and electronic control for operating and monitoring remotely operated branch circuit breakers.

1. Comply with UL 916 (CSA C22.2, No. 205); with a microprocessor-based, solid-state, 365-day

timing and control unit.

2. Power Supply: Powered from panelboard, sized to provide control power for operation of remotely operated circuit breakers, controller, bus system, control-voltage inputs, and field-installed sensors.
3. Integral keypad and digital-display front panel for local setup, including the following:

    a. Log and display remotely operated breaker on-time.
    b. Provision to accept downloadable firmware so that latest features may be added in future without replacing module.

4. Nonvolatile memory must retain all setup configurations. After a power failure, controller must automatically reboot and return to normal system operation.
5. Ethernet Communications: Comply with [**ASHRAE 135**][**ISO/IEC 14908-1**][**"MODBUS Application Protocol Specification"**]<**Insert network protocol**> protocols.

    a. Each input connected to controller must control any remotely operated breaker in any other networked electronically operated, circuit-breaker panelboard.
    b. A schedule programmed at one controller must be able to control any remotely operated breaker in any other networked panelboard.

6. Time Synchronization: Timing unit must be updated not less than every <**Insert number**> hour(s) with network time server.
7. Web Server: Display information listed below over a standard Web-enabled server for displaying information over a standard Web browser.

    a. A secure, password-protected login screen for modifying operational parameters, accessible to authorized users via Web page interface.
    b. Separate Web page, showing status of each main and slave electronically operated, circuit-breaker panelboards with arrangement of breakers on page matching physical appearance of panel. Status must include breaker nametags, pole configuration, location in panel, actual contact state (on-off/tripped/manual), and breaker on-time.
    c. Panel summary showing master and slave panels connected to controller.
    d. Controller diagnostic information.
    e. Show front panel mimic screens for setting up controller parameters, input types, zones, and operating schedules. These mimic screens must also allow direct breaker control and zone overrides.

8. Alarm and E-mail Notification: Automatically initiate alarms based on preconfigured conditions listed below and routing alarm alerts as set at control panel.

    a. General Alarms: Power loss, non-responding breakers, loss and restoration of sub-net communications, loss and restoration of serial port communications, loss and restoration of DDC system for HVAC commands.
    b. Specific Alarms: Input status, zone status, breaker status on-time (zero to 99999 hours).
    c. E-mail Notification: Automatically route e-mail messages to five individual e-mail addresses. Within body text of e-mail, include a link that will automatically redirect user to associated panels' status Web page.

B. Timing Unit:

1. 365-day calendar, astronomical clock, and automatic adjustments for daylight savings and leap year.
2. Clock configurable for 12-hour (A.M./P.M.) or 24-hour format.
3. [**16**]<**Insert number**> independent schedules, each having [**24**]<**Insert number**> time periods.
4. Schedule periods settable to the minute.
5. Day of week, day of month, day of year with one-time or repeating capability.

6. [**32**]<**Insert number**> special date periods.

C. With [**eight**][**16**]<**Insert number**> inputs, each configurable to the following parameters:

1. Normally open, normally closed, two-wire maintained toggle, two-wire momentary toggle, two-wire momentary on, two-wire momentary off, or three-wire momentary operation.
2. On and off-delay timers for local override operation, adjustable from five minutes to 12 hours. Local override must be by field-installed, two-wire momentary toggle switch.

2.7 SLAVE PANEL CONTROLLERS

A. Slave panels must contain necessary busses and network hardware to allow connection of sub-net wiring between panels, with programming at main panel controller. Programmable timing unit, Web server, alarm and e-mail notification, and Ethernet connection to control network is not required provided all of these functions are available for slave panel from main panel controller.

B. Sub-net wiring connections must allow connection of wiring to a terminal that can be removed from panel without interrupting communications to other panels.

C. Slave panels must contain a nameplate label attached to deadfront trim indicating panel designation, panel network address, and panel designation of associated master panel.

2.8 CONTROL NETWORK

A. Panel Controllers: Networked with other [**electronically operated, circuit-breaker panel controllers**][**DDC system for HVAC controllers**] in a peer-to-peer configuration using Ethernet [**10Base-T**][**100Base-T**] network.

B. Protocol: Controllers must support serial MS/TP and Ethernet IP communications, and must be able to communicate directly via DDC system for HVAC TIA-485 serial networks and Ethernet 10Base-T networks as a native device.

2.9 MANUAL SWITCHES AND COVER PLATES

A. Keypads: Programmable, designed to control functions associated with equipment of this Section. Units must be able to control any system output device.

B. Push-Button Switches: Modular, momentary-contact, control-voltage type.

1. Match color specified in Section 262726 "Wiring Devices."
2. Integral green [**digital-display**][**neon**] pilot light to indicate when circuit is on.
3. Internal white [**digital-display**][**neon**] locator light to illuminate when circuit is off.

C. Manual, Maintained Contact, Line-Voltage or Control-Voltage Switch: Comply with Section 262726 "Wiring Devices."

D. Cover Plates: Single and multigang cover plates as specified in Section 260533.16 "Boxes and Covers for Electrical Systems."

E. Legend: Engraved or permanently silk-screened on cover plate where indicated. Use designations indicated on Drawings.

2.10 CONDUCTORS AND CABLES

A. Power Wiring to Supply Side of Class 2 Power Source: Not smaller than No. 12 AWG. Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Class 2 and Class 3 Control Cables: Multiconductor cable with copper conductors not smaller than [**No. 18**][**No. 22**][**No. 24**] AWG. Comply with Section 260523 "Control-Voltage Electrical Power Cables."

C. Class 1 Control Cables: Multiconductor cable with copper conductors not smaller than [**No. 14**][**No. 16**][**No. 18**] AWG. Comply with Section 260523 "Control-Voltage Electrical Power Cables."

D. Twisted-Pair Data Cable:

1. [**Category 5e**][**Category 6**][**Category 6a**]. Comply with requirements for twisted pair cabling in Section 260523 "Control-Voltage Electrical Power Cables."
2. [**Category 5e**][**Category 6**][**Category 6a**]. Comply with requirements in Section 271513 "Communications Copper Horizontal Cabling."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Receive, inspect, handle, and store panelboards according to [**NECA 407**][**NEMA PB 1.1**].

B. Examine panelboards before installation. Reject panelboards that are damaged or rusted or have been subjected to water saturation.

C. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF WIRING

A. Wiring Method:

1. Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
2. Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters[**and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used**]. Conceal raceway and cables except in unfinished spaces.

a. Install plenum cable in environmental air spaces, including plenum ceilings.
b. Comply with requirements for cable trays specified in Section 260536 "Cable Trays for Electrical Systems."
c. Comply with requirements for raceways specified in Section 260533.13 "Conduits for Electrical Systems."

B. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

3.3 INSTALLATION OF PANELBOARDS

A. Install panelboards and accessories according to [**NECA 407**][**NEMA PB 1.1**].

B. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."

C. Mounting Height: [**90 inch (2286 mm)**]<**Insert dimension**> to top of trim above finished floor unless otherwise indicated.

D. Mount panelboard cabinet plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.

E. Install filler plates in unused spaces.

3.4 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Section 260553 "Identification for Electrical Systems."

C. Create a directory to indicate loads served by each circuit; incorporate Owner's final room designations. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are unacceptable.

D. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

A. Acceptance Testing Preparation:

1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

C. Tests and Inspections:

D. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:

1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
3. Perform the following infrared scan tests and inspections and prepare reports:

a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.
b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each panelboard 11 months after date of Substantial Completion.
c. Instruments and Equipment:

1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

E. Nonconforming Work:

1. Panelboard will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Prepare test and inspection reports, including a certified report that identifies panelboards included and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

G. Manufacturer Services:

1. Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

3.6 STARTUP SERVICE

A. [**Engage a factory-authorized service representative to perform**][**Perform**] startup service.

1. Complete installation and startup checks according to manufacturer's instructions.
2. Confirm correct communication wiring, initiate communications between panels, and program control system according to approved time-of-day schedules and input override assignments.
3. <**Insert startup steps if any**>.

3.7 ADJUSTING

A. Occupancy Adjustments: When requested within [**12**]<**Insert number**> months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two**]<**Insert number**> visits to Project during other-than-normal occupancy hours for this purpose.

3.8 MAINTENANCE

A. Software and Firmware Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software support for [**two**]<**Insert number**> years.
2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software upgrades that become available within [**two**]<**Insert number**> years from date of Substantial Completion. Verify upgrading software includes operating system and new or revised licenses for using software.

a. Upgrade Notice: No fewer than [**30**]<**Insert number**> days to allow Owner to schedule and

access the system and to upgrade computer equipment if necessary.

3. Upgrade Reports: Prepare written report after each update, documenting upgrades installed.

END OF SECTION 26 24 16 00A

SECTION 26 24 19 00 - MOTOR-CONTROL CENTERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes MCCs for use with ac circuits rated 600 V and less, with combination controllers and having the following factory-installed components:

1. Automatic power transfer.
2. Feeder-tap units.
3. Measurement and control.
4. Auxiliary devices.
5. Panelboards.
6. Transformers.

1.2 DEFINITIONS

A. CPT: Control power transformer.

B. MCC: Motor-control center.

C. MCCB: Molded-case circuit breaker.

D. MCP: Motor-circuit protector.

E. OCPD: Overcurrent protective device.

F. PID: Control action; proportional plus integral plus derivative.

G. PT: Potential transformer.

H. SPD: Surge protective device.

I. SCR: Silicon-controlled rectifier.

J. VFC: Variable-frequency controller.

K. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for MCCs.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories for each cell of the MCC.

B. Sustainable Design Submittals:

1. Product Data: For continuous metering equipment for energy consumption.
2. Product Data: For continuous metering equipment for energy consumption.
3. Product Data: For continuous metering equipment for energy consumption.
4. Product Data: For continuous metering equipment for energy consumption.
5. Product Data: For continuous metering equipment for energy consumption.

C. Shop Drawings: For each MCC, manufacturer's [**approval**][**custom**][**and**][**production**] drawings as defined in UL 845. In addition to requirements specified in UL 845, include dimensioned plans, elevations, and sections; and conduit entry locations and sizes, mounting arrangements, and details, including required clearances and service space around equipment.

1. Show tabulations of installed devices, equipment features, and ratings. Include the following:

a. Each installed unit's type and details.
b. Factory-installed devices.
c. Enclosure types and details.
d. Nameplate legends.
e. Short-circuit current (withstand) rating of complete MCC, and for bus structure and each unit.
f. Features, characteristics, ratings, and factory settings of each installed controller and feeder device, and installed devices.
g. Specified optional features and accessories.
h. <**Insert required information**>.

2. Schematic[**and Connection**] Wiring Diagrams: For power, signal, and control wiring for each installed controller.
3. Nameplate legends.
4. Vertical and horizontal bus capacities.
5. Features, characteristics, ratings, and factory settings of each installed unit.
6. <**Insert required information**>.

1.4 INFORMATIONAL SUBMITTALS

A. Standard Drawings: For each MCC, as defined in UL 845.

B. Production Drawings: For each MCC, as defined in UL 845.

C. Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout, required working clearances, and required area above and around MCCs where pipe and ducts are prohibited. Show MCC layout and relationships between electrical components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.

D. Qualification Data: For testing agency.

E. Seismic Qualification Data: Certificates, for MCCs, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their

installation requirements.

F. Product Certificates: For each MCC.

G. Source quality-control reports.

H. Field quality-control reports.

I. Load-Current and Overload Relay Heater List: Compile after motors have been installed, and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.

J. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed, and arrange to demonstrate that switch settings for motor running overload protection suit actual motors to be protected.

K. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For MCCs, all installed devices, and components to include in emergency, operation, and maintenance manuals.

1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
2. Manufacturer's Record Drawings: As defined in UL 845. In addition to requirements specified in UL 845, include field modifications [**and field-assigned wiring identification**]incorporated during construction by manufacturer, Contractor, or both.
3. Manufacturer's written instructions for testing and adjusting circuit breaker and MCP trip settings.
4. Manufacturer's written instructions for setting field-adjustable overload relays.
5. Manufacturer's written instructions for testing, adjusting, and reprogramming reduced-voltage, solid-state controllers.
6. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor control modules.
7. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Power Fuses: Equal to [**10**]<**Insert number**> percent of quantity installed for each size and type, but no fewer than [**three**]<**Insert number**> of each size and type.
2. Control Power Fuses: Equal to [**10**]<**Insert number**> percent of quantity installed for each size and type, but no fewer than [**two**]<**Insert number**> of each size and type.
3. Indicating Lights: [**Two**]<**Insert number**> of each type and color installed.
4. Auxiliary Contacts: Furnish [**one**]<**Insert number**> spare(s) for each size and type of magnetic controller installed.
5. Power Contacts: Furnish [**three**]<**Insert number**> spares for each size and type of magnetic contactor installed.
6. <**Insert extra materials**>.

1.7 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member company of NETA.

1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

B. Source Limitations: Obtain MCCs and controllers of a single type from single source from single manufacturer.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, and marked for intended use.

D. UL Compliance: MCCs shall comply with UL 845 and shall be listed and labeled by a qualified testing agency.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver MCCs in shipping splits of lengths that can be moved past obstructions in delivery paths.

B. Handle MCCs according to the following:

1. NECA 402, "Recommended Practice for Installing and Maintaining Motor Control Centers."
2. NEMA ICS 2.3, "Instructions for the Handling, Installation, Operation, and Maintenance of Motor Control Centers Rated Not More Than 600 Volts."

C. If stored in space that is not permanently enclosed and air conditioned, remove loose packing and flammable materials from inside MCCs; [**install temporary electric heating, with at least 250 W per vertical section**][**connect factory-installed space heaters to temporary electrical service**].

1.9 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace [**MCC**][**and**][**SPD**]<**Insert devices**> that fail in materials or workmanship within specified warranty period.

1. Warranty Period: [**Five**]<**Insert number**> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MOTOR-CONTROL CENTERS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**Rockwell Automation, Inc.**]
4. [**Siemens Industry, Inc., Energy Management Division**]
5. [**Square D; Schneider Electric USA**]

6. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**Eaton**]
3. [**Rockwell Automation, Inc.**]
4. [**Siemens Industry, Inc., Energy Management Division**]
5. [**Square D; Schneider Electric USA**]
6. <**Insert manufacturer's name**>

2.2 SYSTEM DESCRIPTION

A. NEMA Compliance: Fabricate and label MCCs to comply with NEMA ICS 18.

B. Ambient Environment Ratings:

1. Ambient Temperature Rating: Not less than **0 deg F (minus 18 deg C)** and not exceeding **104 deg F (40 deg C)**, with an average value not exceeding **95 deg F (35 deg C)** over a 24-hour period.
2. Ambient Storage Temperature Rating: Not less than **minus 4 deg F (minus 20 deg C)** and not exceeding **140 deg F (60 deg C)**
3. Humidity Rating: Less than 95 percent (noncondensing).
4. Altitude Rating: Not exceeding **6600 feet (2000 m)**, or **3300 feet (1000 m)** if MCC includes solid-state devices.
5. <**Insert unusual service condition**>.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 PERFORMANCE REQUIREMENTS

A. Seismic Performance: MCCs shall withstand the effects of earthquake motions determined according to [**ASCE/SEI 7**]<**Insert requirement**>.

1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified[**and the system will be fully operational after the seismic event**]."
2. Component Importance Factor: [**1.5**][**1.0**].
3. Component Amplification Factor: 2.5.
4. Component Response Modification Factor: 6.0.

B. Capacities and Characteristics:

1. MCC Enclosure and Assembly:

a. Nominal System Voltage: [**277**][**277/480**][**600**]<**Insert number(s)**>-V ac.
b. Service Equipment Rated: [**Yes**][**No**].
c. Enclosure: NEMA 250, Type <**Insert number or number and a letter**>.

2. Integrated Short-Circuit Rating for MCC:

a. Combination series rated; <**Insert number**> kA.
b. Fully rated; <**Insert number**> kA.

3. Integrated Short-Circuit Rating for Each Unit:

a. Combination series rated; <**Insert number**> kA.
b. Fully rated; <**Insert number**> kA.

4. Wiring Class: <**Insert numbers and letters**>.
5. Bus:

a. Horizontal Bus: <**Insert number**> kA.
b. Neutral Bus: [**None**][**50 percent**][**Full size**][**150 percent**]<**Insert percentage**>.

6. Main Disconnect Device:

a. Main Disconnect: [**MCCB, UL 489,**][**Fusible switch, UL 98,**] three pole, <**Insert number**> A.[**Manually operated, electrically tripped.**]
b. SPD: UL 1449, [**Type 1**][**Type 2**].
c. Optional Features: <**Insert items**>.

7. Automatic Power Transfer: Electrically operated MCCBs, three pole, <**Insert number**> A.
8. Magnetic Controllers:

a. Tag Number: <**Insert numbers and letters**>, <**Insert description**>, <**Insert number**> hp, <**Insert number**> full-load A.

1) Classification by Starting Method: <**Insert text**>.
2) Controller Size: <**Insert number or numbers and letters**> complying with NEMA ICS 2.
3) Optional Features: <**Insert items**>.

9. Reduced-Voltage Solid-State Controllers:

a. Tag Number: <**Insert numbers and letters**>, <**Insert description**>, <**Insert number**> hp, <**Insert number**> full-load A.

1) Starting Configuration: <**Insert text**>.
2) Starting Mode: <**Insert text**>.
3) Stopping Mode: <**Insert text**>.
4) Controller Size: <**Insert number or numbers and letters**> complying with NEMA ICS 2.
5) Bypass Contactor: Comply with NEMA ICS 2.
6) Acceleration Control: <**Insert number**>.
7) Overload Relays: [**Melting alloy**][**Bimetallic**][**Solid state**]. Class [**10**][**20**][**30**].
8) Isolated Overload Alarm Contact: [**NC**][**NO**].
9) Optional Features: <**Insert items**>.

10. VFCs:

a. Tag Number: <**Insert numbers and letters**>, <**Insert description**>, <**Insert number**> hp, <**Insert number**> full-load A.

1) Bypass Mode: [**Manual**][**Field selectable, manual or automatic**].
2) Bypass Style: [**Two**][**Three**] contactor style.

3) Bypass Contactor Classification: [**Full-voltage (across-the-line)**][**Reduced-voltage autotransformer, open transition**][**Reduced-voltage autotransformer, closed transition**]<**Insert type**>.
4) Overload Relays: [**Melting alloy**][**Bimetallic**][**Solid state**]. Class [**10**][**20**][**30**].
5) Isolated Overload Alarm Contact: [**NC**][**NO**].
6) Optional Features: <**Insert items**>.

11. Controller-Mounted Auxiliary Devices:

a. Push Buttons and Selector Switches: [**Heavy**][**Standard**]-duty, [**oiltight**] type.
b. <**Insert devices**>.
c. Feeder Tap Units: Main Disconnect: [**MCCB, UL 489,**][**Fusible switch, UL 98,**] three pole, <**Insert number**> A.[**Manually operated, electrically tripped.**]

12. Panelboards: Tag Number <**Insert designation**>.

a. Mains: [**MCCB**][**Main lugs only**], <**Insert number**> phase, <**Insert number**> V, <**Insert number**> A.
b. [**Plug-in**][**Bolt-on**] circuit breakers.

13. Transformer(s): Tag Number <**Insert designation**>, <**Insert number**> kVA, <**Insert number**> V primary, <**Insert number**> V secondary.

a. Primary Circuit Breaker: MCCB, <**Insert number**> A.

14. Transfer Switch: Tag Number <**Insert designation**>, <**Insert number**> pole, <**Insert number**> A.

2.4 MOTOR-CONTROL CENTER ENCLOSURES

A. Indoor Enclosures: Freestanding steel cabinets unless otherwise indicated. NEMA 250, [**Type 1**][**Type 1A**][**Type 2**][**Type 12**] unless otherwise indicated to comply with environmental conditions at installed location.

B. Space Heaters: Factory-installed electric space heaters of sufficient wattage in each vertical section to maintain enclosure temperature above expected dew point.

1. Space-Heater Control: [**Thermostats to maintain temperature of each section above expected dew point**][**Manual switching of branch-circuit protective device**].
2. Space-Heater Power Source: [**Transformer, factory installed in MCC**][**120-V external branch circuit**].

C. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's [**standard gray**][**custom color**] finish over a rust-inhibiting primer on treated metal surface.

D. Outdoor Enclosures: Type 3R, [**non-walk-in aisle**][**with interior-lighted walk-in aisle**].

1. Finish: Factory-applied finish in manufacturer's [**standard**][**custom**] color; undersurfaces treated with corrosion-resistant undercoating.
2. Enclosure: [**Flat**][**Downward, rearward sloping**] roof; [**bolt-on rear covers**][**rear hinged doors**] for each section, with provisions for padlocking.
3. Doors: Personnel door at each end of aisle, minimum width of [**30 inches (762 mm)**]<**Insert dimension**>; opening outwards; with panic hardware and provisions for [**padlocking**][**cylinder lock**].
4. Accessories: Fluorescent luminaires, ceiling mounted; wired to a three-way light switch at each

end of aisle; GFCI duplex receptacle; emergency battery pack luminaire installed on wall of aisle midway between personnel doors.

5. Walk-in Aisle Heating and Ventilating:

    a. Factory-installed electric unit heater(s), wall or ceiling mounted, with integral thermostat and disconnect and with capacities to maintain switchboard interior temperature of [**40 deg F (5 deg C)**]<**Insert temperature**> with outside design temperature of [**plus 23 deg F (minus 5 deg C)**]<**Insert temperature**>.
    b. Factory-installed exhaust fan with capacities to maintain switchboard interior temperature of [**100 deg F (38 deg C)**]<**Insert temperature**> with outside design temperature of [**104 deg F (40 deg C)**]<**Insert temperature**>.
    c. Ventilating openings[**complete with replaceable fiberglass air filters**].
    d. Thermostat: Single stage; wired to control heat and exhaust fan.

6. Power for Space Heaters, Ventilation, Lighting, and Receptacle: Include a CPT within the switchboard. Supply voltage shall be [**120**][**120/240**][**120/208**]-V ac.
7. Power for space heaters, ventilation, lighting, and receptacle supplied from a remote source.

2.5 ASSEMBLY

A. Structure:

1. Comply with UL requirements for service entrance equipment.
2. Units up to and including Size 3 shall have drawout mountings with connectors that automatically line up and connect with vertical-section buses while being racked into their normal, energized positions.
3. Units in Type B and Type C MCCs shall have pull-apart terminal strips for external control connections.
4. Pull Boxes:

    a. Include provisions for ventilation to maintain temperature in pull box within same limits as the MCC.
    b. Set the box back from front to clear circuit-breaker removal mechanism.
    c. Covers: Removable covers forming top, front, and sides.
    d. Insulated bottom of fire-resistive material with separate holes for cable drops into MCC.
    e. Cable Supports: Arranged to facilitate cabling and adequate to support cables, including supports for future cables.
    f. When equipped with barriers, supply with access to check bus bolt tightness.

B. Compartments: Modular; individual [**lift-off**]doors with concealed hinges and quick-captive screw fasteners.

1. Interlock compartment door to require that the disconnecting means is "off" before door can be opened or closed, except by operating a concealed release device.
2. Compartment construction shall allow for removal of units without opening adjacent doors, disconnecting adjacent compartments, or disturbing operation of other units in MCC.
3. The same-size compartments shall be interchangeable to allow rearrangement of units, such as replacing three single units with a unit requiring three spaces, without cutting or welding.

C. Bus Transition and Incoming Pull Sections: Included and aligned with the structure of the MCC.

D. Utility Metering Compartment: Fabricated, barrier compartment and section complying with utility company's requirements; hinged sealed door; buses provisioned for mounting utility company's current transformers and PTs or potential taps as required by utility company. If separate vertical section is

required for utility metering, match and align with basic MCC. Install service entrance label and applicable service entrance features. Comply with requirements in Section 262713 "Electricity Metering."

E. Owner's Metering Compartment: A separate customer metering compartment and section with front hinged door, metering, and current transformers for each meter. Current transformer secondary wiring shall be terminated on shorting-type terminal blocks.[**Include PTs having primary and secondary fuses with disconnecting means and secondary wiring terminated on terminal blocks.**]

F. Interchangeability: Compartments constructed to allow for removal of units without opening adjacent doors, disconnecting adjacent compartments, or disturbing operation of other units in MCC; same-size compartments to permit interchangeability and ready rearrangement of units, such as replacing three single units with a unit requiring three spaces, without cutting or welding.

G. Wiring Spaces:

1. Vertical wireways in each vertical section for vertical wiring to each unit compartment; supports to hold wiring in place.
2. Horizontal wireways in [**bottom**][**and**][**top**] of each vertical section for horizontal wiring between vertical sections; supports to hold wiring in place.

H. Provisions for Future:

1. Compartments marked "future" shall be bused, wired and equipped with guide rails or equivalent, and ready for insertion of drawout units.
2. Compartments marked "spare" shall include provisions for connection to the vertical bus.

I. Integrated Short-Circuit Rating:

1. Short-Circuit Current Rating for Each Unit: [**Combination series rated**][**Fully rated**]; [**22**][**42**][**65**][**100**]<**Insert number**> kA.
2. Short-Circuit Current Rating of MCC: [**Combination series rated**][**Fully rated**] with its main overcurrent device; [**22**][**42**][**65**][**100**]<**Insert number**> kA.

J. Control Power:

1. 120-V ac, supplied centrally [**from a CPT**][**from a remote branch circuit**].
2. [**24**][**120**]<**Insert number**>-V ac; obtained from CPT integral with controller; with primary and secondary fuses. The CPT shall be of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.
3. Control Circuits: 24-V dc, supplied centrally from two redundant, automatically switched power supplies.
4. CPT Spare Capacity: [**50**][**100**][**200**]<**Insert number**> VA.

K. Factory-Installed Wiring: Factory installed, with bundling, lacing, and protection included. Use flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

1. Wiring Class:

a. NEMA ICS 18, [**Class I**][**Class I-S**], [**Type A**][**Type B, for starters larger than Size 3**][**Type B-D, for starters Size 3 and smaller**][**Type B-T, for starters Size 3 and smaller**][**Type C**].
b. NEMA ICS 18, [**Class II**][**Class II-S**], [**Type B, for starters larger than Size 3**][**Type B-D, for starters Size 3 and smaller**][**Type B-T, for starters Size 3 and smaller**][**Type C**].

2. Control and Load Wiring: Factory installed, with bundling, lacing, and protection included. Use flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

L. Bus:

1. Main Horizontal and Equipment Ground Buses: Uniform capacity for entire length of MCC's main and vertical sections. Provide for future extensions[**from both ends**].
2. Vertical Phase and Equipment Ground Buses: Uniform capacity for entire usable height of vertical sections, except for sections incorporating single units.
3. Phase- and Neutral-Bus Material:

    a. Hard-drawn copper of 98 percent minimum conductivity or [**silver**][**tin**]-plated alloy, with [**mechanical**][**compression**] connectors for outgoing conductors.
    b. Hard-drawn copper of 98 percent minimum conductivity or tin-plated, high-strength, electrical-grade aluminum alloy, with [**mechanical**][**compression**] connectors for outgoing conductors.

4. Ground Bus: Hard-drawn copper of 98 percent minimum conductivity, with pressure connector for ground conductors, minimum size **1/4-by-2 inches (6 by 50 mm)**. Equip with [**mechanical**][**compression**] connectors for outgoing conductors.
5. Neutral Disconnect Link: Bolted, uninsulated, **1/4-by-2-inch (6-by-50-mm)** copper bus, arranged to connect neutral bus to ground bus.
6. Bus-Bar Insulation: Factory-applied, flame-retardant, tape wrapping of individual bus bars or flame-retardant, spray-applied insulation. Insulation temperature rating shall not be less than 105 deg C.

2.6 MAIN DISCONNECT AND OVERCURRENT PROTECTIVE DEVICE(S)

A. MCCB (to 2500 A): Fixed mounted, manually operated air-circuit breaker. Comply with UL 489.

1. MCCB shall have quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, its position shall be shown by the position of the handle, and manual push-to-trip push button.
2. Solid-state monitoring and tripping system to show system status monitoring, adjustable time-current protection, and shunt trip.

    a. Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
    b. Trip-setting dials or interchangeable plugs to establish the continuous trip of the circuit breaker. Plugs shall not be interchangeable between frames, and the breaker may not be closed without the plug. With neutral ground-fault sensor.
    c. Time-current adjustments to achieve protective-device coordination as follows:

        1) Adjustable long-time delay.
        2) Adjustable short-time setting and delay to shape the time-current curve.
        3) Adjustable instantaneous setting.
        4) Individually adjustable ground-fault setting and time delay.

    d. Built-in connector to test the long-time delay, instantaneous, and ground-fault functions of the breaker.[**Provide one test set for testing the installed circuit breakers 225-A frame and higher.**]
    e. Built-in digital ammeter display, showing load current and tripping cause.

3. Switch operator power shall be from control power specified in "Assembly" Article.

B. MCCB (1600 to 2500 A): Fixed mounted, manually operated air-circuit breaker. Comply with UL 489.

1. MCCB shall have quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, its position shall be indicated by the position of the handle, and manual push-to-trip push button.
2. Solid-state monitoring and tripping system to show system status monitoring, adjustable time-current protection, and shunt trip.

a. Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
b. LED indicators or display, with manual reset, to show reasons of automatic trip.
c. Display panel to indicate the status of the system circuitry, or give fault location based on automatic diagnosis.
d. Trip the circuit breaker when closing on a fault.
e. Time-current adjustments to achieve protective-device coordination as follows:

1) Adjustable long-delay pickup and time.
2) Individual adjustments for short-delay pickup, time, and I-squared-t setting.
3) Adjustable instantaneous pickup.
4) Individually adjustable ground-fault pickup and time, with [**I-squared-t setting**][**ground alarm**].

f. One test kit to test each trip function.
g. Battery backup for informational displays after automatic trip, with battery status indicator.

3. Switch operator power shall be from control power specified in "Assembly" Article.

C. MCC Main Disconnect Device: Fusible switch; fixed-mounted, manually operated, [**electrically tripped,**]quick-make, quick-break switch. Comply with UL 98.

1. Indication whether the switch is open or closed, and provisions for padlocking the operating handle.
2. Fuse clips and fuses.
3. Electrically tripped switches shall include the following:

a. Shunt trip.
b. Ground-fault protection, with adjustable time delay and test panel.
c. Single-phase protection, tripping the switch on loss of a source phase.
d. Blown fuse protection, tripping the switch on a blown fuse, with blown fuse indication.
e. Switch operator power shall be from control power specified in "Assembly" Article.

D. Surge Suppression: Factory installed as an integral part of the incoming feeder, complying with UL 1449, SPD [**Type 1**][**Type 2**].

2.7 AUTOMATIC POWER TRANSFER

A. Two-Breaker Transfer Control:

1. Transfer control, using electrically operated MCCBs, for an MCC supplied from two normally energized low-voltage power sources, designated "normal" and "standby." The circuit breakers connecting the two power sources to the load bus shall be controlled by a microprocessor-based automatic transfer control. Power for the transfer control shall be from the voltage-sensing transformers.

2. MCCBs (to 2500 A): Fixed mounted, manually operated air-circuit breaker. Comply with UL 489.

    a. MCCB shall have quick-make, quick-break, over-center switching mechanism that is mechanically trip-free, its position shall be indicated by the position of the handle, and manual push-to-trip push button.
    b. Solid-state monitoring and tripping system to show system status monitoring, adjustable time-current protection, and shunt trip.

        1) Interchangeable current sensors and timing circuits for adjustable time-current protection settings and status signals.
        2) Trip-setting dials or interchangeable plugs to establish the continuous trip of the circuit breaker. Plugs shall not be interchangeable between frames, and the breaker may not be closed without the plug. With neutral ground-fault sensor.
        3) Time-current adjustments to achieve protective-device coordination as follows:

            a) Adjustable long-time delay.
            b) Adjustable short-time setting and delay to shape the time-current curve.
            c) Adjustable instantaneous setting.
            d) Individually adjustable ground-fault setting and time delay.

        4) Built-in connector to test the long-time delay, instantaneous, and ground-fault functions of the breaker.[**Provide one test set for testing the installed circuit breakers 225-A frame and higher.**]
        5) Built-in digital ammeter display, showing load current and tripping cause.

3. In the automatic mode, the load bus is connected to the normal power source. When the normal source fails, the control shall automatically open the normal power source and close the standby source circuit breaker.
4. Sequence of Operation:

    a. The default operation shall be with the normal source main breaker closed and standby main breaker open. On detection of an undervoltage to the line side of the normal main breaker and after a field-adjustable time delay, the main breaker shall open and, after an additional field-adjustable time delay, the standby breaker shall close and restore power to the facility.
    b. On restoration of voltage to the line side of the normal main breaker and after a field-adjustable time delay, the standby main breaker shall open and, after a field-adjustable time delay, the normal main breaker shall close.

5. Field-Adjustable Transfer Parameters:

    a. Delay the transfer from the normal power source to the standby power source and from the standby power source to the normal source. The time delay is to allow the load voltage to decay before reconnecting to another power source. Delay range is zero seconds to 30 minutes.
    b. Delay the initiation of the transfer sequence. The time delay is recommended to override a momentary power outage or voltage fluctuation. Delay range is zero to 120 seconds.
    c. Delay the transfer from the standby power source to the normal power source. Delay range is zero seconds to 30 minutes.
    d. A relay with contact that changes state when the power is available on the normal source, and a relay with contact that changes state when the power is available on the standby source.

6. Controls and Indicators: In addition to the delay setting controls, include the following:

a. Interlocks or relay control to prevent transfer when either of the two controlled circuit breakers trip due to overcurrent or ground-fault.
b. Three-position selector switch to select the normal source: Source 1, Source 2, or none.
c. Transfer-control automatic and manual selector.

1) Interlock shall prevent paralleling of the two power sources in manual mode.

d. Open-close control switch for manual electrical operation of each controlled circuit breaker.
e. Selector to place control into programming mode.
f. Circuit breaker control switch for each of the normal and standby source breakers, providing open and close operation.
g. Push button to initiate manual retransfer to the normal source when the transfer controller is in the automatic mode.
h. Meters and display to show the following:

1) Voltage and frequency of both sources.
2) A multiline display showing the following:

a) Set points of timers, and voltage pickup and dropout set points.
b) Date, time, and reason for minimum of the last 10 transfers. The display may show the information for one transfer at a time using a scrolling control, with the others held in memory.
c) When the control system is in the transferring process, the display shall show delay countdown in seconds.

i. LED indicators to show the following:

1) Normal source available.
2) Standby source available.
3) Normal source connected.
4) Standby source connected.
5) Load bus energized.

7. Voltage Transformers: Primary and secondary protection and disconnecting means for sensing functions and control power.
8. Voltage Sensing Relays: Microprocessor-based, IEEE device number 27/47 voltage detection relays for three-phase undervoltage protection and negative sequence voltage protection.

2.8 MAGNETIC CONTROLLERS

A. Controller Units: Combination controllers.

B. Disconnects:

1. Fusible Switch:

a. UL 98 and NEMA KS 1, heavy-duty, horsepower-rated fusible switch, with clips or bolt pads to accommodate [**UL 248-8 Class J**][**UL 248-10 Class L**]<**Insert class**> fuses.
b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
c. Auxiliary Contacts: [**NC**][**NO**], arranged to activate before switch blades open.

2. MCP:

a. UL 489, with interrupting capacity complying with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with

motor locked-rotor amperes.
b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
d. [**NC**][**NO**] alarm contact that operates only when MCP has tripped.
e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.

3. MCCB:

a. UL 489, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
c. Lockable Handle: For three padlocks and interlocks with cover in closed position.
d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
e. [**NC**][**NO**] alarm contact that operates only when MCCB has tripped.

4. Molded-Case Switch:

a. UL 489, with in-line fuse block for [**UL 248-8 Class J**][**UL 248-10 Class L**] power fuses (depending on ampere rating), providing an interrupting capacity to comply with available fault currents; MCCB with fixed, high-set instantaneous trip only.
b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
c. Auxiliary contacts "a" and "b" arranged to activate with molded-case switch handle.
d. [**NC**][**NO**] alarm contact that operates only when molded-case switch has tripped.

C. Controllers: Comply with UL 508.

1. Full-Voltage Magnetic Controllers: Electrically held, full voltage, NEMA ICS 2, general purpose, Class A.

a. Classification: [**Nonreversing**][**and**][**reversing**]<**Insert classification**>.

2. Reduced-Voltage Magnetic Controllers: Electrically held, NEMA ICS 2, general purpose, Class A; [**closed**][**open**] transition; adjustable time delay on transition. [**Electrically**][**Mechanically**] held.

a. Wye-Delta Controller: Four contactors, with a three-phase starting resistor/reactor bank.
b. Part-Winding Controller: Separate START and RUN contactors, with separate overload relays for starting and running sequences.
c. Autotransformer Reduced-Voltage Controller: Medium-duty service, with integral overtemperature protection; taps for starting at 50, 65, and 80 percent of line voltage; one RUN and two START contactors.

3. Multispeed Magnetic Controllers: Electrically held, full voltage, NEMA ICS 2, general purpose, Class A.

a. Classification, Nonreversing: [**Consequent pole**][**Two winding**].

1) Two speed, with compelling relays to ensure that motor will start only at low speed.
2) Timer Relays:

a) Accelerating, for properly timed acceleration through speeds lower than that selected.
b) Decelerating, for automatically timed deceleration through each speed.

b. Classification, Reversing: [**Consequent pole**][**Two winding**].

1) Two speed, with compelling relay to ensure that motor will start only at low speed.
2) Timer Relays:

a) Accelerating, for properly timed acceleration through speeds lower than that selected.
b) Decelerating, for automatically timed deceleration through each speed.

c. Antiplugging Relays: Time delay when transferring from FORWARD to REVERSE and back.

D. Overload Relays:

1. Melting-Alloy Overload Relays:

a. Inverse-time-current characteristic.
b. [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.

2. Bimetallic Overload Relays:

a. Inverse-time-current characteristic.
b. [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
d. Ambient compensated.
e. Automatic resetting.

3. Solid-State Overload Relays:

a. Switch or dial selectable for motor-running overload protection.
b. Sensors in each phase.
c. [**Class 10**][**Class 20**][**Class 10/20 selectable**] tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
d. UL 1053 Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
e. Analog communication module.

4. [**NC**][**NO**] isolated overload alarm contact.
5. External overload reset push button.

2.9 REDUCED-VOLTAGE SOLID-STATE CONTROLLERS

A. Controller Units: An integrated unit with disconnects, power SCRs, heat sink, microprocessor logic board, door-mounted digital display and keypad, bypass contactor, and overload relays. Comply with UL 508.

1. Suitable for use with NEMA MG 1 Design B, polyphase induction motors.
2. <**Insert special applications**>.

B. Disconnects:

1. Fusible Switch:

    a. UL 98 and NEMA KS 1, heavy-duty, horsepower-rated fusible switch, with clips or bolt pads to accommodate [**UL 248-8 Class J**][**UL 248-10 Class L**]<**Insert class**> fuses.
    b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
    c. Auxiliary Contacts: [**NC**][**NO**], arranged to activate before switch blades open.

2. MCP:

    a. UL 489, with interrupting capacity complying with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
    b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
    c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
    d. [**NC**][**NO**] alarm contact that operates only when MCP has tripped.
    e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.

3. MCCB:

    a. UL 489, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
    b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
    c. Lockable Handle: For three padlocks and interlocks with cover in closed position.
    d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
    e. [**NC**][**NO**] alarm contact that operates only when MCCB has tripped.

4. Molded-Case Switch:

    a. UL 489, with in-line fuse block for [**UL 248-8 Class J**][**UL 248-10 Class L**] power fuses (depending on ampere rating), providing an interrupting capacity to comply with available fault currents; MCCB with fixed, high-set instantaneous trip only.
    b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
    c. Auxiliary contacts "a" and "b" arranged to activate with molded-case switch handle.
    d. [**NC**][**NO**] alarm contact that operates only when molded-case switch has tripped.

C. Configuration: [**Standard**][**Severe**] duty; [**nonreversible**][**reversible**].

D. Starting Mode: [**Voltage ramping**][**Current limit**][**Torque control**][**Torque control with voltage boost**][**; field selectable**].

E. Stopping Mode: [**Coast to stop**][**Adjustable torque deceleration**][**Adjustable braking**][**; field selectable**].

F. Bypass Controller: Operates automatically to bypass the SCRs when the motor has reached rated speed and full voltage is applied to motor. Solid-state controller protective features shall remain active when the bypass relay is in the bypass mode.

1. Bypass Contactor: [**Manufacturer's standard product**][**or**][**NEMA ICS 2, general-purpose, Class A contactor, rated to start the load across the line**][**, as indicated on Drawings**].
2. Bypass Contactor Coils: Pressure-encapsulated type; manufacturer's standard operating voltage, matching control power or line voltage, depending on contactor size and line-voltage rating.

G. Acceleration Control: Adjustable, using voltage or current ramp, and adjustable starting torque control with up to [**400**]<**Insert number**> percent current limitation for 20 seconds.

H. SCR Bridge: At least two SCRs per phase, for stable and smooth acceleration [**with**][**without**] external feedback from the motor or driven equipment.

I. Keypad: Front accessible; for programming the controller parameters, functions, and features; shall be manufacturer's standard and include not less than the following functions:

1. Adjusting motor full-load amperes, as a percentage of the controller's rating.
2. Adjusting current limitation on starting, as a percentage of the motor full-load current rating.
3. Adjusting linear acceleration and deceleration ramps, in seconds.
4. Setting initial torque, as a percentage of the nominal motor torque.
5. Adjusting torque limit, as a percentage of the nominal motor torque.
6. Adjusting maximum start time, in seconds.
7. Adjusting voltage boost, as a percentage of the nominal supply voltage.
8. Selecting stopping mode and adjusting parameters.
9. Selecting motor thermal-overload protection class between 5 and 30.
10. Activating and deactivating protection modes.
11. Selecting or activating communications modes.
12. <**Insert function**>.

J. Digital Display: Front accessible; for showing motor, controller, and fault status; shall be manufacturer's standard and include not less than the following:

1. Controller Condition: Ready, starting, running, stopping.
2. Motor Condition: Amperes, voltage, power factor, power, and thermal state.
3. Fault Conditions: Controller thermal fault, motor overload alarm and trip, motor underload, overcurrent, shorted SCRs, line or phase loss, phase reversal, and line frequency over or under normal.
4. <**Insert items**>.

K. Controller Diagnostics and Protection:

1. Microprocessor-based thermal protection system for monitoring SCR and motor thermal characteristics, and providing controller overtemperature and motor overload alarm and trip; settings selectable via the keypad.
2. Protection from line-side reverse phasing; line-side and motor-side phase loss; motor jam, stall, and underload conditions; and line frequency excursions to over- or under-normal. Accomplish protection by the following:

    a. Input isolation contactor that opens when the controller diagnostics detect a faulted solid-state component, or when the motor is stopped.
    b. Shunt trip that opens the disconnecting means when the controller diagnostics detect a faulted solid-state component.
    c. <**Insert items**>.

L. Remote Output Features:

1. All outputs prewired to terminal blocks.
2. Form C status contacts that change state when controller is running.
3. Form C alarm contacts that change state when a fault condition occurs.
4. <**Insert items**>.

M. Overload Relays:

1. Melting-Alloy Overload Relays:

    a. Inverse-time-current characteristic.
    b. [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
    c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.

2. Bimetallic Overload Relays:

    a. Inverse-time-current characteristic.
    b. [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
    c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
    d. Ambient compensated.
    e. Automatic resetting.

3. Solid-State Overload Relays:

    a. Switch or dial selectable for motor-running overload protection.
    b. Sensors in each phase.
    c. [**Class 10**][**Class 20**][**Class 10/20 selectable**] tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
    d. UL 1053, Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
    e. Analog communication module.

N. Optional Features:

1. Analog output for field-selectable assignment of motor operating characteristics; [**0- to 10-V dc**][**4- to 20-mA dc**].
2. [**Two**]<**Insert number**> additional field-assignable Form C contacts for alarm outputs.
3. Full-voltage/BYPASS selector switch. Power contacts shall be totally enclosed, double break, made of silver-cadmium oxide, and assembled to allow inspection and replacement without disturbing line or load wiring.

2.10 VFC

A. Controller Units: Combination controllers, consisting of variable-frequency power converter that is factory packaged in an enclosure, with integral disconnecting means and overcurrent and overload protection; listed and labeled by an NRTL as a complete unit; arranged for self-protection, protection, and variable-speed control of one or more three-phase induction motors by adjusting output voltage and frequency. Comply with NEMA ICS 7, NEMA ICS 61800-2, UL 508C, and [**UL 508E**]<**Insert standard**>.

1. Units suitable for operation of NEMA MG 1, Design A and Design B motors as defined by NEMA MG 1, Section IV, Part 30, "Application Considerations for Constant Speed Motors Used on a Sinusoidal Bus with Harmonic Content and General Purpose Motors Used with Adjustable-Voltage or Adjustable-Frequency Controls or Both."
2. Units suitable for operation of inverter-duty motors as defined by NEMA MG 1, Section IV, Part 31, "Definite-Purpose Inverter-Fed Polyphase Motors."
3. Listed and labeled for integrated short-circuit current (withstand) rating by an NRTL acceptable to authorities having jurisdiction.
4. Listed and labeled for single-phase use by an NRTL acceptable to authorities having jurisdiction.

B. Disconnects:

1. Fusible Switch:

    a. UL 98 and NEMA KS 1, heavy-duty, horsepower-rated fusible switch, with clips or bolt pads to accommodate [**UL 248-8 Class J**][**UL 248-10 Class L**]<**Insert class**> fuses.
    b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
    c. Auxiliary Contacts: [**NC**][**NO**], arranged to activate before switch blades open.

2. MCP:

    a. UL 489, with interrupting capacity complying with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
    b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
    c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
    d. [**NC**][**NO**] alarm contact that operates only when MCP has tripped.
    e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.

3. MCCB:

    a. UL 489, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
    b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
    c. Lockable Handle: For three padlocks and interlocks with cover in closed position.
    d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
    e. [**NC**][**NO**] alarm contact that operates only when MCCB has tripped.

4. Molded-Case Switch:

    a. UL 489, with in-line fuse block for [**UL 248-8 Class J**][**UL 248-10 Class L**] power fuses (depending on ampere rating), providing an interrupting capacity to comply with available fault currents; MCCB with fixed, high-set instantaneous trip only.
    b. Lockable Handle: For three padlocks and interlocks with cover in closed position.
    c. Auxiliary contacts "a" and "b" arranged to activate with molded-case switch handle.
    d. [**NC**][**NO**] alarm contact that operates only when molded-case switch has tripped.

5. Disconnect Rating:

    a. Not less than 115 percent of VFC input current rating.
    b. Not less than 115 percent of NFPA 70 motor full-load current rating or VFC input current rating, whichever is larger.

6. Auxiliary Contacts: [**NC**][**NO**], arranged to activate before switch blades open.
7. Auxiliary contacts "a" and "b" arranged to activate with circuit-breaker handle.
8. [**NC**][**NO**] alarm contact that operates only when circuit breaker has tripped.

C. Operating Requirements:

1. Input AC Voltage Tolerance: Plus 10 and minus [**10**][**15**] percent of VFC input voltage rating.
2. Input AC Voltage Unbalance: Not exceeding [**3**][**5**] percent.
3. Input Frequency Tolerance: Plus or minus 3 percent of VFC frequency rating.
4. Minimum Efficiency: [**96**][**97**]<**Insert number**> percent at 60 Hz, full load.
5. Minimum Displacement Primary-Side Power Factor: [**96**][**98**]<**Insert number**> percent under any load or speed condition.

6. Overload Capability:

    a. For variable-torque controllers, 1.1 times the base load current for 60 seconds; minimum of 1.8 times the base load current for three seconds.
    b. For constant-torque controllers, 1.5 times the base load current for 60 seconds; minimum of 1.8 times the base load current for three seconds.

7. Starting Torque: Minimum of 100 percent of rated torque from 3 to 60 Hz.
8. Speed Regulation: Plus or minus [**5**][**10**] percent.
9. Output Carrier Frequency: Field selectable.
10. Stop Modes: Programmable; includes fast, free-wheel, and dc injection braking.
11. Internal Adjustability Capabilities:

    a. Minimum Speed: 5 to 25 percent of maximum rpm.
    b. Maximum Speed: 80 to 100 percent of maximum rpm.
    c. Acceleration: [**0.1 to 999.9**]<**Insert range**> seconds.
    d. Deceleration: [**0.1 to 999.9**]<**Insert range**> seconds.
    e. Current Limit: 30 to a minimum of 150 percent of maximum rating.
    f. <**Insert adjustment and parameters**>.

12. Self-Protection and Reliability Features:

    a. Input transient protection by means of SPDs for three-phase protection against damage from supply voltage surges 10 percent or more above nominal line voltage.
    b. Loss of Input Signal Protection: Selectable response strategy including speed default to a percent of the most recent speed, a preset speed, or stop; with alarm.
    c. Under- and overvoltage trips.
    d. Inverter overcurrent trips.
    e. VFC and Motor Overload/Overtemperature Protection: Microprocessor-based thermal protection system for monitoring VFCs and motor thermal characteristics, and for providing VFC overtemperature and motor overload alarm and trip; settings selectable via the keypad; NRTL approved and listed and labeled by an NRTL.
    f. Critical frequency rejection, with [**three**]<**Insert number**> selectable, adjustable deadbands.
    g. Instantaneous line-to-line and line-to-ground overcurrent trips.
    h. Loss-of-phase protection.
    i. Reverse-phase protection.
    j. Short-circuit protection.
    k. Motor overtemperature fault.
    l. <**Insert additional protection or reliability feature**>.

13. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.
14. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.

D. Operator Station:

1. Inverter Logic: Microprocessor based, [**16**][**32**] bit, isolated from all power circuits.
2. Isolated Control Interface: Allows VFCs to follow remote-control signal over a minimum 40:1 speed range.
3. Panel-mounted, manufacturer's standard front-accessible, sealed keypad and plain-English-language digital display; allows complete programming, program copying, operating, monitoring, and diagnostic capability.

a. Keypad: In addition to required programming and control keys, include keys for HAND, OFF, and AUTO modes.
b. Security Access: Electronic security access to controls through identification and password with at least three levels of access: View only; view and operate; and view, operate, and service.

E. Displays:

1. Historical Logging Information and Displays:

a. Real-time clock with current time and date.
b. Running log of total power versus time.
c. Total run time.
d. Fault log, maintaining last [**four**]<**Insert number**> faults with time and date stamp for each.
e. <**Insert information or display**>.

2. Indicating Devices: Digital display[**and additional readout devices as required,**] mounted flush in VFC door and connected to display VFC parameters including the following:

a. Output frequency (Hz).
b. Motor speed (rpm).
c. Motor status (running, stop, fault).
d. Motor current (amperes).
e. Motor torque (percentage).
f. Fault or alarming status (code).
g. PID feedback signal (percentage).
h. DC-link voltage (V dc).
i. Set-point frequency (Hz).
j. Motor output voltage (V ac).
k. <**Insert parameter**>.

F. Bypass Systems:

1. Bypass Operation: Safely transfers motor between power converter output and bypass circuit, manually, automatically, or both. Selector switches set modes, and indicator lights indicate mode selected. Unit is capable of stable operation (starting, stopping, and running) with motor completely disconnected from power converter.
2. Manual Bypass Mode: Manual operation only; requires local operator selection at VFC. Transfer between power converter and bypass contactor and retransfer shall only be allowed with the motor at zero speed.
3. Field-Selectable Bypass Mode: Field-selectable automatic or manual, allows local and remote transfer between power converter and bypass contactor and retransfer, either via manual operator interface or automatic control system feedback.
4. Two-Contactor Bypass Controller: Allows motor operation via the power converter or the bypass controller[**; with input isolating switch and barrier arranged to isolate the power converter and permit safe troubleshooting and testing, both energized and de-energized, while motor is operating in bypass mode**].

a. Bypass Contactor: Load-break, [**IEC**][**NEMA**]-rated contactor.
b. Output Isolating Contactor: Non-load-break, [**IEC**][**NEMA**]-rated contactor.
c. Isolating Switch: Non-load-break switch arranged to isolate power converter and permit safe troubleshooting and testing of the power converter, both energized and de-energized, while motor is operating in bypass mode; pad-lockable, door-mounted handle mechanism.

5. Three-Contactor Bypass Controller: Allows motor operation via the power converter or the bypass controller[**; with input isolating switch and barrier**] arranged to isolate the power converter

input and output and permit safe testing[**and troubleshooting**] of the power converter, both energized and de-energized, while motor is operating in bypass mode.

a. Bypass Contactor: Load-break, [**IEC**][**NEMA**]-rated contactor.
b. Input and Output Isolating Contactors: Non-load-break, [**IEC**][**NEMA**]-rated contactors.
c. Isolating Switch: Non-load-break switch arranged to isolate power converter and permit safe troubleshooting and testing of the power converter, both energized and de-energized, while motor is operating in bypass mode; pad-lockable, door-mounted handle mechanism.

6. Bypass Contactor Classification: [**Full-voltage (across-the-line)**][**Reduced-voltage autotransformer, open transition**][**Reduced-voltage autotransformer, closed transition**]<**Insert type**> type.
7. NORMAL/BYPASS selector switch.

a. HAND/OFF/AUTO selector switch.
b. NORMAL/TEST Selector Switch: Allows testing and adjusting of VFC while the motor is running in the bypass mode.
c. Contactor Coils: Pressure-encapsulated type[**with coil transient suppressors**].

1) Operating Voltage: Depending on contactor NEMA size and line-voltage rating, manufacturer's standard matching control power or line voltage.
2) Power Contacts: Totally enclosed, double break, and silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.

8. Overload Relays: NEMA ICS 2.

a. Melting-Alloy Overload Relays:

1) Inverse-time-current characteristic.
2) [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
3) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.

b. Bimetallic Overload Relays:

1) Inverse-time-current characteristic.
2) [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
3) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
4) Ambient compensated.
5) Automatic resetting.

c. Solid-State Overload Relays:

1) Switch or dial selectable for motor-running overload protection.
2) Sensors in each phase.
3) [**Class 10**][**Class 20**][**Class 10/20 selectable**] tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
4) Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
5) Analog communication module.

d. [**NC**][**NO**] isolated overload alarm contact.
e. External overload reset push button.

G. Automatic Reset/Restart: Attempt three restarts after drive fault or on return of power after an interruption and before shutting down for manual reset or fault correction; adjustable delay time between restart attempts.

H. Power-Interruption Protection: To prevent motor from re-energizing after a power interruption until motor has stopped, unless "Bidirectional Autospeed Search" feature is available and engaged.

I. Bidirectional Autospeed Search: Capable of starting VFC into rotating loads spinning in either direction and returning motor to set speed in proper direction, without causing damage to drive, motor, or load.

J. Firefighter's Override (Smoke Purge) Input: On a remote contact closure from [**the firefighter's control station**][**smoke-control fan controller**]<**Insert location**>, the following password-protected input:

1. Overrides all other local and external inputs (analog/digital, serial communication, and all keypad commands).
2. Forces VFC to operate motor, without any other run or speed command, at a field-adjustable, preset speed.
3. Forces VFC to transfer to bypass mode and operate motor at full speed.
4. Causes display of override mode on the VFC display.
5. Reset VFC to normal operation on removal of override signal [**automatically**][**manually**].

K. Communication Port: [**Ethernet**][**RS-232 port**][**USB 2.0 port**] or equivalent connection Capable of connecting a printer[**and a notebook computer**].

L. <**Insert feature**>.

2.11 CONTROLLER-MOUNTED AUXILIARY DEVICES

A. Control-Circuit and Pilot Devices: Factory installed in controller enclosure cover unless otherwise indicated. Comply with NEMA ICS 5.

1. Push Buttons, Pilot Lights, and Selector Switches: [**Heavy**][**Standard**]-duty, [**oiltight**] type.

   a. Push Buttons: [**Covered**][**Lockable**][**Recessed**][**Shielded**][**Shrouded**][**Unguarded**] types; [**maintained**][**momentary**] contact unless otherwise indicated.
   b. Pilot Lights: [**LED**][**Resistor**][**Transformer**] types; <**Insert color(s)**>[**; push to test**].
   c. Selector Switches: [**Rotary**]<**Insert description**> type.

B. Elapsed-Time Meters: Heavy duty with digital readout in hours[**; nonresettable**][**; resettable**].

C. Meters: Panel type, **2-1/2-inch (64-mm)** minimum size with 90- or 120-degree scale and plus or minus 2 percent accuracy, with selector switches having an off position.

D. Auxiliary Dry Contacts: [**NC**][**NO**][**Reversible NC/NO**].

E. Control Relays:

1. Time Delay: Auxiliary and adjustable [**pneumatic**][**solid-state**] time-delay relays.
2. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections and adjustable undervoltage, overvoltage, and time-delay settings.
3. <**Insert control device**>.

2.12 MEASUREMENT AND CONTROL DEVICES

A. Instrument Transformers: IEEE C57.13, NEMA EI 21.1, and the following:

1. PTs: IEEE C57.13; 120 V, 60 Hz, [**single**][**tapped**][**double**] secondary; disconnecting type with integral fuse mountings. Burden and accuracy shall be consistent with connected metering and relay devices.
2. Current Transformers: IEEE C57.13; 5 A, 60 Hz, secondary; [**wound**][**bushing**][**bar or window**] type; [**single**][**double**] secondary winding and secondary shorting device. Burden and accuracy shall be consistent with connected metering and relay devices.
3. CPTs: Dry type, mounted in separate compartments for units larger than 3 kVA.
4. Current Transformers for Neutral and Ground-Fault Current Sensing: Connect secondary wiring to ground overcurrent relays, via shorting terminals, for selective tripping of main and tie circuit breaker. Coordinate with feeder circuit-breaker and ground-fault protection.

B. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:

1. Listed or recognized by a nationally recognized testing laboratory.
2. Inputs from sensors or 5-A current-transformer secondaries, and potential terminals rated to 600 V.
3. Switch-selectable digital display of the following values with the indicated maximum accuracy tolerances:

    a. Phase Currents, Each Phase: Plus or minus 1 percent.
    b. Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
    c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
    d. Three-Phase Real Power (Megawatts): Plus or minus 2 percent.
    e. Three-Phase Reactive Power (Megavars): Plus or minus 2 percent.
    f. Power Factor: Plus or minus 2 percent.
    g. Frequency: Plus or minus 0.5 percent.
    h. Accumulated Energy, Megawatt Hours: Plus or minus 2 percent; accumulated values unaffected by power outages up to 72 hours.
    i. Megawatt Demand: Plus or minus 2 percent; demand interval programmable from 5 to 60 minutes.
    j. Contact devices to operate remote impulse-totalizing demand meter.

4. Mounting: Display and control unit flush or semiflush mounted in instrument compartment door.

C. Ammeters, Voltmeters, and Power-Factor Meters: ANSI C39.1. **4-inch (100-mm)** diameter or **6 inches (150 mm)** square, flush or semiflush, with antiparallax 250-degree scale and external zero adjustment.

1. Voltmeters: Cover an expanded-scale range of nominal voltage plus 10 percent.
2. Feeder Ammeters: **2-1/2-inch (64-mm)** minimum size with 90- or 120-degree scale. Meter and transfer device with off position, located on overcurrent device door for feeder circuits, unless otherwise indicated.

D. Instrument Switches: Rotary type with off position.

1. Voltmeter Switches: Permit reading of all phase-to-phase voltages and phase-to-neutral voltages where a neutral is included.
2. Ammeter Switches: Permit reading of current in each phase and maintain current-transformer secondaries in a closed-circuit condition at all times.

E. Watt-Hour Meters and Wattmeters:

1. Comply with ANSI C12.1.
2. Three-phase induction type with two stators, each with current and potential coil, rated 5 A, 120 V, 60 Hz.
3. Suitable for connection to three- and four-wire circuits.
4. Potential indicating lamps.
5. Adjustments for light and full load, phase balance, and power factor.
6. Four-dial clock register.
7. Integral demand indicator.
8. Contact devices to operate remote impulse-totalizing demand meter.
9. Ratchets to prevent reverse rotation.
10. Removable meter with drawout test plug.
11. Semiflush mounted case with matching cover.
12. Appropriate multiplier tag.

F. Impulse-Totalizing Demand Meter:

1. Comply with ANSI C12.1.
2. Suitable for use with MCC watt-hour meter, including two-circuit totalizing relay.
3. Cyclometer.
4. Four-dial, totalizing kilowatt-hour register.
5. Positive chart drive mechanism.
6. Capillary pen holding a minimum of one month's ink supply.
7. Roll chart with minimum 31-day capacity; appropriate multiplier tag.
8. Capable of indicating and recording [**five**][**15**][**30**]<**Insert time**>-minute integrated demand of totalized system.

G. Control Power Fuses: Primary and secondary fuses for current-limiting and overload protection of transformer and fuses for protection of control circuits.

2.13 FEEDER TAP UNITS

A. MCCBs (to 1200 A): Fixed mounted, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger. Comply with UL 489, and NEMA AB 3, with interrupting capacity to comply with available fault currents.

1. Adjustable, Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
2. Electronic Trip Circuit Breakers: Field-replaceable rating plug, rms sensing, with the following field-adjustable settings:

    a. Instantaneous trip.
    b. Long- and short-time pickup levels.
    c. Long- and short-time time adjustments.
    d. Ground-fault pickup level, time delay, and I2t response.

3. Communication Capability: [**Circuit-breaker-mounted**][**Universal-mounted**][**Integral**][**Din-rail-mounted**] communication module with functions and features compatible with power monitoring and control system specified in Section 260913 "Electrical Power Monitoring and Control."
4. With built-in digital ammeter and a digital display, showing tripping cause.
5. Shunt Trip: Trip coil energized from separate circuit, with coil-clearing contact.
6. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
7. Auxiliary Contacts: [**One SPDT switch**][**Two SPDT switches**] with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker

contacts.

8. Alarm Switch: One [**NC**][**NO**] contact that operates only when circuit breaker has tripped.
9. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
10. Zone-Selective Interlocking: Integral with [**electronic**][**ground-fault**] trip unit; for interlocking ground-fault protection function.
11. Electrical Operator: Remote control for on, off, and reset operations.

B. Fusible Switches (to 600 A): Fixed-mounted, manually operated, [**electrically tripped,**]fusible, quick-make, quick-break switch with 200-kA interrupting and short-circuit current rating when fitted with UL 248-8 Class J fuses. Comply with UL 98.

1. Indication whether the switch is open or closed, and provisions for padlocking the operating handle.
2. Include fuse clips and fuses.
3. Electrically tripped switches shall include the following:

    a. Shunt trip.
    b. Ground-fault protection, with adjustable time delay and test panel.
    c. Single-phase protection, tripping the switch on loss of a source phase.
    d. Blown fuse protection, tripping the switch on a blown fuse, with blown fuse indication.

2.14 PANELBOARDS

A. Comply with NEMA PB 1.

B. Branch OCPDs for Circuit-Breaker Frame Sizes 125 A and Smaller: [**Plug-in**][**Bolt-on**] circuit breakers.

C. Branch OCPDs for Circuit-Breaker Frame Sizes Larger Than 125 A: Bolt-on circuit breakers; or plug-in circuit breakers where individual positive-locking device requires mechanical release for removal.

D. Contactors in Main Bus: NEMA ICS 2, Class A, [**electrically**][**mechanically**] held, general-purpose controller, with same short-circuit interrupting rating as panelboard.

E. Accessory Control Power Voltage: Integrally mounted, self-powered, <**Insert number**> [**Remote mounted and powered**].

2.15 TRANSFORMERS

A. Factory-assembled and -tested, air-cooled, two-winding, low-voltage dry-type transformers; with primary circuit breaker. Comply with NEMA ST 20.

B. Taps for Transformers Smaller Than 3 kVA: [**None**][**One 5 percent tap above normal full capacity**].

C. Taps for Transformers 7.5 to 24 kVA: [**One 5 percent tap above and one 5 percent tap below normal full capacity**][**Two 5 percent taps below rated voltage**].

D. Taps for Transformers 25 kVA and Larger: [**Two 2.5 percent taps above and two 2.5 percent taps below normal full capacity**][**Two 2.5 percent taps above and four 2.5 percent taps below normal full capacity**].

E. Insulation Class: 220 deg C, UL-component-recognized insulation system with a maximum of

[**150**][**115**][**80**] deg C rise above 40 deg C ambient temperature.

F. Energy Efficiency for Transformers Rated 15 kVA and Larger:

1. Complying with NEMA TP 1, Class 1 efficiency levels.
2. Tested according to NEMA TP 2.

2.16 TRANSFER SWITCHES

A. Factory-assembled and -tested, open-transition transfer switches. The transfer switch shall comply with UL 1008[**and be listed and labeled by a qualified testing agency**].

B. Comply with NEMA ST 20.

C. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated.

D. Tested Fault-Current Closing and Withstand Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.

1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination shall exceed indicated fault-current value at installation location.

E. Solid-State Controls: Repetitive accuracy of all settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C.

F. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.41.1. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.

G. Electrical Operation: Accomplish by a nonfused, momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions.

H. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.

1. Limitation: Switches using molded-case switches or circuit breakers or insulated-case circuit-breaker components are unacceptable.
2. Switch Action: Double throw; mechanically held in both directions.
3. Contacts: Silver composition or silver alloy for load-current switching. Conventional automatic transfer-switch units, rated 225 A and higher, shall have separate arcing contacts.

I. Neutral Switching. Where four-pole switches are indicated, equip with [**neutral pole switched simultaneously with phase poles**][**overlapping neutral contacts**].

J. Neutral Terminal: Solid and rated the same as the neutral bus.

K. Oversize Neutral: Ampacity and switch rating of neutral path through units indicated for oversize neutral shall be double the nominal rating of circuit in which switch is installed.

L. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels shall

have communication capability matched with remote device.

2.17 SOURCE QUALITY CONTROL

A. MCC Testing: Test and inspect MCCs according to requirements in [**NEMA ICS 18**]<**Insert standard**>.

B. VFC Testing: Test and inspect VFCs according to requirements in [**NEMA ICS 61800-2**]<**Insert standard**>.

1. Test each VFC while connected to [**its specified motor**][**a motor that is comparable to that for which the VFC is rated**].
2. Verification of Performance: Rate VFCs according to operation of functions and features specified.

C. MCCs will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and surfaces to receive MCCs, with Installer present, for compliance with requirements for installation tolerances, <**Insert Project-specific conditions,**> and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. NEMA Industrial Control and Systems Standards: Comply with parts of NEMA ICS 2.3 for installation and startup of MCCs.

B. Floor Mounting: Install MCCs on **4-inch (100-mm)** nominal-thickness concrete base. Comply with requirements for concrete base specified in Section 033000 "Cast-in-Place Concrete."

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on **18-inch (450-mm)** centers around the full perimeter of concrete base.
2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to supported equipment.

C. Seismic Bracing: Comply with requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."

D. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

E. Install fuses in each fusible switch.

F. Install fuses in control circuits if not factory installed. Comply with requirements in Section 262813 "Fuses."

G. Install heaters in thermal-overload relays. Select heaters based on actual nameplate full-load amperes after motors have been installed.

H. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.

I. Install power factor correction capacitors. Connect to the [**line**][**load**] side of overload relays. If connected to the load side of overload relays, adjust overload heater sizes to accommodate the reduced motor full-load currents.

J. Comply with NECA 1.

3.3 IDENTIFICATION

A. Comply with requirements in Section 260553 "Identification for Electrical Systems" for identification of MCC, MCC components, and control wiring.

1. Identify field-installed conductors, interconnecting wiring, and components.
2. Install required warning signs.
3. Label MCC and each cubicle with engraved nameplate.
4. Label each enclosure-mounted control and pilot device.
5. Mark up a set of manufacturer's connection wiring diagrams with field-assigned wiring identifications and return to manufacturer for inclusion in Record Drawings.

B. Operating Instructions: Frame printed operating instructions for MCCs, including control sequences and emergency procedures. Fabricate frame of finished metal, and cover instructions with clear acrylic plastic. Mount on front of MCCs.

3.4 INSTALLATION OF CONTROL WIRING

A. Install wiring between [**enclosed controllers**][**master terminal boards**] and remote devices [**and facility's BAS**][**and facility's central-control system**]. Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."

B. Bundle, train, and support wiring in enclosures.

C. Connect selector switches and other automatic-control selection devices where applicable.

1. Connect selector switches to bypass only those manual- and automatic-control devices that have no safety functions when switch is in manual-control position.
2. Connect selector switches within enclosed controller circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.5 CONNECTIONS

A. Comply with requirements for installation of conduit in Section 260533.13 "Conduits for Electrical Systems." Drawings indicate general arrangement of conduit, fittings, and specialties.

B. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.6 FIELD QUALITY CONTROL

A. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections[**with the assistance of a factory-authorized service representative**].

D. Acceptance Testing Preparation:

1. Test insulation resistance for each enclosed controller, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

E. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
4. Perform the following infrared (thermographic) scan tests and inspections and prepare reports:

    a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each multipole enclosed controller. Remove front panels so joints and connections are accessible to portable scanner.
    b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each multipole enclosed controller 11 months after date of Substantial Completion.
    c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Submit calibration record for device.

5. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
6. Mark up a set of manufacturer's drawings with all field modifications incorporated during construction and return to manufacturer for inclusion in Record Drawings.

F. MCCs will be considered defective if they do not pass tests and inspections.

G. Prepare test and inspection reports.

3.7 STARTUP SERVICE

A. [**Engage a factory-authorized service representative to perform**][**Perform**] startup service.

1. Complete installation and startup checks according to NETA Acceptance Testing Specification and manufacturer's written instructions.

2. <**Insert startup steps if any**>.

3.8 ADJUSTING

A. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload relay pickup and trip ranges.

B. Adjust overload relay heaters or settings if power factor correction capacitors are connected to the load side of the overload relays.

C. Adjust the trip settings of MCPs and thermal-magnetic circuit breakers with adjustable, instantaneous trip elements. Initially adjust to six times the motor nameplate full-load amperes and attempt to start motors several times, allowing for motor cool-down between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed eight times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify [**Architect**][**Construction Manager**][**Owner**] before increasing settings.

D. Set the taps on reduced-voltage autotransformer controllers at [**50**][**65**][**80**] percent.

E. Set field-adjustable switches and program microprocessors for required start and stop sequences in reduced-voltage, solid-state controllers.

F. Program microprocessors in VFCs for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.

G. Set field-adjustable circuit-breaker trip ranges[**as specified in Section 260573.16 "Coordination Studies."**]

3.9 DEMONSTRATION

A. [**Engage a factory-authorized service representative to train**][**Train**] Owner's maintenance personnel to adjust, operate, and maintain enclosed controllers[**, and to use and reprogram microprocessor-based, reduced-voltage, solid-state controllers**].

SECTION 26 25 00 00 - LOW-VOLTAGE ENCLOSED BUS ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Enclosed bus assemblies.
2. Plug-in devices.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 ACTION SUBMITTALS

A. Shop Drawings: For each type of product.

1. Show fabrication and installation details for enclosed bus assemblies. Include plans, elevations, and sections of components. Designate components and accessories, including clamps, brackets, hanger rods, connectors, straight lengths, and fittings.
2. Show fittings, materials, fabrication, and installation methods for [**listed firestop barriers**][**and**][**weather barriers**].
3. Indicate required clearances, method of field assembly, and location and size of each field connection.
4. Detail connections to switchgear, switchboards, transformers, and panelboards.
5. Cable and conductor terminal sizes for bus and plug-in device terminations.
6. Wiring Diagrams: Power[**and signal**][**and control**][**, signal, and control**] wiring.

B. Delegated Design Submittal: For seismic-restraint details, signed and sealed by a qualified structural professional engineer.

1. Include design calculations for selecting seismic restraints.
2. Detail fabrication, including anchorages and attachments to structure and to supported equipment.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.4 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Plug-in Units: [**10**]<**Insert number**> percent of amount installed[**for each size indicated**], but no fewer than <**Insert number**> unit(s).

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle enclosed bus assemblies according to NEMA BU 1.1, "General Instructions for Handling, Installation, Operation, and Maintenance of Busway Rated 600 Volts or Less."

PART 2 - PRODUCTS

2.1 ASSEMBLY DESCRIPTIONS

A. Source Limitations: Obtain enclosed bus assemblies[**and plug-in devices**] from single source from single manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with UL 857.

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified electrical professional engineer to design enclosed bus assemblies, plug-in devices, and components.

2.3 ENCLOSED BUS ASSEMBLIES

A. Feeder-Bus Assemblies: Low-impedance bus assemblies in totally enclosed, nonventilated housing; single-bolt joints; ratings as indicated.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**EAE USA**]
c. [**Eaton**]
d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**EAE USA**]
c. [**Eaton**]

d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

3. Seismic Fabrication Requirements: Fabricate mounting provisions and attachments for feeder-bus assemblies with reinforcement strong enough to withstand seismic forces defined in Section 260548.16 "Seismic Controls for Electrical Systems" when mounting provisions and attachments are anchored to building structure.
4. Electrical Characteristics:

   a. Voltage: [**120/208**][**240**][**480**][**277/480**] V.
   b. Phase: Three; [**3 wire**][**4 wire**].
   c. Percent of Neutral Capacity: [**50**][**100**][**200**]<**Insert value**>.

5. Short-Circuit Interrupting Rating:

   a. For Bus Amperage of 800: 85 symmetrical kAIC.
   b. For Bus Amperage of 1200: 100 symmetrical kAIC.
   c. For Bus Amperage of 1600: 125 symmetrical kAIC.
   d. For Bus Amperage of 2500: 150 symmetrical kAIC.
   e. For Bus Amperage of 5000: 200 symmetrical kAIC.

6. Temperature Rise: 55 deg C above 40 deg C ambient maximum for continuous rated current.
7. Bus Materials: Current-carrying [**copper**][**aluminum**] conductors, fully insulated with Class 130C insulation except at joints; plated surface at joints.
8. Voltage Drop:

   a. Measure voltage drop at 30 deg C ambient with bus thermally stabilized at full rated load.
   b. Three-phase, line-to-line voltage drop less than 3.1 V per **100 ft.** **(30.5 m)** at 40 percent power factor.

9. Ground: 50 percent capacity, [**integral with housing**][**internal bus bar of material matching bus material**][**isolated, internal bus bar of material matching bus material**].
10. Enclosure: [**Steel**][**Aluminum**], with manufacturer's standard finish.[**Weatherproof, sealed seams, drains, and removable closures.**]
11. Fittings and Accessories: Manufacturer's standard.
12. Firestop: Comply with UL 1479 firestop system, listed and labeled by an NRTL acceptable to authorities having jurisdiction for penetrations of fire-rated walls, ceilings, and floors.
13. Mounting: Arranged flat, edgewise, or vertically without derating. Rated for hanger spacing of up to **10 ft.** **(3 m)** for horizontally mounted runs and up to **16 ft.** **(5 m)** for vertically mounted runs.
14. Expansion Section: Manufacturer's standard expansion fitting for the provided busway with expansion capability to accommodate thermal expansion of bus and enclosure, and to accommodate movement across building expansion joints.

B. Plug-in Bus Assemblies: Low-impedance bus assemblies in totally enclosed, nonventilated housing; single-bolt joints; ratings as indicated.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Eaton**]
   c. [**Siemens Industry, Inc., Energy Management Division**]
   d. [**Square D; Schneider Electric USA**]

e. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide **<Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Eaton**]
   c. [**Siemens Industry, Inc., Energy Management Division**]
   d. [**Square D; Schneider Electric USA**]
   e. **<Insert manufacturer's name>**

3. Electrical Characteristics:

   a. Voltage: [**120/208**][**240**][**480**][**277/480**] V.
   b. Phase: Three; [**3 wire**][**4 wire**].
   c. Percent of Neutral Capacity: [**100**][**200**]<**Insert value**>.

4. Short-Circuit Interrupting Rating:

   a. For Bus Amperage of 800: 85 symmetrical kAIC.
   b. For Bus Amperage of 1200: 100 symmetrical kAIC.
   c. For Bus Amperage of 1600: 125 symmetrical kAIC.
   d. For Bus Amperage of 2500: 150 symmetrical kAIC.
   e. For Bus Amperage of 5000: 200 symmetrical kAIC.

5. Temperature Rise: 55 deg C above 40 deg C ambient maximum for continuous rated current.
6. Bus Materials: Current-carrying [**copper**][**aluminum**] conductors, fully insulated with Class 130C insulation except at stabs and joints; plated surface at stabs and joints.
7. Ground: 50 percent capacity, [**integral with housing**][**internal bus bar of material matching bus material**][**isolated, internal bus bar of material matching bus material**].
8. Enclosure: [**Steel**][**Aluminum**], with manufacturer's standard finish.
9. Plug-in Openings: **24 inch (600 mm)** on center on each side of bus, and hinged covers over unused openings. Plug-in openings must be finger-safe with covers open or closed.
10. Fittings and Accessories: Manufacturer's standard.
11. Firestop: Comply with UL 1479 firestop system, listed and labeled by an NRTL acceptable to authorities having jurisdiction for penetrations of fire-rated walls, ceilings, and floors.
12. Mounting: Arranged flat, edgewise, or vertically without derating. Rated for hanger spacing of up to **10 ft. (3 m)** for horizontally mounted runs and up to **16 ft. (5 m)** for vertically mounted runs.
13. Expansion Section: Manufacturer's standard expansion fitting for the provided busway with expansion capability to accommodate thermal expansion of bus and enclosure, and to accommodate movement across building expansion joints.

C. Joints:

1. Busway joints must use one high-strength steel bolt with Belleville washers.
2. Bolts must be torque indicating type and at ground potential.
3. Bolts must be two-headed design to indicate when proper torque has been applied and require only a standard long handle wrench to be properly activated.
4. Access must be required to only one side of the busway for tightening joint bolts.
5. Joint connection assemblies must be removable without disturbing adjacent busway lengths.
6. Joint connection assemblies that rely on the joint cover to provide ground continuity are unacceptable.

2.4 PLUG-IN DEVICES

A. Fusible Switches: NEMA KS 1, heavy duty; with [**R-type rejection**][**J-type**][**L-type**] fuse clips to accommodate specified fuses; hookstick-operated handle, lockable with two padlocks, and interlocked with cover in closed position. Interlocked to prevent plug-in device insertion into or removal from bus with switch in closed position. See Section 262813 "Fuses" for fuses and fuse installation requirements.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Eaton**]
    b. [**Siemens Industry, Inc., Energy Management Division**]
    c. [**Square D; Schneider Electric USA**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Eaton**]
    b. [**Siemens Industry, Inc., Energy Management Division**]
    c. [**Square D; Schneider Electric USA**]
    d. <**Insert manufacturer's name**>

B. Molded-Case Circuit Breakers: UL 489; hookstick-operated handle, lockable with two padlocks, and interlocked with cover in closed position. Interlocked to prevent plug-in device insertion into or removal from bus with switch in closed position.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB, Electrification Business**]
    b. [**Eaton**]
    c. [**NOARK Electric North America**]
    d. [**Siemens Industry, Inc., Energy Management Division**]
    e. [**Square D; Schneider Electric USA**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. [**Eaton**]
    c. [**NOARK Electric North America**]
    d. [**Siemens Industry, Inc., Energy Management Division**]
    e. [**Square D; Schneider Electric USA**]
    f. <**Insert manufacturer's name**>

C. SPD: NEMA 250, Type 1 enclosure with NEMA KS 1, fusible, disconnect switch and external handle to isolate SPD from busway. SPD product and installation requirements are specified in Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB, Electrification Business**]
    b. [**Advanced Protection Technologies Inc. (APT)**]
    c. [**ALLTEC LLC**]
    d. [**Eaton**]
    e. [**Emerson Electric Co., Automation Solutions**]
    f. [**LEA International**]
    g. [**Leviton Manufacturing Co., Inc.**]
    h. [**Mersen USA**]
    i. [**PowerLogics, Inc./PQ Protection**]
    j. [**Schneider Electric USA, Inc.**]
    k. [**Siemens Industry, Inc., Energy Management Division**]
    l. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. [**Advanced Protection Technologies Inc. (APT)**]
    c. [**ALLTEC LLC**]
    d. [**Eaton**]
    e. [**Emerson Electric Co., Automation Solutions**]
    f. [**LEA International**]
    g. [**Leviton Manufacturing Co., Inc.**]
    h. [**Mersen USA**]
    i. [**PowerLogics, Inc./PQ Protection**]
    j. [**Schneider Electric USA, Inc.**]
    k. [**Siemens Industry, Inc., Energy Management Division**]
    l. <**Insert manufacturer's name**>

D. Motor Controllers: NEMA ICS 2, Class A, full voltage, nonreversing, across the line unless otherwise indicated.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB, Electrification Business**]
    b. [**ABB, Motion Business**]
    c. [**Cerus Industrial, Inc.**]
    d. [**Eaton**]
    e. [**Rockwell Automation, Inc.**]
    f. [**Siemens Industry, Inc., Energy Management Division**]
    g. [**Square D; Schneider Electric USA**]
    h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**ABB, Motion Business**]
c. [**Cerus Industrial, Inc.**]
d. [**Eaton**]
e. [**Rockwell Automation, Inc.**]
f. [**Siemens Industry, Inc., Energy Management Division**]
g. [**Square D; Schneider Electric USA**]
h. <**Insert manufacturer's name**>

3. Control Circuit: 120 V; obtained from [**integral control power transformer**]<**Insert source of control power**> with a control power [**transformer**][**source**] of enough capacity to operate connected pilot, indicating and control devices, plus 100 percent spare capacity.
4. Combination Controller: Factory-assembled combination controller and disconnect switch with or without overcurrent protection as indicated.

   a. Fusible Disconnecting Means: NEMA KS 1, heavy-duty, fusible switch with [**R-type rejection**][**J-type**] fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1, as certified by an NRTL acceptable to authorities having jurisdiction. See Section 262813 "Fuses" for fuses and fuse installation requirements.
   b. Circuit-Breaker Disconnecting Means: UL 489, motor-circuit protector with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.

5. Overload Relay: Ambient-compensated type with inverse-time-current characteristic and NEMA ICS 2, [**Class 10**][**Class 20**][**Class 30**] tripping characteristic. Overload relays must have heaters or sensors in each phase matched to nameplate full-load current of specific motor to which they connect and with appropriate adjustment for duty cycle.
6. Adjustable Overload Relay: Dipswitch selected for motor running overload protection with NEMA ICS 2, [**Class 10**][**Class 20**][**Class 30**] tripping characteristic, and selected to protect motor against voltage and current unbalance and single phasing. Adjustable overload relays must have Class II ground-fault protection with start and run delays to prevent nuisance trip on starting.

E. Multispeed Magnetic Controllers: Match controller to motor type, application, and number of speeds.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**ABB, Motion Business**]
   c. [**Eaton**]
   d. [**Rockwell Automation, Inc.**]
   e. [**Siemens Industry, Inc., Energy Management Division**]
   f. [**Square D; Schneider Electric USA**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**ABB, Motion Business**]
   c. [**Eaton**]
   d. [**Rockwell Automation, Inc.**]
   e. [**Siemens Industry, Inc., Energy Management Division**]

f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

3. Compelling relay ensures motor starts only at low speed.
4. Accelerating relay ensures properly timed acceleration through speeds lower than that selected.
5. Decelerating relay ensures automatically timed deceleration through each speed.

F. Accessories: Hookstick operator, adjustable to maximum extension of [**14 ft. (4.3 m)**]<**Insert dimension**>.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Coordinate layout and installation of enclosed bus assemblies and suspension system with other construction that penetrates ceilings or floors or is supported by them, including luminaires, HVAC equipment, fire-suppression system, and partition assemblies.

B. Equipment Mounting:

1. Install enclosed bus assemblies on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
2. Coordinate size and location of concrete curbs around openings for vertical bus. Concrete, reinforcement, and formwork requirements are specified with concrete.

C. Support bus assemblies independent of supports for other elements such as equipment enclosures at connections to panelboards and switchboards, pipes, conduits, ceilings, and ducts.

1. Design each fastener and support to carry load indicated by seismic requirements and to comply with seismic-restraint details according to Section 260548.16 "Seismic Controls for Electrical Systems."
2. Design each fastener and support to carry **200 lb (90 kg)** or 4 times the weight of bus assembly, whichever is greater.
3. Support bus assembly to prevent twisting from eccentric loading.
4. Support bus assembly with not less than [**3/8 inch (10 mm)**]<**Insert dimension**> steel rods. Install side bracing to prevent swaying or movement of bus assembly. Modify supports after completion to eliminate strains and stresses on bus bars and housings.
5. Fasten supports securely to building structure according to Section 260529 "Hangers and Supports for Electrical Systems."
6. Bolts and nuts that are loosened for any reason after tightening to manufacturer's recommended torque setting must be discarded and replaced with new bolts and nuts.

D. Install expansion fittings at locations where bus assemblies cross building expansion joints. Install at other locations so distance between expansion fittings does not exceed manufacturer's recommended distance between fittings.

E. Construct rated firestop assemblies where bus assemblies penetrate fire-rated elements such as walls, floors, and ceilings. Seal around penetrations according to Section 078413 "Penetration Firestopping."

F. Install weatherseal fittings and flanges where bus assemblies penetrate exterior elements such as walls or roofs. Seal around openings to make weathertight. See Section 079200 "Joint Sealants" for materials and application.

G. Coordinate bus-assembly terminations to equipment enclosures to ensure proper phasing, connection, and closure.

H. Tighten bus-assembly joints with torque wrench or similar tool recommended by bus-assembly manufacturer. Tighten joints again after bus assemblies have been energized for 30 days.

I. Install bus-assembly, plug-in units. Support connecting conduit independent of plug-in unit.

3.2 CONNECTIONS

A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

C. Terminate to transformer enclosures with matching bus assemblies according to Section 262200 "Low-Voltage Transformers."

D. Terminate to switchgear enclosures with matching bus assemblies according to Section 262300 "Low-Voltage Switchgear."

E. Terminate to switchboard enclosures with matching bus assemblies according to Section 262413 "Switchboards."

F. Terminate to panelboard enclosures with matching bus assemblies according to Section 262416 "Panelboards."

G. Terminate to motor-control centers enclosures with matching bus assemblies according to Section 262419 "Motor-Control Centers."

3.3 FIELD QUALITY CONTROL

A. Field tests must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

B. Tests and Inspections:

1. After installing equipment, test for compliance with requirements according to NETA ATS.
2. Visual and Mechanical Inspection:

    a. Compare equipment nameplate data with Drawings and Specifications.
    b. Inspect physical and mechanical condition.
    c. Inspect anchorage, alignment, and grounding.
    d. Verify correct connection according to single-line diagram.
    e. Inspect bolted electrical connections for high resistance using one or more of the following methods:

        1) Use of low-resistance ohmmeter.
        2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method according to manufacturer's published data.
        3) Perform thermographic survey.

3. Electrical Tests:

a. Perform insulation resistance measurements through bolted connections and bus joints with low-resistance ohmmeter.
b. Perform insulation resistance tests of each busway, phase to phase, and phase to ground.
c. Perform a dielectric withstand voltage test on each busway, phase to ground with phases not under test grounded for one minute.
d. Measure resistance of assembled busway sections on insulated busway and compare values with adjacent phases.
e. Perform phasing test on each busway tie section energized by separate sources.
f. Verify operation of busway space heaters.

C. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switch. Remove all access panels so joints and connections are accessible to portable scanner.

1. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
2. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.
3. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.

D. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

E. Nonconforming Work:

1. Enclosed bus assemblies will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

3.4 ADJUSTING

A. Set field-adjustable, circuit-breaker trip ranges[**and overload relay trip settings**] as indicated.

3.5 CLEANING

A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

3.6 PROTECTION

A. Provide final protection to ensure that moisture does not enter bus assembly.

END OF SECTION 26 25 00 00

Task	Specification	Specification Description
26 25 13 00	26 25 00 00	Low-Voltage Enclosed Bus Assemblies
26 25 16 00	26 25 00 00	Low-Voltage Enclosed Bus Assemblies

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 27 13 00 - ELECTRICITY METERING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Electricity meters.
2. Work to accommodate utility company revenue meters, and Owner's electricity meters used to manage electrical power system.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 DEFINITIONS

A. KY or KYZ Pulse: Term used by metering industry to describe method of measuring consumption of electricity (kWh) that is based on relay opening and closing in response to rotation of disk in meter. Electronic meters generate pulses electronically.

1.3 COORDINATION

A. Electrical Service Connections:

1. Coordinate with utility companies and utility-furnished components.

a. Comply with requirements of utility providing electrical power services.
b. Coordinate installation and connection of utilities and services, including provision for electricity-metering components.

1.4 ACTION SUBMITTALS

A. Product Data:

1. For each type of meter.
2. For metering infrastructure components.
3. For metering software.

B. Shop Drawings: For electricity-metering equipment.

1. Include elevation views of front panels of control and indicating devices and control stations.
2. Include diagrams for power, signal, and control wiring.
3. Wire Termination Diagrams and Schedules: Include diagrams for power, signal, and control

wiring. Identify terminals and wiring designations and color-codes to facilitate installation, operation, and maintenance. Indicate recommended types, wire sizes, and circuiting arrangements for field-installed wiring, and show circuit protection features. Differentiate between manufacturer-installed and field-installed wiring.

4. Include series-combination rating data for modular meter centers with main disconnect device.
5. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data communication paths and identify networks, data buses, data gateways, concentrators, and other devices used. Describe characteristics of network and other data communication lines.
6. Submit evidence that meters are compatible with connected monitoring and control devices and systems specified in [**Section 260913 "Electrical Power Monitoring and Control."**]<**Insert Section number and title.**>

    a. Show interconnecting signal and control wiring, and interface devices to show compatibility of meters.
    b. For reporting and billing interfaces and adapters, list network protocols and provide statements from manufacturers that input and output devices comply with interoperability requirements of the protocol.

C. Field quality-control reports.

1.5 INFORMATIONAL SUBMITTALS

A. Manufacturers' Published Instructions: Record copy of official installation[**and testing**] instructions issued to Installer by manufacturer for the following:

1. Installation of metering equipment.

B. Sample warranties.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Contracts:

1. Software and firmware service agreement.

B. Warranty documentation.

1.7 WARRANTY

A. Special Installer Extended Warranty: Installer warrants that fabricated and installed metering equipment performs in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period.

1. Extended-Warranty Period: [**Two**]<**Insert number**> years from date of Substantial Completion; full coverage for labor, materials, and equipment.

B. Special Manufacturer Extended Warranty: Manufacturer warrants that metering equipment performs in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within extended-warranty period.

1. Initial Extended-Warranty Period: [**Three**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.
2. Follow-On Extended-Warranty Period: [**Eight**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for materials[**that failed because of transient voltage surges**] only, free on board [**origin**][**destination**], freight prepaid.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

B. Comply with UL 916.

2.2 UTILITY METERING INFRASTRUCTURE

A. Install metering accessories furnished by utility company, complying with its requirements.

B. Utility-Furnished Meters: Connect data transmission facility of metering equipment installed by Utility.

1. Data Transmission: Transmit pulse data over control-circuit conductors, classified as Class 1 per NFPA 70, Article 725. Comply with Section 260523 "Control-Voltage Electrical Power Cables."

C. Current-Transformer Cabinets: Comply with requirements of electrical-power utility company.

D. Meter Sockets:

1. Comply with requirements of electrical-power utility company.
2. Steady-state and short-circuit current ratings must meet indicated circuit ratings.

E. Modular Meter Center: Factory-coordinated assembly of main service [**terminal box with lugs only**][**disconnect device**], wireways, meter socket modules, and feeder circuit breakers arranged in adjacent vertical sections complete with interconnecting buses.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

3. Comply with requirements of utility company for meter center.

   a. Comply with UL 67.

4. Housing: UL 50E, [**Type 1**][**Type 3R**][**Type 4X**] enclosure.
5. Meter Socket Rating: Coordinated with connected feeder circuit rating.
6. Minimum Short-Circuit Rating: [**22 000 A**][**42 000 A**][**65 000 A**][**100 000 A**]<**Insert amperes**> symmetrical at rated voltage.
7. Steady-state and short-circuit current ratings must have ratings that match connected circuit ratings.
8. Main Disconnect Device:

   a. Circuit breaker, series-combination rated for use with downstream feeder and branch circuit breakers and having adjustable magnetic trip setting for circuit-breaker frame sizes of 250 A and larger. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers." Circuit breakers must be operable from outside enclosure to disconnect unit. Configure cover so it can be opened only when disconnect switch is open.
   b. Fusible switch, UL 98 Type GD, series-combination rated by fuse manufacturer to protect downstream feeder and branch circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers." Switch must be operable from outside enclosure to disconnect unit. Configure cover so that it can be opened only when disconnect switch is open.

9. Feeder Circuit Breakers: Series-combination-rated molded-case units, rated to protect downstream circuit breakers and to house load centers and panelboards that have [**10 000 A**]<**Insert amperes**> interrupting capacity.

   a. Identification: Complying with requirements in Section 260553 "Identification for Electrical Systems."
   b. Physical Protection: Tamper resistant, with hasp for padlock.

10. Surge Protection:

    a. Factory-installed in main disconnect, integrally mounted, UL 1449 Type 1. Comply with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."
    b. Field-mounted external to main disconnect, UL 1449 Type 2, with integral disconnect and overcurrent protective device. Comply with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."
    c. Factory-installed in main terminal box, integrally mounted, UL 1449 Type 1. Comply with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."
    d. Field-mounted external to main terminal box, UL 1449 Type 2, with integral disconnect and overcurrent protective device. Comply with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."

F. Arc-Flash Warning Labels:

1. Comply with requirements for "Arc-Flash Warning Labels" in Section 260573.19 "Arc-Flash Studies." Apply **3-1/2-by-5 inch (76-by-127 mm)** thermal transfer label of high-adhesion

polyester for each work location included in the analysis.

2. Comply with requirements for "Self-Adhesive Equipment Labels" and "Signs" in Section 260553 "Identification for Electrical Systems." Apply **3-1/2-by-5 inch (76-by-127 mm)** thermal transfer label of high-adhesion polyester for each work location included in the analysis. Labels must be machine printed, with no field-applied markings.

    a. Label must have orange header with wording, "WARNING, ARC-FLASH HAZARD," and must include the following information taken directly from arc-flash hazard analysis:

        1) Location designation.
        2) Nominal voltage.
        3) Flash protection boundary.
        4) Hazard risk category.
        5) Incident energy.
        6) Working distance.
        7) Engineering report number, revision number, and issue date.

2.3 ELECTRICITY METERS

A. System Description: Able to meter designated activity loads, with or without external alarm, control, and communication capabilities, or other optional features.

B. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**Davidge Controls**]
3. [**E-Mon**]
4. [**Eaton**]
5. [**GE Power; General Electric Company**]
6. [**Leviton Manufacturing Co., Inc.**]
7. [**National Meter Industries**]
8. [**Sensus Metering Systems**]
9. [**Siemens Industry, Inc., Energy Management Division**]
10. [**Square D; Schneider Electric USA**]
11. <**Insert manufacturer's name**>

C. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**Davidge Controls**]
3. [**E-Mon**]
4. [**Eaton**]
5. [**GE Power; General Electric Company**]
6. [**Leviton Manufacturing Co., Inc.**]
7. [**National Meter Industries**]
8. [**Sensus Metering Systems**]
9. [**Siemens Industry, Inc., Energy Management Division**]
10. [**Square D; Schneider Electric USA**]
11. <**Insert manufacturer's name**>

D. General Requirements for Meters:

1. Comply with NEMA ANSI C12.1 and NEMA ANSI C12.20, [**0.1**][**0.2**][**0.5**] accuracy class.
2. Ambient Temperature: **Minus 22 deg F to plus 158 deg F (Minus 30 deg C to plus 70 deg C)**.
3. Humidity: Zero to 95 percent, noncondensing.
4. Capacities and Characteristics:

    a. Circuit: 120/240 V(ac), 100 A.
    b. Measure: kWh, onboard LED display.
    c. Remote-Reading Options: None.

5. Billing Meters Accuracy: [**0.2**][**0.5**][**1.0**] percent of reading, complying with NEMA ANSI C12.20.
6. Meter Certification: Certified by [**California Type Evaluation Program**]<**Insert agency**> as complying with [**4 CCR 4027, Article 2.2**]<**Insert state or Federal regulatory requirement**>.
7. Certify that meters comply with NEMA ANSI C12.20 requirements by laboratory accredited by the National Voluntary Laboratory Accreditation Program (NVLAP) of the National Institute of Standards and Technology (NIST). Laboratory must use test equipment that is certified annually and is traceable to NIST standards.
8. Enclosure: Supplied by meter manufacturer, UL 50E, [**Type 1**][**Type 3R**][**Type 4X**] minimum, with provisions for locking or sealing.
9. Identification: Comply with requirements in Section 260553 "Identification for Electrical Systems."
10. Onboard Nonvolatile Data Storage: kWh, until reset.
11. Sensors: Current-sensing type, supplied by electronic meter manufacturer, with current or voltage output, selected for optimum range and accuracy for meters indicated for this application.

    a. Type: [**Split**][**and**][**solid**] core, complying with recommendation of meter manufacturer.

E. kWh Meter: Electronic [**single-phase**][**and**][**three-phase**] meters, measuring electricity use.

1. Voltage and Phase Configuration: Meter must be designed for use on circuits with voltage rating and phase configuration indicated for its application.
2. Display:

    a. LCD with characters not less than **0.25 inch (6 mm)** high, indicating accumulative kWh and current kilowatt load. Retain accumulated kWh in nonvolatile memory, until reset.
    b. Digital electromechanical counter, indicating accumulative kWh.

F. kWhd Meter: Electronic [**single-phase**][**and**][**three-phase**] meters, measuring electricity use and demand. Demand must be integrated over [**15-minute**]<**Insert time**> interval.

1. Voltage and Phase Configuration: Meter must be designed for use on circuits with voltage rating and phase configuration indicated for its application.
2. Display: LCD with characters not less than **0.25 inch (6 mm)** high, indicating the following:

    a. Accumulative kWh.
    b. Current time and date.
    c. Current demand.
    d. Historic peak demand.
    e. Time and date of historic peak demand.

3. Retain accumulated kWh and historic peak demand in nonvolatile memory, until reset.

G. KY and KYZ Pulse Totalizer:

1. Pulse Totalizer: Instrument for demand and billing applications where one or more utility revenue meters stream KY or KYZ energy pulses. Instrument must totalize kWh accumulated over user-selected period and must log maximum and minimum kWhd for that period. Record each period

with date/time stamp. Time period must be user selected from one to 60 minutes.

a. Pulse Input: [**One**]<**Insert number**>, individually programmable, KYZ Form C (three-wire) contact pulse channels. Pulse interval, pulse rate, and minimum pulse width must be field adjustable, set for pulse stream provided by utility revenue meter.
b. Data Totalizing Capacity of Each Channel: Not less than 149 days at 15-minute intervals.
c. Instrument Power: User selectable, 120 V(ac) and 277 V(ac).
d. Clock: Line frequency.

H. Remote Reading Options:

1. Pulse Output: [**KY**][**KYZ**], complete with optical sensor and interface devices.
2. TIA-232 serial interface.
3. TIA-485 serial interface, with [**Modbus RTU protocol**]<**Insert protocol name**>.
4. USB interface.
5. TCP/IP adapter.

I. Current-Transformer Cabinet: Size and configuration as recommended by metering equipment manufacturer for use with indicated connected feeder and sensors.

J. Uninterruptible Power Supply: Single phase, 120 V(ac), sized and rated to provide continuous power to meter for operations of [**48**]<**Insert number**> hours after interruption of normal power.

1. Output: Sine wave, total harmonic distortion less than 5 percent at full load.
2. Battery: Maintenance free, sealed, lead acid, and leakproof.
3. Control Panel: LED status display of "on-battery," "replace battery," and "overload."

K. Data Transmission Cable: Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."

L. Software: PC-based product [**of**][**recommended by**] meter manufacturer, suitable for calculating utility cost allocation.

1. Utility Cost Allocation: Automatically import electricity-usage records to allocate electricity costs for the following:

a. At least [**15**]<**Insert number**> departments.
b. At least [**30**]<**Insert number**> tenants or activities.
c. At least [**five**]<**Insert number**> processes.
d. At least [**five**]<**Insert number**> buildings.
e. <**Insert entity**>.

2. Activity Billing Software: Automatically import electricity-usage records to automatically compute and prepare electricity-use statements[**and invoices**] based on electricity use[**and peak demand**]. Maintain separate directory for each allocation. Prepare summary reports in user-defined formats and time intervals.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with manufacturer's published instructions.

B. Reference Standards:

1. Install modular meter center according to switchboard installation requirements in NECA 400.
2. Install arc-flash labels as required by NFPA 70.

C. Special Techniques:

1. Install meters furnished by utility company. Install raceways and equipment according to utility company's published instructions. Provide empty conduits for metering leads and extend grounding connections as required by utility company.
2. Wiring Methods:

    a. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" and Section 260533.13 "Conduits for Electrical Systems."
    b. Install unshielded, twisted-pair cable for control and signal transmission conductors, complying with Section 271513 "Communications Copper Horizontal Cabling."
    c. Minimum conduit size is metric designator 16 (trade size 1/2).

3.2 IDENTIFICATION

A. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

1. Series Combination Warning Label: Self-adhesive labels, with text as required by NFPA 70.
2. Equipment Identification Labels: Self-adhesive labels with clear protective overlay. For residential meters, provide additional card holder suitable for [**printed, weather-resistant card**][**typewritten card**] with occupant's name.

3.3 FIELD QUALITY CONTROL

A. Acceptance Testing Preparation:

1. <**Insert requirements**>.

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

C. Tests and Inspections:

1. Equipment and Software Setup:

    a. Set meter date and time clock.
    b. Test, calibrate, and connect pulse metering system.
    c. Set and verify billing demand interval for demand meters.
    d. Report settings and calibration results.
    e. Set up reporting and billing software, insert billing location names and initial constant values and variable needed for billing computations.

2. Connect load of known power rating, [**1.5 kW**]<**Insert kilowatts**> minimum, to circuit supplied by metered feeder.
3. Turn off circuits supplied by metered feeder and secure them in off condition.
4. Run test load continuously for eight hours minimum, or longer, to obtain measurable meter

indication. Use test-load placement and setting that ensures continuous, safe operation.

5. Check and record meter reading at end of test period and compare with actual electricity used, based on test-load rating, duration of test, and sample measurements of supply voltage at test-load connection. Record test results.
6. Generate test report and billing for each tenant or activity from meter reading tests.

D. Nonconforming Work:

1. Electricity metering will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services:

1. Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

3.4 PROTECTION

A. After installation, protect metering equipment from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

3.5 MAINTENANCE

A. Software and Firmware Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software and firmware support for [**two**]<**Insert number**> years.
2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software and firmware upgrades that become available within [**two**]<**Insert number**> years from date of Substantial Completion.[**Verify that upgrading software includes operating system and new or revised licenses for using software.**]

    a. Upgrade Notice: No fewer than [**30**]<**Insert number**> days to allow Owner to schedule and access the system[**and to upgrade computer equipment if necessary.**]

3. Upgrade Reports: Prepare report after each update, documenting upgrades installed.

END OF SECTION 26 27 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 27 16 00 - ELECTRICAL CABINETS AND ENCLOSURES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cabinets and cutout boxes.
2. Termination boxes.
3. Miscellaneous enclosures.
4. Rack or frame systems.
5. Enclosure-mounted power distribution.

B. Products Installed, but Not Furnished, under This Section:

1. <**Insert products identified in "Existing Products to be Modified" Article or "Existing Products to be Removed and Reinstalled" Article**>.

C. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies temperature, humidity, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies seismic hazard, wind hazard, and other structural design conditions applicable to the Work specified in this Section.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
4. Section 078413 "Penetration Firestopping" specifies materials and methods for sealing penetrations of rated walls and partitions referenced by this Section.
5. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
6. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding for RBBs referenced by this Section.
7. Section 260573 "Power System Studies" specifies arc-flash hazard analysis and warning labels referenced by this Section.
8. Section 270528 "Pathways for Communications Systems"[**and Section 271100 "Communications Equipment Room Fittings"**] specifies additional requirements for raceway materials, routing, locations, and identification of communications equipment and cabling.

1.2 DEFINITIONS

A. RBB: Rack bonding busbar, located in equipment cabinets and racks.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Prepare and submit the following:

1. Shop Drawings for Custom Enclosures and Cabinets: Include plans, elevations, sections, and attachment details.
2. Shop Drawings for Racks or Frames:

    a. Include plans, elevations, sections, details, and attachments to other work.
    b. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
    c. Include workspace requirements and access for cable connections.
    d. Grounding: Indicate location of RBB and its mounting detail showing standoff insulators and wall-mounting brackets.

C. Sustainable Design Submittals:

1. Product data for sustainable design features for each type of product.

D. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturers' published instructions.

1.5 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures; conduct tests of complex equipment; analyze test and equipment data; plan a job; and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.

C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

D. Communications Testing and Inspecting Agency: Entity possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site communications testing supervisor must have [**BICSI Technician (TECH)**]<**Insert certification program**> certification and documented training, and be experienced with testing communications equipment in accordance with [**BICSI**]<**Insert code enforced by authorities having jurisdiction**> testing standards.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact the Work**>.

1. Sustainable Design Features:

a. Material Reuse: Product is salvaged, refurbished, or reused.

C. Accessories: <**Insert accessories included with existing product**>.

2.2 EXISTING PRODUCTS TO BE REMOVED AND REINSTALLED

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact the Work**>.

1. Sustainable Design Features:

a. Material Reuse: Product is salvaged, refurbished, or reused.

C. Accessories: <**Insert accessories included with existing product**>.

2.3 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2.4 CABINETS AND CUTOUT BOXES

A. UL CYIV - Indoor Sheet Metal Cabinets :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Adalet; division of Scott Fetzer Co.**]
c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
d. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
e. [**Erickson Electrical Equipment Company**]
f. [**FSR Inc.**]
g. [**Hoffman; brand of nVent Electrical plc**]
h. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]

i. [**Milbank Manufacturing Company**]
j. [**N J Sullivan Company**]
k. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
l. [**Robroy Enclosures; Robroy Industries**]
m. [**Siemens Industry, Inc., Building Technologies Division**]
n. [**Square D; Schneider Electric USA**]
o. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Adalet; division of Scott Fetzer Co.**]
c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
d. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
e. [**Erickson Electrical Equipment Company**]
f. [**FSR Inc.**]
g. [**Hoffman; brand of nVent Electrical plc**]
h. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
i. [**Milbank Manufacturing Company**]
j. [**N J Sullivan Company**]
k. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
l. [**Robroy Enclosures; Robroy Industries**]
m. [**Siemens Industry, Inc., Building Technologies Division**]
n. [**Square D; Schneider Electric USA**]
o. <**Insert manufacturer's name**>

3. Listing Criteria:

a. UL CCN CYIV.
b. Non-Environmental Characteristics: UL 50.
c. Environmental Characteristics: UL 50E.

4. Standard Features:

a. Enclosure provided with frame, mat, or trim in which swinging door or doors are or can be hung.
b. Degree of Protection: [**Type 1**][**Type 2**][**Type 5**][**Type 12**][**Type 12K**][**Type 13**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

B. UL CYIV - Indoor Sheet Metal Cutout Boxes :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Adalet; division of Scott Fetzer Co.**]
   c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
   d. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
   e. [**Erickson Electrical Equipment Company**]
   f. [**FSR Inc.**]
   g. [**Hoffman; brand of nVent Electrical plc**]
   h. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   i. [**Milbank Manufacturing Company**]
   j. [**N J Sullivan Company**]
   k. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   l. [**Robroy Enclosures; Robroy Industries**]
   m. [**Siemens Industry, Inc., Building Technologies Division**]
   n. [**Square D; Schneider Electric USA**]
   o. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Adalet; division of Scott Fetzer Co.**]
   c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
   d. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
   e. [**Erickson Electrical Equipment Company**]
   f. [**FSR Inc.**]
   g. [**Hoffman; brand of nVent Electrical plc**]
   h. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   i. [**Milbank Manufacturing Company**]
   j. [**N J Sullivan Company**]
   k. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   l. [**Robroy Enclosures; Robroy Industries**]
   m. [**Siemens Industry, Inc., Building Technologies Division**]
   n. [**Square D; Schneider Electric USA**]
   o. <**Insert manufacturer's name**>

3. Listing Criteria:

   a. UL CCN CYIV.
   b. Non-Environmental Characteristics: UL 50.
   c. Environmental Characteristics: UL 50E.

4. Standard Features:

   a. Enclosure that has swinging doors or covers secured directly to and telescoping with walls of enclosure.
   b. Degree of Protection: [**Type 1**][**Type 2**][**Type 5**][**Type 12**][**Type 12K**][**Type 13**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL CYIV - Outdoor Sheet Metal Cabinets :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Adalet; division of Scott Fetzer Co.**]
c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
d. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
e. [**Erickson Electrical Equipment Company**]
f. [**FSR Inc.**]
g. [**Hoffman; brand of nVent Electrical plc**]
h. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
i. [**Milbank Manufacturing Company**]
j. [**N J Sullivan Company**]
k. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
l. [**Robroy Enclosures; Robroy Industries**]
m. [**Siemens Industry, Inc., Building Technologies Division**]
n. [**Square D; Schneider Electric USA**]
o. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Adalet; division of Scott Fetzer Co.**]
c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
d. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
e. [**Erickson Electrical Equipment Company**]
f. [**FSR Inc.**]
g. [**Hoffman; brand of nVent Electrical plc**]
h. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
i. [**Milbank Manufacturing Company**]
j. [**N J Sullivan Company**]
k. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
l. [**Robroy Enclosures; Robroy Industries**]
m. [**Siemens Industry, Inc., Building Technologies Division**]
n. [**Square D; Schneider Electric USA**]

o. <**Insert manufacturer's name**>

3. Listing Criteria:

a. UL CCN CYIV.
b. Non-Environmental Characteristics: UL 50.
c. Environmental Characteristics: UL 50E.

4. Standard Features:

a. Enclosure provided with frame, mat, or trim in which swinging door or doors are or can be hung.
b. Degree of Protection: [**Type 3**][**Type 3X**][**Type 3R**][**Type 3RX**][**Type 3S**][**Type 3SX**][**Type 4**][**Type 4X**][**Type 6**][**Type 6P**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

D. UL CYIV - Outdoor Sheet Metal Cutout Boxes :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Adalet; division of Scott Fetzer Co.**]
c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
d. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
e. [**Erickson Electrical Equipment Company**]
f. [**FSR Inc.**]
g. [**Hoffman; brand of nVent Electrical plc**]
h. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
i. [**Milbank Manufacturing Company**]
j. [**N J Sullivan Company**]
k. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
l. [**Robroy Enclosures; Robroy Industries**]
m. [**Siemens Industry, Inc., Building Technologies Division**]
n. [**Square D; Schneider Electric USA**]
o. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the

following:

a. [**ABB, Electrification Business**]
b. [**Adalet; division of Scott Fetzer Co.**]
c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
d. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
e. [**Erickson Electrical Equipment Company**]
f. [**FSR Inc.**]
g. [**Hoffman; brand of nVent Electrical plc**]
h. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
i. [**Milbank Manufacturing Company**]
j. [**N J Sullivan Company**]
k. [**Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
l. [**Robroy Enclosures; Robroy Industries**]
m. [**Siemens Industry, Inc., Building Technologies Division**]
n. [**Square D; Schneider Electric USA**]
o. **<Insert manufacturer's name>**

3. Listing Criteria:

a. UL CCN CYIV.
b. Non-Environmental Characteristics: UL 50.
c. Environmental Characteristics: UL 50E.

4. Standard Features:

a. Enclosure that has swinging doors or covers secured directly to and telescoping with walls of enclosure.
b. Degree of Protection: [**Type 3**][**Type 3X**][**Type 3R**][**Type 3RX**][**Type 3S**][**Type 3SX**][**Type 4**][**Type 4X**][**Type 6**][**Type 6P**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.5 TERMINATION BOXES

A. Description: Enclosure for termination base consisting of lengths of bus bars, terminal strips, or terminal blocks with provision for wire connectors to accommodate incoming or outgoing conductors or both.

B. UL XCKT - Termination Boxes and Termination Bases for Installation on Line Side of Service Equipment :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB, Electrification Business**]
    b. [**Appleton; Emerson Electric Co., Automation Solutions**]
    c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
    d. [**Erickson Electrical Equipment Company**]
    e. [**Hoffman; brand of nVent Electrical plc**]
    f. [**Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    g. [**Milbank Manufacturing Company**]
    h. [**N J Sullivan Company**]
    i. [**Square D; Schneider Electric USA**]
    j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. [**Appleton; Emerson Electric Co., Automation Solutions**]
    c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
    d. [**Erickson Electrical Equipment Company**]
    e. [**Hoffman; brand of nVent Electrical plc**]
    f. [**Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    g. [**Milbank Manufacturing Company**]
    h. [**N J Sullivan Company**]
    i. [**Square D; Schneider Electric USA**]
    j. <**Insert manufacturer's name**>

3. Listing Criteria:

    a. UL CCN XCKT; including UL 1773.
    b. Non-Environmental Characteristics: UL 50.
    c. Environmental Characteristics: UL 50E.

4. Standard Features:

    a. Listed and labeled for installation on line side of service equipment.
    b. Indoor Degree of Protection: [**Type 1**][**Type 2**][**Type 5**][**Type 12**][**Type 12K**][**Type 13**].
    c. Outdoor Degree of Protection: [**Type 3**][**Type 3X**][**Type 3R**][**Type 3RX**][**Type 3S**][**Type 3SX**][**Type 4**][**Type 4X**][**Type 6**][**Type 6P**].

5. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard

development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. UL XCKT - Termination Boxes and Termination Bases for Installation on Load Side of Service Equipment :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Appleton; Emerson Electric Co., Automation Solutions**]
   c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
   d. [**Erickson Electrical Equipment Company**]
   e. [**Hoffman; brand of nVent Electrical plc**]
   f. [**Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   g. [**Milbank Manufacturing Company**]
   h. [**N J Sullivan Company**]
   i. [**Square D; Schneider Electric USA**]
   j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Appleton; Emerson Electric Co., Automation Solutions**]
   c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
   d. [**Erickson Electrical Equipment Company**]
   e. [**Hoffman; brand of nVent Electrical plc**]
   f. [**Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   g. [**Milbank Manufacturing Company**]
   h. [**N J Sullivan Company**]
   i. [**Square D; Schneider Electric USA**]
   j. <**Insert manufacturer's name**>

3. Listing Criteria:

   a. UL CCN XCKT; including UL 1773.
   b. Non-Environmental Characteristics: UL 50.
   c. Environmental Characteristics: UL 50E.

4. Standard Features:

   a. Listed and labeled for installation on load side of service equipment.
   b. Indoor Degree of Protection: [**Type 1**][**Type 2**][**Type 5**][**Type 12**][**Type 12K**][**Type 13**].
   c. Outdoor Degree of Protection: [**Type 3**][**Type 3X**][**Type 3R**][**Type 3RX**][**Type 3S**][**Type 3SX**][**Type 4**][**Type 4X**][**Type 6**][**Type 6P**].

5. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts

of extraction operations and activities associated with product and its supply chain.

b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.6 MISCELLANEOUS ENCLOSURES

A. UL XCKT or NWIN - Indoor Sheet Metal Miscellaneous Enclosures :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Appleton; Emerson Electric Co., Automation Solutions**]
   c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
   d. [**Erickson Electrical Equipment Company**]
   e. [**Hoffman; brand of nVent Electrical plc**]
   f. [**Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   g. [**Milbank Manufacturing Company**]
   h. [**N J Sullivan Company**]
   i. [**Square D; Schneider Electric USA**]
   j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Appleton; Emerson Electric Co., Automation Solutions**]
   c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
   d. [**Erickson Electrical Equipment Company**]
   e. [**Hoffman; brand of nVent Electrical plc**]
   f. [**Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   g. [**Milbank Manufacturing Company**]
   h. [**N J Sullivan Company**]
   i. [**Square D; Schneider Electric USA**]
   j. <**Insert manufacturer's name**>

3. Listing Criteria:

   a. UL CCN XCKT; including UL 1773; or UL CCN NWIN, including UL 2416.
   b. Non-Environmental Characteristics: UL 50.
   c. Environmental Characteristics: UL 50E.

4. Standard Features:

a. Degree of Protection: [**Type 1**][**Type 2**][**Type 5**][**Type 12**][**Type 12K**][**Type 13**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

B. UL XCKT or NWIN - Outdoor Sheet Metal Miscellaneous Enclosures :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Appleton; Emerson Electric Co., Automation Solutions**]
c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
d. [**Erickson Electrical Equipment Company**]
e. [**Hoffman; brand of nVent Electrical plc**]
f. [**Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
g. [**Milbank Manufacturing Company**]
h. [**N J Sullivan Company**]
i. [**Square D; Schneider Electric USA**]
j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Appleton; Emerson Electric Co., Automation Solutions**]
c. [**Cooper B-line; brand of Eaton, Electrical Sector**]
d. [**Erickson Electrical Equipment Company**]
e. [**Hoffman; brand of nVent Electrical plc**]
f. [**Metron; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
g. [**Milbank Manufacturing Company**]
h. [**N J Sullivan Company**]
i. [**Square D; Schneider Electric USA**]
j. <**Insert manufacturer's name**>

3. Listing Criteria:

a. UL CCN XCKT; including UL 1773; or UL CCN NWIN, including UL 2416.
b. Non-Environmental Characteristics: UL 50.

c. Environmental Characteristics: UL 50E.

4. Standard Features:

a. Degree of Protection: [**Type 3**][**Type 3X**][**Type 3R**][**Type 3RX**][**Type 3S**][**Type 3SX**][**Type 4**][**Type 4X**][**Type 6**][**Type 6P**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

2.7 RACK OR FRAME SYSTEMS

A. Description: This category covers rack or frame systems that are not complete but include components and assemblies that are intended to power, protect, heat, cool, or otherwise support electrical or electronic equipment that will be installed at a later time.

B. UL NWIN - 19 Inch Open Equipment Rack :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Inc.**]
b. [**Black Box Corporation**]
c. [**Bud Industries, Inc.**]
d. [**CommScope, Inc**]
e. [**Cooper B-line; brand of Eaton, Electrical Sector**]
f. [**Dell Technologies Inc.**]
g. [**Hammond Mfg. Co. Inc**]
h. [**Hoffman; brand of nVent Electrical plc**]
i. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
j. [**Kendall Howard**]
k. [**Leviton Manufacturing Co., Inc.**]
l. [**Liebert; Vertiv Holdings Co.**]
m. [**Middle Atlantic Products; Legrand North America, LLC**]
n. [**Ortronics, Inc.**]
o. [**Panduit Corp**]
p. [**Siemon Co. (The)**]
q. [**Tripp-Lite**]
r. **<Insert manufacturer's name>**

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Belden Inc.**]
    b. [**Black Box Corporation**]
    c. [**Bud Industries, Inc.**]
    d. [**CommScope, Inc**]
    e. [**Cooper B-line; brand of Eaton, Electrical Sector**]
    f. [**Dell Technologies Inc.**]
    g. [**Hammond Mfg. Co. Inc**]
    h. [**Hoffman; brand of nVent Electrical plc**]
    i. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    j. [**Kendall Howard**]
    k. [**Leviton Manufacturing Co., Inc.**]
    l. [**Liebert; Vertiv Holdings Co.**]
    m. [**Middle Atlantic Products; Legrand North America, LLC**]
    n. [**Ortronics, Inc.**]
    o. [**Panduit Corp**]
    p. [**Siemon Co. (The)**]
    q. [**Tripp-Lite**]
    r. <**Insert manufacturer's name**>

3. Listing Criteria:

    a. UL CCN NWIN; including UL 2416.
    b. Non-Environmental Characteristics: UL 50.
    c. Environmental Characteristics: UL 50E or UL 2416.

4. Standard Features:

    a. Threaded rails designed for mounting telecommunications equipment.
    b. Width: Compatible with EIA/ECIA 310-E, **19 inch (482.6 mm)** equipment mounting with an opening of **17.72 inch (450 mm)** between rails.
    c. Frames: Modular units designed for telecommunications terminal support and coordinated with dimensions of units to be supported.
    d. Finish: Manufacturer's standard, baked-polyester powder coat.
    e. Cable Management:

        1) Metal, with integral wire retaining fingers.
        2) Baked-polyester powder coat finish.
        3) Vertical cable management panels have front and rear channels with covers.
        4) Horizontal crossover cable manager at top of each relay rack, with minimum height of two rack units each.

    f. Configuration: [**Two post**][**and**][**four post**].
    g. Material: [**Extruded steel**][**Extruded aluminum**][**Sheet steel**][**Sheet aluminum**].

5. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted,

manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Color: [**Black**]<**Insert color**>.

b. Floor-Mounted Racks:

1) Overall Height: [**72 inch (1828.8 mm)**][**84 inch (2133.6 mm)**][**As indicated on Drawings**]<**Insert value**>.
2) Overall Depth: [**23 inch (584.2 mm)**][**29 inch (736.6 mm)**]<**Insert value**>.
3) Rail Depth: [**3 inch (76.2 mm)**][**6 inch (152.4 mm)**]<**Insert value**>
4) Two-Post Load Rating: [**200 lb (91 kg)**][**400 lb (181 kg)**]<**Insert value**>.
5) Four-Post Load Rating: [**1000 lb (454 kg)**][**2000 lb (907 kg)**]<**Insert value**>.
6) Number of Rack Units per Rack: [**38**][**42**][**45**][**52**][**58**][**As indicated on Drawings**]<**Insert number**>.

a) Numbering: [**Every**][**Every five**] rack unit(s), on interior of rack.

7) Threads: [**10-32**][**12-24**][**Universal square**].
8) Vertical and horizontal cable management channels, top and bottom cable troughs, grounding lug[**, and a power strip**].
9) Base must have minimum four mounting holes for permanent attachment to floor.
10) Top must have provisions for attaching to cable tray or ceiling.
11) Self-leveling.

c. Wall-Mounted Racks:

1) Height: [**18 inch (457.2 mm)**][**22 inch (558.8 mm)**][**As indicated on Drawings**]<**Insert value**>.
2) Depth: [**23 inch (584.2 mm)**][**29 inch (736.6 mm)**]<**Insert value**>.
3) Load Rating: [**150 lb (65 kg)**][**200 lb (91 kg)**]<**Insert value**>.
4) Number of Rack Units per Rack: [**8**][**12**][**22**][**As indicated on Drawings**]<**Insert number**>.
5) Threads: [**10-32**][**12-24**][**Universal square**].
6) Wall Attachment: Four pre-punched mounting holes.
7) Equipment Access: Integral swing.

C. UL NWIN - 19 Inch Enclosed Equipment Rack :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Inc.**]
b. [**Black Box Corporation**]
c. [**Bud Industries, Inc.**]
d. [**Chatsworth Products, Inc.**]

e. [**CommScope, Inc**]
f. [**Cooper B-line; brand of Eaton, Electrical Sector**]
g. [**Hoffman; brand of nVent Electrical plc**]
h. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
i. [**Kendall Howard**]
j. [**Leviton Manufacturing Co., Inc.**]
k. [**Liebert; Vertiv Holdings Co.**]
l. [**Middle Atlantic Products; Legrand North America, LLC**]
m. [**Ortronics, Inc.**]
n. [**Panduit Corp**]
o. [**Siemon Co. (The)**]
p. [**Tripp-Lite**]
q. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**Black Box Corporation**]
c. [**Bud Industries, Inc.**]
d. [**Chatsworth Products, Inc.**]
e. [**CommScope, Inc**]
f. [**Cooper B-line; brand of Eaton, Electrical Sector**]
g. [**Hoffman; brand of nVent Electrical plc**]
h. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
i. [**Kendall Howard**]
j. [**Leviton Manufacturing Co., Inc.**]
k. [**Liebert; Vertiv Holdings Co.**]
l. [**Middle Atlantic Products; Legrand North America, LLC**]
m. [**Ortronics, Inc.**]
n. [**Panduit Corp**]
o. [**Siemon Co. (The)**]
p. [**Tripp-Lite**]
q. <**Insert manufacturer's name**>

3. Listing Criteria:

a. UL CCN NWIN; including UL 2416.
b. Non-Environmental Characteristics: UL 50.
c. Environmental Characteristics: UL 50E or UL 2416.

4. Standard Features:

a. Manufacturer-assembled four-post frame enclosed by side and top panels and front and rear doors, designed for mounting telecommunications equipment.
b. Threaded rails designed for mounting telecommunications equipment.
c. Width: Compatible with EIA/ECIA 310-E, **19 inch (482.6 mm)** equipment mounting with an opening of **17.72 inch (450 mm)** between rails.
d. Frames: Modular units designed for telecommunications terminal support and coordinated with dimensions of units to be supported.
e. Finish: Manufacturer's standard, baked-polyester powder coat.
f. Cable Management:

1) Metal, with integral wire retaining fingers.
2) Baked-polyester powder coat finish.
3) Vertical cable management panels have front and rear channels with covers.
4) Horizontal crossover cable manager at top of each relay rack, with minimum height of two rack units each.

g. Material: [**Extruded steel**][**Extruded aluminum**][**Sheet steel**][**Sheet aluminum**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Color: [**Black**]<**Insert color**>.
b. Modular Freestanding Cabinets:

1) Overall Height: [**72 inch (1828.8 mm)**][**84 inch (2133.6 mm)**][**As indicated on Drawings**]<**Insert value**>.
2) Overall Depth: [**23 inch (584.2 mm)**][**29 inch (736.6 mm)**]<**Insert value**>.
3) Load Rating: [**3000 lb (1362 kg)**]<**Insert value**>.
4) Number of Rack Units: [**38**][**42**][**45**][**52**][**58**][**As indicated on Drawings**]<**Insert number**>.

a) Numbering: [**Every**][**Every five**] rack unit(s), on interior of rack.

5) Threads: [**10-32**][**12-24**][**Universal square**].
6) Removable and lockable side and top panels.
7) Hinged and lockable front and rear doors.
8) Adjustable feet for leveling.
9) Screened ventilation openings in roof and rear door.
10) Cable access provisions in roof and base.
11) RBB.
12) [**Rack**][**Roof**]-mounted, **550 cfm (260 L/s)** fan with filter.
13) Power strip.
14) All cabinets keyed alike.

c. Modular Wall Cabinets:

1) Height: [**18 inch (457.2 mm)**][**22 inch (558.8 mm)**][**As indicated on Drawings**]<**Insert value**>.
2) Depth: [**23 inch (584.2 mm)**][**29 inch (736.6 mm)**]<**Insert value**>.
3) Load Rating: [**150 lb (65 kg)**][**200 lb (91 kg)**]<**Insert value**>.
4) Number of Rack Units: [**8**][**12**][**22**][**As indicated on Drawings**]<**Insert number**>.

5) Threads: [**10-32**][**12-24**][**Universal square**].
6) Lockable front[**and rear**] doors.
7) Louvered side panels.
8) Cable access provisions top and bottom.
9) Grounding lug.
10) [**Rack**][**Roof**]-mounted, **250 cfm (118 L/s)** fan.
11) Power strip.
12) All cabinets keyed alike.

D. UL NWIN - 23 Inch Open Equipment Rack :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Inc.**]
b. [**Black Box Corporation**]
c. [**CommScope, Inc**]
d. [**Cooper B-line; brand of Eaton, Electrical Sector**]
e. [**Hoffman; brand of nVent Electrical plc**]
f. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
g. [**Kendall Howard**]
h. [**Leviton Manufacturing Co., Inc.**]
i. [**Liebert; Vertiv Holdings Co.**]
j. [**Middle Atlantic Products; Legrand North America, LLC**]
k. [**Ortronics, Inc.**]
l. [**Panduit Corp**]
m. [**Siemon Co. (The)**]
n. [**Tripp-Lite**]
o. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**Black Box Corporation**]
c. [**CommScope, Inc**]
d. [**Cooper B-line; brand of Eaton, Electrical Sector**]
e. [**Hoffman; brand of nVent Electrical plc**]
f. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
g. [**Kendall Howard**]
h. [**Leviton Manufacturing Co., Inc.**]
i. [**Liebert; Vertiv Holdings Co.**]
j. [**Middle Atlantic Products; Legrand North America, LLC**]
k. [**Ortronics, Inc.**]
l. [**Panduit Corp**]
m. [**Siemon Co. (The)**]
n. [**Tripp-Lite**]
o. <**Insert manufacturer's name**>

3. Listing Criteria:

a. UL CCN NWIN; including UL 2416.
b. Non-Environmental Characteristics: UL 50.
c. Environmental Characteristics: UL 50E or UL 2416.

4. Standard Features:

a. Threaded rails designed for mounting telecommunications equipment.
b. Width: Compatible with **23 inch (584.2 mm)** equipment mounting.
c. Frames: Modular units designed for telecommunications terminal support and coordinated with dimensions of units to be supported.
d. Finish: Manufacturer's standard, baked-polyester powder coat.
e. Cable Management:

1) Metal, with integral wire retaining fingers.
2) Baked-polyester powder coat finish.
3) Vertical cable management panels have front and rear channels with covers.
4) Horizontal crossover cable manager at top of each relay rack, with minimum height of two rack units each.

f. Configuration: [**Two post**][**and**][**four post**].
g. Material: [**Extruded steel**][**Extruded aluminum**][**Sheet steel**][**Sheet aluminum**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Color: [**Black**]<**Insert color**>.
b. Floor-Mounted Racks:

1) Overall Height: [**72 inch (1828.8 mm)**][**84 inch (2133.6 mm)**][**As indicated on Drawings**]<**Insert value**>.
2) Overall Depth: [**23 inch (584.2 mm)**][**29 inch (736.6 mm)**]<**Insert value**>.
3) Rail Depth: [**3 inch (76.2 mm)**][**6 inch (152.4 mm)**]<**Insert value**>
4) Two-Post Load Rating: [**200 lb (91 kg)**][**400 lb (181 kg)**]<**Insert value**>.
5) Four-Post Load Rating: [**1000 lb (454 kg)**][**2000 lb (907 kg)**]<**Insert value**>.
6) Number of Rack Units per Rack: [**38**][**42**][**45**][**52**][**58**][**As indicated on Drawings**]<**Insert number**>.

a) Numbering: [**Every**][**Every five**] rack unit(s), on interior of rack.

7) Threads: [**10-32**][**12-24**][**Universal square**].
8) Vertical and horizontal cable management channels, top and bottom cable troughs,

grounding lug[, **and a power strip**].
9) Base must have minimum four mounting holes for permanent attachment to floor.
10) Top must have provisions for attaching to cable tray or ceiling.
11) Self-leveling.

c. Wall-Mounted Racks:

1) Height: [**18 inch (457.2 mm)**][**22 inch (558.8 mm)**][**As indicated on Drawings**]<**Insert value**>.
2) Depth: [**23 inch (584.2 mm)**][**29 inch (736.6 mm)**]<**Insert value**>.
3) Load Rating: [**150 lb (65 kg)**][**200 lb (91 kg)**]<**Insert value**>.
4) Number of Rack Units per Rack: [**8**][**12**][**22**][**As indicated on Drawings**]<**Insert number**>.
5) Threads: [**10-32**][**12-24**][**Universal square**].
6) Wall Attachment: Four pre-punched mounting holes.
7) Equipment Access: Integral swing.

E. UL NWIN - 23 Inch Enclosed Equipment Rack :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Inc.**]
b. [**Black Box Corporation**]
c. [**CommScope, Inc**]
d. [**Cooper B-line; brand of Eaton, Electrical Sector**]
e. [**Dell Technologies Inc.**]
f. [**Hoffman; brand of nVent Electrical plc**]
g. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
h. [**Kendall Howard**]
i. [**Leviton Manufacturing Co., Inc.**]
j. [**Liebert; Vertiv Holdings Co.**]
k. [**Middle Atlantic Products; Legrand North America, LLC**]
l. [**Ortronics, Inc.**]
m. [**Panduit Corp**]
n. [**Siemon Co. (The)**]
o. [**Tripp-Lite**]
p. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Belden Inc.**]
b. [**Black Box Corporation**]
c. [**CommScope, Inc**]
d. [**Cooper B-line; brand of Eaton, Electrical Sector**]
e. [**Dell Technologies Inc.**]
f. [**Hoffman; brand of nVent Electrical plc**]
g. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
h. [**Kendall Howard**]

i. [**Leviton Manufacturing Co., Inc.**]
j. [**Liebert; Vertiv Holdings Co.**]
k. [**Middle Atlantic Products; Legrand North America, LLC**]
l. [**Ortronics, Inc.**]
m. [**Panduit Corp**]
n. [**Siemon Co. (The)**]
o. [**Tripp-Lite**]
p. <**Insert manufacturer's name**>

3. Listing Criteria:

a. UL CCN NWIN; including UL 2416.
b. Non-Environmental Characteristics: UL 50.
c. Environmental Characteristics: UL 50E or UL 2416.

4. Standard Features:

a. Manufacturer-assembled four-post frame enclosed by side and top panels and front and rear doors, designed for mounting telecommunications equipment.
b. Threaded rails designed for mounting telecommunications equipment.
c. Width: Compatible with **23 inch (584.2 mm)** equipment mounting.
d. Frames: Modular units designed for telecommunications terminal support and coordinated with dimensions of units to be supported.
e. Finish: Manufacturer's standard, baked-polyester powder coat.
f. Cable Management:

1) Metal, with integral wire retaining fingers.
2) Baked-polyester powder coat finish.
3) Vertical cable management panels have front and rear channels with covers.
4) Horizontal crossover cable manager at top of each relay rack, with minimum height of two rack units each.

g. Material: [**Extruded steel**][**Extruded aluminum**][**Sheet steel**][**Sheet aluminum**].

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

a. Color: [**Black**]<**Insert color**>.
b. Modular Freestanding Cabinets:

1) Overall Height: [**72 inch (1828.8 mm)**][**84 inch (2133.6 mm)**][**As indicated on**

Drawings]<**Insert value**>.
2) Overall Depth: [**23 inch (584.2 mm)**][**29 inch (736.6 mm)**]<**Insert value**>.
3) Load Rating: [**3000 lb (1362 kg)**]<**Insert value**>.
4) Number of Rack Units: [**38**][**42**][**45**][**52**][**58**][**As indicated on Drawings**]<**Insert number**>.

a) Numbering: [**Every**][**Every five**] rack unit(s), on interior of rack.

5) Threads: [**10-32**][**12-24**][**Universal square**].
6) Removable and lockable side and top panels.
7) Hinged and lockable front and rear doors.
8) Adjustable feet for leveling.
9) Screened ventilation openings in roof and rear door.
10) Cable access provisions in roof and base.
11) RBB.
12) [**Rack**][**Roof**]-mounted, **550 cfm (260 L/s)** fan with filter.
13) Power strip.
14) All cabinets keyed alike.

c. Modular Wall Cabinets:

1) Height: [**18 inch (457.2 mm)**][**22 inch (558.8 mm)**][**As indicated on Drawings**]<**Insert value**>.
2) Depth: [**23 inch (584.2 mm)**][**29 inch (736.6 mm)**]<**Insert value**>.
3) Load Rating: [**150 lb (65 kg)**][**200 lb (91 kg)**]<**Insert value**>.
4) Number of Rack Units: [**8**][**12**][**22**][**As indicated on Drawings**]<**Insert number**>.
5) Threads: [**10-32**][**12-24**][**Universal square**].
6) Lockable front[**and rear**] doors.
7) Louvered side panels.
8) Cable access provisions top and bottom.
9) Grounding lug.
10) [**Rack**][**Roof**]-mounted, **250 cfm (118 L/s)** fan.
11) Power strip.
12) All cabinets keyed alike.

2.8 ENCLOSURE-MOUNTED POWER DISTRIBUTION

A. Description: This category covers relocatable power taps and power distribution units.

B. UL XBYS - Enclosure-Mounted Relocatable Power Tap :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. <**Insert manufacturer's name**>

3. Listing Criteria: UL CCN XBYS; including UL 1363.
4. Standard Features:

    a. Rocker-type on-off switch, illuminated when in on position.
    b. LED indicator lights for power and protection status.
    c. LED indicator lights for reverse polarity and open outlet ground.

5. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
    e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

    a. Wiring Devices: [**Six**]<**Insert quantity**>[**5-15R**][**5-20R**]<**Insert type**> receptacles.
    b. Circuit Breaker and Thermal Fusing: [**When protection is lost, circuit opens and cannot be reset**][**Unit continues to supply power if protection is lost**].
    c. Cord Length: [**Close-coupled, direct plug-in**][**15 ft (4.5 m)**].
    d. Surge Protection: Type 3 SPDs.

        1) Peak Single-Impulse Surge Current Rating: [**33**][**26**][**13**] kA per phase.
        2) Protection modes must be line to neutral, line to ground, and neutral to ground. UL 1449 clamping voltage for all three modes may not be more than [**330 V**]<**Insert value**>.

C. UL QPQY - Rack-Mounted Power Distribution Center :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB, Electrification Business**]
    b. [**Fujitsu Network Communications**]
    c. [**Vertiv Co.**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB, Electrification Business**]
    b. [**Fujitsu Network Communications**]
    c. [**Vertiv Co.**]
    d. <**Insert manufacturer's name**>

3. Listing Criteria: UL CCN QPQY; including UL 62368-1 or UL 60950-1, in addition to UL Subject 1801.
4. Standard Features:

    a. Input Voltage: [**120 V**][**208 V**][**120/208 V**][**208Y/120 V**][**208 V Delta**].
    b. Input Current: [**15 A**][**20 A**][**30 A**].
    c. Output Receptacle Types and Quantities:

        1) 5-15R: [**6**][**8**][**10**][**12**][**14**][**20**].
        2) 5-20R: [**6**][**10**][**12**][**20**].
        3) L5-20R: [**6**][**12**][**24**].
        4) L5-30R: 6.
        5) L6-20R: [**1**][**12**][**20**][**24**].
        6) L6-30R: [**1**][**6**].
        7) L21-30R: 1.

5. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide [**third-party-verified**]corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.
    b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.
    c. Regional Materials (IgCC/ASHRAE 189.1): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.
    d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.
    e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Other Available Features Required by the Project:

    a. Rack transfer switch.
    b. Switched receptacles.
    c. Monitoring: [**Unit level**][**Outlet level**].
    d. Sensors:

        1) Temperature: [**1**][**3**].
        2) Humidity.
        3) Dew point.
        4) Airflow.
        5) Plug-and-play dry contact.
        6) Door position.
        7) Water.
        8) Power failure.

PART 3 - EXECUTION

3.1 SELECTION OF ELECTRICAL CABINETS AND ENCLOSURES

A. Unless more stringent requirements are specified in Contract Documents or manufacturers' written

instructions, comply with NFPA 70 for selection of electrical cabinets and enclosures. Consult Architect for resolution of conflicting requirements.

B. Degree of Protection:

1. Outdoors:

a. [**Type 3R**][**Type 4**][**Type 3**] unless otherwise indicated.
b. Locations Exposed to Hosedown: [**Type 4**][**Type 6**][**Type 6P**].
c. Locations Subject to Potential Flooding: Type 6P.
d. Locations Aboveground Where Mechanism Must Operate When Ice Covered: Type 3S.
e. Locations in-Ground or Exposed to Corrosive Agents: [**Type 4X**][**Type 6P**][**Type 3RX**].
f. Locations in-Ground or Exposed to Corrosive Agents Where Mechanism Must Operate When Ice Covered: Type 3SX.

2. Indoors:

a. Type 1 unless otherwise indicated.
b. Damp or Dusty Locations: [**Type 12**][**Type 2**][**Type 4**][**Type 5**].
c. Surface Mounted in Kitchens and Other Locations Exposed to Oil or Coolants: Type 12.
d. Flush Mounted in Kitchens and Other Locations Exposed to Oil or Coolants: [**Type 12**][**Type 12K**].
e. Locations Exposed to Airborne Dust, Lint, Fibers, or Flyings: [**Type 4**][**Type 6**].
f. Locations Exposed to Hosedown: [**Type 4**][**Type 6**][**Type 6P**].
g. Locations Exposed to Brief Submersion: [**Type 6**][**Type 6P**].
h. Locations Exposed to Prolonged Submersion: Type 6P.
i. Locations Exposed to Corrosive Agents: [**Type 4X**][**Type 6P**].
j. Locations Exposed to Spraying Oil or Coolants: Type 13.

3.2 INSTALLATION OF ELECTRICAL CABINETS AND ENCLOSURES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in Contract Documents or manufacturers' published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
4. Communications Work: BICSI N1.
5. Work in ITE Rooms: NFPA 75.
6. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
7. Cabinets and Cutout Boxes: Article 312 of NFPA 70.
8. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Mount cabinets and enclosures at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to [**center**][**top**][**bottom**] of box unless otherwise indicated.
2. Do not install cabinets, enclosures, or fittings in contact with concrete or earth.
3. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to ensure a continuous ground path.
4. Identification: Provide labels for cabinets, enclosures, racks and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Provide warning signs.
c. Label each cabinet, enclosure, and rack with engraved metal or laminated-plastic nameplate.

D. Interfaces with Other Work:

1. Firestop penetrations of rated walls and partitions.
2. Ground and bond RBBs in cabinets, enclosures, and racks.
3. Apply arc-flash hazard warning labels cabinets, enclosures, and racks.
4. Coordinate installation of new products for <**Insert system or product family/category**> with existing conditions.

a. <**Insert requirements for transition between new and existing**>.

5. Coordinate with <**Insert Section number and title**> for <**Insert description of interfacing related Work**>.

a. <**Insert requirements for transition between this Section and related Work**>.

3.3 FIELD QUALITY CONTROL OF ELECTRICAL CABINETS AND ENCLOSURES

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Administrant for Communications Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified communications testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified communications testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

D. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.

E. Nonconforming Work:

1. Cabinet, enclosure, or rack will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

3.4 CLEANING

A. Remove construction dust and debris from cabinets, enclosures, and racks.

3.5 PROTECTION

A. Protect coatings and finishes of cabinets, enclosures, and racks from damage and deterioration.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

SECTION 26 27 19 00 - MULTI-OUTLET ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Wall-mounted, surface metal raceway multi-outlet assemblies.
2. Wall-mounted, surface nonmetallic raceway multi-outlet assemblies.
3. Floor-mounted, recessed metal raceway multi-outlet assemblies.
4. Indoor service poles.
5. Floor-mounted, enclosure multi-outlet assemblies.
6. Fire-rated, poke-through assemblies.
7. Above-floor service fittings.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. Section 260533.13 "Conduits for Electrical Systems" and Section 260533.23 "Surface Raceways for Electrical Systems" for raceways.
4. Section 260533.16 "Boxes and Covers for Electrical Systems" for floor boxes and covers.
5. Section 262726 "Wiring Devices" for receptacles and switches.
6. Section 271513 "Communications Copper Horizontal Cabling" for control-voltage communications outlet devices.

1.2 ACTION SUBMITTALS

A. Product Data:

1. Wall-mounted, surface metal raceway multi-outlet assemblies.
2. Wall-mounted, surface nonmetallic raceway multi-outlet assemblies.
3. Floor-mounted, recessed metal raceway multi-outlet assemblies.
4. Indoor service poles.
5. Floor-mounted, enclosure multi-outlet assemblies.
6. Fire-rated, poke-through assemblies.
7. Above-floor service fittings.

PART 2 - PRODUCTS

2.1 WALL-MOUNTED, SURFACE METAL RACEWAY MULTI-OUTLET ASSEMBLIES

A. Description: Two-piece surface metal raceway, field assembled and wired or with factory-wired multi-outlet harness, including outlets.

B. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.

C. General Characteristics:

1. Reference Standards: UL 5 for exposed power raceway and fittings. Multi-outlet assemblies used for communications or data must also comply with UL 5C for exposed communications raceway and fittings, and UL 2024 for communications cable routing.
2. Provide separate paths for management of telecommunications and power cables.

D. Source Limitations: Obtain products from single manufacturer designed for use as complete, matching assembly of raceways, receptacles, and switches.

E. Wall-Mounted, Surface Metal Raceway Power Multi-Outlet Assembly :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    b. [**Wiremold; Legrand North America, LLC**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    b. [**Wiremold; Legrand North America, LLC**]
    c. <**Insert manufacturer's name**>

3. Options:

    a. Material: [**Steel**][**Aluminum**], with manufacturer's standard finish.
    b. Color: <**Indicate color**>.
    c. Power Outlets: <**Indicate receptacle type**> in accordance with Section 262726 "Wiring Devices."
    d. Power Outlet Spacing: [**6 inch (150 mm)**][**9 inch (230 mm)**][**12 inch (300 mm)**][**18 inch (460 mm)**].
    e. Wiring: [**Single circuit**][**Two circuits, connecting alternating receptacles or switches,**] in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

F. Wall-Mounted, Surface Metal Raceway Power and Communications Multi-Outlet Assembly :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell**

Incorporated]
b. [**Wiremold; Legrand North America, LLC**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Wiremold; Legrand North America, LLC**]
c. <**Insert manufacturer's name**>

3. Options:

a. Material: [**Steel**][**Aluminum**], with manufacturer's standard finish.
b. Color: <**Indicate color**>.
c. Power Outlets: <**Indicate receptacle type**> in accordance with Section 262726 "Wiring Devices."
d. Power Outlet Spacing: [**6 inch (150 mm)**][**9 inch (230 mm)**][**12 inch (300 mm)**][**18 inch (460 mm)**].
e. Power Wiring: [**Single circuit**][**Two circuits, connecting alternating receptacles or switches,**] in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
f. Voice and Data Communication Outlets: <**Indicate quantity**>[**blank insert with bushed cable opening**][**8PSJ jacks**] complying with requirements in Section 271500 "Communications Horizontal Cabling."
g. A minimum of [**two**][**four**] four-pair cables in accordance with Section 271513 "Communications Copper Horizontal Cabling" for each outlet.

2.2 WALL-MOUNTED, SURFACE NONMETALLIC RACEWAY MULTI-OUTLET ASSEMBLIES

A. Description: Two-piece surface nonmetallic raceway, field assembled and wired or with factory-wired multi-outlet harness, including outlets.

B. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.

C. General Characteristics:

1. Reference Standards: UL 5A for exposed power raceway and fittings, UL 5C for exposed communications raceway and fittings, and UL 2024 for communications cable routing.
2. Provide separate paths for management of telecommunications and power cables.

D. Source Limitations: Obtain products from single manufacturer designed for use as complete, matching assembly of raceways, receptacles, and switches.

E. Wall-Mounted, Surface Nonmetallic Raceway Power Multi-Outlet Assembly :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Wiremold; Legrand North America, LLC**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Wiremold; Legrand North America, LLC**]
c. <**Insert manufacturer's name**>

3. Options:

a. Material: [**PVC**]<**Indicate material**>.
b. Color: <**Indicate color**>.
c. Power Outlets: <**Indicate receptacle type**> in accordance with Section 262726 "Wiring Devices."
d. Power Outlet Spacing: [**6 inch (150 mm)**][**9 inch (230 mm)**][**12 inch (300 mm)**][**18 inch (460 mm)**].
e. Wiring: [**Single circuit**][**Two circuits, connecting alternating receptacles or switches,**] in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

F. Wall-Mounted, Surface Nonmetallic Raceway Power and Communications Multi-Outlet Assembly :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Wiremold; Legrand North America, LLC**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Wiremold; Legrand North America, LLC**]
c. <**Insert manufacturer's name**>

3. Options:

a. Material: [**PVC**]<**Indicate material**>.
b. Color: <**Indicate color**>.
c. Power Outlets: <**Indicate receptacle type**> in accordance with Section 262726 "Wiring Devices."
d. Power Outlet Spacing: [**6 inch (150 mm)**][**9 inch (230 mm)**][**12 inch (300 mm)**][**18 inch (460 mm)**].

e. Power Wiring: [**Single circuit**][**Two circuits, connecting alternating receptacles or switches,**] in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
f. Voice and Data Communication Outlets: <**Indicate quantity**>[**blank insert with bushed cable opening**][**8PSJ jacks**] complying with requirements in Section 271500 "Communications Horizontal Cabling."
g. A minimum of [**two**][**four**] four-pair cables in accordance with Section 271513 "Communications Copper Horizontal Cabling" for each outlet.

2.3 FLOOR-MOUNTED, RECESSED METAL RACEWAY MULTI-OUTLET ASSEMBLIES

A. Description: Two-piece flush-mounted, in-floor, metal raceway, with factory-wired multi-outlet harness, for installation flush in floor or under floor finish.

B. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.

C. General Characteristics:

1. Reference Standards: UL 5 for exposed power raceway and fittings, UL 5C for exposed communications raceway and fittings, and UL 2024 for communications cable routing.
2. Provide separate paths for management of telecommunications and power cables.

D. Source Limitations: Obtain products from single manufacturer designed for use as complete, matching assembly of raceways and receptacles.

E. Floor-Mounted, Recessed Metal Raceway Power Multi-Outlet Assembly :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Wiremold; Legrand North America, LLC**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Wiremold; Legrand North America, LLC**]
c. <**Insert manufacturer's name**>

3. Options:

a. Load-Bearing Capacity: [**1000 lb (450 kg)**]<**Indicate capacity**>.
b. Material: [**Steel**][**Aluminum**], with manufacturer's standard finish.
c. Color: <**Indicate color**>.
d. Power Outlets: <**Indicate quantity**><**Indicate receptacle type**> in accordance with Section 262726 "Wiring Devices" in surface-mounted enclosure capable of mounting

anywhere along length of recessed raceway.

e. Wiring: [**Single circuit**][**Two circuits, connecting alternating receptacles,**] in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

F. Floor-Mounted, Recessed Metal Raceway Power and Communications Multi-Outlet Assembly :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Wiremold; Legrand North America, LLC**]
   c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Wiremold; Legrand North America, LLC**]
   c. <**Insert manufacturer's name**>

3. Options:

   a. Load-Bearing Capacity: [**1000 lb (450 kg)**]<**Indicate capacity**>.
   b. Material: [**Steel**][**Aluminum**], with manufacturer's standard finish.
   c. Color: <**Indicate color**>.
   d. Power Outlets: <**Indicate quantity**><**Indicate receptacle type**> in accordance with Section 262726 "Wiring Devices" in surface-mounted enclosure capable of mounting anywhere along length of recessed raceway.
   e. Power Wiring: [**Single circuit**][**Two circuits, connecting alternating receptacles,**] in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
   f. Voice and Data Communication Outlets: <**Indicate quantity**>[**blank insert with bushed cable opening**][**8PSJ jacks**] complying with requirements in Section 271500 "Communications Horizontal Cabling."
   g. A minimum of [**two**][**four**] four-pair cables in accordance with Section 271513 "Communications Copper Horizontal Cabling" for each outlet.

2.4 INDOOR SERVICE POLES

A. Description: Factory-assembled and -wired, exposed raceway and fittings to route electrical wiring from connections above ceiling to outlets below ceiling.

B. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.

C. General Characteristics:

1. Reference Standards: UL 5 for exposed power raceway and fittings, and UL 2024 for communications raceway and fittings.

2. Listed and labeled in accordance with NFPA 90A for installation in air-handling plenum spaces.
3. Mounting: Ceiling trim flange with concealed bracing arranged for positive connection to above ceiling structural supports; with pole foot and carpet pad attachment.
4. Provide barrier to separate channel for power wiring from channel for voice and data communication cabling.

D. Indoor Service Pole :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    b. [**Panduit Corp**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    b. [**Panduit Corp**]
    c. <**Insert manufacturer's name**>

3. Options:

    a. Material: [**Aluminum**][**Steel**].
    b. Height: <**Insert height**> below ceiling, and <**Insert height**> above ceiling.
    c. Finish: [**Manufacturer's standard painted finish and trim combination**][**Satin-anodized aluminum**].

        1) Color: [**Clear anodized**][**White**][**Ivory**][**Gray**][**Black**]<**Insert color**>.

    d. Power Outlets: <**Indicate quantity**><**Indicate receptacle type**> in accordance with Section 262726 "Wiring Devices."
    e. Wiring: [**Single circuit**][**Two circuits, connecting alternating receptacles,**] in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
    f. Voice and Data Communication Outlets: <**Indicate quantity**>[**blank insert with bushed cable opening**][**8PSJ jacks**] complying with requirements in Section 271500 "Communications Horizontal Cabling."
    g. A minimum of [**two**][**four**] four-pair cables in accordance with Section 271513 "Communications Copper Horizontal Cabling" for each outlet.

2.5 FLOOR-MOUNTED ENCLOSURE MULTI-OUTLET ASSEMBLIES

A. Description: Floor-mounted box with cover enclosing multiple power[**and communications**] outlets in a single assembly.

B. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.

C. General Characteristics:

1. Reference Standards: UL 514A for metallic boxes; UL 514C for nonmetallic boxes, including scrub-water exclusion requirements; and UL 514D for cover plates.
2. Provide separate paths for management of telecommunications and power cables in accordance with NFPA 76.
3. Compartments: Barrier separates power from voice and data communication cabling.

D. Source Limitations: Obtain products from single manufacturer designed for use as complete, matching assembly of raceways and receptacles.

E. Floor-Mounted Enclosure Multi-Outlet Assembly :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB, Electrification Business**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Wiremold; Legrand North America, LLC**]
   d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB, Electrification Business**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Wiremold; Legrand North America, LLC**]
   d. <**Insert manufacturer's name**>

3. Options:

   a. Floor Box and Cover:

      1) [**Provide floor boxes classified for use in 1-hour-rated concrete floors. Boxes for floors in contact with earth must be protected with an epoxy paint.**]
      2) [**Provide floor boxes classified for use in 1-1/2-hour-rated concrete floors. Boxes for floors in contact with earth must be protected with an epoxy paint.**]
      3) [**Provide floor boxes classified for use in 2-hour-rated concrete floors. Boxes for floors in contact with earth must be protected with an epoxy paint.**]
      4) [**Provide floor boxes classified for use in 3-hour-rated concrete floors. Boxes for floors in contact with earth must be protected with an epoxy paint.**]
      5) [**Provide floor boxes for installation in raised floors.**]
      6) [**Provide floor boxes for installation in wood floors.**]
      7) Floor boxes for concrete floors must provide a minimum of **4 inch (100 mm)** of adjustment prior to concrete pour and a minimum of **1/2 inch (12.5 mm)** after concrete is set.
      8) Provide [**cast-metal**][**sheet metal**][**nonmetallic**] floor boxes with [**four**][**six**][**eight**][**10**] gangs.
      9) Provide brass or aluminum flanges approved for use on carpet, tile, or wood floor applications. Flanges and cover plates must have a buffed appearance and a

protective finish. Covers must match appearance of floor flanges and provide access to included devices.

10) Covers must lay flat on floor surface when open. Provide for cable egress when cover is closed. Provide ADA-compliant covers.
11) Provide flanges, mounting brackets, keystones, and accessories for mounting devices and connections indicated on Drawings.

b. Outlets:

1) Power Outlets: <**Indicate quantity**><**Indicate receptacle type**> in accordance with Section 262726 "Wiring Devices."
2) Wiring: [**Single circuit**][**Two circuits, connecting alternating receptacles,**] in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
3) Voice and Data Communication Outlets: <**Indicate quantity**>[**blank insert with bushed cable opening**][**8PSJ jacks**] complying with requirements in Section 271500 "Communications Horizontal Cabling."
4) A minimum of [**two**][**four**] four-pair cables in accordance with Section 271513 "Communications Copper Horizontal Cabling" for each outlet.

2.6 FIRE-RATED, POKE-THROUGH ASSEMBLIES

A. Description: Factory-fabricated assembly of below-floor junction box with multichannel, through-floor raceway/firestop unit with receptacles or communications outlets installed below floor surface level.

B. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.

C. General Characteristics:

1. Reference Standards: UL 514A for metallic boxes and UL 514C for nonmetallic boxes, including scrub-water exclusion requirements.
2. Provide separate paths for management of telecommunications and power cables.
3. Fire Rating: Provide unit listed and labeled for fire rating of floor-ceiling assembly.

D. Source Limitations: Obtain products from single manufacturer designed for use as complete, matching assembly of raceways and receptacles.

E. Fire-Rated, Poke-Through Assembly : [**Recessed**][**Flush**][**Pedestal**] type.

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Square D; Schneider Electric USA**]
c. [**Wiremold; Legrand North America, LLC**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Square D; Schneider Electric USA**]
c. [**Wiremold; Legrand North America, LLC**]
d. <**Insert manufacturer's name**>

3. Options:

a. Modular, [**recessed**][**flush**][**pedestal**]-type, dual-service units suitable for wiring method used[**, with cover flush with finished floor**].
b. Service Plate, Flaps, and Cover: [**Rectangular**][**Round**], [**die-cast aluminum**][**solid brass**] with satin finish.
c. Core Size: Selected to fit nominal [**4 inch (100 mm)**][**6 inch (150 mm)**][**8 inch (200 mm)**][**10 inch (250 mm)**] cored holes in floor and matched to floor thickness.
d. Closure Plug: Close unused cored opening and reestablish fire rating of floor.
e. Feed Conduits: Provide connection points for conduits as indicated on Drawings or required for conductors shown. Provide minimum [**1 inch (25 mm)**]<**Insert nominal size**> conduits for communications cables.
f. Power Outlets: <**Indicate quantity**><**Indicate receptacle type**> gray finish, unless otherwise indicated, in accordance with Section 262726 "Wiring Devices."
g. Telephone and Data Outlets: <**Indicate quantity**>[**blank cover with bushed cable opening.**][**modular, keyed, color-coded, 8PSJ jacks in accordance with Section 271513 "Communications Copper Horizontal Cabling."**]
h. Audio and Video Outlets: [**Blank cover with bushed cable opening**]<**Indicate quantity and type**>.

2.7 ABOVE-FLOOR SERVICE FITTINGS

A. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.

B. General Characteristics:

1. Reference Standards: UL 514A for metallic boxes and UL 514C for nonmetallic boxes, including scrub-water exclusion requirements.
2. Provide separate paths for management of telecommunications and power cables in compliance with NFPA 76.
3. See Section 260533.16 "Boxes and Covers for Electrical Systems" for more details and requirements for floor boxes.
4. Compartments: Barrier separates power from voice and data communication cabling.

C. Source Limitations: Obtain products from single manufacturer designed for use as complete, matching assembly of raceways and receptacles.

D. Pedestal-Type, Above-Floor Service Fitting :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Eaton**]

c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Wiremold; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Wiremold; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

3. Options:

a. Service Plate and Housing: [**die-cast aluminum**][**solid brass**] with satin finish.
b. Wiring, Raceways, and Compartments: For a minimum of four No. 12 AWG conductors and a minimum of [**two**][**four**] four-pair cables in accordance with Section 260533.23 "Surface Raceways for Electrical Systems" and Section 271513 "Communications Copper Horizontal Cabling."
c. Power Outlets: <**Indicate quantity**><**Indicate receptacle type**> gray finish, unless otherwise indicated, in accordance with Section 262726 "Wiring Devices."
d. Communications Outlets: <**Indicate quantity**>[**blank cover with bushed cable opening.**][**modular, keyed, color-coded, 8PSJ jacks in accordance with Section 271513 "Communications Copper Horizontal Cabling."**]

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with NECA 1 for device mounting heights, except where requirements on Drawings or in this Section are stricter.

B. Comply with NECA 101 for installation requirements for steel raceways, except where requirements on Drawings or in this Section are stricter.

C. Comply with NECA 102 for installation requirements for aluminum raceways, except where requirements on Drawings or in this Section are stricter.

D. Comply with NFPA 70 limitations for types of raceways allowed in specific occupancies.

E. Provide terminations, adapters, boxes, and other fittings required for installation.

F. Install surface raceway with a minimum **2 inch (50 mm)** radius control at bend points.

G. Secure metallic surface raceway with screws or other anchor-type devices at intervals not exceeding **48 inch (1200 mm)** and with no fewer than two supports per straight raceway section. Support surface raceway in accordance with manufacturer's instructions. Tape and glue are unacceptable support methods.

H. Do not install aluminum raceways or fittings in contact with concrete.

I. Secure nonmetallic surface raceway with screws or other anchor-type devices in each wiring channel at intervals not exceeding **18 inch (460 mm)** and with no fewer than two supports per straight raceway section in each wiring channel. Support nonmetallic surface raceway in accordance with manufacturer's instructions. Tape and glue are unacceptable support methods.

J. Do not install PVC raceways where ambient temperature exceeds [**122 deg F (50 deg C)**]<**Insert temperature**>. Conductors with insulation rated higher than 75 deg C installed in PVC raceways may not be operated at a temperature greater than 75 deg C.

K. Comply with Section 260526 "Grounding and Bonding for Electrical Systems."

L. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for hangers and support.

M. Comply with requirements in Section 260533.13 "Conduits for Electrical Systems" and Section 260533.23 "Surface Raceways for Electrical Systems" for installation of raceways.

N. Comply with requirements in Section 260533.16 "Boxes and Covers for Electrical Systems" for additional requirements for floor boxes.

O. Coordination with Other Work:

1. Adjust locations of multi-outlet assemblies to suit arrangement of partitions and furnishings. Locate outlets to avoid blocking by supports, furnishings, and other architectural fixtures.
2. Provide outlets with special requirements, such as GFCI, AFCI, or special environmental requirements, where required by Drawings or to meet codes.
3. Adjust locations of poke-through assembly penetrations to coordinate with locations of structural members, concealed piping, and concealed conduit. Obtain written approval from Architect prior to drilling penetrations in floors other than where dimensioned on architectural Drawings. Comply with requirements in Section 078413 "Penetration Firestopping."

3.2 IDENTIFICATION

A. Comply with Section 260553 "Identification for Electrical Systems."

END OF SECTION 26 27 19 00

Task	Specification	Specification Description
26 27 19 00	26 05 39 00	Underfloor Raceways For Electrical Systems
26 27 23 00	26 27 26 00	Wiring Devices

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 27 26 00 - WIRING DEVICES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. General-use switches, dimmer switches, and fan-speed controller switches.
2. General-grade single straight-blade receptacles.
3. General-grade duplex straight-blade receptacles.
4. Hospital-grade straight-blade receptacles.
5. Receptacles with arc-fault and ground-fault protective devices.
6. Locking receptacles.
7. Pin-and-sleeve receptacles.
8. Cord reels and fittings.
9. Connectors, cords, and plugs.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies temperature, humidity, acoustical, and other field conditions applicable to the Work specified in this Section.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies seismic hazard, wind hazard, other structural load design conditions applicable to the Work specified in this Section.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
4. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
5. Section 260533.16 "Boxes and Covers for Electrical Systems" specifies covers and cover plates referenced by this Section.
6. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
7. Section 260923 "Lighting Control Devices" for occupancy sensors, timers, control-voltage switches, and control-voltage dimmers.
8. Section 260936 "Modular Dimming Controls" for multiscene and multipreset dimming controls.
9. Section 260943.16 "Addressable Luminaire Lighting Controls" for network lighting control solid-state devices.
10. Section 260943.23 "Relay-Based Lighting Controls" for network lighting control relay devices.
11. Section 262726.11 "General-Use Switches, Dimmer Switches, and Fan-Speed Controller Switches" for additional wiring device products.
12. Section 262726.31 "General-Grade Single Straight-Blade Receptacles" for additional wiring device products.
13. Section 262726.33 "General-Grade Duplex Straight-Blade Receptacles" for additional wiring device products.
14. Section 262726.35 "Hospital-Grade Straight-Blade Receptacles" for additional wiring device products.
15. Section 262726.37 "Receptacles with Arc-Fault and Ground-Fault Protective Devices" for additional wiring device products.
16. Section 262726.39 "Locking Receptacles" for additional wiring device products.
17. Section 262726.41 "Pin-and-Sleeve Receptacles" for additional wiring device products.

18. Section 262726.43 "Special-Purpose Power Outlet Assemblies" for additional wiring device products.
19. Section 262726.51 "Connectors, Cords, and Plugs" for additional wiring device products.
20. Section 270528 "Pathways for Communications Systems" [**and Section 271100 "Communications Equipment Room Fittings"**] specifies additional requirements for raceway materials, routing, locations, and identification of communications equipment and cabling.

1.2 DEFINITIONS

A. AFCI: Arc-Fault Circuit Interrupter.

B. Commercial/Industrial-Use Cord Reel: A cord reel subject to severe use in factories, commercial garages, construction sites, and similar locations requiring a harder service-type cord.

C. GFCI: Ground-Fault Circuit Interrupter.

D. SPD: Surge Protective Device.

E. UL 1472 Type I Dimmer: Dimmer in which air-gap switch is used to energize preset lighting levels.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference [**at the Project site**][**by web conference**].

B. Preinstallation Coordination Meeting(s): For ceiling-mounted cable reels. Conduct meeting [**as videoconference**][**at Project site**].

1. Attendees: Installers, fabricators, representatives of manufacturers, and administrants for field tests and inspections. Notify Architect [**Construction Manager**][**and the Owner's Commissioning Authority**] of scheduled meeting dates.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of specified product.

1. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.

2. Include manufacturer's sample extended warranty language.

B. Samples: One for each type of product specified, in each finish and color specified for [**public spaces**] .

C. Shop Drawings: Prepare and submit wiring diagrams for duplex straight-blade receptacles with integral switching means.

D. Sustainable Design Submittals:

1. Product data for sustainable design features for each type of product.

2. Lighting Control Documentation: Floor plans indicating the following information:

a. As-installed locations of switches and dimmers.
b. Lighting zones and control strategy for each switch or dimmer, including unoccupied time-delay setting for shut-off and override time-delay setting for shut-off.
c. Multilevel or dimming range capability for each switch or dimmer.
d. Which switches or dimmers are operated by occupancy sensors, vacancy sensors, daylighting sensors, or time clocks.

3. Record floor plan Drawings indicating as-installed locations of switches and dimmers, indicating lighting zone's each device control, to verify extent of ability of the installed Work to provide occupant control for customizing environment.
4. Record floor plan Drawings indicating as-installed locations of uncontrolled and marked controlled receptacles superimposed on office furniture layout, to verify extent of ability of the installed Work to provide each occupant ability to select at least one uncontrolled receptacle and at least one controlled receptacle for powering workspace equipment. Indicate locations of UL-approved relocatable power taps and power strips, indicating means of securing protection from damage and accessibility for inspection. Indicate locations of temporary extension cords, indicating plan for replacing them with permanent wiring within 90 days.

5. Product Data for Automated Demand Response Controls: For automated demand response controls connected to [**HVAC systems,**][**lighting systems,**][**automatic receptacle controls,**][**service water heating,**][**and**][**electric vehicle supply equipment**] .

E. Field QC Reports: For specified tests and inspections.

1.5 INFORMATIONAL SUBMITTALS

A. Manufacturer's Published Instructions: For wiring devices.

B. Field Reports: Manufacturer's field reports for field QC support.

1.6 CLOSEOUT SUBMITTALS

A. Warranty Documentation:

1. Special manufacturer extended warranty for devices and cord reels and fittings.
2. Special installer extended warranty for devices and cord reels and fittings.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Extra Stock Material: Furnish straight-blade receptacles and connectors, cords, and plugs.

B. Special Tools: Furnish straight-blade receptacles and connectors, cords, and plugs.

1.8 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, conduct tests of complex equipment, analyze test and equipment data, plan a job, and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able

to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.

C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

1.9 WARRANTY FOR DEVICES

A. Special Installer Extended Warranty: Installer warrants that installed devices perform in accordance with specified requirements and agrees to repair or replace products that fail to perform as specified within extended-warranty period. Warranty must convey to the Owner upon acceptance of the Work.

1. Extended-Warranty Period: [**Two**][**Three**][**Four**] years from date of Substantial Completion; full coverage for labor, materials, and equipment.

B. Special Manufacturer Extended Warranty: Manufacturer warrants that devices perform in accordance with specified requirements and agrees to provide repair or replacement of devices that fail to perform as specified within extended warranty period.

1. Initial Extended Warranty Period: [**Three**][**Four**][**Five**] years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.

2. Follow-On Extended Warranty Period: [**Eight**] years from date of Substantial Completion; [**full**][**prorated**] coverage for materials only, free on board [**origin**][**destination**] , freight prepaid.

1.10 WARRANTY FOR CORD REELS AND FITTINGS

A. Special Installer Extended Warranty: Installer warrants that fabricated and installed cord-reel power outlet assemblies perform in accordance with specified requirements and agrees to repair or replace assemblies that fail to perform as specified within extended warranty period.

1. Extended Warranty Period: [**Two**][**Three**][**Four**] years from date of Substantial Completion; full coverage for labor, materials, and equipment.

B. Special Manufacturer Extended Warranty: Manufacturer warrants that components of cord-reel power outlet assemblies perform in accordance with specified requirements and agrees to provide repair or replacement of components that fail to perform as specified within extended warranty period.

1. Initial Extended Warranty Period: [**Three**][**Four**][**Five**] years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.

2. Follow-On Extended Warranty Period: [**Eight**] years from date of Substantial Completion; [**full**][**prorated**] coverage for materials only, free on board [**origin**][**destination**] , freight prepaid.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

A. Description:

1. Sustainable Design Features:

a. Material Reuse: Product is salvaged, refurbished, or reused.

2.2 EXISTING PRODUCTS TO BE REMOVED AND REINSTALLED

A. Description:

1. Sustainable Design Features:

a. Material Reuse: Product is salvaged, refurbished, or reused.

2.3 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2.4 GENERAL-USE SWITCHES, DIMMER SWITCHES, AND FAN-SPEED CONTROLLER SWITCHES

A. Toggle Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Flush Switches: UL CCN WMUZ and UL 20.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance**

with NEMA WD 1][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .

b. Configuration:

1) General-duty, 120-277 V, 15 A, [**single pole**][**double pole**][**three way**][**four way**] .
2) General-duty, 120-277 V, 20 A, [**single pole**][**double pole**][**three way**][**four way**] .
3) Extra-heavy-duty, 120-277 V, 15 A, [**single pole**][**double pole**][**three way**][**four way**] .
4) Extra-heavy-duty, 120-277 V, 20 A, [**single pole**][**double pole**][**three way**][**four way**] .
5) Extra-heavy-duty, 120-277 V, 30 A, [**single pole**][**double pole**][**three way**] .

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**] corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Toggle Switch with Forked Key Lock :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical**

testing laboratory recognized by authorities having jurisdiction] in accordance with one or more of the following guide information and corresponding standards:

a. Flush Switches: UL CCN WMUZ and UL 20.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Black**][**As indicated on architectural Drawings**] as directed by the Owner .
b. Configuration:

1) 120-277 V, 15 A, [**single pole**][**double pole**][**three way**][**four way**] .
2) 120-277 V, 20 A, [**single pole**][**double pole**][**three way**][**four way**] .
3) 120-277 V, 30 A, [**single pole**][**double pole**] .

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**] corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

C. Rocker Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Flush Switches: UL CCN WMUZ and UL 20.

4. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
   b. Configuration:

      1) 120-277 V, 15 A, [**single pole**][**three way**][**four way**] .
      2) 120-277 V, 20 A, [**single pole**][**double pole**][**three way**][**four way**] .

5. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide [**third-party-verified**] corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

   b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

   c. Regional Materials (IgCC): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

   d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

   e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Accessories:

   a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

D. Rocker Switch with Nightlight :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton, Wiring Devices; Arrow Hart**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Flush Switches: UL CCN WMUZ and UL 20.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
b. Configuration: 120-277 V, 20 A, [**single pole**][**three way**][**four way**] .

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**] corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

E. Type I Dimmer Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**GE Lighting; a Savant Company**]
c. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
d. [**Leviton Manufacturing Co., Inc.**]
e. [**Lutron Electronics Co., Inc**]
f. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. General-Use Switch Dimmers: UL CCN EOYX and UL 1472.

4. Standard Features:

a. UL 1472 Type I dimmer.

b. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
c. Switch Style: [**Toggle**][**Rocker**][**Push button**] .
d. Dimming Control Style: [**Slide**][**Rotary**] .

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**] corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

F. Air-Gap Fan-Speed Controller Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical**

testing laboratory recognized by authorities having jurisdiction] in accordance with one or more of the following guide information and corresponding standards:

a. Fan-Speed Controls: UL CCN GQHG and UL 1917.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide [**third-party-verified**] corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

b. Regional Materials (LEED): Provide documentation if product is sourced (extracted, manufactured, or purchased) within **100 miles (160 km)** of Project site.

c. Regional Materials (IgCC): Provide documentation if product is sourced (extracted, harvested, recovered, or manufactured) within **500 miles (800 km)** of Project site. Identify percentage of product's travel that is by rail or water.

d. Third-Party Certification: Third-party certification, in accordance with multiple attribute standard(s) developed by consensus-based process from an approved standard development organization, is publicly available for product.

e. Third-Party-Verified Product Life-Cycle Assessment: Assessment covering cradle-to-gate scope, in accordance with ISO 14040 and ISO 14044, is publicly available for product.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.5 GENERAL-GRADE SINGLE STRAIGHT-BLADE RECEPTACLES

A. Single Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Leviton Manufacturing Co., Inc.**]
c. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or

more of the following guide information and corresponding standards:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
b. Configuration:

1) General-duty, [**NEMA 5-15R**][**NEMA 5-20R**][**NEMA 5-30R**][**NEMA 5-50R**] .
2) General-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
3) General-duty, [**NEMA 6-15R**][**NEMA 6-20R**][**NEMA 6-30R**][**NEMA 6-50R**] .
4) General-duty, smooth face, NEMA 6-20R.
5) General-duty, [**NEMA 14-30R (Dryer)**][**NEMA 14-50R (Range)**] .
6) Heavy-duty, [**NEMA 5-30R**][**NEMA 5-50R**] .
7) Heavy-duty, [**NEMA 6-30R**][**NEMA 6-50R**] .
8) Heavy-duty, [**NEMA 7-20R**][**NEMA 7-30R**][**NEMA 7-50R**] .
9) Heavy-duty, [**NEMA 14-20R**][**NEMA 14-30R (Dryer)**][**NEMA 14-50R (Range)**][**NEMA 14-60R**] .
10) Heavy-duty, [**NEMA 15-20R**][**NEMA 15-30R**][**NEMA 15-50R**][**NEMA 15-60R**] .
11) Heavy-duty, [**NEMA 18-20R**][**NEMA 18-30R**][**NEMA 18-50R**][**NEMA 18-60R**] .
12) Extra-heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
13) Extra-heavy-duty, [**NEMA 6-15R**][**NEMA 6-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Tamper-Resistant, Clock Hanger Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

3. Standard Features:

   a. Finish: [**White nylon**][**Ivory nylon**][**Brass**][**Stainless steel**][**Brushed brass**][**Nickel plated**] .
   b. Configuration: Recessed, smooth wallplate; [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

C. Tamper-Resistant, Floor-Mounted Display Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   b. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

3. Standard Features:

   a. Finish: [**Brushed brass**][**Nickel plated**] .

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

2.6 GENERAL-GRADE DUPLEX STRAIGHT-BLADE RECEPTACLES

A. Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton, Wiring Devices; Arrow Hart**]
   b. [**Leviton Manufacturing Co., Inc.**]
   c. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or

more of the following guide information and corresponding standards:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
b. Configuration:

1) General-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
2) General-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
3) General-duty, [**NEMA 6-15R**][**NEMA 6-20R**] .
4) General-duty, smooth face, [**NEMA 6-15R**][**NEMA 6-20R**] .
5) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
6) Heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
7) Heavy-duty, [**NEMA 6-15R**][**NEMA 6-20R**] .
8) Heavy-duty, smooth face, NEMA 6-15R.
9) Heavy-duty, NEMA 7-15R.
10) Extra-heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
11) Extra-heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
12) Extra-heavy-duty, [**NEMA 6-15R**][**NEMA 6-20R**] .
13) Extra-heavy-duty, smooth face, [**NEMA 6-15R**][**NEMA 6-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Tamper-Resistant Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Leviton Manufacturing Co., Inc.**]
c. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
   b. Configuration:

      1) General-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
      2) General-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
      3) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
      4) Heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
      5) Extra-heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

   a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

C. Isolated Ground Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Leviton Manufacturing Co., Inc.**]
   b. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
   b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
   b. Configuration:

      1) General-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
      2) General-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
      3) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
      4) Heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
      5) Extra-heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
      6) Extra heavy-duty, [**NEMA 6-15R**][**NEMA 6-20R**] .

4. Other Available Features Required by the Project:

    a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

    a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
    b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

D. Isolated Ground Duplex Straight-Blade Receptacle with Type 3 Surge Protective Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Eaton, Wiring Devices; Arrow Hart**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
    b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

    a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
    b. Configuration: Heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

    a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

    a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
    b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

E. Tamper-Resistant Duplex Straight-Blade Receptacle with USB Outlet to Power Class 2 Equipment :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner .
b. Configuration:

1) General-duty, [**NEMA 5-15R**][**NEMA 5-20R**] ; two USB-A ports.
2) General-duty, [**NEMA 5-15R**][**NEMA 5-20R**] ; two USB-C ports.
3) General-duty, [**NEMA 5-15R**][**NEMA 5-20R**] ; one USB-A port; one USB-C port.
4) General-duty, smooth face, two USB-A ports.
5) General-duty, smooth face, four USB-A ports.

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

F. Wired Full-Controlled Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Hubbell Lighting; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or

more of the following guide information and corresponding standards:

a. Receptacles with Integral Switching Means: UL CCN RTXI and UL Subject 498B.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
b. Configuration: [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

G. Wired Half-Controlled Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Hubbell Lighting; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Receptacles with Integral Switching Means: UL CCN RTXI and UL Subject 498B.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
b. Configuration: [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.7 HOSPITAL-GRADE STRAIGHT-BLADE RECEPTACLES

A. Hospital-Grade, Non-Ferrous Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton, Wiring Devices; Arrow Hart**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
   b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
   b. Configuration: Extra-heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

   a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Hospital-Grade, Tamper-Resistant Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton, Wiring Devices; Arrow Hart**]
   b. [**Leviton Manufacturing Co., Inc.**]
   c. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
    b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

    a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
    b. Configuration:

        1) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
        2) Heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .
        3) Extra-heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
        4) Extra-heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

    a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

    a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
    b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

C. Hospital-Grade, Tamper-Resistant, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Eaton, Wiring Devices; Arrow Hart**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
    b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

    a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance**

with NEMA WD 1][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.

b. Configuration:

1) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
2) Heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

D. Hospital-Grade, Tamper-Resistant, Isolated Ground Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Leviton Manufacturing Co., Inc.**]
b. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
b. Configuration:

1) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .
2) Heavy-duty, smooth face, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

E. Hospital-Grade, Tamper-Resistant Duplex Straight-Blade Receptacle with USB Outlet to Power Class 2 Equipment :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton, Wiring Devices; Arrow Hart**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Pass & Seymour; Legrand North America, LLC**]
   d. >

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
   b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
   b. Configuration:

      1) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] ; two USB-A ports.
      2) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] ; two USB-C ports.
      3) Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] ; one USB-A port; one USB-C port.

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

   a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.8 RECEPTACLES WITH ARC-FAULT AND GROUND-FAULT PROTECTIVE DEVICES

A. General-Grade, Tamper-Resistant Duplex Straight-Blade Receptacle with AFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton, Wiring Devices; Arrow Hart**]

b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Outlet Branch-Circuit Type AFCIs: UL CCN AWBZ, UL 498, UL 1699, and UL Subject 1699A.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. General-Grade, Tamper-Resistant Duplex Straight-Blade Receptacle with AFCI and GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Leviton Manufacturing Co., Inc.**]
c. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Outlet Branch-Circuit Type GFCIs and AFCIs: UL CCN KCXX, UL 498, UL 943, UL 1699, and UL Subject 1699A.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.

b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

   a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

C. General-Grade, Weather-Resistant, Tamper-Resistant Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton, Wiring Devices; Arrow Hart**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
   b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

   a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

D. General-Grade, Weather-Resistant, Tamper-Resistant, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Eaton, Wiring Devices; Arrow Hart**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

    a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
    b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

    a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

    a. Cover Plate: **0.060 inch** **(1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
    b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

E. Hospital-Grade, Weather-Resistant, Tamper-Resistant, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Eaton, Wiring Devices; Arrow Hart**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

F. Hospital-Grade, Isolated Ground, Weather-Resistant, Tamper-Resistant Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton, Wiring Devices; Arrow Hart**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**] as directed by the Owner.
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**] .

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.9 LOCKING RECEPTACLES

A. UL RTRT - NEMA, 125 V, Locking Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**ABB Electrification Installations Products**]
   b. [**Eaton, Wiring Devices; Arrow Hart**]
   c. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   d. [**Leviton Manufacturing Co., Inc.**]
   e. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

4. Standard Features:

   a. Device Color: Black with yellow voltage indication on face.
   b. Configuration: 2 pole, 3 wire, grounding, [**NEMA L5-15R**][**NEMA L5-20R**][**NEMA L5-30R**] .

B. UL RTRT - NEMA, 125 V, Isolated Ground Locking Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton, Wiring Devices; Arrow Hart**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

4. Standard Features:

    a. Device Color: Black with yellow voltage indication on face.
    b. Configuration: 2 pole, 3 wire, grounding, [**NEMA L5-15R**][**NEMA L5-20R**][**NEMA L5-30R**] .

C. UL RTRT - NEMA, 250 V, Locking Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Eaton, Wiring Devices; Arrow Hart**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

4. Standard Features:

    a. Device Color: Black with blue voltage indication on face.
    b. Configuration:

        1) 2 pole, 3 wire, grounding, [**NEMA L6-15R**][**NEMA L6-20R**][**NEMA L6-30R**] .
        2) 3 pole, 4 wire, grounding, [**NEMA L15-20R**][**NEMA L15-30R**] .
        3) 4 pole, 4 wire, non-grounding, [**NEMA L18-20R**][**NEMA L18-30R**] .
        4) 4 pole, 5 wire, grounding, [**NEMA L21-20R**][**NEMA L21-30R**] .

D. UL RTRT - NEMA, 250 V, Isolated Ground Locking Receptacle :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Eaton, Wiring Devices; Arrow Hart**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or

more of the following guide information and corresponding standards:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

4. Standard Features:

a. Device Color: Black with blue voltage indication on face.
b. Configuration:

1) 2 pole, 3 wire, grounding, [**NEMA L6-15R**][**NEMA L6-20R**][**NEMA L6-30R**] .
2) 3 pole, 4 wire, grounding, [**NEMA L15-20R**][**NEMA L15-30R**] .
3) 4 pole, 5 wire, grounding, [**NEMA L21-20R**][**NEMA L21-30R**] .

2.10 PIN-AND-SLEEVE RECEPTACLES

A. UL QLIW - C2 Series, 125/250 V, Pin-and-Sleeve Receptacles :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**ABB Electrification Installations Products**]
b. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
c. [**Eaton, Wiring Devices; Arrow Hart**]
d. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
e. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
f. [**Leviton Manufacturing Co., Inc.**]
g. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Pin-and-Sleeve Type Receptacles: UL CCN QLIW; including UL 1682.

4. Standard Features:

a. Series: UL 1686 Series C2 and IEC 60309-2 Series II.
b. Voltage Rating: 125/250 V.
c. Configuration:

1) 2 pole, 3 wire, [**20 A**][**30 A, IP67**][**30 A, IP69k**][**60 A, IP67**][**60 A, IP69k**][**100 A**] .
2) 3 pole, 4 wire, [**20 A**][**30 A, IP67**][**30 A, IP69k**][**60 A, IP67**][**60 A, IP69k**][**100 A, IP67**][**100 A, IP69k**] .
3) 4 pole, 5 wire, [**20 A**][**30 A, IP67**][**30 A, IP69k**][**60 A, IP67**][**60 A, IP69k**][**100 A, IP67**][**100 A, IP69k**] .

B. UL QLIW - C2 Series, 480 V, Pin-and-Sleeve Receptacles :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the**

following][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**ABB Electrification Installations Products**]
b. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
c. [**Eaton, Wiring Devices; Arrow Hart**]
d. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
e. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
f. [**Leviton Manufacturing Co., Inc.**]
g. [**Pass & Seymour; Legrand North America, LLC**]

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Pin-and-Sleeve Type Receptacles: UL CCN QLIW; including UL 1682.

4. Standard Features:

   a. Series: UL 1686 Series C2 and IEC 60309-2 Series II.
   b. Voltage Rating: 480 V.
   c. Configuration:

      1) 2 pole, 3 wire, [**20 A**][**30 A, IP67**][**30 A, IP69k**][**60 A, IP67**][**60 A, IP69k**][**100 A**] .
      2) 3 pole, 4 wire, [**20 A**][**30 A, IP67**][**30 A, IP69k**][**60 A, IP67**][**60 A, IP69k**][**100 A, IP67**][**100 A, IP69k**] .
      3) 4 pole, 5 wire, [**20 A**][**30 A, IP67**][**30 A, IP69k**][**60 A, IP67**][**60 A, IP69k**][**100 A, IP67**][**100 A, IP69k**] .

2.11 CORD REELS AND FITTINGS

A. Power Outlet Cord Management Assembly :

1. Source Limitations: Obtain all components for each power outlet cord management assembly from single manufacturer.
2. General Characteristics: Provide the following specified products with fabricated power outlet cord management assembly:

   a. Cord Management System:

      1) Spring-driven commercial/industrial-use cord reel .
      2) Cord reel for use in Class I Group D hazardous location .

   b. Termination Fitting:

      1) the Owner-furnished fitting.

      2) Outdoor-use, watertight, sealed cord connector;

3. Accessories:

   a. Mounting: [**Ceiling**][**Wall**][**Floor**] mounted.

4. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

   a. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events [**and unit must be fully operational after seismic events**] ."

   b. Component Importance Factor (Ip): [**1.0**][**1.5**] .

   c. Component Amplification Factor (ap): [**1.0**][**2.5**].

   d. Component Response Modification Factor (Rp): [**1.5**][**2.0**][**2.5**][**6.0**].

   e. Component Overstrength Factor (Ωo): [**1.5**][**2.5**] .

B. Spring-Driven Commercial/Industrial-Use Cord Reel, 14 AWG Conductors :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Eaton**]
   b. [**Ericson Manufacturing Company**]
   c. [**Gleason Reel; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Cord and Cable Reels: UL CCN SBCV and UL 355.

3. Standard Features:

   a. Spring take-up retraction mechanism.

   b. Electrical Rating with Cable: 600 V, [**18 A**][**15 A**][**12 A**][**10.5 A**][**7.5 A**] .
   c. Color: [**Yellow**][**Black**][**White**].
   d. Enclosure Degree of Protection: [**Type 4**][**Type 4X**] .
   e. Ball stop.
   f. Pivot base.
   g. Spool Capacity:

      1) 14 AWG, two wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**][**50 ft (15.2 m)**][**60 ft (18.3 m)**][**70 ft (21.3 m)**] .

2) 14 AWG, three wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**35 ft (10.7 m)**][**40 ft (12.2 m)**][**50 ft (15.2 m)**][**60 ft (18.3 m)**][**70 ft (21.3 m)**] .
3) 14 AWG, five wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**][**50 ft (15.2 m)**][**60 ft (18.3 m)**] .
4) 14 AWG, seven wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**][**50 ft (15.2 m)**] .
5) 14 AWG, nine wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**] .
6) 14 AWG, eleven wires and equipment ground, [**20 ft (6 m)**][**60 ft (18.3 m)**] .

7) 14 AWG, two wires and equipment ground, [**25 ft (7.6 m)**][**35 ft (10.7 m)**][**45 ft (13.7 m)**][**90 ft (27.4 m)**][**100 ft (30.5 m)**][**125 ft (38.1 m)**][**150 ft (45.7 m)**] .
8) 14 AWG, three wires and equipment ground, [**25 ft (7.6 m)**][**45 ft (13.7 m)**][**65 ft (19.8 m)**][**80 ft (24.4 m)**][**90 ft (27.4 m)**][**100 ft (30.5 m)**][**125 ft (38.1 m)**][**150 ft (45.7 m)**] .
9) 14 AWG, five wires and equipment ground, [**25 ft (7.6 m)**][**35 ft (10.7 m)**][**45 ft (13.7 m)**] .
10) 14 AWG, seven wires and equipment ground, [**25 ft (7.6 m)**][**35 ft (10.7 m)**][**45 ft (13.7 m)**] .
11) 14 AWG, nine wires and equipment ground, [**25 ft (7.6 m)**][**50 ft (15.2 m)**] .
12) 14 AWG, eleven wires and equipment ground, [**25 ft (7.6 m)**][**30 ft (9.1 m)**] .

4. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

   a. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events [**and unit must be fully operational after seismic events**] ."

   b. Component Importance Factor (Ip): [**1.0**][**1.5**] .

   c. Component Amplification Factor (ap): [**1.0**][**2.5**].

   d. Component Response Modification Factor (Rp): [**1.5**][**2.0**][**2.5**][**6.0**].

   e. Component Overstrength Factor (Ωo): [**1.5**][**2.5**].

C. Spring-Driven Commercial/Industrial-Use Cord Reel, 12 AWG Conductors :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Appleton; Emerson Electric Co., Automation Solutions**]
   b. [**Ericson Manufacturing Company**]
   c. [**Gleason Reel; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   d. [**Reelcraft Industries Inc**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Cord and Cable Reels: UL CCN SBCV and UL 355.

3. Standard Features:

   a. Spring take-up retraction mechanism.

   b. Electrical Rating with Cable: 600 V, [**25 A**][**20 A**][**16 A**][**14 A**] .
   c. Color: [**Yellow**][**Black**][**White**].
   d. Enclosure Degree of Protection: [**Type 4**][**Type 4X**] .
   e. Ball stop.
   f. Pivot base.
   g. Spool Capacity:

      1) 12 AWG, two wires and equipment ground, [**20 ft (6 m)**][**25 ft (7.6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**][**50 ft (15.2 m)**][**60 ft (18.3 m)**] .
      2) 12 AWG, three wires and equipment ground, [**20 ft (6 m)**][**25 ft (7.6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**][**45 ft (13.7 m)**][**50 ft (15.2 m)**][**60 ft (18.3 m)**][**100 ft (30.5 m)**] .
      3) 12 AWG, five wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**] .
      4) 12 AWG, seven wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**] .

      5) 12 AWG, two wires and equipment ground, [**35 ft (10.7 m)**][**45 ft (13.7 m)**][**70 ft (21.3 m)**][**80 ft (24.4 m)**][**90 ft (27.4 m)**][**100 ft (30.5 m)**][**125 ft (38.1 m)**][**150 ft (45.7 m)**] .
      6) 12 AWG, three wires and equipment ground, [**35 ft (10.7 m)**][**70 ft (21.3 m)**][**80 ft (24.4 m)**][**90 ft (27.4 m)**][**125 ft (38.1 m)**] .
      7) 12 AWG, four wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**] .
      8) 12 AWG, five wires and equipment ground, [**25 ft (7.6 m)**][**35 ft (10.7 m)**][**45 ft (13.7 m)**] .
      9) 12 AWG, seven wires and equipment ground, [**25 ft (7.6 m)**][**40 ft (12.2 m)**] .

4. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

   a. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events [**and unit must be fully operational after seismic events**] ."

   b. Component Importance Factor (Ip): [**1.0**][**1.5**] .

   c. Component Amplification Factor (ap): [**1.0**][**2.5**].

   d. Component Response Modification Factor (Rp): [**1.5**][**2.0**][**2.5**][**6.0**].

   e. Component Overstrength Factor (Ωo): [**1.5**][**2.5**].

D. Spring-Driven Cord Reel for Use in Class I Group D Hazardous Locations :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Appleton; Emerson Electric Co., Automation Solutions**]
   b. [**Conductix-Wampfler USA; Delachaux Group**]
   c. [**KH Industries, Inc.**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Cord Reels for Use in Hazardous Locations: UL CCN SAOX and UL 355.

3. Standard Features:

   a. Spring take-up retraction mechanism.

   b. Electrical Rating with Cable: 600 V, [**35 A**][**25 A**][**20 A**][**18 A**][**15 A**] .
   c. Color: [**Yellow**][**Black**][**White**].
   d. Enclosure Degree of Protection: [**Type 4**][**Type 4X**] .
   e. Ball stop.
   f. Pivot base.
   g. Spool Capacity:

      1) 14 AWG, two wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**50 ft (15.2 m)**] .
      2) 14 AWG, three wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**50 ft (15.2 m)**] .
      3) 12 AWG, two wires and equipment ground, [**30 ft (9.1 m)**][**50 ft (15.2 m)**] .
      4) 14 AWG, two wires and equipment ground, [**40 ft (12.2 m)**][**60 ft (18.3 m)**][**70 ft (21.3 m)**] .
      5) 14 AWG, three wires and equipment ground, [**40 ft (12.2 m)**][**60 ft (18.3 m)**] .
      6) 12 AWG, two wires and equipment ground, [**20 ft (6 m)**][**40 ft (12.2 m)**][**60 ft (18.3 m)**] .
      7) 12 AWG, three wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**][**50 ft (15.2 m)**] .
      8) No. 10 AWG, two wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**] .
      9) No. 10 AWG, three wires and equipment ground, [**20 ft (6 m)**][**30 ft (9.1 m)**][**40 ft (12.2 m)**] .

4. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

   a. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events [**and unit must be fully operational after seismic events**] ."

   b. Component Importance Factor (Ip): [**1.0**][**1.5**] .

   c. Component Amplification Factor (ap): [**1.0**][**2.5**].

   d. Component Response Modification Factor (Rp): [**1.5**][**2.0**][**2.5**][**6.0**].

   e. Component Overstrength Factor (Ωo): [**1.5**][**2.5**].

2.12 CONNECTORS, CORDS, AND PLUGS

A. Outdoor-Use, Watertight, Sealed Cord Connector :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Ericson Manufacturing Company**]

2. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**FM Approvals**][**CSA Group (with "US" marking)**][**Intertek ETL**][**TÜV Rheinland**][**or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Fuseless Attachment Plugs: UL CCN AXUT and UL 498.

3. Standard Features:

a. Configuration:

1) NEMA 5-15 [**with diagnostic LED indicator**] .
2) NEMA 5-20 [**with diagnostic LED indicator**] .
3) NEMA 6-15.
4) NEMA 6-20.
5) NEMA L5-15.
6) NEMA L5-20 [**with diagnostic LED indicator**] .
7) NEMA L5-30.
8) NEMA L6-15.
9) NEMA L6-20.
10) NEMA L6-30.
11) NEMA L7-15.
12) NEMA L7-20.
13) NEMA L7-30.
14) NEMA L14-20.
15) NEMA L14-30.
16) NEMA L15-20.
17) NEMA L15-30.
18) NEMA L16-20.
19) NEMA L16-30.
20) NEMA L17-30.
21) NEMA L18-30.

2.13 MAINTENANCE MATERIAL ITEMS FOR STRAIGHT-BLADE RECEPTACLES

A. Extra Stock Material: Furnish to the Owner extra materials [**from same production run,**] that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. [**Include the following:**]

1. SPD Receptacles: Equal to [**10**] percent of quantity installed for each kind specified, but no fewer than [**one**] units.
2. Controlled Receptacles: Equal to [**10**] percent of quantity installed for each kind specified, but no fewer than [**one**] units.

B. Special Tools: Furnish to the Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to controlled receptacles, that are packaged with protective covering for storage on-site and identified with labels describing contents.

2.14 MAINTENANCE MATERIAL ITEMS FOR CONNECTORS, CORDS, AND PLUGS

A. Extra Stock Material: Furnish to the Owner extra materials [**from same production run,**] that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. [**Include the following:**]

1. Cord Connectors: [**One**] of each kind.

B. Special Tools: Furnish to the Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to cord connectors, that are packaged with protective covering for storage on-site and identified with labels describing contents.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Receptacles:

1. Verify that receptacles to be procured and installed for the Owner-furnished equipment are compatible with mating attachment plugs on equipment.

B. Cord Reels and Fittings:

1. Examine roughing-in for cord reel mounting and power connections to verify actual locations of mounts and power connections before cord reel installation.
2. Examine walls, floors, and ceilings for suitable conditions where cord reel will be installed.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SELECTION OF CONTROLLED AND UNCONTROLLED RECEPTACLES

A. Private and Open Office Spaces:

1. Uncontrolled Receptacles at Workstations: Coordinate final locations of receptacles with furniture plan such that at least one uncontrolled receptacle is selected for installation not greater than **6 ft. (1.8 m)** from each workstation.
2. Controlled Receptacles at Workstations: Coordinate final locations of receptacles with furniture plan such that at least one controlled receptacle is selected for installation not greater than **6 ft. (1.8 m)** from each workstation.
3. Contact Architect for resolution of discrepancies between these requirements and Drawings, as directed by the Owner.

3.3 SELECTION OF GFCI RECEPTACLES

A. Healthcare Facilities: Unless protection of downstream branch-circuit wiring, cord sets, and power-supply cords is required by NFPA 70 or NFPA 99, provide non-feed-through GFCI receptacles.

3.4 INSTALLATION OF GENERAL-USE SWITCHES, DIMMER SWITCHES, AND FAN-SPEED CONTROLLER SWITCHES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Life Safety and Means of Egress Work: NFPA 101.
4. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
5. Wiring Devices: NECA NEIS 130.
6. Mounting Heights: NECA NEIS 1.
7. Consult Architect for resolution of conflicting requirements, as directed by the Owner.

C. Interfaces with Other Work:

1. Identification:

a. Identify cover or cover plate for device with panelboard identification and circuit number.

b. Mark cover or cover plate using hot, stamped, or engraved machine printing with [**black**][**white**][**red**] -filled lettering, and provide durable wire markers or tags inside device box or outlet box.

c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

d. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

3.5 INSTALLATION OF STRAIGHT-BLADE RECEPTACLES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
4. Work in ITE Rooms: NFPA 75.
5. Work in Health Care Facilities: NFPA 99 and Article 517 of NFPA 70.
6. Work in Confined Spaces: NFPA 350.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
8. Installing and Maintaining Wiring Devices: NECA NEIS 130.
9. Mounting Heights: Unless otherwise indicated in the Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
10. Receptacle Orientation: Unless otherwise indicated in the Contract Documents, orient receptacle to match configuration diagram in NEMA WD 6.

a. Hospital-Grade Receptacle Orientation: Orient receptacle with ground pin or neutral pin at top.

11. Consult Architect for resolution of conflicting requirements, as directed by the Owner.

C. Interfaces with Other Work:

1. Identification: Provide labels for receptacles and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure with engraved metal or laminated-plastic nameplate.

1) Identify cover or cover plate for device with panelboard identification and circuit number.

2) Mark cover or cover plate using hot, stamped, or engraved machine printing with [**black**][**white**][**red**] -filled lettering, and provide durable wire markers or tags inside device box or outlet box.

c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

d. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

2. Do not install Type 3 SPD, including surge-protected relocatable taps and power strips, on branch circuit downstream of GFCI device.

3.6 INSTALLATION OF LOCKING RECEPTACLES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
4. Work in ITE Rooms: NFPA 75.
5. Work in Health Care Facilities: NFPA 99 and Article 517 of NFPA 70.
6. Work in Confined Spaces: NFPA 350.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
8. Installing and Maintaining Wiring Devices: NECA NEIS 130.
9. Mounting Heights: Unless otherwise indicated in the Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
10. Receptacle Orientation: Unless otherwise indicated in the Contract Documents, orient receptacle to match configuration diagram in NEMA WD 6.
11. Consult Architect for resolution of conflicting requirements, as directed by the Owner.

C. Interfaces with Other Work:

1. Identification: Provide labels for receptacles and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure with engraved metal or laminated-plastic nameplate.

1) Identify cover or cover plate for device with panelboard identification and circuit number.

2) Mark cover or cover plate using hot, stamped, or engraved machine printing with [**black**][**white**][**red**] -filled lettering, and provide durable wire markers or tags inside device box or outlet box.

c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

d. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

3.7 INSTALLATION OF PIN-AND-SLEEVE RECEPTACLES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
4. Work in ITE Rooms: NFPA 75.
5. Work in Health Care Facilities: NFPA 99 and Article 517 of NFPA 70.
6. Work in Confined Spaces: NFPA 350.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
8. Installing and Maintaining Wiring Devices: NECA NEIS 130.
9. Mounting Heights: Unless otherwise indicated in the Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
10. Receptacle Orientation: Unless otherwise indicated in the Contract Documents, orient receptacle to match configuration diagram in UL 1686.
11. Consult Architect for resolution of conflicting requirements, as directed by the Owner.

C. Interfaces with Other Work:

1. Identification: Provide labels for receptacles and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure with engraved metal or laminated-plastic nameplate.

1) Identify cover or cover plate for device with panelboard identification and circuit number.

2) Mark cover or cover plate using hot, stamped, or engraved machine printing with [**black**][**white**][**red**] -filled lettering, and provide durable wire markers or tags inside device box or outlet box.

c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

d. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

3.8 INSTALLATION OF CORD REELS AND FITTINGS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Hot Work: NFPA 51B.
5. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
6. Work in Confined Spaces: NFPA 350.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.

3.9 INSTALLATION OF CONNECTORS, CORDS, AND PLUGS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
5. Work in ITE Rooms: NFPA 75.
6. Work in Health Care Facilities: NFPA 99 and Article 517 of NFPA 70.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
8. Consult Architect for resolution of conflicting requirements, as directed by the Owner.

3.10 FIELD QUALITY CONTROL OF GENERAL-USE SWITCHES, DIMMER SWITCHES, AND FAN-SPEED CONTROLLER SWITCHES

A. Administrant for Electrical Power Tests and Inspections:

1. [**the Owner**][**Tenant**] will engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections [**with assistance of factory-authorized service representative**] .

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**] as directed by the Owner.

C. Tests and Inspections: Perform tests and inspections in accordance with manufacturers' published instructions.

D. Nonconforming Work:

1. Unit will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field Quality Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.11 FIELD QUALITY CONTROL OF STRAIGHT-BLADE RECEPTACLES

A. Administrant for Electrical Power Tests and Inspections:

1. [**the Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections [**with assistance of factory-authorized service representative**] .

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**] as directed by the Owner.

C. Tests and Inspections:

1. Insert and remove test plug to verify that device is securely mounted.
2. Verify polarity of hot and neutral pins.
3. Measure line voltage.
4. Measure percent voltage drop.
5. Measure grounding circuit continuity; impedance must be not greater than 2 ohms.

6. Healthcare Facilities: Test straight-blade receptacles in patient care spaces with receptacle pin tension test instrument in accordance with NFPA 99. Retention force of ground pin must be not less than 115 g (4 oz).
7. Perform additional installation and maintenance inspections and diagnostic tests in accordance with NECA NEIS 130 and manufacturers' published instructions.

D. Nonconforming Work:

1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field Quality Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.12 FIELD QUALITY CONTROL OF LOCKING RECEPTACLES

A. Administrant for Low-Voltage Electrical Tests and Inspections:

1. [**the Owner**][**Tenant**] will engage qualified low-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified low-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections [**with assistance of factory-authorized service representative**] .

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**] as directed by the Owner.

C. Tests and Inspections:

1. Insert and remove test plug to verify that device is securely mounted.
2. Verify polarity of hot and neutral pins.
3. Measure line voltage.
4. Measure percent voltage drop.
5. Measure grounding circuit continuity; impedance must be not greater than 2 ohms.
6. Perform additional installation and maintenance inspections and diagnostic tests in accordance with NECA NEIS 130 and manufacturers' published instructions.

D. Nonconforming Work:

1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field Quality Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.13 FIELD QUALITY CONTROL OF PIN-AND-SLEEVE RECEPTACLES

A. Administrant for Low-Voltage Electrical Tests and Inspections:

1. [**the Owner**][**Tenant**] will engage qualified low-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified low-voltage electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections [**with assistance of factory-authorized service representative**] .

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]

as directed by the Owner.

C. Tests and Inspections:

1. Insert and remove test plug to verify that device is securely mounted.
2. Measure line voltage.
3. Measure percent voltage drop.
4. Measure ground impedance, which must be not greater than 2 ohms.
5. Perform additional installation and maintenance inspections and diagnostic tests in accordance with NECA NEIS 130 and manufacturers' published instructions.

D. Nonconforming Work:

1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field Quality Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.14 FIELD QUALITY CONTROL OF CORD REELS AND FITTINGS

A. Administrant for Electrical Power Tests and Inspections:

1. [**the Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections [**with assistance of factory-authorized service representative**] .

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**] as directed by the Owner.

C. Tests and Inspections: Perform tests and inspections indicated in manufacturer's published instructions.

D. Nonconforming Work:

1. Components and assemblies will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field Quality Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.15 FIELD QUALITY CONTROL OF CONNECTORS, CORDS, AND PLUGS

A. Administrant for Electrical Power Tests and Inspections:

1. [**the Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections [**with assistance of factory-authorized service representative**] .

B. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**] as directed by the Owner.

C. Tests and Inspections: Perform tests and inspections indicated in manufacturer's published instructions.

D. Nonconforming Work:

1. Unit will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field Quality Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.16 SYSTEM STARTUP FOR GENERAL-USE SWITCHES, DIMMER SWITCHES, AND FAN-SPEED CONTROLLER SWITCHES

A. Perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's published instructions.

B. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] system startup.

1. Manufacturer's Field Reports for System Startup Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.17 ADJUSTING

A. Occupancy Adjustments for Controlled Receptacles: When requested within [**12**] months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to [**two**] visits to the Project during other-than-normal occupancy hours for this purpose.

B. Cord Reels and Fittings: Adjust spring mechanisms and moving parts of cord reels and fittings to function smoothly, and lubricate as recommended in writing by manufacturer.

3.18 PROTECTION

A. Devices:

1. Schedule and sequence installation to minimize risk of contamination of wires and cables, devices, device boxes, outlet boxes, covers, and cover plates by plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other materials.
2. After installation, protect wires and cables, devices, device boxes, outlet boxes, covers, and cover plates from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by the Owner.

B. Cord Reels and Fittings: After installation, protect cord reels and fittings from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by the Owner.

C. Connectors, Cords, and Plugs: After installation, protect connectors, cords, and plugs from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by the Owner.

END OF SECTION 26 27 26 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 27 26 00A - RECEPTACLES WITH ARC-FAULT AND GROUND-FAULT PROTECTIVE DEVICES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Receptacles with AFCI devices.
2. Receptacles with both AFCI and GFCI devices.
3. Receptacles with GFCI devices.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
5. Section 260533.16 "Boxes and Covers for Electrical Systems" specifies covers and cover plates referenced by this Section.
6. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
7. Section 262726.31 "General-Grade Single Straight-Blade Receptacles" for single receptacles.
8. Section 262726.33 "General-Grade Duplex Straight-Blade Receptacles" for duplex receptacles that are not hospital grade.
9. Section 262726.35 "Hospital-Grade Straight-Blade Receptacles" for hospital-grade receptacles.
10. Section 262726.39 "Locking Receptacles" for twist-locking receptacles.
11. Section 262726.41 "Pin-and-Sleeve Receptacles" for pin-and-sleeve receptacles.

1.2 DEFINITIONS

A. AFCI: Arc-Fault Circuit Interrupter.

B. GFCI: Ground-Fault Circuit Interrupter.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.

a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and

fitness for purpose.

b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.

c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for submitted product.

2. Include manufacturer's sample extended warranty language.

B. Samples:

1. One for each kind of receptacles with AFCI devices[**and cover plate accessory**] specified, in each finish and color specified.
2. One for each kind of receptacles with AFCI and GFCI devices[**and cover plate accessory**] specified, in each finish and color specified.
3. One for each kind of receptacles with GFCI devices[**and cover plate accessory**] specified, in each finish and color specified.

C. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

B. Field Reports:

1. Manufacturer's field reports for field quality-control support.

1.5 WARRANTY

A. Special Manufacturer Extended Warranty: Manufacturer warrants that devices perform in accordance with specified requirements and agrees to provide repair or replacement of devices that fail to perform as specified within extended warranty period.

1. Initial Extended Warranty Period: [**Three**][**Four**][**Five**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.
2. Follow-On Extended Warranty Period: [**Eight**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for materials only, free on board [**origin**][**destination**], freight prepaid.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2.2 RECEPTACLES WITH AFCI DEVICES

A. General-Grade, Tamper-Resistant Duplex Straight-Blade Receptacle with AFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**Pass & Seymour; Legrand North America, LLC**]
   e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**Pass & Seymour; Legrand North America, LLC**]
   e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Outlet Branch-Circuit Type AFCIs: UL CCN AWBZ, UL 498, UL 1699, and UL Subject 1699A.

4. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
   b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

   a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Hospital-Grade, Tamper-Resistant Duplex Straight-Blade Receptacle with AFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the**

following][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Leviton Manufacturing Co., Inc.**]
b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Leviton Manufacturing Co., Inc.**]
b. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Outlet Branch-Circuit Type AFCIs: UL CCN AWBZ, UL 498, UL 1699, and UL Subject 1699A.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.3 RECEPTACLES WITH BOTH AFCI AND GFCI DEVICES

A. General-Grade, Tamper-Resistant Duplex Straight-Blade Receptacle with AFCI and GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Outlet Branch-Circuit Type GFCIs and AFCIs: UL CCN KCXX, UL 498, UL 943, UL 1699, and UL Subject 1699A.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.4 RECEPTACLES WITH GFCI DEVICES

A. General-Grade Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]
    e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

    a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
    b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

    a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

    a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
    b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. General-Grade, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]

b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
   b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

   a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

C. General-Grade, Tamper-Resistant Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**Pass & Seymour; Legrand North America, LLC**]
   e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**Pass & Seymour; Legrand North America, LLC**]
   e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

    a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
    b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

    a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

    a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
    b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

D. General-Grade, Tamper-Resistant, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]
    e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

E. General-Grade, Weather-Resistant Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on**

architectural Drawings].
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

F. General-Grade, Weather-Resistant, Tamper-Resistant Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

G. General-Grade, Weather-Resistant, Tamper-Resistant, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth

finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

H. General-Grade, Isolated Ground, Tamper-Resistant Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

I. General-Grade, Isolated Ground, Weather-Resistant, Tamper-Resistant Duplex Straight-Blade

Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Leviton Manufacturing Co., Inc.**]
    d. [**Pass & Seymour; Legrand North America, LLC**]
    e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

    a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
    b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

    a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

    a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
    b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

J. Hospital-Grade Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

K. Hospital-Grade, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]

e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

L. Hospital-Grade, Tamper-Resistant, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

M. Hospital-Grade, Weather-Resistant, Tamper-Resistant Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]

d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

N. Hospital-Grade, Weather-Resistant, Tamper-Resistant, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product

categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

O. Hospital-Grade, Isolated Ground, Tamper-Resistant Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
c. [**Leviton Manufacturing Co., Inc.**]
d. [**Pass & Seymour; Legrand North America, LLC**]
e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].
   b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

   a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

P. Hospital-Grade, Isolated Ground, Weather-Resistant, Tamper-Resistant Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**Pass & Seymour; Legrand North America, LLC**]
   e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Arrow Hart, Wiring Devices; Eaton, Electrical Sector**]
   b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Leviton Manufacturing Co., Inc.**]
   d. [**Pass & Seymour; Legrand North America, LLC**]
   e. <**Insert manufacturer's name**>

3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

4. Standard Features:

   a. Device Color: [**Ivory**][**White**][**Gray**][**Brown**][**Black**][**Red**][**Yellow**][**Orange**][**in accordance with NEMA WD 1**][**Blue**][**Green**][**Office White**][**Almond**][**Light Almond**][**As indicated on architectural Drawings**].

b. Configuration: Heavy-duty, [**NEMA 5-15R**][**NEMA 5-20R**].

5. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

6. Accessories:

a. Cover Plate: **0.060 inch (1.5 mm)** thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that receptacles to be procured and installed for Owner-furnished equipment are compatible with mating attachment plugs on equipment.

3.2 SELECTION OF GFCI RECEPTACLES

A. Healthcare Facilities: Unless protection of downstream branch-circuit wiring, cord sets, and power-supply cords is required by NFPA 70 or NFPA 99, provide non-feed-through GFCI receptacles.

3.3 INSTALLATION

A. Comply with manufacturer's instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
4. Work in ITE Rooms: NFPA 75.
5. Work in Health Care Facilities: NFPA 99 and Article 517 of NFPA 70.
6. Work in Confined Spaces: NFPA 350.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
8. Installing and Maintaining Wiring Devices: NECA NEIS 130.
9. Mounting Heights: Unless otherwise indicated in the Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
10. Receptacle Orientation: Unless otherwise indicated in the Contract Documents, orient receptacle to match configuration diagram in NEMA WD 6.

a. Hospital-Grade Receptacle Orientation: Orient receptacle with ground pin or neutral pin at top.

11. Consult Architect for resolution of conflicting requirements.

C. Interfaces with Other Work:

1. Identification: Provide labels for receptacles and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure with engraved metal or laminated-plastic nameplate.

1) Identify cover or cover plate for device with panelboard identification and circuit number.
2) Mark cover or cover plate using hot, stamped, or engraved machine printing with [**black**][**white**][**red**]-filled lettering, and provide durable wire markers or tags inside device box or outlet box.

c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.
d. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

2. Do not install Type 3 SPD, including surge-protected relocatable taps and power strips, on branch circuit downstream of GFCI device.
3. Coordinate installation of new products for <**Insert system or product group**> with existing conditions.

a. <**Insert requirements for transition between new and existing**>.

4. Coordinate with <**Insert Section number and title**> for <**Insert description of interfacing related Work**>.

a. <**Insert requirements for transition between this Section and related Work**>.

3.4 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

1. <**Insert requirements**>.

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

D. Tests and Inspections:

1. Insert and remove test plug to verify that device is securely mounted.

2. Verify polarity of hot and neutral pins.
3. Measure line voltage.
4. Measure percent voltage drop.
5. Measure grounding circuit continuity; impedance must be not greater than 2 ohms.
6. Healthcare Facilities: Test straight-blade receptacles in patient care spaces with receptacle pin tension test instrument in accordance with NFPA 99. Retention force of ground pin must be not less than 115 g (4 oz).
7. Perform additional installation and maintenance inspections and diagnostic tests in accordance with NECA NEIS 130 and manufacturers' instructions.
8. <**Insert tests and inspections**>.

E. Nonconforming Work:

1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

G. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.5 PROTECTION

A. Schedule and sequence installation to minimize risk of contamination of wires and cables, devices, device boxes, outlet boxes, covers, and cover plates by plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other materials.

B. After installation, protect wires and cables, devices, device boxes, outlet boxes, covers, and cover plates from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

END OF SECTION 26 27 26 00A

SECTION 26 27 26 00B - CONNECTORS, CORDS, AND PLUGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Fuseless attachment cord connectors.
2. Extra-hard-usage, jacketed, flexible cord.
3. Antimicrobial, extra-hard-usage, jacketed, flexible cord.
4. Hard-usage, jacketed, flexible cord.
5. Strain-relief cord grips.

B. Products Installed, but Not Furnished, under This Section:

1. <**Insert products identified in "Existing Products to be Modified" Article or "Existing Products to be Removed and Reinstalled" Article**>.

C. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
5. Section 262726.43 "Special-Purpose Power Outlet Assemblies" specifies fabricated power-outlet cord management assemblies containing connectors and cords specified by this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: One for each kind of cord connector specified, in each finish and color specified.

C. Field quality-control reports.

1.3 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

B. Field Reports:

1. Manufacturer's field reports for field quality-control support.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2.2 FUSELESS ATTACHMENT CORD CONNECTORS

A. Description: Connectors for attachment to cord that do not incorporate switches or overcurrent protection.

B. Indoor-Use, Dry Location Cord Connector:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Ericson Manufacturing Company**]
    b. <**Insert manufacturer's name**>

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Reference Standards: UL CCN AXUT and UL 498.

3. Standard Features:

    a. Configuration: NEMA 5-15[**with lighted blade**].

C. Indoor-Use, Sealed Cord Connector:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Ericson Manufacturing Company**]
    b. <**Insert manufacturer's name**>

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Reference Standards: UL CCN AXUT and UL 498.

3. Standard Features:

    a. Configuration:

1) NEMA 5-15[**with diagnostic LED indicator**].
2) NEMA 5-20[**with diagnostic LED indicator**].
3) NEMA 6-15.
4) NEMA 6-20.
5) NEMA L5-15.
6) NEMA L5-20[**with diagnostic LED indicator**].
7) NEMA L5-30.
8) NEMA L6-15.
9) NEMA L6-20.
10) NEMA L6-30.
11) NEMA L7-15.
12) NEMA L7-20.
13) NEMA L7-30.
14) NEMA L14-20.
15) NEMA L14-30.
16) NEMA L15-20.
17) NEMA L15-30.
18) NEMA L16-20.
19) NEMA L16-30.
20) NEMA L17-30.
21) NEMA L18-30.

D. Hospital-Grade, Indoor-Use, Sealed Cord Connector:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Ericson Manufacturing Company**]
   b. <**Insert manufacturer's name**>

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Reference Standards: UL CCN AXUT and UL 498.

3. Standard Features:

   a. Configuration: [**NEMA 5-15**][**NEMA 5-20**].

E. Indoor-Use, Compression-Grip, Sealed Cord Connector:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Ericson Manufacturing Company**]
   b. <**Insert manufacturer's name**>

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Reference Standards: UL CCN AXUT and UL 498.

3. Standard Features:

a. Configuration:

1) NEMA 5-15[**with diagnostic LED indicator**].
2) NEMA 5-20[**with diagnostic LED indicator**].
3) NEMA 6-15.
4) NEMA 6-20.
5) NEMA L5-15.
6) NEMA L5-20[**with diagnostic LED indicator**].
7) NEMA L5-30.
8) NEMA L6-15.
9) NEMA L6-20.
10) NEMA L6-30.
11) NEMA L7-15.

F. Outdoor-Use, Watertight, Sealed Cord Connector:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Ericson Manufacturing Company**]
b. <**Insert manufacturer's name**>

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Reference Standards: UL CCN AXUT and UL 498.

3. Standard Features:

a. Configuration:

1) NEMA 5-15[**with diagnostic LED indicator**].
2) NEMA 5-20[**with diagnostic LED indicator**].
3) NEMA 6-15.
4) NEMA 6-20.
5) NEMA L5-15.
6) NEMA L5-20[**with diagnostic LED indicator**].
7) NEMA L5-30.
8) NEMA L6-15.
9) NEMA L6-20.
10) NEMA L6-30.
11) NEMA L7-15.
12) NEMA L7-20.
13) NEMA L7-30.
14) NEMA L14-20.
15) NEMA L14-30.
16) NEMA L15-20.
17) NEMA L15-30.

18) NEMA L16-20.
19) NEMA L16-30.
20) NEMA L17-30.
21) NEMA L18-30.

G. Antimicrobial, Watertight, Sealed Cord Connector:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Ericson Manufacturing Company**]
b. <**Insert manufacturer's name**>

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Reference Standards: UL CCN AXUT and UL 498.

3. Options:

a. Antimicrobial additive embedded in connector grip polymer.
b. Configuration:

1) NEMA 5-15.
2) NEMA 5-20.
3) NEMA 6-15.
4) NEMA 6-20.
5) NEMA L5-15.
6) NEMA L5-20.
7) NEMA L5-30.
8) NEMA L6-15.
9) NEMA L6-20.
10) NEMA L6-30.
11) NEMA L7-15.
12) NEMA L7-20.
13) NEMA L7-30.
14) NEMA L14-20.
15) NEMA L14-30.
16) NEMA L15-20.
17) NEMA L15-30.
18) NEMA L16-20.
19) NEMA L16-30.
20) NEMA L17-30.
21) NEMA L18-30.

2.3 EXTRA-HARD-USAGE, JACKETED, FLEXIBLE CORD

A. Oil-Resistant, Extra-Hard-Usage, Jacketed, Flexible Cord for Indoor Damp Locations:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

a. [**Belden Inc.**]
b. [**Ericson Manufacturing Company**]
c. [**Southwire Company, LLC**]
d. [**U.S. Wire & Cable Corp.**]
e. <**Insert manufacturer's name**>

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Reference Standards: UL CCN ZJCZ and UL 62.

3. Standard Features:

a. 600 V, 90 deg C, hard service cord with oil-resistant jacket[**and oil-resistant insulation**] for pendant or portable extra-hard usage in damp locations.
b. Flexible Cord Type: [**STO**][**STOO**][**SEO**][**SEOO**][**SO**][**SOO**].

B. Oil-Resistant, Extra-Hard-Usage, Jacketed, Flexible Cord for Outdoor or Indoor Wet Locations:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Inc.**]
b. [**Ericson Manufacturing Company**]
c. [**Southwire Company, LLC**]
d. [**U.S. Wire & Cable Corp.**]
e. <**Insert manufacturer's name**>

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Reference Standards: UL CCN ZJCZ and UL 62.

3. Standard Features:

a. 600 V, 90 deg C, hard service cord with oil-resistant jacket[**and oil-resistant insulation**] for pendant or portable extra-hard usage in damp locations.
b. Flexible Cord Type: [**STOW**][**STOOW**][**SEOW**][**SEOOW**][**SOW**][**SOOW**].

2.4 ANTIMICROBIAL, EXTRA-HARD-USAGE, JACKETED, FLEXIBLE CORD

A. Antimicrobial, Oil-Resistant, Extra-Hard-Usage, Jacketed, Flexible Cord for Outdoor or Indoor Wet Locations:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the**

following]:

a. [**Ericson Manufacturing Company**]
b. <**Insert manufacturer's name**>

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Reference Standards: UL CCN ZJCZ and UL 62.

3. Standard Features:

a. 600 V, 90 deg C, hard service cord with oil-resistant jacket for pendant or portable extra-hard usage in damp or wet locations.
b. Antimicrobial additive embedded in jacket polymer.
c. Flexible Cord Type: [**STOW**][**SEOW**].
d. Configuration:

1) No. 14 AWG, two wires and equipment ground.
2) No. 12 AWG, two wires and equipment ground.
3) No. 12 AWG, three wires and equipment ground.
4) No. 10 AWG, two wires and equipment ground.
5) No. 10 AWG, three wires and equipment ground.

2.5 HARD-USAGE, JACKETED, FLEXIBLE CORD

A. Oil-Resistant, Hard-Usage, Jacketed, Flexible Cord for Indoor Damp Locations:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Belden Inc.**]
b. [**Ericson Manufacturing Company**]
c. [**Southwire Company, LLC**]
d. [**U.S. Wire & Cable Corp.**]
e. <**Insert manufacturer's name**>

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Reference Standards: UL CCN ZJCZ and UL 62.

3. Standard Features:

a. 300 V, 90 deg C, hard service cord with oil-resistant jacket[**and oil-resistant insulation**] for pendant or portable extra-hard usage in damp locations.
b. Flexible Cord Type: [**SJTO**][**SJTOO**][**SJEO**][**SJEOO**][**SJO**][**SJOO**].

B. Oil-Resistant, Hard-Usage, Jacketed, Flexible Cord for Outdoor or Indoor Wet Locations:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Belden Inc.**]
    b. [**Ericson Manufacturing Company**]
    c. [**Southwire Company, LLC**]
    d. [**U.S. Wire & Cable Corp.**]
    e. <**Insert manufacturer's name**>

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Reference Standards: UL CCN ZJCZ and UL 62.

3. Standard Features:

    a. 300 V, 90 deg C, hard service cord with oil-resistant jacket[**and oil-resistant insulation**] for pendant or portable extra-hard usage in damp locations.
    b. Flexible Cord Type: [**SJTOW**][**SJTOOW**][**SJEOW**][**SJEOOW**][**SJOW**][**SJOOW**].

2.6 STRAIN-RELIEF CORD GRIPS

A. Strain-Relief Cord Grip:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Ericson Manufacturing Company**]
    b. [**Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
    c. [**Pass & Seymour; Legrand North America, LLC**]
    d. <**Insert manufacturer's name**>

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Reference Standards: UL CCN QCRV and UL 514B.

3. Standard Features:

    a. Strain-relief grip for bus drop cable.
    b. Noninsulated strain-relief grip for flexible cord.
    c. Insulated strain-relief grip for flexible cord.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with manufacturer's instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
5. Work in ITE Rooms: NFPA 75.
6. Work in Health Care Facilities: NFPA 99 and Article 517 of NFPA 70.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
8. Consult Architect for resolution of conflicting requirements.

C. Special Techniques:

1. <**Insert more stringent installation requirements that supplement or supersede listed standards and manufacturers' instructions**>.

D. Interfaces with Other Work:

1. Coordinate with Section 262726.43 "Special-Purpose Power Outlet Assemblies" for installation of connectors and cords on fabricated power-outlet cord management assemblies.
2. Coordinate installation of new products for <**Insert system or product group**> with existing conditions.

a. <**Insert requirements for transition between new and existing**>.

3. Coordinate with <**Insert Section number and title**> for <**Insert description of interfacing related Work**>.

a. <**Insert requirements for transition between this Section and related Work**>.

3.2 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

1. <**Insert requirements**>.

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

D. Tests and Inspections:

1. Perform tests and inspections indicated in manufacturer's instructions.
2. <**Insert Project-specific test or inspection**>.

E. Nonconforming Work:

1. Unit will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

G. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

END OF SECTION 26 27 26 00B

Task	Specification	Specification Description

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 27 33 00 - POWER DISTRIBUTION UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Manufactured power distribution units.

B. Products Installed, but Not Furnished, under This Section:

1. <**Insert products identified in "Existing Products to be Modified" Article or "Existing Products to be Removed and Reinstalled" Article**>.

C. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
5. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
6. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration isolation and seismic control devices referenced by this Section.
7. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
8. Section 260573 "Power System Studies" specifies arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.

1.2 DEFINITIONS

A. EPO: Emergency power-off.

B. SPD: Surge protective device.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Coordination Meeting(s): For power distribution units. Conduct meeting(s) [**as videoconference**][**or**][**at Project site**]<**Insert location**> before <**Insert construction activity**>.

1. Attendees: Installers, fabricators, representatives of manufacturers, representatives of Owner, and administrants for field tests and inspections. Notify Architect[**, Construction Manager**][**, and Owner's Commissioning Authority**] of scheduled meeting dates.
2. Coordinate layout and installation of power distribution units with Owner's equipment.

3. Record agreements reached in meetings and distribute record to other participants.
4. Adjust arrangements and locations of power distribution units to accommodate and optimize arrangement and space requirements of equipment.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.

a. If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
b. Listing criteria identified in approval letter must match specified listing criteria. UL label indicating approval of equipment's enclosure is not considered approval of equipment for intended application.
c. Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for discontinued or superseded products are unacceptable for submitted product.

B. Shop Drawings: Prepare and submit the following:

1. Include plans, elevations, sections, and [**mounting**][**attachment**] details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

C. Factory test reports.

D. Field quality-control reports.

1.5 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

B. Manufacturer's field reports for field quality-control support.

C. Manufacturer's field reports for system startup support.

D. Field reports for infrared scanning.

1.6 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, conduct tests of complex equipment, analyze test and equipment data, plan a job, and lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

B. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able

to conduct tests of complex metering and relay systems; evaluate tests, test equipment, test results, and power system performance; recommend actions to maintain or improve system performance; and lead multi-team projects.

C. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver equipment in fully enclosed vehicles after specified environmental conditions have been permanently established in spaces where equipment is to be placed.

B. Store equipment in spaces with environments controlled within manufacturer's ambient temperature and humidity tolerances for non-operating equipment.

1.8 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

A. Modeling, analysis, product selection, installation, and quality control for all electrical Work on the Project must comply with service condition requirements specified in Section 018116 "Facility Environmental Requirements" and Section 018123 "Facility Seismic and Wind Criteria."

B. Usual Service Conditions: Unless unusual service conditions have been specified in "General Environmental Conditions," "Outdoor Conditions," and "Indoor Conditions" articles of Section 018116 "Facility Environmental Requirements," electrical service and distribution equipment must be suitable for operation under usual service conditions specified in applicable NEMA PB series, IEEE C37 series, and IEEE C57 series standards.

PART 2 - PRODUCTS

2.1 EXISTING PRODUCTS TO BE MODIFIED

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact the Work**>.

C. Accessories: <**Insert accessories included with existing product**>.

2.2 EXISTING PRODUCTS TO BE REMOVED AND REINSTALLED

A. Basis for Pricing: <**Insert name of manufacturer; model number or series for existing product**>.

B. Description: <**Insert description of existing product, including special features, options, and finishes that may impact the Work**>.

C. Accessories: <**Insert accessories included with existing product**>.

2.3 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2.4 MANUFACTURED POWER DISTRIBUTION UNITS

A. Source Quality Control:

1. Factory Tests:

a. Owner will witness required factory tests. Notify Architect at least 14 days before date of tests and indicate their approximate duration.
b. Testing Administrant: [**Owner will engage**][**Engage**] qualified electrical testing agency to evaluate power distribution units.
c. Factory Tests and Inspections: Test and inspect power distribution units, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with referenced standards before delivering to site. Affix label with name and date of [**manufacturer's**][**qualified electrical testing laboratory's**] certification of system compliance.

1) Conduct factory sound-level tests.

d. Nonconforming Work:

1) Equipment that does not pass tests and inspections will be considered defective.

e. Factory Test Reports: Compile and submit factory test and inspection reports.

B. Power Distribution Units :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Liebert; Vertiv Holdings Co.**]
d. [**Myers Power Products, Inc**]
e. [**Power Distribution, Inc.; Eaton, Electrical Sector**]
f. [**Powersmiths International Corp.; Socomec Group**]
g. [**Square D; Schneider Electric USA**]
h. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Electrification Business**]
b. [**Eaton**]
c. [**Liebert; Vertiv Holdings Co.**]
d. [**Myers Power Products, Inc**]

e. [**Power Distribution, Inc.; Eaton, Electrical Sector**]
f. [**Powersmiths International Corp.; Socomec Group**]
g. [**Square D; Schneider Electric USA**]
h. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Standard Features:

a. Integrated and coordinated assembly of power-line-conditioning and distribution components packaged in single cabinet or modular assembly of cabinets[**each with full-swivel casters mounted to bottom frame**]. Include the following components:

1) Input-power, circuit-breaker section.
2) Isolation transformer.
3) SPD system.
4) Output panelboard(s).
5) Alarm, monitoring, and control system.

b. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
c. Wiring Access: [**Top**][**and**][**bottom**] wiring access.
d. Unit Capacity Rating: Carry indicated RMS kilovolt-ampere load continuously without affecting normal operation of circuit breakers, monitoring system, or unit controls and without exceeding rated insulation temperature for the following input voltage and load current:

1) Input Voltage: Within rated input-voltage tolerance band of unit.
2) Load Current: Minimum of 3.0 crest factor and 85 percent total harmonic distortion.

e. Input-Power, Circuit-Breaker Section: Three-pole, [**shunt-tripped,**]thermal-magnetic-type circuit breaker, rated for indicated interrupting capacity and 125 percent of input current of unit at 100 percent rated load at unit capacity rating.

1) Dual-Input Units:

a) Two input circuit breakers arranged to provide transfer between two input-power sources.
b) Controls and interfaces to allow selecting either open- or closed-transition transfer between two input-power sources.
c) Use 120 V permissive signal from both upstream voltage sources to indicate acceptable conditions for closed-transition transfer.
d) Open second circuit breaker automatically after closed-transition transfer is completed.

2) Static Transfer Switch: Three-pole, double-throw; solid-state, automatic transfer switch.

f. Isolation Transformer Section: Dry-type, electrostatically shielded, three-phase, common-core, convection-air-cooled isolation transformer.

1) Comply with UL 1561[**including requirements for nonsinusoidal load-current-handling capability defined by designated K-factor**].
2) Cores: Electrical grade, non-aging silicon steel with high permeability and low hysteresis losses, one leg per phase.
3) Coil Material and Insulation: [**Aluminum**][**Copper**] windings, 220 deg C insulation

class.

4) Temperature Rise: Designed for [**80**][**115**][**150**] deg C rise above 40 deg C ambient.
5) Output Impedance: 3.5 plus or minus 0.5 percent.
6) Regulation: 2 to 4 percent maximum, at full-resistive load; 5 percent maximum, at rated nonlinear load.
7) Taps: Six full-capacity compensation taps at 2.5 percent increments; two above and four below nominal voltage.
8) Full-Load Efficiency: Minimum 96 percent at rated[**nonlinear**] load.
9) Magnetic-Field Strength External to Transformer Enclosure: Less than 0.1 G at **18 inch (450 mm)**.
10) K-Factor Rating: Transformers indicated to be K-factor rated must comply with UL 1561 requirements for nonsinusoidal load current-handling capability to the degree defined by designated K-factor.

    a) Unit may not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor.
    b) Indicate value of K-factor on transformer nameplate.

11) Electrostatic Shielding: Independently shield each winding with full-width, [**single**][**double**], copper, electrostatic shield arranged to minimize interwinding capacitance.

    a) Coil leads and terminal trips must be arranged to minimize capacitive coupling between input and output connections.
    b) Shield Terminal: Separate, and marked "Shield" for grounding connection. Shield must be connected to reference ground point for distribution panels.
    c) Capacitance: Limit capacitance between primary and secondary windings to maximum of 33 pF over frequency range of 20 Hz to 1 MHz.
    d) Common-Mode Noise Attenuation: 120 dB minimum, 0.5 to 1.5 kHz; minus 65 dB minimum, 1.5 to 100 kHz.
    e) Normal-Mode Noise Attenuation: 52 dB minimum, 1.5 to 10 kHz.

12) Neutral Rating: [**1.732 times**][**200 percent of**] system full-load ampere rating.
13) Shipping Restraints: Paint or otherwise color code bolts, wedges, blocks, and other restraints that are to be removed after installation and before energizing. Use fluorescent colors that are easily identifiable inside transformer enclosure.

g. SPD System: Integrated SPD system, complying with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits," to protect unit panelboard, and having the following features:

1) Disconnect Device: Manual, three-pole, fused disconnect switch to de-energize SPD system while permitting power distribution units to continue operation. Fuses must be rated for 200 kA interrupting capacity.
2) Nonlinear Loading: System must accommodate rated-load current with minimum 3.0 crest factor and 85 percent total harmonic distortion.

h. Output Panelboards: Panelboards complying with Section 262416 "Panelboards" except for mounting provisions. Mount [**single**][**double**] panelboards on power distribution unit behind flush doors. Include the following features:

1) Construction: [**30**][**42**] pole, [**208 V**][**240 V**], three phase; capable of accepting branch circuit breakers rated up to 100 A.
2) Panelboard Rating: [**225 A**]<**Insert value**>, with main circuit breaker.
3) Panelboard Phase, Neutral, and Ground Buses: Copper, with neutral bus at least

[**1.732**][**two**] times nominal phase bus rating.

4) Isolated Ground Bus: Copper, adequate for branch-circuit equipment ground conductors; insulated from supports.
5) Branch Circuit Breakers: [**Bolt**][**Plug**] on.
6) Cable Racks: Removable and arranged for supporting and routing cables for panelboard entrance.
7) Access Panels: Arranged so additional branch-circuit wiring can be installed and connected in future.

i. Power Distribution Unit Controls: Include the following control features:

1) EPO switch integral with power distribution unit.
2) Power-off input terminals for connection to remote EPO switch.
3) Shutdown with automatic unit disconnection for the following alarm conditions:

a) High temperature in transformer coil.
b) High or low input or output voltage.
c) Phase loss.
d) Ground fault.
e) Reverse-phase rotation.

4) Alarm Contacts: Electrically isolated, Form C (one normally open and one normally closed), summary alarm; contact set must change state if monitored function goes into alarm mode.
5) Auxiliary Control Outputs: <**Insert control function outputs**>.

j. Monitoring, Status, and Alarm Annunciation: Microprocessor-based monitoring, status, and alarm annunciation panel mounted flush in front of power distribution unit to provide status display and failure-indicating interface for the following:

1) Power Monitoring:

a) Input Voltage: Line-to-line, RMS.
b) Output Voltage: Line-to-line and line-to-neutral, RMS.
c) Output current.

2) Status Indication: Unit on.
3) Alarm Annunciation:

a) High temperature in transformer coil.
b) High and low input voltage.
c) High and low output voltage.
d) Phase loss.
e) Ground fault.
f) Frequency.
g) Phase rotation.
h) SPD module failure.

4) Audible Alarm and Silencing Switch: Alarm sounds when alarm indication occurs. Silencing switch must silence audible alarm but leave visual indication active until alarm condition is corrected.

k. Sound Level:

1) Fully assembled products must have average audible sound levels[**more than 3 dB**] below the following maximum sound levels, without fans running, when factory

tested in accordance with IEEE C57.12.91:

a) 9 kVA and Smaller: [**40**]<**Insert number**> dB(A-weighted).
b) 9.01 to 30 kVA: [**45**]<**Insert number**> dB(A-weighted).
c) 30.01 to 50 kVA: [**45**][**48**]<**Insert number**> dB(A-weighted).
d) 50.01 to 150 kVA: [**50**][**53**]<**Insert number**> dB(A-weighted).
e) 150.01 to 300 kVA: [**55**][**58**]<**Insert number**> dB(A-weighted).
f) 300.01 to 500 kVA: [**60**][**63**]<**Insert number**> dB(A-weighted).
g) 500.01 to 700 kVA: [**62**][**65**]<**Insert number**> dB(A-weighted).
h) 700.01 to 1000 kVA: [**64**][**67**]<**Insert number**> dB(A-weighted).

2) Mount transformer on rubber isolation pads.

l. Enclosure:

1) Single, freestanding, galvanized steel, UL 50E Type 1 enclosure. Opening of exterior door may not provide access to live parts. Panels and covers that expose hazardous voltages must require tools to remove.
2) Access from front, top, and side only for installation, operations, and normal maintenance, including infrared scanning of bus and breakers. Normal operating controls and instrumentation must be located on front of enclosure.
3) Arrange enclosure to allow lifting and moving via forklift.

m. Finish: Manufacturer's standard finish over corrosion-resistant pretreatment and primer.

5. Seismic and Wind Performance: Installed product must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

a. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events[**and unit must be fully operational after seismic events**]."
b. Component Importance Factor (Ip): [**1.0**][**1.5**].
c. Component Amplification Factor (ap): [**2.5**]<**Insert value**>.
d. Component Response Modification Factor (Rp): [**6.0**]<**Insert value**>.
e. Component Overstrength Factor (Ωo): [**2.5**]<**Insert value**>.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Commissioning of Electrical Systems: NECA NEIS 90.
5. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
6. Work in ITE Rooms: NFPA 75.
7. Work in Health Care Facilities: NFPA 99 and Article 517 of NFPA 70.
8. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.

9. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
10. Connections to Connectors and Terminals: Comply with torque-tightening values in UL 486A-486B.
11. Consult Architect for resolution of conflicting requirements.

C. Special Techniques:

1. Arrange power distribution units to provide adequate access to equipment and circulation of cooling air. Locate transformers away from corners and not parallel to adjacent wall surface.

D. Interfaces with Other Work:

1. Identification: Provide labels for power distribution units and associated electrical equipment.

   a. Identify field-installed conductors, interconnecting wiring, and components.
   b. Label each enclosure with engraved metal or laminated-plastic nameplate.
   c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

2. Coordinate size and location of [**concrete bases**][**access flooring support**] with actual power distribution unit provided.
3. Equipment Mounting:

   a. Provide cast-in-place concrete equipment base(s) for equipment.
   b. Provide vibration isolation and seismic control devices for equipment.
   c. Supports must penetrate and be independent of access flooring.

4. Ground and bond power distribution unit.
5. Install flexible connections at conduit and conductor terminations and supports to eliminate sound and vibration transmission to building structure.

3.2 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

1. <**Insert requirements**>.

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

D. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.
2. Perform each visual and mechanical inspection and electrical test stated in NETA ATS for circuit

breakers, molded case; and for transformers, dry type, air cooled, low voltage. Certify compliance with test parameters.
3. Perform functional tests of power distribution units throughout their operating ranges. Test each monitoring, status, and alarm function.
4. Test Labeling: On completion of satisfactory testing of each unit, attach dated and signed "Satisfactory Test" label to tested component.

E. Nonconforming Work:

1. Power distribution unit will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

G. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.3 SYSTEM STARTUP

A. Perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's published instructions.
2. Verify that power distribution units are installed and connected in accordance with the Contract Documents.
3. Verify that electrical wiring installation complies with manufacturer's submittal and with published installation requirements in other electrical Sections.

B. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] system startup.

1. Manufacturer's Field Reports for System Startup Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.4 ADJUSTING

A. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

B. Adjust power distribution units to provide optimal voltage to equipment served throughout normal operating cycle of loads served. Record input and output voltages and adjustment settings, and incorporate into test results.

3.5 CLEANING

A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

3.6 CLOSEOUT ACTIVITIES

A. Training:

1. [**With assistance from factory-authorized service representatives, train**][**Train**] Owner's maintenance personnel on the following topics:

a. How to adjust, operate, and maintain power distribution units.

2. [**Provide video recordings of training sessions to Owner.**][**Allow Owner to record training sessions.**]

3.7 PROTECTION

A. After installation, protect power distribution units from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

3.8 MAINTENANCE

A. Infrared Scanning of Power Distribution Units: Two months after Substantial Completion, perform infrared scan of conductor and bus joints and connections. Remove covers so joints and connections are accessible to portable scanner. Take visible light photographs at same locations and orientations as infrared scans for documentation to ensure follow-on scans match same conditions for valid comparison.

1. Use infrared-scanning device designed to measure temperature or to detect significant deviations from normal values. Provide documentation of device calibration.
2. Follow-up Infrared Scanning: Perform two follow-up infrared scans of power distribution units, one at four months and another at 11 months after Substantial Completion.
3. Instrument: Use infrared-scanning device designed to measure temperature or to detect significant deviations from normal values. Provide documentation of device calibration.
4. Field Reports for Infrared Scanning: Prepare certified report that identifies joints and connections checked and that describes scanning results. Include notation of deficiencies detected, remedial actions taken, and scanning observations after remedial action.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 28 13 00 - FUSES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Nonrenewable cartridge fuses.
2. Spare-fuse cabinets.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
5. Section 260573 "Power System Studies" specifies coordination studies, arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product. Include the following for each fuse type indicated:

1. Ambient Temperature Adjustment Information: If ratings of fuses have been adjusted to accommodate ambient temperatures, provide list of fuses with adjusted ratings.

a. For each fuse having adjusted ratings, include location of fuse, original fuse rating, local ambient temperature, and adjusted fuse rating.
b. Provide manufacturer's technical data on which ambient temperature adjustment calculations are based.

2. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
3. Current-limitation curves for fuses with current-limiting characteristics.
4. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse. Submit [**in electronic format suitable for use in coordination software**][**and**][**in PDF format**].
5. Coordination charts and tables and related data.
6. Fuse sizes for elevator feeders and elevator disconnect switches.

1.3 MAINTENANCE MATERIAL SUBMITTALS

A. Extra stock material.

1.4 FIELD CONDITIONS

A. Where ambient temperature to which fuses are directly exposed is less than [**40 deg F (5 deg C)**]<**Insert temperature**> or more than [**100 deg F (38 deg C)**]<**Insert temperature**>, apply manufacturer's ambient temperature adjustment factors to fuse ratings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

2.2 NONRENEWABLE CARTRIDGE FUSES

A. Class CC Nonrenewable Cartridge Fuse :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Bussmann, an Eaton business**]
    b. [**Edison; a brand of Bussmann by Eaton**]
    c. [**Littelfuse, Inc.**]
    d. [**Mersen USA**]
    e. [**Optifuse; Vortex Technologies; division of Triad Partners, LLC**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Bussmann, an Eaton business**]
    b. [**Edison; a brand of Bussmann by Eaton**]
    c. [**Littelfuse, Inc.**]
    d. [**Mersen USA**]
    e. [**Optifuse; Vortex Technologies; division of Triad Partners, LLC**]
    f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by a qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Cartridge Fuses, Nonrenewable: UL CCN JDDZ, including UL 248-1 and UL 248-4 (Class CC).

5. Standard Features:

a. NEMA FU 1, Class CC, 200 kA(sym) interrupt rating, current limiting, sizes up to 30 A, 600 V(ac), [**12 s minimum time-delay at 200 percent**][**non-time-delay**], with rejection feature.

B. Class CD Nonrenewable Cartridge Fuse :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Littelfuse, Inc.**]
   b. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Littelfuse, Inc.**]
   b. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by a qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Cartridge Fuses, Nonrenewable: UL CCN JDDZ, including UL 248-1 and UL 248-18 (Class CD).

5. Standard Features:

   a. UL 248-18, Class CD, 200 kA(sym) interrupt rating, current limiting, sizes 31 to 60 A, 600 V(ac), [**12 s minimum time-delay at 200 percent**][**non-time-delay**], with rejection feature.

C. Class J Nonrenewable Cartridge Fuse :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Bussmann, an Eaton business**]
   b. [**Edison; a brand of Bussmann by Eaton**]
   c. [**Littelfuse, Inc.**]
   d. [**Mersen USA**]
   e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Bussmann, an Eaton business**]
   b. [**Edison; a brand of Bussmann by Eaton**]
   c. [**Littelfuse, Inc.**]
   d. [**Mersen USA**]
   e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by a qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Cartridge Fuses, Nonrenewable: UL CCN JDDZ, including UL 248-1 and UL 248-8 (Class J).

5. Standard Features:

    a. NEMA FU 1, Class J, [**200 kA(sym)**][**300 kA(sym)**] interrupt rating, current limiting, sizes up to 600 A, 600 V(ac), [**8 to 10 s minimum time-delay at 500 percent**][**non-time-delay**], with rejection feature.

D. Class L Nonrenewable Cartridge Fuse :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Bussmann, an Eaton business**]
    b. [**Edison; a brand of Bussmann by Eaton**]
    c. [**Littelfuse, Inc.**]
    d. [**Mersen USA**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Bussmann, an Eaton business**]
    b. [**Edison; a brand of Bussmann by Eaton**]
    c. [**Littelfuse, Inc.**]
    d. [**Mersen USA**]
    e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by a qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Cartridge Fuses, Nonrenewable: UL CCN JDDZ, including UL 248-1 and UL 248-10 (Class L).

5. Standard Features:

    a. NEMA FU 1, Class L, 300 kA(sym) interrupt rating, current limiting, sizes 100 to 6000 A, 600 V(ac), [**4 s minimum time-delay (nonstandard) at 500 percent**][**10 s minimum time-delay at 500 percent**][**non-time-delay**], with rejection feature, with bolt-on terminals.

E. Class RK1 Nonrenewable Cartridge Fuse :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following]:

a. [**Bussmann, an Eaton business**]
b. [**Edison; a brand of Bussmann by Eaton**]
c. [**Littelfuse, Inc.**]
d. [**Mersen USA**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Bussmann, an Eaton business**]
b. [**Edison; a brand of Bussmann by Eaton**]
c. [**Littelfuse, Inc.**]
d. [**Mersen USA**]
e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by a qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Cartridge Fuses, Nonrenewable: UL CCN JDDZ, including UL 248-1 and UL 248-12 (Class R).

5. Standard Features:

a. NEMA FU 1, Class RK1, 200 kA(sym) interrupt rating, current limiting, sizes up to 600 A, [**250 V(ac)**][**600 V(ac)**], [**8 to 10 s minimum time-delay at 500 percent**][**non-time-delay**], with rejection feature.

1) Select ferrule terminals or knife blade terminals to match equipment where fuse is installed.

F. Class RK5 Nonrenewable Cartridge Fuse :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Bussmann, an Eaton business**]
b. [**Edison; a brand of Bussmann by Eaton**]
c. [**Littelfuse, Inc.**]
d. [**Mersen USA**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Bussmann, an Eaton business**]
b. [**Edison; a brand of Bussmann by Eaton**]
c. [**Littelfuse, Inc.**]

d. [**Mersen USA**]
e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by a qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Cartridge Fuses, Nonrenewable: UL CCN JDDZ, including UL 248-1 and UL 248-12 (Class R).

5. Standard Features:

   a. NEMA FU 1, Class RK5, 200 kA(sym) interrupt rating, current limiting, sizes up to 600 A, [**250 V(ac)**][**600 V(ac)**], [**8 to 10 s minimum time-delay at 500 percent**][**non-time-delay**], with rejection feature.

      1) Select ferrule terminals or knife blade terminals to match equipment where fuse is installed.

G. Class T Nonrenewable Cartridge Fuse :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**Bussmann, an Eaton business**]
   b. [**Edison; a brand of Bussmann by Eaton**]
   c. [**Littelfuse, Inc.**]
   d. [**Mersen USA**]
   e. [**Optifuse; Vortex Technologies; division of Triad Partners, LLC**]
   f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Bussmann, an Eaton business**]
   b. [**Edison; a brand of Bussmann by Eaton**]
   c. [**Littelfuse, Inc.**]
   d. [**Mersen USA**]
   e. [**Optifuse; Vortex Technologies; division of Triad Partners, LLC**]
   f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by a qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Cartridge Fuses, Nonrenewable: UL CCN JDDZ, including UL 248-1 and UL 248-15 (Class T).

5. Standard Features:

a. NEMA FU 1, Class T, 200 kA(sym) interrupt rating, current limiting, sizes up to 1200 A, [**300 V(ac)**][**600 V(ac)**], [**8 to 10 s minimum time-delay at 500 percent**][**non-time-delay**], with rejection feature.

1) Select ferrule terminals or knife blade terminals to match equipment where fuse is installed.

2.3 SPARE-FUSE CABINET

A. Characteristics: Wall-mounted steel unit with full-length, recessed piano-hinged door and key-coded cam lock and pull.

1. Size: Adequate for storage of spare fuses specified with [**15**]<**Insert number**> percent spare capacity minimum.
2. Finish: Gray, baked enamel.
3. Fuse Pullers: For each size of fuse, where applicable and available, from fuse manufacturer.

2.4 MAINTENANCE MATERIAL ITEMS

A. Extra Stock Material: Furnish to Owner extra materials[**, from same production run,**] that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.[**Include the following:**]

1. Fuses: Equal to [**10**]<**Insert number**> percent of quantity installed for each size and type, but no fewer than [**three**]<**Insert number**> of each size and type.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine fuses before installation. Reject fuses that are moisture damaged or physically damaged.

B. Examine holders to receive fuses for compliance with installation tolerances and other conditions affecting performance, such as rejection features.

C. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.

D. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF FUSES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Work in Confined Spaces: NFPA 350.
5. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
6. Fuse Applications: NECA NEIS 420.
7. Work with Fuses in Motor Control Centers: NECA NEIS 402.

C. Provide open-fuse indicator fuses or fuse covers with open fuse indication.

D. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.

E. Install spare-fuse cabinet(s) in location indicated on the Drawings or as indicated in the field by [**Architect**][**Construction Manager**][**Owner**].

F. Interfaces with Other Work:

1. Identification: Provide labels for spare fuse cabinet.

   a. Legend: "SPARE FUSES" in **1-1/2 inch (38 mm)** high letters on exterior of door.

2. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size and with results of coordination study and arc-flash hazard analysis.

END OF SECTION 26 28 13 00

Task	Specification	Specification Description
26 28 13 00	26 11 16 11	Secondary Unit Substations with Switchgear Secondary

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 28 16 00 - ENCLOSED SWITCHES AND CIRCUIT BREAKERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Enclosed Switches:

a. UL WIAX or NITW - Single- or double-throw enclosed switch.
b. UL WIAX or NITW - Fused electrically-tripped enclosed switch.
c. UL WIAX or NITW - Electrically-tripped ground-fault protection enclosed switch.

2. Dead-Front Switches:

a. UL WHXS - Switch for mounting in separate dead-front enclosure.

3. Enclosed Switches for Use in Hazardous (Classified) Locations:

a. UL WRPR - Enclosed switch for use in hazardous location.

4. Fused Power-Circuit Devices:

a. UL IYSR - Enclosed fused bolted-pressure contact switch.
b. UL IYSR - Enclosed fused high-pressure butt-type contact switch.

5. Molded-Case Circuit Breakers and Enclosures:

a. UL DIVQ - Enclosed molded-case circuit breaker.

6. Molded-Case Switches and Enclosures:

a. UL WJAZ - Enclosed molded-case switch.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding electrical equipment including raceways, electrical power cabling, and communications cabling referenced by this Section.
5. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
6. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration isolation and seismic- [**and wind-**] control devices referenced by this Section.
7. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and

warning signs referenced by this Section.

8. Section 260573 "Power System Studies" specifies short-circuit current analysis, coordination study, arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.

1.2 DEFINITIONS

A. AFCI: Arc-fault circuit interrupter.

B. GFCI: Ground-fault circuit interrupter.

C. MCCB: Molded-case circuit breaker.

D. N.C.: Normally closed.

E. NICET: National Institute for Certification in Engineering Technologies; a division of the National Society of Professional Engineers (NSPE).

F. N.O.: Normally open.

G. SPDT: Single pole, double throw.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of specified product.

1. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing laboratory, certifying that model number corresponding to specified product complies with specified listing criteria.
2. Include manufacturer's sample extended warranty language.
3. Include nameplate ratings, dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.
4. Enclosure types and details for types other than UL 50E, Type 1.
5. Current and voltage ratings.
6. Short-circuit current ratings (interrupting and withstand, as appropriate).
7. Include evidence of qualified electrical testing laboratory listing for series rating of installed devices.
8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices, accessories, and auxiliary components.
9. Include time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device. Provide in [**PDF**][**and**]<**Insert calculation program format**> electronic format.

B. Shop Drawings: Prepare and submit the following:

1. Drawings, Diagrams, and Supporting Documents for Enclosed Switches and Circuit Breakers:

a. Include plans, elevations, sections, details, and attachments to other work.
b. Include wiring diagrams for power, signal, and control wiring.

C. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

B. Field Reports:

1. Manufacturer's field reports for field quality-control support.
2. Field reports for infrared scanning.

1.5 CLOSEOUT SUBMITTALS

A. Warranty documentation.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Spare parts.

1.7 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician I: Possessing active NICET EPT Level I certification. Able to work safely around electrical power equipment and cabling under supervision.

B. Electrical Power Testing (EPT) Technician II: Possessing active NICET EPT Level II certification. Able to isolate and ground electrical power equipment, to connect test equipment, and to conduct and document standard tests of basic equipment.

C. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, to conduct tests of complex equipment, to analyze test and equipment data, to plan a job, and to lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

D. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; to evaluate tests, test equipment, test results, and power system performance; to recommend actions to maintain or improve system performance; and to lead multi-team projects.

E. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

1.8 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

A. Modeling, analysis, product selection, installation, and quality control for electrical Work specified in this Section must comply with service condition requirements specified in Section 018116 "Facility Environmental Requirements" and Section 018123 "Facility Seismic and Wind Criteria" unless otherwise specified in this Section or on the Drawings.

1.9 WARRANTY

A. Special Installer Extended Warranty: Installer warrants that fabricated and installed enclosed switches and circuit breakers perform in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period.

1. Extended-Warranty Period: [**Two**]<**Insert number**> years from date of Substantial Completion; full coverage for labor, materials, and equipment.

B. Special Manufacturer Extended Warranty: Manufacturer warrants that enclosed switches and circuit breakers perform in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within extended-warranty period.

1. Extended-Warranty Period: [**Three**]<**Insert number**> years from date of Substantial Completion; [**full**][**prorated**] coverage for labor, materials, and equipment.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed switches and circuit breakers, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum dimensions.

B. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

C. Enclosures:

1. Enclosed Switches and Circuit Breakers: UL 489, NEMA BS 31047, UL 50E, and UL 50, to comply with environmental conditions at installed location.
2. Enclosure Finish: Enclosure must be [**finished with**][**gray baked enamel paint, electrodeposited on cleaned, phosphatized steel (UL 50E Type 1)**][**gray baked enamel paint, electrodeposited on cleaned, phosphatized galvannealed steel (UL 50E Types 3R, 12)**][**a brush finish on Type 304 stainless steel (UL 50E Type 4-4X stainless steel)**][**copper-free cast aluminum alloy (UL 50E Types 7, 9)**] .
3. Conduit Entry: UL 50E Types 4, 4X, and 12 enclosures may not contain knockouts. UL 50E Types 7 and 9 enclosures must be provided with threaded conduit openings in both endwalls.
4. Operating Mechanism: Circuit-breaker operating handle must be [**externally operable with operating mechanism being integral part of box, not cover**][**directly operable through front cover of enclosure (UL 50E Type 1)**][**directly operable through dead front trim of enclosure (UL 50E Type 3R)**][**externally operable with operating mechanism being integral part of cover (UL 50E Types 7, 9)**] . Cover interlock mechanism must have externally operated override. Override may not permanently disable interlock mechanism, which must return to locked position once override is released. Tool used to override cover interlock mechanism must not be required to enter enclosure in order to override interlock.
5. Enclosures designated as UL 50E Type 4, 4X stainless steel, 12, or 12K must have dual cover interlock mechanism to prevent unintentional opening of enclosure cover when circuit breaker is ON and to prevent turning circuit breaker ON when enclosure cover is open.
6. UL 50E Type 7/9 enclosures must be furnished with breather and drain kit to allow their use in outdoor and wet location applications.

D. Seismic and Wind Performance: Installed assembly must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

1. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events [**, and unit must be fully operational after seismic events**] .
2. Component Importance Factor (Ip): [**1.0**][**1.5**] .
3. Component Amplification Factor (ap): [**1.0**][**2.5**]<**Insert value**> .
4. Component Response Modification Factor (Rp): [**1.5**][**2.0**][**2.5**][**6.0**]<**Insert value**> .
5. Component Overstrength Factor (Ωo): [**1.5**][**2.5**]<**Insert value**> .

2.2 ENCLOSED SWITCHES

A. UL WIAX or NITW - Single- or Double-Throw Enclosed Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**ABB Industrial Connections & Solutions LLC**]
   b. [**ABB Industrial Connections and Solutions LLC (Tradename Midwest)**]
   c. [**Appleton; Emerson Electric Co., Automation Solutions**]
   d. [**Bussmann; Eaton, Electrical Sector**]
   e. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
   f. [**Eaton**]
   g. [**Hubbell Inc Wiring Device Div**]
   h. [**Leviton Manufacturing Co., Inc.**]
   i. [**Siemens**]
   j. [**Square D; Schneider Electric USA**]
   k. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB Industrial Connections & Solutions LLC**]
   b. [**ABB Industrial Connections and Solutions LLC (Tradename Midwest)**]
   c. [**Appleton; Emerson Electric Co., Automation Solutions**]
   d. [**Bussmann; Eaton, Electrical Sector**]
   e. [**Crouse-Hinds; brand of Eaton, Electrical Sector**]
   f. [**Eaton**]
   g. [**Hubbell Inc Wiring Device Div**]
   h. [**Leviton Manufacturing Co., Inc.**]
   i. [**Siemens**]
   j. [**Square D; Schneider Electric USA**]
   k. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Listed Enclosed Switches: UL CCN WIAX, including UL 98.

b. Listed Industrial Control Panels: UL CCN NITW, including UL 508A for entire assembly and UL 98 component certification for switches.

5. Standard Features:

a. Product Reference Standard: "Heavy Duty" switches meeting requirements of NEMA BS 31047.
b. Enclosure Rating: Marked for intended use and location in accordance with UL 50E.
c. Motor Rating: Motor-circuit switches must be marked with horsepower ratings for starting characteristics of motor.
d. Short-Circuit Current Rating: As determined by results of Power System Studies [**and selection of fuses**] .
e. Fuseholders: Provide clips or bolt pads to accommodate selected fuses.
f. Lockable Handle: Capability to accept three padlocks, and interlocked with cover in closed position.
g. Voltage Rating: [**120 V(ac)**][**120/240 V(ac)**][**125 V(dc)**][**125/250 V(dc)**][**240 V(ac)**][**240/480 V(ac)**][**250 V(dc)**][**480 V(ac)**][**600 V(ac)**][**600 V(dc)**] .
h. Poles: [**Two**][**Three**][**Four**] .
i. Wires: [**Two**][**Three**][**Four**][**Five**][**(including solid neutral)**] .
j. Current Rating: [**30 A**][**60 A**][**100 A**][**200 A**][**400 A**][**600 A**][**800 A**][**1200 A**][**1600 A**][**2000 A**][**2500 A**][**3000 A**][**4000 A**] .
k. Horsepower Rating: [**1/2 hp**][**1-1/2 hp**][**2 hp**][**3 hp**][**5 hp**][**7-1/2 hp**][**10 hp**][**15 hp**][**25 hp**][**30 hp**][**50 hp**][**60 hp**][**75 hp**][**100 hp**][**200 hp**][**250 hp**] .
l. Fusing: [**Fused**][**Nonfused**] .
m. Load Class: [**General**][**Isolating**] Use.
n. Throw: [**Single**][**Double**] .

6. Accessories:

a. Receptacle: Polarized, three-phase, four-wire receptacle (fourth wire connected to enclosure ground lug).

1) Interlocking Linkage: Provide interlock between receptacle and switch mechanism to prevent inserting or removing plug while switch is in on position, while inserting plug other than specified, and while turning switch on if incorrect plug is inserted or correct plug has not been fully inserted into receptacle.

b. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
c. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
d. Isolated Ground Kit: Internally mounted; insulated, labeled for copper and aluminum neutral conductors.
e. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
f. Service-Rated Switches: Labeled for use as service equipment.
g. Hookstick Handle: Allows use of hookstick to operate handle.
h. Auxiliary Contact Kit: [**One**][**Two**] N.O./N.C. (Form "C") auxiliary contact(s), arranged to activate before switch blades open. Contact rating - [**24 V(ac)**][**120 V(ac)**][**208 V(ac)**][**240 V(ac)**][**6 V(dc)**][**12 V(dc)**][**24 V(dc)**] .
i. Lugs: [**Mechanical**][**Compression**] type, suitable for number, size, and conductor material.

B. UL WIAX or NITW - Fused Electrically-Tripped Enclosed Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering**

products that may be incorporated into the Work include, but are not limited to, the following] :

a. [**Eaton**]
b. [**Mersen USA**]
c. [**Siemens**]
d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Eaton**]
b. [**Mersen USA**]
c. [**Siemens**]
d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Listed Enclosed Switches: UL CCN WIAX, including UL 98.
b. Listed Industrial Control Panels: UL CCN NITW, including UL 508A for entire assembly and UL 98 component certification for switches.

5. Standard Features:

a. Product Reference Standard: "Heavy Duty" switches meeting requirements of NEMA BS 31047.
b. Enclosure Rating: Marked for intended use and location in accordance with UL 50E.
c. Motor Rating: Motor-circuit switches must be marked with horsepower ratings for starting characteristics of motor.
d. Short-Circuit Current Rating: As determined by results of Power System Studies [**and selection of fuses**] .
e. Fuseholders: Provide clips or bolt pads to accommodate selected fuses.
f. Lockable Handle: Capability to accept three padlocks, and interlocked with cover in closed position.
g. Shunt Trip: Comply with [**ASME A17.1,**] UL 50E, and UL 98, with Class J fuse block and 200 kA interrupting and short-circuit current rating.
h. Shunt Trip Control Circuit: 120 V(ac); obtained from [**integral control power transformer, with primary and secondary fuses,**]<**Insert source of control power**> with control power [**transformer**][**source**] of enough capacity to operate shunt trip, pilot, indicating and control devices.
i. Voltage Rating: [**120 V(ac)**][**120/240 V(ac)**][**125 V(dc)**][**125/250 V(dc)**][**240 V(ac)**][**240/480 V(ac)**][**250 V(dc)**][**480 V(ac)**][**600 V(ac)**][**600 V(dc)**] .
j. Poles: [**Two**][**Three**][**Four**] .
k. Wires: [**Two**][**Three**][**Four**][**Five**][**(including solid neutral)**] .
l. Current Rating: [**30 A**][**60 A**][**100 A**][**200 A**][**400 A**][**600 A**][**800 A**][**1200 A**][**1600 A**][**2000 A**][**2500 A**][**3000 A**][**4000 A**] .
m. Horsepower Rating: [**1/2 hp**][**1-1/2 hp**][**2 hp**][**3 hp**][**5 hp**][**7-1/2 hp**][**10 hp**][**15 hp**][**25 hp**][**30 hp**][**50 hp**][**60 hp**][**75 hp**][**100 hp**][**200 hp**][**250 hp**] .
n. Fusing: [**Fused**][**Nonfused**] .
o. Load Class: [**General**][**Isolating**] Use.
p. Throw: [**Single**][**Double**] .

6. Accessories:

    a. Elevator Disconnect Accessories:

        1) Oiltight key switch for key-to-test function.
        2) Oiltight Pilot Light: [**Red**][**Green**][**White**][**Yellow**] ON.
        3) Isolated Neutral Lug: [**100**][**200**] percent rating.
        4) Mechanically interlocked auxiliary contacts that change state when switch is opened and closed.
        5) Three-pole, double-throw, fire-safety and alarm relay: [**120 V(ac)**][**24 V(dc)**] coil voltage.
        6) Three-pole, double-throw, fire-alarm voltage monitoring relay complying with NFPA 72.

    b. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
    c. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
    d. Isolated Ground Kit: Internally mounted; insulated, labeled for copper and aluminum neutral conductors.
    e. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
    f. Service-Rated Switches: Labeled for use as service equipment.
    g. Hookstick Handle: Allows use of hookstick to operate handle.
    h. Auxiliary Contact Kit: [**One**][**Two**] N.O./N.C. (Form "C") auxiliary contact(s), arranged to activate before switch blades open. Contact rating - [**24 V(ac)**][**120 V(ac)**][**208 V(ac)**][**240 V(ac)**][**6 V(dc)**][**12 V(dc)**][**24 V(dc)**] .
    i. Lugs: [**Mechanical**][**Compression**] type, suitable for number, size, and conductor material.

C. UL WIAX or NITW - Electrically-Tripped Ground-Fault Protection Enclosed Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Eaton**]
    b. [**Mersen USA**]
    c. [**Siemens**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Eaton**]
    b. [**Mersen USA**]
    c. [**Siemens**]
    d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Listed Enclosed Switches: UL CCN WIAX, including UL 98.
b. Listed Industrial Control Panels: UL CCN NITW, including UL 508A for entire assembly and UL 98 component certification for switches.

5. Standard Features:

a. Product Reference Standard: "Heavy Duty" switches meeting requirements of NEMA BS 31047.
b. Enclosure Rating: Marked for intended use and location in accordance with UL 50E.
c. Motor Rating: Motor-circuit switches must be marked with horsepower ratings for starting characteristics of motor.
d. Short-Circuit Current Rating: As determined by results of Power System Studies [**and selection of fuses**] .
e. Fuseholders: Provide clips or bolt pads to accommodate selected fuses.
f. Lockable Handle: Capability to accept three padlocks, and interlocked with cover in closed position.
g. Shunt Trip: Comply with UL 50E, and UL 98, with Class J fuse block and 200 kA interrupting and short-circuit current rating.
h. Shunt Trip Control Circuit: 120 V(ac); obtained from [**integral control power transformer, with primary and secondary fuses,**]<**Insert source of control power**> with control power [**transformer**][**source**] of enough capacity to operate shunt trip, pilot, indicating and control devices.
i. Voltage Rating: [**120 V(ac)**][**120/240 V(ac)**][**125 V(dc)**][**125/250 V(dc)**][**240 V(ac)**][**240/480 V(ac)**][**250 V(dc)**][**480 V(ac)**][**600 V(ac)**][**600 V(dc)**] .
j. Poles: [**Two**][**Three**][**Four**] .
k. Wires: [**Two**][**Three**][**Four**][**Five**][**(including solid neutral)**] .
l. Current Rating: [**30 A**][**60 A**][**100 A**][**200 A**][**400 A**][**600 A**][**800 A**][**1200 A**][**1600 A**][**2000 A**][**2500 A**][**3000 A**][**4000 A**] .
m. Horsepower Rating: [**1/2 hp**][**1-1/2 hp**][**2 hp**][**3 hp**][**5 hp**][**7-1/2 hp**][**10 hp**][**15 hp**][**25 hp**][**30 hp**][**50 hp**][**60 hp**][**75 hp**][**100 hp**][**200 hp**][**250 hp**] .
n. Fusing: [**Fused**][**Nonfused**] .
o. Load Class: [**General**][**Isolating**] Use.
p. Throw: [**Single**][**Double**] .

6. Accessories:

a. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
b. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
c. Isolated Ground Kit: Internally mounted; insulated, labeled for copper and aluminum neutral conductors.
d. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
e. Service-Rated Switches: Labeled for use as service equipment.
f. Hookstick Handle: Allows use of hookstick to operate handle.
g. Auxiliary Contact Kit: [**One**][**Two**] N.O./N.C. (Form "C") auxiliary contact(s), arranged to activate before switch blades open. Contact rating - [**24 V(ac)**][**120 V(ac)**][**208 V(ac)**][**240 V(ac)**][**6 V(dc)**][**12 V(dc)**][**24 V(dc)**] .
h. Lugs: [**Mechanical**][**Compression**] type, suitable for number, size, and conductor material.

2.3 DEAD-FRONT SWITCHES

A. UL WHXS - Switch for Mounting in Separate Dead-Front Enclosure :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the**

following][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

a. [**Eaton**]
b. [**Erickson Electrical Equipment Company**]
c. [**Siemens**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Eaton**]
b. [**Erickson Electrical Equipment Company**]
c. [**Siemens**]
d. [**Square D; Schneider Electric USA**]
e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with the following guide information and corresponding standards:

a. Listed Dead-Front Switches: UL CCN WHXS, including UL 98.

5. Standard Features:

a. Product Reference Standard: "Heavy Duty" switches meeting requirements of NEMA BS 31047.
b. Enclosure Rating: Marked for intended use and location in accordance with UL 50E.
c. Motor Rating: Motor-circuit switches marked with horsepower ratings for starting characteristics of motor.
d. Short-Circuit Current Rating: As determined by results of Power System Studies [**and selection of fuses**] .
e. Fuseholders: Provide clips or bolt pads to accommodate selected fuses.
f. Lockable Handle: Capability to accept three padlocks, and interlocked with cover in closed position.
g. Voltage Rating: [**120 V(ac)**][**120/240 V(ac)**][**125 V(dc)**][**125/250 V(dc)**][**240 V(ac)**][**240/480 V(ac)**][**250 V(dc)**][**480 V(ac)**][**600 V(ac)**][**600 V(dc)**] .
h. Poles: [**Two**][**Three**][**Four**] .
i. Wires: [**Two**][**Three**][**Four**][**Five**][**(including solid neutral)**] .
j. Current Rating: [**30 A**][**60 A**][**100 A**][**200 A**][**400 A**][**600 A**][**800 A**][**1200 A**][**1600 A**][**2000 A**][**2500 A**][**3000 A**][**4000 A**] .
k. Horsepower Rating: [**1/2 hp**][**1-1/2 hp**][**2 hp**][**3 hp**][**5 hp**][**7-1/2 hp**][**10 hp**][**15 hp**][**25 hp**][**30 hp**][**50 hp**][**60 hp**][**75 hp**][**100 hp**][**200 hp**][**250 hp**] .
l. Fusing: [**Fused**][**Nonfused**] .
m. Load Class: [**General**][**Isolating**] Use.
n. Throw: [**Single**][**Double**] .

6. Accessories:

a. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground

conductors.
b. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
c. Isolated Ground Kit: Internally mounted; insulated, labeled for copper and aluminum neutral conductors.
d. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
e. Service-Rated Switches: Labeled for use as service equipment.
f. Hookstick Handle: Allows use of hookstick to operate handle.
g. Auxiliary Contact Kit: [**One**][**Two**] N.O./N.C. (Form "C") auxiliary contact(s), arranged to activate before switch blades open. Contact rating - [**24 V(ac)**][**120 V(ac)**][**208 V(ac)**][**240 V(ac)**][**6 V(dc)**][**12 V(dc)**][**24 V(dc)**] .
h. Lugs: [**Mechanical**][**Compression**] type, suitable for number, size, and conductor material.

2.4 ENCLOSED SWITCHES FOR USE IN HAZARDOUS (CLASSIFIED) LOCATIONS

A. UL WRPR - Enclosed Switch for Use in Hazardous Location :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**Appleton Group (tradename NEER)**]
   b. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Rockwell Automation, Inc.**]
   d. [**Square D; Schneider Electric USA**]
   e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**Appleton Group (tradename NEER)**]
   b. [**Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated**]
   c. [**Rockwell Automation, Inc.**]
   d. [**Square D; Schneider Electric USA**]
   e. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with the following guide information and corresponding standards:

   a. Listed Enclosed Switches: UL CCN WRPR, including UL 98.
   b. Listed Equipment for Use in and Relating to Classes I, II, and III, Divisions 1 and 2 Hazardous Locations: UL CCN AAIZ, including one or more of the following combinations of applicable standards:

      1) Class I, Division 1: UL 1203, UL 913, NFPA 496, UL 60079-28, and UL 60079-33.
      2) Class I, Division 2: UL 121201, NFPA 496, UL 60079-28, and UL 60079-33.
      3) Class II, Division 1: UL 1203, UL 913, NFPA 496, UL 60079-28, and UL 60079-33.
      4) Class II, Division 2: UL 121201, NFPA 496, UL 60079-28, and UL 60079-33.
      5) Class III, Divisions 1 and 2: UL 913, UL 121201, and UL 60079-33.

5. Standard Features:

    a. Product Reference Standard: "Heavy Duty" switches meeting requirements of NEMA BS 31047.
    b. Enclosure Rating: Marked for intended use and location in accordance with UL 50E.
    c. Motor Rating: Motor-circuit switches marked with horsepower ratings for starting characteristics of motor.
    d. Short-Circuit Current Rating: As determined by results of Power System Studies [**and selection of fuses**] .
    e. Fuseholders: Provide clips or bolt pads to accommodate selected fuses.
    f. Lockable Handle: Capability to accept three padlocks, and interlocked with cover in closed position.
    g. Voltage Rating: [**120 V(ac)**][**120/240 V(ac)**][**125 V(dc)**][**125/250 V(dc)**][**240 V(ac)**][**240/480 V(ac)**][**250 V(dc)**][**480 V(ac)**][**600 V(ac)**][**600 V(dc)**] .
    h. Poles: [**Two**][**Three**][**Four**] .
    i. Wires: [**Two**][**Three**][**Four**][**Five**][**(including solid neutral)**] .
    j. Current Rating: [**30 A**][**60 A**][**100 A**][**200 A**][**400 A**][**600 A**][**800 A**][**1200 A**][**1600 A**][**2000 A**][**2500 A**][**3000 A**][**4000 A**] .
    k. Horsepower Rating: [**1/2 hp**][**1-1/2 hp**][**2 hp**][**3 hp**][**5 hp**][**7-1/2 hp**][**10 hp**][**15 hp**][**25 hp**][**30 hp**][**50 hp**][**60 hp**][**75 hp**][**100 hp**][**200 hp**][**250 hp**] .
    l. Fusing: [**Fused**][**Nonfused**] .
    m. Load Class: [**General**][**Isolating**] Use.
    n. Throw: [**Single**][**Double**] .

6. Accessories:

    a. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
    b. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
    c. Isolated Ground Kit: Internally mounted; insulated, labeled for copper and aluminum neutral conductors.
    d. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
    e. Service-Rated Switches: Labeled for use as service equipment.
    f. Hookstick Handle: Allows use of hookstick to operate handle.
    g. Auxiliary Contact Kit: [**One**][**Two**] N.O./N.C. (Form "C") auxiliary contact(s), arranged to activate before switch blades open. Contact rating - [**24 V(ac)**][**120 V(ac)**][**208 V(ac)**][**240 V(ac)**][**6 V(dc)**][**12 V(dc)**][**24 V(dc)**] .
    h. Lugs: [**Mechanical**][**Compression**] type, suitable for number, size, and conductor material.

2.5 FUSED POWER-CIRCUIT DEVICES

A. UL IYSR - Enclosed Fused Bolted-Pressure Contact Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**Eaton**]
    b. [**Schneider Electric USA, Inc.**]
    c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert**

manufacturer's name; product name or designation> or comparable product by one of the following:

a. [**Eaton**]
b. [**Schneider Electric USA, Inc.**]
c. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with the following guide information and corresponding standards:

a. Listed Fused Power-Circuit Devices: UL CCN IYSR, including UL 977.

5. Standard Features:

a. Product Reference Standard: "Heavy Duty" switches meeting requirements of NEMA BS 31047 providing additional pressure or clamping action at both ends of the switch blades when the blades are in a fully closed position.
b. Enclosure Rating: Marked for intended use and location in accordance with UL 50E.
c. Motor Rating: Motor-circuit switches marked with horsepower ratings for starting characteristics of motor.
d. Short-Circuit Current Rating: As determined by results of Power System Studies [**and selection of fuses**] .
e. Fuseholders: Provide clips or bolt pads to accommodate selected fuses.
f. Lockable Handle: Capability to accept three padlocks, and interlocked with cover in closed position.
g. Voltage Rating: [**120 V(ac)**][**120/240 V(ac)**][**125 V(dc)**][**125/250 V(dc)**][**240 V(ac)**][**240/480 V(ac)**][**250 V(dc)**][**480 V(ac)**][**600 V(ac)**][**600 V(dc)**] .
h. Poles: [**Two**][**Three**][**Four**] .
i. Wires: [**Two**][**Three**][**Four**][**Five**][**(including solid neutral)**] .
j. Current Rating: [**30 A**][**60 A**][**100 A**][**200 A**][**400 A**][**600 A**][**800 A**][**1200 A**][**1600 A**][**2000 A**][**2500 A**][**3000 A**][**4000 A**] .
k. Horsepower Rating: [**1/2 hp**][**1-1/2 hp**][**2 hp**][**3 hp**][**5 hp**][**7-1/2 hp**][**10 hp**][**15 hp**][**25 hp**][**30 hp**][**50 hp**][**60 hp**][**75 hp**][**100 hp**][**200 hp**][**250 hp**] .
l. Fusing: [**Fused**][**Nonfused**] .
m. Load Class: [**General**][**Isolating**] Use.
n. Throw: [**Single**][**Double**] .

6. Accessories:

a. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
b. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
c. Isolated Ground Kit: Internally mounted; insulated, labeled for copper and aluminum neutral conductors.
d. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
e. Service-Rated Switches: Labeled for use as service equipment.
f. Hookstick Handle: Allows use of hookstick to operate handle.
g. Auxiliary Contact Kit: [**One**][**Two**] N.O./N.C. (Form "C") auxiliary contact(s), arranged to activate before switch blades open. Contact rating - [**24 V(ac)**][**120 V(ac)**][**208 V(ac)**][**240 V(ac)**][**6 V(dc)**][**12 V(dc)**][**24 V(dc)**] .
h. Lugs: [**Mechanical**][**Compression**] type, suitable for number, size, and conductor material.

B. UL IYSR - Enclosed Fused High-Pressure Butt-Type Contact Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**ABB**]
    b. [**Eaton**]
    c. [**Siemens**]
    d. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB**]
    b. [**Eaton**]
    c. [**Siemens**]
    d. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with the following guide information and corresponding standards:

    a. Listed Fused Power-Circuit Devices: UL CCN IYSR, including UL 977.

5. Standard Features:

    a. Product Reference Standard: "Heavy Duty" switches meeting requirements of NEMA BS 31047 and having butt-type contacts and a spring-charged mechanism.
    b. Enclosure Rating: Marked for intended use and location in accordance with UL 50E.
    c. Motor Rating: Motor-circuit switches marked with horsepower ratings for starting characteristics of motor.
    d. Short-Circuit Current Rating: As determined by results of Power System Studies [**and selection of fuses**] .
    e. Fuseholders: Provide clips or bolt pads to accommodate selected fuses.
    f. Lockable Handle: Capability to accept three padlocks, and interlocked with cover in closed position.
    g. Voltage Rating: [**120 V(ac)**][**120/240 V(ac)**][**125 V(dc)**][**125/250 V(dc)**][**240 V(ac)**][**240/480 V(ac)**][**250 V(dc)**][**480 V(ac)**][**600 V(ac)**][**600 V(dc)**] .
    h. Poles: [**Two**][**Three**][**Four**] .
    i. Wires: [**Two**][**Three**][**Four**][**Five**][**(including solid neutral)**] .
    j. Current Rating: [**30 A**][**60 A**][**100 A**][**200 A**][**400 A**][**600 A**][**800 A**][**1200 A**][**1600 A**][**2000 A**][**2500 A**][**3000 A**][**4000 A**] .
    k. Horsepower Rating: [**1/2 hp**][**1-1/2 hp**][**2 hp**][**3 hp**][**5 hp**][**7-1/2 hp**][**10 hp**][**15 hp**][**25 hp**][**30 hp**][**50 hp**][**60 hp**][**75 hp**][**100 hp**][**200 hp**][**250 hp**] .
    l. Fusing: [**Fused**][**Nonfused**] .
    m. Load Class: [**General**][**Isolating**] Use.
    n. Throw: [**Single**][**Double**] .

6. Accessories:

a. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
b. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
c. Isolated Ground Kit: Internally mounted; insulated, labeled for copper and aluminum neutral conductors.
d. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
e. Service-Rated Switches: Labeled for use as service equipment.
f. Hookstick Handle: Allows use of hookstick to operate handle.
g. Auxiliary Contact Kit: [**One**][**Two**] N.O./N.C. (Form "C") auxiliary contact(s), arranged to activate before switch blades open. Contact rating - [**24 V(ac)**][**120 V(ac)**][**208 V(ac)**][**240 V(ac)**][**6 V(dc)**][**12 V(dc)**][**24 V(dc)**] .
h. Lugs: [**Mechanical**][**Compression**] type, suitable for number, size, and conductor material.

2.6 MOLDED-CASE CIRCUIT BREAKERS AND ENCLOSURES

A. UL DIVQ - Enclosed Molded-Case Circuit Breaker :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

    a. [**ABB**]
    b. [**ABB Industrial Connections and Solutions LLC (GE ED&C)**]
    c. [**Eaton**]
    d. [**Hubbell Inc Wiring Device Div**]
    e. [**Leviton Manufacturing Co., Inc.**]
    f. [**Littelfuse, Inc.**]
    g. [**NOARK Electric North America**]
    h. [**Siemens Industry, Inc.**]
    i. [**Square D; Schneider Electric USA**]
    j. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB**]
    b. [**ABB Industrial Connections and Solutions LLC (GE ED&C)**]
    c. [**Eaton**]
    d. [**Hubbell Inc Wiring Device Div**]
    e. [**Leviton Manufacturing Co., Inc.**]
    f. [**Littelfuse, Inc.**]
    g. [**NOARK Electric North America**]
    h. [**Siemens Industry, Inc.**]
    i. [**Square D; Schneider Electric USA**]
    j. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with the following guide information and corresponding standards:

a. Listed Fused Power-Circuit Devices: UL CCN DIVQ, including UL 489.

5. Standard Features:

a. Product Reference Standard: NEMA AB 3.
b. Enclosure Rating: Marked for intended use and location in accordance with UL 50E.
c. Short-Circuit Current Rating: As determined by results of Power System Studies.
d. System Frequency: [**50/60 Hz**][**DC**][**400 Hz**]<**Insert frequency**> .
e. Voltage Rating: [**120 V(ac)**][**125 V(ac)**][**120/240 V(ac)**][**208 V(ac)**][**208Y/120 V(ac)**][**240 V(ac)**][**277 V(ac)**][**480Y/277 V(ac)**][**480 V(ac)**][**347 V(ac)**][**600Y/347 V(ac)**][**600 V(ac)**][**24 V(dc)**][**48 V(dc)**][**60 V(dc)**][**65 V(dc)**][**80 V(dc)**][**125 V(dc)**][**125/250 V(dc)**][**160 V(dc)**][**250 V(dc)**][**500 V(dc)**][**600 V(dc)**] .
f. Poles: [**One**][**Two**][**Three**][**(corner-grounded delta)**] .
g. Wires: [**Two**][**Three**][**Four**][**Five**][**(including solid neutral)**] .
h. Current Rating: [**15 A**][**20 A**][**25 A**][**30 A**][**34 A**][**40 A**][**45 A**][**50 A**][**60 A**][**70 A**][**80 A**][**90 A**][**100 A**][**110 A**][**125 A**][**150 A**][**175 A**][**200 A**][**225 A**][**250 A**][**300 A**][**350 A**][**400 A**][**450 A**][**500 A**][**600 A**][**700 A**][**800 A**][**1000 A**][**1200 A**][**1600 A**][**2000 A**][**2500 A**][**3000 A**][**4000 A**][**5000 A**][**6000 A**] .
i. Tripping Means: [**Thermal-Magnetic**][**Hydraulic-Magnetic**][**Electronic (Solid-State)**] .
j. Intended Use: [**Main**][**Feeder**][**Branch circuit**] protection.
k. Specific Purpose Categories:

1) Remotely operated.
2) Integrally-fused.
3) Current-limiting.
4) Switching Duty (SWD).
5) Instantaneous trip only (motor circuit protector or circuit interrupter).
6) Heating, air conditioning, and refrigeration (HACR).
7) Marine.
8) Naval.
9) Mining.
10) High intensity discharge lighting (HID).
11) Ground-fault circuit interrupter (GFCI).
12) Arc-fault circuit interrupter (AFCI).
13) Equipment ground-fault protective device.
14) Classified (alternates).
15) Secondary surge arrester.
16) Transient voltage surge suppressor (TVSS).
17) For use with uninterruptible power supplies (UPS).
18) 100 percent rated.
19) Photovoltaic (PV).

l. Fusing: [**Fused**][**Nonfused**] .
m. Conductor Connections: [**Front-connected**][**Rear-connected**] .
n. Mounting Arrangement: [**Stationary**][**Plug-in**][**Drawout**] .
o. Lugs: [**Mechanical**][**Compression**] type, suitable for number, size, trip ratings, and conductor material. Suitable for [**60 deg C rated wire on 125 A circuit breakers and below**][**75 deg C rated wire**][**90 deg C rated wire, sized in accordance with 75 deg C temperature rating in NFPA 70**] .
p. Ground-Fault Protection: Comply with UL 1053; [**integrally mounted, self-powered**][**remote-mounted and powered**] type with mechanical ground-fault indicator; relay with adjustable pickup and time-delay settings, push-to-test feature, internal memory, and shunt trip unit; and three-phase, zero-sequence current transformer/sensor.
q. Communication Capability: [**Circuit-breaker-mounted**][**Universal-mounted**][**Integral**][**Din-rail-mounted**] communication module with functions and features

compatible with power monitoring and control system, specified in Section 260913 "Electrical Power Monitoring."

6. Accessories:

   a. Interchangeable Trip Unit: Field-installable assembly that controls tripping functions.
   b. Shunt Trip: Trip coil energized from separate circuit, with coil-clearing contact.
   c. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
   d. Auxiliary Switch: [**Rated for pilot duty**][**Not rated for pilot duty**] . [**One SPDT switch**][**Two SPDT switches**] with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
   e. Alarm Switch: [**Rated for pilot duty**][**Not rated for pilot duty**] . One [**N.O.**][**N.C.**] contact operates only when circuit breaker has tripped.
   f. Electrical Operator: Provide remote control for on, off, and reset operations.
   g. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key must be removable only when circuit breaker is in off position.
   h. Zone-Selective Interlocking: Integral with [**electronic**][**ground-fault**] trip unit; for interlocking ground-fault protection function.
   i. Handle Locking Device: Capable of locking circuit breaker in isolated position.
   j. Accessory Control Power: [**Integrally mounted, self-powered**][**Remote mounted and powered**] ; [**24 V(ac)**][**120 V(ac)**][**208 V(ac)**][**240 V(ac)**][**12 V(dc)**][**24 V(dc)**][**120 V(dc)**] .

2.7 MOLDED-CASE SWITCHES AND ENCLOSURES

A. UL WJAZ - Enclosed Molded-Case Switch :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**] :

   a. [**ABB Industrial Connections & Solutions LLC**]
   b. [**Bussmann; Eaton, Electrical Sector**]
   c. [**Eaton**]
   d. [**NOARK Electric North America**]
   e. [**Schneider Electric USA, Inc.**]
   f. [**Siemens Industry, Inc.**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB Industrial Connections & Solutions LLC**]
   b. [**Bussmann; Eaton, Electrical Sector**]
   c. [**Eaton**]
   d. [**NOARK Electric North America**]
   e. [**Schneider Electric USA, Inc.**]
   f. [**Siemens Industry, Inc.**]
   g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical**

testing laboratory recognized by authorities having jurisdiction] in accordance with the following guide information and corresponding standards:

a. Listed Fused Power-Circuit Devices: UL CCN WJAZ, including UL 489.

5. Standard Features:

a. Product Reference Standard: NEMA AB 3 and is designed to open and close a circuit by nonautomatic means.
b. Enclosure Rating: Marked for intended use and location in accordance with UL 50E.
c. Short-Circuit Current Rating: As determined by results of Power System Studies.
d. System Frequency: [**50/60 Hz**][**DC**][**400 Hz**]<**Insert frequency**> .
e. Voltage Rating: [**120 V(ac)**][**125 V(ac)**][**120/240 V(ac)**][**208 V(ac)**][**208Y/120 V(ac)**][**240 V(ac)**][**277 V(ac)**][**480Y/277 V(ac)**][**480 V(ac)**][**347 V(ac)**][**600Y/347 V(ac)**][**600 V(ac)**][**24 V(dc)**][**48 V(dc)**][**60 V(dc)**][**65 V(dc)**][**80 V(dc)**][**125 V(dc)**][**125/250 V(dc)**][**160 V(dc)**][**250 V(dc)**][**500 V(dc)**][**600 V(dc)**] .
f. Poles: [**One**][**Two**][**Three**][**(corner-grounded delta)**] .
g. Wires: [**Two**][**Three**][**Four**][**Five**][**(including solid neutral)**] .
h. Current Rating: [**15 A**][**20 A**][**25 A**][**30 A**][**34 A**][**40 A**][**45 A**][**50 A**][**60 A**][**70 A**][**80 A**][**90 A**][**100 A**][**110 A**][**125 A**][**150 A**][**175 A**][**200 A**][**225 A**][**250 A**][**300 A**][**350 A**][**400 A**][**450 A**][**500 A**][**600 A**][**700 A**][**800 A**][**1000 A**][**1200 A**][**1600 A**][**2000 A**][**2500 A**][**3000 A**][**4000 A**][**5000 A**][**6000 A**] .
i. Tripping Means: [**Thermal-Magnetic**][**Hydraulic-Magnetic**][**Electronic (Solid-State)**] .
j. Intended Use: [**Main**][**Feeder**][**Branch circuit**] protection.
k. Specific Purpose Categories:

1) Remotely operated.
2) Integrally-fused.
3) Current-limiting.
4) Switching Duty (SWD).
5) Instantaneous trip only (motor circuit protector or circuit interrupter).
6) Heating, air conditioning, and refrigeration (HACR).
7) Marine.
8) Naval.
9) Mining.
10) High intensity discharge lighting (HID).
11) Ground fault circuit interrupter (GFCI).
12) Arc fault circuit interrupter (AFCI).
13) Equipment ground fault protection.
14) Classified (alternates).
15) Secondary surge arrester.
16) Transient voltage surge suppressor (TVSS).
17) For use with uninterruptible power supplies (UPS).
18) 100 percent rated.
19) Photovoltaic (PV).

l. Fusing: [**Fused**][**Nonfused**] .
m. Conductor Connections: [**Front-connected**][**Rear-connected**] .
n. Mounting Arrangement: [**Stationary**][**Plug-in**][**Drawout**] .
o. Lugs: [**Mechanical**][**Compression**] type, suitable for number, size, trip ratings, and conductor material. Suitable for [**60 deg C rated wire on 125 A switches and below**][**75 deg C rated wire**][**90 deg C rated wire, sized in accordance with 75 deg C temperature rating in NFPA 70**] .
p. Ground-Fault Protection: Comply with UL 1053; [**integrally mounted, self-powered**][**remote-mounted and powered**] type with mechanical ground-fault indicator;

relay with adjustable pickup and time-delay settings, push-to-test feature, internal memory, and shunt trip unit; and three-phase, zero-sequence current transformer/sensor.

q. Communication Capability: [**Circuit-breaker-mounted**][**Universal-mounted**][**Integral**][**DIN-rail-mounted**] communication module with functions and features compatible with power monitoring and control system, specified in Section 260913 "Electrical Power Monitoring."

6. Accessories:

a. Interchangeable Trip Unit: Field-installable assembly that controls tripping functions.
b. Shunt Trip: Trip coil energized from separate circuit, with coil-clearing contact.
c. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
d. Auxiliary Switch: [**Rated for pilot duty**][**Not rated for pilot duty**] . [**One SPDT switch**][**Two SPDT switches**] with "a" and "b" contacts; "a" contacts mimic switch contacts, "b" contacts operate in reverse of switch contacts.
e. Alarm Switch: [**Rated for pilot duty**][**Not rated for pilot duty**] . One [**N.O.**][**N.C.**] contact operates only when switch has tripped.
f. Electrical Operator: Provide remote control for on, off, and reset operations.
g. Key Interlock Kit: Externally mounted to prohibit switch operation; key must be removable only when switch is in off position.
h. Zone-Selective Interlocking: Integral with [**electronic**][**ground-fault**] trip unit; for interlocking ground-fault protection function.
i. Handle Locking Device: Capable of locking switch in isolated position.
j. Accessory Control Power: [**Integrally mounted, self-powered**][**Remote mounted and powered**] ; [**24 V(ac)**][**120 V(ac)**][**208 V(ac)**][**240 V(ac)**][**12 V(dc)**][**24 V(dc)**][**120 V(dc)**] .

2.8 MAINTENANCE MATERIAL ITEMS

A. Spare Parts: Furnish to Owner spare parts, for repairing enclosed switches and circuit breakers, that are packaged with protective covering for storage on-site and identified with labels describing contents. [**Include the following:**]

1. Fuses: Equal to [**10**]<**Insert number**> percent of quantity installed for each size and type, but no fewer than [**three**]<**Insert number**> of each size and type.
2. Fuse Pullers: [**Two**]<**Insert number**> for each size and type.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine elements and surfaces to receive enclosed switches and circuit breakers for compliance with installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

1. Commencement of work will indicate Installer's acceptance of areas and conditions as satisfactory.

3.2 SELECTION OF ENCLOSURES

A. Indoor, Dry and Clean Locations: UL 50E, [**Type 1**]<**Insert type**> .

B. Outdoor Locations: UL 50E, [**Type 3R**][**Type 4X**]<**Insert type**> .

C. Kitchen and Wash-Down Areas: UL 50E, [**Type 4X**]<**Insert type**> , [**stainless steel**]<**Insert material**> .

D. Other Wet or Damp, Indoor Locations: UL 50E, [**Type 4**]<**Insert type**> .

E. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: UL 50E, Type 12.

F. Hazardous Areas Indicated on the Drawings: UL 50E, [**Type 7**][**Type 9**]<**Insert type**>[**with cover attached by Type 316 stainless steel bolts**] .

3.3 INSTALLATION, GENERAL

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B and NECA NEIS 91.
3. Electrical Safety: NFPA 70E.
4. Commissioning of Electrical Systems: NECA NEIS 90.
5. Commissioning of Active and Passive Fire Protection Features: NFPA 3 and NFPA 4.
6. Hot Work: NFPA 51B.
7. Fire-Alarm and Premises Security Work: NFPA 72, NFPA 731, NFPA 1225, and NECA NEIS 305.
8. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
9. Communications Work: BICSI N1.
10. Work in ITE Rooms: NFPA 75.
11. Work in Health Care Facilities: NFPA 99 and Article 517 of NFPA 70.
12. Life Safety and Means of Egress Work: NFPA 101.
13. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
14. Work in Confined Spaces: NFPA 350.
15. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
16. Evaluation of Unlabeled Electrical Equipment: NFPA 791.
17. Consult Architect for resolution of conflicting requirements.

C. Interfaces with Other Work:

1. Identification: Provide labels for enclosed switches, circuit breakers, and associated electrical equipment.

    a. Identify field-installed conductors, interconnecting wiring, and components.
    b. Label each enclosure with engraved metal or laminated-plastic nameplate.
    c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

2. Grounding and Bonding:

    a. Equipment Grounding Conductors: Provide and route insulated equipment grounding conductors with other feeder or branch circuit conductors. Bond equipment grounding conductor to enclosure using provided hardware in accordance with manufacturer's published instructions.
    b. Equipment Bonding Conductors: Provide equipment bonding straps or jumpers where additional bonding is indicated on the Drawings between enclosed switches or circuit breakers and adjacent metallic equipment, enclosures, piping, or building structure. Route

bonding conductors along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access panels or placing conductors where they may be subjected to strain, impact, or damage.

3.4 INSTALLATION OF ENCLOSED SWITCHES AND CIRCUIT BREAKERS

A. Special Techniques:

1. Layout Coordination: Coordinate layout and installation of switches, circuit breakers, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
2. Mounting Heights: Install individual wall-mounted switches and circuit breakers with tops at uniform height unless otherwise indicated.
3. Seismic Controls: Provide equipment mounts and anchors complying with seismic requirements for the Project.
4. Temporary Lifting Provisions: Remove temporary lifting of eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
5. Fusing: Install fuses in fusible devices.

3.5 FIELD QUALITY CONTROL OF ENCLOSED SWITCHES AND CIRCUIT BREAKERS

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections [**with assistance of factory-authorized service representative**] .

B. Acceptance Testing Preparation: <**Insert requirements**> .

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**> .

D. Tests and Inspections for Enclosed Switches, Dead-Front Switches, Enclosed Switches for Use in Hazardous (Classified) Locations, and Fused Power-Circuit Devices:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, grounding, and clearances.
c. Verify that unit is clean.
d. Verify blade alignment, blade penetration, travel stops, and mechanical operation.
e. Verify that fuse sizes and types match the Specifications and the Drawings.
f. Verify that each fuse has adequate mechanical support and contact integrity.
g. Inspect bolted electrical connections for high resistance using one of the methods as follows:

1) Use low-resistance ohmmeter.

a) Compare bolted connection resistance values to values of similar

connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.

2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS Table 100.12.

a) Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS Table 100.12.

h. Verify that operation and sequencing of interlocking systems is as described in the Specifications and shown on the Drawings.
i. Verify correct phase barrier installation.
j. Verify lubrication of moving current-carrying parts and moving and sliding surfaces.

2. Electrical Tests:

a. Perform resistance measurements through bolted connections with low-resistance ohmmeter. Compare bolted connection resistance values to values of similar connections. Investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
b. Measure contact resistance across each switchblade fuseholder. Drop values may not exceed high level of manufacturer's published data. If manufacturer's published data are not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
c. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with switch closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, use Table 100.1 from NETA ATS. Investigate values of insulation resistance less than those published in Table 100.1 or as recommended in manufacturer's published data.
d. Measure fuse resistance. Investigate fuse-resistance values that deviate from each other by more than 15 percent.
e. Perform ground fault test in accordance with NETA ATS Section 7.14 "Ground Fault Protection Systems, Low-Voltage."

E. Tests and Inspections for Molded-Case Circuit Breakers and Enclosures and for Molded-Case Switches and Enclosures:

1. Visual and Mechanical Inspection:

a. Verify that equipment nameplate data are as described in the Specifications and shown on the Drawings.
b. Inspect physical and mechanical condition.
c. Inspect anchorage, alignment, grounding, and clearances.
d. Verify that unit is clean.
e. Operate circuit breaker to ensure smooth operation.
f. Inspect bolted electrical connections for high resistance using one of the methods as follows:

1) Use low-resistance ohmmeter.

a) Compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of lowest value.

2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS Table 100.12.

a) Bolt-torque levels must be in accordance with manufacturer's published data. In absence of manufacturer's published data, use NETA ATS Table 100.12.

g. Inspect operating mechanism, contacts, and chutes in unsealed units.
h. Perform adjustments for final protective device settings in accordance with coordination study.

2. Electrical Tests:

a. Perform resistance measurements through bolted connections with low-resistance ohmmeter. Compare bolted connection resistance values to values of similar connections. Investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
b. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with circuit breaker closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, use Table 100.1 from NETA ATS. Investigate values of insulation resistance less than those published in Table 100.1 or as recommended in manufacturer's published data.
c. Perform contact/pole resistance test. Drop values may not exceed high level of manufacturer's published data. If manufacturer's published data are not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
d. Perform insulation resistance tests on control wiring with respect to ground. Applied potential must be 500 V(dc) for 300 V rated cable and 1000 V(dc) for 600 V rated cable. Test duration must be one minute. For units with solid state components, follow manufacturer's recommendation. Insulation resistance values may be no less than 2 MΩ.
e. Determine the primary current injection by the following:

1) Long-time pickup and delay. Pickup values must be as specified. Trip characteristics may not exceed manufacturer's published time-current characteristic tolerance band, including adjustment factors.
2) Short-time pickup and delay. Short-time pickup values must be as specified. Trip characteristics may not exceed manufacturer's published time-current characteristic tolerance band, including adjustment factors.
3) Ground-fault pickup and time delay. Ground-fault pickup values must be as specified. Trip characteristics may not exceed manufacturer's published time-current characteristic tolerance band, including adjustment factors.
4) Instantaneous pickup. Instantaneous pickup values must be as specified and within manufacturer's published tolerances.

f. Test functionality of trip unit by means of primary current injection. Pickup values and trip characteristics must be as specified and within manufacturer's published tolerances.
g. Perform minimum pickup voltage tests on shunt trip and close coils in accordance with manufacturer's published data. Minimum pickup voltage of shunt trip and close coils must be as indicated by manufacturer.
h. Verify correct operation of auxiliary features such as trip and pickup indicators; zone interlocking; electrical close and trip operation; trip-free, anti-pump function; and trip unit battery condition. Reset trip logs and indicators. Investigate units that do not function as designed.
i. Verify operation of charging mechanism. Investigate units that do not function as designed.

3. Test and adjust controls, remote monitoring, and safeties.

F. Nonconforming Work:

1. Enclosed switches and circuit breakers will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

G. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

1. Test procedures used.
2. Include identification of each enclosed switch and circuit breaker tested and describe test results.
3. List deficiencies detected, remedial action taken, and observations after remedial action.

H. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.6 ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate in accordance with manufacturer's published instructions.

B. Set field-adjustable circuit-breaker trip ranges [**in accordance with results of power system studies.**][**to values indicated on the Drawings.**][**to values indicated in attached schedule.**]

3.7 PROTECTION

A. After installation, protect enclosed switches and circuit breakers from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

3.8 MAINTENANCE

A. Infrared Scanning of Enclosed Switches and Circuit Breakers: Two months after Substantial Completion, perform infrared scan of joints and connections. Remove covers so joints and connections are accessible to portable scanner. Take visible light photographs at same locations and orientations as infrared scans for documentation to ensure follow-on scans match same conditions for valid comparison.

1. Instruments and Equipment: Use infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
2. Follow-up Infrared Scanning: Perform two follow-up infrared scans of enclosed switches and breakers, one at four months and another at 11 months after Substantial Completion.
3. Instrument: Use infrared-scanning device designed to measure temperature or to detect significant deviations from normal values. Provide documentation of device calibration.
4. Field Reports for Infrared Scanning: Prepare certified report that identifies units checked and that describes scanning results. Include notation of deficiencies detected, remedial actions taken, and scanning observations after remedial action.

SECTION 26 29 13 00 - MANUAL AND MAGNETIC MOTOR CONTROLLERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Manual motor controllers.
2. Magnetic motor controllers.
3. Combination motor controllers.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
5. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
6. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration isolation and seismic-[**and wind-**]control devices referenced by this Section.
7. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
8. Section 260573 "Power System Studies" specifies arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.

1.2 DEFINITIONS

A. CPT: Control power transformer.

B. MCCB: Molded-case circuit breaker.

C. MCP: Motor circuit protector.

D. N.C.: Normally closed.

E. OCPD: Overcurrent protective device.

F. SCCR: Short-circuit current rating.

G. SCPD: Short-circuit protective device.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
2. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing laboratory, certifying that model number corresponding to specified product complies with specified listing criteria.

B. Shop Drawings: Prepare and submit the following:

1. Include plans, elevations, sections, and mounting details.
2. Indicate dimensions, weights, required clearances, and location and size of each field connection.
3. Wire Termination Diagrams and Schedules: Include diagrams for signal, and control wiring. Identify terminals and wiring designations and color-codes to facilitate installation, operation, and maintenance. Indicate recommended types, wire sizes, and circuiting arrangements for field-installed wiring, and show circuit protection features. Differentiate between manufacturer-installed and field-installed wiring.
4. Include features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

C. Product Schedule: List the following for each enclosed controller:

1. Each installed magnetic controller type.
2. Laboratory and file number for listing by qualified electrical testing laboratory.
3. Factory-installed accessories.
4. Nameplate legends.
5. SCCR of integrated unit.
6. For each combination magnetic controller include features, characteristics, ratings, and factory setting of the SCPD and OCPD.

    a. Listing document proving Type 2 coordination.

7. For each series-rated combination state the listed integrated short-circuit current (withstand) rating of SCPD and OCPDs by qualified electrical testing laboratory recognized by authorities having jurisdiction.

D. Field quality-control reports.

E. System startup testing reports.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

B. Field Reports:

1. Manufacturer's field reports for field quality-control support.
2. Manufacturer's field reports for system startup support.
3. Field reports for infrared scanning.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Spare parts.

1.6 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician I: Possessing active NICET EPT Level I certification. Able to work safely around electrical power equipment and cabling under supervision.

B. Electrical Power Testing (EPT) Technician II: Possessing active NICET EPT Level II certification. Able to isolate and ground electrical power equipment, to connect test equipment, and to conduct and document standard tests of basic equipment.

C. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, to conduct tests of complex equipment, to analyze test and equipment data, to plan a job, and to lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

D. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; to evaluate tests, test equipment, test results, and power system performance; to recommend actions to maintain or improve system performance; and to lead multi-team projects.

E. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.

B. If stored in areas subject to weather, cover controllers to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; [**install temporary electric heating, with at least**][**50 W**]<**Insert number**>[**per controller**][**connect factory-installed space heaters to temporary electrical service**].

1.8 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

A. Modeling, analysis, product selection, installation, and quality control for all electrical Work on the Project must comply with service condition requirements specified in Section 018116 "Facility Environmental Requirements" and Section 018123 "Facility Seismic and Wind Criteria."

B. Ambient Environment Ratings: Rate equipment for continuous operation under the following conditions unless otherwise indicated:

1. Ambient Temperature: Not less than **23 deg F (minus 5 deg C)** and not exceeding **104 deg F (40 deg C)**.
2. Altitude: Not exceeding **6600 ft (2010 m)** for electromagnetic and manual devices.
3. The effect of solar radiation is insignificant.

4. <**Insert unusual service condition**>.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

B. Enclosures:

1. Environmental Ratings: Comply with UL 50E, type designations as indicated on the Drawings.
2. Construction: Comply with NEMA IA 10030.
3. Controllers in Hazardous (Classified) Locations: Comply with UL 1203.

C. Seismic and Wind Performance: Installed assembly must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

1. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events[**, and unit must be fully operational after seismic events**].
2. Component Importance Factor (Ip): [**1.0**][**1.5**].
3. Component Amplification Factor (ap): [**1.0**][**2.5**]<**Insert value**>.
4. Component Response Modification Factor (Rp): [**1.5**][**2.0**][**2.5**][**6.0**]<**Insert value**>.
5. Component Overstrength Factor (Ωo): [**1.5**][**2.5**]<**Insert value**>.

2.2 MANUAL MOTOR CONTROLLERS

A. Motor-Starting Switches (MSS) :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB, Motion Business**]
b. [**Eaton**]
c. [**Rockwell Automation, Inc.**]
d. [**Siemens Industry, Inc., Energy Management Division**]
e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB, Motion Business**]
b. [**Eaton**]
c. [**Rockwell Automation, Inc.**]
d. [**Siemens Industry, Inc., Energy Management Division**]

e. [**Square D; Schneider Electric USA**]
f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Motor Controllers, Manual: UL CCN NLRV, including UL 60947-1 and UL 60947-4-1.

5. Standard Features: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off or on.

   a. Referenced Standards: Comply with NEMA ICS 2, general purpose, Class A.
   b. Configuration: [**Nonreversing**][**Reversing**][**Two speed**].
   c. Mounting: [**Flush**][**Surface**].
   d. Pilot Light Color: [**Red**][**Green**].
   e. Additional Nameplates: [**FORWARD and REVERSE for reversing switches**][**HIGH and LOW for two-speed switches**]<**Insert special markings**>.

B. Fractional Horsepower Manual Controllers (FHPMC) :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB Electrification Installations Products**]
   b. [**ABB, Motion Business**]
   c. [**Eaton**]
   d. [**Rockwell Automation, Inc.**]
   e. [**Siemens Industry, Inc., Energy Management Division**]
   f. [**Square D; Schneider Electric USA**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB Electrification Installations Products**]
   b. [**ABB, Motion Business**]
   c. [**Eaton**]
   d. [**Rockwell Automation, Inc.**]
   e. [**Siemens Industry, Inc., Energy Management Division**]
   f. [**Square D; Schneider Electric USA**]
   g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Motor Controllers, Manual: UL CCN NLRV, including UL 60947-1 and UL 60947-4-1.

5. Standard Features: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off, on, or tripped.

    a. Referenced Standards: Comply with NEMA ICS 2.

        1) Overload Relays:

            a) Inverse-time-current characteristics; [**Class 10**]<**Insert class**> tripping characteristics; heaters matched to nameplate full-load current of actual protected motor; external reset push button[**; bimetallic type**][**; melting alloy type**].
            b) Bimetallic class as scheduled on the Drawings.

    b. Configuration: [**Nonreversing**][**Two speed**].
    c. Pilot Light: [**Red**]<**Insert color**>.

C. Integral Horsepower Manual Controllers (IHPMC) :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**ABB Electrification Installations Products**]
    b. [**ABB, Motion Business**]
    c. [**Eaton**]
    d. [**Rockwell Automation, Inc.**]
    e. [**Siemens Industry, Inc., Energy Management Division**]
    f. [**Square D; Schneider Electric USA**]
    g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**ABB Electrification Installations Products**]
    b. [**ABB, Motion Business**]
    c. [**Eaton**]
    d. [**Rockwell Automation, Inc.**]
    e. [**Siemens Industry, Inc., Energy Management Division**]
    f. [**Square D; Schneider Electric USA**]
    g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Motor Controllers, Manual: UL CCN NLRV, including UL 60947-1 and UL 60947-4-1.

5. Standard Features: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off, on, or tripped.

    a. Referenced Standards: Comply with NEMA ICS 2.

1) Overload Relays:

a) Inverse-time-current characteristics; [**Class 10**]<**Insert class**> tripping characteristics; heaters matched to nameplate full-load current of actual protected motor; external reset push button[**; bimetallic type**][**; melting alloy type**].
b) Bimetallic class as scheduled on the Drawings.

b. Configuration: [**Nonreversing**][**Two speed**].

2.3 MAGNETIC MOTOR CONTROLLERS

A. Enclosed Full-Voltage Magnetic Motor Controllers :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB Electrification Installations Products**]
b. [**ABB, Motion Business**]
c. [**Eaton**]
d. [**Rockwell Automation, Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]
f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB Electrification Installations Products**]
b. [**ABB, Motion Business**]
c. [**Eaton**]
d. [**Rockwell Automation, Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]
f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Motor Controllers, Magnetic: UL CCN NLDX, including UL 60947-1 and UL 60947-4-1.

5. Standard Features: Across-the-line start, electrically held, for nominal system voltage of 600 V(ac) and less.

a. Referenced Standards: Comply with UL 508 and NEMA ICS 2, general purpose, Class A.
b. Configuration: [**Nonreversing**]<**Insert configuration**>.
c. Contactor Coils: Pressure-encapsulated type[**with coil transient suppressors when indicated**].

1) Operating Voltage: Manufacturer's standard unless otherwise indicated.

d. Control Power: For on-board control power, obtain from line circuit or from integral CPT with capacity to operate integral devices and remotely located pilot, indicating, and control devices.

1) Spare CPT Capacity as Indicated on the Drawings: [**50**][**100**][**200**]<**Insert number**> VA.

e. Overload Relays:

1) Thermal Overload Relays:

a) Inverse-time-current characteristic.
b) [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
c) Heaters: In each phase; coordinate with nameplate full-load current of actual protected motor; include appropriate adjustment for duty cycle.
d) Ambient compensated.
e) Automatic resetting.

2) Solid-State Overload Relay:

a) Switch or dial selectable for motor-running overload protection.
b) Sensors in each phase.
c) [**Class 10**][**Class 20**][**Class 30**][**Class 10/20 selectable**] tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.

f. Class II Ground-Fault Protection: Comply with UL 1053 to interrupt low-level ground faults. The ground-fault detection system includes circuitry that will prevent the motor controller from tripping when the fault current exceeds the interrupting capacity of the controller. Equip with start and run delays to prevent nuisance trip on starting, and a trip indicator.

g. Digital communication module, using [**TIA-485 Modbus, RTU protocol,**][**2**][**4**][**-wire connection to host devices with a compatible port**]<**Insert protocol**> to transmit the following to the LAN:

1) Instantaneous rms current each phase, and 3-phase average.
2) Voltage: L-L for each phase, L-L 3-phase average, L-N each phase and L-N 3-phase average - rms.
3) Active Energy (kWh): 3-phase total.
4) Power Factor:[**Each phase and**] 3-phase total.
5) <**Insert value**>.

B. Enclosed Reduced-Voltage Magnetic Motor Controllers :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB Electrification Installations Products**]
b. [**ABB, Motion Business**]
c. [**Eaton**]
d. [**Rockwell Automation, Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]

f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB Electrification Installations Products**]
b. [**ABB, Motion Business**]
c. [**Eaton**]
d. [**Rockwell Automation, Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]
f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Motor Controllers, Magnetic: UL CCN NLDX, including UL 60947-1 and UL 60947-4-1.

5. Standard Features: Electrically held; closed transition; adjustable time delay on transition, 600 V(ac) or less.

a. Referenced Standards: Comply with UL 508 and NEMA ICS 2, general purpose, Class A.
b. Configuration:

1) Wye-Delta Controller: Four contactors, with a three-phase starting resistor/reactor bank.
2) Part-Winding Controller: Separate START and RUN contactors, field-selectable for one-half- or two-thirds-winding start mode, with either six- or nine-lead motors; with separate overload relays for starting and running sequences.
3) Autotransformer Reduced-Voltage Controller: Medium-duty service, with integral overtemperature protection; taps for starting at 50, 65, and 80 percent of line voltage; two START and one RUN contactors.

c. Contactor Coils: Pressure-encapsulated type[**with coil transient suppressors when indicated**].

1) Operating Voltage: Manufacturer's standard unless otherwise indicated.

d. Control Power: [**24**][**120**] V ac; obtained from integral CPT, with primary and secondary fuses, with CPT of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.

1) Spare CPT Capacity: [**50**][**100**][**200**]<**Insert number**> VA.

e. Overload Relays:

1) Thermal Overload Relays: [**Melting alloy type**][**Bimetallic type**].

a) Inverse-time-current characteristic.
b) [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
c) Heaters in each phase matched to nameplate full-load current of actual

protected motor and with appropriate adjustment for duty cycle.
d) Ambient compensated.
e) Automatic resetting.

2) Solid-State Overload Relay:

a) Switch or dial selectable for motor-running overload protection.
b) Sensors in each phase.
c) [**Class 10**][**Class 20**][**Class 30**][**Class 10/20 selectable**] tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.

f. Class II Ground-Fault Protection: Comply with UL 1053 to interrupt low-level ground faults. The ground-fault detection system includes circuitry that will prevent the motor controller from tripping when the fault current exceeds the interrupting capacity of the controller. Equip with start and run delays to prevent nuisance trip on starting, and a trip indicator.
g. Digital Communication Module: [**TIA-485 Modbus, RTU protocol,**][**2**][**4**][**-wire connection to host devices with a compatible port**]<**Insert protocol**> to transmit the following to the LAN:

1) Instantaneous rms current each phase, and 3-phase average.
2) Voltage: L-L for each phase, L-L 3-phase average, L-N each phase and L-N 3-phase average - rms.
3) Active Energy (kWh): 3-phase total.
4) Power Factor:[**Each phase and**] 3-phase total.
5) <**Insert value**>.

C. Multispeed Magnetic Controllers :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB Electrification Installations Products**]
b. [**ABB, Motion Business**]
c. [**Eaton**]
d. [**Rockwell Automation, Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]
f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB Electrification Installations Products**]
b. [**ABB, Motion Business**]
c. [**Eaton**]
d. [**Rockwell Automation, Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]
f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.

4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

    a. Motor Controllers, Magnetic: UL CCN NLDX, including UL 60947-1 and UL 60947-4-1.

5. Standard Features: Two speed, full voltage, across the line, electrically held.

    a. Referenced Standards: Comply with NEMA ICS 2, general purpose, Class A.
    b. Configuration: Nonreversing[**, multispeed**].

        1) Contactor Coils: Pressure-encapsulated type[**with coil transient suppressors**].

            a) Operating Voltage: Manufacturer's standard unless otherwise indicated.

        2) Power Contacts: Totally enclosed, double break, silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.

            a) Control Power: [**24**][**120**] V(ac); obtained from integral CPT, with primary and secondary fuses, with CPT of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.
            b) Spare CPT Capacity: [**50**][**100**][**200**]<**Insert number**> VA.

        3) Compelling Relays: Ensure that motor will start only at low speed.
        4) Accelerating Timer Relays: Ensure properly timed acceleration through speeds lower than that selected.
        5) Decelerating Timer Relays: Ensure automatically timed deceleration through each speed.
        6) Antiplugging Timer Relays: Ensure a time delay when transferring from FORWARD to REVERSE and back.

    c. Overload Relays:

        1) Thermal Overload Relays: [**Melting alloy type**][**Bimetallic type**].

            a) Inverse-time-current characteristic.
            b) [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
            c) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
            d) Ambient compensated.
            e) Automatic resetting.

        2) Solid-State Overload Relay:

            a) Switch or dial selectable for motor-running overload protection.
            b) Sensors in each phase.
            c) [**Class 10**][**Class 20**][**Class 30**][**Class 10/20 selectable**] tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.

    d. Class II Ground-Fault Protection: Comply with UL 1053 to interrupt low-level ground faults. The ground-fault detection system includes circuitry that will prevent the motor controller from tripping when the fault current exceeds the interrupting capacity of the controller. Equip with start and run delays to prevent nuisance trip on starting, and a trip indicator.
    e. Digital communication module, using [**TIA-485 Modbus, RTU protocol,**][**2**][**4**][**-wire**

connection to host devices with a compatible port]<**Insert protocol**> to transmit the following to the LAN:

1) Instantaneous rms current each phase, and 3-phase average.
2) Voltage: L-L for each phase, L-L 3-phase average, L-N each phase and L-N 3-phase average - rms.
3) Active Energy (kWh): 3-phase total.
4) Power Factor:[**Each phase and**] 3-phase total.
5) <**Insert value**>.

2.4 COMBINATION MAGNETIC MOTOR CONTROLLERS

A. Combination Full-Voltage Magnetic Motor Controller :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB Electrification Installations Products**]
   b. [**ABB, Motion Business**]
   c. [**Eaton**]
   d. [**Rockwell Automation, Inc.**]
   e. [**Siemens Industry, Inc., Energy Management Division**]
   f. [**Square D; Schneider Electric USA**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB Electrification Installations Products**]
   b. [**ABB, Motion Business**]
   c. [**Eaton**]
   d. [**Rockwell Automation, Inc.**]
   e. [**Siemens Industry, Inc., Energy Management Division**]
   f. [**Square D; Schneider Electric USA**]
   g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Combination Motor Controllers: UL CCN NKJH (36 BPMs), including UL 60947-1 and UL 60947-4-1.

5. Standard Features: Factory-assembled, combination full-voltage magnetic motor controller consisting of the controller described in this article, indicated disconnecting means, SCPD and OCPD, in a single enclosure.

   a. Referenced Standards: Comply with NEMA ICS 2, general purpose, Class A.
   b. Configuration: [**Nonreversing**]<**Insert configuration**>.

c. Contactor Coils: Pressure-encapsulated type[**with coil transient suppressors when indicated**].

1) Operating Voltage: Manufacturer's standard unless otherwise indicated.

d. Control Power: For on-board control power, obtain from line circuit or from integral CPT with capacity to operate integral devices and remotely located pilot, indicating, and control devices.

1) Spare CPT Capacity as Indicated on the Drawings: [**50**][**100**][**200**]<**Insert number**> VA.

e. Overload Relays:

1) Thermal Overload Relays:

a) Inverse-time-current characteristic.
b) [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
c) Heaters: In each phase coordinate with nameplate full-load current of actual protected motor; include appropriate adjustment for duty cycle.
d) Ambient compensated.
e) Automatic resetting.

2) Solid-State Overload Relay:

a) Switch or dial selectable for motor-running overload protection.
b) Sensors in each phase.
c) [**Class 10**][**Class 20**][**Class 30**][**Class 10/20 selectable**] tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.

f. Class II Ground-Fault Protection: Comply with UL 1053 to interrupt low-level ground faults. The ground-fault detection system includes circuitry that will prevent the motor controller from tripping when the fault current exceeds the interrupting capacity of the controller. Equip with start and run delays to prevent nuisance trip on starting, and a trip indicator.

g. Digital communication module, using [**TIA-485 Modbus, RTU protocol,**][**2**][**4**][**-wire connection to host devices with a compatible port**]<**Insert protocol**> to transmit the following to the LAN:

1) Instantaneous rms current each phase, and 3-phase average.
2) Voltage: L-L for each phase, L-L 3-phase average, L-N each phase and L-N 3-phase average - rms.
3) Active Energy (kWh): 3-phase total.
4) Power Factor:[**Each phase and**] 3-phase total.
5) <**Insert value**>.

h. Fusible Disconnecting Means:

1) NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate indicated fuses.
2) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

i. Nonfusible Disconnecting Means:

1) NEMA KS 1, heavy-duty, horsepower-rated, nonfusible switch.

2) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

j. MCP Disconnecting Means:

1) UL 489 and NEMA AB 3, with interrupting capacity to comply with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
2) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

k. MCCB Disconnecting Means:

1) UL 489 and NEMA AB 3, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse-time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
2) Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
3) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

B. Combination Reduced-Voltage Motor Controllers :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB Electrification Installations Products**]
b. [**ABB, Motion Business**]
c. [**Eaton**]
d. [**Rockwell Automation, Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]
f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB Electrification Installations Products**]
b. [**ABB, Motion Business**]
c. [**Eaton**]
d. [**Rockwell Automation, Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]
f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Combination Motor Controllers: UL CCN NKJH (36 BPMs), including UL 60947-1 and UL

60947-4-1.

5. Standard Features: Factory-assembled, combination reduced-voltage magnetic motor controller consisting of the controller described in this article, indicated disconnecting means, and SCPD and OCPD, in a single enclosure.

   a. Configuration:

      1) Wye-Delta Controller: Four contactors, with a three-phase starting resistor/reactor bank.
      2) Part-Winding Controller: Separate START and RUN contactors, field-selectable for one-half- or two-thirds-winding start mode, with either six- or nine-lead motors; with separate overload relays for starting and running sequences.
      3) Autotransformer Reduced-Voltage Controller: Medium-duty service, with integral overtemperature protection; taps for starting at 50, 65, and 80 percent of line voltage; two START and one RUN contactors.

   b. Contactor Coils: Pressure-encapsulated type[**with coil transient suppressors when indicated**].

      1) Operating Voltage: Manufacturer's standard unless otherwise indicated.

   c. Control Power: [**24**][**120**] V(ac); obtained from integral CPT, with primary and secondary fuses, with CPT of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.

      1) Spare CPT Capacity: [**50**][**100**][**200**]<**Insert number**> VA.

   d. Overload Relays:

      1) Thermal Overload Relays: [**Melting alloy type**][**Bimetallic type**].

         a) Inverse-time-current characteristic.
         b) [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
         c) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
         d) Ambient compensated.
         e) Automatic resetting.

      2) Solid-State Overload Relay:

         a) Switch or dial selectable for motor-running overload protection.
         b) Sensors in each phase.
         c) [**Class 10**][**Class 20**][**Class 30**][**Class 10/20 selectable**] tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.

   e. Class II Ground-Fault Protection: Comply with UL 1053 to interrupt low-level ground faults. The ground-fault detection system includes circuitry that will prevent the motor controller from tripping when the fault current exceeds the interrupting capacity of the controller. Equip with start and run delays to prevent nuisance trip on starting, and a trip indicator.
   f. Digital Communication Module: [**TIA-485 Modbus, RTU protocol,**][**2**][**4**][**-wire connection to host devices with a compatible port**]<**Insert protocol**> to transmit the following to the LAN:

      1) Instantaneous rms current each phase, and 3-phase average.

2) Voltage: L-L for each phase, L-L 3-phase average, L-N each phase and L-N 3-phase average - rms.
3) Active Energy (kWh): 3-phase total.
4) Power Factor:[**Each phase and**] 3-phase total.
5) <**Insert value**>.

g. Fusible Disconnecting Means:

1) NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate indicated fuses.
2) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

h. Nonfusible Disconnecting Means:

1) NEMA KS 1, heavy-duty, horsepower-rated, nonfusible switch.
2) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

i. MCP Disconnecting Means:

1) UL 489 and NEMA AB 3, with interrupting capacity to comply with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
2) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

j. MCCB Disconnecting Means:

1) UL 489 and NEMA AB 3, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse-time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
2) Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
3) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

C. Combination Multispeed Magnetic Motor Controller :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB Electrification Installations Products**]
b. [**ABB, Motion Business**]
c. [**Eaton**]
d. [**Rockwell Automation, Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]
f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB Electrification Installations Products**]
b. [**ABB, Motion Business**]
c. [**Eaton**]
d. [**Rockwell Automation, Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]
f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Combination Motor Controllers: UL CCN NKJH (36 BPMs), including UL 60947-1 and UL 60947-4-1.

5. Standard Features: Factory-assembled, combination of multispeed magnetic motor controller, consisting of the controller, indicated disconnecting means, and SCPD and OCPD, in a single enclosure.

   a. Referenced Standards: Comply with NEMA ICS 2, general purpose, Class A.
   b. Configuration: [**Nonreversing**][**Reversing**]; [**consequent pole**][**two-winding**].

      1) Contactor Coils: Pressure-encapsulated type[**with coil transient suppressors**].

         a) Operating Voltage: Manufacturer's standard unless otherwise indicated.

      2) Power Contacts: Totally enclosed, double break, silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.
      3) Control Power: [**24**][**120**] V(ac); obtained from integral CPT, with primary and secondary fuses, with CPT of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.

         a) Spare CPT Capacity: [**50**][**100**][**200**]<**Insert number**> VA.

      4) Compelling Relays: Ensure that motor will start only at low speed.
      5) Accelerating Timer Relays: Ensure properly timed acceleration through speeds lower than that selected.
      6) Decelerating Timer Relays: Ensure automatically timed deceleration through each speed.
      7) Antiplugging Timer Relays: Ensure a time delay when transferring from FORWARD to REVERSE and back.

   c. Overload Relays:

      1) Thermal Overload Relays: [**Melting alloy type**][**Bimetallic type**].

         a) Inverse-time-current characteristic.
         b) [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
         c) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
         d) Ambient compensated.
         e) Automatic resetting.

      2) Solid-State Overload Relay:

a) Switch or dial selectable for motor-running overload protection.
b) Sensors in each phase.
c) [**Class 10**][**Class 20**][**Class 30**][**Class 10/20 selectable**] tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.

d. Class II Ground-Fault Protection: Comply with UL 1053 to interrupt low-level ground faults. The ground-fault detection system includes circuitry that will prevent the motor controller from tripping when the fault current exceeds the interrupting capacity of the controller. Equip with start and run delays to prevent nuisance trip on starting, and a trip indicator.

e. Digital communication module, using [**TIA-485 Modbus, RTU protocol,**][**2**][**4**][**-wire connection to host devices with a compatible port**]<**Insert protocol**> to transmit the following to the LAN:

1) Instantaneous rms current each phase, and 3-phase average.
2) Voltage: L-L for each phase, L-L 3-phase average, L-N each phase and L-N 3-phase average - rms.
3) Active Energy (kWh): 3-phase total.
4) Power Factor:[**Each phase and**] 3-phase total.
5) <**Insert value**>.

f. Fusible Disconnecting Means:

1) NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate indicated fuses.
2) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

g. Nonfusible Disconnecting Means:

1) NEMA KS 1, heavy-duty, horsepower-rated, nonfusible switch.
2) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

h. MCP Disconnecting Means:

1) UL 489 and NEMA AB 3, with interrupting capacity to comply with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
2) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

i. MCCB Disconnecting Means:

1) UL 489 and NEMA AB 3, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse-time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
2) Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
3) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

2.5 ACCESSORIES

A. General Requirements for Control Circuit and Pilot Devices: NEMA ICS 5; factory installed in controller enclosure cover unless otherwise indicated.

1. Push-Buttons, Pilot Lights, and Selector Switches: Standard duty, except as needed to match enclosure type. Heavy duty or oiltight where indicated in the controller schedule.

a. Push-Buttons: As indicated in the controller schedule.
b. Pilot Lights: As indicated in the controller schedule.

2. Elapsed Time Meters: Heavy duty with digital readout in hours[**; nonresettable**][**; resettable**].
3. Meters: Panel type, **2-1/2-inch (64-mm)** minimum size with 90- or 120-degree scale and plus or minus two percent accuracy. Where indicated, provide selector switches with an off position.

B. Motor Protection Relays: Provide solid-state sensing circuit and isolated output contacts for hardwired connections.

1. Phase-failure.
2. Phase-reversal, with bicolor LED to indicate normal and fault conditions. Automatic reset when phase reversal is corrected.
3. Under/overvoltage, operate when the circuit voltage reaches a preset value, and drop out when the operating voltage drops to a level below the preset value. Include adjustable time-delay setting.
4. <**Insert description**>.

C. Breather Assemblies: Maintain interior pressure and release condensation in [**Type 4**][**Type 4X**][**Type 7**][**Type 9**]<**Insert type**> enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.

D. Space Heaters: Provide N.C. auxiliary contacts, to mitigate condensation in [**Type 3R**][**Type 4X**][**Type 12**]<**Insert type**> enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.

E. Sun Shields: Install on fronts, sides, and tops of enclosures that are installed outdoors and subject to direct and extended sun exposure.

F. <**Insert accessories**>.

2.6 MAINTENANCE MATERIAL ITEMS

A. Spare Parts: Furnish to Owner spare parts, for repairing motor controllers, that are packaged with protective covering for storage on-site and identified with labels describing contents.[**Include the following:**]

1. Fuses for Fused Switches: Equal to [**10**]<**Insert number**> percent of quantity installed for each size and type, but no fewer than [**three**]<**Insert number**> of each size and type.
2. Control Power Fuses: Equal to [**10**]<**Insert number**> percent of quantity installed for each size and type, but no fewer than [**two**]<**Insert number**> of each size and type.
3. Indicating Lights: [**Two**]<**Insert number**> of each type and color installed.
4. Auxiliary Contacts: Furnish [**one**]<**Insert number**> spare(s) for each size and type of magnetic controller installed.
5. Power Contacts: Furnish [**three**]<**Insert number**> spares for each size and type of magnetic contactor installed.
6. <**Insert extra materials**>.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and space conditions for compliance with requirements for motor controllers, their relationship with the motors, and other conditions affecting performance of the Work.

3.2 INSTALLATION OF MANUAL AND MAGNETIC MOTOR CONTROLLERS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NECA NEIS 1, NFPA 1, and NFPA 70.
2. Electrical Maintenance: NECA NEIS 91 and NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Commissioning of Electrical Systems: NECA NEIS 90.
5. Hot Work: NFPA 51B.
6. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
7. Work in Confined Spaces: NFPA 350.
8. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
9. Evaluation of Unlabeled Electrical Equipment: NFPA 791.
10. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Wall-Mounted Controllers: Install magnetic controllers on walls with tops at uniform height indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not at walls, provide freestanding racks for support unless otherwise indicated.
2. Floor-Mounted Controllers: Install controllers on cast-in-place concrete equipment base(s).
3. Provide seismic control devices.
4. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.
5. Setting of Overload Relays: Select and set overloads on the basis of full-load current rating as shown on motor nameplate. Adjust setting value for special motors as required by NFPA 70 for motors that are high-torque, high-efficiency, and so on.

D. Interfaces with Other Work:

1. Identification: Provide labels for motor controllers and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure and each compartment with [**baked-enamel signs**][**metal-backed butyrate signs**][**laminated acrylic or melamine plastic signs**], mounted with corrosion-resistant screws.
c. Provide warning signs for electrical equipment.

2. Arc-Flash Warning Labels:

a. Provide self-adhesive equipment label for each work location[**included in the arc-flash**

hazard analysis].

b. Labels must be machine printed, with no field-applied markings.
c. Labels must have orange header with wording, "WARNING, ARC-FLASH HAZARD," and must include the following information taken directly from the arc-flash hazard analysis:

1) Location designation.
2) Nominal voltage.
3) Flash protection boundary.
4) Hazard risk category.
5) Incident energy.
6) Working distance.
7) Engineering report number, revision number, and issue date.

3.3 FIELD QUALITY CONTROL OF MANUAL AND MAGNETIC MOTOR CONTROLLERS

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

1. <**Insert requirements**>.

C. Field tests and inspections must be witnessed by [**Architect**][**Tenant**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.

D. Tests and Inspections:

1. Comply with NFPA 70B.
2. Visual and Mechanical Inspection:

a. Compare equipment nameplate data with drawings and specifications.
b. Inspect physical and mechanical condition.
c. Inspect anchorage, alignment, and grounding.
d. Verify the unit is clean.
e. Inspect contactors:

1) Verify mechanical operation.
2) Verify contact gap, wipe, alignment, and pressure are in accordance with manufacturer's published data.

f. Motor-Running Protection:

1) Verify overload element rating is correct for its application.
2) If motor-running protection is provided by fuses, verify correct fuse rating.

g. Inspect bolted electrical connections for high resistance using one of the two following methods:

1) Use a low-resistance ohmmeter. Compare bolted connection resistance values with values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.
2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS Table 100.12.

h. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.

3. Electrical Tests:

a. [**For the contactor and circuit breaker, perform**][**Perform**] insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with switch closed, and across each open pole.

1) Insulation Resistance: In accordance with manufacturer's published data or NETA ATS Table 100.1. In the absence of manufacturer's published data, use Table 100.5.
2) Investigate and correct insulation resistance values less than those of this table or manufacturer's published instructions.

b. Measure fuse resistance. Investigate fuse-resistance values that deviate from each other by more than 15 percent.
c. Test motor protection devices in accordance with manufacturer's published data.
d. Test circuit breakers as follows:

1) Operate the circuit breaker to ensure smooth operation.
2) For adjustable circuit breakers, adjust protective device settings in accordance with the coordination study. Comply with coordination study recommendations.

e. Perform operational tests by initiating control devices.

E. Nonconforming Work:

1. Motor controller will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

F. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

G. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.4 SYSTEM STARTUP

A. Perform startup service in accordance with manufacturer's published instructions.

B. System Startup Testing: Verify the correct interaction of sensing, processing, and action devices. Perform system startup testing after field quality control tests have been completed and all components have passed specified tests.

1. Develop test parameters and perform tests for the purpose of evaluating performance of integral components and their functioning as a complete unit within design requirements and manufacturer's published data.
2. Verify the correct operation of interlock safety devices for fail-safe functions in addition to design function.
3. Verify the correct operation of sensing devices, alarms, and indicating devices.

C. Nonconforming Work:

1. Motor controller will be considered defective if it does not pass system startup testing.

D. System Startup Testing Report: Compile, prepare, and submit system startup testing reports.

E. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] system startup.

1. Manufacturer's Field Reports for System Startup Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.5 CLOSEOUT ACTIVITIES

A. Training:

1. [**With assistance from factory-authorized service representatives, train**][**Train**] Owner's maintenance personnel on the following topics:

a. How to adjust, operate, and maintain equipment specified in Section 262913.03 "Manual and Magnetic Motor Controllers."

2. [**Provide video recordings of training sessions to Owner**][**Allow Owner to record training sessions**].

3.6 MAINTENANCE

A. Infrared Scanning of Motor Controllers: Perform infrared scanning during periods of maximum possible loading. Comply with NFPA 70B requirements. Remove covers so joints and connections are accessible to portable scanner. Take visible light photographs at same locations and orientations as infrared scans for documentation to ensure follow-on scans match same conditions for valid comparison.

1. Equipment: Inspect distribution systems with imaging equipment capable of detecting a minimum temperature difference of 1 deg C at 30 deg C. The equipment must detect emitted radiation and convert detected radiation to a visual signal.
2. Act on inspection results and recommended action, and considering the recommendations of NETA ATS Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.
3. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of the electrical power connections of each motor controller.
4. Follow-On Infrared Scanning: Perform follow-up infrared scans of motor controller at 11 months after Substantial Completion.
5. Field Reports for Infrared Scanning: Prepare a certified report including the following information:

a. Identities of personnel performing infrared scanning.

b. Description of test equipment used and record of their calibration.
c. Description of motor controllers and associated equipment tested.
d. Deficiencies found, remedial actions taken, and observations found when scans were repeated after the remedial actions.
e. Temperature difference between the area of concern and the reference area.
f. Probable cause of temperature difference.
g. Areas inspected. Identify inaccessible and unobservable areas and equipment.
h. Load conditions at time of inspection.
i. Photographs and thermograms of the deficient area.
j. Recommended action.

END OF SECTION 26 29 13 00

SECTION 26 29 13 00A - SOFT-START MOTOR CONTROLLERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Soft-start motor controllers.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on the Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on the Project.
3. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
4. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
5. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
6. Section 260548 "Vibration and Seismic Controls for Electrical Systems" specifies vibration isolation and seismic-[**and wind-**]control devices referenced by this Section.
7. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
8. Section 260573 "Power System Studies" specifies arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.
9. Section 264313 "Surge Protective Devices for Low-Voltage Electrical Power Circuits" specifies field-installed surge protection referenced by this Section.

1.2 DEFINITIONS

A. CPT: Control power transformer.

B. FLA: Full-load amperes.

C. MCCB: Molded-case circuit breaker.

D. MCP: Motor circuit protector.

E. N.C.: Normally closed.

F. N.O.: Normally open.

G. OCPD: Overcurrent protective device.

H. SCCR: Short-circuit current rating.

I. SCPD: Short-circuit protective device.

J. SCR: Silicon-controlled rectifier.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
2. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing laboratory, certifying that model number corresponding to specified product complies with specified listing criteria.

B. Shop Drawings: Prepare and submit the following:

1. Include plans, elevations, sections, and mounting details.
2. Indicate dimensions, weights, required clearances, and location and size of each field connection.
3. Wire Termination Diagrams and Schedules: Include diagrams for signal and control wiring. Identify terminals and wiring designations and color-codes to facilitate installation, operation, and maintenance. Indicate recommended types, wire sizes, and circuiting arrangements for field-installed wiring, and show circuit protection features. Differentiate between manufacturer-installed and field-installed wiring.
4. Include features, characteristics, ratings, and factory settings of individual OCPD and auxiliary components.

C. Product Schedule: For each enclosed controller.

1. Each installed soft-start controller type.
2. Laboratory and file number for listing by qualified electrical testing laboratory..
3. Factory-installed accessories.
4. Nameplate legends.
5. SCCR of integrated unit.

a. For each combination soft-start controller, include features, characteristics, ratings, and factory setting of the SCPD and OCPD.

1) Listing document proving Type 2 coordination.

b. For each series-rated combination, state the listed integrated SCCR (withstand) of SCPDs and OCPDs by qualified electrical testing laboratory acceptable to authorities having jurisdiction.

D. Field quality-control reports.

E. System startup testing reports.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

B. Field Reports:

1. Manufacturer's field reports for field quality-control support.

2. Manufacturer's field reports for system startup support.
3. Field reports for infrared scanning.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Spare parts.

1.6 QUALIFICATIONS

A. Electrical Power Testing (EPT) Technician I: Possessing active NICET EPT Level I certification. Able to work safely around electrical power equipment and cabling under supervision.

B. Electrical Power Testing (EPT) Technician II: Possessing active NICET EPT Level II certification. Able to isolate and ground electrical power equipment, to connect test equipment, and to conduct and document standard tests of basic equipment.

C. Electrical Power Testing (EPT) Technician III: Possessing active NICET EPT Level III certification. Able to manage switching procedures, to conduct tests of complex equipment, to analyze test and equipment data, to plan a job, and to lead a team. Has experience performing NFPA 70B, IEEE, and NETA electrical tests.

D. Electrical Power Testing (EPT) Technician IV: Possessing active NICET EPT Level IV certification. Able to conduct tests of complex metering and relay systems; to evaluate tests, test equipment, test results, and power system performance; to recommend actions to maintain or improve system performance; and to lead multi-team projects.

E. Electrical Power Testing and Inspecting Agency: Entities possessing active credentials from qualified electrical testing laboratory recognized by authorities having jurisdiction.

1. On-site electrical testing supervisors must possess active NICET EPT Technician [**III**][**IV**] certification.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store soft-start controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect soft-start controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.

B. If stored in areas subject to weather, cover soft-start controllers to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; [**install temporary electric heating, with at least**][**50 W**]<**Insert number**>[**per controller**][**connect factory-installed space heaters to temporary electrical service**].

1.8 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

A. Modeling, analysis, product selection, installation, and quality control for all electrical Work on the Project must comply with service condition requirements specified in Section 018116 "Facility Environmental Requirements" and Section 018123 "Facility Seismic and Wind Criteria."

B. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:

1. Ambient Temperature: Not less than **32 deg F (0 deg C)** and not exceeding **104 deg F (40 deg C)**, humidity noncondensing.
2. Altitude: Not exceeding **3300 ft (1000 m)**.
3. The effect of solar radiation is insignificant.
4. <**Insert unusual service condition**>.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

B. Enclosures:

1. Environmental Ratings: Comply with UL 50E, type designations as indicated on Drawings.
2. Construction: Comply with NEMA ICS IA 10030.
3. Controllers in Hazardous (Classified) Locations: Comply with UL 1203.

C. Seismic and Wind Performance: Installed assembly must perform in accordance with Section 018123 "Facility Seismic and Wind Criteria" and the following:

1. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events[**, and unit must be fully operational after seismic events**].
2. Component Importance Factor (Ip): [**1.0**][**1.5**].
3. Component Amplification Factor (ap): [**1.0**][**2.5**]<**Insert value**>.
4. Component Response Modification Factor (Rp): [**1.5**][**2.0**][**2.5**][**6.0**]<**Insert value**>.
5. Component Overstrength Factor (Ωo): [**1.5**][**2.5**]<**Insert value**>.

2.2 SOFT-START MOTOR CONTROLLERS

A. Enclosed Soft-Start Motor Controllers :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB Electrification Installations Products**]
b. [**ABB, Motion Business**]
c. [**Eaton**]
d. [**Rockwell Automation, Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]
f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB Electrification Installations Products**]
b. [**ABB, Motion Business**]
c. [**Eaton**]
d. [**Rockwell Automation, Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]
f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Motor Controllers, Mechanically Operated and Solid-State: UL CCN NMFT, including UL 508, UL 60947-1, and UL 60947-4-1.

5. Standard Features: Controllers designed for reduced-voltage start, full-voltage run, and optional soft stop.

   a. Construction: Integrated unit with power SCRs, heat sink, microprocessor logic board, door-mounted digital display and user interface module, run-bypass contactor, and overload relay(s); suitable for use with NEMA MG 1, Design B, polyphase, medium induction motors.
   b. Run-Bypass Contactor: Magnetic contactor in parallel with the SCR of the soft-start controller, bypassing the SCR when full voltage is achieved.
   c. Referenced Standards: NEMA ICS 2, general purpose, Class A.
   d. Configuration: [**Standard duty**]<**Insert configurations**>.

      1) Motor Starting and Stopping: Provide at least two SCRs per phase.
      2) Microprocessor Control: Continuously monitor current and proper operation of the SCRs.

   e. Bypass Contactor: Operates automatically when full voltage is applied to motor, and bypasses the SCRs. Soft-start controller protective features and deceleration controls must remain active when this contactor is in the bypass mode.

      1) Power Electronics Disconnect Contactor. Where indicated, installed ahead of the power electronics equipment, and opens automatically when the motor is stopped, or a controller fault is detected, or when an SCR shorts.
      2) Logic Board: Identical for all ampere ratings and voltage classes, with environmental protective coating.
      3) Surge Protection: Provide [**NEMA ICS 2 compliant factory-installed**][**field-installed**] surge suppression.

   f. Control Power:

      1) For on-board control power, obtain from line circuit or from integral CPT with capacity to operate integral devices and remotely located pilot, indicating, and control devices.
      2) Spare CPT Capacity: As indicated on Drawings, available in increments of 100 VA, from 100 to 500 VA.

   g. Controller Diagnostics and Protection:

      1) Microprocessor-based thermal-protection system for monitoring SCR and motor

thermal characteristics, and providing controller overtemperature and motor-overload alarm and trip; settings selectable via the keypad.

2) Protection from line-side reverse phasing; line-side and motor-side phase loss; motor jam, stall, and under-load conditions; and line frequency over or under normal.
3) Input isolation contactor that opens when the controller diagnostics detect a faulted soft-start component or when the motor is stopped.
4) <**Insert items**>.

h. Cover mounted-controller status panel with LED lights or alphanumeric display to show the following:

1) Starter Status: "Ready," "Starting," "Stopping," or "Run."
2) Motor current in amperes.
3) Faults:

a) Motor overcurrent trip.
b) Motor thermal overload.
c) Starter thermal fault.
d) Low line voltage.
e) Loss of a phase.
f) Phases reversed.
g) Maximum stating time exceeded.
h) Serial communications error.

i. Interface Panel: [**Mounted on controller door**][**Mounted remotely within 50 ft (15 m)**].[**With plug-in connector and removable.**]

1) Guarded adjustable set points, not readily accessible.

a) Motor FLA, adjustable from [**40 to 110**]<**Insert numbers**> percent of the controller's rating.
b) Current limitation on starting, adjustable from 200 to 500 percent of FLA, typically set at 300 percent.
c) NEMA ICS 2 Overload Class: Include the following selections: Class 5, Class 10, Class 15, Class 20, and Class 30.

2) Adjustable set points, readily accessible[**, password protected**].

a) Linear acceleration, adjustable from [**1 to 60 s**]<**Insert range in seconds**>.
b) Maximum start time, adjustable from [**1 to 250 s**]<**Insert range in seconds**>.
c) Selector switch; select coast to stop or soft stop.
d) Linear deceleration, adjustable from [**1 to 60 s**]<**Insert range in seconds**>.

j. Remote Output Features. All outputs prewired to terminal blocks.

1) Analog output for field-selectable assignment of motor operating characteristics; [**0- to 10 V(dc)**][**4- to 20 mA(dc)**].
2) Form C status contacts that change state when controller is running.
3) Form C alarm contacts that change state when a fault condition occurs.
4) <**Insert items**>.

k. Digital Communication Module: [**TIA-485 Modbus, RTU protocol, 2-wire connection to host devices with a compatible port**][**TIA-485 Modbus, RTU protocol, 4-wire connection to host devices with a compatible port**]<**Insert protocol**> to transmit the following to the LAN:

1) Instantaneous root mean square (RMS) current each phase, and three-phase average.
2) RMS Voltage: L-L for each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
3) Active Energy (kilowatt-hour): Three-phase total.
4) Power Factor:[**Each phase and**] three-phase total.
5) <**Insert value**>.

B. Combination Soft-Start Motor Controllers :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**ABB Electrification Installations Products**]
   b. [**ABB, Motion Business**]
   c. [**Eaton**]
   d. [**Rockwell Automation, Inc.**]
   e. [**Siemens Industry, Inc., Energy Management Division**]
   f. [**Square D; Schneider Electric USA**]
   g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**ABB Electrification Installations Products**]
   b. [**ABB, Motion Business**]
   c. [**Eaton**]
   d. [**Rockwell Automation, Inc.**]
   e. [**Siemens Industry, Inc., Energy Management Division**]
   f. [**Square D; Schneider Electric USA**]
   g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

   a. Motor Controllers, Mechanically Operated and Solid-State: UL CCN NMFT, including UL 508, UL 60947-1, and UL 60947-4-1.

5. Standard Features: Factory-assembled, combination, reduced-voltage soft-start controller with a disconnecting means, SCPD and OCPD, in a single enclosure.

   a. Construction: Integrated unit with power SCRs, heat sink, microprocessor logic board, door-mounted digital display and user interface module, run-bypass contactor, and overload relay(s); suitable for use with NEMA MG 1, Design B, polyphase, medium induction motors.
   b. Run-Bypass Contactor: Magnetic contactor in parallel with the SCR of the soft-start controller, bypassing the SCR when full voltage is achieved.
   c. Referenced Standards: NEMA ICS 2, general purpose, Class A.
   d. Configuration: [**Standard duty**]<**Insert configurations**>.

1) At least two SCRs per phase to control the starting and stopping of the motor.
2) Continuously monitor current and proper operation of the SCRs.
3) Bypass Contactor: Operates automatically when full voltage is applied to motor, and bypasses the SCRs. Soft-start controller protective features and deceleration controls remain active when this contactor is in the bypass mode.
4) Power Electronics Disconnect Contactor. Where indicated, installed ahead of the power electronics equipment, and opens automatically when the motor is stopped, or a controller fault is detected, or when an SCR shorts.
5) Logic Board: Identical for all ampere ratings and voltage classes, with environmental protective coating.
6) Surge Protection: Provide [**NEMA ICS 2 compliant factory-installed**][**field-installed**] surge suppression.

e. Control Power:

1) For on-board control power, obtain from line circuit or from integral CPT with capacity to operate integral devices and remotely located pilot, indicating, and control devices.
2) Spare CPT Capacity: As indicated on Drawings, available in increments of 100 VA, from 100 to 500 VA.

f. Controller Diagnostics and Protection:

1) Microprocessor-based thermal-protection system for monitoring SCR and motor thermal characteristics, and providing controller overtemperature and motor-overload alarm and trip; settings selectable via the keypad.
2) Protection from line-side reverse phasing; line-side and motor-side phase loss; motor jam, stall, and under-load conditions; and line frequency over or under normal.
3) Input isolation contactor that opens when the controller diagnostics detect a faulted soft-start component or when the motor is stopped.
4) <**Insert items**>.

g. Cover mounted-controller status panel with LED lights or alphanumeric display to show the following:

1) Starter Status: "Ready," "Starting," "Stopping," or "Run."
2) Motor current in amperes.
3) Faults:

a) Motor overcurrent trip.
b) Motor thermal overload.
c) Starter thermal fault.
d) Low line voltage.
e) Loss of a phase.
f) Phases reversed.
g) Maximum stating time exceeded.
h) Serial communications error.

h. Interface Panel: [**Mounted on controller door**][**Mounted remotely within 50 ft (15 m)**].[**With plug-in connector and removable.**]

1) Guarded adjustable set points, not readily accessible.

a) Motor FLA, adjustable from [**40 to 110**]<**Insert numbers**> percent of the controller's rating.

b) Current limitation on starting, adjustable from 200 to 500 percent of FLA, typically set at 300 percent.
c) NEMA ICS 2 Overload Class: Include the following selections: Class 5, Class 10, Class 15, Class 20, and Class 30.

2) Adjustable set points, readily accessible[**, password protected**].

a) Linear acceleration, adjustable from [**1 to 60 s**]<**Insert range in seconds**>.
b) Maximum start time, adjustable from [**1 to 250 s**]<**Insert range in seconds**>.
c) Selector switch; select coast to stop or soft stop.
d) Linear deceleration, adjustable from [**1 to 60 s**]<**Insert range in seconds**>.

i. Remote Output Features: All outputs prewired to terminal blocks.

1) Analog output for field-selectable assignment of motor operating characteristics; [**0- to 10 V(dc)**][**4- to 20 mA(dc)**].
2) Form C status contacts that change state when controller is running.
3) Form C alarm contacts that change state when a fault condition occurs.
4) <**Insert items**>.

j. Digital Communication Module: [**TIA-485 Modbus, RTU protocol, 2-wire connection to host devices with a compatible port**][**TIA-485 Modbus, RTU protocol, 4-wire connection to host devices with a compatible port**]<**Insert protocol**> to transmit the following to the LAN:

1) Instantaneous RMS current each phase, and three-phase average.
2) RMS Voltage: L-L for each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
3) Active Energy (kilowatt-hour): Three-phase total.
4) Power Factor:[**Each phase and**] three-phase total.
5) <**Insert value**>.

k. Fusible Disconnecting Means:

1) NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate [**Class J**][**Class L**][**indicated**] fuses.
2) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
3) Auxiliary Contacts: N.O. or N.C., arranged to activate before switch blades open.

l. MCP Disconnecting Means:

1) UL 489 and NEMA AB 3 (with interrupting capacity to comply with available fault currents) instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
2) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
3) Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
4) [**N.C.**][**N.O.**] alarm contact that operates only when MCP has tripped.
5) Current-limiting module to increase controller SCCR (withstand) to 100 kA.

m. MCCB Disconnecting Means:

1) UL 489 and NEMA AB 3, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.

2) Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
3) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
4) Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
5) [**N.C.**][**N.O.**] alarm contact that operates only when MCCB has tripped.

n. Molded-Case Switch Disconnecting Means:

1) UL 489 and NEMA AB 3, with in-line fuse block for Class J or Class L power fuses (depending on ampere rating), providing an interrupting capacity to comply with available fault currents; MCCB with fixed, high-set instantaneous trip only.
2) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
3) Auxiliary contacts "a" and "b" arranged to activate with molded-case switch handle.
4) [**N.C.**][**N.O.**] alarm contact that operates only when molded-case switch has tripped.

C. Bypass Motor Controller :

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**ABB Electrification Installations Products**]
b. [**ABB, Motion Business**]
c. [**Eaton**]
d. [**Rockwell Automation, Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]
f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**ABB Electrification Installations Products**]
b. [**ABB, Motion Business**]
c. [**Eaton**]
d. [**Rockwell Automation, Inc.**]
e. [**Siemens Industry, Inc., Energy Management Division**]
f. [**Square D; Schneider Electric USA**]
g. <**Insert manufacturer's name**>

3. Source Limitations: Obtain products from single manufacturer.
4. Listing Criteria: Investigated, labeled, and marked by [**UL Solutions**][**or**][**FM Approvals**][**, CSA Group (with "US" marking)**][**, Intertek ETL**][**, TÜV Rheinland**][**, or other qualified electrical testing laboratory recognized by authorities having jurisdiction**] in accordance with one or more of the following guide information and corresponding standards:

a. Motor Controllers, Mechanically Operated and Solid-State: UL CCN NMFT, including UL 508, UL 60947-1, and UL 60947-4-1.

5. Standard Features: Factory-assembled, combination, full-voltage electromagnetic motor controller with a disconnecting means, SCPD and OCPD, in a single enclosure. Connected as a

bypass controller, operating manually, with NORMAL/BYPASS selector switch.

a. Referenced Standards: NEMA ICS 2, general purpose, Class A.
b. Configuration: Across-the-line start, electrically held.
c. Contactor Coils: Pressure-encapsulated type[**with coil transient suppressors when indicated**].

    1) Operating Voltage: Manufacturer's standard unless otherwise indicated.

d. Control Power: [**24**][**120**] V(ac); obtained from integral CPT, with primary and secondary fuses, and with CPT of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.

    1) Spare CPT Capacity: As indicated on Drawings, [**50**][**100**][**200**]<**Insert number**> VA.

e. Overload Relays:

    1) Thermal-Overload Relays:

        a) Inverse-time-current characteristic.
        b) [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
        c) Heaters: In each phase; coordinate with nameplate FLA of actual protected motor; include appropriate adjustment for duty cycle.
        d) Ambient compensated.
        e) Automatic resetting.

    2) Solid-State Overload Relays:

        a) Switch or dial selectable for motor running overload protection.
        b) Sensors in each phase.
        c) [**Class 10**][**Class 20**][**Class 30**][**Class 10/20 selectable**] tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.

f. Class II Ground-Fault Protection: Comply with UL 1053 to interrupt low-level ground faults. The ground-fault detection system includes circuitry that will prevent the motor controller from tripping when the fault current exceeds the interrupting capacity of the controller. Equip with start and run delays to prevent nuisance trip on starting, and a trip indicator.
g. Digital Communication Module: [**TIA-485 Modbus, RTU protocol, 2-wire connection to host devices with a compatible port**][**TIA-485 Modbus, RTU protocol, 4-wire connection to host devices with a compatible port**]<**Insert protocol**> to transmit the following to the LAN:

    1) Instantaneous RMS current each phase, and three-phase average.
    2) RMS Voltage: L-L for each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
    3) Active Energy (kilowatt-hour): Three-phase total.
    4) Power Factor:[**Each phase and**] three-phase total.
    5) <**Insert value**>.

h. Fusible Disconnecting Means:

    1) NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate indicated fuses.
    2) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

i. Nonfusible Disconnecting Means:

1) NEMA KS 1, heavy-duty, horsepower-rated, nonfusible switch.
2) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

j. MCP Disconnecting Means:

1) UL 489 and NEMA AB 3 (with interrupting capacity to comply with available fault currents) instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
2) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

k. MCCB Disconnecting Means:

1) UL 489 and NEMA AB 3, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
2) Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
3) Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

2.3 ACCESSORIES

A. General Requirements for Control Circuit and Pilot Devices: NEMA ICS 5; factory installed in controller enclosure cover unless otherwise indicated.

1. Push-Buttons, Pilot Lights, and Selector Switches: Standard duty, except as needed to match enclosure type. Heavy duty or oiltight where indicated in the controller schedule.

a. Push-Buttons: As indicated in the controller schedule.
b. Pilot Lights: As indicated in the controller schedule.

2. Elapsed Time Meters: Heavy duty with digital readout in hours[**; nonresettable**][**; resettable**].
3. Meters: Panel type, **2-1/2 inch (64 mm)** minimum size with 90- or 120-degree scale and plus or minus 2 percent accuracy. Where indicated, provide selector switches with an off position.

B. Breather Assemblies: Maintain interior pressure and release condensation in [**Type 4**][**Type 4X**][**Type 7**][**Type 9**]<**Insert type**> enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.

C. Space Heaters: Provide N.C. auxiliary contacts, to mitigate condensation in [**Type 3R**][**Type 4X**][**Type 12**]<**Insert type**> enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.

D. Sun Shields: Install on fronts, sides, and tops of enclosures that are installed outdoors and subject to direct and extended sun exposure.

E. <**Insert accessories**>.

2.4 MAINTENANCE MATERIAL ITEMS

A. Spare Parts: Furnish to Owner spare parts, for repairing motor controllers, that are packaged with protective covering for storage on-site and identified with labels describing contents.[**Include the following:**]

1. Fuses for Fused Switches: Equal to [**10**]<**Insert number**> percent of quantity installed for each size and type, but no fewer than [**three**]<**Insert number**> of each size and type.
2. Control Power Fuses: Equal to [**10**]<**Insert number**> percent of quantity installed for each size and type, but no fewer than [**two**]<**Insert number**> of each size and type.
3. Indicating Lights: [**Two**]<**Insert number**> of each type and color installed.
4. Auxiliary Contacts: Furnish [**one**]<**Insert number**> spare(s) for each size and type of magnetic controller installed.
5. Power Contacts: Furnish [**three**]<**Insert number**> spares for each size and type of magnetic contactor installed.
6. <**Insert extra materials**>.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and space conditions for compliance with requirements for motor controllers, their relationship with the motors, and other conditions affecting performance of the Work.

3.2 INSTALLATION OF SOFT-START MOTOR CONTROLLERS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: ICC IBC, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B and NECA NEIS 91.
3. Electrical Safety: NFPA 70E.
4. Commissioning of Electrical Systems: NECA NEIS 90.
5. Hot Work: NFPA 51B.
6. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
7. Work in Confined Spaces: NFPA 350.
8. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
9. Evaluation of Unlabeled Electrical Equipment: NFPA 791.
10. Consult Architect for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Wall-Mounted Controllers: Install controllers on walls with tops at uniform height indicated, and by bolting units to wall or mounting on slotted support systems and bolted to wall.
2. Freestanding Controllers: Provide slotted support systems.
3. Floor-Mounted Controllers: Install controllers on cast-in-place concrete equipment base(s).
4. Provide seismic control devices.
5. Control Wiring: Separate control wiring from power wiring. Where unavoidable, use twisted pair cabling or shielded cables for control wiring.
6. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and

distribution spools.

7. Setting of Overload Relays: Select and set overloads on the basis of FLA rating as shown on motor nameplate. Adjust setting value for special motors as required by NFPA 70 for high-torque, high-efficiency, and similar motors.

D. Interfaces with Other Work:

1. Identification: Provide labels for motor controllers and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure and each compartment with [**baked enamel signs**][**metal backed butyrate signs**][**laminated acrylic or melamine plastic signs**], mounted with corrosion-resistant screws
c. Provide warning signs for electrical equipment.

2. Arc-Flash Warning Labels:

a. Provide self-adhesive equipment label for each work location [**included in the arc-flash hazard analysis**].
b. Labels must be machine printed, with no field-applied markings.
c. Labels must have orange header with wording, "WARNING, ARC-FLASH HAZARD," and must include the following information taken directly from the arc-flash hazard analysis:

1) Location designation.
2) Nominal voltage.
3) Flash protection boundary.
4) Hazard risk category.
5) Incident energy.
6) Working distance.
7) Engineering report number, revision number, and issue date.

3.3 FIELD QUALITY CONTROL OF SOFT-START MOTOR CONTROLLERS

A. Administrant for Electrical Power Tests and Inspections:

1. [**Owner**][**Tenant**] will engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
2. Engage qualified electrical testing and inspecting agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections[**with assistance of factory-authorized service representative**].

B. Acceptance Testing Preparation:

1. <**Insert requirements**>.

C. Tests and Inspections:

1. Comply with NFPA 70B.
2. Visual and Mechanical Inspection:

a. Compare equipment nameplate data with Drawings and the Specifications.

b. Inspect physical and mechanical condition.
c. Inspect anchorage, alignment, and grounding.
d. Verify that the unit is clean.
e. Ensure that vent path openings are free from debris and that heat-transfer surfaces are clean.
f. Verify correct connections of circuit boards, wiring, disconnects, and ribbon cables.
g. Inspect Contactors:

1) Verify mechanical operation.
2) Verify that contact gap, wipe, alignment, and pressure are in accordance with manufacturer's published data.

h. Motor-Running Protection:

1) Verify that motor FLA is at, or under, the controller current rating.
2) Verify that overload element setting is correct for its application.
3) Apply minimum- and maximum-speed set points. Verify that set points are within limitations of the load coupled to the motor.
4) If motor-running protection is provided by fuses, verify correct fuse rating.

i. Inspect bolted electrical connections for high resistance using one of the following two methods:

1) Use a low-resistance ohmmeter. Compare bolted-connection-resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.
2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12.

j. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.

3. Electrical Tests:

a. [**For the contactor and circuit breaker, perform**][**Perform**] insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with switch closed, and across each open pole.

1) Insulation Resistance: In accordance with manufacturer's published instructions or NETA ATS, Table 100.1. In the absence of manufacturer's published instructions, use Table 100.5.
2) Investigate and correct insulation resistance values less than those of this table or manufacturer's published instructions.

b. Measure fuse resistance. Investigate fuse-resistance values that deviate from each other by more than 15 percent.
c. Test motor protection devices according to manufacturer's published instructions.
d. Test circuit breakers as follows:

1) Operate the circuit breaker to ensure smooth operation.
2) For adjustable circuit breakers, adjust protective device settings in accordance with the coordination study. Comply with coordination study recommendations.

e. Test the electronic motor overload relay elements by injecting primary current through the overload circuit and monitoring trip time of the overload element.

f. Test the following parameters in accordance with NETA relay calibration procedures, or as recommended by manufacturer:

1) ANSI No. 49R, Overtemperature Protection:

a) Determine time delay at 300 percent of setting.
b) Determine a second point on the operating curve.
c) Determine pickup.

2) ANSI No. 47, Input Phase Loss and Reversed Phases Protection:

a) Determine positive sequence voltage to close the N.O. contact.
b) Determine positive sequence voltage to open the N.C. contact (undervoltage trip).
c) Verify negative sequence trip.
d) Determine time delay to close the N.O. contact with sudden application of 120 percent of pickup.
e) Determine time delay to close the N.C. contact on removal of voltage when previously set to rated system voltage.

3) ANSI No. 81, Overfrequency Protection:

a) Verify frequency set points.
b) Determine time delay.
c) Determine undervoltage cutoff.

4) Fault Alarm Outputs: Verify that each relay contact performs its intended function in the control scheme including breaker trip tests, close inhibit tests, lockout tests, and alarm functions.

g. Perform operational tests by initiating control devices.

D. Nonconforming Work:

1. Motor controllers will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field Quality Control Reports: Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.4 SYSTEM STARTUP

A. Perform startup service in accordance with manufacturer's published instructions.

B. System Startup Testing: Verify the correct interaction of sensing, processing, and action devices. Perform system startup testing after field quality-control tests have been completed and all components have passed specified tests.

1. Develop test parameters and perform tests for the purpose of evaluating performance of integral components and their functioning as a complete unit within design requirements and manufacturer's published data.
2. Verify the correct operation of interlock safety devices for fail-safe functions in addition to design function.
3. Verify the correct operation of sensing devices, alarms, and indicating devices.

C. Motor controllers will be considered defective if they do not pass system startup testing.

D. System Startup Testing Report: Compile, prepare, and submit test and inspection reports.

E. Manufacturer Services: Engage factory-authorized service representative to [**support**][**supervise**] system startup.

1. Manufacturer's Field Reports for System Startup Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.5 CLOSEOUT ACTIVITIES

A. Training:

1. [**With assistance from factory-authorized service representatives, train**][**Train**] Owner's maintenance personnel on the following topics:

a. How to adjust, operate, and maintain equipment specified in Section 262913.03 "Manual and Magnetic Motor Controllers."

2. [**Provide video recordings of training sessions to Owner**][**Allow Owner to record training sessions**].

3.6 MAINTENANCE

A. Infrared Scanning of Motor Controllers: Perform infrared scanning during periods of maximum possible loading. Comply with NFPA 70B requirements. Remove covers so joints and connections are accessible to portable scanner. Take visible light photographs at same locations and orientations as infrared scans for documentation to ensure follow-on scans match same conditions for valid comparison.

1. Equipment: Inspect distribution systems with imaging equipment capable of detecting a minimum temperature difference of 1 deg C at 30 deg C. The equipment detects emitted radiation and convert detected radiation to a visual signal.
2. Act on inspection results and recommended action, and considering the recommendations of NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as Owner's operations permit. Retest until deficiencies are corrected.
3. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of the electrical power connections of each motor controller.
4. Follow-On Infrared Scanning: Perform follow-up infrared scans of motor controller at 11 months after Substantial Completion.
5. Field Reports for Infrared Scanning: Prepare a certified report including the following information:

a. Identities of personnel performing infrared scanning.
b. Description of test equipment used and record of their calibration.
c. Description of motor controllers and associated equipment tested.

d. Deficiencies found, remedial actions taken, and observations found when scans were repeated after the remedial actions.
e. Temperature difference between the area of concern and the reference area.
f. Probable cause of temperature difference.
g. Areas inspected. Identify inaccessible and unobservable areas and equipment.
h. Load conditions at time of inspection.
i. Photographs and thermograms of the deficient area.
j. Recommended action.

END OF SECTION 26 29 13 00A

Task	Specification	Specification Description
26 29 13 13	26 29 13 00	Manual and Magnetic Motor Controllers
26 29 13 13	26 29 13 00a	Soft-Start Motor Controllers

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 29 23 00 - VARIABLE-FREQUENCY MOTOR CONTROLLERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes separately enclosed, preassembled, combination VFCs, rated 600 V and less, for speed control of three-phase, squirrel-cage induction motors.

B. Related Requirements:

1. Section 262419 "Motor-Control Centers" for VFCs installed in motor-control centers.

1.2 DEFINITIONS

A. CE: Conformite Europeene (European Compliance).

B. CPT: Control power transformer.

C. DDC: Direct digital control.

D. EMI: Electromagnetic interference.

E. LED: Light-emitting diode.

F. NC: Normally closed.

G. NO: Normally open.

H. OCPD: Overcurrent protective device.

I. PID: Control action, proportional plus integral plus derivative.

J. RFI: Radio-frequency interference.

K. VFC: Variable-frequency motor controller.

1.3 ACTION SUBMITTALS

A. Product Data: For each type and rating of VFC indicated.

1. Include dimensions and finishes for VFCs.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings: For each VFC indicated.

1. Include mounting and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field

connection.
3. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Required working clearances and required area above and around VFCs.
2. Show VFC layout and relationships between electrical components and adjacent structural and mechanical elements.
3. Show support locations, type of support, and weight on each support.
4. Indicate field measurements.

B. Qualification Data: For testing agency.

C. Seismic Qualification Data: Certificates, for each VFC, accessories, and components, from manufacturer.

1. Certificate of compliance.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based, and their installation requirements.

D. Product Certificates: For each VFC from manufacturer.

E. Harmonic Analysis Report: Provide Project-specific calculations and manufacturer's statement of compliance with IEEE 519.

F. Source quality-control reports.

G. Field quality-control reports.

H. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For VFCs to include in emergency, operation, and maintenance manuals.

1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

a. Manufacturer's written instructions for testing and adjusting thermal-magnetic circuit breaker and motor-circuit protector trip settings.
b. Manufacturer's written instructions for setting field-adjustable overload relays.
c. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor control modules.
d. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.
e. Load-Current and Overload-Relay Heater List: Compile after motors have been installed,

and arrange to demonstrate that selection of heaters suits actual motor nameplate, full-load currents.

f. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed, and arrange to demonstrate that switch settings for motor-running overload protection suit actual motors to be protected.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Power Fuses: Equal to [**10**]<**Insert number**> percent of quantity installed for each size and type, but no fewer than [**three**]<**Insert number**> of each size and type.
2. Control Power Fuses: Equal to [**10**]<**Insert number**> percent of quantity installed for each size and type, but no fewer than [**two**]<**Insert number**> of each size and type.
3. Indicating Lights: [**Two**]<**Insert number**> of each type and color installed.
4. Auxiliary Contacts: Furnish [**one**]<**Insert number**> spare(s) for each size and type of magnetic controller installed.
5. Power Contacts: Furnish [**three**]<**Insert number**> spares for each size and type of magnetic contactor installed.
6. <**Insert extra materials**>.

1.7 QUALITY ASSURANCE

A. Testing Agency Qualifications: Accredited by NETA.

1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

1.8 DELIVERY, STORAGE, AND HANDLING

A. If stored in space that is not permanently enclosed and air conditioned, remove loose packing and flammable materials from inside controllers and [**install temporary electric heating, with at least 250 W per controller**][**connect factory-installed space heaters to temporary electrical service**].

B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for VFCs, including clearances between VFCs, and adjacent surfaces and other items.

1.9 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace VFCs that fail in materials or workmanship within specified warranty period.

1. Warranty Period: [**Five**]<**Insert number**> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 VARIABLE-FREQUENCY MOTOR CONTROLLERS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide**

products by one of the following][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**ABB, Electrification Business**]
2. [**ABB, Motion Business**]
3. [**Cerus Industrial, Inc.**]
4. [**Danfoss, Inc.**]
5. [**Eaton**]
6. [**Nidec Motor Corporation; Nidec Corporation**]
7. [**Rockwell Automation, Inc.**]
8. [**Schneider Electric USA, Inc.**]
9. [**Siemens Industry, Inc., Building Technologies Division**]
10. [**Yaskawa Electric America, Inc.**]
11. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**ABB, Electrification Business**]
2. [**ABB, Motion Business**]
3. [**Cerus Industrial, Inc.**]
4. [**Danfoss, Inc.**]
5. [**Eaton**]
6. [**Nidec Motor Corporation; Nidec Corporation**]
7. [**Rockwell Automation, Inc.**]
8. [**Schneider Electric USA, Inc.**]
9. [**Siemens Industry, Inc., Building Technologies Division**]
10. [**Yaskawa Electric America, Inc.**]
11. <**Insert manufacturer's name**>

2.2 SYSTEM DESCRIPTION

A. General Requirements for VFCs:

1. VFCs and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with NEMA ICS 7, NEMA ICS 61800-2, and [**UL 508A**][**UL 508C**]<**Insert standard**>.

B. Application: [**Constant torque**][**and**][**variable torque**]<**Insert application**>.

C. VFC Description: Variable-frequency motor controller, consisting of power converter that employs pulse-width-modulated inverter, factory built and tested in an enclosure, with integral disconnecting means and overcurrent and overload protection; listed and labeled by an NRTL as a complete unit; arranged to provide self-protection, protection, and variable-speed control of one or more three-phase induction motors by adjusting output voltage and frequency.

1. Units suitable for operation of NEMA MG 1, Design A and Design B motors, as defined by NEMA MG 1, Section IV, Part 30, "Application Considerations for Constant Speed Motors Used on a Sinusoidal Bus with Harmonic Content and General Purpose Motors Used with Adjustable-Voltage or Adjustable-Frequency Controls or Both."
2. Units suitable for operation of inverter-duty motors as defined by NEMA MG 1, Section IV, Part 31, "Definite-Purpose Inverter-Fed Polyphase Motors."
3. Listed and labeled for integrated short-circuit current (withstand) rating by an NRTL acceptable to authorities having jurisdiction.

D. Design and Rating: Match load type, such as fans, blowers, and pumps; and type of connection used between motor and load such as direct or through a power-transmission connection.

E. Output Rating: Three phase; 10 to [**60 Hz, with voltage proportional to frequency throughout voltage range**][**66 Hz, with torque constant as speed changes**]; maximum voltage equals input voltage.

F. Unit Operating Requirements:

1. Input AC Voltage Tolerance: Plus 10 and minus [**10**][**15**] percent of VFC input voltage rating.
2. Input AC Voltage Unbalance: Not exceeding [**3**][**5**] percent.
3. Input Frequency Tolerance: Plus or minus 3 percent of VFC frequency rating.
4. Minimum Efficiency: [**96**][**97**]<**Insert number**> percent at 60 Hz, full load.
5. Minimum Displacement Primary-Side Power Factor: [**96**][**98**]<**Insert number**> percent under any load or speed condition.
6. Minimum Short-Circuit Current (Withstand) Rating: [**10**][**22**][**65**][**100**]<**Insert value**> kA.
7. Ambient Temperature Rating: Not less than **32 deg F (0 deg C)** and not exceeding **104 deg F (40 deg C)**.
8. Humidity Rating: Less than 95 percent (noncondensing).
9. Altitude Rating: Not exceeding **3300 feet (1000 m)**.
10. Vibration Withstand: Comply with NEMA ICS 61800-2.
11. Overload Capability: [**1.1**][**1.5**] times the base load current for 60 seconds; minimum of 1.8 times the base load current for three seconds.
12. Starting Torque: Minimum 100 percent of rated torque from 3 to 60 Hz.
13. Speed Regulation: Plus or minus [**5**][**10**] percent.
14. Output Carrier Frequency: Selectable; 0.5 to [**15**]<**insert number**> kHz.
15. Stop Modes: Programmable; includes fast, free-wheel, and dc injection braking.

G. Inverter Logic: Microprocessor based, [**16**][**32**] bit, isolated from all power circuits.

H. Isolated Control Interface: Allows VFCs to follow remote-control signal over a minimum 40:1 speed range.

1. Signal: [**Electrical**][**Pneumatic**].

I. Internal Adjustability Capabilities:

1. Minimum Speed: 5 to 25 percent of maximum rpm.
2. Maximum Speed: 80 to 100 percent of maximum rpm.
3. Acceleration: [**0.1 to 999.9**]<**Insert range**> seconds.
4. Deceleration: [**0.1 to 999.9**]<**Insert range**> seconds.
5. Current Limit: 30 to minimum of 150 percent of maximum rating.
6. <**Insert adjustment and parameters**>.

J. Self-Protection and Reliability Features:

1. Surge Suppression: [**Factory installed as an integral part of the VFC, complying with UL 1449 SPD, Type 1 or Type 2**][**Field-mounted surge suppressors complying with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits," UL 1449 SPD, Type 2**].
2. Loss of Input Signal Protection: Selectable response strategy, including speed default to a percent of the most recent speed, a preset speed, or stop; with alarm.
3. Under- and overvoltage trips.
4. Inverter overcurrent trips.
5. VFC and Motor-Overload/Overtemperature Protection: Microprocessor-based thermal protection system for monitoring VFCs and motor thermal characteristics, and for providing VFC

overtemperature and motor-overload alarm and trip; settings selectable via the keypad.
6. Critical frequency rejection, with [**three**]<**Insert number**> selectable, adjustable deadbands.
7. Instantaneous line-to-line and line-to-ground overcurrent trips.
8. Loss-of-phase protection.
9. Reverse-phase protection.
10. Short-circuit protection.
11. Motor-overtemperature fault.
12. <**Insert protection or reliability feature**>.

K. Automatic Reset/Restart: Attempt three restarts after drive fault or on return of power after an interruption and before shutting down for manual reset or fault correction; adjustable delay time between restart attempts.

L. Power-Interruption Protection: To prevent motor from re-energizing after a power interruption until motor has stopped, unless "Bidirectional Autospeed Search" feature is available and engaged.

M. Bidirectional Autospeed Search: Capable of starting VFC into rotating loads spinning in either direction and returning motor to set speed in proper direction, without causing damage to drive, motor, or load.

N. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.

O. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.

P. Integral Input Disconnecting Means and OCPD: [**UL 489, instantaneous-trip circuit breaker**][**UL 489, molded-case switch, with power fuse block and current-limiting fuses**][**UL 489, thermal-magnetic circuit breaker**][**NEMA KS 1, nonfusible switch, with power fuse block and current-limiting fuses**][**NEMA KS 1, fusible switch**] with pad-lockable, door-mounted handle mechanism.

1. Disconnect Rating: [**Not less than 115 percent of VFC input current rating**][**Not less than 115 percent of NFPA 70 motor full-load current rating or VFC input current rating, whichever is larger**].
2. Auxiliary Contacts: NO or NC, arranged to activate before switch blades open.
3. Auxiliary contacts "a" and "b" arranged to activate with circuit-breaker handle.
4. [**NC**][**NO**] alarm contact that operates only when circuit breaker has tripped.

2.3 PERFORMANCE REQUIREMENTS

A. Seismic Performance: VFCs shall withstand the effects of earthquake motions determined according to ASCE/SEI 7. The designated VFCs shall be tested and certified by an NRTL as meeting the ICC-ES AC 156 test procedure requirements.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."

2.4 CONTROLS AND INDICATION

A. Status Lights: Door-mounted LED indicators displaying the following conditions:

1. Power on.
2. Run.

3. Overvoltage.
4. Line fault.
5. Overcurrent.
6. External fault.
7. <**Insert condition**>.

B. Panel-Mounted Operator Station: Manufacturer's standard front-accessible, sealed keypad and plain-English-language digital display; allows complete programming, program copying, operating, monitoring, and diagnostic capability.

1. Keypad: In addition to required programming and control keys, include keys for HAND, OFF, and AUTO modes.
2. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: View only; view and operate; and view, operate, and service.

    a. Control Authority: Supports at least four conditions: Off, local manual control at VFC, local automatic control at VFC, and automatic control through a remote source.

C. Historical Logging Information and Displays:

1. Real-time clock with current time and date.
2. Running log of total power versus time.
3. Total run time.
4. Fault log, maintaining last [**four**]<**Insert number**> faults with time and date stamp for each.
5. <**Insert information or display**>.

D. Indicating Devices: Digital display[**and additional readout devices as required,**] mounted flush in VFC door and connected to display VFC parameters including, but not limited to:

1. Output frequency (Hz).
2. Motor speed (rpm).
3. Motor status (running, stop, fault).
4. Motor current (amperes).
5. Motor torque (percent).
6. Fault or alarming status (code).
7. PID feedback signal (percent).
8. DC-link voltage (V dc).
9. Set point frequency (Hz).
10. Motor output voltage (V ac).
11. <**Insert parameter**>.

E. Control Signal Interfaces:

1. Electric Input Signal Interface:

    a. A minimum of [**two**]<**Insert number**> programmable analog inputs: [**0- to 10-V dc**][**4- to 20-mA dc**][**Operator-selectable "x"- to "y"-mA dc**]<**Insert signal parameters**>.
    b. A minimum of [**six**]<**Insert number**> multifunction programmable digital inputs.

2. Pneumatic Input Signal Interface: **3 to 15 psig (20 to 104 kPa)**.
3. Remote Signal Inputs: Capability to accept any of the following speed-setting input signals from the DDC system for HVAC or other control systems:

    a. 0- to 10-V dc.
    b. 4- to 20-mA dc.

c. Potentiometer using up/down digital inputs.
d. Fixed frequencies using digital inputs.
e. <**Insert signal input**>.

4. Output Signal Interface: A minimum of [**one**]<**Insert number**> programmable analog output signal(s) ([**0- to 10-V dc**][**4- to 20-mA dc**][**operator-selectable "x"- to "y"-mA dc**]<**Insert signal parameters**>), which can be configured for any of the following:

a. Output frequency (Hz).
b. Output current (load).
c. DC-link voltage (V dc).
d. Motor torque (percent).
e. Motor speed (rpm).
f. Set point frequency (Hz).
g. <**Insert indication**>.

5. Remote Indication Interface: A minimum of [**two**]<**Insert number**> programmable dry-circuit relay outputs (120-V ac, 1 A) for remote indication of the following:

a. Motor running.
b. Set point speed reached.
c. Fault and warning indication (overtemperature or overcurrent).
d. PID high- or low-speed limits reached.
e. <**Insert indication**>.

F. PID Control Interface: Provides closed-loop set point, differential feedback control in response to dual feedback signals. Allows for closed-loop control of fans and pumps for pressure, flow, or temperature regulation.

1. Number of Loops: [**One**][**Two**]<**Insert number**>.

G. Interface with DDC System for HVAC: Factory-installed hardware and software shall interface with DDC system for HVAC to monitor, control, display, and record data for use in processing reports. VFC settings shall be retained within VFC's nonvolatile memory.

1. Hardwired Points:

a. Monitoring: On-off status, <**Insert monitoring point**>.
b. Control: On-off operation, <**Insert control point**>.

2. Communication Interface: Comply with [**ASHRAE 135**]<**Insert type of interface**>. Communication shall interface with DDC system for HVAC to remotely control and monitor lighting from a DDC system for HVAC operator workstation. Control features and monitoring points displayed locally at lighting panel shall be available through the DDC system for HVAC.

2.5 LINE CONDITIONING AND FILTERING

A. Input Line Conditioning: Based on the manufacturer's harmonic analysis study and report, provide input filtering, as required, to limit total demand (harmonic current) distortion and total harmonic voltage demand at the defined point of common coupling to meet IEEE 519 recommendations.

B. Output Filtering: <**Insert requirements**>.

C. EMI/RFI Filtering:

1. CE marked; certify compliance with IEC 61800-3 for [**Category C2**]<**Insert category**>.
2. <**Insert requirements**>.

2.6 BYPASS SYSTEMS

A. Bypass Operation: Safely transfers motor between power converter output and bypass circuit, manually, automatically, or both. Selector switches set modes and indicator lights indicate mode selected. Unit is capable of stable operation (starting, stopping, and running) with motor completely disconnected from power converter.

B. Bypass Mode:

1. Manual operation only; requires local operator selection at VFC. Transfer between power converter and bypass contactor, and retransfer shall only be allowed with the motor at zero speed.
2. Field-selectable automatic or manual, allows local and remote transfer between power converter and bypass contactor and retransfer, either via manual operator interface or automatic-control system feedback.

C. Bypass Controller:

1. Two-Contactor-Style Bypass: Two-contactor-style bypass allows motor operation via the power converter or the bypass controller[**; with input isolating switch and barrier arranged to isolate the power converter and permit safe troubleshooting and testing, both energized and de-energized, while motor is operating in bypass mode**].

   a. Bypass Contactor: Load-break, [**IEC**][**NEMA**]-rated contactor.
   b. Output Isolating Contactor: Non-load-break, [**IEC**][**NEMA**]-rated contactor.
   c. Isolating Switch: Non-load-break switch arranged to isolate power converter and permit safe troubleshooting and testing of the power converter, both energized and de-energized, while motor is operating in bypass mode; pad-lockable, door-mounted handle mechanism.

2. Three-Contactor-Style Bypass: Three-contactor-style bypass allows motor operation via the power converter or the bypass controller[**; with input isolating switch and barrier**] arranged to isolate the power converter input and output and permit safe testing[**and troubleshooting**] of the power converter, both energized and de-energized, while motor is operating in bypass mode.

   a. Bypass Contactor: Load-break, [**IEC**][**NEMA**]-rated contactor.
   b. Input and Output Isolating Contactors: Non-load-break, [**IEC**][**NEMA**]-rated contactors.
   c. Isolating Switch: Non-load-break switch arranged to isolate power converter and permit safe troubleshooting and testing of the power converter, both energized and de-energized, while motor is operating in bypass mode; pad-lockable, door-mounted handle mechanism.

D. Bypass Contactor Configuration: [**Full-voltage (across-the-line)**][**Reduced-voltage (autotransformer)**]<**Insert type**> type.

1. NORMAL/BYPASS selector switch.
2. HAND/OFF/AUTO selector switch.
3. NORMAL/TEST Selector Switch: Allows testing and adjusting of VFC while the motor is running in the bypass mode.
4. Contactor Coils: Pressure-encapsulated type[**with coil transient suppressors**].

   a. Operating Voltage: Depending on contactor NEMA size and line-voltage rating, manufacturer's standard matching control power or line voltage.
   b. Power Contacts: Totally enclosed, double break, and silver-cadmium oxide; assembled to

allow inspection and replacement without disturbing line or load wiring.

5. Control Circuits: [**120**]<**Insert number**>-V ac; obtained from [**integral CPT, with primary and secondary fuses**]<**Insert source of control power**>, with [**CPT**][**control power source**] of sufficient capacity to operate all integral devices and remotely located pilot, indicating, and control devices.

    a. CPT Spare Capacity: [**50**][**100**][**200**]<**Insert number**> VA.

6. Overload Relays: NEMA ICS 2.

    a. Melting-Alloy Overload Relays:

        1) Inverse-time-current characteristic.
        2) [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
        3) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.

    b. Bimetallic Overload Relays:

        1) Inverse-time-current characteristic.
        2) [**Class 10**][**Class 20**][**Class 30**] tripping characteristic.
        3) Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
        4) Ambient compensated.
        5) Automatic resetting.

    c. Solid-State Overload Relays:

        1) Switch or dial selectable for motor-running overload protection.
        2) Sensors in each phase.
        3) [**Class 10**][**Class 20**][**Class 10/20 selectable**] tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
        4) Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
        5) Analog communication module.

    d. [**NC**][**NO**] isolated overload alarm contact.
    e. External overload, reset push button.

2.7 OPTIONAL FEATURES

A. Multiple-Motor Capability: VFC suitable for variable-speed service to multiple motors. Overload protection shuts down VFC and motors served by it, and generates fault indications when overload protection activates.

1. Configure to allow two or more motors to operate simultaneously at the same speed; separate overload relay for each controlled motor.
2. Configure to allow two motors to operate separately; operator selectable via local or remote switch or contact closures; single overload relay for both motors; separate output magnetic contactors for each motor.
3. Configure to allow two motors to operate simultaneously and in a lead/lag mode, with one motor operated at variable speed via the power converter and the other at constant speed via the bypass controller; separate overload relay for each controlled motor.

B. Damper control circuit with end-of-travel feedback capability.

C. Sleep Function: Senses a minimal deviation of a feedback signal and stops the motor. On an increase in speed-command signal deviation, VFC resumes normal operation.

D. Motor Preheat Function: Preheats motor when idle to prevent moisture accumulation in the motor.

E. Firefighter's Override (Smoke Purge) Input: On a remote contact closure from [**the firefighter's control station**][**smoke-control fan controller**]<**Insert location**>, this password-protected input:

1. Overrides all other local and external inputs (analog/digital, serial communication, and all keypad commands).
2. Forces VFC to operate motor, without any other run or speed command, at a field-adjustable, preset speed.
3. Forces VFC to transfer to bypass mode and operate motor at full speed.
4. Causes display of override mode on the VFC display.
5. Reset VFC to normal operation on removal of override signal [**automatically**][**manually**].

F. Remote Indicating Circuit Terminals: Mode selection, controller status, and controller fault.

G. Remote digital operator kit.

H. Communication Port: RS-232 port, USB 2.0 port, or equivalent connection capable of connecting a printer[**and a notebook computer**].

I. <**Insert feature**>.

2.8 ENCLOSURES

A. VFC Enclosures: NEMA 250, to comply with environmental conditions at installed location.

1. Dry and Clean Indoor Locations: [**Type 1**]<**Insert type**>.
2. Outdoor Locations: [**Type 3R**][**Type 4X**]<**Insert type**>.
3. [**Kitchen**][**Wash-Down**] Areas: [**Type 4X**]<**Insert type**>, [**stainless steel**]<**Insert material**>.
4. Other Wet or Damp Indoor Locations: [**Type 4**]<**Insert type**>.
5. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12.
6. <**Insert enclosure requirements**>.

B. Plenum Rating: UL 1995; NRTL certification label on enclosure, clearly identifying VFC as "Plenum Rated."

2.9 ACCESSORIES

A. General Requirements for Control-Circuit and Pilot Devices: NEMA ICS 5; factory installed in VFC enclosure cover unless otherwise indicated.

1. Push Buttons: [**Covered**][**Lockable**][**Shielded**][**Unguarded**].
2. Pilot Lights: Push to test.
3. Selector Switches: [**Rotary**]<**Insert description**> type.
4. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.

B. [**NC**][**NO**][**Reversible NC/NO**] bypass contactor auxiliary contact(s).

C. Control Relays: Auxiliary and adjustable [**pneumatic**][**solid-state**] time-delay relays.

D. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections. Provide adjustable undervoltage, overvoltage, and time-delay settings.

1. Current Transformers: Continuous current rating, basic impulse insulating level (BIL) rating, burden, and accuracy class suitable for connected circuitry. Comply with IEEE C57.13.

E. Supplemental Digital Meters:

1. Elapsed-time meter.
2. Kilowatt meter.
3. Kilowatt-hour meter.

F. Breather and drain assemblies, to maintain interior pressure and release condensation in NEMA 250, [**Type 4**][**Type 4X**][**Type 12**]<**Insert type**> enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.

G. Space heaters, with NC auxiliary contacts, to mitigate condensation in NEMA 250, [**Type 3R**][**Type 4X**][**Type 12**]<**Insert type**> enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.

H. Cooling Fan and Exhaust System: For NEMA 250, [**Type 1**][**Type 12**]<**Insert enclosure type**>; UL 508 component recognized: Supply fan, with [**composite**][**stainless steel**]<**Insert material**> intake and exhaust grills [**and filters**]; [**120**]<**Insert number**>-V ac; obtained from [**integral CPT**]<**Insert source of control power**>.

I. Sun shields installed on fronts, sides, and tops of enclosures installed outdoors and subject to direct and extended sun exposure.

J. Spare control-wiring terminal blocks[**; unwired**][**; wired**].

K. <**Insert accessory**>.

2.10 SOURCE QUALITY CONTROL

A. Testing: Test and inspect VFCs according to requirements in [**NEMA ICS 61800-2**]<**Insert standard**>.

1. Test each VFC while connected to [**its specified motor**][**a motor that is comparable to that for which the VFC is rated**].
2. Verification of Performance: Rate VFCs according to operation of functions and features specified.

B. VFCs will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, surfaces, and substrates to receive VFCs, with Installer present, for compliance with requirements for installation tolerances, <**insert Project-specific conditions,**> and other conditions affecting performance of the Work.

B. Examine VFC before installation. Reject VFCs that are wet, moisture damaged, or mold damaged.

C. Examine roughing-in for conduit systems to verify actual locations of conduit connections before VFC installation.

D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Wall-Mounting Controllers: Install with tops at uniform height and with disconnect operating handles not higher than **79 inches (2000 mm)** above finished floor, unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not on walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."

B. Floor-Mounting Controllers: Install VFCs on **4-inch (100-mm)** nominal thickness concrete base. Comply with requirements for concrete base specified in Section 033000 "Cast-in-Place Concrete."

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on **18-inch (450-mm)** centers around the full perimeter of concrete base.
2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to supported equipment.

C. Roof-Mounting Controllers: Install VFC on roofs with tops at uniform height and with disconnect operating handles not higher than **79 inches (2000 mm)** above finished roof surface unless otherwise indicated, and by bolting units to curbs or mounting on freestanding, lightweight, structural-steel channels bolted to curbs. Seal roof penetrations after raceways are installed.

1. Curbs and roof penetrations are specified in Section 077200 "Roof Accessories."
2. Structural-steel channels are specified in Section 260529 "Hangers and Supports for Electrical Systems."

D. Seismic Bracing: Comply with requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."

E. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

F. Install fuses in each fusible-switch VFC.

G. Install fuses in control circuits if not factory installed. Comply with requirements in Section 262813 "Fuses."

H. Install heaters in thermal-overload relays. Select heaters based on actual nameplate full-load amperes after motors are installed.

I. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.

J. Comply with NECA 1.

3.3 CONTROL WIRING INSTALLATION

A. Install wiring between VFCs and remote devices[**and facility's central-control system**]. Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."

B. Bundle, train, and support wiring in enclosures.

C. Connect selector switches and other automatic-control devices where applicable.

1. Connect selector switches to bypass only those manual- and automatic-control devices that have no safety functions when switches are in manual-control position.
2. Connect selector switches with control circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor-overload protectors.

3.4 IDENTIFICATION

A. Identify VFCs, components, and control wiring. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
2. Label each VFC with engraved nameplate.
3. Label each enclosure-mounted control and pilot device.

B. Operating Instructions: Frame printed operating instructions for VFCs, including control sequences and emergency procedures. Fabricate frame of finished metal, and cover instructions with clear acrylic plastic. Mount on front of VFC units.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections[**with the assistance of a factory-authorized service representative**].

D. Acceptance Testing Preparation:

1. Test insulation resistance for each VFC element, bus, component, connecting supply, feeder, and

control circuit.
2. Test continuity of each circuit.

E. Tests and Inspections:

1. Inspect VFC, wiring, components, connections, and equipment installation.[**Test and adjust controllers, components, and equipment.**]
2. Test insulation resistance for each VFC element, component, connecting motor supply, feeder, and control circuits.
3. Test continuity of each circuit.
4. Verify that voltages at VFC locations are within 10 percent of motor nameplate rated voltages. If outside this range for any motor, notify [**Architect**][**Construction Manager**][**Owner**] before starting the motor(s).
5. Test each motor for proper phase rotation.
6. Perform tests according to the Inspection and Test Procedures for Adjustable Speed Drives stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
7. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
8. Perform the following infrared (thermographic) scan tests and inspections, and prepare reports:

    a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each VFC. Remove front panels so joints and connections are accessible to portable scanner.
    b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each VFC 11 months after date of Substantial Completion.
    c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

9. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

F. VFCs will be considered defective if they do not pass tests and inspections.

G. Prepare test and inspection reports, including a certified report that identifies the VFC and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

3.6 STARTUP SERVICE

A. [**Engage a factory-authorized service representative to perform**][**Perform**] startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. <**Insert startup steps if any**>.

3.7 ADJUSTING

A. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.

B. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.

C. Adjust the trip settings of instantaneous-only circuit breakers and thermal-magnetic circuit breakers with adjustable, instantaneous trip elements. Initially adjust to 6 times the motor nameplate full-load amperes and attempt to start motors several times, allowing for motor cool-down between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed 8 times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify [**Architect**][**Construction Manager**][**Owner**] before increasing settings.

D. Set the taps on reduced-voltage autotransformer controllers.

E. Set field-adjustable circuit-breaker trip ranges[**as specified in Section 260573.16 "Coordination Studies."**]

F. Set field-adjustable pressure switches.

3.8 PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until controllers are ready to be energized and placed into service.

B. Replace VFCs whose interiors have been exposed to water or other liquids prior to Substantial Completion.

3.9 DEMONSTRATION

A. [**Engage a factory-authorized service representative to train**][**Train**] Owner's maintenance personnel to adjust, operate, reprogram, and maintain VFCs.

END OF SECTION 26 29 23 00

SECTION 26 29 33 13 - DIESEL-DRIVE, CENTRIFUGAL FIRE PUMPS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Fire pumps - diesel drive, centrifugal.
2. Diesel engine driver.
3. Fire-pump controller - for diesel-drive fire pumps.
4. Fire-pump accessories and specialties.
5. Fire-pump controller remote alarm panel.
6. Fuel oil storage.
7. Grout.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on Project.
2. Section 260010 "Supplemental Requirements for Electrical" specifies requirements applicable to coordinating, scheduling, and sequencing of the electrical Work specified in this Section.

1.2 DEFINITIONS

A. ECM: Electronic control module.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for fire pump and fire-pump controller.
2. Include rated capacities, operating characteristics, factory-certified performance test curves, electrical characteristics, and furnished accessories and specialties.

B. Shop Drawings: For packaged fire pump and diesel driver, fire-pump controller, and fire-pump accessories and specialties.

1. Provide fabrication and installation details including plans, elevations, sections, and mounting and attachment details.
2. Provide details of equipment assemblies. Indicate dimensions; shipping, installed, and operating weights; loads; required clearances; method of field assembly; components; electrical characteristics; and location and size of each field connection.
3. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
4. Provide wiring diagrams for power, signal, and control wiring.
5. For fire-pump controllers, show the following:

a. Each installed unit's type and details.
b. Enclosure types and details for types other than NEMA 250, Type 2.
c. Factory-installed devices.
d. Nameplate legends.
e. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices.
f. Specified modifications.

C. Delegated Design Submittals: For fire pump and fire-pump controller.

1. Include design calculations for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.

1.4 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For fire pumps, controllers, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Product Certificates: For each type of fire pump and fire-pump controller, from manufacturer.

C. Source quality control reports.

D. Field acceptance testing and inspection reports for fire-pump controllers.

E. Field quality control reports.

F. Certified shop test curves showing head capacity and brake horsepower for each pump.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fire pumps and fire-pump controllers to include in emergency, operation, and maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Extra Stock Material: Furnish extra materials that match fire-pump controllers installed and that are packaged with protective coverings for storage and identified with labels describing contents.

1. Auxiliary Contacts: [**One**]<**Insert number**> for each size and type of magnetic contactor installed.
2. Power Contacts: [**Three**]<**Insert number**> for each size and type of magnetic contactor installed.
3. Contactor Coils: [**One**]<**Insert number**> for each size and type of magnetic controller installed.
4. Relay Boards: [**One**]<**Insert number**> for each size and type of relay board installed.
5. Operator Interface: [**One**]<**Insert number**> microprocessor board(s), complete with display and membrane keypad.

6. <**Insert extra materials**>.

1.7 WARRANTY

A. Manufacturer Warranty: [**Manufacturer agrees**][**Installer agrees**][**Manufacturer and Installer agree**] to repair or replace fire pumps and controllers that fail in materials or workmanship within specified warranty period.

B. Special Warranty: [**Manufacturer agrees**][**Installer agrees**][**Manufacturer and Installer agree**] to repair or replace components of fire pumps and controllers, including [**auxiliary contacts for magnetic contactors**][**power contacts for magnetic contactors**][**contactor coils for magnetic contactors**][**relay boards**][**operator interface microprocessor boards**]<**Insert components**> that fail in materials or workmanship within specified warranty period.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Fire pumps are to withstand the effects of earthquake motions determined in accordance with [**ASCE/SEI 7**]<**Insert requirement**>[**, NFPA 13**][**, NFPA 14**], and NFPA 20. See Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment" and Section 018123 "Facility Seismic and Wind Criteria" for building seismic performance criteria.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
2. Component Importance Factor: 1.5.
3. <**Insert requirements for Component Amplification Factor and Component Response Modification Factor**>.

B. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.

2.2 FIRE PUMPS - DIESEL DRIVE, CENTRIFUGAL

A. Fire Pump - Diesel Drive, End Suction Centrifugal:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**A C Fire Pump; a Xylem brand**]
b. [**Armstrong Fluid Technology**]
c. [**Patterson Pump Company; a Gorman-Rupp company**]
d. [**Pentair Aurora; Pentair Pump Group**]
e. [**Reddy-Buffaloes Pump Company**]
f. [**Ruhrpumpen, Inc**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**A C Fire Pump; a Xylem brand**]
    b. [**Armstrong Fluid Technology**]
    c. [**Patterson Pump Company; a Gorman-Rupp company**]
    d. [**Pentair Aurora; Pentair Pump Group**]
    e. [**Reddy-Buffaloes Pump Company**]
    f. [**Ruhrpumpen, Inc**]
    g. <**Insert manufacturer's name**>

3. Source Limitations:

    a. Obtain fire pump and diesel drive from single manufacturer.
    b. Equipment provider is to provide services of a factory-authorized service representative and have a service facility located within a **60-mile (100-km)** radius of Project site.

4. Description: Factory-fabricated, -assembled, and -tested fire pump and diesel drive.

    a. Pump Equipment, Accessory, and Specialty Pressure Rating: [**175 psig (1200 kPa)**]<**Insert minimum pressure**> minimum.
    b. Finish: Red paint applied to factory-assembled and -tested unit before shipping.

5. Standards:

    a. Comply with NFPA 20.
    b. <**Insert standard**>.

6. Base: Fabricated and attached to fire-pump and driver unit, with reinforcement to resist movement of pump during seismic events when base is anchored to building substrate.
7. Pump:

    a. Standard: [**UL 448**]<**Insert standard**>, for end-suction pumps for fire service.
    b. Casing: Top centerline discharge self-venting cast iron with ASME B16.1 pipe-flange connections.
    c. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
    d. Wear Rings: Replaceable bronze.
    e. Shaft and Sleeve: Steel shaft with [**bronze**][**stainless steel**] sleeves.

        1) Shaft Bearings: Grease-lubricated, back-to-back thrust ball bearings and one radial roller bearing.
        2) Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.

    f. Mounting: Back pullout design allowing complete rotating assembly removal without disturbing the casing piping connections. Pump and driver shafts are horizontal, with pump and driver on same base.

8. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.
9. Driver: Diesel engine.
10. Controller: Diesel engine drive.
11. Capacities and Characteristics:

a. Rated Capacity: <**Insert gpm (L/minute)**>.
b. Total Rated Head: <**Insert feet or psig (kPa)**>.
c. Inlet Flange: [**Class 125**][**Class 250**]<**Insert class**>.
d. Outlet Flange: [**Class 125**][**Class 250**]<**Insert class**>.
e. Suction Head Available at Pump: <**Insert feet (m)**>.
f. Engine Horsepower: <**Insert number**> hp.
g. Engine Speed: <**Insert number**> rpm.
h. Fuel Tank Capacity: <**Insert gal. (L)**>.
i. Pump-Start, Pressure-Switch Setting: <**Insert psig (kPa)**>.
j. Pump-Stop, Pressure-Switch Setting: <**Insert psig (kPa)**>.

12. Source Quality Control:

a. Manufacturer Testing: Test and inspect fire pumps in accordance with UL 448 requirements for "Operation Test" and "Manufacturing and Production Tests."

1) Verification of Performance: Rate fire pumps in accordance with UL 448.

b. Prepare test and inspection reports.

B. Fire Pump - Diesel Drive, Split Case, Horizontally Mounted, Single Stage, Centrifugal:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**A C Fire Pump; a Xylem brand**]
b. [**Armstrong Fluid Technology**]
c. [**Patterson Pump Company; a Gorman-Rupp company**]
d. [**Peerless Pump Company**]
e. [**Pentair Aurora; Pentair Pump Group**]
f. [**Plad Equipment, Ltd.**]
g. [**Reddy-Buffaloes Pump Company**]
h. [**Ruhrpumpen, Inc**]
i. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**A C Fire Pump; a Xylem brand**]
b. [**Armstrong Fluid Technology**]
c. [**Patterson Pump Company; a Gorman-Rupp company**]
d. [**Peerless Pump Company**]
e. [**Pentair Aurora; Pentair Pump Group**]
f. [**Plad Equipment, Ltd.**]
g. [**Reddy-Buffaloes Pump Company**]
h. [**Ruhrpumpen, Inc**]
i. <**Insert manufacturer's name**>

3. Source Limitations:

a. Obtain fire pump and diesel drive from single manufacturer.
b. Equipment provider is to provide services of a factory authorized service representative and have a service facility located within a **60-mile (100-km)** radius of Project site.

4. Description: Factory-fabricated, -assembled, and -tested fire-pump and diesel drive.

    a. Pump Equipment, Accessory, and Specialty Pressure Rating: [**175 psig (1200 kPa)**]<**Insert minimum pressure**> minimum.
    b. Finish: Red paint applied to factory-assembled and -tested unit before shipping.

5. Standards:

    a. Comply with NFPA 20.
    b. <**Insert standard**>.

6. Base: Fabricated and attached to fire pump and driver unit, with reinforcement to resist movement of pump during seismic events when base is anchored to building substrate.
7. Pump:

    a. Standard: [**UL 448**]<**Insert standard**>, for split-case pumps for fire service.
    b. Casing: Axially split case, cast iron with ASME B16.1 pipe-flange connections.
    c. Impeller: Double suction, cast bronze, statically and dynamically balanced, and keyed to shaft.
    d. Wear Rings: Replaceable bronze.
    e. Shaft and Sleeve: Alloy-steel shaft with bronze sleeve.

        1) Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
        2) Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.

    f. Mounting: Horizontal pump and driver shafts with pump and driver on same base.

8. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.
9. Driver: Diesel engine.
10. Controller: Diesel engine drive.
11. Capacities and Characteristics:

    a. Rated Capacity: <**Insert gpm (L/minute)**>.
    b. Total Rated Head: <**Insert feet or psig (kPa)**>.
    c. Inlet Flange: [**Class 125**][**Class 250**]<**Insert class**>.
    d. Outlet Flange: [**Class 125**][**Class 250**]<**Insert class**>.
    e. Suction Head Available at Pump: <**Insert feet (m)**>.
    f. Engine Horsepower: <**Insert number**> hp.
    g. Engine Speed: <**Insert number**> rpm.
    h. Fuel Tank Capacity: <**Insert gal. (L)**>.
    i. Pump-Start, Pressure-Switch Setting: <**Insert psig (kPa)**>.
    j. Pump-Stop, Pressure-Switch Setting: <**Insert psig (kPa)**>.
    k. Rotation [**Clockwise**][**Counterclockwise**].

12. Source Quality Control:

    a. Manufacturer Testing: Test and inspect fire pumps in accordance with UL 448 requirements for "Operation Test" and "Manufacturing and Production Tests."

        1) Verification of Performance: Rate fire pumps in accordance with UL 448.

    b. Prepare test and inspection reports.

C. Fire Pump - Diesel Drive, Split Case, Horizontally Mounted, Two Stage, Centrifugal:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

   a. [**A C Fire Pump; a Xylem brand**]
   b. [**Patterson Pump Company; a Gorman-Rupp company**]
   c. [**Peerless Pump Company**]
   d. [**Pentair Aurora; Pentair Pump Group**]
   e. [**Ruhrpumpen, Inc**]
   f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. [**A C Fire Pump; a Xylem brand**]
   b. [**Patterson Pump Company; a Gorman-Rupp company**]
   c. [**Peerless Pump Company**]
   d. [**Pentair Aurora; Pentair Pump Group**]
   e. [**Ruhrpumpen, Inc**]
   f. <**Insert manufacturer's name**>

3. Source Limitations:

   a. Obtain fire pump and diesel driver from single manufacturer.
   b. Equipment provider is to provide services of a factory-authorized service representative and have a service facility located within a **60-mile (100-km)** radius of Project site.

4. Description: Factory-fabricated, -assembled, and -tested fire pump and diesel drive.

   a. Pump Equipment, Accessory, and Specialty Pressure Rating: [**175 psig (1200 kPa)**]<**Insert minimum pressure**> minimum.
   b. Finish: Red paint applied to factory-assembled and -tested unit before shipping.

5. Standards:

   a. Comply with NFPA 20.
   b. <**Insert standard**>.

6. Base: Fabricated and attached to fire-pump and driver unit, with reinforcement to resist movement of pump during seismic events when base is anchored to building substrate.
7. Pump:

   a. Standard: [**UL 448**]<**Insert standard**>, for split-case pumps for fire service.
   b. Number Stages: Two.
   c. Casing: Axially split case, cast iron with ASME B16.1 pipe-flange connections.
   d. Impeller: Double suction, cast bronze, statically and dynamically balanced, and keyed to shaft.
   e. Wear Rings: Replaceable bronze.
   f. Shaft and Sleeve: Alloy-steel shaft with bronze sleeve.

      1) Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
      2) Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn

and bronze packing gland.

g. Mounting: Horizontal pump and driver shafts with pump and driver on same base.

8. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.
9. Driver: Diesel engine.
10. Controller: Diesel engine drive.
11. Capacities and Characteristics:

    a. Rated Capacity: <**Insert gpm (L/minute)**>.
    b. Total Rated Head: <**Insert feet or psig (kPa)**>.
    c. Inlet Flange: [**Class 125**][**Class 250**]<**Insert class**>.
    d. Outlet Flange: [**Class 125**][**Class 250**]<**Insert class**>.
    e. Suction Head Available at Pump: <**Insert feet (m)**>.
    f. Engine Horsepower: <**Insert number**> hp.
    g. Engine Speed: <**Insert number**> rpm.
    h. Fuel Tank Capacity: <**Insert gal. (L)**>.
    i. Pump-Start, Pressure-Switch Setting: <**Insert psig (kPa)**>.
    j. Pump-Stop, Pressure-Switch Setting: <**Insert psig (kPa)**>.

12. Source Quality Control:

    a. Manufacturer Testing: Test and inspect fire pumps in accordance with UL 448 requirements for "Operation Test" and "Manufacturing and Production Tests."

        1) Verification of Performance: Rate fire pumps in accordance with UL 448.

    b. Prepare test and inspection reports.

2.3 DIESEL ENGINE DRIVER

A. Diesel Engine Driver:

1. Fuel: Fuel oil, [**Grade DF-2**]<**Insert grade**>.
2. Horsepower Rating: Not less than 110 percent of maximum brake horsepower (after derating for temperature and elevation in accordance with NFPA 20).
3. Emergency Manual Operator: Factory wired for starting and operating standby engine in case of malfunction in main controller or wiring.
4. Controls:

    a. Adjustable governor.
    b. Over-speed shutdown.
    c. Manual reset, speed switch.
    d. Instrument panel with tachometer, oil pressure gauge, water temperature gauge, and hour meter.

5. Fuel System:

    a. Comply with NFPA 20.
    b. Main Fuel Pump: Mounted on engine. Pump ensures adequate primary fuel flow under starting and load conditions.
    c. Relief-Bypass Valve: Automatically regulates pressure in fuel line and returns excess fuel to source.

d. Flexible metallic fuel lines.
e. Inline fuel filter.
f. Oil pressure safety switch.
g. Air cleaner.
h. Engine-driven oil pump.
i. Enclosed control wiring electric starter with voltage regulator.
j. Storage Tank:[**Double wall,**] size indicated, but not less than required by NFPA 20; with floor legs, direct-reading level gauge[**, and secondary containment tank having capacity at least equal to storage tank**].

6. Exhaust System:

a. Piping: ASTM A53/A53M, Type E or S, Schedule 40 black steel pipe; ASME B16.9 weld-type pipe fittings; ASME B16.5 steel flanges; and ASME B16.21 nonmetallic gaskets.
b. Fabricate double-wall, ventilated thimble from steel pipe.
c. Flexible exhaust connector.
d. [**Industrial-**][**Residential-**][**Critical-**][**Super Critical-**][**Hospital-**][**Hospital Plus-**][**Extreme-**] grade exhaust silencer with spark arrestor.

7. Rated Engine Speed: 1800 rpm.
8. Maximum Piston Speed for Four-Cycle Engines: **2250 fpm (11.4 m/s)**.
9. Engine- or Skid-Mounted Lubrication System:

a. Filter and Strainer: Rated to remove 90 percent of particles 5 micrometers and smaller while passing full flow.
b. Thermostatic Control Valve: Controls flow in system to maintain optimum oil temperature. Unit is to be capable of full flow and is designed to be fail-safe.
c. Crankcase Drain: Arranged for complete gravity drainage to an easily removable container with no disassembly and without use of pumps, siphons, special tools, or appliances.

10. Coolant Jacket Heater: Electric-immersion type, factory installed in coolant jacket system.
11. Cooling System, Factory-Mounted Radiator:

a. Factory installed, closed loop, liquid cooled, with radiator factory mounted on fire-pump mounting frame and integral engine-driven coolant pump.
b. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
c. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.
d. Expansion Tank: Constructed of welded-steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gauge glass and petcock.
e. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.
f. Coolant Hose: Flexible assembly with inside surface of nonporous rubber and outer covering of aging-, ultraviolet-, and abrasion-resistant fabric.

1) Rating: **50 psig (345 kPa)** maximum working pressure, with coolant at **180 deg F (82 deg C)**, and noncollapsible under vacuum.
2) End Fittings: Flanges or steel pipe nipples with clamps to suit piping and equipment connections.

12. Cooling System, Remote Radiator:

a. Closed loop, liquid cooled, with remote radiator and integral engine-driven coolant pump.
b. Configuration: [**Vertical**][**Horizontal**] air discharge.

c. Radiator Core Tubes: [**Aluminum**][**Nonferrous-metal construction other than aluminum**].
d. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.
e. Expansion Tank: Constructed of welded-steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gauge glass and petcock.
f. Fan: Driven by [**multiple belts from engine shaft**][**totally enclosed electric motor with sealed bearings**].
g. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
h. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.

13. Muffler/Silencer, Industrial Grade: Sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

    a. Minimum sound attenuation of [**15 dBA**]<**Insert dBA**> at 500 Hz.
    b. Sound level measured at a distance of [**25 ft. (8 m)**]<**Insert distance**> from exhaust discharge after installation is complete is to be [**85**]<**Insert number**> dBA or less.

14. Muffler/Silencer, Residential Grade: Sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

    a. Minimum sound attenuation of [**20 dBA**]<**Insert dBA**> at 500 Hz.
    b. Sound level measured at a distance of [**10 ft. (3 m)**]<**Insert distance**> from exhaust discharge after installation is complete is to be [**85**]<**Insert number**> dBA or less.

15. Muffler/Silencer, Critical Grade: Sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

    a. Minimum sound attenuation of [**25 dBA**]<**Insert dBA**> at 500 Hz.
    b. Sound level measured at a distance of [**10 ft. (3 m)**]<**Insert distance**> from exhaust discharge after installation is complete is to be [**85**]<**Insert number**> dBA or less.

16. Muffler/Silencer, Super Critical Grade: Sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

    a. Minimum sound attenuation of [**30 dBA**]<**Insert dbA**> at 500 Hz.
    b. Sound level measured at a distance of [**10 ft. (3 m)**]<**Insert distance**> from exhaust discharge after installation is complete is to be [**85**]<**Insert number**> dBA or less.

17. Muffler/Silencer, Hospital Grade: Sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

    a. Minimum sound attenuation of [**35 dBA**]<**Insert dBA**> at 500 Hz.
    b. Sound level measured at a distance of [**10 ft. (3 m)**]<**Insert distance**> from exhaust discharge after installation is complete is to be [**85**]<**Insert number**> dBA or less.

18. Muffler/Silencer, Hospital Plus Grade: Sized as recommended by engine manufacturer and

selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

a. Minimum sound attenuation of [**35 dBA**]<**Insert dBA**> at 500 Hz.
b. Sound level measured at a distance of [**10 ft. (3 m)**]<**Insert distance**> from exhaust discharge after installation is complete is to be [**85**]<**Insert number**> dBA or less.

19. Muffler/Silencer, Extreme Grade: Sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

a. Minimum sound attenuation of [**40 dBA**]<**Insert dBA**> at 500 Hz.
b. Sound level measured at a distance of [**10 ft. (3 m)**]<**Insert distance**> from exhaust discharge after installation is complete is to be [**85**]<**Insert number**> dBA or less.

20. Muffler/Silencer, Super Extreme Grade: Sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

a. Minimum sound attenuation of [**45 dBA**]<**Insert dBA**> at 500 Hz.
b. Sound level measured at a distance of [**10 ft. (3 m)**]<**Insert distance**> from exhaust discharge after installation is complete is to be [**85**]<**Insert number**> dBA or less.

21. Air-Intake Filter: [**Standard**][**Heavy**]-duty, engine-mounted air cleaner with replaceable dry-filter element and "blocked filter" indicator.
22. Starting System: [**12**][**24**]-V dc, with negative ground.

a. Components: Sized so they will not be damaged during a full engine-cranking cycle with ambient temperature at maximum specified in "Performance Requirements" Article.
b. Cranking Motor: Heavy-duty unit that automatically engages and releases from engine flywheel without binding.
c. Cranking Cycle: [**60**]<**Insert number**> seconds.
d. Battery: Adequate capacity within ambient temperature range specified in "Performance Requirements" Article to provide specified cranking cycle at least [**twice**][**three times**] without recharging.
e. Battery Cable: Size as recommended by engine manufacturer for cable length indicated. Include required interconnecting conductors and connection accessories.
f. Battery Compartment: Factory fabricated of metal with acid-resistant finish and thermal insulation. Thermostatically controlled heater is to be arranged to maintain battery above 10 deg C regardless of external ambient temperature within range specified in "Performance Requirements" Article. Include accessories required to support and fasten batteries in place.
g. Battery-Charging Alternator: Factory mounted on engine with solid-state voltage regulation and 35-A minimum continuous rating.
h. Battery Charger: Current-limiting, automatic-equalizing and float-charging type. Unit is to comply with UL 1236 and include the following features:

1) Operation: Equalizing-charging rate of 10 A is to be initiated automatically after battery has lost charge until an adjustable equalizing voltage is achieved at battery terminals. Unit is then to be automatically switched to a lower float-charging mode and is to continue to operate in that mode until battery is discharged again.
2) Automatic Temperature Compensation: Adjust float and equalize voltages for variations in ambient temperature from minus 40 to plus 60 deg C to prevent overcharging at high temperatures and undercharging at low temperatures.
3) Automatic Voltage Regulation: Maintain constant output voltage regardless of input voltage variations up to plus or minus 10 percent.

4) Ammeter and Voltmeter: Flush mounted in door. Meters are to indicate charging rates.
5) Safety Functions: Sense abnormally low battery voltage and close contacts providing low battery voltage indication on control and monitoring panel. Sense high battery voltage and loss of ac input or dc output of battery charger. Either condition is to close contacts that provide a battery-charger malfunction indication at system control and monitoring panel.
6) Enclosure and Mounting: NEMA 250, Type 1 wall-mounted cabinet.

2.4 FIRE-PUMP CONTROLLER - FOR DIESEL-DRIVE FIRE PUMPS

A. Fire-Pump Controllers - For Diesel-Drive Fire Pumps:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Eaton**]
b. [**Firetrol**]
c. [**Master Control Systems, Inc**]
d. [**Metron Eledyne; a Hubbell Company**]
e. [**Tornatech**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Eaton**]
b. [**Firetrol**]
c. [**Master Control Systems, Inc**]
d. [**Metron Eledyne; a Hubbell Company**]
e. [**Tornatech**]
f. <**Insert manufacturer's name**>

3. Source Limitations:

a. Obtain diesel-drive controllers from single manufacturer.
b. Equipment provider is to provide services of a factory authorized service representative and have a service facility located within a **60-mile (100-km)** radius of Project site.

4. Description:

a. Factory fabricated, assembled, wired, and tested.
b. Operation: [**Combined automatic and nonautomatic**][**Nonautomatic**] operation.

5. Standards:

a. Comply with NFPA 20.
b. <**Insert standard**>.

6. Method of Starting:

a. Actuation: [**Pressure**][**Nonpressure**]-switch actuated.

1) Water-pressure-actuated switch and pressure transducer with independent high- and low-calibrated adjustments responsive to water pressure in fire-suppression piping.
2) Programmable minimum-run-time relay to prevent short cycling.
3) Programmable timer for weekly tests.

b. Dual, redundant dc-voltage battery units, with automatic changeover.
c. Emergency Control: Bypasses automatic control circuits during manual starting and running.
d. Automatic engine start on loss of ac power to the controller.

7. Method of Stopping: [**Automatic and nonautomatic shutdown after automatic starting**][**Nonautomatic**].
8. Enclosure:

a. NEMA 250, Type [**2**][**3R**][**4**][**4X**][**12**]<**Insert type**> minimum.

1) Comply with environmental conditions at installed location and NFPA 20.

b. Enclosure Color: [**Manufacturer's standard "fire-pump-controller red"**]<**Insert color**>.
c. Nameplates: Comply with NFPA 20; complete with capacity, characteristics, approvals, listings, and other pertinent data.
d. Features:

1) Floor stands, **12 inches (305 mm)** high, for floor-mounted controllers.
2) Space heater, [**120 V(ac)**][**240 V(ac)**][**, with humidistat**][**, with thermostat**].
3) Tropicalization.
4) <**Insert optional feature**>.

9. Door-Mounted Operator Interface and Controls:

a. Monitor, display, and control devices, alarms, functions, and operations listed in NFPA 20 as required for drivers and controller types used.

1) Pressure and Event Recorder capable of logging pressure data and operational events with time and date stamp for the life of the controller. Data to be retrievable and downloadable to a flash memory drive via a USB port accessible to the user without having to open the controller door.

b. Touch Screen Operator Interface:

1) Provide minimum 7-inch LCD Color Touch Screen powered by an embedded microprocessor with software.
2) Provide in addition to push-button operation for START/STOP/RUN TEST and graphic display of system operations, the control is to allow programming of Cut-In and Cut-Out pressures, Minimum Runtime and is to allow for on-screen viewing of corresponding Owner's Manual in chosen language.

c. Local and Remote Alarm and Status Indications:

1) Status LEDs - green color for the following:

a) Low Pressure.
b) Engine Run.

c) Remote Start.
d) Interlock On.
e) Deluge Valve (if applicable).
f) One Programmable LED.

2) Alarm LEDs - red color for the following:

a) Battery #1 Failure.
b) Charger #1 Failure.
c) Battery #2 Failure.
d) Charger #2 Failure
e) Low Pressure.
f) System Over Pressure.
g) Low Suction Pressure.
h) Low Fuel.
i) Fail to Start.
j) High Engine Temp.
k) Low Oil Pressure.
l) Engine Over Speed.
m) ECM Selector in Alt Position.
n) Fuel Injection Malfunction.
o) ECM Warning.
p) ECM Failure.
q) High Raw Water Temp.
r) Low Engine Temperature
s) Fuel Spill
t) One Programmable LED.

d. Audible alarm with Push to Silence button.
e. Nonautomatic START and STOP push buttons or switches.
f. Set pressure and system pressure.
g. <**Insert function**>.

10. Features:

a. Extra Output Contacts:

1) [**One**]<**Insert number**> Form C contact(s) for low pump-room temperature.
2) [**One**]<**Insert number**> each, Form C contact(s) for high and low fuel levels.
3) [**One**]<**Insert number**> each, Form C contact(s) for high and low reservoir levels.
4) <**Insert contact type**>.

b. Operator Interface Communications Ports: USB, Ethernet, and TIA-485-A.
c. Communications Protocol Capability: Modbus with TCP/IP frame format and shielded female RJ45 connector.
d. Powered louver contacts.
e. Powered engine-oil heater contacts.
f. <**Insert optional feature**>.

11. Battery Charger System:

a. Built-in, independent, dual battery chargers with automatic changeover; [**12 V(dc)**][**24 V(dc)**] for [**lead-acid**][**nickel-cadmium**] batteries.
b. Standard: [**UL 1236**]<**Insert standard**>.

12. Source Quality Control:

    a. Manufacturer Testing: Test and inspect fire-pump controllers in accordance with requirements in NFPA 20 and [**UL 218**]<**Insert standard**>.

        1) Verification of Performance: Rate controllers in accordance with operation of functions and features specified.

    b. Prepare test and inspection reports.

2.5 FIRE-PUMP ACCESSORIES AND SPECIALTIES

A. Automatic Air-Release Valves: Comply with NFPA 20 for installation in fire-pump casing.

B. Circulation Relief Valves: UL 1478, bronze or cast iron, spring loaded; for installation in pump-discharge piping.

C. Inlet Fitting: Eccentric tapered reducer at pump suction inlet.

D. Outlet Fitting: Concentric tapered reducer at pump-discharge outlet.

E. Discharge Cone: [**Closed**][**Open**][**Closed or open**] type.

F. Fire-Pump Relief Valve:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**BERMAD Control Valves**]
    b. [**CLA-VAL**]
    c. [**Kunkle Valve**]
    d. [**OCV Control Valves**]
    e. [**WATTS; A Watts Water Technologies Company**]
    f. [**Zurn Industries, LLC**]
    g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**BERMAD Control Valves**]
    b. [**CLA-VAL**]
    c. [**Kunkle Valve**]
    d. [**OCV Control Valves**]
    e. [**WATTS; A Watts Water Technologies Company**]
    f. [**Zurn Industries, LLC**]
    g. <**Insert manufacturer's name**>

3. Description: UL 1478, bronze or cast iron, spring loaded; for installation in fire-suppression water-supply piping.

G. Fire-Pump Test Connection:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**American Fire Supply**]
    b. [**CLA-VAL**]
    c. [**Croker; a Division of Morris Group International**]
    d. [**Guardian Fire Equipment, Inc**]
    e. [**Potter Roemer LLC; a Division of Morris Group International**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**American Fire Supply**]
    b. [**CLA-VAL**]
    c. [**Croker; a Division of Morris Group International**]
    d. [**Guardian Fire Equipment, Inc**]
    e. [**Potter Roemer LLC; a Division of Morris Group International**]
    f. <**Insert manufacturer's name**>

3. Standards:

    a. NFPA 20.
    b. UL 405, except outlets without clappers instead of inlets.

4. Description: [**Exposed, projecting, for wall mounting**][**Flush, for wall mounting**]<**Insert type**>.
5. Pressure Rating: **175 psig (1200 kPa)** minimum.
6. Body Material: Corrosion-resistant metal with number of outlets required by NFPA 20.
7. Escutcheon Plate: Brass or bronze.
8. Hose Valves: UL 668, bronze, with outlet threaded in accordance with NFPA 1963 and matching local fire-department threads. Include caps and chains.
9. Exposed Parts Finish: [**Polished**][**Rough**][**brass**][**, chrome plated**].
10. Escutcheon Plate Marking: [**FIRE-PUMP TEST CONNECTION**]<**Insert marking**>

H. Fire-Pump Flowmeter Systems:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Fire Research Corp**]
    b. [**Gerand Engineering Co**]
    c. [**Hyspan Precision Products, Inc**]
    d. [**Victaulic Company**]
    e. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Fire Research Corp**]

b. [**Gerand Engineering Co**]
c. [**Hyspan Precision Products, Inc**]
d. [**Victaulic Company**]
e. <**Insert manufacturer's name**>

3. Description: UL-listed or FM-Approved, fire-pump flowmeter system with capability to indicate flow to not less than 175 percent of fire-pump rated capacity.
4. Pressure Rating: [**175 psig (1200 kPa) minimum**][**250 psig (1725 kPa)**][**300 psig (2070 kPa)**]<**Insert pressure**>.
5. Sensor: [**Venturi**][**Paddlewheel**]<**Insert type**>. Sensor size is to match pipe, tubing, flowmeter, and fittings.
6. Permanently Mounted Flowmeter: Compatible with flow sensor, with dial not less than **4-1/2 inches (115 mm)** in diameter.[**Include bracket or device for wall mounting.**]

   a. Tubing Package: **NPS 1/8 or NPS 1/4 (DN 6 or DN 10)** plastic tubing with copper or brass fittings and valves.

7. Portable Flowmeter: Compatible with flow sensor, with dial not less than **4-1/2 inches (115 mm)** in diameter and with two **12-ft.- (3.7-m-)** long hoses in carrying case.

2.6 FUEL OIL STORAGE

A. Comply with NFPA 30.

B. Day Tank: UL 142, freestanding, factory-fabricated fuel tank assembly, with integral, float-controlled transfer pump and the following features:

1. Containment: Integral rupture basin, with a capacity of 150 percent of nominal capacity of day tank.

   a. Leak Detector: Locate in rupture basin and connect to provide audible and visual alarm in the event of day-tank leak.

2. Tank Capacity: [**As recommended by engine manufacturer**]<**Insert gallons (liters)**>.
3. Pump Capacity: Exceeds maximum flow of fuel drawn by engine-mounted fuel supply pump at 110 percent of rated capacity, including fuel returned from engine.
4. Low-Level Alarm Sensor: Liquid-level device operates alarm contacts at 25 percent of normal fuel level.
5. Piping Connections: Factory-installed fuel supply and return lines from tank to engine; local fuel fill, vent line, overflow line; and tank drain line with shutoff valve.

C. Base-Mounted Fuel Oil Tank: Factory installed and piped, complying with UL 142 fuel oil tank. Features include the following:

1. Tank level indicator.
2. Capacity: Fuel for [**eight**]<**Insert number**> hours' continuous operation at 100 percent rated power output.
3. Vandal-resistant fill cap.
4. Containment Provisions: Comply with requirements of authorities having jurisdiction.

2.7 FIRE-PUMP CONTROLLER REMOTE ALARM PANEL

A. Fire-Pump Controller Remote Alarm Panel:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

    a. [**Eaton**]
    b. [**Firetrol**]
    c. [**Master Control Systems, Inc**]
    d. [**Metron Eledyne; a Hubbell Company**]
    e. [**Tornatech**]
    f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

    a. [**Eaton**]
    b. [**Firetrol**]
    c. [**Master Control Systems, Inc**]
    d. [**Metron Eledyne; a Hubbell Company**]
    e. [**Tornatech**]
    f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain remote alarm panels from single manufacturer.
4. Standards:

    a. Comply with NFPA 20.
    b. <**Insert standard**>.

5. Description: Factory fabricated, assembled, wired, and tested.
6. Supervisory and Normal Control Voltage: [**120 V(ac)**][**240 V(ac)**]<**Insert voltage**>; [**single**][**dual**] source.
7. Audible and Visual Alarm and Status Indications for Diesel-Driven Pump Controllers:

    a. Normal Power On.
    b. Supervisory Power On.
    c. Engine Running.
    d. Not in Auto Mode.
    e. Low Fuel.
    f. Common Alarm.
    g. <**Insert alarm**>.
    h. <**Insert alarm**> with SPDT, 8 Amp relay Output.

8. Audible alarm, with silence push button.

2.8 GROUT

A. Standard: ASTM C1107/C1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.

B. Characteristics: Nonshrink and recommended for interior and exterior applications.

C. Design Mix: **5000 psi (34 MPa)**, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, surfaces to receive equipment, equipment bases and anchorage provisions, with installing contractor(s)[**, Architect,**][**, Engineer,**][**, Construction Manager,**] and Manufacturer's Representative present, for compliance with requirements for installation tolerances, and other conditions affecting performance of the fire pump and fire-pump controller.

B. Examine roughing-in for fire-suppression piping systems to verify actual locations of piping connections before fire-pump installation.

C. Examine equipment before installation. Reject equipment that is wet or damaged by moisture or mold.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PROTECTION OF FIRE-PUMP CONTROLLERS

A. Temporary Heating: Apply temporary heat to maintain temperature in accordance with manufacturer's written instructions until enclosed fire-pump controllers are ready to be energized and placed into service.

B. Replace fire-pump controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.

3.3 INSTALLATION OF FIRE PUMPS

A. Comply with NFPA 20 for installation of fire pumps, relief valves, and related components.

B. Equipment Mounting:

1. Install fire pumps on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment" and Section 018123 "Facility Seismic and Wind Criteria."
3. Comply with requirements for vibration isolation devices specified in Section 210548.13 "Vibration Controls for Fire-Suppression Piping and Equipment."

C. Install fire-pump suction and discharge piping equal to or larger than sizes required by NFPA 20.

D. Support piping and pumps separately, so weight of piping does not rest on pumps.

E. Install valves that are same size as connecting piping. Comply with requirements for fire-protection valves specified in Section 211000 "Water-Based Fire-Suppression Systems."

F. Install pressure gauges on fire-pump suction and discharge flange pressure-gauge tappings. Comply with requirements for pressure gauges specified in Section 211000 "Water-Based Fire-Suppression Systems."

G. Install piping hangers and supports, anchors, valves, gauges, and equipment supports in accordance with NFPA 20[**, NFPA 13,**][**and**][**NFPA 14**]<**Insert standard**>.

H. Install fuel system in accordance with NFPA 20.

I. Install water supply and drain piping for diesel-engine heat exchangers. Extend drain piping from heat exchangers to point of disposal.

J. Install exhaust-system piping for diesel engines. Extend to point of termination outside structure. Install pipe and fittings with welded joints; install components having flanged connections with gasketed joints.

K. Install condensate-drain piping for diesel-engine exhaust system. Extend drain piping from low points of exhaust system to condensate traps and to point of disposal.

L. Install flowmeters and sensors. Install flowmeter-system components and make connections in accordance with NFPA 20 and manufacturer's written instructions.

M. Electrical Wiring: Install electrical devices furnished by equipment manufacturers that are not factory mounted. Furnish copies of manufacturers' wiring diagram submittals to electrical Installer.

3.4 ALIGNMENT OF FIRE PUMPS

A. Align [**end-suction**][**and**][**split-case**] pump and driver shafts after complete unit has been leveled on concrete base, grout has set, and anchor bolts have been tightened.

B. After alignment is correct, tighten anchor bolts evenly. Fill baseplate completely with grout, with metal blocks and shims or wedges in place. Tighten anchor bolts after grout has hardened. Check alignment and make required corrections.

C. Align piping connections.

D. Align pump and driver shafts for angular and parallel alignment in accordance with HI 1.4 and to tolerances specified by manufacturer.

3.5 PIPING CONNECTIONS

A. Comply with requirements for piping and valves specified in Section 211000 "Water-Based Fire-Suppression Systems." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to pumps and equipment to allow service and maintenance.

C. Connect relief-valve discharge to drainage piping or point of discharge.

D. Connect flowmeter-system meters, sensors, and valves to tubing.

E. Connect fire pumps to their controllers.

3.6 INSTALLATION OF FIRE-PUMP CONTROLLERS

A. Coordinate installation of controllers with other construction including conduit, piping, fire-pump equipment, and adjacent surfaces. Maintain required clearances for workspace and equipment access

doors and panels. Ensure that controllers are within sight of fire-pump drivers.

B. Coordinate sizes and locations of concrete bases with actual equipment provided.

C. Install controllers within sight of their respective drivers.

D. Connect controllers to their dedicated pressure-sensing lines.

E. Wall-Mounting Controllers: Install controllers on walls with disconnect operating handles not higher than **79 inches (2 m)** above finished floor, and bottom of enclosure not less than **12 inches (305 mm)** above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For controllers not on walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."

F. Floor-Mounting Controllers: Install controllers on concrete base(s), using floor stands high enough so that the bottom of enclosure cabinet is not less than **12 inches (305 mm)** above finished floor. Comply with requirements for concrete bases specified in Section 260529 "Hangers and Supports for Electrical Systems."

1. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base, and anchor into structural concrete floor.
2. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
3. Install anchor bolts to elevations required for proper attachment to supported equipment.

G. Seismic Bracing: Comply with requirements specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems" and Section 018123 "Facility Seismic and Wind Criteria."

H. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

I. Installation of Control and Alarm Wiring:

1. Install wiring between fire-pump controllers and remote devices[**and facility's central monitoring system**]. Comply with requirements in NFPA 20, NFPA 70, and Section 260523 "Control-Voltage Electrical Power Cables."
2. Install wiring between remote alarm panels and fire-pump controllers. Comply with requirements in NFPA 20, NFPA 70, and Section 260523 "Control-Voltage Electrical Power Cables."
3. Install wiring between controllers and the building's fire-alarm system. Comply with requirements specified in Section 284600 "Fire Detection and Alarm."
4. Bundle, train, and support wiring in enclosures.
5. Connect remote manual and automatic activation devices where applicable.

J. Field Acceptance Testing and Inspection.

1. Acceptance Testing Preparation:

a. Inspect and Test Each Component:

1) Inspect wiring, components, connections, and equipment installations. Test and adjust components and equipment.
2) Test insulation resistance for each element, component, connecting supply, feeder, and control circuits.
3) Test continuity of each circuit.

2. Representatives from manufacturers of fire-pump controllers must be present during acceptance

tests and inspections in accordance with NFPA 20.

3. Acceptance tests and inspections must be witnessed by [**Architect**][**Construction Manager**][**Owner**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.
4. Acceptance Tests and Inspections:

    a. Do not begin field acceptance testing until suction piping has been flushed and hydrostatically tested and the certificate for flushing and testing has been submitted to [**Architect**][**Construction Manager**][**Owner**] and authorities having jurisdiction.
    b. Prior to starting, notify authorities having jurisdiction of the time and place of the acceptance testing.
    c. Engage manufacturer's factory-authorized service representative to be present during the testing.
    d. Perform field acceptance tests as outlined in NFPA 20.

5. Nonconforming Work:

    a. Controllers will be considered defective if they do not pass tests and inspections.
    b. Remove and replace defective units with new units and retest.

6. Prepare and submit field acceptance testing and inspection reports.

3.7 INSTALLATION OF FIRE-PUMP CONTROLLER REMOTE ALARM PANEL

A. Install panels on walls with tops not higher than [**72 inches (1829 mm)**]<**Insert height**> above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For panels not on walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."

3.8 IDENTIFICATION OF FIRE PUMPS AND FIRE-PUMP CONTROLLERS

A. Comply with NFPA 20 requirements for marking of fire pumps and fire-pump controllers.

B. Identify equipment, system components, piping, wiring, cabling, and terminals. Comply with requirements for identification in NFPA 20 and as specified in Section 210553 "Identification for Fire-Suppression Piping and Equipment and Section 260553 "Identification for Electrical Systems."

3.9 STARTUP SERVICE FOR FIRE PUMPS AND CONTROLLERS

A. [**Engage a factory-authorized service representative to perform**][**Perform**] startup service.

1. Complete installation and startup checks in accordance with manufacturer's written instructions.
2. <**Insert startup steps**>.

3.10 ADJUSTING

A. Adjust fire-pump controllers and battery charger systems to function smoothly and as recommended by manufacturer.

B. Set field-adjustable switches, auxiliary relays, time-delay relays, and timers.

C. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.

D. Set field-adjustable pressure switches.

3.11 FIELD QUALITY CONTROL

A. Test each fire pump with its controller as a unit.

B. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

D. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:

1. After installing components, assemblies, and equipment, including controller, test for compliance with requirements.
2. Test in accordance with NFPA 20 for acceptance and performance testing.

    a. Prior to initial startup and acceptance testing, complete and check all electric wiring serving fire-pump controller and pressure-maintenance pump motor including control interwiring, normal power, and alternate power.

3. Leak Test: After installation, fill system and test for leaks. Repair leaks and retest until no leaks exist.
4. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Components, assemblies, and equipment will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

G. Furnish fire hoses in number, size, and length required to reach storm drain or other acceptable location to dispose of fire-pump test water. Hoses are for tests only and do not convey to Owner.

3.12 DEMONSTRATION

A. [**Engage a factory-authorized service representative to train**][**Train**] Owner's maintenance personnel to adjust, operate, and maintain fire pumps, and fire-pump controllers.

END OF SECTION 26 29 33 13

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 29 33 13A - PRESSURE-MAINTENANCE PUMPS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Pressure-maintenance pumps - vertical, multistage.
2. Pressure-maintenance pumps - vertical turbine.
3. Pressure-maintenance pump controllers.
4. Grout.

B. Related Requirements:

1. Section 018116 "Facility Environmental Requirements" specifies basis-of-design environmental conditions and performance criteria that are applicable to product selection and installation of the Work on Project.
2. Section 018123 "Facility Seismic and Wind Criteria" specifies basis-of-design seismic and wind criteria for nonstructural components on Project.
3. Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment" specifies seismic restraint and vibration isolation of fire suppression equipment and piping.
4. Section 260010 "Supplemental Requirements for Electrical" specifies requirements applicable to coordinating, scheduling, and sequencing of the electrical Work specified in this Section.
5. Section 260573 "Power System Studies" specifies arc flash hazard analyses and arc flash hazard labeling.
6. Section 284600 "Fire Detection and Alarm" specifies supervisory connections to fire-alarm systems.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for pressure-maintenance pump and pressure-maintenance pump controller.
2. Include rated capacities, operating characteristics, factory-certified performance test curves, electrical characteristics, and furnished accessories and specialties.

B. Shop Drawings: For pressure-maintenance pumps, pressure-maintenance pump controllers, and pressure-maintenance pump accessories and specialties.

1. Provide fabrication and installation details, including plans, elevations, sections, and mounting and attachment details.
2. Provide details of equipment assemblies. Indicate dimensions; shipping, installed, and operating weights; loads; required clearances; method of field assembly; components; electrical characteristics; and location and size of each field connection.
3. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
4. Provide wiring diagrams for power, signal, and control wiring.
5. For pressure-maintenance pump controllers, show the following:

a. Each installed unit's type and details.
b. Enclosure types and details for types other than NEMA, Type 2.
c. Factory-installed devices.
d. Nameplate legends.
e. Short-circuit current rating of integrated unit.
f. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices.
g. Specified modifications.

C. Delegated Design Submittal: For pressure-maintenance pump and pressure-maintenance pump controller.

1. Include design calculations for selecting vibration isolators[**and seismic restraints**] and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For pressure-maintenance pumps, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Product Certificates: For each type of pressure-maintenance pump and pressure-maintenance pump controller, from manufacturer.

C. Source quality-control reports.

D. Field-acceptance testing and inspection reports for fire-pump controllers.

E. Field quality-control reports.

F. Certified shop test curves showing head capacity and brake horsepower for each pump.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For pressure-maintenance pumps and pressure-maintenance pump controllers to include in operation and maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Auxiliary Contacts: [**One**]<**Insert number**> for each size and type of magnetic contactor installed.
2. Power Contacts: [**Three**]<**Insert number**> for each size and type of magnetic contactor installed.
3. Contactor Coils: [**One**]<**Insert number**> for each size and type of magnetic controller installed.

4. Relay Boards: [**One**]<**Insert number**> for each size and type of relay board installed.
5. Operator Interface: [**One**]<**Insert number**> microprocessor board(s), complete with display and membrane keypad.
6. <**Insert extra materials**>.

1.6 WARRANTY

A. Manufacturer Warranty: [**Manufacturer agrees**][**Installer agrees**][**Manufacturer and Installer agree**] to repair or replace pressure-maintenance pumps and controllers that fail in materials or workmanship within specified warranty period.

B. Special Warranty: [**Manufacturer agrees**][**Installer agrees**][**Manufacturer and Installer agree**] to repair or replace components of pressure-maintenance pumps and controllers, including [**auxiliary contacts for magnetic contactors**][**power contacts for magnetic contactors**][**contactor coils for magnetic contactors**][**relay boards**][**operator interface microprocessor boards**]<**Insert components**> that fail in materials or workmanship within specified warranty period.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Pressure-maintenance pumps are to withstand the effects of earthquake motions determined in accordance with NFPA 20 [**and**][**ASCE/SEI 7**][**NFPA 13**][**NFPA 14**]<**Insert requirement**>.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
2. Component Importance Factor: 1.5.
3. <**Insert requirements for Component Amplification Factor and Component Response Modification Factor**>.

B. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70 by a qualified electrical testing agency recognized by authorities having jurisdiction and marked for intended location and application.

2.2 PRESSURE-MAINTENANCE PUMPS

A. Pressure-Maintenance Pumps - Vertical, Multistage:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**A C Fire Pump; a Xylem brand**]
b. [**Armstrong Fluid Technology**]
c. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the

following:

a. [**A C Fire Pump; a Xylem brand**]
b. [**Armstrong Fluid Technology**]
c. <**Insert manufacturer's name**>

3. Source Limitations:

a. Obtain vertical, multistage, pressure-maintenance pump and electric drive from single manufacturer.
b. Equipment provider is to provide services of a factory authorized service representative and have a service facility located within a **60-mile (100 km)** radius of Project site.

4. Description: Factory-fabricated, -assembled, and -tested, multistage, barrel-type vertical pressure-maintenance pump, as defined in HI 2.1-2.2 and HI 2.3; designed for surface installation with pump and motor direct coupled and mounted vertically.
5. Pump Construction:

a. Barrel: Stainless steel.
b. Suction and Discharge Chamber: Cast iron with flanged inlet and outlet.
c. Pump Head/Motor Mount: Cast iron.
d. Impellers: Stainless steel, balanced, and keyed to shaft.
e. Pump Shaft: Stainless steel.
f. Seal: Mechanical type with carbon rotating face and silicon-carbide stationary seat.
g. Wear Rings: Teflon.
h. Intermediate Chamber Bearings: Aluminum-oxide ceramic or bronze.
i. Chamber-Base Bearing: Tungsten carbide.
j. O-Rings: [**EPDM**][**NBR**][**Viton**].

6. Motor: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 210500 "Common Work Results for Fire Suppression."

a. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
b. Description: Single speed with permanently lubricated ball bearings and rigidly mounted to pump head.

7. Nameplate: Permanently attached to pump and indicating capacity and characteristics.
8. Capacities and Characteristics:

a. Rated Capacity: <**Insert gpm (L/minute)**>.
b. Total Dynamic Head: <**Insert feet (kPa)**>.
c. Working Pressure: [**175 psig (1200 kPa) minimum**][**230 psig (1586 kPa)**][**300 psig (2070 kPa)**]<**Insert value**>.
d. Inlet and Outlet Size: [**NPS 1-1/4 (DN 32)**]<**Insert size**>.
e. Discharge and Suction Flanges: [**Class 250**]<**Insert class**>.
f. Suction Head Available at Pump: <**Insert ft. (m)**>.
g. Motor Horsepower: <**Insert value**>.
h. Motor Speed: <**Insert rpm**>.
i. Electrical Characteristics:

1) Volts: [**120**][**208**]<**Insert value**>.
2) Phases: [**Single**][**Three**].
3) Hertz: [**60**]<**Insert value**>.

4) Full-Load Amperes: <**Insert value**>.
5) Minimum Circuit Ampacity: <**Insert value**>.
6) Maximum Overcurrent Protection: <**Insert amperage**>.

j. Pump-Start, Pressure-Switch Setting: <**Insert psig (kPa)**>.
k. Pump-Stop, Pressure-Switch Setting: <**Insert psig (kPa)**>.

B. Pressure-Maintenance Pumps - Vertical Turbine:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Armstrong Fluid Technology**]
b. [**Aurora Pump; Pentair Ltd.**]
c. [**Patterson Pump Company; a Gorman-Rupp company**]
d. [**Peerless Pump Company**]
e. [**Ruhrpumpen, Inc**]
f. [**Sulzer Pumps Inc.**]
g. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Armstrong Fluid Technology**]
b. [**Aurora Pump; Pentair Ltd.**]
c. [**Patterson Pump Company; a Gorman-Rupp company**]
d. [**Peerless Pump Company**]
e. [**Ruhrpumpen, Inc**]
f. [**Sulzer Pumps Inc.**]
g. <**Insert manufacturer's name**>

3. Source Limitations:

a. Obtain vertical-turbine, pressure-maintenance pump and driver from single manufacturer.
b. Equipment provider is to provide services of a factory-authorized service representative and have a service facility located within a **60-mile (100 km)** radius of Project site.

4. Description: Factory-fabricated, -assembled, and -tested, vertical, multistate, open-line-shaft turbine pressure-maintenance pump, as defined in HI 2.1-2.2 and HI 2.3; with pump motor mounted above pump head.
5. Pump Construction:

a. Pump Head: Cast iron, for surface discharge, with flange, except connections may be threaded in sizes in which flanges are not available.
b. Pump Head Seal: Stuffing box and stuffing.
c. Line Shaft and Bearings for Water-Lubricated Bearings: Static water levels of **50 ft. (15 m)** or less.

1) Line Shaft: Stainless steel or steel, with corrosion-resistant shaft sleeves.
2) Line Shaft Bearings: Rubber sleeve, water lubricated.

d. Line Shaft and Bearings for Oil-Lubricated Bearings: Static water levels between **50 and 200 ft. (15 and 61 m)**.

1) Line Shaft: Steel.
2) Line Shaft Bearings: Corrosion resistant, oil lubricated.

e. Impeller Shaft: Monel metal or stainless steel.
f. Bowl Section: Multiple cast-iron bowls with closed-type bronze or stainless-steel impellers.
g. Column Pipe: ASTM A53/A53M, Schedule 40, galvanized-steel pipe with threaded ends and cast-iron or steel fittings, in sections **10 ft. (3 m)** or less, with strainer of cast or fabricated bronze or stainless steel at bottom.

6. Motor: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 210500 "Common Work Results for Fire Suppression."

a. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
b. Description: Single speed with permanently lubricated ball bearings.

7. Base: Cast iron or steel with hole for electrical cable.
8. Nameplate: Permanently attached to pump and indicating capacity and characteristics.
9. Capacities and Characteristics:

a. Rated Capacity: <**Insert gpm (L/minute)**>.
b. Total Dynamic Head: <**Insert feet (kPa)**>.
c. Working Pressure: <**Insert psig (kPa)**>.
d. Inlet Column Size: <**Insert NPS (DN)**>.
e. Pump Column Length: <**Insert feet (m)**>.
f. Outlet Size: <**Insert NPS (DN)**>.
g. Flange: [**Class 125**]<**Insert class**>.
h. Suction Head Available at Pump: <**Insert feet (m)**>.
i. Motor Horsepower: <**Insert value**>.
j. Motor Speed: <**Insert rpm**>.
k. Electrical Characteristics:

1) Volts: [**120**][**208**]<**Insert value**>.
2) Phases: [**Single**][**Three**].
3) Hertz: [**60**]<**Insert value**>.
4) Full-Load Amperes: <**Insert value**>.
5) Minimum Circuit Ampacity: <**Insert value**>.
6) Maximum Overcurrent Protection: <**Insert amperage**>.

l. Pump-Start, Pressure-Switch Setting: <**Insert psig (kPa)**>.
m. Pump-Stop, Pressure-Switch Setting: <**Insert psig (kPa)**>.

2.3 PRESSURE-MAINTENANCE PUMP CONTROLLERS

A. Pressure-Maintenance Pump Controller:

1. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

a. [**Eaton**]
b. [**Firetrol**]

c. [**Master Control Systems, Inc**]
d. [**Metron Eledyne; a Hubbell Company**]
e. [**Tornatech**]
f. <**Insert manufacturer's name**>

2. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

a. [**Eaton**]
b. [**Firetrol**]
c. [**Master Control Systems, Inc**]
d. [**Metron Eledyne; a Hubbell Company**]
e. [**Tornatech**]
f. <**Insert manufacturer's name**>

3. Source Limitations: Obtain pressure-maintenance pump controllers from a single manufacturer.
4. Description:

a. Type: UL 508A, factory-assembled, -wired, and -tested, across-the-line controller; for combined automatic and manual operation.
b. Enclosure: NEMA, Type 2 for wall mounting.
c. Finish: Manufacturer's standard color paint.

5. Standards:

a. Listed in accordance with UL 508A.
b. <**Insert standard**>.

6. Rate controller for scheduled horsepower and include the following:

a. Fusible disconnect switch.
b. Pressure switch.
c. Hand-off-auto selector switch.
d. Pilot light.
e. Running period timer.

2.4 GROUT

A. Standard: ASTM C1107/C1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.

B. Characteristics: Nonshrink and recommended for interior and exterior applications.

C. Design Mix: **5000 psi (34 MPa)**, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, surface to receive equipment, equipment bases and anchorage provisions, with Installing Contractor(s), [**Architect**][**engineer**][**Construction Manager**][**and**] Manufacturer's Representative present, for compliance with requirements for installation tolerances, and other conditions affecting performance of the pressure-maintenance pump and pressure-maintenance pump controller.

B. Examine roughing-in for fire-suppression piping systems to verify actual locations of piping connections before pressure-maintenance pump installation.

C. Examine equipment before installation. Reject equipment that is wet or damaged by moisture or mold.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PROTECTION OF PRESSURE-MAINTENANCE PUMP CONTROLLERS

A. Replace pressure-maintenance pump controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.

3.3 INSTALLATION OF PRESSURE-MAINTENANCE PUMPS

A. Comply with NFPA 20 for installation of pressure-maintenance pumps.

B. Equipment Mounting:

1. Install multistage pressure-maintenance pumps in accordance with HI 1.4.
2. Install vertical-turbine, pressure-maintenance pumps in accordance with HI 2.4.
3. Install base-mounted pumps on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
4. Comply with requirements for vibration isolation and seismic control devices specified in Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment" and Section 018123 "Facility Seismic and Wind Criteria."
5. Comply with requirements for vibration isolation devices specified in Section 210548.13 "Vibration Controls for Fire-Suppression Piping and Equipment."

C. Support piping and pumps separately, so weight of piping does not rest on pumps.

D. Install isolation valves in both inlet and outlet pipes near the pump. Comply with requirements for valves specified in Section 211000 "Water-Based Fire-Suppression Systems."

E. Install piping hangers and supports, anchors, valves, gauges, and equipment supports in accordance with NFPA 20 [**NFPA 13**][**and**][**NFPA 14**]<**Insert standard**>.

F. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not factory mounted. Furnish copies of manufacturers' wiring diagram submittals to electrical Installer.

3.4 PIPING CONNECTIONS

A. Comply with requirements for piping and valves specified in Section 211000 "Water-Based Fire-Suppression Systems." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to pumps and equipment to allow service and maintenance.

C. Connect pressure-maintenance pumps to their controllers

3.5 INSTALLATION OF PRESSURE-MAINTENANCE-PUMP CONTROLLERS

A. Coordinate installation of controllers with other construction, including conduit, piping, fire-pump equipment, and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels. Ensure that controllers are within sight of pressure-maintenance-pump drivers.

B. Connect controllers to their dedicated pressure-sensing lines.

C. Wall-Mounting Controllers: Install controllers on walls with disconnect operating handles not higher than **79 inches (2 m)** above finished floor, and bottom of enclosure not less than **12 inches (305 mm)** above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For controllers not on walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."

D. Seismic Bracing: Comply with requirements specified in Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment" and Section 018123 "Facility Seismic and Wind Criteria."

E. Installation of Power Wiring:

1. Install power wiring between pressure-maintenance-pump controllers and their services or sources, and between pressure-maintenance-pump controllers and their drivers. Comply with requirements in NFPA 20, NFPA 70 (including Article 695, "Fire Pumps"), and Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
2. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

F. Field-Acceptance Testing and Inspection.

1. Acceptance Testing Preparation:

a. Inspect and Test Each Component:

1) Inspect wiring, components, connections, and equipment installations. Test and adjust components and equipment.
2) Test insulation resistance for each element, component, connecting supply, feeder, and control circuits.
3) Test continuity of each circuit.

b. Verify and Test Each Electric-Drive Controller:

1) Verify that voltages at controller locations are within 1 percent of motor nameplate rated voltages, with motors off. If outside this range for motor, notify [**Architect**][**Construction Manager**][**Owner**] before starting the motor(s).
2) Test each motor for proper phase rotation.

3) Verify short-circuit current rating.

c. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
d. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

2. Acceptance tests and inspections must be witnessed by [**Architect**][**Construction Manager**][**Owner**][**authorities having jurisdiction**]<**Insert names or titles of witnesses**>.
3. Acceptance Tests and Inspections:

a. Do not begin field-acceptance testing until suction piping has been flushed and hydrostatically tested and the certificate for flushing and testing has been submitted to [**Architect**][**Construction Manager**][**Owner**] and authorities having jurisdiction.
b. Prior to starting, notify authorities having jurisdiction of the time and place of the acceptance testing.
c. Engage manufacturer's factory-authorized service representative to be present during the testing.
d. Perform field-acceptance tests as outlined in NFPA 20.

4. Nonconforming Work:

a. Controllers will be considered defective if they do not pass tests and inspections.
b. Remove and replace defective units with new units and retest.

5. Prepare and submit field-acceptance testing and inspection reports.

3.6 STARTUP SERVICE FOR PRESSURE-MAINTENANCE PUMPS AND CONTROLLERS

A. [**Engage a factory-authorized service representative to perform**][**Perform**] startup service.

1. Complete installation and startup checks in accordance with manufacturer's written instructions.
2. <**Insert startup steps**>.

3.7 ADJUSTING

A. Adjust pressure-maintenance-pump controllers to function smoothly and as recommended by manufacturer.

B. Set field-adjustable pressure switches, auxiliary relays, time-delay relays, and timers.

C. Program microprocessors for required operational sequences, status indications, alarms, event recordings, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.

D. Lubricate pumps as recommended by manufacturer.

3.8 FIELD QUALITY CONTROL

A. Test each pressure-maintenance pump with its controller as a unit.

B. Testing Agency: [**Owner will engage**][**Engage**] a qualified testing agency to perform tests and inspections.

C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

D. Perform the following tests and inspections[**with the assistance of a factory-authorized service representative**]:

1. After installing components, assemblies, and equipment, including controller, test for compliance with requirements.
2. Test in accordance with NFPA 20 for acceptance and performance testing.
    a. Prior to initial startup and acceptance testing, complete and check all electric wiring serving pressure-maintenance pump motor and interwiring, normal power, and alternate power.
    b. Perform arc flash risk assessment for all electric pressure-maintenance pump controllers in accordance with NFPA 70E or other code required by authorities having jurisdiction.
    c. Field label electric pressure-maintenance pump controllers for arc flash risk in accordance with NFPA 70E or other code required by authorities having jurisdiction.
3. Leak Test: After installation, fill system and test for leaks. Repair leaks and retest until no leaks exist.
4. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Components, assemblies, and equipment will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

END OF SECTION 26 29 33 13A

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 31 00 00 - PHOTOVOLTAIC COLLECTORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Manufactured PV units.
2. PV module framing.
3. PV array construction.
4. Inverters.
5. System overcurrent protection.
6. Mounting structures.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.2 DEFINITIONS

A. CEC: California Energy Commission.

B. ETFE: Ethylene tetrafluoroethylene.

C. FEP: Fluorinated ethylene propylene.

D. IP Code: Required ingress protection to comply with IEC 60529.

E. MPPT: Maximum power point tracking.

F. PTC: PVUSA Test Condition. Commonly regarded as a "real-world" measure of PV output. See below for definition of "PVUSA."

G. PV: Photovoltaic.

H. PVUSA: Photovoltaics for Utility Systems Applications.

I. STC: Standard Test Conditions defined in IEC 61215.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Manufactured PV units.
2. PV module framing.

3. PV array construction.
4. Inverters.
5. System overcurrent protection.
6. Mounting structures.

B. Shop Drawings: For PV modules.

1. Include plans, elevations, sections, and mounting details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Detail fabrication and assembly.
4. Include diagrams for power, signal, and control wiring.

C. Field quality-control reports.

1.4 INFORMATIONAL SUBMITTALS

A. Manufacturers' published instructions.

B. Field Reports:

1. Manufacturer's field reports for field quality-control support.

1.5 CLOSEOUT SUBMITTALS

A. Warranty documentation.

1.6 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of PV modules that fail in materials or workmanship within specified warranty period.

1. Manufacturer's materials and workmanship warranties include, but are not limited to, the following:

a. Faulty operation of PV modules.
b. <**Insert failure modes**>.

2. Warranty Period: [**Two**][**Five**]<**Insert number**> years from date of Substantial Completion.

B. Manufacturer's Special Minimum Power Output Warranty: Manufacturer agrees to repair or replace components of PV modules that fail to exhibit the minimum power output within specified warranty period. Special warranty, applying to modules only, applies to materials only, on a prorated basis, for period specified.

1. Manufacturer's minimum power output warranties include, but are not limited to, the following warranty periods, from date of Substantial Completion:

a. Specified minimum power output to [**80**]<**Insert number**> percent or more, for a period of [**25**]<**Insert number**> years.

b. <**Insert additional minimum power output special warranty**>.

PART 2 - PRODUCTS

2.1 MANUFACTURED UNITS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Aleo Solar**]
2. [**BP Solar USA**]
3. [**Canadian Solar**]
4. [**ET Solar**]
5. [**Evergreen Solar, Inc.**]
6. [**GE Solar; General Electric Company**]
7. [**Kaneka Corporation**]
8. [**Kyocera International, Inc.**]
9. [**Lumos Solar, LLC**]
10. [**Mitsubishi Electric US, Inc.**]
11. [**REC Solar US LLC**]
12. [**SANYO North America Corporation**]
13. [**Schott Solar**]
14. [**Sharp Electronics Corp.**]
15. [**Suniva**]
16. [**SunPower Corporation**]
17. [**Suntech Power**]
18. [**Trina Solar Limited**]
19. [**United Solar Ovonic LLC**]
20. [**Yingli Green Energy Holding Co., Ltd.**]
21. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Aleo Solar**]
2. [**BP Solar USA**]
3. [**Canadian Solar**]
4. [**ET Solar**]
5. [**Evergreen Solar, Inc.**]
6. [**GE Solar; General Electric Company**]
7. [**Kaneka Corporation**]
8. [**Kyocera International, Inc.**]
9. [**Lumos Solar, LLC**]
10. [**Mitsubishi Electric US, Inc.**]
11. [**REC Solar US LLC**]
12. [**SANYO North America Corporation**]
13. [**Schott Solar**]
14. [**Sharp Electronics Corp.**]
15. [**Suniva**]
16. [**SunPower Corporation**]
17. [**Suntech Power**]
18. [**Trina Solar Limited**]
19. [**United Solar Ovonic LLC**]

20. [**Yingli Green Energy Holding Co., Ltd.**]
21. <**Insert manufacturer's name**>

2.2 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.

B. Hazardous Locations: FM Global approved for NFPA 70, Class 1, Division 2, Group C and Group D.

2.3 PV CAPACITIES AND CHARACTERISTICS

A. Minimum Electrical Characteristics:

1. Rated Open-Circuit Voltage: <**Insert V(dc)**>.
2. Maximum System Voltage: <**Insert V(dc)**>.
3. Maximum Power at Voltage (Vpm): <**Insert V(dc)**>.
4. Short-Circuit Temperature Coefficient: <**Insert mA/deg C**>.
5. Rated Short-Circuit Current (Isc): <**Insert amperes**>.
6. Maximum System: <**Insert V(dc)**>.
7. Rated Operation Current (Imp): <**Insert amperes**>.
8. Maximum Power at STC (Pmax): <**Insert watts**>.

B. Additional Electrical Characteristics:

1. PTC Rating: <**Insert watts**>.
2. Peak Power per Unit Area: <**Insert watts**>.
3. Tolerance of Pmax: <**Insert number**> percent.
4. Minimum Peak Power: <**Insert watts**>.
5. Series Fuse Rating: <**Insert amperes**>.
6. Module Efficiency: <**Insert number**> percent.
7. Temperature Cycling Range: <**Insert deg C**>.
8. Humidity, Freeze, Damp Heat Condition: <**Insert number**> percent RH.
9. Wind Loading or Surface Pressure: <**Insert lb/ft2 (N/m2)**>.
10. Maximum Distortion Angle: <**Insert degrees**>.
11. Hailstone Impact Withstand: <**Insert inch (mm)**> diameter at <**Insert mile/h (km/h)**> wind velocity.

C. Normal Operating Temperature Characteristics (NOTC):

1. Temperature at Nominal Operating Cell Temperature: <**Insert deg C**>.
2. Temperature Coefficient (NOTC Nominal Power): <**Insert deg C**>.
3. Temperature Coefficient (NOTC Open-Circuit Voltage): <**Insert deg C**>.
4. Temperature Coefficient (NOTC Short Circuit Current): <**Insert deg C**>.
5. Temperature Coefficient (NOTC Maximum Power Voltage): <**Insert deg C**>.
6. Temperature Coefficient (NOTC Maximum Power Current): <**Insert deg C**>.

2.4 PV SYSTEMS DESCRIPTION

A. Interactive PV System: Collectors connected in parallel to the electrical utility; and capable of providing power for Project and supplying power to a distributed network.

1. A [**six**]<**Insert number**>-module array to generate a total nominal rated output of [**1000 W**]<**Insert watts**>.
2. System Components:

    a. PV modules.
    b. Array frame.
    c. Utility-interactive inverter.
    d. Overcurrent protection, disconnect, and rapid shutdown devices.
    e. Mounting structure.
    f. Utility meter.
    g. <**Insert component**>.

B. Hybrid PV System: Collectors connected to provide power to DC and AC loads, connected to utility through interactive inverters or meters, and connected to energy storage.

1. A [**six**]<**Insert number**>-module array to generate a total nominal rated output of [**1000 W**]<**Insert watts**>.
2. System Components:

    a. PV modules.
    b. Array frame.
    c. Charge controller.
    d. Energy storage.
    e. System control.
    f. [**Inverter**][**Utility-interactive inverter**].
    g. Overcurrent protection, disconnect, and rapid shutdown devices.
    h. Mounting structure.
    i. [**Meter**][**Utility-interactive meter**].
    j. <**Insert component**>.

C. Stand-Alone PV System: Collectors connected to provide power to Project DC and AC loads through an energy storage system.

1. A [**six**]<**Insert number**>-module array to generate a total nominal rated output of [**1000 W**]<**Insert watts**>.
2. System Components:

    a. PV modules.
    b. Array frame.
    c. Charge controller.
    d. Energy storage.
    e. Inverter.
    f. Overcurrent protection, disconnect, and rapid shutdown devices.
    g. Mounting structure.

2.5 MANUFACTURED PV UNITS

A. Cell Materials, Thin Film:

1. Amorphous silicon (a-Si).
2. Micromorphous silicon (a-Si+uc-Si).
3. Copper indium (di)selenide (CIS).
4. Copper indium gallium (di)selenide (CIGS).
5. Cadmium telluride (CdTe).
6. Cadmium sulfide.

B. Cell Materials, Wafer: [**Polycrystalline**][**Monocrystalline**].

1. c-Si.
2. Gallium arsenide (GaAs).

C. Module Construction:

1. Nominal Size: **32 inch (800 mm)** wide by **64 inch (1600 mm)** long.
2. Weight: **42.8 lb (19.4 kg)**.

D. Insulating Substrate Film: [**Flexible**][**Rigid**], [**polyester**][**polyimide**].

E. Conducting Substrate Film: [**Flexible**][**Rigid**][**Fluoropolymer**], [**ETFE**][**FEP**].

F. Encapsulant: Ethyl vinyl acetate.

G. Front Panel: [**Fully tempered glass**][**0.125 inch (3.2 mm) thick glass**][**Low iron glass**][**Antireflective coating glass**][**Laminating film**][**Laminating material**].

H. Backing Material: [**Tempered glass**][**0.125 inch (3.2 mm) thick glass**][**Polyester film**][**PVC film**].

1. Layers: <**Insert number**>.
2. Color: [**White**]<**Insert color**>.

I. Bypass Diode Protection: Internal.

J. Junction Box:

1. Size: **1.56-by-3.96-by-0.52 inch (39.6-by-100.6-by-13.2 mm)**.
2. Fully potted, vandal resistant.
3. IP Code: [**IP65**][**IP66**][**IP67**]<**Insert IP code designation**>.
4. Flammability Test: UL 1703.

K. Output Cabling:

1. [**0.158 inch (4 mm)**]<**Insert dimension**>.
2. Quick, multiconnect, polarized connectors.
3. Two-Conductor Harness: No traditional return wire is needed from the end of a row back to the source combiner.

L. Series Fuse Rating: <**Insert amperes**>.

2.6 PV MODULE FRAMING

A. PV laminates mounted in anodized extruded-aluminum frames.

1. Entire assembly UL listed for electrical and fire safety, [**Class A**][**Class C**], according to UL 1703, and complying with IEC 61215.
2. Frame strength exceeding requirements of certifying agencies in subparagraph above.
3. Anodized Aluminum Finish: Alloy and temper recommended by framing manufacturer for strength, corrosion resistance, and application of required finish.
4. High-performance Organic Finish: Manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not

less than 70 percent PVC resin by weight.
5. Baked-enamel finish.
6. Color: As indicated by manufacturer's designations.

2.7 PV ARRAY CONSTRUCTION

A. Framing:

1. Material: [**Extruded aluminum**][**Galvanized steel**][**Coated steel**].
2. Maximum System Weight: Less than **4 lb/ft2 (19.53 kg/m2)**.
3. Minimum Distance to Connectors: <**Insert inch (mm)**>.
4. Raceway Cover Plates: [**Plastic**][**Aluminum**][**Galvanized steel**].

B. Flat-Roof Mounting:

1. No roof penetrations.
2. Self-ballasting.
3. Wind-tunnel tested to **110 mile/h (160 km/h)** wind.
4. Service Life: [**25**]<**Insert number**> years.
5. Freestanding system.

2.8 INVERTER

A. Inverter Type: [**Central**][**Microgrid**].

B. Control Type: [**Pulse-width-modulation control**][**Maximum power point tracker control**].

C. Inverter Electrical Characteristics:

1. Maximum Recommended PV Input Power: <**Insert kilowatts**>.
2. Maximum Open-Circuit Voltage: <**Insert V(dc)**>.
3. PV Start Voltage: <**Insert V(dc)**>.
4. MPPT Voltage Range: <**Insert V(dc)**>.
5. Maximum Input Current: <**Insert amperes**>.
6. Number of String Inputs: <**Insert number**>.
7. Number of Independent MPPT Circuits: <**Insert value**>.
8. Nominal Output Voltage: <**Insert V(dc)**>.
9. CEC Rated Power: <**Insert kilowatts**>.
10. Maximum Output Current: <**Insert amperes**>.
11. Peak Efficiency: <**Insert number**> percent.
12. CEC Weighted Efficiency: <**Insert number**> percent.
13. CEC Night Tare Loss: <**Insert watts**>.
14. DC/AC Terminal Range (AWG): <**Insert range of AWG values**>.
15. Communications Interface: [**TIA-485**][**TIA-232**][**Ethernet**][**Zigbee**]<**Insert type**>.
16. Utility Interface: Utility-interactive inverter.

D. Operating Conditions:

1. Operating Ambient Temperatures: **Minus 4 to plus 122 deg F (20 to plus 50 deg C)**.
2. Storage Temperature: **Minus 40 to plus 122 deg F (minus 40 to plus 50 deg C)**.
3. Relative Humidity: Zero to 95 percent, noncondensing.

E. Charge controllers must have the following:

1. Overcurrent protection.
2. Generator input breaker box.
3. Automatic transfer relay.
4. Digital display.
5. Transformer.
6. Disconnect switch.
7. Shunt controller.
8. Shunt regulator.
9. Surge overload protection.

F. Enclosure:

1. UL 50E[**, Type 3R**][**, Type 4X**].
2. Enclosure Material: [**Galvanized steel**][**Steel**].
3. Cooling Methods:

   a. Fan convection cooling.
   b. Passive cooling.

4. Protective Functions:

   a. AC over/undervoltage.
   b. AC over/underfrequency.
   c. Ground overcurrent.
   d. Overtemperature.
   e. AC and DC overcurrent.
   f. DC overvoltage.

5. Standard LCD, four lines, 20 characters, with user display and on/off toggle switch.

G. Disconnects: Rated for system voltage and conductor.

H. Regulatory Approvals:

1. IEEE 1547.1.
2. IEEE 1547.3.
3. UL 1741.

I. Characteristics:

1. Inverter Dimensions: <**Insert inch (mm)**>.
2. Inverter Weight: <**Insert lb (kg)**>.

2.9 SYSTEM OVERCURRENT PROTECTION

A. Fuses: <**Insert amperes**>.

B. Circuit Breakers: <**Insert amperes**>.

2.10 MOUNTING STRUCTURES

A. Roof Mount: Extruded aluminum, [**two**][**four**] rails, tilt legs, and roof standoffs.

B. Pole Mount: [**Top**][**Panel tops**][**Side**].

C. Tracking Mounts: [**One**][**Two**] axis.

2.11 SOURCE QUALITY CONTROL

A. Product Data: Prepare and submit catalog cuts, brochures,[**diagrams,**][**schedules,**] and performance data illustrating size, physical appearance, and other characteristics of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for PV panels.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
3. Sample Warranty: For manufacturer's special materials and workmanship warranty and minimum power output warranty.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrate areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Do not begin installation until mounting surfaces have been properly prepared.

C. If preparation of mounting surfaces is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

D. Examine modules and array frame before installation. Reject modules and arrays that are wet, moisture damaged, or mold damaged.

E. Examine roofs, supports, and supporting structures for suitable conditions where PV system will be installed.

F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Coordinate layout and installation of PV panels with [**roof**][**support**] assembly and other construction.

B. Support PV panel assemblies independent of supports for other elements such as roof and support assemblies, enclosures, vents, pipes, and conduits. Support assembly to prevent twisting from eccentric loading.

C. Install PV [**inverters,**][**energy storage,**][**charge controller,**][**rapid shutdown,**][**and**][**system control**] in locations indicated on Drawings.

D. Install weatherseal fittings and flanges where PV panel assemblies penetrate exterior elements such as walls or roofs. Seal around openings to make weathertight. See Section 079200 "Joint Sealants" for materials and application.

E. Seismic Restraints: Comply with requirements for seismic-restraint devices specified in Section 260548.16 "Seismic Controls for Electric Systems."

F. Wiring Method: Install cables in raceways.

G. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

3.3 CONNECTIONS

A. Coordinate PV panel cabling to equipment enclosures to ensure proper connections.

B. Coordinate installation of utility-interactive meter with utility.

C. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

D. Make splices, terminations, and taps that are compatible with conductor material[**and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors**].

END OF SECTION 26 31 00 00

Task	Specification	Specification Description
26 31 00 00	26 01 00 00	Supplemental Requirements for Electrical
26 32 13 00	26 32 13 19	Bi-Fuel-Engine-Driven Generator Sets

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 32 13 13 - DIESEL-ENGINE-DRIVEN GENERATOR SETS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Diesel-engine-driven generator sets.
2. Diesel engine.
3. Diesel fuel-oil system.
4. Control and monitoring.
5. Generator overcurrent and fault protection.
6. Generator, exciter, and voltage regulator.
7. Load bank.
8. Outdoor engine generator enclosure.
9. Remote radiator motors.
10. Vibration isolation devices.

B. Related Requirements:

1. Section 262313 "Paralleling Low-Voltage Switchgear" for controls and paralleling equipment for large or multiple parallel engine generators.
2. Section 263343 "Battery Chargers" for remote engine battery chargers.
3. Section 263600 "Transfer Switches" for transfer switches including sensors and relays to initiate automatic-starting and -stopping signals for engine generators.

1.2 DEFINITIONS

A. EPS: Emergency power supply.

B. EPSS: Emergency power supply system.

C. Operational Bandwidth: The total variation from the lowest to highest value of a parameter over the range of conditions indicated, expressed as a percentage of the nominal value of the parameter.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
2. Include thermal damage curve for generator.
3. Include time-current characteristic curves for generator protective device.
4. Include fuel consumption in **gallons per hour (liters per hour)** at 0.8 power factor at 0.5, 0.75, and 1.0 times generator capacity.
5. Include generator efficiency at 0.8 power factor at 0.5, 0.75, and 1.0 times generator capacity.
6. Include airflow requirements for cooling and combustion air in **cubic feet per minute (cubic meters per minute)** at 0.8 power factor, with air-supply temperature of **95, 80, 70, and 50 deg F (35, 27, 21, and 10 deg C)**. Provide Drawings indicating requirements and limitations for location

of air intake and exhausts.
7. Include generator characteristics, including, but not limited to, kilowatt rating, efficiency, reactances, and short-circuit current capability.

B. Shop Drawings:

1. Include plans and elevations for engine generator and other components specified. Indicate access requirements affected by height of subbase fuel tank.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Identify fluid drain ports and clearance requirements for proper fluid drain.
4. Design calculations for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
5. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include base weights.
6. Include diagrams for power, signal, and control wiring. Complete schematic, wiring, and interconnection diagrams showing terminal markings for engine generators and functional relationship between all electrical components.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For [**Installer**][**manufacturer**][**and**][**testing agency**].

B. Seismic Qualification Data: Certificates, for engine generator, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: With engine and generator mounted on rails, identify center of gravity and total weight[**, including full fuel tank**], [**supplied enclosure,**][**external silencer,**][**subbase-mounted fuel tank,**][**skid-mounted load bank,**] and each piece of equipment not integral to the engine generator, and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Source Quality-Control Reports: Including, but not limited to, the following:

1. Certified summary of prototype-unit test report.
2. Certified Test Reports: For components and accessories that are equivalent, but not identical, to those tested on prototype unit.
3. Certified Summary of Performance Tests: Certify compliance with specified requirement to meet performance criteria for sensitive loads.
4. Report of factory test on units to be shipped for this Project, showing evidence of compliance with specified requirements.
5. Report of sound generation.
6. Report of exhaust emissions showing compliance with applicable regulations.
7. Certified Torsional Vibration Compatibility: Comply with NFPA 110.

D. Field quality-control reports.

E. Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For packaged engine generators to include in emergency, operation, and maintenance manuals.

1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

a. List of tools and replacement items recommended to be stored at Project for ready access. Include part and drawing numbers, current unit prices, and source of supply.
b. Operating instructions laminated and mounted adjacent to generator location.
c. Training plan.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: One for every 10 of each type and rating, but no fewer than one of each.
2. Indicator Lamps: Two for every six of each type used, but no fewer than two of each.
3. Filters: One set each of lubricating oil, fuel, and combustion-air filters.
4. Tools: Each tool listed by part number in operations and maintenance manual.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

B. Testing Agency Qualifications: Accredited by NETA.

1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

1.8 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace components of packaged engine generators and associated auxiliary components that fail in materials or workmanship within specified warranty period.

1. Warranty Period: <**Insert number**> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 DIESEL-ENGINE-DRIVEN GENERATOR SETS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Caterpillar, Inc.; Electric Power Division**]
2. [**Cummins Power Generation**]
3. [**Generac**]

4. [**Hipower Systems**]
5. [**Kohler Power Systems**]
6. [**Rolls-Royce Solutions America Inc.**]
7. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Caterpillar, Inc.; Electric Power Division**]
2. [**Cummins Power Generation**]
3. [**Generac**]
4. [**Hipower Systems**]
5. [**Kohler Power Systems**]
6. [**Rolls-Royce Solutions America Inc.**]
7. <**Insert manufacturer's name**>

C. Source Limitations: Obtain packaged engine generators and auxiliary components from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Engine generator housing, [**subbase fuel tank,**][**day tank,**] engine generator, batteries, battery racks, silencers, [**load banks,**] sound attenuating equipment, accessories, and components shall withstand the effects of earthquake motions determined according to [**ASCE/SEI 7**]<**Insert requirement**>.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
2. Shake-table testing shall comply with ICC-ES AC156. Testing shall be performed with all fluids at worst-case normal levels.[**Water shall be substituted for diesel fuel in fuel tank during test.**]
3. Component Importance Factor: [**1.5**][**1.0**].

B. B11 Compliance: Comply with B11.19.

C. NFPA Compliance:

1. Comply with NFPA 37.
2. Comply with NFPA 70.
3. Comply with NFPA 99.
4. Comply with NFPA 110 requirements for Level [**1**][**2**] EPSS.

D. UL Compliance: Comply with UL 2200.

E. Engine Exhaust Emissions: Comply with EPA Tier [**2**][**3**][**4**] requirements and applicable state and local government requirements.

F. Noise Emission: Comply with [**applicable state and local government requirements**]<**Insert Project criteria**> for maximum noise level at [**adjacent property boundaries**]<**Insert critical locations**> due to sound emitted by engine generator including engine, engine exhaust, engine cooling-air intake and discharge, and other components of installation.

G. Environmental Conditions: Engine generator system shall withstand the following environmental conditions without mechanical or electrical damage or degradation of performance capability:

1. Ambient Temperature: [41 to 104 deg F (5 to 40 deg C)][5 to 104 deg F (Minus 15 to plus 40 deg C)].
2. Relative Humidity: Zero to 95 percent.
3. Altitude: Sea level to [1000 feet (300 m)]<**Insert altitude**>.

H. Unusual Service Conditions: Engine generator equipment and installation are required to operate under the following conditions:

1. [**High salt-dust content in the air due to sea-spray evaporation**]<**Insert unusual condition**>.

2.3 ENGINE GENERATOR ASSEMBLY DESCRIPTION

A. Factory-assembled and -tested, water-cooled engine, with brushless generator and accessories.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.

C. Power Rating: [**Prime**][**Industrial**][**Standby**].

D. Overload Capacity: 110 percent of service load for 1 hour in 12 consecutive hours.

E. EPSS Class: Engine generator shall be classified as a [**Class 2**][**Class 6**][**Class 48**][**Class 96**]<**Insert classification**> according to NFPA 110.

F. Service Load: <**Insert number**> kVA.

G. Power Factor: [**0.8**]<**Insert number**>, lagging.

H. Frequency: 60 Hz.

I. Voltage: [**208**][**240**][**480**][**600**][**4160**]-V ac.

J. Phase: Three-phase, [**three**][**four**] wire, [**wye**][**delta**].

K. Induction Method: [**Naturally aspirated**][**Turbocharged**].

L. Governor: Adjustable isochronous, with speed sensing.

M. Mounting Frame: Structural steel framework to maintain alignment of mounted components without depending on concrete foundation. Provide lifting attachments sized and spaced to prevent deflection of base during lifting and moving.

1. Rigging Diagram: Inscribed on metal plate permanently attached to mounting frame to indicate location and lifting capacity of each lifting attachment and engine generator center of gravity.

N. Capacities and Characteristics:

1. Power Output Ratings: Nominal ratings as indicated at 0.8 power factor excluding power required for the continued and repeated operation of the unit and auxiliaries[**, with capacity as required to operate as a unit as evidenced by records of prototype testing**].
2. Nameplates: For each major system component to identify manufacturer's name and address, and model and serial number of component.

O. Engine Generator Performance:

1. Steady-State Voltage Operational Bandwidth: 3 percent of rated output voltage from no load to full load.
2. Transient Voltage Performance: Not more than 20 percent variation for 50 percent step-load increase or decrease. Voltage shall recover and remain within the steady-state operating band within three seconds.
3. Steady-State Frequency Operational Bandwidth: 0.5 percent of rated frequency from no load to full load.
4. Steady-State Frequency Stability: When system is operating at any constant load within the rated load, there shall be no random speed variations outside the steady-state operational band and no hunting or surging of speed.
5. Transient Frequency Performance: Less than 5 percent variation for 50 percent step-load increase or decrease. Frequency shall recover and remain within the steady-state operating band within five seconds.
6. Output Waveform: At no load, harmonic content measured line to line or line to neutral shall not exceed 5 percent total and 3 percent for single harmonics. Telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.
7. Sustained Short-Circuit Current: For a three-phase, bolted short circuit at system output terminals, system shall supply a minimum of 250 percent of rated full-load current for not less than 10 seconds and then clear the fault automatically, without damage to generator system components.
8. Start Time:

    a. Comply with NFPA 110, [**Type U**][**Type 10**] system requirements.
    b. [**10**]<**Insert number**> seconds.

P. Engine Generator Performance for Sensitive Loads:

1. Oversizing generator compared with the rated power output of the engine is permissible to meet specified performance.

    a. Nameplate Data for Oversized Generator: Show ratings required by the Contract Documents rather than ratings that would normally be applied to generator size installed.

2. Steady-State Voltage Operational Bandwidth: 1 percent of rated output voltage from no load to full load.
3. Transient Voltage Performance: Not more than 10 percent variation for 50 percent step-load increase or decrease. Voltage shall recover and remain within the steady-state operating band within 0.5 second.
4. Steady-State Frequency Operational Bandwidth: Plus or minus 0.25 percent of rated frequency from no load to full load.
5. Steady-State Frequency Stability: When system is operating at any constant load within the rated load, there shall be no random speed variations outside the steady-state operational band and no hunting or surging of speed.
6. Transient Frequency Performance: Less than 2-Hz variation for 50 percent step-load increase or decrease. Frequency shall recover and remain within the steady-state operating band within three seconds.
7. Output Waveform: At no load, harmonic content measured line to neutral shall not exceed 2 percent total with no slot ripple. Telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.
8. Sustained Short-Circuit Current: For a three-phase, bolted short circuit at system output terminals, system shall supply a minimum of 300 percent of rated full-load current for not less than 10 seconds and then clear the fault automatically, without damage to winding insulation or other generator system components.
9. Excitation System: Performance shall be unaffected by voltage distortion caused by nonlinear load.

a. Provide permanent magnet excitation for power source to voltage regulator.

10. Start Time:

a. Comply with NFPA 110, [**Type U**][**Type 10**] system requirements.
b. [**10**]<**Insert number**> seconds.

Q. Parallel Engine Generators:

1. Automatic reactive output power control and load sharing between engine generators operated in parallel.
2. Automatic regulation, automatic connection to a common bus, and automatic synchronization, with manual controls and instruments to monitor and control paralleling functions.
3. Protective relays required for equipment and personnel safety.
4. Paralleling suppressors to protect excitation systems.
5. Reverse power protection.
6. Loss of field protection.

2.4 DIESEL ENGINE

A. Fuel: ASTM D975, diesel fuel oil, Grade 2-D S15.

1. <**Insert specific fuel grade requirements**>.

B. Rated Engine Speed: 1800 rpm.

C. Lubrication System: Engine or skid-mounted.

1. Filter and Strainer: Rated to remove 90 percent of particles 5 micrometers and smaller while passing full flow.
2. Thermostatic Control Valve: Control flow in system to maintain optimum oil temperature. Unit shall be capable of full flow and is designed to be fail-safe.
3. Crankcase Drain: Arranged for complete gravity drainage to an easily removable container with no disassembly and without use of pumps, siphons, special tools, or appliances.

D. Jacket Coolant Heater: Electric-immersion type, factory installed in coolant jacket system. Comply with UL 499[**and with NFPA 110 requirements for Level 1 equipment for heater capacity**].

E. Integral Cooling System: Closed loop, liquid cooled, with radiator factory mounted on engine generator set mounting frame and integral engine-driven coolant pump.

1. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
2. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.
3. Expansion Tank: Constructed of welded steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gage glass and petcock.
4. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.
5. Coolant Hose: Flexible assembly with inside surface of nonporous rubber and outer covering of aging-, UV-, and abrasion-resistant fabric.

a. Rating: **50-psig (345-kPa)** maximum working pressure with coolant at **180 deg F (82 deg C)**, and noncollapsible under vacuum.

b. End Fittings: Flanges or steel pipe nipples with clamps to suit piping and equipment connections.

F. Remote Cooling System: Closed loop, liquid cooled, with remote radiator and [**integral engine driven**][**auxiliary**] coolant pump. Comply with requirements in Section 232113 "Hydronic Piping" for coolant piping.

1. Configuration: [**Vertical**][**Horizontal**] air discharge.
2. Radiator Core Tubes: [**Aluminum**][**Nonferrous-metal construction other than aluminum**].
3. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.
4. Expansion Tank: Constructed of welded steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gage glass and petcock.
5. Fan: Driven by [**multiple belts from engine shaft**][**totally enclosed electric motor with sealed bearings**].
6. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
7. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.

G. Muffler/Silencer:

1. Critical type, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

   a. Minimum sound attenuation of 25 dB at 500 Hz.
   b. Sound level measured at a distance of **25 feet (8 m)** from exhaust discharge after installation is complete shall be [**78**]<**Insert number**> dBA or less.

2. Semicritical type, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

   a. Minimum sound attenuation of 18 dB at 500 Hz.
   b. Sound level measured at a distance of **25 feet (8 m)** from exhaust discharge after installation is complete shall be [**85**]<**Insert number**> dBA or less.

3. Commercial type, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

   a. Minimum sound attenuation of 12 dB at 500 Hz.
   b. Sound level measured at a distance of **25 feet (8 m)** from exhaust discharge after installation is complete shall be [**90**]<**Insert number**> dBA or less.

H. Air-Intake Filter: [**Standard**][**Heavy**]-duty, engine-mounted air cleaner with replaceable dry-filter element and "blocked filter" indicator.

I. Starting System: [**12**][**24**]-V electric, with negative ground.

1. Components: Sized so they are not damaged during a full engine-cranking cycle with ambient temperature at maximum specified in "Performance Requirements" Article.
2. Cranking Motor: Heavy-duty unit that automatically engages and releases from engine flywheel without binding.
3. Cranking Cycle: [**As required by NFPA 110 for system level specified**][**60 seconds**].
4. Battery: [**Lead acid**][**Nickel cadmium**], with capacity within ambient temperature range specified

in "Performance Requirements" Article to provide specified cranking cycle at least [**twice**][**three times**] without recharging.

5. Battery Cable: Size as recommended by engine manufacturer for cable length indicated. Include required interconnecting conductors and connection accessories.
6. Battery Compartment: Factory fabricated of metal with acid-resistant finish and thermal insulation. Thermostatically controlled heater shall be arranged to maintain battery above **50 deg F (10 deg C)** regardless of external ambient temperature within range specified in "Performance Requirements" Article. Include accessories required to support and fasten batteries in place. Provide ventilation to exhaust battery gases.
7. Battery Stand: Factory-fabricated, two-tier metal with acid-resistant finish designed to hold the quantity of battery cells required and to maintain the arrangement to minimize lengths of battery interconnections.
8. Battery-Charging Alternator: Factory mounted on engine with solid-state voltage regulation and 35-A minimum continuous rating.
9. Battery Charger: Current-limiting, automatic-equalizing, and float-charging type designed for [**lead-acid**][**nickel-cadmium**] batteries. Unit shall comply with UL 1236 and include the following features:

    a. Operation: Equalizing-charging rate of 10 A shall be initiated automatically after battery has lost charge until an adjustable equalizing voltage is achieved at battery terminals. Unit shall then be automatically switched to a lower float-charging mode and shall continue to operate in that mode until battery is discharged again.
    b. Automatic Temperature Compensation: Adjust float and equalize voltages for variations in ambient temperature from **minus 40 to 140 deg F (minus 40 to plus 60 deg C)** to prevent overcharging at high temperatures and undercharging at low temperatures.
    c. Automatic Voltage Regulation: Maintain constant output voltage regardless of input voltage variations up to plus or minus 10 percent.
    d. Ammeter and Voltmeter: Flush mounted in door. Meters shall indicate charging rates.
    e. Safety Functions: Sense abnormally low battery voltage and close contacts providing low battery voltage indication on control and monitoring panel. Sense high battery voltage and loss of ac input or dc output of battery charger. Either condition shall close contacts that provide a battery-charger malfunction indication at system control and monitoring panel.
    f. Enclosure and Mounting: NEMA 250, Type 1, wall-mounted cabinet.

2.5 DIESEL FUEL-OIL SYSTEM

A. Comply with NFPA 37.

B. Piping: Fuel-oil piping shall be Schedule 40 black steel, complying with requirements in Section 231113 "Facility Fuel-Oil Piping." Cast iron, aluminum, copper, and galvanized steel shall not be used in the fuel-oil system.

C. Main Fuel Pump: Mounted on engine to provide primary fuel flow under starting and load conditions.

D. Fuel Filtering: Remove water and contaminants larger than 1 micron.

E. Relief-Bypass Valve: Automatically regulates pressure in fuel line and returns excess fuel to source.

F. Fuel-Oil Storage Tank: Comply with requirements in [**Section 231313 "Facility Underground Fuel-Oil Storage Tanks."**][**Section 231323 "Facility Aboveground Fuel-Oil Storage Tanks."**]

1. Fuel Tank Capacity: [**Minimum 133 percent of total fuel required for periodic maintenance operations between fuel refills plus fuel for the hours of continuous operation required for the indicated EPSS Class.**][**As recommended by engine manufacturer for an uninterrupted period of 8 hours' operation at 100 percent of rated power output of engine generator**

system without being refilled]<**Insert gallons (liters)**>.

2. Duplex Fuel-Oil Transfer Pump: Comply with requirements in Section 231213 "Facility Fuel-Oil Pumps."

G. Day Tank: Comply with UL 142, freestanding, factory-fabricated fuel tank assembly, with integral, float-controlled transfer pump and the following features:

1. Containment: Integral rupture basin with a capacity of 150 percent of nominal capacity of day tank.

   a. Leak Detector: Locate in rupture basin and connect to provide audible and visual alarm in the event of day-tank leak.

2. Tank Capacity: [**As recommended by engine manufacturer for an uninterrupted period of 4 hours' operation at 100 percent of rated power output of engine generator system without being refilled**]<**Insert gallons (liters)**>.
3. Pump Capacity: Exceeds maximum flow of fuel drawn by engine-mounted fuel supply pump at 110 percent of rated capacity, including fuel returned from engine.
4. Low-Level Alarm Sensor: Liquid-level device operates alarm contacts at 25 percent of normal fuel level.
5. High-Level Alarm Sensor: Liquid-level device operates alarm and redundant fuel shutoff contacts at midpoint between overflow level and 100 percent of normal fuel level.
6. Piping Connections: Factory-installed fuel supply and return lines from tank to engine; local fuel fill, vent line, overflow line; and tank drain line with shutoff valve.
7. Redundant High-Level Fuel Shutoff: Actuated by high-level alarm sensor in day tank to operate a separate motor-control device that disconnects day-tank pump motor. Sensor shall signal solenoid valve, located in fuel suction line between fuel storage tank and day tank, to close. Both actions shall remain in shutoff state until manually reset. Shutoff action shall initiate an alarm signal to control panel but shall not shut down engine generator.

H. Subbase-Mounted, Double-Wall, Fuel-Oil Tank: Factory installed and piped, complying with UL 142 fuel-oil tank. Features include the following:

1. Tank level indicator.
2. Fuel-Tank Capacity: Minimum 133 percent of total fuel required for planned operation plus fuel for periodic maintenance operations between fuel refills.
3. Leak detection in interstitial space.
4. Vandal-resistant fill cap.
5. Containment Provisions: Comply with requirements of authorities having jurisdiction.

2.6 CONTROL AND MONITORING

A. Automatic Starting System Sequence of Operation: When mode-selector switch on the control and monitoring panel is in the automatic position, remote-control contacts in one or more separate automatic transfer switches initiate starting and stopping of engine generator. When mode-selector switch is switched to the on position, engine generator starts. The off position of same switch initiates engine generator shutdown. When engine generator is running, specified system or equipment failures or derangements automatically shut down engine generator and initiate alarms.

B. Manual Starting System Sequence of Operation: Switching on-off switch on the generator control panel to the on position starts engine generator. The off position of same switch initiates engine generator shutdown. When engine generator is running, specified system or equipment failures or derangements automatically shut down engine generator and initiate alarms.

C. Provide minimum run time control set for [**15**][**30**]<**Insert number**> minutes with override only by operation of a remote emergency-stop switch.

D. Comply with UL 508A.

E. Configuration:

1. Operating and safety indications, protective devices, basic system controls, and engine gages shall be grouped in a common control and monitoring panel mounted on the engine generator. Mounting method shall isolate the control panel from engine generator vibration. Panel shall be powered from the engine generator battery.
2. Operating and safety indications, protective devices, basic system controls, and engine gages shall be grouped in a common wall-mounted control and monitoring panel. Panel shall be powered from the engine generator battery.
3. Operating and safety indications, protective devices, basic system controls, engine gages, instrument transformers, generator disconnect switch or circuit breaker, and other indicated components shall be grouped in a combination control and power panel. Control and monitoring section of panel shall be isolated from power sections by steel barriers. Panel shall be powered from the engine generator battery. Panel features shall include the following:

    a. Wall-Mounting Cabinet Construction: Rigid, self-supporting steel unit complying with NEMA ICS 6.
    b. Switchboard Construction: Freestanding unit complying with Section 262413 "Switchboards." Power bus shall be copper. Bus, bus supports, control wiring, and temperature rise shall comply with UL 891.
    c. Switchgear Construction: Freestanding unit complying with Section 262300 "Low-Voltage Switchgear."

F. Control and Monitoring Panel:

1. Digital engine generator controller with integrated LCD display, controls, and microprocessor, capable of local and remote control, monitoring, and programming, with battery backup.
2. Analog control panel with dedicated gages and indicator lights for the instruments and alarms indicated below.
3. Instruments: Located on the control and monitoring panel and viewable during operation.

    a. Engine lubricating-oil pressure gage.
    b. Engine-coolant temperature gage.
    c. DC voltmeter (alternator battery charging).
    d. Running-time meter.
    e. AC voltmeter, [**for each phase**][**connected to a phase selector switch**].
    f. AC ammeter, [**for each phase**][**connected to a phase selector switch**].
    g. AC frequency meter.
    h. Generator-voltage adjusting rheostat.

4. Controls and Protective Devices: Controls, shutdown devices, and common alarm indication, including the following:

    a. Cranking control equipment.
    b. Run-Off-Auto switch.
    c. Control switch not in automatic position alarm.
    d. Overcrank alarm.
    e. Overcrank shutdown device.
    f. Low-water temperature alarm.
    g. High engine temperature prealarm.
    h. High engine temperature.

i. High engine temperature shutdown device.
j. Overspeed alarm.
k. Overspeed shutdown device.
l. Low fuel main tank.

1) Low-fuel-level alarm shall be initiated when the level falls below that required for operation for duration required [**for the indicated EPSS class**][**in "Fuel Tank Capacity" Subparagraph in "Diesel Fuel-Oil System" Article**].

m. Coolant low-level alarm.
n. Coolant low-level shutdown device.
o. Coolant high-temperature prealarm.
p. Coolant high-temperature alarm.
q. Coolant low-temperature alarm.
r. Coolant high-temperature shutdown device.
s. EPS load indicator.
t. Battery high-voltage alarm.
u. Low cranking voltage alarm.
v. Battery-charger malfunction alarm.
w. Battery low-voltage alarm.
x. Lamp test.
y. Contacts for local and remote common alarm.
z. Low-starting air pressure alarm.
aa. Low-starting hydraulic pressure alarm.
bb. Remote manual stop shutdown device.
cc. Air shutdown damper alarm when used.
dd. Air shutdown damper shutdown device when used.
ee. Generator overcurrent-protective-device not-closed alarm.
ff. Hours of operation.
gg. Engine generator metering, including voltage, current, hertz, kilowatt, kilovolt ampere, and power factor.

G. Engine Generator Metering: Comply with [**Section 260913 "Electrical Power Monitoring and Control."**][**Section 262713 "Electricity Metering."**][**Section 260913 "Electrical Power Monitoring and Control" and Section 262713 "Electricity Metering."**]

H. Connection to Datalink:

1. A separate terminal block, factory wired to Form C dry contacts, for each alarm and status indication.
2. Provide connections for datalink transmission of indications to remote data terminals via [**ModBus**][**LonWorks**][**Ethernet**]<**Insert data protocol**>. Data system connections to terminals are covered in Section 260913 "Electrical Power Monitoring and Control."

I. Common Remote Panel with Common Audible Alarm: Include necessary contacts and terminals in control and monitoring panel. Remote panel shall be powered from the engine generator battery.

J. Remote Alarm Annunciator: An LED indicator light labeled with proper alarm conditions shall identify each alarm event, and a common audible signal shall sound for each alarm condition. Silencing switch in face of panel shall silence signal without altering visual indication. Connect so that after an alarm is silenced, clearing of initiating condition will reactivate alarm until silencing switch is reset. Cabinet and faceplate are surface- or flush-mounting type to suit mounting conditions indicated.

1. Overcrank alarm.
2. Low water-temperature alarm.

3. High engine temperature prealarm.
4. High engine temperature alarm.
5. Low lube oil pressure alarm.
6. Overspeed alarm.
7. Low fuel main tank alarm.
8. Low coolant level alarm.
9. Low cranking voltage alarm.
10. Contacts for local and remote common alarm.
11. Audible-alarm silencing switch.
12. Air shutdown damper when used.
13. Run-Off-Auto switch.
14. Control switch not in automatic position alarm.
15. Fuel tank derangement alarm.
16. Fuel tank high-level shutdown of fuel supply alarm.
17. Lamp test.
18. Low-cranking voltage alarm.
19. Generator overcurrent-protective-device not-closed alarm.

K. Supporting Items: Include sensors, transducers, terminals, relays, and other devices and include wiring required to support specified items. Locate sensors and other supporting items on engine or generator unless otherwise indicated.

L. Remote Emergency-Stop Switch: Flush; wall mounted unless otherwise indicated; and labeled. Push button shall be protected from accidental operation.

2.7 GENERATOR OVERCURRENT AND FAULT PROTECTION

A. Overcurrent protective devices shall be coordinated to optimize selective tripping when a short circuit occurs.

1. Overcurrent protective devices for the entire EPSS shall be coordinated to optimize selective tripping when a short circuit occurs. Coordination of protective devices shall consider both utility and EPSS as the voltage source.
2. Overcurrent protective devices for the EPSS shall be accessible only to authorized personnel.

B. Generator Overcurrent Protective Device:

1. Molded-case circuit breaker, thermal-magnetic type; 100 percent rated; complying with UL 489:

    a. Tripping Characteristic: Designed specifically for generator protection.
    b. Trip Rating: Matched to generator output rating.
    c. Shunt Trip: Connected to trip breaker when engine generator is shut down by other protective devices.
    d. Mounting: Adjacent to, or integrated with, control and monitoring panel.

2. Molded-case circuit breaker, electronic-trip type; 100 percent rated; complying with UL 489:

    a. Tripping Characteristics: Adjustable long-time and short-time delay and instantaneous.
    b. Trip Settings: Selected to coordinate with generator thermal damage curve.
    c. Shunt Trip: Connected to trip breaker when engine generator is shut down by other protective devices.
    d. Mounting: Adjacent to, or integrated with, control and monitoring panel.

3. Insulated-case circuit breaker, electronic-trip type; 100 percent rated; complying with UL 489:

a. Tripping Characteristics: Adjustable long-time and short-time delay and instantaneous.
b. Trip Settings: Selected to coordinate with generator thermal damage curve.
c. Shunt Trip: Connected to trip breaker when engine generator is shut down by other protective devices.
d. Mounting: Adjacent to, or integrated with, control and monitoring panel.

4. Molded-case type disconnect switch; 100 percent rated:

a. Trip Rating: Matched to generator output rating.
b. Shunt Trip: Connected to trip switch when signaled by generator protector or by other protective devices.

C. Generator Protector: Microprocessor-based unit shall continuously monitor current level in each phase of generator output, integrate generator heating effect over time, and predict when thermal damage of alternator will occur. When signaled by generator protector or other engine generator protective devices, a shunt-trip device in the generator disconnect switch shall open the switch to disconnect the generator from load circuits. Protector performs the following functions:

1. Initiates a generator overload alarm when generator has operated at an overload equivalent to 110 percent of full-rated load for 60 seconds. Indication for this alarm is integrated with other engine generator malfunction alarms. Contacts shall be available for load shed functions.
2. Under single- or three-phase fault conditions, regulates generator to 300 percent of rated full-load current for up to 10 seconds.
3. As overcurrent heating effect on the generator approaches the thermal damage point of the unit, protector switches the excitation system off, opens the generator disconnect device, and shuts down the engine generator.
4. Senses clearing of a fault by other overcurrent devices and controls recovery of rated voltage to avoid overshoot.

D. Ground-Fault Indication: Comply with NFPA 70, "Emergency System" signals for ground fault.

1. Indicate ground fault with other engine generator alarm indications.
2. Trip generator protective device on ground fault.

2.8 GENERATOR, EXCITER, AND VOLTAGE REGULATOR

A. Comply with NEMA MG 1.

B. Drive: Generator shaft shall be directly connected to engine shaft. Exciter shall be rotated integrally with generator rotor.

C. Electrical Insulation: [**Class H**][**or**][**Class F**].

D. Stator-Winding Leads: Brought out to terminal box to permit future reconnection for other voltages if required. Provide [**six**][**12**]-lead alternator.

E. Range: Provide [**limited**][**broad**][**extended**] range of output voltage by adjusting the excitation level.

F. Construction shall prevent mechanical, electrical, and thermal damage due to vibration, overspeed up to 125 percent of rating, and heat during operation at 110 percent of rated capacity.

G. Enclosure: Dripproof.

H. Instrument Transformers: Mounted within generator enclosure.

I. Voltage Regulator: Solid-state type, separate from exciter, providing performance as specified[**and as required by NFPA 110**].

1. Adjusting Rheostat on Control and Monitoring Panel: Provide plus or minus 5 percent adjustment of output-voltage operating band.
2. Maintain voltage within [**15**][**20**][**30**] percent on one step, full load.
3. Provide anti-hunt provision to stabilize voltage.
4. Maintain frequency within [**5**][**10**][**15**] percent and stabilize at rated frequency within [**2**][**5**] seconds.

J. Strip Heater: Thermostatically controlled unit arranged to maintain stator windings above dew point.

K. Windings: Two-thirds pitch stator winding and fully linked amortisseur winding.

L. Subtransient Reactance: [**12**]<**Insert number**> percent, maximum.

2.9 LOAD BANK

A. Description:

1. Permanent, outdoor, weatherproof, remote-controlled, forced-air-cooled, [**resistive**][**resistive and reactive**] unit capable of providing a balanced three-phase, delta-connected load to engine generator at [**100**]<**Insert number**> percent rated-system capacity, at [**80**]<**Insert number**> percent power factor, lagging.[**Unit may contain separate resistive and reactive load banks controlled by a common control panel.**] Unit shall be capable of selective control of load in 25 percent steps and with minimum step changes of approximately 5 and 10 percent available.
2. Permanent, radiator-mounted[**, resistive**] unit capable of providing a balanced three-phase, delta-connected load to engine generator at [**50**][**70**]<**Insert number**> percent rated-system capacity. Unit shall be capable of selective control of load in 25 percent steps of load-bank rating and with minimum step changes of approximately 5 and 10 percent available.

B. Resistive Load Elements: Corrosion-resistant chromium alloy with ceramic and stainless-steel supports. Elements shall be double insulated and designed for repetitive on-off cycling. Elements shall be mounted in removable aluminized-steel heater cases. Galvanized steel is prohibited. Element's maximum resistance shall be between 100 and 105 percent of rated resistance.

C. Reactive Load Elements: Epoxy-encapsulated reactor coils.

D. Load-Bank Heat Dissipation: Integral fan with totally enclosed motor shall provide uniform cooling airflow through load elements. Airflow and coil operating current shall be such that, at maximum load, with ambient temperature at the upper end of specified range, load-bank elements operate at not more than 50 percent of maximum continuous temperature rating of resistance elements.

E. Load-Element Switching: Remote-controlled contactors switch groups of load elements. Contactor coils are rated 120 V. Contactors shall be located in a separate NEMA 250, Type 3R enclosure within load-bank enclosure, accessible from exterior through hinged doors with tumbler locks.

F. Contactor Enclosures: Heated by thermostatically controlled strip heaters to prevent condensation.

G. Load-Bank Enclosures: NEMA 250, Type 3R, aluminized steel complying with NEMA ICS 6. Louvers at cooling-air intake and discharge openings shall prevent entry of rain and snow. Openings for airflow shall be screened with **1/2-inch- (13-mm-)** square, galvanized-steel mesh. Reactive load bank shall include automatic shutters at air intake and discharge. Components other than resistive elements shall

receive exterior epoxy coating with compatible primer. Comply with requirements in Section 099600 "High-Performance Coatings."

H. Protective Devices: Power input circuits to load banks shall be fused, and fuses shall be selected to coordinate with generator circuit breaker. Fuse blocks shall be located in contactor enclosure. Cooling airflow and overtemperature sensors shall automatically shut down and lock out load bank until manually reset. Safety interlocks on access panels and doors shall disconnect load power, control, and heater circuits. Fan motor shall be separately protected by overload and short-circuit devices. Short-circuit devices shall be noninterchangeable fuses with 200,000-A interrupting capacity.

I. Load-Bank Remote-Control Panel: Separate from load bank in NEMA 250, Type 1 enclosure with a control power switch and pilot light, and switches controlling groups of load elements.

J. Control Sequence: Control panel may be preset for adjustable single-step loading of generator during automatic exercising.

2.10 OUTDOOR ENGINE GENERATOR ENCLOSURE

A. Description:

1. Vandal-resistant, sound-attenuating, weatherproof steel housing; wind resistant up to **100 mph (160 km/h)**. Multiple panels shall be lockable and provide adequate access to components requiring maintenance. Panels shall be removable by one person without tools. Instruments and control shall be mounted within enclosure.

    a. Sound Attenuation Level: <**Insert level**>.

2. Prefabricated or pre-engineered, galvanized-steel-clad, integral structural-steel-framed, walk-in enclosure; erected on concrete foundation.

B. Structural Design and Anchorage: Comply with ASCE/SEI 7 for wind loads up to **100 mph (160 km/h)**.

C. Seismic Design: Comply with seismic requirements in Section 260548.16 "Seismic Controls for Electrical Systems."

D. Fire Protection: Provide fire protection according to Section 211000 "Water-Based Fire-Suppression Systems." Provide smoke detector in enclosure; mounted according to NFPA 72.

E. Hinged Doors: With padlocking provisions.

F. Space Heater: Thermostatically controlled and sized to prevent condensation.

G. Lighting: Provide weather-resistant [**fluorescent**][**LED**] lighting with [**30 fc (330 lx)**][**50 fc (550 lx)**] average maintained.

H. Thermal Insulation: Manufacturer's standard materials and thickness selected in coordination with space heater to maintain winter interior temperature within operating limits required by engine generator components.

I. Muffler Location: [**Within**][**External to**] enclosure.

J. Engine-Cooling Airflow through Enclosure: Maintain temperature rise of system components within required limits when unit operates at 110 percent of rated load for two hours with ambient temperature

at top of range specified in system service conditions.

1. Louvers: Fixed-engine, cooling-air inlet and discharge. Stormproof and drainable louvers prevent entry of rain and snow.
2. Automatic Dampers: At engine cooling-air inlet and discharge. Dampers shall be closed to reduce enclosure heat loss in cold weather when unit is not operating.
3. Ventilation: Provide temperature-controlled exhaust fan interlocked to prevent operation when engine is running.

K. Interior Lights with Switch: Factory-wired, vapor-proof luminaires within housing; arranged to illuminate controls and accessible interior. Arrange for external electrical connection.

1. AC lighting system and connection point for operation when remote source is available.
2. DC lighting system for operation when remote source and generator are both unavailable.

L. Convenience Outlets: Factory-wired, GFCI. Arrange for external electrical connection.

2.11 REMOTE RADIATOR MOTORS

A. Description: NEMA MG 1, Design B, medium-induction, random-wound, squirrel-cage motor.

B. Efficiency: Energy efficient, as defined in NEMA MG 1.

C. Service Factor: 1.15.

D. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.

E. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

F. Temperature Rise: Match insulation rating.

G. Code Letter Designation:

1. Motors [**15**]<**Insert number**> HP and Larger: NEMA starting Code F or Code G.
2. Motors Smaller Than [**15**]<**Insert number**> HP: Manufacturer's standard starting characteristic.

H. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

I. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in electrical Sections.

2.12 VIBRATION ISOLATION DEVICES

A. Elastomeric Isolator Pads: Oil- and water-resistant elastomer or natural rubber, arranged in single or multiple layers, molded with a nonslip pattern and galvanized-steel baseplates of sufficient stiffness for uniform loading over pad area, and factory cut to sizes that match requirements of supported equipment.

1. Material: [**Standard neoprene**][**Natural rubber**][**Bridge-bearing neoprene, complying with AASHTO M 251**] separated by steel shims.
2. Shore A Scale Durometer Rating: [**30**][**40**][**45**][**50**][**60**][**65**][**70**]<**Insert number**>.

3. Number of Layers: [**One**][**Two**][**Three**][**Four**]<**Insert number**>.
4. Minimum Deflection: [**1 inch (25 mm)**]<**Insert value**>.

B. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic restraint.

1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to wind loads or if weight is removed; factory-drilled baseplate bonded to **1/4-inch- (6-mm-)** thick, elastomeric isolator pad attached to baseplate underside; and adjustable equipment-mounting and -leveling bolt that acts as blocking during installation.
2. Outside Spring Diameter: Not less than 80 percent of compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of required deflection at rated load.
4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
6. Minimum Deflection: [**1 inch (25 mm)**]<**Insert value**>.

C. Comply with requirements in Section 232116 "Hydronic Piping Specialties" for vibration isolation and flexible connector materials for steel piping.

D. Comply with requirements in Section 233113 "Metal Ducts" for vibration isolation and flexible connector materials for exhaust shroud and ductwork.

E. Vibration isolation devices shall not be used to accommodate misalignments or to make bends.

2.13 FINISHES

A. Indoor and Outdoor Enclosures and Components: Manufacturer's standard finish over corrosion-resistant pretreatment and compatible primer.

2.14 SOURCE QUALITY CONTROL

A. Prototype Testing: Factory test engine generator using same engine model, constructed of identical or equivalent components and equipped with identical or equivalent accessories.

1. Tests: Comply with IEEE 115[**and with NFPA 110, Level 1 Energy Converters**].

B. Project-Specific Equipment Tests: Before shipment, factory test engine generator and other system components and accessories manufactured specifically for this Project. Perform tests at rated load and power factor. Include the following tests:

1. Test components and accessories furnished with installed unit that are not identical to those on tested prototype to demonstrate compatibility and reliability.
2. Test generator, exciter, and voltage regulator as a unit.
3. Full load run.
4. Maximum power.
5. Voltage regulation.
6. Transient and steady-state governing.
7. Single-step load pickup.
8. Safety shutdown.
9. Provide 14 days' advance notice of tests and opportunity for observation of tests by Owner's representative.
10. Report factory test results within 10 days of completion of test.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, equipment bases, and conditions, with Installer present, for compliance with requirements for installation and other conditions affecting packaged engine generator performance.

B. Examine roughing-in for piping systems and electrical connections. Verify actual locations of connections before packaged engine generator installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:

1. Notify [**Architect**][**Construction Manager**][**Owner**] no fewer than [**two**]<**Insert number**> working days in advance of proposed interruption of electrical service.
2. Do not proceed with interruption of electrical service without [**Architect's**][**Construction Manager's**][**Owner's**] written permission.

3.3 INSTALLATION

A. Comply with NECA 1 and NECA 404.

B. Comply with packaged engine generator manufacturers' written installation and alignment instructions[**and with NFPA 110**].

C. Equipment Mounting:

1. Install packaged engine generators on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
2. Coordinate size and location of concrete bases for packaged engine generators[**and remote radiators mounted on grade**]. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.
3. Install [**packaged engine generator**][**engine generator in a walk-in enclosure**] with [**elastomeric isolator pads**][**restrained spring isolators**] having a minimum deflection of [**1 inch (25 mm)**]<**Insert static deflection**> on **4-inch- (100-mm-)** high concrete base. Secure [**sets**][**enclosure**] to anchor bolts installed in concrete bases. Concrete base construction is specified in Section 260548.16 "Seismic Controls for Electrical Systems."
4. Remote Radiators:

a. Install remote radiator with [**elastomeric isolator pads**][**restrained spring isolators**] on [**concrete base on grade**][**roof equipment supports on roof**].
b. Coordinate size and location of roof curbs, equipment supports, and roof penetrations for remote radiators. These items are specified in Section 077200 "Roof Accessories."

D. Install packaged engine generator to provide access, without removing connections or accessories, for periodic maintenance.

E. Cooling System: Install Schedule 40 black steel piping with welded joints for cooling water piping between engine generator and [**heat exchanger**][**remote radiator**]. Piping materials and installation requirements are specified in Section 232113 "Hydronic Piping."

1. Install isolating thimbles where exhaust piping penetrates combustible surfaces. Provide a minimum of **9 inches (225 mm)** of clearance from combustibles.
2. Insulate cooling-system piping and components according to requirements in Section 230719 "HVAC Piping Insulation."

F. Exhaust System: Install Schedule 40 black steel piping with welded joints and connect to engine muffler. Install thimble at wall. Piping shall be same diameter as muffler outlet.

1. Piping materials and installation requirements are specified in Section 232113 "Hydronic Piping."
2. Install flexible connectors and steel piping materials according to requirements in Section 232116 "Hydronic Piping Specialties."
3. Insulate muffler/silencer and exhaust system components according to requirements in Section 230719 "HVAC Piping Insulation."
4. Install isolating thimbles where exhaust piping penetrates combustible surfaces with a minimum of **9 inches (225 mm)** of clearance from combustibles.

G. Drain Piping: Install condensate drain piping to muffler drain outlet full size of drain connection with a shutoff valve, stainless-steel flexible connector, and Schedule 40 black steel pipe with welded joints.

1. Piping materials and installation requirements are specified in Section 232113 "Hydronic Piping."
2. Drain piping valves, connectors, and installation requirements are specified in Section 232116 "Hydronic Piping Specialties."

H. Fuel Piping:

1. Diesel storage tanks, tank accessories, piping, valves, and specialties for fuel systems are specified in Section 231113 "Facility Fuel-Oil Piping."
2. Copper and galvanized steel shall not be used in the fuel-oil piping system.

I. Install electrical devices furnished by equipment manufacturers but not specified to be factory mounted.

3.4 CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping and specialties.

B. Connect fuel, cooling-system, and exhaust-system piping adjacent to packaged engine generator to allow space for service and maintenance.

C. Connect cooling-system water piping to engine generator and [**remote radiator**][**heat exchanger**] with flexible connectors.

D. Connect engine exhaust pipe to engine with flexible connector.

E. Connect fuel piping to engines with a gate valve and union and flexible connector.

F. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

G. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

Provide a minimum of one 90-degree bend in flexible conduit routed to the engine generator from a stationary element.

H. Balance single-phase loads to obtain a maximum of 10 percent unbalance between any two phases.

3.5 IDENTIFICATION

A. Identify system components according to Section 230553 "Identification for HVAC Piping and Equipment" and Section 260553 "Identification for Electrical Systems."

B. Install a sign indicating the generator neutral is bonded to the main service neutral at the main service location.

3.6 FIELD QUALITY CONTROL

A. Testing Agency:

1. Owner will engage a qualified testing agency to perform tests and inspections.
2. Engage a qualified testing agency to perform tests and inspections.
3. Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
4. Perform tests and inspections[**with the assistance of a factory-authorized service representative**].

B. Tests and Inspections:

1. Perform tests recommended by manufacturer and each visual and mechanical inspection and electrical and mechanical test listed in first two subparagraphs below, as specified in NETA ATS. Certify compliance with test parameters.

    a. Visual and Mechanical Inspection:

        1) Compare equipment nameplate data with Drawings and the Specifications.
        2) Inspect physical and mechanical condition.
        3) Inspect anchorage, alignment, and grounding.
        4) Verify that the unit is clean.

    b. Electrical and Mechanical Tests:

        1) Perform insulation-resistance tests according to IEEE 43.

            a) Machines Larger Than **200 hp (150 kW)**: Test duration shall be 10 minutes. Calculate polarization index.
            b) Machines **200 hp (150 kW)** or Less: Test duration shall be one minute. Calculate the dielectric-absorption ratio.

        2) Test protective relay devices.
        3) Verify phase rotation, phasing, and synchronized operation as required by the application.
        4) Functionally test engine shutdown for low oil pressure, overtemperature, overspeed, and other protection features as applicable.
        5) Perform vibration test for each main bearing cap.
        6) Verify correct functioning of the governor and regulator.

2. NFPA 110 Acceptance Tests: Perform tests required by NFPA 110 that are additional to those specified here, including, but not limited to, single-step full-load pickup test.
3. Battery Tests: Equalize charging of battery cells according to manufacturer's written instructions. Record individual cell voltages.

    a. Measure charging voltage and voltages between available battery terminals for full-charging and float-charging conditions. Check electrolyte level and specific gravity under both conditions.
    b. Test for contact integrity of all connectors. Perform an integrity load test and a capacity load test for the battery.
    c. Verify acceptance of charge for each element of the battery after discharge.
    d. Verify that measurements are within manufacturer's specifications.

4. Battery-Charger Tests: Verify specified rates of charge for both equalizing and float-charging conditions.
5. System Integrity Tests: Methodically verify proper installation, connection, and integrity of each element of engine generator system before and during system operation. Check for air, exhaust, and fluid leaks.
6. Exhaust-System Back-Pressure Test: Use a manometer with a scale exceeding **40-inch wg (120 kPa)**. Connect to exhaust line close to engine exhaust manifold. Verify that back pressure at full-rated load is within manufacturer's written allowable limits for the engine.
7. Exhaust Emissions Test: Comply with applicable government test criteria.
8. Voltage and Frequency Transient Stability Tests: Use recording oscilloscope to measure voltage and frequency transients for 50 and 100 percent step-load increases and decreases, and verify that performance is as specified.
9. Harmonic-Content Tests: Measure harmonic content of output voltage at 25 and 100 percent of rated linear load. Verify that harmonic content is within specified limits.
10. Noise Level Tests: Measure A-weighted level of noise emanating from engine generator installation, including engine exhaust and cooling-air intake and discharge, at [**four**]<**Insert number**> locations [**25 feet (8 m) from edge of the generator enclosure**][**on the property line**]<**Insert location for measurement**>, and compare measured levels with required values.

C. Coordinate tests with tests for transfer switches and run them concurrently.

D. Test instruments shall have been calibrated within the past 12 months, traceable to NIST Calibration Services, and adequate for making positive observation of test results. Make calibration records available for examination on request.

E. Leak Test: After installation, charge exhaust, coolant, and fuel systems and test for leaks. Repair leaks and retest until no leaks exist.

F. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation for generator and associated equipment.

G. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

H. Remove and replace malfunctioning units and [**retest**][**reinspect**] as specified above.

I. Retest: Correct deficiencies identified by tests and observations, and retest until specified requirements are met.

J. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation resistances, time delays, and other values and observations. Attach a label or tag to each tested component indicating satisfactory completion of tests.

K. Infrared Scanning: After Substantial Completion, but not more than 60 days after final acceptance, perform an infrared scan of each power wiring termination and each bus connection while running with maximum load. Remove all access panels so terminations and connections are accessible to portable scanner.

1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan 11 months after date of Substantial Completion.
2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
3. Record of Infrared Scanning: Prepare a certified report that identifies terminations and connections checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.7 MAINTENANCE SERVICE

A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include [**12**]<**Insert number**> months' full maintenance by skilled employees of manufacturer's authorized service representative. Include quarterly preventive maintenance and exercising to check for proper starting, load transfer, and running under load. Include routine preventive maintenance as recommended by manufacturer and adjusting as required for proper operation. Parts shall be manufacturer's authorized replacement parts and supplies.

3.8 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain packaged engine generators.

Task	Specification	Specification Description
26 32 13 13	26 32 13 19	Bi-Fuel-Engine-Driven Generator Sets

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 32 13 19 - BI-FUEL-ENGINE-DRIVEN GENERATOR SETS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Bi-fuel-engine-driven generator sets.
2. Bi-fuel engine.
3. Diesel fuel-oil system.
4. Gas fuel system.
5. Control and monitoring.
6. Generator overcurrent and fault protection.
7. Generator, exciter, and voltage regulator.
8. Load bank.
9. Outdoor engine generator enclosure.
10. Remote radiator motors.
11. Vibration isolation devices.

B. Related Requirements:

1. Section 262313 "Paralleling Low-Voltage Switchgear" for controls and paralleling equipment for large or multiple parallel engine generators.
2. Section 263343 "Battery Chargers" for remote engine battery chargers.
3. Section 263600 "Transfer Switches" for transfer switches including sensors and relays to initiate automatic-starting and -stopping signals for engine generators.

1.2 DEFINITIONS

A. Bi-Fuel: An engine generator that starts using diesel fuel, and upon assumption of the electrical load, transitions to a diesel fuel and natural gas mix.

B. EPS: Emergency power supply.

C. EPSS: Emergency power supply system.

D. Operational Bandwidth: The total variation from the lowest to highest value of a parameter over the range of conditions indicated, expressed as a percentage of the nominal value of the parameter.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
2. Include thermal damage curve for generator.
3. Include time-current characteristic curves for generator protective device.
4. Include fuel consumption in [**gallons per hour (liters per hour)**][**and**][**cubic feet per hour (cubic meters per hour)**] at 0.8 power factor at 0.5, 0.75, and 1.0 times generator capacity.

a. Include fuel consumption at power factor and loads above at 3:1, 2:1, and 1:1 natural gas to diesel ratio.

5. Include generator efficiency at 0.8 power factor at 0.5, 0.75, and 1.0 times generator capacity.
6. Include airflow requirements for cooling and combustion air in **cubic feet per minute (cubic meters per minute)** at 0.8 power factor, with air-supply temperature of **95, 80, 70, and 50 deg F (35, 27, 21, and 10 deg C)**. Provide Drawings indicating requirements and limitations for location of air intake and exhausts.
7. Include generator characteristics, including, but not limited to, kilowatt rating, efficiency, reactances, and short-circuit current capability.

B. Shop Drawings:

1. Include plans and elevations for engine generator and other components specified. Indicate access requirements affected by height of subbase fuel tank.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Identify fluid drain ports and clearance requirements for proper fluid drain.
4. Design calculations for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
5. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include base weights.
6. Include diagrams for power, signal, and control wiring. Complete schematic, wiring, and interconnection diagrams showing terminal markings for EPS equipment and functional relationship between all electrical components.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For [**Installer**][**manufacturer**][**and**][**testing agency**].

B. Seismic Qualification Data: Certificates, for engine generator, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: With engine and generator mounted on rails, identify center of gravity and total weight[**including full fuel tank**], [**supplied enclosure,**][**external silencer,**][**subbase-mounted fuel tank,**][**skid-mounted load bank,**] and each piece of equipment not integral to the engine generator, and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Source Quality-Control Reports: Including, but not limited to, the following:

1. Certified summary of prototype-unit test report.
2. Certified Test Reports: For components and accessories that are equivalent, but not identical, to those tested on prototype unit.
3. Certified Summary of Performance Tests: Certify compliance with specified requirement to meet performance criteria for sensitive loads.
4. Report of factory test on units to be shipped for this Project, showing evidence of compliance with specified requirements.
5. Report of sound generation.

6. Report of exhaust emissions showing compliance with applicable regulations.
7. Certified Torsional Vibration Compatibility: Comply with NFPA 110.

D. Field quality-control reports.

E. Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For packaged engine generators to include in emergency, operation, and maintenance manuals.

1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

a. List of tools and replacement items recommended to be stored at Project for ready access. Include part and drawing numbers, current unit prices, and source of supply.
b. Operating instructions laminated and mounted adjacent to generator location.
c. Training plan.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: One for every 10 of each type and rating, but no fewer than one of each.
2. Indicator Lamps: Two for every six of each type used, but no fewer than two of each.
3. Filters: One set each of lubricating oil, fuel, and combustion-air filters.
4. Tools: Each tool listed by part number in operations and maintenance manual.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

B. Testing Agency Qualifications: Accredited by NETA.

1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

1.8 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace components of packaged engine generators and associated auxiliary components that fail in materials or workmanship within specified warranty period.

1. Warranty Period: <**Insert number**> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 BI-FUEL-ENGINE-DRIVEN GENERATOR SETS

A. Manufacturers: Subject to compliance with requirements, [**provide products by the following**][**provide products by one of the following**][**available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following**]:

1. [**Caterpillar, Inc.; Electric Power Division**]
2. [**Cummins Power Generation**]
3. [**Generac**]
4. [**Rolls-Royce Solutions America Inc.**]
5. <**Insert manufacturer's name**>

B. Basis-of-Design Product: Subject to compliance with requirements, provide <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

1. [**Caterpillar, Inc.; Electric Power Division**]
2. [**Cummins Power Generation**]
3. [**Generac**]
4. [**Rolls-Royce Solutions America Inc.**]
5. <**Insert manufacturer's name**>

C. Source Limitations: Obtain packaged engine generators and auxiliary components from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Engine generator housing, [**subbase fuel tank,**][**day tank,**] engine generator, batteries, battery racks, silencers, [**load banks,**]and sound-attenuating equipment, accessories, and components shall withstand the effects of earthquake motions determined according to [**ASCE/SEI 7**]<**Insert requirement**>.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified[**and the unit will be fully operational after the seismic event**]."
2. Shake-table testing shall comply with ICC-ES AC156. Testing shall be performed with all fluids at worst case normal levels.[**Water shall be substituted for diesel fuel in fuel tank during test.**]
3. Component Importance Factor: [**1.5**][**1.0**].

B. B11 Compliance: Comply with B11.19.

C. NFPA Compliance:

1. Comply with NFPA 37.
2. Comply with NFPA 70.
3. Comply with NFPA 99.
4. Comply with NFPA 110 requirements for Level [**1**][**2**] EPSS.

D. UL Compliance: Comply with UL 2200.

E. Engine Exhaust Emissions: Comply with EPA Tier [**2**][**3**][**4**] requirements and applicable state and local

government requirements.

F. Noise Emission: Comply with [**applicable state and local government requirements**]<**Insert Project criteria**> for maximum noise level at [**adjacent property boundaries**]<**Insert critical locations**> due to sound emitted by engine generator including engine, engine exhaust, engine cooling-air intake and discharge, and other components of installation.

G. Environmental Conditions: Engine generator system shall withstand the following environmental conditions without mechanical or electrical damage or degradation of performance capability:

1. Ambient Temperature: [**41 to 104 deg F (5 to 40 deg C)**][**5 to 104 deg F (Minus 15 to plus 40 deg C)**].
2. Relative Humidity: Zero to 95 percent.
3. Altitude: Sea level to [**1000 feet (300 m)**]<**Insert altitude**>.

H. Unusual Service Conditions: Engine generator equipment and installation are required to operate under the following conditions:

1. [**High salt-dust content in the air due to sea-spray evaporation**]<**Insert unusual condition**>.

2.3 ENGINE GENERATOR ASSEMBLY DESCRIPTION

A. Factory-assembled and -tested, water-cooled engine, with brushless generator and accessories.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended location and use.

C. Power Rating: [**Prime**][**Industrial**][**Standby**].

D. Overload Capacity: 110 percent of service load for 1 hour in 12 consecutive hours.

E. EPSS Class: Engine generator shall be classified as a [**Class 2**][**Class 6**][**Class 48**][**Class 96**]<**Insert classification**> according to NFPA 110.

F. Service Load: <**Insert number**> kVA.

G. Power Factor: [**0.8**]<**Insert number**>, lagging.

H. Frequency: 60 Hz.

I. Voltage: [**208**][**240**][**480**][**600**][**4160**]-V ac.

J. Phase: Three-phase, [**three**][**four**]-wire, [**wye**][**delta**].

K. Induction Method: [**Naturally aspirated**][**Turbocharged**].

L. Governor: Adjustable isochronous, with speed sensing.

M. Mounting Frame: Structural steel framework to maintain alignment of mounted components without depending on concrete foundation. Provide lifting attachments sized and spaced to prevent deflection of base during lifting and moving.

1. Rigging Diagram: Inscribed on metal plate permanently attached to mounting frame to indicate location and lifting capacity of each lifting attachment and engine generator center of gravity.

N. Capacities and Characteristics:

1. Power Output Ratings: Nominal ratings as indicated at 0.8 power factor excluding power required for the continued and repeated operation of the unit and auxiliaries[**, with capacity as required to operate as a unit as evidenced by records of prototype testing**].
2. Nameplates: For each major system component to identify manufacturer's name and address, and model and serial number of component.

O. Engine Generator Performance:

1. Steady-State Voltage Operational Bandwidth: 3 percent of rated output voltage from no load to full load.
2. Transient Voltage Performance: Not more than 20 percent variation for 50 percent step-load increase or decrease. Voltage shall recover and remain within the steady-state operating band within three seconds.
3. Steady-State Frequency Operational Bandwidth: 0.5 percent of rated frequency from no load to full load.
4. Steady-State Frequency Stability: When system is operating at any constant load within the rated load, there shall be no random speed variations outside the steady-state operational band and no hunting or surging of speed.
5. Transient Frequency Performance: Less than 5 percent variation for 50 percent step-load increase or decrease. Frequency shall recover and remain within the steady-state operating band within five seconds.
6. Output Waveform: At no load, harmonic content measured line to line or line to neutral shall not exceed 5 percent total and 3 percent for single harmonics. Telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.
7. Sustained Short-Circuit Current: For a three-phase, bolted short circuit at system output terminals, system shall supply a minimum of 250 percent of rated full-load current for not less than 10 seconds and then clear the fault automatically, without damage to generator system components.
8. Start Time:

    a. Comply with NFPA 110, [**Type U**][**Type 10**] system requirements.
    b. [**10**]<**Insert number**> seconds.

P. Engine Generator Performance for Sensitive Loads:

1. Oversizing generator compared with the rated power output of the engine is permissible to meet specified performance.

    a. Nameplate Data for Oversized Generator: Show ratings required by the Contract Documents rather than ratings that would normally be applied to generator size installed.

2. Steady-State Voltage Operational Bandwidth: 1 percent of rated output voltage from no load to full load.
3. Transient Voltage Performance: Not more than 10 percent variation for 50 percent step-load increase or decrease. Voltage shall recover and remain within the steady-state operating band within 0.5 second.
4. Steady-State Frequency Operational Bandwidth: Plus or minus 0.25 percent of rated frequency from no load to full load.
5. Steady-State Frequency Stability: When system is operating at any constant load within the rated load, there shall be no random speed variations outside the steady-state operational band and no hunting or surging of speed.
6. Transient Frequency Performance: Less than 2-Hz variation for 50 percent step-load increase or decrease. Frequency shall recover and remain within the steady-state operating band within three

seconds.

7. Output Waveform: At no load, harmonic content measured line to neutral shall not exceed 2 percent total with no slot ripple. Telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.
8. Sustained Short-Circuit Current: For a three-phase, bolted short circuit at system output terminals, system shall supply a minimum of 300 percent of rated full-load current for not less than 10 seconds and then clear the fault automatically, without damage to winding insulation or other generator system components.
9. Excitation System: Performance shall be unaffected by voltage distortion caused by nonlinear load.

    a. Provide permanent magnet excitation for power source to voltage regulator.

10. Start Time:

    a. Comply with NFPA 110, [**Type U**][**Type 10**] system requirements.
    b. [**10**]<**Insert number**> seconds.

Q. Parallel Engine Generators:

1. Automatic reactive output power control and load sharing between engine generators operated in parallel.
2. Automatic regulation, automatic connection to a common bus, and automatic synchronization, with manual controls and instruments to monitor and control paralleling functions.
3. Protective relays required for equipment and personnel safety.
4. Paralleling suppressors to protect excitation systems.
5. Reverse power protection.
6. Loss of field protection.

2.4 BI-FUEL ENGINE

A. Fuel: ASTM D975, diesel fuel oil, Grade 2-D S15 and natural gas.

1. <**Insert specific fuel grade requirements**>.

B. Rated Engine Speed: 1800 rpm.

C. Lubrication System: Engine or skidmounted.

1. Filter and Strainer: Rated to remove 90 percent of particles 5 micrometers and smaller while passing full flow.
2. Thermostatic Control Valve: Control flow in system to maintain optimum oil temperature. Unit shall be capable of full flow and is designed to be fail-safe.
3. Crankcase Drain: Arranged for complete gravity drainage to an easily removable container with no disassembly and without use of pumps, siphons, special tools, or appliances.

D. Jacket Coolant Heater: Electric-immersion type, factory installed in coolant jacket system. Comply with UL 499[**and with NFPA 110 requirements for Level 1 equipment for heater capacity**].

E. Integral Cooling System: Closed loop, liquid cooled, with radiator factory mounted on engine generator mounting frame and integral engine-driven coolant pump.

1. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
2. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110

percent load condition.

3. Expansion Tank: Constructed of welded steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gage glass and petcock.
4. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.
5. Coolant Hose: Flexible assembly with inside surface of nonporous rubber and outer covering of aging-, UV-, and abrasion-resistant fabric.

    a. Rating: **50-psig (345-kPa)** maximum working pressure with coolant at **180 deg F (82 deg C)**, and noncollapsible under vacuum.
    b. End Fittings: Flanges or steel pipe nipples with clamps to suit piping and equipment connections.

F. Remote Cooling System: Closed loop, liquid cooled, with remote radiator and [**integral engine-driven**][**auxiliary**] coolant pump. Comply with requirements in Section 232113 "Hydronic Piping" for coolant piping.

1. Configuration: [**Vertical**][**Horizontal**] air discharge.
2. Radiator Core Tubes: [**Aluminum**][**Nonferrous-metal construction other than aluminum**].
3. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.
4. Expansion Tank: Constructed of welded steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gage glass and petcock.
5. Fan: Driven by [**multiple belts from engine shaft**][**totally enclosed electric motor with sealed bearings**].
6. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
7. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.

G. Muffler/Silencer:

1. Critical type, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

    a. Minimum sound attenuation of 25 dB at 500 Hz.
    b. Sound level measured at a distance of **25 feet (8 m)** from exhaust discharge after installation is complete shall be [**78**]<**Insert number**>dBA or less.

2. Semicritical type, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

    a. Minimum sound attenuation of 18 dB at 500 Hz.
    b. Sound level measured at a distance of **25 feet (8 m)** from exhaust discharge after installation is complete shall be [**85**]<**Insert number**>dBA or less.

3. Commercial type, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

    a. Minimum sound attenuation of 12 dB at 500 Hz.
    b. Sound level measured at a distance of **25 feet (8 m)** from exhaust discharge after installation is complete shall be [**90**]<**Insert number**>dBA or less.

H. Air-Intake Filter: [**Standard**][**Heavy**]-duty, engine-mounted air cleaner with replaceable dry-filter element and "blocked filter" indicator.

I. Starting System: [**12**][**24**]-V electric, with negative ground.

1. Components: Sized so they are not damaged during a full engine-cranking cycle with ambient temperature at maximum specified in "Performance Requirements" Article.
2. Cranking Motor: Heavy-duty unit that automatically engages and releases from engine flywheel without binding.
3. Cranking Cycle: [**As required by NFPA 110 for system level specified**][**60 seconds**].
4. Battery: [**Lead acid**][**Nickel cadmium**], with capacity within ambient temperature range specified in "Performance Requirements" Article to provide specified cranking cycle at least [**twice**][**three times**] without recharging.
5. Battery Cable: Size as recommended by engine manufacturer for cable length indicated. Include required interconnecting conductors and connection accessories.
6. Battery Compartment: Factory fabricated of metal with acid-resistant finish and thermal insulation. Thermostatically controlled heater shall be arranged to maintain battery above **50 deg F (10 deg C)** regardless of external ambient temperature within range specified in "Performance Requirements" Article. Include accessories required to support and fasten batteries in place. Provide ventilation to exhaust battery gases.
7. Battery Stand: Factory-fabricated, two-tier metal with acid-resistant finish designed to hold the quantity of battery cells required and to maintain the arrangement to minimize lengths of battery interconnections.
8. Battery-Charging Alternator: Factory mounted on engine with solid-state voltage regulation and 35-A minimum continuous rating.
9. Battery Charger: Current-limiting, automatic-equalizing and float-charging type designed for [**lead-acid**][**nickel-cadmium**] batteries. Unit shall comply with UL 1236 and include the following features:

    a. Operation: Equalizing-charging rate of 10 A shall be initiated automatically after battery has lost charge until an adjustable equalizing voltage is achieved at battery terminals. Unit shall then be automatically switched to a lower float-charging mode and shall continue to operate in that mode until battery is discharged again.
    b. Automatic Temperature Compensation: Adjust float and equalize voltages for variations in ambient temperature from **minus 40 to 140 deg F (minus 40 to plus 60 deg C)** to prevent overcharging at high temperatures and undercharging at low temperatures.
    c. Automatic Voltage Regulation: Maintain constant output voltage regardless of input voltage variations up to plus or minus 10 percent.
    d. Ammeter and Voltmeter: Flush mounted in door. Meters shall indicate charging rates.
    e. Safety Functions: Sense abnormally low battery voltage and close contacts providing low battery voltage indication on control and monitoring panel. Sense high battery voltage and loss of ac input or dc output of battery charger. Either condition shall close contacts that provide a battery-charger malfunction indication at system control and monitoring panel.
    f. Enclosure and Mounting: NEMA 250, Type 1, wall-mounted cabinet.

2.5 DIESEL FUEL-OIL SYSTEM

A. Comply with NFPA 37.

B. Piping: Fuel-oil piping shall be Schedule 40 black steel complying with requirements in Section 231113 "Facility Fuel-Oil Piping." Cast iron, aluminum, copper, and galvanized steel shall not be used in the fuel-oil system.

C. Main Fuel Pump: Mounted on engine to provide primary fuel flow under starting and load conditions.

D. Fuel Filtering: Remove water and contaminants larger than 1 micron.

E. Relief-Bypass Valve: Automatically regulates pressure in fuel line and returns excess fuel to source.

F. Fuel-Oil Storage Tank: Comply with requirements in [**Section 231313 "Facility Underground Fuel-Oil Storage Tanks."**][**Section 231323 "Facility Aboveground Fuel-Oil Storage Tanks."**]

1. Fuel Tank Capacity: [**Minimum 133 percent of total fuel required for periodic maintenance operations between fuel refills plus fuel for the hours of continuous operation required for the indicated EPSS Class.**][**As recommended by engine manufacturer for an uninterrupted period of 8 hours' operation at 100 percent of rated power output of engine generator system without being refilled**]<**Insert gallons (liters)**>.
2. Duplex Fuel-Oil Transfer Pump: Comply with requirements in Section 231213 "Facility Fuel-Oil Pumps."

G. Day Tank: Comply with UL 142, freestanding, factory-fabricated fuel tank assembly, with integral, float-controlled transfer pump and the following features:

1. Containment: Integral rupture basin with a capacity of 150 percent of nominal capacity of day tank.

    a. Leak Detector: Locate in rupture basin and connect to provide audible and visual alarm in the event of day-tank leak.

2. Tank Capacity: [**As recommended by engine manufacturer for an uninterrupted period of 4 hours' operation at 100 percent of rated power output of engine generator system without being refilled**]<**Insert gallons (liters)**>.
3. Pump Capacity: Exceeds maximum flow of fuel drawn by engine-mounted fuel supply pump at 110 percent of rated capacity, including fuel returned from engine.
4. Low-Level Alarm Sensor: Liquid-level device operates alarm contacts at 25 percent of normal fuel level.
5. High-Level Alarm Sensor: Liquid-level device operates alarm and redundant fuel shutoff contacts at midpoint between overflow level and 100 percent of normal fuel level.
6. Piping Connections: Factory-installed fuel supply and return lines from tank to engine; local fuel fill, vent line, overflow line; and tank drain line with shutoff valve.
7. Redundant High-Level Fuel Shutoff: Actuated by high-level alarm sensor in day tank to operate a separate motor-control device that disconnects day-tank pump motor. Sensor shall signal solenoid valve, located in fuel suction line between fuel storage tank and day tank, to close. Both actions shall remain in shutoff state until manually reset. Shutoff action shall initiate an alarm signal to control panel but shall not shut down engine generator.

H. Subbase-Mounted, Double-Wall, Fuel-Oil Tank: Factory installed and piped, complying with UL 142 fuel-oil tank. Features include the following:

1. Tank level indicator.
2. Fuel-Tank Capacity: Minimum 133 percent of total fuel required for periodic maintenance operations between fuel refills, plus fuel for the hours of continuous operation for indicated EPSS class.
3. Leak detection in interstitial space.
4. Vandal-resistant fill cap.
5. Containment Provisions: Comply with requirements of authorities having jurisdiction.

2.6 GAS FUEL SYSTEM

A. Natural Gas Piping: Comply with requirements in Section 231123 "Facility Natural Gas Piping."

B. Gas Train: Comply with NFPA 37.

C. Engine Fuel System:

1. Natural Gas, Vapor-Withdrawal System:

a. Carburetor.
b. Secondary Gas Regulators: One for each fuel type, with atmospheric vents piped to building exterior.
c. Fuel-Shutoff Solenoid Valves: NRTL-listed, normally closed, safety shutoff valves; one for each fuel source.
d. Fuel Filters: One for each fuel type.
e. Manual Fuel Shutoff Valves: One for each fuel type.
f. Flexible Fuel Connectors: Minimum one for each fuel connection.

2.7 CONTROL AND MONITORING

A. Automatic Starting System Sequence of Operation: When mode-selector switch on the control and monitoring panel is in the automatic position, remote-control contacts in one or more separate automatic transfer switches initiate starting and stopping of engine generator. When mode-selector switch is switched to the on position, engine generator starts. The off position of same switch initiates engine generator shutdown. When engine generator is running, specified system or equipment failures or derangements automatically shut down engine generator and initiate alarms.

B. Manual Starting System Sequence of Operation: Switching on-off switch on the generator control panel to the on position starts engine generator. The off position of same switch initiates engine generator shutdown. When engine generator is running, specified system or equipment failures or derangements automatically shut down engine generator and initiate alarms.

C. Provide minimum run-time control set for [**15**][**30**]<**Insert number**> minutes with override only by operating a remote emergency-stop switch.

D. Comply with UL 508A.

E. Configuration:

1. Operating and safety indications, protective devices, basic system controls, and engine gages shall be grouped in a common control and monitoring panel mounted on the engine generator. Mounting method shall isolate the control panel from engine generator vibration. Panel shall be powered from the engine generator battery.
2. Operating and safety indications, protective devices, basic system controls, and engine gages shall be grouped in a common wall-mounted control and monitoring panel. Panel shall be powered from the engine generator battery.
3. Operating and safety indications, protective devices, basic system controls, engine gages, instrument transformers, generator disconnect switch or circuit breaker, and other indicated components shall be grouped in a combination control and power panel. Control and monitoring section of panel shall be isolated from power sections by steel barriers. Panel shall be powered from the engine generator battery. Panel features shall include the following:

a. Wall-Mounting Cabinet Construction: Rigid, self-supporting steel unit complying with NEMA ICS 6.

b. Switchboard Construction: Freestanding unit complying with Section 262413 "Switchboards." Power bus shall be copper. Bus, bus supports, control wiring, and temperature rise shall comply with UL 891.
c. Switchgear Construction: Freestanding unit complying with Section 262300 "Low-Voltage Switchgear."

F. Control and Monitoring Panel:

1. Digital controller with integrated LCD display, controls, and microprocessor, capable of local and remote control, monitoring, and programming, with battery backup.
2. Analog control panel with dedicated gages and indicator lights for the instruments and alarms indicated below.
3. Instruments: Located on the control and monitoring panel and viewable during operation.

a. Engine lubricating-oil pressure gage.
b. Engine-coolant temperature gage.
c. DC voltmeter (alternator battery charging).
d. Running-time meter.
e. AC voltmeter, [**for each phase**][**connected to a phase selector switch**].
f. AC ammeter, [**for each phase**][**connected to a phase selector switch**].
g. AC frequency meter.
h. Generator-voltage adjusting rheostat.

4. Controls and Protective Devices: Controls, shutdown devices and common visual alarm indication including the following:

a. Cranking control equipment.
b. Run-Off-Auto switch.
c. Control switch not in automatic position alarm.
d. Overcrank alarm.
e. Overcrank shutdown device.
f. Low water temperature alarm.
g. High engine temperature pre-alarm.
h. High engine temperature.
i. High engine temperature shutdown device.
j. Overspeed alarm.
k. Overspeed shutdown device.
l. Low fuel main tank.

1) Low-fuel-level alarm shall be initiated when the level falls below that required for operation for duration required [**for the indicated EPSS class**][**in "Fuel Tank Capacity" Subparagraph in "Diesel Fuel-Oil System" Article**].

m. Coolant low-level alarm.
n. Coolant low-level shutdown device.
o. Coolant high-temperature prealarm.
p. Coolant high-temperature alarm.
q. Coolant low-temperature alarm.
r. Coolant high-temperature shutdown device.
s. EPS supplying load indicator.
t. Battery high-voltage alarm.
u. Low cranking voltage alarm.
v. Battery-charger malfunction alarm.
w. Battery low-voltage alarm.
x. Lamp test.

y. Contacts for local and remote common alarm.
z. Low-starting air pressure alarm.
aa. Low-starting hydraulic pressure alarm.
bb. Remote manual stop shutdown device.
cc. Air shutdown damper alarm when used.
dd. Air shutdown damper shutdown device when used.
ee. Generator overcurrent-protective-device not-closed alarm.
ff. Hours of operation.
gg. Engine generator metering, including voltage, current, hertz, kilowatt, kilovolt ampere, and power factor.

G. Engine Generator Metering: Comply with [**Section 260913 "Electrical Power Monitoring and Control."**][**Section 262713 "Electricity Metering."**][**Section 260913 "Electrical Power Monitoring and Control" and Section 262713 "Electricity Metering."**]

H. Connection to Datalink:

1. A separate terminal block, factory wired to Form C dry contacts, for each alarm and status indication.
